26810. One. We think your position as outlined both dignified and strong. Sentiment here is that Sir Cecil Spring-Rice has ample ground for strong protest.

Two. We agree that this is subject to be handled most carefully. We must remember that all Allies will probably wish to secure large further credits in United States, and if Allies' statement as to curtailing purchases were in form to be construed here as a threat your credit position would be still further imperilled. You will pardon suggestion, but perhaps before making any statement on this point your authorities will wish to submit it to us for comment.

Three. Our opinion is unchanged from our 31843. We think chief selling probably arises from holders of deposit balances in London who fear further fall in exchange.

Four. Although situation is rendered somewhat difficult by reason of higher money rates, still we are confident that we can arrange sufficient credits with outside banks to extent that American collateral is available, and to this end we might utilize A. and B. Corporation. But if our exchange purchases continue at anything like pace of last two days, namely, thirty million, you can see where we shall land.

As to gold, you give no precise time as to when this will be available. We had figured from your last cable outlining gold position that by end of February there would be total gold available of about $650,000,000. May we ask you to co-ordinate that cable and 26788 so that we shall be clearer on this vital point of shipments. We see no great difficulty in handling payments during coming month.

Five. We hope sharp rise in money here is temporary, though it is likely to rule stronger than in last six months. We figure that only hope of maintaining in London bulk of present American deposits is to guarantee exchange and are disappointed that authorities do not think feasible. If rates ease off here somewhat, as we think not unlikely, guarantee of exchange in deposits ought to be effective. Is there no way to this end?

Six. Thank you.

Seven. Not in close touch with Kuhn, Loeb & Co. Both Otto Kahn and Mortimer L. Schiff are outspoken for Allies, but just where they really stand it is hard to know. Paris loan off almost point and half from issue; three new muncipalities almost point off. In this last operation underwriters will, counting in their subscriptions, be obliged to take up about one-half of issue, and Kuhn, Loeb & Co. will not exercise option on remaining balance of sixty million.

In general, our chief concern is not as to the next ninety days, but as to the situation thereafter. There are payments for purchases through us alone of $1,300,000,000 in next five months. These are not subject to any great extent to cancellation. They may be augmented by day-by-day purchases unless you let up completely on these. We realize subject is so complex and vast that you cannot at once give any indication of your policy for long future, but whatever it may be we must begin as soon a possible to shape matters here to your ends.

While action of Federal Reserve Board has been heavy blow, and is likely to be far reaching in future as well as immediate operations, yet we are by no means without strong hope that by end of February situation will have changed sufficiently to enable us to take up in earnest again consideration of fresh collateral loan. And we plan to continue steadily work of education and preparation. It would be short sighted of us not to give you the picture, but you must not for a moment gain the idea that we consider outlook as impossible even though we cannot see far ahead.

J. P. MORGAN & Co.,
EXPORT DEPARTMENT,
New York, Nov. 30, 1916,
[Rec'd Dec. 1, 1916.]

26827. Chancellor would not wish to disregard the expressed wishes of the Federal Reserve Board of which Secretary of Treasury is a member and, therefore, requests Messrs. J. P. Morgan & Co. not to issue the Treasury bills as arranged on December 1st. Former is statement made to me by Chancellor of the Exchequer. Will this provide basis for any explanation you may have to make?—E. C. Grenfell.

MORGAN.

EXHIBIT No. 2620

12/1/16.

J. P. Morgan & Co. issue the following statement:

"We have been instructed by the British and French Governments to withdraw their Treasury bills from sale. We have accordingly expressed to those institutions and investors, which had already placed orders with us for these securities, the wish to be released from our obligation to deliver; and they have been good enough to accede.

"This action is taken because, as explained by the British Chancellor of the Exchequer and by the French Minister of Finance, these Governments desire to show every regard to the Federal Reserve Board, a governmental body of which the Secretary of the Treasury and the Comptroller of the Currency are ex-officio members.

"We may add that the sale in limited amount of these Treasury bills, payable in dollars in New York, had never been an essential part of the Allied Governments' financial plans but had for some time been under consideration, with a view to furnishing a credit medium that would accommodate the American banking demand for an instrument of short maturity, and of such limited volume that the Governments could always undertake to lay down gold in New York sufficient to meet maturing bills.

"It was believed further that these bills would have furnished, at the end of the war, an excellent measure of protection to the American financing situation inasmuch as these steadily maturing obligations of the foreign governments would have tended to prevent heavy drafts of gold from this market."

EXHIBIT No. 2621

30

J. P. MORGAN & Co.,
EXPORT DEPARTMENT,
New York, Dec. 1, 1916.

[Copy of telegram despatched 12 : 45 p. m. to Ministere de Finances pour Harjes, Paris]

14898. 18421. Authorization as to issuance of Treasury bills as forwarded by M. Ribot through you is entirely satisfactory. Thank you. We are, however, today issuing to the press the following:

Quote: "We have been instructed by the British and French Governments to withdraw their Treasury bills from sale. We have accordingly expressed to those institutions and investors which had already placed orders with us for these securities the wish to be released from our obligation to deliver and they have been good enough to accede. This action is taken because, as explained by the British Chancellor of the Exchequer and by the French Minister of Finance, these Governments desire to show every regard to the Federal Reserve Board, a governmental body of which the Secretary of Treasury and the Comptroller of Currency are ex-officio members.

"We may add that the sale in limited amount of these Treasury bills, payable in dollars in New York City, had never been an essential part of the

Allied Governments' financial plans, but had for some time been under consideration with a view to furnishing a credit medium that would accommodate the American banking demand for an instrument of short maturity and of such limited volume that the Governments could always undertake to lay down gold in New York City sufficient to meet maturing bills.

"It was believed, further, that these bills would have furnished at the end of the war an excellent measure of protection to the American financial situation inasmuch as these steadily maturing obligations of the foreign Governments would have tended to prevent heavy drafts of gold from this market." End quote.

We trust this will meet with the unqualified approval of Minister of Finance, as we are confident it would if he were informed as to conditions here. We justified statement insofar as French Government is concerned—

First. Upon the fact that the British Government had definitely authorized us to make a statement on their account, and that they had communicated with M. Ribot suggesting that French Government join.

Second. We are in receipt of an unofficial cable from London to the effect that no official communication had reached London, but unofficially our house there was informed that French Government were in accord.

Third. In your 18421, you state "Under same conditions as for the British Government."

Fourth. It was necessary to make the statement today, as we had previously announced the bills would be offered today and had made conditional sales which we either had to fill or cancel today, and as it was necessary to make the statement, it would, in our opinion, have been most unfortunate to have made it for the British Government and not for the French as well.

For your information, we communicated by telephone with M. Bloch, who was in Washington, D. C., acquainting him with the situation but ourselves assuming all the responsibility of the statement. It is unnecessary to assure you that never will we take a step of this kind without the fullest authority except in such an emergency, as we regard exists today. We will appreciate the approval of M. Ribot of our action.

We cannot at this time give you general effect of the statement, but insofar as we have learned it is regarded most favorably and characteristic in dignity and strength of both Governments. There is a strong undertone of disapproval of the statement of the Federal Reserve Board, and it is within range of possibility that a benefit may yet be realized out of their position and it may develop a public sentiment which will make itself strongly felt in favor of further and better financing

There is a rumor that the Federal Reserve Board are this afternoon making an additional statement to clarify their previous one. If statement is made, we will advise you of its contents. It is difficult to express calmly our views of the general situation caused by the statement of the Federal Reserve Board, which gave to the public at large an entirely erroneous impression as to the proposed sale of French and British Treasury bills. We believe that the action of the Board is ill-advised, and that they have taken it without due regard to the interests of the American commercial and investment world. There is, however, no use crying over spilt milk. We must start afresh and do all that we can to show the public the facts as to the undoubted soundness of the Government obligations of France and Great Britain. Of course, this action has for the moment put a complete estoppel upon any credit activities, but you may rest assured that we will renew our active efforts at the first possible moment.—H. P. DAVISON—T. W. LAMONT.)

J. P. MORGAN & CO.,
EXPORT DEPARTMENT,
New York, Dec. 4, '16.

[Copy of telegram received 10:05 p. m. from Harjes, Paris]

18435. For H. P. Davison and T. W. Lamont. 14898. Ribot is greatly upset over your action in this matter and is quite unable to understand how you took upon yourselves to speak authoritatively for him as you did without even getting his views upon the subject, let alone his consent. The question as to whether issue of Treasury bills should have been withdrawn or not, does not disturb him so much as, although your 14889 and your whole attitude as reflected by your other cables was to the effect that the issue was to take place irrespective of the statement of the Federal Reserve Board, and also, although opinion over here was in favor of proceeding with the matter, it is conceded that it is possible that something may have arisen to have made you change your mind. but what appears incomprehensible is the form and wording of your public statement to the press, particularly in view of the disapproval of the French Ambassador in Washington, which Ribot hears by cable was transmitted to you by M. Bloch, who at the same time suggested to you another form which the Ambassador considered desirable and which you apparently brushed aside.

As to the points you raise as justifying your statement regarding the French Government, we are informed that point one does not reflect what actually transpired between the two Governments, as the British Government only apparently asked the French Government(s) opinion ~~in~~ upon the subject and did not actually suggest to it to join in authorizing you to make a statement on their account.

Point two seems absolutely incomprehensible as no French representative was authorized even unofficially to communicate with Morgan, Grenfell & Co. upon the subject.

Point four. The feeling is, as previously expressed, that any statement should have been made in conformity with the suggestions of the representative of the French Government in America unless and until a complete understanding had been arrived at directly with the Government here. Exception is taken particularly to that part of the statement which says "This action is taken because as explained by the British Chancellor of the Exchequer and by the French Minister of Finance, these governments desire to show every regard to the Federal Reserve Board, a governmental body of which the Secretary of Treasury and the Comptroller of Currency are ex officio members." Contrary to your view, it is not at all considered by authorities here as characteristic of the dignity and strength of both governments. Minister of Finance therefore very much regrets the incident. For your information and with view to helping you understand the feeling over here, we would say that, when your 14878 was received announcing the statement of the Federal Reserve Board. Ribot at once communicated with London, suggesting that it would be well for both governments to consult together as to what steps should be taken.—H. H. HARJES.

EXHIBIT No. 2625

CABLES EXCHANGED BETWEEN KUHN, LOEB & CO., NEW YORK, AND M. M. WARBURG & CO., HAMBURG, REGARDING THE ISSUANCE OF CITIES OF HAMBURG, FRANKFORT, AND BERLIN BONDS

Received October 1, 1916: 11th telegram. Can you act for Hamburg Frankfort A/m in same way as for Paris.

Sent October 2, 1916: 27th telegram. Answering your 11th if exclusively for municipal purposes should only be too pleased provided syndicate can be formed and we can be certain that issue can be made successfully.

Sent October 6, 1916: Believe might possibly place Hamburg, Frankfort, Berlin, preferably last, 6% ten-year bonds dollars or marks at twenty cents with first three years interest remaining here if for municipal purposes only and Government agrees to furnish gold if needed to enable payments.

Received October 8, 1916: 22nd telegram. Replying your cable number 27, both friends guarantee to use money exclusively as indicated by you. Wire on what terms you would be ready to close business.

Sent October 11, 1916: 42nd. Telegraphed our suggestions already before receipt number 22, but with renewed difficulties since created, matter must be postponed for present.

Received October 18, 1916: 42nd telegram. Received your telegram number 42, and suggestions mentioned therein to which agree in principle; please telegraph at once as soon as transaction feasible again what amount and exact conditions. For several reasons very anxious to carry it through, especially since transaction with Paris concluded.

Sent October 20, 1916: 54th telegram. With existing sentiment not feasible in our opinion to do anything just now, but we ought perhaps to be placed in position to proceed whenever proper moment arrives, which will not be so long as submarine situation may bring relations to crisis over night. While we cannot now forsee when we can likely proceed, we shall do our best at suitable moment, if authority be given to us, to take fifty million dollars, six-percent ten-year bonds, either all Berlin or twenty-five million Berlin, twelve one-half million Frankfurt, twelve one-half million Hamburg, at ninety percent, half firm half option, other terms as stated in our former cables.

Received November 8, 1916: Shall probably be able authorize you to close fifty million dollars three friends only for purposes mentioned by you three years interest staying there half firm half option provided exchange 480 and increase purchase price some percent. Telegraph very best terms obtainable as very anxious to carry transaction through.

Sent November 8, 1916: 74th. To meet your wishes accept suggestion rate exchange four eighty but as to price it is most important to make tempting terms to syndicate and public. We might go to ninety-one but to reasonably assure success would prefer ninety. If on these terms we can have transaction on hand as intended for humanitarian and other municipal purposes we shall make best endeavors to complete it but this cannot be done while latest submarine question remains unsettled as our public as a prerequisite condition to success issue need feel that menace relations through submarine activity definitely removed.

Received December 6, 1916: 25. Think psychological moment come to carry through business with friends mentioned your advice 74 afraid otherwise others will do business. Have cabled you about this separately.

Received December 8, 1916: Yours number 74. You are authorized Frankfort and Hamburg twelve and a half each Berlin twenty-five six per cent ten year. Bonds half yearly coupons at ninety-two of which one half three months option other half firm. Four marks eighty, however, unsuitable can allow at the utmost M 4.40. We offer you, however, participation ten per cent of net profit of valuta three years interest staying there. The Government agrees to provide gold if needed. The proceeds are to be used exclusively for municipal purposes. What interest do you allow for credit balance that is not disposed of? I have no doubt that the political circumstances are satisfying for carrying business through for (us) as here best intentions. Please act at the earliest possible opportunity. I shall forward to you municipal statements and power of attorney at the earliest date. Greetings.

Sent December 8, 1916: Number 10. Federal Reserve Board having issued warning against further foreign financing at present and England and France having in consequence withdrawn imminent financing here it is impracticable for the time being to act upon your cable sent through embassy though your price and rates anyhow not feasible.

Received December 23, 1916: 51. Answering your no. 10 cable whether it not advisable to send you powers of attorney to be prepared for all events.

Sent December 27, 1916: 23. Answering your 51st as nothing foreign practicable for some time to come advise retaining powers.

[Copy—Letter sent to M. M. Warburg & Co., Hamburg]

64 DEC. 12, 1916.

DEAR SIRS: On the 8th of November we sent you, through Messrs. Ecourtant & Co.[1] our cable no. 74, to which we received your reply only on the 8th of December. At the same time we received your cables nos. 25 to 30, and we have replied to your proposals by our cable no. 10, which we sent you through Ecourtant & Co.

As you will probably be aware, the Federal Reserve Board has in the course of time which elapsed between the sending of our cable no. 74 and the arrival of your reply, issued a detailed statement, warning the banks of the United States against the further purchase of foreign government obligations, which, in the opinion of the Board, would not constitute a proper asset against deposits. In the same statement the Board cautioned also the public in respect to investment in such foreign obligations.

The result of this warning has been a marked one. The Governments of England and France, after issuance of the warning, have withdrawn the intended offer of Treasury bills in this market. The effect in our market, for foreign securities, has at the same time been exceedingly pronounced. Without exception the prices of these securities began to drop and the bonds of the Anglo-French loan fell as low as 92⅞, which places them on a 7⅛% basis.

The above events happened to coincide with a marked stringency in the money market. Call money went up to 15% and after a temporary reaction, rose again to 10% yesterday.

This disposition of the money market, together with the effect of the Federal Reserve Board's warning, has, of course, put a stop to all foreign financing for the time being and much to our regret, we were therefore compelled to inform you in our cable that it is impossible to conclude any transaction of the kind at present, even if your conditions would have made the business feasible in itself, which was not the case.

* * * * * * *

We thank you for the spirit of eagerness in which you have worked for the consummation of the transactions in question and you may rest assured that we, on our part, had the genuine wish to contribute to the conclusion of any of them, but under the prevailing, exceptionally adverse circumstances, any attempt at present would undoubtedly have met with a complete failure.

Believe us,

Yours very faithfully

(Signature) L. KEESING.

[From the House collection, custody of Prof. Charles Seymour, Yale University, New Haven, Conn.]

THE WHITE HOUSE,
Washington.

The PRESIDENT.

DEAR GOVERNOR: I am enclosing you a copy of a letter which has just come from Viscount Grey. It gives me an opportunity to write him whatever I wish.

Captain Gaunt is going to England Saturday, but this not to be known to anyone excepting the British Ambassador. There is some reason for secrecy.

Gaunt has caught a conversation between Bernstorff and a certain lady here. Bernstorff told her that they were trying to negotiate a loan in America, and when that was arranged they did not intend to pay further attention to America. This conversation is not mere hearsay.

---

[1] (In pencil.) The German Embassy.

Baruch tells me that Kuhn, Loeb & Co. are preparing to make a loan to the German cities, just as they did some time ago to the French cities. Before doing it they want to be sure that our relations with Germany are satisfactory, otherwise they will refuse to go on. I am wondering what, if anything, you want done in regard to this.

Affectionately yours,

—— ——.

115 East 53rd Street,
New York.

November 23, 1916.

Exhibit No. 2627

[From the House collection, custody of Prof. Charles Seymour, Yale University, New Haven, Conn.]

The White House,
Washington.

My Dearest Friend: I have had a really overwhelming cold during nearly the whole of the week, and it has sadly thrown my plans out. The paper I had intended to write needed the clearest thinking I could do, and not until tonight have I ventured to begin it. Even now I have gone no further than a skeleton outline.

I wanted to make these suggestions:

First: That you convey to Kuhn, Loeb & Co. through Mr. Schiff, who would be sure of my personal friendship, the intimation that our relations with Germany are now in a very unsatisfactory and doubtful state, and that it would be most unwise at this time to risk a loan.

Second: That you write to Lord Grey in the strongest terms to the effect that he could be sure that the United States would go any length in promoting and lending her full might to a league for peace, and that her people were growing more and more impatient with the intolerable conditions of neutrality, their feeling as hot against Great Britain as it was at first against Germany and likely to grow still hotter against an indefinite continuation of the war, if no greater progress could be shown than now appears, either for the Allies or the Central Powers.

It might be well to intimate to him that Page no longer represents the feeling or the point of view of the United States any more than do the Americans resident in London.

I hope that these suggestions commend themselves to you. I do not think that he ought to be left in any degree of ignorance of the real state of our opinion. It might even be well to intimate that we, in common with the other neutral nations, look upon the continuation of the war through another winter with the utmost distaste and misgiving.

I am so sorry I am not to see you tomorrow, but it would be folly for me to risk the exposure at the present stage of my cold.

All join in affectionate messages.

Faithfully yours,

(Signed) Woodrow Wilson.

Mr. Edward M. House.

24 November, 1916.

Exhibit No. 2628

[From the House collection, custody of Prof. Charles Seymour, Yale University, New Haven, Conn.]

Diary—Dec. 3, 1916—308.

"Jusserand wished to know what he would cable his Government tomorrow to better matters. He promised to regard anything I told him as confidential except as to his Government. I suggested that he start by cabling them of the President's speech last night at the banquet in which he indicated strong sympathy for France and a leaning toward the Allies.

"(2) That we were trying to undo the harm which the Federal Reserve Board has done regarding their credits.

"(3) To say the President had warned Germany concerning U-boat activities in American waters.

"(4) This country was doing what it could to protect communications with the Allies and their communication with one another as well as with neutrals by holding down to a minimum the activities of U-boats.

"(5) The United States had practiced benevolent neutrality toward the Allies which the Allies in no way appreciated. We had gotten the enmity of Germany and had not received corresponding benefit from the Allies.

"Jusserand promised to embody all these suggestions in his cable."

The following pencilled memo is attached:

Nov. 22, '16.

Laid on table for a full Board meeting.

L. A.

AGREEMENT WITH THE BANK OF ENGLAND

Nov. 23, 1916.

Memorandum for the Federal Reserve Board.

The executive committee, to which was referred the matter of a proposed contract between the Federal Reserve Bank of New York and the Bank of England authorizing the latter institution to act as agent for the Federal Reserve Bank in England, begs to make the following recommendations:

(1) That the Federal Reserve Bank of New York be authorized to ~~proceed with the negotiations on the general lines of the draft as submitted;~~ [establish an agency with the Bank of England in conformity with the terms and provisions of the Federal Reserve Act and to establish an account with said agency.]

~~(2) That such authorization, however, be given with the distinct understanding that no business is to be transacted under the contract, with the exception of purely routine operations necessary to put it into effect, until after the close of the European war now in progress, or until further authority is granted by the Federal Reserve Board.~~

Respectfully submitted,

(Sgd) W. P. G. HARDING,
(Sgd) PAUL M. WARBURG,
(Sgd) F. A. DELANO,
Executive Committee.

30141. 18572. Announcement is correct, but matter is almost simply routine, as Federal Reserve Bank of New York City applied sometime ago for permission appoint foreign agents. I think it quite probable Federal Reserve Board thought it was indicating pleasanter feeling by doing this now. Indeed, I think they feel they went much too far and did the wrong thing in the statement of November 28th and are casting about for ways of improving their position.

National City Bank has informed all its German clients it does not wish any activity in their accounts though of course clients are at liberty to dispose of amounts now to their credit. This was done entirely of their own motion, as Frank A. Vanderlip stated to me, because they thought accounts were being used to help German trading. He also said only result so far had been great activity in accounts of Swedish banks which they have, which they presume take the place of the German accounts which they have stopped, but as to this they do not think they can do anything.—J. P. Morgan.

THE ZIMMERMANN TELEGRAM

[Sent by Germany to Mexico, January 19, 1917]

We intend to begin on the 1st of February unrestricted submarine warfare. We shall endeavor in spite of this to keep the United States of America neutral. In the event of this not succeeding, we make Mexico a proposal of alliance on the following basis: Make war together, make peace together, generous financial support and an understanding on our part that Mexico is to reconquer the lost territory in Texas, New Mexico, and Arizona. The settlement in detail is left to you. You will inform the President of the above most secretly as soon as the outbreak of war with the United States of America is certain and add the suggestion that he should on his own initiative, invite Japan to immediate adherence and at the same time mediate between Japan and ourselves. Please call the President's attention to the fact that the ruthless employment of our submarines now offers the prospect of compelling England in a few months to make peace.

(Signed) ZIMMERMANN.

EXHIBIT No. 2637

GERMAN SUBMARINE NOTE OF JANUARY 31, 1917

The German Government gave notice on January 31, 1917, to the United States Government that thereafter they would let loose absolutely unrestricted submarine warfare on all American merchant ships unless the American Government agreed immediately to comply with and obey the following rules laid down for it by the German Government:

Sailing of regular American passenger steamers may continue undisturbed after February 1, 1917, if—

(a) The port of destination is Falmouth.

(b) Sailing to or coming from that port course is taken via the Scilly Islands and a point 50° N. 20° W.

(c) The steamers are marked in the following way which must not be allowed to other vessels in American ports: On ships' hull and superstructure 3 vertical stripes 1 meter wide each to be painted alternately white and red. Each mast should show a large flag checkered white and red, and the stern the American national flag.

Care should be taken that, during dark, national flag and painted marks are easily recognizable from a distance and that the boats are well lighted throughout.

(d) One steamer a week sails in each direction with arrival at Falmouth on Sunday and departure from Falmouth on Wednesday.

(e) The United States Government guarantees that no contraband (according to German contraband list) is carried by those steamers.

So certain were Von Bernstorff and his Government that the note of January 31 meant war, that on the morning of that day, before delivering the note, he had given instructions for the disabling of all engines on German vessels lying in American harbors.

APRIL 7, 1917.

[Personal]

EDWARD N. SMITH, Esquire,
Watertown, New York.

MY DEAR ED: I received your letter of approval of the President's address to Congress and was much gratified that you felt as you do about it, although I knew that you would feel so without your writing.

Since you wrote me, Congress has acted and I am sure that to one who watches as closely as you do the course of national affairs, the vote in the House must indicate the conditions under which we have long been laboring. We have known the state of mind in the House and realized that it was not as "clear sailing" as many people seemed to think. I was asked the day before the vote was taken what would be the number of the opposition and when I said, "Fifty, possibly sixty", I was ridiculed as a pessimistic prophet. I really believe that there were a number of others who would have voted against the resolution if they had dared and if they had not the overwhelming majority in the Senate as an indication of popular opinion.

It is my judgment that if the same resolution had been presented in February the House would have shown three times as great opposition, and if it had been voted on last summer its passage would have been so close as to show a divided country. Indeed, it might have entirely failed. Of course, the President could have made a record for himself by action then, but knowing the temper of the coordinate branch as he did he would have placed the country in a most humiliating position. The only course practicable was to wait, to suffer further indignities, and to make every effort to bring about peace, so that the lukewarm would grow hot and the cold lukewarm. It was to wait the time when there could be no question but that a substantial majority favored war. Even when that time arrived, the thought that a very considerable number of pacifists of pro-German and anti-British adherents, and of Representatives who sought, at any cost, the material good of their constituents could be counted against the resolution was to me a distressing fact.

The only satisfaction I derived from the situation was that it must open the eyes of many people, who had been clamoring for action and claiming that the President should have acted after the *Lusitania* disaster or certainly after the *Sussex*. Why, the President would have been defeated had he tried to obtain action after either case almost as certainly as night follows day. It is a very different thing to feel the pulse of the whole Nation and to feel that of a city, a State, or a section of the country. You can have little idea of the temptation to act and the difficulty of restraint, though reason said that immediate action would result in humiliation.

There! I did not intend to write you so fully, but I confess to a measure of indignation when I consider the abuse which the President has borne because he was wise enough and brave enough to wait until he was sure that he could take a step which would not have to be withdrawn because Congress would not give him a decided majority.

Do not think that I am blaming those who have been bitter critics. I am not, because I realize their feelings were natural from the facts at their command. But I do hope that now they will comprehend the obstacles which had to be removed and the difficulties which had to be overcome, before decisive action could be wisely taken. If they are just they will admit their error. If they find it difficult to be so generous I hope that they will at least cease to complain about a delay, the wisdom of which they must now appreciate.

Just one word more. You suggest a coalition cabinet. I have talked to several leading Republicans about it and they all scoff at the idea. They say that coalition cabinets are only excusable in responsible governments, and then only when no party is strong enough to insure stability. They say that even in such circumstances they never work well and are only an undesirable makeshift. And they point out that under our system stability exists without such method of gaining a legislative majority. I believe from the little the President has said on the subject that he hold similar views and holds them strongly.

Write me again.

Sincerely yours,

ROBERT LANSING.

EXPORT DEPARTMENT,
New York, December 1, 1916.

[Copy of telegram despatched 12:30 a. m. to Morgan, London]

31879, E. C. Grenfell. Denkbar. We purchased today, £4,040,000 exchange, making total exchange purchased during last three business days $51,550,000. We ourselves tomorrow will be advancing on loan no. 1, $84,349,000. On loan no. 2, $6,000,000, exclusive of tomorrow's export department's requirements. On Anglo-French joint purchase account, $8,892,000.

In addition to foregoing, we have invested in United Kingdom loan, other loans to Allies, and acceptances with belligerent government guarantees, $25,-

759,000, and we have also committed ourselves in connection with new Russian loan and Bankers Trust Co. acceptances from France to the extent of $9,320,000. The foregoing making a total of approximately $134,320,000.

We expect to begin participating loans next Monday.—H. P. Davison.

[Copy of telegram despatched 12:45 p. m. to Morgan, London]

31951. E. C. Grenfell. Exchange purchases up to noon today already aggregate over £3,000,000. As indicated in 31844, all our calculations will be completely upset if exchange purchases continue as now. 31879 gave you situation which today is still worse. We feel that we must know at once what the plans of your authorities are in this matter of exchange, for certainly the present situation cannot continue.

Newspapers here last Saturday reported arrival in San Francisco of $32,000,000 Russian gold. We have had no other information. Is it true?

Morgan.

84/21/16a1/30A

J. P. Morgan & Co.,
Export Department,
New York, Dec. 5, 1916.

[Copy of telegram despatched 10 p. m. to Morgan, London]

33036. For E. C. Grenfell. Our exchange purchases this morning aggregate approximately £4,000,000. We must again reiterate that this feature seems to be the crux of the whole situation. Payments under contracts closed through us are not excessive. We figure them approximately 100,000,000 monthly during the next four months. But the support of the exchange market is the serious feature. In attempting yesterday to participate nos. 1 and 2 loans beyond our own circle, we found reluctance on the part of some institutions, naturally, due to low reserves and extraordinarily high rates for call money. With this somewhat unexpected obstacle and with the situation as serious as it is, we called group of confidential leading bankers this morning to point out the necessity of caring for situation and the facility for doing so with such large amounts of American securities to use pending arrival of sufficient gold. All these bankers most anxious to cooperate and express willingness to reduce their reserves even below legal limit, if necessary, but as one man they asked the question, What are Great Britain's requirements going to be in the next thirty days? We could not answer this question, because the handling of exchange makes that feature absolutely uncertain. It was apparent to us that our inability to answer this specific question or even to place an outside limit upon the exchange item was very disturbing to these bankers. We feel, therefore, on this and on every other account that we must have some early expressions as to plans of authorities on this point. We are not fully acquainted with what is in their minds. Perhaps they have some undisclosed resources that we are not aware of, but at the present rate of going they will soon exhaust all gold available or in transit and also available American securities, even going so far as to assume that we can possibly secure loans up to 80% of the value of these securities. We do not presume to suggest the policy of the authorities, but our responsibility certainly requires our pointing out the dangers in the situation, so that if we should suddenly find that we had exhausted all available resources of this market, the knowledge of that fact would not come as a shock to authorities. Our own interest this morning in numbers one and two loans was $90,000,000. Owing to previously explained limitations upon amount any one promissor may borrow, it may be necessary for us in the near future ourselves to become the obligor for your account. You can understand our reluctance to do this, as fact would almost undoubtedly become known and create bad effect.

Your 26937. Can you give us any idea of the amount of withdrawal of American deposits in London and of remainder there? Natural supposition is that this shifting together with gold imports would reduce rates here and we believe that present hardness will not continue. It is largely due to fact of enormous increase in business activity, bank loans having increased here to extent of $3,000,000,000 since the outbreak of the war. Primarily at this time it is due to very low reserves in banks of leading cities. Small interior banks have large surplus reserves but they are very slow in transferring these to New York City and whether in view of increasing business activity in interior domestic circles we can count upon such shifting to any considerable extent we are doubtful. The newspaper reports of the Cabinet crisis are disturbing many people here and naturally tend to make difficulties somewhat greater. We hope you will give us such information as you properly can upon this situation. It is distressing to us to send you any cable which would in any degree contribute to the difficulties, but our reasons for doing so are of course obvious.

Please give this cable your immediate attention and reply as promptly as possible.

MORGAN.

26986. Denkstein for H. P. Davison. In view of your recent experiences here you will, I hope, understand my personal difficulties in sending you any satisfactory replies to the wonderful cables you are sending us. You sized up the character of our chancellor and can appreciate my difficulty. In addition the Cabinet crisis occupies the minds of all the ministers to the exclusion of other matters, even when they are of such vital importance as the situation which you and we are endeavoring to cope with.

I have not been able, up to 1 p. m., our time, to see the chancellor in reference to 33036, though the governor and I hope to do so shortly.

I presume that if a break were allowed in exchange or any concellations of orders were to begin, these might occasion a big squeeze in your stock markets and curtailment of loan facilities by bankers. Do you endorse this opinion? I will cable when I have seen chancellor.—E. C. GREENFELL.

MORGAN.

J. P. MORGAN & Co.,
EXPORT DEPARTMENT,
New York, December 6th, 1916.

[Copy of telegram despatched 9 : 10 p. m. to Morgan, London]

33061. For E. C. Grenfell. 26986. Your difficulties are fully appreciated by us all and you have our full sympathy. As has frequently been said, the complete understanding between us at least makes less difficult our endeavors. Exchange purchases today again aggregate almost £4,000,000.

A break in exchange or cancellation of orders would probably affect the stock market, and also foreign issues. We are not sure we know just what you have in mind by a break in exchange. Our experience leads us to believe that if the protection were completely removed the exchange market would break badly, the results of which would be reflection upon British credit, which would in turn make borrowing more difficult. We do not see how cancellation of orders would bear upon this, unless cancellations were viewed as necessary because of lack of ability to pay for the goods; that is to say, if cancellations were made because of speeding up of resources at home or in colonies, thus enabling Great Britain to get along without goods from this country, it would be only a natural move in view of the difficulties of borrowing in this country.

As you know, we have no hope of immediate financing of any kind, but if the situation can be maintained a reasonable time, we would then hope for a marked improvement when we would hope to issue secured if not unsecured obligations. But if there is doubt in the minds of your authorities as to ability to keep up exchange, then we believe it is better to meet that situation now rather than later.

We have no means of measuring the exchange requirements, and the only available resources of which we know are the gold and the American securities. So far as we know, there has been no consideration given to the gradual support of exchange, letting it seek a lower level, but endeavoring to avoid a shock. Is not this worthy of consideration? To summarize, our judgment is that it would be wise to hold the situation as heretofore if, all things considered, it is certainly possible to do so. We have hope that we may soon have somewhat easier money market. If so, that should somewhat relieve the pressure on exchange sales.

However, unless it is clear that with the full knowledge of our situation here, and such other resources as you may have, you can carry the situation through, we believe it is better to face the situation now rather than later. Of course, it is most unfortunate that such a development should occur just at the time of the Cabinet crisis and the lack of favorable military news. I hope this gives you our thought upon this subject.—H. P. DAVISON.

MORGAN.

J. P. MORGAN & Co.,
EXPORT DEPARTMENT,
New York, Dec. 6, '16.

[Copy of telegram received 7 : 23 p. m. from Morgan, London]

28017. 33036. Refer to 26810: Not counting gold, advised 26817, 26908, which latter treasury sent in advance of your request on their own initiative, there is in Ottawa £18,000,000. This includes $20,000,000 en route Atlantic, mentioned 26810. Arriving San Francisco £2,000,000 in four shipments due between November 30th–December 28th. Now in London £20,000,000 French, which we hope expedite to United States.

Treasury are disposed to support exchange with gold as above, insofar as you find it difficult to borrow on American securities. Treasury estimates of their expenditure as given to H. P. Davison proved correct for October, November, this apart from supporting exchange for which demands exceeded estimates.

Treasury estimate that for December, including Morgan orders $100,000,000, other payments, exclusive of French and exchange, should not exceed $20,000,000. France will require $12,000,000 this week, as already advised, and will be pressed to carry on for rest of month out of proceeds Kuhn, Loeb & Co. loan. If you can therefore care for $150,000,000 during the whole of December out of advances on American securities in addition to loans nos. one and two now outstanding there will be a margin. This provided gold deliveries meet exchange requirements.

It is difficult to give you accurate idea of amount of American deposits outstanding. Bankers' deposits in London were about £18,000,000 at end of October and rose to £22,500,000 on November 25th.

During last week up to December 2nd, American bankers sterling balances in London were reduced by $30,000,000 out of $60,000,000 of exchange purchased by you. There may be, therefore, about £17,000,000 of American bankers sterling balances now in London, not including sterling treasury bills held for American account.

You will understand that these figures may not represent all current balances here. Whereas American deposits tended to increase until November 25th, the sudden change from deposit to withdrawal helped to account for amount of exchange bought.

Treasury sincerely appreciate your clear cable 33036 and seek your views on above figures and explanations.—E. C. GRENFELL.

MORGAN.

EXHIBIT No. 2646

(Date handwritten) JULY 23, 1917.

Memorandum which was handed to Mr. Page on July 20th last at the instance of the Chancellor of the Exchequer stated in clause 3 that "unless the U. S. Government can meet in full our expenses in America, including exchange, the whole financial fabric of the Alliance will collapse. This conclusion will be matter not of months but of days."

That memorandum was intended to set forth for the information of U. S. Government extent of financial effort which H. M. Government have already made and approaching exhaustion of their resources. It did not deal with the question of exchange in particular. As, however, this form of assistance is at the same time most vital to H. M. Government and most difficult to render clear to U. S. Government it is dealt with here.

(1) Growth of existing system for supporting the exchange.
(2) Cost of it.
(3) Consequences of withdrawing it.
(4) It is pointed out that H. M. Government must now learn how far U. S. Government will be able to give them necessary support. A point has been now reached when a definite decision must be taken within the next few days and H. M. Government trust U. S. Government will agree with them as to the necessity of putting end to present state of uncertainty.

(1) At the commencement of the war balance of trade with America was in favour of this country. That is to say, there were on balance purchasers of sterling in New York. We were able, therefore, to finance our war purchases

from America, as also from the rest of the world, by sale of sterling exchange. In the summer of 1915 large amounts of dollars were required to finance advance payments on shell and rifle contracts placed for Russian Government, with result that British Treasury were no longer able to provide themselves with all the dollars they required by sale of sterling in New York as hitherto. A break in exchange took place and it became necessary in the course of the autumn of 1915 for British Treasury to finance their munitions purchased by other means than by sale of sterling in New York. By the beginning of 1916 they had to go a step further and to come to the support of commercial exchange by making a standing offer through their agents in New York to purchase sterling from all comers at fixed minimum rate of $4.76 7/16.

Anglo-French loan of 1915, mobilization of dollar securities for sale and collateral security loan and export of gold to United States were chief sources of the funds required for these two purposes.

This arrangement provided a direct means of conversion of sterling into dollars by which British purchasers of American goods could reckon on financing them at a fixed rate while the Allies and Dominions who received sterling credits could turn them into dollars to meet their American payments. Indirectly also it stabilized in some degree all the other foreign exchanges since sterling could be if necessary converted into any other foreign currency by first purchasing dollars and the using these dollars to obtain foreign currency required.

As time went on this system developed into one by which the nervous centre of Allied financial system was as much in New York as in London. While gold was occasionally exported to other destinations the bulk of it was reserved for America. By furnishing America with unprecedented quantities of species we ourselves provided basis of credit she required to finance her sales to us.

At first adverse balance was relatively small. In fact up to April 1916 we were still able to supplement our other resources by sale on balance of a certain amount of sterling. From May 1916 balance has been progressively adverse.

In November and December 1916 we were faced with first serious exchange crisis since the summer of 1915. As shown in a table below average weekly requirements for support of exchange amounted in December 1916 to $44,500,000.

Since that date high prices, increased expenditures, growing exhaustion of the Allies, depletion of British financial reserves in all parts of the world and progressive destruction of our export trade by diversion of man power into other channels have combined to raise figures taking one month with another far beyond those of 1916.

Past seven months have accordingly required a lavish employment of our ultimate liquid reserves. Conclusion of third year of war finds us with these reserves at a level likely to entirely exhaust in a few weeks if present drain on them is to continue.

(2) Appended table shows average weekly expenditure of British treasury in United States for each month since April 1916, first column representing purchase of commodities and transfer of dollars to Allies, and the second, support afforded to dollar exchanges. While figures in second column have fluctuated widely it will be seen that average weekly requirements during the past three months have worked out at rather more than $40,000,000.

Average weekly expenditure in U. S.:

1916—April. Treasury account (all figures in thousands of dollars). 26,969. Exchange brought 5,156. Total 21,813 (column 2, sale of sterling).

July (3 weeks to July 21)	49, 919	21, 606	71, 525

[1] Written in pencil.

Fluctuations are mainly due to movement of American banking funds to and from London. It is obvious that when American bankers are increasing their London balances the exchange benefits and conversely that when they are withdrawing balances the normal burden on exchange is aggravated. In the course of the present year cash balances and bills held on American account in London have been as high as 53,500,000 pounds (Apr. 14th) and as low as £22,500,000 (June 23rd).

Allowing for the fact that figures of the past three months have been abnormally inflated by withdrawal of American balances, and that they include cost of temporary wheat purchases which will be paid for in future otherwise average cost of supporting exchange assuming that American balances in London remain stationary is not likely to be less than $25,000,000 a week or $100,000,000 a month.

(3) The above summary of past events will have shown what a central place support of dollar exchange has come to take in financial system of alliance. Funds which we have placed at disposal of the allies and dominions have been mainly sterling, purchasing power of which in all parts of the world has been maintained by this means.

To estimate consequences of withdrawing support from sterling exchange in New York we must consider the purposes now served by supporting it. The following analysis refers in each case to balance unprovided for after allowing for America's ordinary trade obligations to ourselves and the Allies.

(a) Exports on private account from America to this country for commodities not yet under government control of which cotton is the chief.

(b) Similar purchases by the allies who have not yet controlled so many commodities as we have.

(c) Purchases from America by British Dominions and by India only small part of whose trade is under government control.

(d) Cost of neutral exchange artitraged over New York, that is to say those allied purchases in neutral markets which are being financed at present out of the resources of the U. S.

Of these, U. S. Government will probably wish to enquire most closely into the magnitude and character of (d). Amount involved is fairly substantial, but we have no reliable information on which to estimate it.

If the policy of supporting exchange were to be abandoned tomorrow collapse not only of the allied exchanges on New York, but also of their exchanges on all neutral countries, is to be expected. Allies and all parts of the Empire except Canada would be affected equally. It is likely that exchange quotations would not only fall heavily but would become nominal—that is to say, there would be for the moment no exchange offering at any price, and business would be at a standstill.

Consequences of such a state of things are partly material and partly psychological.

1. On *material* side exporters from U. S. to United Kingdom, other allied countries, Australasia, India, and South Africa would be unable to sell their sterling bills on London. New business would be interrupted at the source and vessels would be delayed in port by reason of shippers being unable to obtain delivery of the goods without paying for them.

From American point of view this would involve a breakdown for the time being of the mechanism of a great part of her export trade, paralysis of business, and congestion of her ports. From the point of view of this country and of the other allies it would represent cessation for the time being of supplies such as cotton which, while still left in private hands, are nevertheless essential for the conduct of the war. It must be remembered that practically no trade takes place except in commodities of national importance, considerations of freight quite apart from finance having already cut off the greater part of what is dispensable.

At the same time the American banks would see their London assets locked up for the period of the war at least, and also heavily depreciated.

How long this state of things would last would depend on the success of our remedial measures. Initial disorganization must be distinguished from permanent results. It is possible even the initial disturbance might be somewhat less for us than indicated above. But whatever the degree of initial disturbance, eventual result if estimate of 100,000,000 dollars a month is correct would be that foreign purchases of the alliance would have to be diminished by at least this amount monthly.

This sum, however, would not represent the whole effect. Destruction of British credit abroad would cut us off from certain sources of income which we now possess. So long as existing foreign balances in London remained immobilized we could not expect foreign countries to increase them. At present we pay in sterling for numerous foreign purchases. Difficulties of freight and supply prevent neutral countries from spending this sterling forthwith. In the meantime they leave it in London and payment is thus deferred.

Allowing, therefore, for losses arising out of the injury to our credit, the economies we should have to effect will largely exceed the 100,000,000 dollars monthly.

Pending reorganization of trade and finance, loss would, as pointed out above, extend beyond this to commodities which, after things had settled down, we might hope to pay for.

On the material side, therefore, breakdown of exchanges must gravely impair our capacity to carry on the war, but by itself it need not prove disastrous. We could, if necessary, effect economies on scale indicated above and still carry on.

(2) Turning to *psychological* consequences results would be plainly disastrous. Open abandonment of support of exchanges is a step which would be interpreted in all circles as indication of deep-seated distress. Not only would our credit have been impaired in all neutral centres but vague doubts would have been awakened which might spread far beyond their origin.

Chief of all, there is effect on the mind of the enemy. There are doubtless officials in Berlin whose duty it is to watch and report upon our financial position and embarrassments. They must suspect our growing financial difficulties and can make a good guess at our position just as we can with their food difficulties. But there is world of difference between a shrewd guess and a piece of tangible evidence.

Encouragement and corroboration of their hopes which they would discover in our abandonment of exchanges would therefore be enormous. Germany would have at last received a second hope added to that of the submarine on which to base her policy of endurance. It would be said whether it is true or not that with collapse of their exchanges the alliance cannot endure 6 months more.

We have openly attached hitherto utmost importance to position of our exchanges. We have constantly proclaimed to the world that it is the corner stone of our policy. To point out depreciation of German exchanges and stability of our own has been a favorable form of propaganda in all parts of the world. We have urged neutral world month after month that this is to be taken as criterion of financial strength. It would be imprudent to believe all this can be swept on one side without a far-reaching reaction.

(4) Memorandum handed to Mr. Page on July 20th will have shown to U. S. Government to what a low level our liquid reserves have now fallen. In the event of exchanges being allowed to fall and of our having to undertake reorganization of our affairs thus made necessary we must do so with a certain amount of liquid resources still in hand. We cannot therefore deplete them further and must look to U. S. Government for the future.

We must therefore know if possible immediately whether U. S. Government can give us the financial assistance we need.

In asking this we do not overlook that we are asking them to moderate two conditions which they have hitherto regarded as essential.

In the first place, to provide funds for exchange is to defray uncontrolled expenditure for undefined purposes. We can only say we have already extended sphere of Government control far beyond what would have been believed possible short time since. But the complexity of the world's trade is too great to allow the whole of it to become amenable to a control. This limitation of continuance of private commerce is represented financially by commercial exchange.

In the second place, support of exchanges involves in part employment of American funds to finance purchases of the Allies outside America. America must be the judge of how great a burden she can support. At present stage of the conflict, her resources are greater than ours. She has not only her own pre-war resources but more than £200,000,000 additional in actual gold with which the Allies have furnished her in the past 3 years. It is necessary for the Allies to make purchases in neutral countries in excess of what they are themselves able to finance. Within comparatively narrow limits they look to U. S. to augment these resources out of her exports of goods and of gold to neutral countries so far as her capacity allows. She cannot render a more valuable service.

H. M. Government trust most sincerely that they may learn within a few days time general attitude of U. S. Government to this most vital question. This is necessary because it is only by assistance of U. S. Government that support of exchange can be continued and at any moment demand for exchange in New York may be so great that our representatives there may be compelled to cease support of it if they cannot rely upon funds from U. S. Government for the purpose. If any further information is desired it will be at once supplied and Lord Northcliffe who is familiar with the whole situation would gladly discuss it with you.

F. R. 1917 S. 2—Our cuts.
File No. 841.51/874.

The British Ambassador (Spring Rice) to the Secretary of State

WASHINGTON, *July 1, 1917.*
[Received July 2.]

MY DEAR MR. SECRETARY: I am instructed by His Majesty's Principal Secretary of State for Foreign Affairs to call your immediate attention to the financial position of Great Britain in regard to the war, inasmuch as it is of an urgent and critical character. It appears, indeed, to Mr. Balfour that the United States Treasury do not realize how perilous the situation truly is, namely, that there is danger that the ability of His Majesty's Government to effect payments in America from today onwards will be in jeopardy.

The effect which will be produced on the progress of the war by a collapse of the exchange will be no less disastrous than a great military reverse, for not only will all commercial relations between the two countries, including the cotton trade, be thrown into complete disorder entailing the stoppage of the entire private export business from the United States, but, further, the basis of financial relations of all the Allies with the rest of the world will be removed, and a general collapse of credit and of all financial confidence will inevitably result.

* * * * * * *

So far as British requirements are concerned, His Majesty's Government have never feared that the United States Government would not give the financial support required. Indeed, upon the entry of the United States into the war His Majesty's Government abandoned financial expedients previously contemplated in order that the American market might be free for the Liberty Loan operation. The need of His Majesty's Government for the six months beginning June 1 were communicated in writing to the Secretary of the Treasury on May 3rd during the presence of Mr. Balfour in Washington and the specific assistance desired for June was indicated in my note to the Secretary of the Treasury of May 29th. It was confidently expected that these needs would be met.

Now, during the month of June the following transactions have taken place. The British Government have received from the United States Government the sum of $150,000,000. They have had to supplement this, however, by bringing in $125,000,000 in gold and by the sale of securities in America to the value of $10,000,000 and on the 28th ultimo they were forced to authorize their financial representative in New York to bring in a further $25,000,000 in gold. Thus you will perceive that, in the course of this month, only about half of the British expenditure in the United States has been met by the United States Government.

* * * * * * *

In view of the practical depletion of our resources in gold and marketable securities I am instructed to present to you a formal request for the following financial assistance. It is desired—

* * * * * * *

(3) That assistance may be given to cover the amount of our overdraft with New York bankers amounting to about $400,000,000. It was explained

to the Secretary of the Treasury in April and again in my communication of May 3d that this overdraft had been incurred mainly in order to enable our other allies to carry on and we agreed that this sum might be included in our application and regarded as a first call on the credits under the loan.

Mr. Balfour desires me to add that the friendly nature of the discussions which he had on these matters with the statesmen of this country did not leave him in any doubt as to the intentions of the United States Government to meet this situation and that the first and third requests which are now put forward merely embody in a formal manner points which he fully understood to express the settled intentions of the United States Government.

In conclusion, Mr. Balfour desires me to add that the foregoing urgent requests are presented solely on account of the immediate and grave necessities of the situation which he is convinced have only to be realized by the United States Government for relief to be forthcoming.

I am [etc.]

COLVILL BARCLAY,
(For the Ambassador).

28037. Denkstein for E. R. Stettinius. We regret that it has been impossible to obtain from the M. M. W. during the past few days decisions as usual regarding your cables containing fresh offers, particularly those covering steel and forgings.

You doubtless appreciate the effect of present circumstances on the transaction of government business and you will understand that in spite of the Ministry's desire to deal with proposals in ordinary course, there are many difficulties in the way of their doing so. While we expect to continue to obtain in ordinary course from the M. M. W. instructions on questions which do not involve additional financial commitments, we do anticipate that there may be some further delays in replying to your cables containing fresh offers, and we hope the reason for this temporary suspension of ordinary dealing will be fully understood on your side, and that you may be able to arrange with contractors to hold offers open for a short period until normal conditions are again established here.

28038. For H. P. Davison. Refer to our formal cable 28037 to E. R. Stettinius. I think it right to explain to you, for your and his private information, that during Cabinet crisis none of the leading ministers can really give proper attention to the matters in hand.

Further, in view of difficult money situation, the Chancellor of the Exchequer was insistent that no fresh orders should be placed. No one, therefore, will take responsibility for fresh orders or for any policy which may be reversed in the next few days by a new administration. I hope this may be arranged by Monday.—E. C. GRENFELL.

33131. 28017. 28027. As we are now advancing on loans one and two aggregate of $175,000,000, an additional loan of $150,000,000 during next three weeks is a very large amount for this market, quite irrespective of the collateral, and particularly in view of the fact that we wish to handle the matter quietly and make no public issue. Our talk with the institutions has been along the line that the action of the Federal Reserve Board has given such a set-back to the issuing of loans that it has been necessary to make other arrangements pending an improvement in the situation; that we have on hand his large volume of American and foreign securities, and that the shipping of gold to this market is being expedited to the fullest extent; that your estimate is that an additional amount of loans, say $150,000,000, during December, will take care of the entire situation as you see it for that period. Our important banking friends have assured us that they will stand by and assist, and as result of various conferences today, we expect that we will be able to carry the business through if no unforeseen obstacles arise. To give you something of the picture, this would involve our having a participation in excess of $100,000,000, the National City Bank, say, $40,000,000, the First National Bank, say, $30,000,000, and so on. Naturally, these institutions ask what is going to happen after the first of the year, and to that we are unable to reply. We, of course, cannot encourage an operation which will bind up the New York market without some way of liquidating it. As we have said before, we hope that conditions will soon improve so that we can make an issue, and certainly we could make a public issue upon these Americans which would undoubtedly go promptly. Otherwise, we would have to liquidate by sale some of the securities, and on this point we may point out that we have only about $15,000,000 Americans in British Government treasury account, unpledged so far as regards either of the United Kingdom loans. This phase of the problem is a most important one. As to rate, we should hope that under no circumstances would the rate go above 6% and that whatever the market for money might be, it would not go below 6%, as we cannot justify this pressure upon these institutions without holding out inducement of compensation when rates shall have declined. As we shall find it necessary to widen the list of participants as well as increase the amounts taken by present participants, it is necessary for us to immediately put the present loans in more definite shape. While we now have authority to pledge all or any part of the collateral in such a manner as in our judgment seems necessary or wise, you appreciate that, as the amounts of these loans increase, there will certainly be inquiries from boards of directors or bank examiners for some specific evidence of our authority. In order, therefore, that we may have something to show when required, we suggest that you cable us in substantially the following form:

"The Chancellor of the Exchequer and the Bank of England have written us letters instructing us to advise you that for all loans which you have made or may hereafter make either to the British Treasury or Bank of England, you are authorized to hold as collateral all or any part of the American or other securities in your possession or in transit to you and all or any part of the gold in transit to you, you to hold or use all or any part of the foregoing collateral in such a manner as in your discretion seems necessary or wise. Your authority continues as heretofore to make such advances either to the British Treasury or to the Bank of England as in our discretion seems necessary or wise."

J. P. MORGAN & Co.,
EXPORT DEPARTMENT,
New York, Dec. 11, 1916.

[Copy of telegram received 7 p. m. from Morgan, London]

28140. Referred to your 33131. Governor and Deputy Governor state they did not fully understand that Bank of England was obligor for number one account. After recapitulating conversation which J. P. Morgan and E. C. Grenfell had with Governor on October 14th and your cable 27998, which was embodied in letter to Bank of England on that date and acknowledged by them, Governor has written us letter as follows:

BANK OF ENGLAND,
London, E. C., December 11, 1916.

DEAR SIRS: I thank you for your letter of this date and am sorry to find that there has been a misunderstanding about the name of the borrower under your New York City house's special or no. 1 loan account. We had all along supposed that the borrower was the "exchange committee", as shown in your letter of June 13th to the Treasury, and their reply of June 15th, whereas you and your New York City friends have always (or, at any rate, since their telegram to you of October 14th) understood that the borrower was the Bank of England. And you tell us that the bank actually figures as the borrower of the large sum now outstanding on the account in question.

I understand from what you tell me that it is necessary that the bank should continue as obligor on that special account, as the "exchange committee's" name would not be acceptable as a borrower. I am, therefore, willing that the bank's name should continue to be used for this purpose, provided that the loan does not exceed $100,000,000, at any rate without further reference to me.

With regard to the instructions which Messrs. J. P. Morgan & Co. in their telegram 33131 desire that we should give you in writing, I do not see how we can very well instruct you to use security which does not belong to the bank as collateral for borrowings in the bank's name, but I am in a position to confirm to you the fact that the Treasury authorize Messrs. J. P. Morgan

& Co. to hold as collateral for loans, on the special or number one account, all or any part of the Government's American or other securities in their possession or in transit to them, and all or any part of the gold in transit to them, holding or using all or any part of the said collateral in such manner as in their discretion seems necessary or wise.

Subject to the limit of $100,000,000, Messrs. J. P. Morgan & Co. have authority to make such advances to the Bank of England (for account of the exchange committee) on that special account as in their discretion seems necessary or wise.

I am, dear sirs,
Yours faithfully,

(Signed) CUNLIFFE, *Governor*.

E. C. GRENFELL.

26950. Refer to 26519. Although it seems hardly feasible at the present moment to talk of a new collateral loan, I should like to know whether you think the security mentioned by J. P. Morgan in 26519 would be suitable. I suggest that in your reply you should lay it down very firmly that you cannot bind yourselves now or at any time to recommend any collateral that will be surely suitable, but that in any case it would be useless to contemplate such a loan unless all the securities had been collected previously and were in shape to be deposited at once. I mention this because it has been very difficult hitherto to convince the authorities that securities collected after a loan has been issued do not form a satisfactory security. This is the more important now in view of the fact that the United States securities are diminishing in volume.—E. C. GRENFELL.

MORGAN.

4AK2

J. P. MORGAN & CO.,
EXPORT DEPARTMENT,
New York, Dec. 6, 1916.

[Copy of telegram despatched 10 : 25 p. m. to Morgan, London]

33077. 26950. With situation as it is and with Federal Reserve Board having put investors on notice to examine security carefully for any foreign obligation purchased, believe it would be most unwise to pledge as security for any new loan, when that becomes a possibility, substantial proportion of securities with which our investors are not familiar and about which they might easily ask questions that could not be satisfactorily answered when judged by our standards here.

If we could see our way clear to suggesting a secured obligation for $250,000,000 at the present time, our recommendations for collateral, having in mind what might be available, would be as follows:

$150,000,000 consisting of, say:

(A) $60,000,000 Americans;
(B) $40,000,000 Canadian Pacific Ry.; and
(C) $50,000,000 in obligations of the Dominion of Canada and its Provinces and municipalities.

The other $150,000,000 to be made up of, say:

(A) $50,000,000 Argentine Railway debentures;
(B) $25,000,000 Grand Trunk debentures;
(C) $25,000,000 British Railway debentures; and
(D) $50,000,000 divided among Australia, New Zealand, South Africa, Japan, Egypt, etc.

This is entirely a tentative opinion without discussing the matter with our associates, as it is quite clear that until further time has elapsed since the Federal Reserve Board statement was made and until the money situation clarifies it is idle to talk of attempting another operation.

When and as it becomes possible to take this subject up we should confer with our friends here and make definite recommendations.

Foregoing represents simply a suggestion; but due to the great advantage in having securities available as soon as anything can be attempted, we believe it would be well for authorities to work toward having available the above amounts, with the very clear understanding, however, that by the time another operation becomes feasible one or more of the above-suggested issues may not be usable, in our judgment.

33518. 28297. Foreign securities. For E. C. Grenfell. Since my return I have looked into things pretty closely and am, of course, impressed anew with the difficulties we have to encounter in getting what the Allied Governments are entitled to expect. As I see it, even with the best will in the world and the utmost pressure, we cannot secure by loans the amounts the Governments want as fast as they might have them. The public which will invest simply in bonds is more or less limited and while it is increasing it has not unlimited investing power. We must, therefore, turn to another resource which we have hardly as yet tapped and which I believe could be used to great advantage in spite of being very distasteful to the British Government, that is the selling of some of their equities. There are, for instance, in the borrowed collaterals a very large amount of Canadian Pacific Railway shares. I quite understand that the Government does not like to enforce the sale of these shares, but I believe there are a large number of capitalists who would be glad to purchase something in which there is a certain speculative element, who would for instance buy $10,000,000 of some security which might rise when they would be disinclined to invest $2,000,000 in the form of a permanent bond. Foraestall Atlantic Leased Lines, San Paulo Railroad, London Lighting situation, Cuban Railways and others occur to me again, and I hope you will make it as clear as you can to the new Chancellor of the Exchequer and to the Premier if necessary to take the matter to him and that while I understand the exceedingly disagreeable character of our suggestion our advice is definite as it has been before, that we see no other way of accomplishing the raising of the necessary sums on this side. It is hardly necessary for us to point out that even if these shares are sold they can be bought back when the war is over and circumstances are different. We understand that it takes time to carry through pieces of business like those mentioned; meanwhile we may in a few days make some suggestions to you covering temporary measures.—J. P. MORGAN.

New York, Dec. 20, 1916.

[Copy of telegram despatched 8 p. m. to Morgan, London]

33604. 28406. For E. C. Grenfell. Without committing ourselves, we have no hesitation in saying that it is our present opinion that, if the money market works around in better shape as we rather expect and unless something very radical happens to change the situation here, we should hope to be able, sometime in January, to arrange for a very considerable secured loan, terms, date of maturity, and all other questions to be settled when we get a little nearer to time. It is at present our idea that this secured loan would have to be of very early maturity in order not to interfere in any way with the market for the much desired, but still very doubtful, long time unsecured loan. In connection with the foregoing we feel impelled to call your attention to 33559, which you will appreciate might have a bearing upon the situation.

You will understand that all foregoing is said to you partly in answer to your question and partly that you may realize that all our thought in this connection is governed by the great desirability of the unsecured loan, and we will endeavor to make all our arrangements in such a way as to further the chances of success in that undertaking.

Our judgment is that just at present it would be unwise to even begin discussing an Indian loan.—J. P. Morgan.

18554. Referring to your 14882. We have not received any further news from you in regard to the effect of the Federal Reserve Board statement and are without any recent advices from you concerning the possibilities of Allied

finances generally. We are, therefore, somewhat in the dark, the more so as we have avoided getting into close touch with the authorities since our cable in 18435. We accordingly would greatly appreciate it if you would cable us the present position, especially as Ribot has gone to London accompanied by Mr. Homberg.

HARJES.

EXHIBIT No. 2661

46A

J. P. MORGAN,
EXPORT DEPARTMENT,
New York, Dec. 27, 1916.

[Copy of telegram despatched 9 p. m. to Ministere des Finances, pour Harjes, Paris]

30100. 18554. Federal Reserve Board apparently has been making some attempts through unofficial utterances and otherwise to make it appear that in their statement of some weeks ago they were not directly discriminating against French and British credit, but effect of these utterances has been negligible, and the fact remains that the statement has been a hard blow to credit of allied governments in this country. We are obliged to begin the educational process, to a great extent all over again, but, of course, the process ought to be less difficult this time. The only concrete effect of the statement apparently has been first in the distinct curtailing by Great Britain of her purchases here; the announcement being made that munition contracts to the extent of $300,000,000 or $400,000,000 will be transferred for 1917 from America to Canada. Second, the more rapid influx of gold than ever before. Of course, both these developments are distinctly to the disadvantage of American trade. Furthermore, Canada being unable by herself to finance such large contracts, will look to the United States to carry her, and if United States does this she will simply have taken upon herself the burden of carrying these large credits for one of Great Britain's colonies and meanwhile have lost all of the compensating trade that goes therewith.

As to new financing, we are waiting upon word from the conference in London of the Allied financial representatives. The Federal Reserve statement was, as you will recall, immediately followed by the change of Government in Great Britain and E. C. Grenfell cabled us that they would not attempt to give us their further views as to future financing in America until after the conference which you mention.

Meanwhile, in reply to inquiry, we have told E. C. Grenfell that some time after the new year, if possible before February 1st, we should hope to be able to put out a new British short term loan secured by Americans and other mixed collateral. Frankly, we do not yet see our way through the operation with friendly institutions carrying so much of outstanding loans and with quotations for all of them below issue price, but we are in hope that light will come from some quarter and believe that we can carry through this projected issue. For your information, all Allied issues here show substantial decline, the city of Paris and other French municipals the greatest, now selling at from 6⅞% to 7¼% basis.

Notwithstanding the outlook as described, some of us are still in hopes that before the new year is too far underway we can undertake a long term unsecured French loan of $100,000,000, upon the basis of appealing strongly to the old-time sentimental friendship existing between France and America. We have in mind your 18405 regarding Allied loan. but see no present prospect of anything in that line. We have long had in mind that when time permitted we should endeavor to devise a new and large Anglo-French issue for the purpose of taking up outstanding Anglo-French loan 1915 as well as furnishing additional funds, but this is entirely in the future.

MORGAN.

31 BOULEVARD HAUSSMANN,
Paris, 31st, Dec. 1916.

Private ERS
L/R.

DEAR JACK: I have just had a long talk with Mr. Ribot and handed him your new year cable (which by mistake had been handed to the firm with the usual war cables), which he much appreciated.

He was in good spirits after his trip to London, from whence he has just returned with the answer to the U. S. note, which he hopes will duly come out in the next forty-eight hours. He was not tired, which surprised me considering the strenuous conferences which he had to attend during his three days' stay, and seemed desirous of speaking freely, though of course absolutely confidentially, of his impressions and of what had been accomplished.

He apparently, on the whole, had a very satisfactory visit, but he told me that he understood the British financial requirements to be something stupendous, and that it was a problem to know how they could be met, so much so that as regards America it had been clearly insinuated to him that England would really have to monopolize the House of Morgan for its own issues, and that France had better look elsewhere; in fact, that it had been even implied that France should make exclusive use, so to speak, of Messrs. Kuhn, Loeb & Co. Mr. Ribot said. of course, that that was out of question, and that he had told them that they in England had been the first to urge the use of the House of Morgan, etc., etc.

I reminded him that I had several times in the past suggested to him the possible advisability of their making use of some other firms' services for financing, if he thought he would be better served, which I did only recently when he so criticized J. P. M. & Co.'s action in the Treasury note matter, and that therefore he must know that I would not take umbrage at such a move if it would better the general Allied situation, but that I had always understood that the "Allied" financing was so closely associated that one house must of necessity control the whole; that. in fact, this was supposed to be the main purpose of our London conference in October. Moreover, its necessity had been clearly demonstrated by the Kuhn, Loeb municipality incident, etc., and that for these reasons I could not well understand London's suggestion and would be inclined to doubt its wisdom as regards the greater benefit to the Allies' cause generally.

He said that London did not seem inclined to agree with the contention that whether the City Bank, or any other new connection was used, or J. P. Morgan & Co., it would to a great extent be the same money or group which would be at work, and that they seemed to think that a French issue by a different group or under a different "etiquette" might be the best way out for him.

Mr. Ribot said he had only spoken in very general terms to them in London (as he was so busy with the note and other things) and had not discussed the American financial situation in detail, but that was apparently the impression he had gathered.

Mr. Ribot, however, said that anyway he did not agree with them and would always give the house of Morgan first chance.

I asked him for how long he was provided in America, and he replied that he was not quite sure; that he was now living on the commercial credit, but thought he had about enough to last him till the end of January. He added that he had enough neutral securities over in the States on which to borrow about *$50,000,000* and he might go to *$100,000,000*, but that you were now coming out with a *$300,000,000* collateral British loan and that February would probably see another issue, so he did not see where he was coming in.

Mr. Ribot then spoke to me about a new law to be passed promptly to put up the tariff of the French railways and that he thought this increase in tariff would provide practically *frs. 250,000,000* annually, which could well serve as a basis for a big railway loan in America having as collateral a first lien on this increased revenue, etc. He said that when the time came he would ask you frankly if you could handle the matter before doing it through anyone else.

His whole attitude was most kind and fair, and I told him I would like to write you fully on the subject to keep you posted and get your views. He replied that all he had told me (a great deal bearing on general war matters and not repeated herein) was most confidential, and he seemed to prefer my not writing to you too fully on the subject, but I told him that I thought it was only right for his own sake and the Allies generally that I should inform you of what I had heard from him concerning the huge British requirements and his own necessities so as to give you the possibility of coordination and, if possible, get your views or suggestions. He quite agreed to my writing you this, but I do not know whether it included my telling you of London's apparent suggestion to make use of others than yourself; and I think, therefore, that this information should not be made use of by you, particularly as, of course, he may somewhat have overstated the British attitude, or I may have exaggerated it in my own mind.

When you receive these lines, I would much appreciate a cable from you giving me your views, etc.

Of course, we are quite certain that you will handle the whole situation with the one and only consideration in mind of attaining the best results possible for the Allies. That is also, naturaly, our sole end, and we will be entirely satisfied with your decision; of that you can rest assured.

I cannot help hoping, however, that you may find some way of not disassociating the British from the French financing, if in any way possible. Of course, we have always understood that such a move would be most unfortunate for the Allies' own sake, and that the finding of financial accommodation in America was really a joint operation, and not separate ones, on behalf of the Allies; in fact, that it would be decidedly harmful if there was to be any kind of competition between themselves on the New York market.

From a purely selfish sentimental point of view—the material one does not count—it would be a very serious blow to us here in Paris. From the first hour of the war we have put ourselves at the disposal of the Government, and we have always been happy to think that the first Allied transaction with J. P. M. & Co. was, if I am not mistaken, the early cable transfers against gold deposits with us. We have ever since endeavored to do all in our power to help our friends; and the satisfaction of working for and assisting them has more than counterbalanced a good deal of the "upsets", and it would be a great sorrow for us to feel that we could not do so any more.

Above all, however, it is our earnest desire that the succession of three generations of Morgans, in one unbroken chain, as the devoted friends and supporters, I might even say "ally", of France, should be maintained, and that after all that has passed since the beginning of the present great struggle, no one else should come between you and this country to break the continuity of an inspiring and traditional association.

With my affectionate regards, believe me,
Yours ever,

H. H. Harjes.

P. S.—Please tell Davy that I lunched yesterday with General Nivelle, who asked particularly about him and expressed the hope that he would have the pleasure of seeing him back here shortly.

H.

2nd P. S.—2nd January.—I have just had another talk with Mr. Ribot and also a separate one with Mr. Homberg. From the latter I hear that the advice given to them in London to make use of other bankers in case of need was even stronger than described above, and apparently done in the spirit of wishing to have the field alone for themselves for their immediate requirements; but that both the Minister and Homberg, who takes great pains to be friendly, would not agree in any way and argued that, on the contrary, they would hope to always work with you.

H.

EXPORT DEPARTMENT,
New York, December 28, 1916.

[Copy of telegram despatched 7 p. m. to Morgan, London]

33836. Looking forward to the possibility of a fresh issue, we wish to put you completely in touch with certain features of the situation as follows:

First. The outstanding issues of foreign loans were quoted this morning as follows:

Anglo-French 5's	92¾, approximately 7¼% basis.
United Kingdom 2-year	98⅛, 6.20% basis.
United Kingdom 3-year	98½, 6.10% basis.
United Kingdom 5-year	98, 6% basis.
City of Paris 6's	96, 7% basis.
Other French municipalities	96½, 7.40% basis.

Second. If the new issue is to be made soon, it seems to us the market for the outstanding United Kingdom notes should be brought up to, at least, issue price and firmly held. Of course, the Anglo-French five's ought to be improved also, but the volume outstanding is so large that we do not see any effective method of doing so. The United Kingdom notes are still largely held by friendly banking institutions; but we have with the trustees of the first loan $2,000,000 and of the second loan $10,000,000, resulting from sales of pledged securities, which amounts could be used in supporting the market. Further, the amount available with the trustee of the first loan could, if necessary, be increased through the substitution of securities now owned by the Treasury in the place of deposited securities which have been borrowed. In this connection at the time of first loan we calculated on having $100,000,000 Americans to be utilized, if necessary, for repurchase of notes; but in order to avoid tying those all up in first instance, we actually pledged only about $50,000,000 Treasury American securities and $50,000,000 loaned American securities, hoping it might not be necessary to use more than $50,000,000 for repurchase purposes.

Third. Our own holding in second loan is approximately $16,500,000. You will realize that it is unwise for us to add further to our holdings of either of these issues for our own account; in fact, as former Chancellor and the Governor have both pointed out, it is important that we should keep ourselves prepared for further operations and be able to act on a large scale in temporary emergencies as at present.

Fourth. In view comparatively small amount Americans in Treasury account we see great difficulty in finding sufficient saleable Americans to take care of market position of first United Kingdom loan through method indicated above and have anything left over for protecting proposed loan; reason being that while we have a large amount of Americans available, they are almost all loaned securities and, therefore, under present instructions not usable for sale and repurchase of notes. To cure this defect we have three suggestions:

(A) The Government might purchase with the proceeds of the next loan some short-term American securities which could be used as collateral and, if necessary, sold to protect the market price of the issue.

(B) The Government might authorize us to pledge, with the expectation of selling some of securities deposited under scheme B, under which we have received approximately $14,000,000 Americans, excluding Canadian Pacifics, with the intention of covering in market later on so as to return the borrowed securities at the end of the 5-year or 3-year period, choosing, of course, for sale such securities as had a broad market and could be repurchased. In the improbable event of not being able to repurchase the Government is, of course, protected under its rights of purchase under scheme B.

(C) The Government might authorize us to sell some of the American securities borrowed under scheme A, involving, as we understand, immediate settlement with the depositors. We understand this not only runs counter to plans heretofore made by your authorities but also might be most disquieting to those who deposited the securities. You will know better than we whether the emergency which exists warrants a change in plan and a calling upon owners of these securities to make even greater sacrifices than they have heretofore been asked to make. It might, however, be wise to bring all possible pressure to have American securities transferred from scheme A to scheme B so that the Government would be empowered to deal more broadly with deposited securities than the scope of scheme A gives it. You will notice that the amount of Americans mentioned above as deposited under scheme B is comparatively small and would not in all probability be sufficient for the purpose required.

Fifth. We do not want you to feel that we are discouraged. We do think, however, your authorities should have clearly before them the softness of the market for existing loans and the danger of this interfering with the success of any future loan. We are setting out the case fully to you, as we desire your views and opinion.

28559. We will consider and will advise later.

J. P. MORGAN & Co.,
EXPORT DEPARTMENT,
New York, Jan. 29, 1917.

[Copy of telegram despatched 8:45 p. m. to Ministere des Finances, pour Harjes, Paris]

30397. For H. H. Harjes. Your letter of Dec. 31st to J. P. Morgan. You are correct in believing our desires to be first of all to serve the cause of the Allies, and at the same time the commercial interests of our own country, these two objects being in our judgment supplementary to each other. We are still willing, as always, to sink our own individuality for the good of the general cause, but in specific reply to your inquiry it would in our judgment serve no useful end to transfer the financial representation for France from our house to some other house active in our group and in allied financing. In such case practically the same amount of responsibility would still come on us as now, and yet we are doubtful whether any other house would be able to command the same degree of cooperation. In our discussion of this matter we do not mean to suggest Kuhn, Loeb & Co., but, as you can appreciate, should your Government be inclined to transfer to them the sooner this change were brought about the better for all concerned. We are, however, happy to accept your assurance that M. Ribot desires to have us give our continued efforts in France's behalf and you may assure him in return that we are zealous to do so. We trust that you will make clear to him that our greater activity in loan offerings for Great Britain has been manifestly and largely due to the fact that Great Britain has been able to command readily a much greater volume of collateral securities well known to American investors and has been able to make her loans attractive by large admixture of strictly American stocks and bonds. For your information we are glad to state that Great Britain has made no suggestion to us even in the remotest terms of confining our operations to that country, and we should think that if her authorities had it seriously in mind, as you indicate, they would almost certainly have given us some inkling of this thought.

As to immediate operations in behalf of France, we have cabled you 30353, and shall be glad to have you cable us more fully your ideas with respect to a French Railway loan. Meantime we urge upon you the desirability once more of canvassing carefully the possibilities in our 30331. Please assure M. Ribot of our earnest good will and continued desire to serve acceptably the cause of France.

[Copy of telegram despatched 11 p. m. to Morgan, London]

J. P. MORGAN & Co.,
EXPORT DEPARTMENT,
New York, Jany. 5, 1917.

35165. 28768. We are appreciative of Treasury's attitude and are making every endeavor to hasten proposed transaction. To this particular end, we have been sounding the public in the last few days, both personally and through various press items. We quite understand Treasury's reluctance, which we share, in matter of option or conversion, but we must point out to you that conversion into a 5-year bond could not be regarded today as any inducement.

Treasury's suggestion is in effect as follows: On, say, February 1st, 1918, holder of new United Kingdom note could convert at par into unsecured 5½% bond running until February 1, 1922. But the American investor can today purchase upon about a 6% basis a United Kingdom bond amply secured by collateral and falling due on November 1, 1921. This being practically coterminous with the suggested unsecured conversion bond. Or investor can obtain an Anglo-French bond maturing in October 1920 yielding approximately 7%. The reason why we deem it essential for the success of the proposed issue to offer a conversion privilege that has decided advantage over outstanding issues is this: Banking institutions are still such large holders of United Kingdom loan no. 2 that, owing to various limitations, with which you are familiar, it will be impossible to count upon them for subscriptions anything like so heavy in the proposed loan as before. Likewise, we cannot look to the munition manufacturers for heavy subscriptions as heretofore. In all the issues till now we have pressed them vigorously, and most of them still have on hand the notes of former issues which they have been unable to liquidate at cost. In fact, we believe it is not too much to say that the only munition makers who have liquidated their interests have been those who have been willing to do so at a loss. All of them who have not heretofore taken their loss are still carrying notes at figures far below cost.

Therefore we must rely more upon the individual investor and must devise some scheme that will appeal to him. We have in the last three weeks canvassed and discarded a large number of plans, all with same end in view. We were finally driven to return to a plan of conversion as the only one offering proper inducement. The plan outlined in 33945 represented, however, as already stated, purely our own suggestion, without consultation with anyone. We have just consulted tentatively with the most important members of our group, and to our regret find that they are unanimous in believing that investment buyers will not be attracted by conversion bond except with 15-year maturity instead of 10. Further, they are convinced that we must offer 1-year note upon 6% basis.

We have endeavored, without success, to urge upon group feasibility of at least plan outlined in 33945, but they are convinced that we should not have success in arranging for anything like amount mentioned under such plan. They iterate again the unfavorable features of the situation, namely, the discount at which all allied loans are selling, the fact that friendly banking institutions are so loaded up with United Kingdom no. 2 as to make their fresh participation to a large extent very doubtful, and, further, the banking community has been disturbed by a reiteration from Washington of the position of the Federal Reserve Board. This, as a matter of fact, is merely the official publication of the statement which was issued in November, but some of the newspapers seized upon it as a fresh outgiving and published versions which cannot fail to be harmful in their effect.

Our group has in the past been so uniformly devoted to the interest of the Allies and has shown such sacrifices and industry, and yet has been so nearly right in its composite judgments, that we ourselves are convinced that it would be unwise to attempt to proceed along lines which appear to them as unsuited to gain success in the present unfortunate state of our markets as to allied loan operations. As a result of these conferences and of our own sizeup of the situation, our advice is that the treasury consider granting us authority at once to arrange for an issue of $300 000,000 as a maximum and $250,000,000 as a minimum of 1-year 5½% notes, secured as arranged, to be sold to the investor upon a 6% basis, to bear a clause permitting conversion at any time prior to maturity into 15-year unsecured obligation dating from time of original issue, bearing interest at 5½%, with a privilege on the part of the Government of calling new issue at any interest period after 10 years has elapsed at 102½ and interest. There should be allowed for underwriting syndicate 1¼% and for our own remuneration ⅜ of 1%.

Favorable as these terms may seem to the investor, we should not feel like entering the undertaking without some arrangement with Bank of England for underwriting and purchasing, suggestions covering which we will cable you tomorrow. We are well aware that all the foregoing recommendation will prove distasteful to the treasury, but it has hitherto handled its matters here with such soundness and wisdom that we cannot think that it will permit to slip by what we regard as possible opportunity to secure for Great Britain the amount mentioned in 33945. The terms as therein outlined cannot on the whole be considered as discreditable to Great Britain in comparison with her domestic loans issued under such different conditions. If treasury should grant the authority suggested, it may rely upon our improving terms for its benefit should conditions here at time of issue permit. For instance, we have it in mind to try to force the issue of two maturities, viz, ½ total amount for 1 year and ½ for 2 years, each with same privilege of conversion. We also have it in mind, if it can possibly be accomplished, to offer the notes upon 5¾% basis, but should not be limited to these changes.

In considering this matter we ask you to bear in mind fact that we are in effect endeavoring to arrange for long-term unsecured loan for Great Britain, and while the charges incidental to 1-year note will seem onerous, these will be comparatively negligible if spread out over longer period. If terms of issue as to rate of interest and conversion can be agreed upon, believe we can deal with collateral as mentioned our 33077.

[Copy of telegram despatched 6 p. m. to Morgan, London]

35177. 35165. Referring to matter of co-operation from your side. We are, for obvious reasons, exceedingly anxious to keep our own commitment, both in underwriting and in purchases, down to the lowest possible point, but feel that the situation calls for strong and united action. The situation over here is so confusing and uncertain that we should be altogether doubtful of the wisdom of proceeding in the issue without having an agreement between the Bank of England and ourselves to underwrite equally $150,000,000, if necessary, and also to purchase in equal shares a total of $150,000,000, if necessary. In this connection we point out to you that no. 1 and no. 2 call loans now exceed $255,000,000, and that our interest in them is now $122,500,000. The chances are that the projected issue, even if successful, will hardly be sufficient to pay off the amount of loans nos. 1 and 2 as they will then exist. But for the moral effect it will be essential to pay off all participants, thus leaving us in a position still carrying a larger amount of call loans. We ourselves also have on hand approximately $15,000,000 United Kingdom loan no. 2, which, of course, shows a loss. We set forth these matters not in a spirit of complaint but in order to acquaint you fully with situation and with realization of difficulties inherent in it.

We hope you will appreciate that until we have had meeting of complete group, ideas as set forth to you are all tentative and in almost every instance subject to suggested changes. This is especially true today because of confused situation existing, as already set forth you in various cables.

New York, January 10, 1917.

[Copy of telegram received 4 : 45 p. m. from Morgan, London]

28945. Following is from treasury:

The treasury have received and carefully considered your 35165. In view of the earnest advice offered by your associates and yourselves, they accept your suggestions as follows:

1. You will arrange for an issue of $300,000,000 as a maximum and 250 as a minimum, of one-year 5½% notes, secured as arranged, to be sold to the investor upon a 6% basis, to bear a clause permitting conversion at any time prior to maturity into a 15-year unsecured obligation, dating from time of original issue, bearing interest at 5½%, with the privilege on the part of the Government of calling new issue at any interest period after 10 years have elapsed at 102½ and interest.

2. There shall be allowed for underwriting syndicate 1¼%, and for your own remuneration ⅜ of 1%. Treasury will, however, be glad if you can, as suggested, force two maturities, half for 1 year, half for 2 years, and secure a 5¾% basis, if at all possible. As regards your 35177, Bank of England will agree with you to underwrite equally $150,000,000, if necessary, and also to purchase in equal shares a total of $150,000,000, if necessary.

MORGAN.

EXHIBIT No. 2668

4AK2

J. P. MORGAN & CO.,
EXPORT DEPARTMENT,
New York, Jan. 12, 1917.

[Copy of telegram despatched 10 p. m. to Morgan, London]

35445. 35377. To the Treasury. Our delay in reply has been due to increasingly difficult market conditions and seeming impossibility of commanding sufficiently wide co-operation from selling houses to enable us to put through operation along precise lines suggested by us 35177, 35165, 33945, and confirmed by you in 28945. The changes which seem now to be in order are as follows:

1. We are hopeful of making one year maturity for only $100,000,000, and swinging remaining $150,000,000 into 2-year maturity, total issue thus being $250,000,000.

2. We find it necessary to eliminate entirely 10-year callable clause. Selling houses maintain, with much reason, that with market in its present condition there is little use in appealing to the investor on the basis of a long-term conversion if at the same time we nullify that privilege by inserting a callable clause at a price as low as 102½. We could, of course, suggest a higher callable price, but it would be so high as in our judgment to appear undignified, and therefore we think it much better to omit entirely any reference to this.

3. Allowance for underwriting syndicate should be 1½% instead of 1¼%, this comparatively small increase being due to various causes, but chiefly to fact that all underwriters who took on the last two United Kingdom loans have seen material loss through the declines which have taken place, and some method must be adopted to secure the continued co-operation of these underwriters by recouping them in some slight measure for this loss.

Also, 4. There should be a special ¼% allowed for group just as in instance of last loan. Changing the majority of maturities from one to two years make this charge for treasury less onerous. Further, you will remember that we were finally able to effect a saving to the treasury out of this sum, and without any commitment we should again do everything along that line that would be for the ultimate interest of the treasury.

5. Refer to 33836, we again strongly recommend using a portion of the loan not to exceed $25,000,000 in purchasing short term American securities suggested in paragraph 4, section A, unless treasury prefers to take over as part of foregoing amount some of the $14,000,000 securities mentioned in section B.

6. The same arrangement as to expenses as in United Kingdom loan no. 2, see 33945, paragraph 7. This is not a change but we are not certain that we brought out the point properly in our last cable.

7. We should be authorized in accordance with the general policy which the Government has adopted in England to state that if to any succeeding United Kingdom loan there be attached conversion privileges more favorable than to immediate projected loan then holders of projected loan should have the right to the new and better conversion privilege. We are not attempting to phrase this point accurately in this message, but to indicate the necessity for announcing some general policy here in accordance with the general principle adopted in England of protecting the investor.

We believe it to be unnecessary to enlarge upon the necessity for these suggested changes. In 35137 we pointed out that owing to the confused situation existing it might be necessary to make essential changes in our own tentative ideas, and even with the changes suggested in this cable we must confess ourselves as not over sanguine of brilliant success. We realize that all foreign credits here have undeservedly received a severe setback through the action of the Federal Reserve Board, resulting in decline of all foreign securities here. For this reason we feel that Government must shape up the forthcoming loans with such terms as in our judgment would go far to eliminate any chances of failure. Such a policy is the only method that can be adopted to save Government still more onerous terms in future operations which we are bound to look forward to. We hope that you will appreciate that being so keen to put through a new issue and realizing so fully the necessity for it we ourselves are inclined to suggest to treasury terms which we are hopeful of accomplishment, but which we find impossible of fulfillment when we start in to seek necessary cooperation of houses whose interest in the situation is more or less remote, or at best largely dependent upon our own urging.

Owing to heavy pressure of situation, we hope you will be able to forward definite authority by our opening Monday.

[Copy of telegram despatched 8:45 p. m., to Morgan, London]

35572. After receiving final authority from you, we contemplate issuing a statement in the following form, subject to change:

"The British Treasury has this day authorized us to issue a new loan of the United Kingdom in the amount of $250,000,000; to be dated February 1, 1917, to mature as to $100,000,000 on February 1, 1918, and as to $150,000,000 on February 1, 1919; to be secured by the same general assortment of high-grade collateral as prevailed in the last United Kingdom issue; to bear interest at the rate of 5½% per annum; the notes of each maturity to be convertible at par at the option of the holder prior to maturity, into a 5½% bond of the United Kingdom of Great Britain and Ireland maturing in 20 years.

"Increasing ease in money conditions and the prevailing demand for high-grade bonds have led us to suggest to the British Treasury the advisability of issuing at this time a security possessing the advantage of early maturity and at the same time giving to the investor the opportunity to obtain an obligation of Great Britain yielding an attractive interest return for a period of years after normal conditions shall have been restored."

35628. 30189. Fully understood and we have this day made announcement of the forthcoming issue in the terms of 35572, making only minor verbal change at the end of the last paragraph.

Very likely effect of terms of new loan will be to depress somewhat further outstanding loans, but this cannot be helped, for as already explained it has become necessary to lay out very attractive terms in order to secure support from investors. We have a feeling that your authorities may not fully appreciate the absolute necessity of the various changes which reluctantly we have been obliged to suggest as contrasted with our own original views as furnished, but we are sure you will make clear to them that situation, for this issue has been more difficult than in case of either United Kingdom loans one or two, and there has been much lethargy to overcome. We have given our best efforts unstintedly and we are now working very hard in hope of making loan so popular as to command some little premium which would be more help to your credit situation here than any other one factor.

We start to form syndicate tomorrow, hoping to hasten this so as to issue on the 24th of January and have new funds available on or about February 1st.

Will keep you fully informed.

35824. 30339. We have heretofore stated to group that we could keep market situation of these issues reasonably in hand through specific authorizations of sale with respect to the pledged collateral, and as to the new loan, the inference was perfectly clear, even if not definitely stated, that the same course would be followed. We think it most unwise to advise them, as we should feel compelled to do, that we had no specific authority as to selling any of the pledged securities. We, therefore, advise that the situation be left unchanged involving the pledge of approximately $22,000,000 of Treasury securities, leaving open for future consideration the question of releasing any unsold Treasury securities by means of substitutions of American dollar securities if their retention for the purposes of sale become no longer desirable.

30500, 35582, and subsequent cables. Treasury regret they are unable to approve the method of deferred payments suggested in connection with the purchase of agricultural tractors from International Harvester Corp'n and other similar cases. In Treasury's view the guarantee of Government orders by joint-stock banks in any form is in effect a weakening of British Government's financial prestige which would operate to prevent the acceptance of any other form of deferred payment in future. Moreover, Treasury could not in any case rely upon consent of the joint-stock banks for operations of the kind suggested, save to very limited extent.

28754, 33995. We quite understand your views that fresh United Kingdom loan should, if possible, be brought out at earliest opportunity. This should not interfere with negotiations for Londons here which have got to point at which we should wish to talk figures with finance committee of London Council, to be submitted to meeting on January 24th. It would therefore be helpful if, with Byrnes, we could talk total amount, duration, and net rate including commission of group and yourselves to the chairman of the council at once, not involving any definite commitment until January 24th.

We note you speak of smaller amount [now] than $50,000,000. We presume you would not wish to do less than $25,000,000 with an option, say, on a further $25,000,000. We can make no further progress without your views on above.

35763. 30296. Canadian Pacific Ry. Debentures and Preference. Will act accordingly. As to obligations guaranteed by or lease to Canadian Pacific Ry., regret that in pressure of work incidental to getting business under way, we did not recall your 29744, our 24991. After cabling you as per 35165, on January 5th and receiving no adverse comment that we felt we could arrange collateral as mentioned 33077, we proceeded as per 35445, 35525 and sent our invitations to proposed syndicate members on eighteenth, stating securities in group One to be made up as follows:

"Stocks, bonds and/or other securities of American municipalities and/or corporations (including among the corporations the Canadian Pacific Ry. Co.) and bonds and/or other obligations (either as maker or guarantor) of the Government of the Dominion of Canada, the Colony of Newfoundland, and/or provinces of the Dominion of Canada and/or approved Canadian municipalities."

This phraseology following that of former loan.

Our counsel hold that in phraseology as used, we should not take obligations of Canadian Pacific Ry. other than direct obligations. This situation may be altered by outcome of negotiations under way with Canadian Pacific Ry. toward refinancing such indirect debt and converting it into dollar form. Sincerely regret this omission to include indirect obligations of Canadian Pacific Ry.

and trust that inasmuch as amount is not large and is under negotiation, along other lines designed to assist exchange situation, treasury will not press this point. Counsel hold that, although we have mentioned Canadian Provincial and municipal debt among securities which may be included in group One, there is no obligation actually to pledge any of these. We shall probably include names of such securities in security list attached to pledge letter, as before. Referring to 33836, paragraph four, how do authorities plan to provide sufficient saleable securities, in view considerable period which must necessarily elapse before any definite results about refinancing Canadian Pacific Ry. debenture stock? Feel we should have some further light on this point. Reply to foregoing, also reply to 35704, should reach us our opening tomorrow, as we plan to advertise on Wednesday. You appreciate that, once having set machinery in motion, it is most unwise to delay unduly any customary step.

41584. 34475. Canadian Pacific Railway. For your information we understand that British treasury and Canadian Pacific Railway have now reached a working agreement. Question now before us is whether we can form a syndicate to sell these bonds at a price sufficient to warrant treasury in proceeding with transaction rather than waiting with idea that congressional action will grant credit to Allies promptly enough to solve their pressing requirements. Terms proposed are to attempt formation syndicate to offer at 97 approximately $200,000,000 of new Canadian Pacific Railway dollar bonds secured by deposit of debenture stock with syndicate commission of 2¼% plus ¼ of 1% as special confidential compensation to group of bankers hitherto interested active and helpful in Canadian financing. Our own compensation to be ¼ of 1%. This would mean a net price to treasury of 94¼. Syndicate to pay all expenses of offering and advertising. At price of 97 yield to investor on thirty-year bond is 5.20%. This compares with the following bases upon which outstanding government securities are now being bought:

United Kingdom no. 1	7%
United Kingdom no. 2	6¾ and 7%
United Kingdom no. 3	5⅝ to 6%
Last French loan	5.95%
Dominion of Canada 10-year bonds	5¼%
Dominion of Canada new domestic	5.35%

All things considered, we regard this price as satisfactory to the British treasury, and in view of pressing needs as far preferable to waiting upon indefinite action of U. S. Congress; in fact, reports from Washington, D. C., today are that projected U. S. issue for its own purposes may be much larger than anticipated. There is, moreover, a distinct tendency already visible here on the part of investors to withhold funds for investment pending Government announcement and to save all investible funds for Government issue—the same sort of spirit that has so fortunately prevailed in Great Britain. This, however, is factor making against ready sale of Canadian Pacific Railways. Another factor is that they are not legally available for life insurance companies, savings banks, or trustees in most important States here. Upon thirty year bond price to treasury named is about 5.38 basis on twenty year bond, if treasury should call at end of that period about 5.47 basis—neither figure being at all discreditable. We are explaining whole situation in detail to you, so that if and when you confer with officials you may see the picture of our position. You are aware of the present status of call loan and while owing to payment for French loan we are temporarily in better shape, we should deem it very imprudent not to take advantage of any such large possibility offering as this to create exchange. We are most helpful that congressional action will be generous and favorable, but, as you well know, it may be long delayed. They may decide to attempt to legislate covering taxation and allied credits at the same time. If so discussion would cause further delay. Situation for projected Canadian Pacific Railway operation will in our judgment grow steadily worse rather than better, therefore if we are to proceed at all feel it essential to begin formation syndicate Monday. Frankly, in view of rates of interests obtainable on outside Government issues, we are agreeably surprised to find as much confidence as we do that operation can be carried through on lines above described.

[Copy of cable despatched 7 p. m. to Morgan, Grenfell & Co., London]

41732. 34551. Denkstein. For your information, Treasury confirmed plan outlined in our 41584, but since that time financial community has been growing steadily cooler towards this proposition because of the several semi-official announcements from Washington: First, as to an impending issue of Federal Treasury bonds much larger than heretofore contemplated, which, of course, would be free from income tax; and, second, as to the probable heavy increase in personal income taxes, which would work against holders of these Canadian Pacific bonds, particularly against large buyers, upon whom the heaviest income tax would fall, and thus make absorption of $200,000,000 extremely difficult, if not impossible. For these reasons, frankly, we do not dare attempt operation except with exceedingly active co-operation of Treasury. We propose that Treasury authorizes us in our discretion to put it into underwriting up to $100,000,000, and into subscription, after issue has been made, up to an equal amount. We do not suggest that either one of these commitments should be as in former United Kingdom operations for joint account of Treasury and ourselves, for the reason that we have already $233,000,000 of commitments in the allied loan situation, and it would not, from the point of view of either Chancellor or ourselves, be prudent to go further. We have explained the whole situation to Sir Hardman Lever, who is in Washington, and he is cabling the Chancellor direct. In further explanation, we again stress the fact that if the operation were smaller, the financial community would feel much more confidence. It is the last $100,000,000 of bonds that they are afraid will be slow, and that inspires their present great reluctance. We point out to you that even if Treasury should be the gainer by this operation by only $100,000,000 net, it would be just that much better off than at present. Furthermore, as we figure it, Treasury has already accumulated upwards of $144,000,000 of these securities and might just as well utilize them for this operation, particularly as proposed form of indenture would make it possible to surrender its bonds and get back the collateral for return to depositors if it should wish to do so. The argument still holds good that it is wise to try to proceed with this operation now, because, as Secretary McAdoo explained confidentially to J. P. Morgan yesterday at Washington, it is uncertain just when and in what manner Congress will handle his proposals. You will further, we trust, make clear to Chancellor that this suggestion as to procedure will in no degree lessen our own efforts or those of our friends, and we have still hopes that we can work the operation out with as little final commitment to the Treasury as it has been obliged to take in previous operations. But circumstances being as they are, the only prudent thing, in our judgment, is to proceed in manner outlined. Promptness in action is essential.

MORGAN.

[File copy]

APRIL 14, 1917.

$150,000,000 Canadian Pacific Railway collateral bond issue.

Hon. W. G. McADOO,
Secretary of the Treasury, Washington, D. C.

DEAR MR. McADOO: A situation has arisen with respect to the above mentioned proposed issue upon which we desire to ask your counsel.

You are already aware that the British treasury's requirements in the immediate future are such as to make it desirous of securing funds from this issue if such, of course, be feasible and altogether in accord with the ideas of the Federal Government. We have understood that you cordially acquiesce in this desire of the British treasury and that you approve the proposed operation on the ground that, in effect, it is a private corporate transaction by the Canadian Pacific Railway; furthermore, however, that you have hitherto deemed it unwise that your general approval of the plan be made known.

We are, however, confronted with this situation: We, and bankers all over the country who might become members of the syndicate to issue these bonds, have a well grounded apprehension that if we should make the issue without allowing the public to be aware that it fits in with your own plans, the syndicate would immediately be subjected to severe criticism. It is, as you can see, altogether probable that the public press being uninformed in the matter would at once declare that the step was a very unpatriotic one, as tending to interfere with the much larger operations of the Federal Treasury which are impending. A good many people would be likely, we think, to say that this was an effort to "draw a herring across the trail" and at the last moment to seize upon some little profit in an operation which was calculated to injure the much more important operations of the Federal Treasury.

We are, naturally, unwilling to subject to this criticism the many banks and banking houses whom we should ordinarily invite to co-operate in an operation of this kind. In consulting with them we find, as you yourself well know, the utmost desire to co-operate in any effort that will serve the cause of the Federal Government, directly or indirectly. Naturally, however, they do not wish to be accused of being unpatriotic.

The question, therefore, arises as to whether you would not consider it wise to allow some indication to be made, even though in a negative way that this proposed operation is not designed to conflict with the operations of the Federal Treasury. Unless we can let that fact be made known, we feel that for the reasons set forth we shall have to abandon the operation—much to the regret of the British treasury and measurable, I presume, to your own regret. We had hitherto suggested some such phrase as the following: "This operation, though taking the form of a private corporate transaction, is being [carried out] for the purpose of serving to regulate the exchanges pending the completion of the Government's plans at Washington and is designed in nowise to conflict with such plans."

It is quite immaterial, of course, as to what form of phrasing is adopted just so long as we can make the real situation known to such an extent that the several hundred banks and bankers all over the country who might take a small participation in this operation would surely not lay themselves open to criticism on the ground of interfering with your plans, when in reality, as you know, they are all most loyal and eager, as we are, if you will allow me to say so, to co-operate in any way that will best serve the ends of the Federal Treasury.

This matter is such a pressing one and must be decided now so quickly that I am asking Mr. Martin Egan, of our staff, to be the bearer of this letter, to bring it to your attention early Monday morning, so that I may call you on the 'phone as soon thereafter as possible and learn what your wishes and decision may be.

I am, my dear Mr. Secretary, with great respect,
Sincerely yours,

——— ———.

[Copy of telegram despatched 6 p. m. to Morgan, London]

35997. For E. C. Grenfell. Subscriptions this morning aggregate $230,000,000. We feel confident whole amount will be covered and that Bank of England will be relieved entirely, except insofar as it may be necessary for us to suggest some concerted action for caring for market situation more thoroughly with respect to this and all outstanding issues.

On Wednesday I conferred informally at Washington, D. C., with Secretary of Treasury, Governor, and one [other] member of Federal Reserve Board. For your information Secretary of Treasury expressed apprehension as to increasing European loans here, fearing that possibly his own financial plans for moderate bond issues might be interferred with. Of course, to us this apprehension seems utterly groundless and we so expressed ourselves. Other two members of Board seemed generally favorable to our plans, including present issue, as designed for distribution among private investors and thus relieving banks. Also seemed very favorable to suggested drawing plan by American manufacturers, see 35582, 35822.

Holden's statement at annual meeting is headlined here today as criticism of Federal Reserve Board. Outgivings like this and, in less degree, Schuster's early in the week, while perfectly natural and very likely impossible to avoid, [are] calculated to make a difficult situation here worse. Banking community here, which may itself privately criticise Federal Reserve Board action, is likely to resent such criticism from abroad. This is only human nature.

The borrower's position, even though his resources may exceed the lender's, is always delicate during the period of borrowing operation and he should try to avoid public criticism of lender's possible shortcomings. Chancellor, if we may be permitted to say so, has fully appreciated this point by refraining at the time of action and since from the slightest public evidence of resentment.

Holden's statement that Allies are entitled to credit here to an amount of six times value of shipments of gold is likely to be strongly challenged by statement of bankers here that shipments of gold are simply settlement of trade balances for goods purchased. In times past, Great Britain has extended to America enormous credits, but none of them upon a basis of large or small American shipments of gold.

Our own view is that Allies are entitled here to any amount of credit they may desire for goods purchased but without particular reference to gold situation. The investing public here is more likely gradually to adopt more liberal view if it feels that its friends in Great Britain are not criticising it for not lending money fast enough.

Our only reason for making these suggestions is to benefit international credit situation for both America and Great Britain.—T. W. LAMONT.

[Copy of telegram despatched 10:45 p. m. to Harjes, Min. Finances, Paris]

30353. 18689. Have given most careful consideration. We venture to point out that you are mistaken in your premises inasmuch as in the new British loan now being put out here there are being offered both collateral and conversion features which had not heretofore been combined and which up to date have resulted in making the loan the most popular with investors which has yet been handled. In view of this we can see no reason why two attractive features should not be embodied in proposed French loan, but it would be distinctly unwise in our judgment to attempt two different kinds of operations for France at the same time.

If Government wish to borrow $50,000,000 we could attempt to work out a collateral loan for this amount, leaving open for future consideration the question of a further loan of similar size with an exchange feature but without collateral. Time would have to be given, however, for the first operation to have been cleared up and a considerable period elapse, at least 2 months, we should think, before second could be undertaken. Our advice would be to go in for a larger amount at one time making it as attractive as possible

18709. With the books still open for subscriptions on the British loan and probably no chance of closing until next week, making it thereafter necessary to leave market quiescent for a short time before bringing out new issue, it is, as you can appreciate, quite impossible at this writing to name even approximate date of issue for France, but we will urge every channel possible and shall greatly hope to be ready before the end of next month. You will appreciate that much depends upon attitude both of investors and American Federal authorities.

For your private information, Secretary of Treasury, who T. W. Lamont visited yesterday, stated informally that in view of pending necessity for American Government to issue bonds, he was beginning to feel personally considerable concern over the increasing amount of French and British loans offered. We sincerely trust that this apprehension, which in our own judgment is [not] well founded, will take no more definite shape, but we are bound to point it out to you as possibly having future bearing upon situation. You may, however, rely upon our proceeding as expeditiously as possible.

30440. 30429. 30428. Until international political situation is somewhat cleared and American investment market secures some inkling of where it stands, it will be as you will appreciate quite useless to discuss any immediate progress with various pending matters.

As to the situation in general, considering the shock occasioned by Germany's note and violent break in stock market, investment markets have held up here very well. Paris municipals having sold off the worst. Looking forward to future it would seem that if Germany backs down investment matters would imemdiately go back to their former status with good prospect of continued operations. With such an outcome improbable, however, and with chance of serious trouble with Germany imminent, it would look to us as though there would be a complete cessation in our investment markets for perhaps a fortnight until people can get their bearings and become adjusted to new situation and outlook. You yourselves have been through such readjustment and know that in case of hostilities it is inevitable. In such an event Federal Treasury may float immediately bond issue of $500,000,000, possibly $1,000,000,000, either amount being quickly absorbed. After such operation it would seem to us as if we ought to have continued good investment market here with fully as much facility and very probably considerably more, for your operations because of the increasing sympathy created among our people for the cause of the Allies.

In dictating this we are as yet quite in the dark as to what action Washington is about to take, which, of course, may be announced later in the day. Such action may serve to make the foregoing suggestions entirely negligible.

New York, Feb. 21, 1917.

[Copy of telegram despatched 9 p. m. to Morgan, London]

37870. For E. C. Grenfell. For the information of authorities. We learned through British Ambassador that the Governor of Federal Reserve Board, and the Secretary of Treasury had intimated to Sir Richard Crawford that insofar as they consistently could they would like to encourage foreign loans to aid our foreign commerce. Therefore Ambassador asked me to visit Washington, D. C., and call upon these two gentlemen. This I did on Feb. 14th. In analyzing situation with them we found they were very clear that they could not take any affirmative official action but that possibly some bridge might be built over which they could pass in reversing the attitude of the Federal Reserve Board taken on November 28th. That is that if some modification of plan then proposed could be made so that they could reverse their position without stultifying themselves they could consider doing so.

Yesterday J. P. Morgan, being in Washington, D. C., as member of Advisory Council Federal Reserve Board, discussed this subject with them. Sir S. Hardman Lever also being in Washington, D. C., was fully posted as to matters then discussed, and we have been conferring with him today in regard to this subject. We have no doubt that Governor Federal Reserve Board and Secretary of Treasury would be very glad to find some way to make the borrowing of the British and French Governments easier and we are working for some plan hoping we may be able to find a solution which will serve your interests and meet their requirements. We regret to state that we are very doubtful of any favorable outcome of this matter and would wish to warn against any encouragement on your part.

As stated this is merely sent for your information and we shall take great care that the British Government is not committed in any way without full consultation and approval on their part and have made it clear to these gentlemen that as yet we have not submitted even the suggestion to British Government.—H. P. DAVISON.

[Copy of telegram despatched 11 p. m. to Morgan, London]

39124. For E. C. Grenfell. Have sent following cable to Morgan, Harjes, and Co., Paris:

"For confidential information of authorities: I spent last evening in Washington, D. C., with Governor Federal Reserve Board, to whom made suggestion of statement which might be issued by Federal Reserve Board for the purpose of breaking present financial deadlock and improving chances for financing for Allies. I am informed by telephone today that Board have considered matter, approve in principle, are to reconvene on Friday, hoping to issue publicly statement Saturday which should be beneficial. By financial deadlock we mean that tense strain here owing to international complications has caused bankers throughout the country to remain practically in status quo, doing as little business as possible, result of which is, so to speak, financial deadlock. Owing to this situation and shipping embargo, exchange has pressed upon us heavily and we are therefore forced to do such financing as is possible to do at the first possible moment. This, we believe, may be in the form of short-term bills. After several conferences, we have ended in talking the short-term bill practically as heretofore proposed, but modifying it to the extent that the amount shall be limited and that there shall be held in Ottawa a gold reserve of 20% of the amount issued. Of course, there is no commitment on the part of the Board to this plan, but if their statement to be published is satisfactory and we believe that we could find a market for these bills, we unhesitatingly recommend their issuance. We have explained the situation to M. Bloch and to the British treasury official here. We are sending this for the information of authorities, as London is also being advised. We await instructions in regard thereto."

Sir Hardman Lever is cabling Treasury officials fully. As he has made clear, it is most important that we should be in a position to act promptly if at all.—H. P. DAVISON.

J. P. MORGAN & CO.,
CABLE DEPARTMENT,
New York, March 28, 1917.

41287. 34036. Thank you. You will be pleased to learn that French loan is over-subscribed, total subscriptions about $116,000,000.

For your [most] confidential information, J. P. Morgan conferred yesterday with Secretary of Treasury, whose attitude is in favor of granting ample credit to the Allies. We believe that in due course President Wilson is likely to advocate such a plan to Congress and we are in hopes that if adopted it might become effective on or about May 1st, thereby leading to a solution of all the exchange difficulties of the Allied Governments.

Of course, you are well aware that Congress may possibly be cool or very slow in the matter and hence we are unable to count definitely upon any action as yet. In case you discuss with Chancellor, please do not allow him to place too much early reliance upon this plan. Also, it is essential that nothing be said publicly about such possible prospects, since Government wish to avoid discussion till they can bring matter before Congress.

For your further information loans one and two aggregate above $340,000,000, our share $168,000,000. Situation is strained but is being taken care of day by day by further imports of gold as needed and various sales of securities.

We are [now] hopeful of proceeding promptly with large Canadian Pacific Railway operation and in case this is possible, think it desirable that it should take precedence over London municipal as being easier to handle and furnishing many times the amount of exchange.

MORGAN.

EXHIBIT No. 2692

[Extract from "Henry P. Davison", by Thomas W. Lamont, 1933 edition]

Page 187: After the war was well over, the cry began to be raised that American bankers had dragged the United States Government into the conflict in order, as it was often put, "to make good their foreign loans." Of course, any such charge was so absurd and unwarranted as to be ridiculous. The total amount of unsecured loans issued in America by the British and French Governments and outstanding at the time America entered the war, did not exceed $500,000,000, and there never could have been any valid doubt of their goodness. At the time of their issue they had been widely distributed throughout the American investment community, and were not—contrary to common belief—held in bulk by bankers.

EXHIBIT No. 2693

L/R.

PARIS, *5th Jany., 1916.*

DEAR JACK: Since my letter of the 3rd inst., I had to see Mr. Ribot last evening in regard to Chicago, Milwaukee & St. Pauls and other American bonds now being repurchased here.

We had quite a lengthy talk and generally went over the present situation of French requirements in the United States.

The Minister spoke with regret of the attitude of the American public towards the obligations of his as well as of the British Government, and how unfortunate it was that Americans had such a poor opinion of France's capacity to meet the present crisis, as evidenced by their indisposition to loan money except against American collateral, which could be done in England, but which, so to speak, did not exist in this country.

He spoke of having received a letter from Mr. Homberg reporting this unsatisfactory atmosphere, and in which Homberg mentioned his endeavors to raise a loan of $60,000,000 for the railroads here, which Davison was not in favor of. The Minister added that he was not himself well disposed towards such a loan, as the banks were now much disinclined to increasing their liabilities indefinitely by further drawings, and besides he did not know whether the railroads needed as much money now.

All of this led to my telling him that I had written you to find out if there might not be a new method of raising money, and we roughly went over what I wrote you in my letter of the 3rd.

He told me that he was entirely in accord with the principle of such a plan; in fact, that he had thought at the time when the Anglo-French Loan was issued in America that it might have been better if these bonds could have been taken up by a company formed of a consortium of the highest banking interests in America, who would have issued their own securities thereagainst. He asked me what I thought the capital of such a company ought to be. I told him that I had not given it enough thought, but that it would no doubt have to be sufficient to represent the margin for the collateral taken up.

He said that he believed it would be possible to get a consortium of the prime banks here to put up a proportion of the capital required, and asked me what proportion I thought the French interests should furnish. He further said that, for instance, if such an institution could be created to raise, for example, frs. 1,500,000,000 for the Government, that he would be prepared to examine the question, and felt favorably disposed towards the idea of depositing as collateral one-third of the amount in gold "à l'étranger", one-third in Government securities, and possibly one-third in French Railway bonds.

His idea, as I understood it, was, in other words, that such an institution might act both for Government requirements, receiving a certain kind of collateral for that, and also for industrial and commercial needs, such as the Creusot, etc., when the institution could receive other collateral.

As you already know, the question of finding here genuine American securities to put up as collateral is fraught with very many difficulties and perhaps impossible; but on the other hand, there is no doubt one could put into such a company as collateral a lot of securities which represent real intrinsic values of the highest grade, such, for instance, as the Rio Tinto shares, South American securities, and other nonbelligerent securities or, at least, not directly affectable by the war.

I am writing you this letter very much in a hurry and fear that it is not as explicit as it should be, but I cannot help but think that the subject is really worthy of very close examination; and I should be greatly obliged if, after you have had the time to think it over, you could cable me your views generally.

Another feature which particularly appeals to me in this proposition is that, in order not to burden the French banks who would subscribe in dollars to the capital of such an American company with the present high rate of exchange, which might mean a loss to them subsequently, it could probably be arranged that they be allowed to ship gold to pay for the investment, and that therein we could find a means of satisfactorily settling our "A" account.

With kind regards, believe me,

Yours very sincerely,

H. H. HARJES.

J. PIERPONT MORGAN, Esq.,
New York.

(In ink:) P. S.—I asked Mr. Ribot not to put Homberg wise on this matter till I had had a chance to hear from you, this in view of Homberg's expressed desire to handle all such matters exclusively and directly himself, which would greatly complicate matters now. I do not know whether Mr. R. will do as I suggested, but I hope so, & anyway, for the time being, I would leave him—Mr. Homberg—out of these negotiations, as he will only mix up all the cards.

H.

[Copy of telegram despatched 10 p. m. to Min. Fin. Harjes, Paris]

11882. 16496. Referring to your letters January 2d and January 5th, our thoughts, which are only tentative, are about as follows:

We might organize American corporation, president of which would be, perhaps, Robert Bacon, and on board of which would sit representatives of our firm, Brown Bros. & Co., and leading financial institutions in U. S. A., capital of such corporation to be $15,000,000. "A" stock to be subscribed by U. S. A., and $15,000,000 "B" stock to be subscribed by France; "A" stock to be, in effect, a preference stock. Such corporation to lend to France for 3 years, say, $215,000,000, to be secured by approved Government bonds of nonbelligerents, with 20% margin. Such corporation to issue its own debentures to amount of $185,000,000, secured by these same bonds, with 25% margin, balance of bonds and obligation of French Government to remain in treasury of corporation. We would hope that the entire cost of such an operation to French Government would not exceed 7½% per annum, and possibly might be below 7¼%. This cost would include the actual interest paid plus proper compensation to American corporation, plus proper brokerage to our group here and to yourself, plus actual expenses; but as we say, above total we hope would come within the per-annum rate mentioned.

If this could be accomplished, we think it would be a very handsome thing for French Government. Our difficulty would appear to be not so much the total interest cost to France as the form in which we could cast the operation so as to pass muster politically over there. For instance, in order to organize such a corporation here and have it subscribed by the right people, we must make the undertaking attractive. The unfortunate part of our suggestion is, that the profit to the corporation would be figured upon the relatively small capitalization, compared with the loan furnished by our group, and sight is apt to be lost of the fact that the corporation is but the medium through which an enormous and most difficult task is undertaken in which we and associates lend our names and energies. Therefore, all thought should be upon the loan and not upon methods. In the Anglo-French loan, 1915, operation, there has been less than no profit, and now the large financial groups here have reached the point where they will take no further steps unless they are assured of reasonable profits.

The French stockholders would receive the rate of interest which the corporation found it necessary to pay upon their debentures. From our point of view, French Government ought not to object to this latter, for the reason that it would be taken out of one pocket and go into another, and Government's subscription would be made solely for the purpose of showing American group confidence in the whole plan, this being a necessity. Of course, if French holders were private institutions, as you suggest in your letter, they would not be satisfied with this arrangement. We are, however, at a loss to suggest any other, and we must again point out the extreme difficulty of such an operation, even at best.

Off and on, ever since receipt of your letters, and especially during the last week, we have given practically entire time of firm up to Jack's sailing last night, to consideration of your suggestions—have canvassed situation discreetly in all important directions, and plan outlined above is only one we can devise by which large credit can be secured.

If Goverment were able simply to consider the one question as to whether they were securing at a fair rate of interest what they require, and could disregard, in a way, figuring on the American end, it would greatly facilitate the operation. Another way of expressing terms is that French Government would pay all costs of operation and a commission to corporation of 1% per annum on loan from them, distributable to class A stock, and ¼% per annum to Brown Bros. & Co. and ourselves for division with you and our associates.

Before sending foregoing we have conferred with Homberg, stating our embarrassment in not keeping you posted, whereupon he consented cheerfully to our giving you information for yourselves only, but again pointed out the embarrassment which would result if you were to use this information with Ribot, French Min. of Finance, to whom he has not yet communicated, as he wishes to discuss the matter with us further before doing so. We assured him that our purpose was merely to keep you informed, and that he need have no question about your in any way interfering with his conducting negotiations. We are glad to inform you of foregoing, as in due course, if approached by Ribot, you will be posted and can point out to him the various advantages of the proposition, but will, of course, say nothing to him until he has first approached you after having learned the terms and conditions proposed from Homberg.

[Copy of telegram despatched 10 p. m. to Ministere des Finances pour Harjes, Paris]

11919. 11882. Strictly confidential and for your information only. We have had long discussion with Homberg this afternoon and have made tentative suggestion to him along following lines which he proposes to submit to Ribot, and will also submit our suggestion 11882. We to organize an American corporation with $25,000,000 all American capital, corporation to lend French Government francs in Paris to an amount in francs equivalent to $100,000,000 firm before underwriting sought here or alternative francs equivalent to $200,000,000 firm after underwriting secured here. Rate to be determined later. Proceeds to be placed to the credit of the French Government in New York City at approximately current rate of exchange of the day, say, francs 5.90. All expenses of the corporation to be paid by it, including interest and commission necessary in placing American debentures, except commission of 1%, which is to be paid by French Government to our group for division as per our 11882.

Loan to be three years and to be paid in Paris in francs. Simultaneously, separate contract to be made by French Government with Bank de France and guaranteed to us by French Government that at maturity of loan Bank de France will furnish dollars in New York City for payment of loan at rate of exchange, say, approximately 5.55. For your information, this would be equivalent to 6% profit on the loan for the three years, or at the rate of 2% per annum which would go to the American corporation as profit out of which the above expenses will be paid.

To summarize net proposition is we furnish the capital $25,000,000, we pay all expenses, we expect to loan them $200,000,000 at fixed rate of interest, they are to pay us 1% upon the amount of the loan as banker commission and we make six points profit in the exchange situation. This meets objection of Homberg: First, obviates the necessity of French capital; second, makes firm commitment; third, avoids embarrasment of commission for corporation, same being found in the exchange.

We believe foregoing sound and feasible. You understand terms regarding collateral and so forth are practically as per our 11882. We believe also that undertaking of Bank de France to place dollars in New York City at 5.55 three years hence is reasonable because prospect of normal exchange at that time and their power to ship gold if exchange is not normal will show a profit to them on the exchange transaction.

[Copy of telegram received from Morgan, Ministere Finances, Paris]

16646. Had long conversation with Ribot who read e telegrams and letters from Homberg. *Net result is:*

Ribot agrees to general principle that corporations should be formed of United States capital only. He does not wish enter into the exchange transactions indicated in your 11919, prefers sugegstion that all [underwriting] commissions and expenses should be settled at first on commission basis. Feels also that return to corporation of 1% per annum on total amount borrowed which he figures would pay them dividend of certainly not less than 16% if $200,000,000 loan is higher than should be required. You must remember that although total expenses would not make rate above 7½% in United States he [will] in addition have to pay probably up to 1½% per annum to holders of securities here in order to borrow them. This will make his whole loan cost him approximately 9%, which he does not believe he ought to face. If you do not think it possible to reduce the profits of the corporation materially so that dividends shall not be out of the ordinary, I believe he will decide not to deal with us any further. I know you will go as far in this direction as you can in your desire to help French Government in its difficult task. Whether he can find others to deal with or not I do not know; but, of course, he is dealing perfectly loyally with us until he has made up his mind whether to proceed or not. Cable your answer as soon as possible as must return to London Wednesday and I should like to have another interview with him on Wednesday morning.—J. P. MORGAN.

[Copy of telegram despatched 11 p. m. to Ministere des Finances pour Harjes, Paris]

12102. 16662. After two days of continuous thought and confidential conference with our best authorities this subject, we have arrived at following conclusions:

Subject to conditions named hereafter, we would endeavor to form a corporation with all American capital to purchase from the French Government their 3-year 5% obligations, on a 7½% basis, net to them an amount approximating $100,000,000. This loan to be secured by collateral to be satisfactory to and approved by us, it being our understanding that its general character would be Government bonds of nonbelligerents, of which the Argentine Gov't. issue would constitute at least one-quarter. The Government to put up a margin of 20% of same security, collateral and margin to be based upon the market value in Paris calculated in dollars at approximately the current rate of exchange at the time of execution of contract, bonds to be delivered in New York City free of expense to the corporation, with power or rehypothecation, the Government contracting to keep the margin good, interest on the nominal amount of the loan at 5% per annum, to be payable semiannually in New York City. Corporation to have option of converting any or all of said obligations into a like amount, par for par, of French Government 20-year 5% dollar bonds.

The net of the foregoing is that if the French Government were prepared to accept the proposition, having collateral in hand, we are confident we could make now firm bid on foregoing basis. You will appreciate it would be but harmful if we were to proceed further to the point of securing an underwriting, in view of the necessary delay in the securing of the collateral. It is our idea to convey to you the belief that if these terms are generally acceptable and if conditions then prevailing are about the same as now, we will be able at the time of concluding the contract to make a firm commitment along these general lines, always having regard for the interests of our client to the extent that conditions at the time of execution of contract might permit, but of course we cannot now commit ourselves to do so for such a period in future.

All are agreed that $100,000,000 is the maximum amount it would be safe to undertake at this time, and that if $200,000,000 is desired we should first undertake the $100,000,000, hoping the success of the undertaking would make it possible to repeat the operation.

We have had constantly in mind the political exigencies of the French Government as repeatedly emphasized by you and as again recently urged by J. P. Morgan, but we cannot change conditions as they exist in America today. Recent developments of our administration's controversy with Germany are making our investors more wary even than before. Further, for your private information, Dominion of Canada is pressing here for $100,000,000 loan, likewise Russia for same amount, being in active negotiation with strong group here for credit, cost of which in this market to Imperial Russian Government will be not less than 9%.

In view of all these conditions and of known cost to British Treasury in the mobilization and sale of American securities, we consider proposed cost to French Republic as highly creditable to it. It is best that we can arrange, and we would point out that owing to these other two large pending negotiations, it would be wise for French Government to come to prompt decision.

J. P. MORGAN & Co.,
EXPORT DEPARTMENT,
New York, June 28, 1916.

[Copy of telegram despatched 11 p. m. to Min. des Finances pour Harjes, Paris]

13307. For H. H. Harjes. Confidential. Financial situation, with Mexican trouble looming up, becoming uncertain; therefore, it is of the utmost importance to French Government's interests to rush shipment of total amount securities necessary for loan. Every measure for this end should be undertaken, and no stone should be left unturned to impress situation upon officials. Allow us to make situation clear. We and a few immediate associates can probably advance to France from week to week what her moderate requirements may be against collateral in transit or in your hands—see 13297 "second", but, of course, these advances would not be comparable in amount to proposed large loan.

Impossible for American corporation to issue its collateral debentures in part, and difficult until securities are lodged here to enable trustee to certify as to same.

Syndicate which we must form in order to underwrite sale of these notes will not in these troubled financial times, before alluded to, undertake commitment unless with possibility of offering to public immediately thereafter. This is reason why it is essential for French Government's interests to rush total shipment.

From our point of view, it would be advisable to take most unusual measures if necessary, such, for instance, as the despatch of two warships to Canada carrying the securities, with branch of Treasury Department established on board to enable counting and tabulating en route, and thus save perhaps 10 days' time. If this work of tabulating securities and landing herein New York via Canada is long delayed financial situation may become such as to make operation most difficult. You will remember that we have right along maintained that operation could be successfully put through unless greatly changed conditions arose.

This possible war with Mexico, and likelihood of United States Government issuing loans on its own account, may bring about radically changed conditions; therefore, we urge all haste for completion of operation.

We hesitate to burden you with this matter, but are concerned lest we are unable to make ourselves entirely clear to Homberg, his thought, perhaps, being that we are trying to introduce some new element into the situation, whereas we are merely endeavoring to point out for the benefit of your friends advisability for haste in shipment.

Please handle this matter with the utmost discretion.

J. P. MORGAN & CO.,
EXPORT DEPARTMENT,
New York, July 17, '16.

[Copy of telegram despatched 12 Mid. to Morgan, London]

23206. For E. C. Grenfell. 20370. For your information, the underwriting syndicate for the $94,500,000 3-yr. 5% notes of American Foreign Securities Co. completed today. We expect to make wide public offering of notes on Wednesday, price to public 98, syndicate underwriting at 96, selling commission and other expenses to be paid by syndicate. American Foreign Securities Co. loans $100,000,000 to French Government at 7¼% per annum, although Government had agreed to pay 7½% if necessary. Newspaper comments on loan have been favorable, and we now anticipate successful issue, although flurry in money here last week gave us some concern. All last week we made very free offerings, both of call and time money, which materially tended to quiet fears of lenders. Your gold shipments, of course, also had a pronounced effect. Until effect of French note offering upon money conditions and reception of notes by investing public is known, we hesitate to express opinion as to proper time for similar operation for your account. We will, however, watch situation closely and keep you posted this point. We have been giving much thought to methods for handling British Government situation and, in view of Government's desire for greatest possible expedition, have following to suggest as best immediate step: That we quietly organize corporation, say, of $10,000,000 capital, officers and personnel to be from within our own office, stock to be closely held with First National Bank and National City Bank, N. Y., participating. In due course, perhaps almost immediately, this corporation would appear in market to borrow money as any other borrower, it loaning British Government not only its capital, but such sums as it would borrow upon such securities of British Gov't in our possession as we deemed wise, the corporation to rehypothecate these securities for such loans as it might make either on demand or on three, six, nine months or longer, the collateral to be deposited with the lending institutions or with their correspondents in New York City if loans made by out-of-town institutions, as is universal custom in the Street. For this service corporation would make a proper charge. By this means we would hope to borrow and continue borrowing by renewals a considerable amount, perhaps, $200,000,000, and we would hope that matter could be so handled that it would not conflict with formation of other corporations and offerings as per our 21457. In any event, this would, we believe, enable us to move at once and relieve situation and give us time for formal operations. Proposed corporations also should be of continuing advantage in filling the gaps between the formal operations and would be designed to be of advantage to you in the conditions as they develop. We would expect the corporation to so arrange loans as from time to time to permit of substitutions which would allow us a freedom of action in making sales of the pledged securities or in carrying out formal operations. You appreciate that if our proposed plan of organization and personnel is carried out it is substantially equivalent to our lending our own credit to plan, which under the circumstances, we are very willing to do in the manner indicated. While we, with our immediate associates, have been able to lend an aggregate in excess of $150,000,000 without special comment, we ourselves at one time were obliged to advance in excess of $80,000,000 and had almost reached the limit of prudence in view of the possibility that some of our associates might have found it necessary to call more or less of their participations for their regular customers. Please consider and cable us at once if authorities approve in principle, in order that we may immediately take steps, after which we would hope to act upon the formal offerings as soon as practicable along some such lines as suggested 21457.

EXHIBIT 2700

AMERICAN FOREIGN SECURITIES COMPANY THREE-YEAR 5% COLLATERAL GOLD NOTES—SYNDICATE AGREEMENT JULY 17, 1916—J. P. MORGAN & CO., BROWN BROTHERS & CO., SYNDICATE MANAGERS

An agreement, made the 17th day of July 1916 by and between—

J. P. Morgan & Co. and Brown Brothers & Co., each a copartnership (hereinafter called the syndicate managers), parties of the first part, and

The subscribers hereto (hereinafter called, severally, the subscribers, and, collectively, the syndicate), severally, parties of the second part:

Whereas a corporation, bearing the corporate title, American Foreign Securities Company, hereinafter termed "the Corporation", has been or is about to be organized under the laws of the State of Delaware, with a capital stock of $10,000,000; and J. P. Morgan & Co. and Brown Brothers & Co. have negotiated, conducted, and completed arrangements for the making by such corporation of a loan of $100,000,000 to the Government of the French Republic, and as compensation for their services in the premises are to receive from the corporation one-half of one percent (½%) of the principal amount of the loan; and

Whereas the corporation is to issue $94,500,000 principal amount of its three-year 5% collateral gold notes dated August 1, 1916, bearing interest at the rate of 5% per annum, payable semiannually, and maturing August 1, 1919, but subject to redemption on February 1, 1917, at 101½% and interest; or on August 1, 1917, or February 1, 1918, at 101% and interest; or on August 1, 1918, or February 1, 1919, at 100½% and interest; and

Whereas the syndicate formed upon the terms of this agreement is to empower the syndicate managers to purchase the said notes of the corporation at the price of 96 percent of the principal amount and any accrued interest; and

Whereas the syndicate managers are to manage the syndicate, and in behalf of the syndicate are to offer for sale the notes so purchased by the syndicate at the price of 98 percent of the face value of principal and any accrued interest, or at such other price or prices as in the exercise of their unlimited discretion from time to time they shall deem expedient:

Now therefore, in consideration of the premises, and of the mutual promises herein contained, the bankers and the syndicate mutually have agreed and do agree as follows:

First. The subscribers hereby authorize and empower the syndicate managers in behalf of the syndicate to purchase from the corporation, at the price hereinabove stated, the $94,500,000 principal amount of the three-year 5% collateral gold notes of the corporation hereinabove described. For the purpose of providing the syndicate managers with moneys to make payment of the said purchase price of the said notes, and for the other purposes of the syndicate, the subscribers, according to the respective amounts of their several subscriptions hereto as hereinafter provided, severally agree to pay to the syndicate managers 98 percent (98%) of the principal amount of said notes and any accrued interest, so much of said payment as is not required for the purchase of said notes or the other purposes of the syndicate to be distributed as hereinafter provided.

On subscribing to this agreement each subscriber shall indicate opposite his name the principal amount of the notes for and on account of which said subscriber is or shall be bound to make payment at 98 percent, and any accrued interest as aforesaid. Each subscriber agrees that from time to time, and at any time on or after this date, he will make payment to the syndicate managers at the said rate for and on account of such amount of notes so indicated in his subscription, when and as called for by the syndicate managers, and without reference to the receipt or the possession by the syndicate managers or by the subscribers of any of the said notes. The term "notes", whenever used herein, shall be deemed to include receipts and certificates issued for payments on account of the purchase price of such notes.

Second. The several subscribers shall be called upon to make such payments of cash, in respect of their several subscriptions, only ratably according to the several amounts thereof; but to the full extent of his several undertaking, each subscriber shall be so responsible, regardless of performance or nonperformance by any other subscriber.

In the same proportion, except as otherwise herein provided, each subscriber shall be entitled to share in the benefits, and shall bear any loss resulting to the syndicate under this agreement.

Nothing herein contained shall constitute the parties hereto partners, or shall render any one of the subscribers liable to contribute more than the amount of his several subscription.

Third. The syndicate managers may issue to the several subscribers suitable receipts in respect of moneys paid or advanced hereunder, or certificates of interest of such tenor and form as they may deem suitable. Such certificates of interest and all rights and obligations hereunder of the respective subscribers may be made transferable in such manner and on such terms and conditions as the syndicate managers may prescribe; but no transfer hereunder shall be valid unless assented to in writing by the syndicate managers; and, unless otherwise expressly provided in such assent, the transferrer shall continue to be liable for the payment of the unpaid part of the transferred subscription until the same shall be fully paid.

Fourth. In case of the failure of any subscriber or of his transferee to perform any of his undertakings hereunder as and when called upon by them, the syndicate managers, in behalf of themselves and the syndicate, shall have, and at their sole and exclusive option they may exercise, the right to exclude such subscriber or his transferee from all interest in or under the syndicate; and in their discretion, without any proceedings either at law or in equity, in such manner and on such terms as they shall deem expedient, and without demand or notice, they may, at public or private sale, dispose of such participation or of any interest or right of such subscriber or of his transferee hereunder, and thereupon all interest and right of such defaulting subscriber or his transferee hereunder shall cease and determine. At any public sale under this article of any interest or right of any subscriber or his transferee, the syndicate managers, or any party hereto, may become purchaser for their, or for his own benefit, without accountability, except for the purchase price. Notwithstanding any sale, whether public or private, the defaulting subscriber shall be responsible to the syndicate managers for the benefit of the syndicate for all damages resulting from any such failure on his part not exceeding the amount unpaid on his subscription hereto with lawful interest.

Fifth. The syndicate managers shall have full power, in their discretion, from time to time in behalf of the syndicate, to agree with the corporation upon the terms of, and to perform and fulfill, the note purchase from the corporation above referred to, and also from time to time to enter into any agreements with the corporation modifying such transaction as they may deem expedient. Any and all contracts with the company made by the syndicate managers shall be open to inspection by any subscriber at the office of the syndicate managers.

Sixth. The syndicate managers shall be the managers of the syndicate, and in behalf of the syndicate they may make any and all arrangements, and may perform any and all acts, even though not herein provided for, that in the exercise of their unrestricted discretion they shall deem to be expedient in order to consummate the purposes of this agreement, or to promote or to protect the interests of the syndicate.

The enumeration of specific powers in any article of this agreement shall not be construed as in any way abridging the general powers by this article intended to be conferred upon or reserved to the syndicate managers.

Seventh. The syndicate managers shall have authority from time to time and at any time to incur such expenses as they may deem proper in carrying out, or in endeavoring to carry out, this agreement or in doing any act or thing which they may deem to be in the interest of the syndicate, or necessary or proper in discharge of any of its obligations; and all such expenses shall constitute and shall be a prior charge in their favor upon any and all moneys, notes, and property by them received and then held hereunder. Any and all moneys by them received hereunder for account of the syndicate shall be held by them or either of them as syndicate managers in general account. They also shall have power and authority finally to fix and to pay all compensations of depositaries, brokers, agents, and counsel, or others, and in the expense account may be included such commissions to brokers and others (whether or not parties to this agreement) as compensation for services rendered, as the syndicate managers from time to time may have determined and have paid or have become obligated to pay.

Eighth. The syndicate managers shall have full power as in the exercise of their unrestricted discretion they shall deem to be for the interest of the syndicate, from time to time, in such manner, upon such terms and for such prices as they shall deem expedient, to sell any and all notes or property that shall be subject to this agreement.

In case of any such sale or acquisition, the results thereof shall become and shall be subject to this agreement; and as administered, used, and finally distributed by the syndicate managers under the provisions of this agreement, the same shall be accepted by the syndicate in full and final discharge of any and all obligation and liability of the syndicate managers hereunder.

Until the termination of the syndicate, the syndicate managers, in such manner, at such prices, on such terms, and in such amounts as they may deem expedient, shall have power, for account of the syndicate, to make purchases of any notes of the issue which are the subject of this agreement, and they may resell any such notes which they may have purchased; and, in their discretion, they may make any further undertakings of any kind with any persons concerning any such notes. They may apply toward any such purchases any sums realized from any sales of any such notes under any provision of this agreement; and they may make advances, or may procure loans, and may secure the same to such amounts and in such manner as from time to time they may deem expedient for any of the purposes of this agreement.

The rights and the powers of the syndicate managers and the interests of the subscribers hereunder severally and respectively shall continue until the final distribution hereunder. Prior to the date of such final distribution, no death of any person or subscriber, or of any member of any partnership subscriber, nor any dissolution or termination of any corporate subscriber, shall dissolve the syndicate or shall terminate the rights of the powers of the syndicate managers in respect of any interest of any subscriber then living or dead or ceasing to exist, or shall entitle any subscriber then surviving or the representatives of any subscriber then deceased or ceasing to exist, to demand any dissolution, distribution, or accounting, or to withdraw any interest hereunder; this stipulation constituting an essential part of the consideration for this agreement.

Ninth. No subscriber shall be entitled before the termination of the syndicate to receive any of the said notes or other securities or the proceeds thereof, subject to this agreement. In the meantime, in their discretion, the syndicate managers either themselves may retain all or any of such notes or other securities, or they may deliver to any subscriber his proportionate part thereof, upon his agrement to hold the same subject to sale by the syndicate managers, and to return the same upon the call of the syndicate managers at any time before the termination of the syndicate.

Tenth. The syndicate managers shall be the sole and final judges as to whether at any time it is to the interest of the syndicate to proceed further under this agreement, and whenever they may deem expedient, they may abandon the objects contemplated by this agreement and all further proceedings thereunder. In such event, any and all notes and any and all cash, securities, or other proceeds of the notes, by them received and then held for account of the syndicate, shall remain charged with the payment of all expenses and liabilities by the syndicate managers incurred for the purposes herein indicated, and shall be applied:

First, to the payment and discharge of any and all expenses and all liabilities incurred by the syndicate managers for any purpose indicated in this agreement;

Secondly, to the payment to the subscribers of all amounts of such securities or of cash held by the syndicate managers subject to this agreement, such payment to be made to the subscribers ratably.

Eleventh. After the complete performance of the entire obligation of the syndicate hereunder, but not before the 20th day of August 1916, unless otherwise determined by the syndicate managers in the exercise of their unrestricted discretion, the syndicate shall be entitled to receive the notes, or proceeds thereof, then held by the syndicate managers under this agreement, and including the net profits of the purchase, use, sale, and disposition of the notes that shall be or become the subject of this agreement.

The syndicate managers will make no charge for their services in forming and in managing the syndicate hereunder; but they and each of them shall be entitled to retain for their own account any benefits accruing to them under any contract by them made with the corporation.

Twelfth. The syndicate managers shall not be liable under any of the provisions of this agreement nor for any matter therewith connected, except for good faith in performing, or in refraining from performing or carrying out, the obligations by them herein expressly assumed; the implication of any obligations not herein expressly assumed by them being hereby expressly denied and waived. The syndicate managers shall be under no responsibility in respect of the form or validity of the said notes or of any receipts or certificates, nor for the delivery of definitive notes by the corporation in exchange for temporary notes or any receipts or certificates which may be issued for payments on account of the notes, nor for the performance of any agreement contained in any such receipts or certificates.

It is understood that, in the same manner as other subscribers, either of the syndicate managers may become subscribers hereto; that as such subscribers they shall be liable for all subscriptions by them made, respectively; and that in all respects they shall be entitled to the same rights and benefits as any other subscriber.

Any subscriber hereto, on his own account, may make any agreement with any other subscriber or with any other person, syndicate, or corporation, *subject, however,* to such restriction as may be prescribed by the syndicate managers; and any subscriber, including the syndicate managers, for himself or themselves, and without accountability to the syndicate or any other subscriber, may become and be interested in any other syndicate or association for the purchase or the sale of any securities covered by this agreement or for dealings therein.

Thirteenth. This agreement shall bind, and is for the benefit of, the parties hereto, and their successors, executors, and administrators, severally and respectively.

All rights and powers hereunder of J. P. Morgan & Co., or of Brown Brothers & Co., shall vest in the copartnership or firm doing business under such name, and without further act or assignment shall pass to and vest in the successors of such firm as from time to time constituted, doing business as such successor.

Either of the parties of the first part may delegate to the other any of the powers and authority of the syndicate managers under this agreement.

Fourteenth. Nothing herein contained shall be construed as creating any trust or obligation whatsoever in favor of any person or corporation other than the syndicate managers and the subscribers, nor any obligation in favor of the subscribers, excepting only as herein expressly provided.

Fifteenth. Each subscriber shall set opposite his subscription hereunder an address, to which notices, calls, or other communications may be sent, and any notice, call, or other communication addressed to any subscriber at the address so given, and either left at such address or mailed thereto, shall be deemed actually given to such subscriber, and shall be sufficient for all the purposes hereof. If any subscriber shall fail so to furnish his address to the syndicate managers, he shall not be entitled to any notice of calls, or offers, or any other notice hereunder, except upon request at the office of the syndicate managers, and he shall be deemed to assent to any action of the syndicate managers.

Sixteenth. In consideration of the irrevocable rights in them vested hereunder, and the promises of the several subscribers, the syndicate managers have become parties to, and in good faith will endeavor to consummate the purposes of, this agreement.

In witness whereof, the parties of the first part have hereunto affixed their signatures, and the parties of the second part at various dates have affixed their subscriptions hereto, it being understood that for convenience this agreement may be subscribed in several parts and copies with like force and effect as though all the subscriptions were upon one part or copy thereof.

EXHIBIT No. 2702

AMERICAN FOREIGN SECURITIES COMPANY AND BANKERS TRUST COMPANY, TRUSTEE—COLLATERAL INDENTURE DATED AUGUST 1, 1916, SECURING $94,500,000 THREE-YEAR 5% COLLATERAL GOLD NOTES, INTEREST PAYABLE FEBRUARY 1 AND AUGUST 1

An indenture, dated the first day of August, one thousand nine hundred and sixteen, between

American Foreign Securities Company (hereinafter termed the "company"), a corporation organized and existing under the laws of the State of Delaware, party of the first part, and

Bankers Trust Company (hereinafter termed the "trustee"), a corporation organized and existing under the laws of the State of New York, party of the second part:

Whereas, under date of July 18, 1916, the company has entered into a contract with the Government of the French Republic, whereunder the company is to make to the Government a loan of $100,000,000 payable July 31, 1919, and such Government has pledged or will pledge with the company as security for the payment of such loan, principal and interest, certain bonds and other securities including the bonds and other securities delivered or deliverable to the trustee under this indenture as hereinafter set forth, which said contract provides, among other things, as follows (the French Government therein mentioned referring to said Government of the French Republic, and the company therein mentioned referring to the corporation named as party of the first part in this indenture, and the collateral indenture therein referred to marked annex B being substantially in the form of this indenture), to wit:

"Fifth. On the first day of August 1916, subject to the provisions of Article Fifteenth hereof, the French Government will deliver to and will pledge and hypothecate with the company, as collateral security under this agreement, the securities scheduled in Annex A. Delivery of such securities shall be made for account of the company to the Bankers Trust Company in the city of New York, the coupons appertaining thereto having been previously detached and deposited as provided in Article Eleventh. All such securities shall be in negotiable form, either payable to bearer, or assigned to bearer or assigned in blank by proper instruments of assignment and transfer.

"The French Government represents that the present value of said securities in the aggregate is not less than one hundred and twenty million dollars ($120,000,000).

"In the determination at any time of the value of securities for all purposes of this agreement, the market value in francs of the securities in France shall be converted into dollars in the city of New York at the then exchange value of francs in the New York market. The word value used herein shall be deemed to mean market value thus converted.

"If at any time during the continuance of the loan, the securities deposited as herein provided, shall have depreciated in value, then, upon notice and request from the company, the French Government will deposit and pledge or will cause to be deposited and pledged hereunder with the company in the United States additional securities of the same character as those scheduled in annex A and in an amount necessary to bring the value at each such time of the total securities so pledged to a sum exceedingly by not less than twenty per centum (20%) the principal amount unpaid under this agreement, so that at all times such twenty per centum margin shall be maintained.

"EIGHTH. The French Government hereby agrees that the whole or any part of the securities (or money substituted therefor) from time to time and at any time held in pledge hereunder may be rehypothecated by the company as security for collateral trust notes to be issued by the company, provided that such rehypothecation shall be in accordance with the terms of the collateral indenture attached hereto marked annex B.

"The company covenants that it will not sell, assign, or pledge this agreement, or any of the obligations of the French Government hereunder.

"NINTH. In the event that the French Government shall make default in the payment of interest or principal, or in the observance of any other covenant herein provided, and such default shall continue for a period of thirty (30) days, then at the option of the company, the principal of this loan may be declared due and/or the company may sell, subject to the lien of the collateral indenture attached hereto, marked annex B, the securities deposited hereunder as collateral by the French Government, in such lots and at such times as the company may determine, provided, however, that no such sale of any of said securities shall be made by the company except at public sale in the cities of New York, or Paris, or London, and upon not less than thirty (30) days previous notice to the French Government. Upon any such sale the French Government and/or the company may purchase such securities without accountability other than for the purchase price. And at any time prior to the date of such public sale, upon payment of the amount due hereunder, the French Government may redeem all of the collateral securities deposited hereunder.

"In case of any such sale of the collateral securities deposited under the terms of this agreement, the money, proceeds or avails of the same, together with any other moneys which may then be held by the company to the credit of the French Government shall be applied as follows, to wit:

"First: To the payment of all necessary and reasonable costs and expenses of such sale;

"Second: To the payment of the whole amount then due by the French Government for principal and for interest under the terms of this agreement, the French Government continuing liable for any deficiency;

"Third: To the payment of the surplus (if any exist) to the French Government.

"TENTH. In case of the rehypothecation of any securities pledged hereunder by the French Government, and in case of any default by the company which would render such securities liable to public sale, the French Government at its option may either—

"(*a*) Bid for and purchase any and all of such securities so offered at public sale; or

"(*b*) In case the French Government be not in default hereunder, it may also in case of any offering for sale under the powers of sale contained in the collateral indenture attached hereto and marked annex B, pay the entire indebtedness of the company under or secured by said collateral indenture hereto annexed, by depositing the amount of such indebtedness in gold coin of the United States with the trustee under said collateral indenture at least five days before such sale. In case of such payment by the French Government, the amount thereof shall be by the company credited on the total amount then due by the French Government under the terms of this agreement, and the company and trustee shall, forthwith, release the collateral security deposited hereunder, and shall deliver the same as provided in article seventh hereof. If at the time of the offering for such sale, the French Government shall be in default, it may redeem only by paying to the trustee under said collateral indenture, its entire indebtedness to the company.

"In case there shall be any sale under the collateral indenture attached hereto marked annex B and at the time the French Government shall not be in default hereunder, then the French Government shall be paid any surplus remaining after the application of the proceeds of sale under the terms of said collateral indenture, and be credited hereunder with the gross proceeds of such sale or sales, after deducting such surplus. In case, however, at the time of said sale or sales, the French Government shall be in default hereunder, it shall be credited only with the gross proceeds after deducting the costs and expenses of such sale or sales, as defined in said collateral indenture. Credits in favor of the French Government made in accordance with this article shall not affect its obligation for any balance due hereunder after making such credits.

"ELEVENTH. Before delivery of securities by the French Government under any provision of this agreement, the French Government may detach from said securities all coupons payable on or before the first day of August 1919. The French Government shall deposit, or shall cause to be deposited, all of said coupons with such bank or banks in the city of Paris, France, as the parties may agree upon, which shall hold the same for account of the company as collateral security under this agreement, subject to the lien hereof. Such bank or banks shall present all of said coupons for payment when due, free of any expense to the company, and, the French Government not then being in default hereunder, any and all sums so collected by them shall be, forthwith, paid into the Bank of France to the credit of the French Government. Except in the event of default by the French Government such coupons shall remain in France. Delivery of all such coupons appertaining to securities released or securities substituted under the provisions of article sixth of this agreement shall be made in France. Except as in this article provided, all the provisions hereof relating to the securities deposited hereunder in the city of New York shall be deemed to include and apply to the coupons detached but respectively appertaining thereto."

"SIXTEENTH. Whenever, according to any of the provisions of this agreement, any notice, request, or instruction may be, or is required to be, given by one party to the other, it shall be deemed sufficient if given in writing, either in French or English, as follows, to wit:

"(*a*) If from the company to the French Government, over the signatures of any two of the following executive officers of the company acting in its behalf; president, chairman of the executive committee, vice chairman of the executive committee, secretary, or treasurer:

"1. By delivery at the office of the consul general of France, in the city of New York, or

"2. By cable addressed to the Minister of Finance of the French Government, provided that a copy of such cable is delivered on the day that it is sent at the office of the consul general of the French Government in the city of New York, or

"3. By delivery to M. Octave Homberg, as long as he shall be financial agent of the French Government in the United States, or to his successor as such financial agent, or

"4. By delivery at the office of the Minister of Finance of the French Government in France.

* * * * * * *"

And whereas for its lawful corporate purposes, being the provision in part of the sum to be loaned to the Government of the French Republic, the company has resolved to issue and to dispose of its three-year 5% collateral gold notes, dated August 1, 1916, hereinafter sometimes termed "the notes", for the aggregate principal sum of $94,500,000, and to secure the payment of such notes by pledging with the trustee under this indenture the property hereinafter specified; and

Whereas, The company has resolved that such notes shall be executed in its name by its president or a vice-president, and be countersigned by its treasurer or an assistant treasurer, and that before issuance and delivery thereof each of such notes shall be authenticated by a certificate of the trustee to the effect that such note is one of the notes described in this indenture; and

Whereas such notes of the company are to be negotiable notes, payable to bearer, for the principal sum of $100, or of $1,000, or of $5,000, or of $10,000, or of any multiple of $10,000 that shall be authorized by the company; and to be substantially in the form following—the number of each note and the principal sum thereof having been inserted in the respective blanks therefor, viz.:

[Form of negotiable note]

No.—— $——

UNITED STATES OF AMERICA, STATE OF DELAWARE, AMERICAN FOREIGN SECURITIES COMPANY, THREE-YEAR 5% COLLATERAL GOLD NOTE

American Foreign Securities Co. (hereinafter called "the company"), for value received, hereby promises to pay to the bearer, the sum of ———— dollars, on the first day of August 1919, at the office of J. P. Morgan & Co. in the Borough of Manhattan, city of New York, State of New York, in gold coin of the United States of America of or equivalent to the standard of weight and fineness existing August 1, 1916, with interest thereon at the rate of five per centum (5%) per annum, payable in like gold coin, at such office, semiannually, on the first day of February and the first day of August in each year, but only upon presentation and surrender of the annexed coupons as severally they mature. Both such principal and interest are payable without deduction for any tax or taxes, present or future (except any Federal income tax of the United States of America), which the company or the trustee under the collateral indenture hereinafter mentioned, may be required to deduct therefrom.

This note is one of an issue of notes for the aggregate principal sum of $94,500,000, all equally and ratably secured by an indenture dated August 1, 1916 (hereinafter termed "collateral indenture"), duly executed and delivered by the company to Bankers Trust Company, a corporation of the State of New York, as trustee, pledging to and with said trustee certain property therein described, to which collateral indenture reference is hereby made for a description of the nature and extent of the security and the rights of the holders of said notes and of the trustee in respect of such security.

This note is subject to redemption prior to maturity, at the option of the company, on February 1, 1917, at 101½% of the principal sum, or on August 1, 1917, or February 1, 1918, at 101% of the principal sum, or on August 1, 1918, or February 1, 1919, at 100½% of the principal sum, accrued interest on the note to the date of any such redemption being also payable, in the manner provided in the collateral indenture, to which reference is made for a complete statement. Notice of any such redemption will be published in a newspaper in the Borough of Manhattan, city of New York, at least thirty days previous to the date of any such redemption, as in the collateral indenture provided.

In case of certain defaults specified in the collateral indenture, the principal of this note and of all the other notes of this issue may be declared, and thereupon shall become and be, due and payable immediately as in the collateral indenture provided.

No recourse for the payment of the principal of or the interest on this note shall be had against any officer, director, incorporator, or stockholder of the company under or pursuant to any statute or otherwise, any and all such liability, now existing or hereafter created, being waived by the holder of this note by the acceptance hereof.

This note shall pass by delivery.

The notes of this issue are in denominations of $100, $1,000, $5,000, and $10,000. As provided in said collateral indenture any notes of denominations greater than $100 at any time outstanding, when surrendered for that purpose with all unmatured coupons attached, may be exchanged at the office of the Trustee for notes of equal aggregate principal amount of any lower denomination or denominations.

This note shall not become or be obligatory for any purpose until the certificate of authentication endorsed hereon shall have been signed by the trustee.

In witness whereof, American Foreign Securities Company has caused this note to be signed by its president or a vice-president, and to be countersigned by its treasurer or an assistant treasurer, and coupons for said interest bearing the engraved facsimile signature of its treasurer to be attached hereto. Dated the first day of August, A. D. 1916.

AMERICAN FOREIGN SECURITIES COMPANY,
By ——— ———, *President.*
Countersigned: ——— ———, *Treasurer.*

And whereas there are to be attached to each of the said notes, at the time of the issue thereof, coupons representing the semi-annual instalments of interest which are to become due thereon, of which the first is payable February 1, 1917, each of which coupons is to be substantially of the following tenor, the proper number of the coupon, date of payment, face amount, number of the note, and facsimile signature of the treasurer, having been inserted in the respective blanks therefor, to wit:

[FORM OF INTEREST COUPON]

No.——— $———

On the first day of , 191 , unless the note herein mentioned shall have been called for previous redemption, American Foreign Securities Company will pay to bearer, at the office of J. P. Morgan & Co., in the Borough of Manhattan, City of New York, N. Y., dollars, United States gold coin of the standard existing August 1, 1916, without deduction of taxes specified in the note, being six months interest then due on its Three-Year 5% Collateral Gold Note, No.

Treasurer.

And whereas on each of said notes there is to be a certificate of the trustee substantially of the following tenor, to wit:

[FORM OF TRUSTEE'S CERTIFICATE]

This note is one of the notes described in the within-mentioned indenture.

BANKERS TRUST COMPANY, *Trustee,*
By ———,———, *Assistant Secretary.*

And whereas the company has resolved that the indenture to secure the said notes shall be of the form of this indenture; and

Whereas all things necessary to make such notes, when certified by the trustee, the valid, binding and legal obligations of the company, and these presents a valid indenture of pledge to secure and to provide for the payment of the said notes, have been done and performed and have happened, and the execution and issue of said notes and of this indenture have been in all respects duly authorized:

Now, therefore, this indenture witnesseth; that in order to secure the payment of the principal and interest of all of said notes at any time issued and outstanding under this indenture, according to the tenor, purport, and effect thereof, and to secure the performance and observance of all the covenants and conditions herein contained, and to declare the terms and conditions on which said notes are issued, received, and held, and in consideration of the premises and of the purchase and acceptance of such notes by the holders thereof and of the sum of one dollar to it duly paid by the trustee at the execution of these presents, the receipt whereof is hereby acknowledged:

American Foreign Securities Company has pledged to and hypothecated with, and hereby does pledge to and hypothecate with, Bankers Trust Company, as trustee, the following described property—hereinafter sometimes termed, collectively, "pledged securities", *viz*:

I. All and singular the bonds and other obligations, with all undetached coupons and interest obligations thereto appertaining, and all and singular the shares of stock of the several corporations, and the certificates thereof with all undetached dividend coupons or rights, herewith delivered to the trustee, and severally scheduled in *Exhibit A* appended hereto and made part hereof. The company represents and covenants that for the purposes of the aforesaid contract between the Government of the French Republic and the company dated July 18, 1916, the values, severally and respectively, of the pledged securities scheduled in *Exhibit A*, have been determined by the company to be the values severally and respectively specified in said *Exhibit A*, the aggregate of such values so scheduled being $3,008,328.

II. Also the sum of $91,993,060 in cash to be held by the trustee as part of the trust estate under this indenture until applied by the trustee as provided in section 1 of article three hereof.

III. Also any and all bonds, obligations, or stocks which, pursuant to the provisions of said section 1 of article three of this indenture, shall be delivered to the trustee upon the release and payment by it of any or all of the cash specified in the preceding part II of these pledging clauses of this indenture.

IV. Also any and all other bonds, obligations, or stocks which shall have been delivered by the Government of the French Republic to the company under the provision in the final paragraph of article fifth of the aforesaid contract between the said Government and the company, in performance of the obligation, in case of depreciation in the value of securities deposited under said contract, to maintain the margin of twenty per cent. referred to in said paragraph; and the company covenants that from time to time, when and as such securities are received from the said Government, the company will deliver and pledge all thereof with the trustee as additional security for the notes issued under this indenture; *subject, however*, to the right of the said Government to detach coupons and rights for dividends and interest as provided in article eleventh of said contract.

V. Also all property of every name and nature, from time to time hereafter, by delivery or by writing of any kind, for the purposes hereof, pledged, assigned, or transferred by the company, or with its written consent by any one in its behalf, to the trustee, which hereby is authorized to receive any property at any and all times, as and for additional security, and also, when and as hereinafter provided, as substituted security, for the payment of the notes issued or to be issued hereunder, and to hold and apply any and all such property according to the terms hereof.

VI. Also all the right, title, and interest of the company in and to the coupons or rights for interest and dividends maturing on or before August 1, 1919, appertaining to the bonds and stocks hereinabove pledged, or hereafter to be pledged as aforesaid, which coupons or rights have been, or will have been, detached from said bonds and stocks prior to the pledge of such bonds and stocks hereunder, and which pursuant to the contract between the Government of the French Republic and the company hereinabove mentioned, have been, or will have been, deposited for account of the company with depositaries in France.

VII. Also all right, title, and interest of the company in and to any moneys paid by the Government of the French Republic to the company, as a consequence of the payment of which such Government shall be entitled to all or any part of the pledged securities.

To have and to hold the same unto said Bankers Trust Company, as trustee, its successors and assigns, forever:

In trust, nevertheless, for the equal and ratable use and benefit of all present and future holders of the notes issued and to be issued under and secured by this indenture, without preference, priority, or distinction as to lien or otherwise of any one note over any other note by reason of priority in the issue, sale, or negotiation thereof or otherwise; so that each and every note issued as aforesaid shall have the same ratable right, lien, and privilege under and by virtue of this indenture, and so that subject to the terms hereof the principal and interest of every such note shall be secured hereby equally and proportionately, as though all had been duly issued, sold and negotiated simultaneously with the execution and delivery of this indenture; it being intended that the lien and security of this indenture shall take effect from the day of the date hereof, without regard to the date of the actual issue, sale, and negotiation of said notes, and as though upon such date all of said notes had been actually sold and delivered to and into the hands of the holders thereof for value; and it being expressly covenanted and declared by the company that all such notes are to be issued, negotiated, sold, and held, and that the said pledged securities, subject to the conditions of the pledge thereof hereunder, are to be held by the trustee, upon and subject to the further trusts, uses, conditions, covenants, and agreements hereinafter set forth; and it is covenanted between the parties hereto and for the benefit of the respective holders from time to time of the notes intended to be secured hereby, as follows, *viz.*:

ARTICLE ONE

SECTION 1. The amount of notes hereby secured, which may be executed by the company, and which may be certified by the trustee, is limited so that never at any time shall there be outstanding notes, hereby secured, for an aggregate principal sum exceeding $94,500,000.

From time to time, the notes to be secured hereby shall be executed by the company, and by it shall be delivered to the trustee, and thereupon, as provided in this article and not otherwise, the trustee shall certify and shall deliver the same.

The notes and the coupons thereto attached respectively shall be substantially of the tenor and purport above recited. The notes each shall be for the principal sum of $100, or of $1,000, or of $5,000, or of $10,000, or of any multiple of $10,000 that shall have been authorized by the company by resolution of its board of directors or of its executive committee.

Each note hereby secured of the denomination of $1,000 shall bear a distinctive serial number, the numbers to be from 1 upwards, consecutively. The notes of the other denominations may be identified by a distinctive number or letter, or both, in accordance with such plan as may be adopted by the company with the approval of the trustee. Unless a different plan be adopted as aforesaid, the notes of denominations other than $1,000 shall have endorsed thereon a notation of the number or numbers of the $1,000 notes in lieu of or in exchange for which such notes of denominations other than $1,000 are issued. The notes of any or all of the denominations, except $100 may have imprinted thereon a legend reciting that the notes of one or more such denominations may be exchanged for an equal aggregate principal amount of notes of one or more lower denominations. The notes may contain such other specifications in the premises as may be required to comply with the rules of any stock exchange, or to conform to usage.

Only such notes as shall bear thereon a certificate, substantially in the form hereinbefore recited, duly executed by the trustee, shall be secured by this indenture, or shall be entitled to any lien or benefit hereunder. Every such certificate of the trustee upon any note executed by the company, shall be conclusive evidence, and the only evidence, that the note so certified has been duly issued hereunder, and is entitled to the benefit of the trust hereby created for the benefit of the holder of such note.

The trustee shall not certify or deliver any note hereby secured, until all coupons thereof then matured shall have been detached and shall have been canceled.

SEC. 2. In case any of the officers who, on behalf of the company, shall have signed any of the notes issued under this indenture, shall die, or shall cease to be such officer of the company, before the notes so signed shall have been actually certified by the trustee, or delivered or sold, nevertheless upon the request of the company, such notes shall be certified and delivered as herein provided, and may be sold or otherwise disposed of by the company, as though the persons who signed and sealed such notes had not died or ceased to be such officers of the company; and also any such note may be signed in behalf of the company by such persons as at the actual date of the execution of the note shall be the proper officers of the company, although on August 1, 1916, any such person shall not have been such officer. The coupons attached to the notes hereby secured shall be authenticated by the facsimile signature of the present treasurer or of any future treasurer of the company, and for that purpose the company may adopt and use the facsimile signature of any treasurer, notwithstanding the fact that at the time when such notes shall be actually certified and delivered or sold he shall have ceased to be the treasurer of the company.

SEC. 3. All the notes authorized to be issued under and secured by this indenture for the aggregate principal sum of $94,500,000 shall be executed by the company and be delivered to the trustee for certification, and as soon as may be after the execution of this indenture, and upon the delivery to the trustee of the pledged securities scheduled in *Exhibit A* hereto annexed and referred to in part I of the pledging clauses of this indenture, and upon payment to the trustee of the sum in cash specified in part II of the pledging clauses of this indenture, shall be certified and be delivered by the trustee upon the written order of the company, signed by its president or vice president or treasurer under its corporate seal, and without any further action on the part of the company.

SEC. 4. Pending the preparation of the definitive notes to be issued under and secured by this indenture, the company may execute and deliver, originally or in exchange, temporary notes without coupons, substantially otherwise in the form of the notes hereinbefore recited, in denominations of $100 or of $1,000 or of any multiple of $1,000, and each of said notes shall be marked "temporary note."

Such temporary notes shall be duly authenticated and delivered by the trustee in the same manner as herein provided in respect of the definitive notes to be issued under this indenture; and such certificate of the trustee shall be conclusive and the only evidence that any such temporary note so certified has been duly issued hereunder, and is entitled to the benefits of the trusts hereby created.

Such temporary notes duly issued and certified hereunder shall be exchangeable, from time to time, at the office of the trustee in the city of New York, without expense to the holder, for definitive notes, secured hereby, of denominations authorized as specified in section 1 of this article, as and when the company shall deliver to the trustee definitive notes for that purpose; and immediately upon such exchange such temporary notes shall be canceled by the trustee and be delivered to the company. Until so exchanged said temporary notes shall in all respects be entitled to the lien and security of these presents.

Without unnecessary delay the company will execute and will furnish engraved definitive notes, to be exchanged for said temporary notes, upon surrender thereof to the trustee.

SEC. 5. In case any note secured hereby or the coupons thereto appertaining shall become mutilated or be destroyed, the company may execute, and, upon its request, the trustee shall certify and deliver, a new note of like tenor and date (including coupons for interest thereon) bearing the same serial number, or, as the case may be, having endorsed thereon the same serial numbers, in exchange and substitution for and upon cancellation of the mutilated note and its coupons, or in lieu of and in substitution for the same destroyed. In case of destruction, the applicant for a substituted note and coupons shall furnish to the company and to the trustee evidence to their satisfaction, in their discretion, of the destruction of such note and its coupons, and also such security or indemnity as shall be required by the company and the trustee.

SEC. 6. Any note issued hereunder and secured hereby of a denomination higher than $100, with all unmatured coupons thereto annexed, may be surrendered to the company at the office of the trustee in the city of New York, in exchange for notes of lower denominations, authorized under this indenture, equal in aggregate face value to the notes so surrendered, and with all unmatured coupons thereto annexed. All notes so surrendered in exchange shall be canceled by the trustee, and be delivered to the company. For any such exchange of notes, the company, at its option, may require the payment of a sum sufficient to reimburse it for any stamp tax or other governmental charge.

SEC. 7. Except as otherwise expressly provided in article five of this indenture, nothing in this indenture, or in the notes secured hereby, expressed or implied, is intended, or shall be construed, to give to any person, firm, or corporation, other than the parties hereto and the holders of said notes, any legal or equitable right, remedy or claim under or in respect of this indenture, or under any covenant, condition or provision herein contained; all its covenants, conditions and provisions being intended to be, and being, for the sole and exclusive benefit of the parties hereto and of the holders of the notes and coupons issued hereunder.

ARTICLE TWO

The company covenants as follows:

SECTION 1. Duly and punctually the company will pay the interest and the principal of the notes issued hereunder at the times and in the manner specified in said notes and in the interest coupons, respectively, without deduction for any tax or taxes, present or future (except any Federal income tax of the United States of America) which the company or the trustee may be required to deduct therefrom.

Sec. 2. From time to time the company promptly shall and will pay and discharge, or cause to be paid and discharged, all taxes, rates, lawful levies or assessments and charges, special or general, ordinary or extraordinary, levied or imposed upon or in respect of the pledged securities held by the trustee in the United States, the lien whereof could be held to be prior or equal to the lien of these presents, so that the same shall not fall into arrears and so that the priority of this indenture of pledge shall be duly preserved: *Provided, however,* That the company, in good faith and by appropriate legal proceedings, shall have the right to contest any such tax, assessment or charge, and pending such contest may delay or defer the payment thereof.

Sec. 3. The company will cause to be delivered at the office of the trustee any and all notes issuable under this indenture which, pursuant to the provisions of article one of this indenture, the company is obligated to deliver in exchange for other notes issued under this indenture.

ARTICLE THREE

Section 1. From time to time upon the written request of the company, accompanied by a certified copy of a resolution of its board of directors or of the executive committee of such board authorizing such request and accompanied also by the certificate provided for in section 5 of this article, the trustee shall release from the lien and operation of this indenture, and shall pay over to the company or upon its order, any or all of the cash paid to the trustee pursuant to the provisions of part II of the pledging clauses of this indenture, upon the delivery to the trustee (*a*) of securities which shall be the obligation (as maker or guarantor) of the government of one of the following countries, viz, Argentina, Sweden, Norway, Denmark, Switzerland, Holland, Uruguay, Egypt, Brazil, or Spain, or (b) of obligations of the Province of Quebec, or (*c*) of shares and bonds of the Suez Canal Company, or (*d*) of shares of stock or bonds of corporations organized in the United States of America, such payment to be at the rate of five dollars in cash for each six dollars in value (certified to the trustee as provided in section 5 of this article) of the securities so delivered: *Provided, however,* That (except as in each instance otherwise may be approved by J. P. Morgan & Co. and Brown Brothers & Co.):

(1) The aggregate value of the said obligations of any one of the abovementioned governments shall not exceed $22,680,000, nor shall such value of the obligations of the Province of Quebec exceed said sum, nor shall such value collectively of the shares and bonds of the Suez Canal Company exceed said sum, nor shall such value collectively of the bonds and shares of said corporations organized in the United States of America exceed said sum; and

(2) The aggregate value of the said obligations of the several governments and of the Province of Quebec shall not be less than the amounts severally and respectively set forth in the following schedule, to wit:

Government of Argentina	$10,250,000
Government of Sweden	4,362,500
Government of Norway	1,645,000
Government of Denmark	3,190,000
Government of Switzerland	6,040,000
Government of Holland	737,500
Government of Uruguay	1,721,500
Government of Egypt	10,100,000
Government of Brazil (funding loan)	590,500
Government of Spain	10,300,000
Province of Quebec	137,500

and until such several amounts of such obligations shall have been delivered to the trustee, pursuant to the provisions of this section and/or pursuant to part I of the pledging clauses of this indenture, the trustee shall hold of the cash above mentioned sums equal to five sixths of the said scheduled amounts of such obligations from time to time remaining to be delivered.

Sec. 2. From time to time upon the written request of the company, accompanied by a certified copy of a resolution of its board of directors or of the executive committee of such board authorizing such request and accompanied also by the certificate provided for in section 5 of this article, the trustee shall release from the lien and operation of this indenture, and shall deliver to the company or upon its order, any of the pledged securities (other than cash) then subject to this indenture which shall be the obligation (as maker or guarantor) of the Government of one of the following countries, viz, Denmark, Norway, Sweden, Holland, Switzerland, Spain, or Egypt; *provided however*, (except as in each instance otherwise may be approved by J. P. Morgan & Co. and Brown Brothers & Co.):

(1) That there always shall remain included in the pledged securities subject to this indenture, such securities of each of said governments of value equal at least to the respective amounts of such securities of such government specified in subdivision (2) of section 1 of this article; and

(2) That contemporaneously with such release there shall be pledged under this indenture, and be substituted for the pledged securities released as aforesaid, other securities of which each shall be such obligation of the government of one of the following countries viz, Denmark, Norway, Sweden, Holland, Switzerland, Spain, or Egypt, and which substituted securities in the aggregate shall be of value equal to or greater than the value of the released pledged securities; and

(3) That the aggregate value of all such obligations of any one of the governments mentioned in subdivision (2) of this section, or of any other issue of securities, shall not be increased by such substitution to an amount which at any such time shall exceed $22,680,000.

Sec. 3. From time to time upon the written request of the company, accompanied by a certified copy of a resolution of its board of directors or of the executive committee of such board authorizing such request and accompanied also by the certificate provided for in section 5 of this article, the trustee shall release from the lien and operation of this indenture, and shall deliver to the company or upon its order, any of the pledged securities (other than cash) subject to this indenture: *Provided, however* (except as in each instance otherwise may be approved by J. P. Morgan & Co. and Brown Brothers & Co.):

(1) That the Government of the French Republic, pursuant to the provisions of article sixth of its aforesaid contract with the company, shall have requested the company to release such pledged securities in anticipation of the maturity of the principal sum thereof; and

(2) That contemporaneously with such release there shall be pledged under this indenture, and be submitted for the pledged securities released as aforesaid, other securities of which each shall be the obligation (as maker or guarantor) of the government of one of the following countries, *viz*, Denmark, Norway, Sweden, Holland, Switzerland, Spain, or Egypt, and which substituted securities in the aggregate shall be of value equal to or greater than the value of the released pledged securities; and

(3) That the aggregate value of all such obligations of any one of the governments mentioned in subdivision (2) of this section, or of any other issue of securities, shall not be increased by such substitution to an amount which at any such time shall exceed $22,680,000.

Sec. 4. In lieu of the substitution of securities under the provisions of section 2 or of section 3 of this article, provided the resolution of the board of directors or of the executive committee of such board shall so specify, the company may deposit with the trustee a sum of money equal at least to the value of the pledged securities released under the provisions of either of said sections.

The company agrees that whenever it shall receive in the city of New York any moneys paid to it by the Government of the French Republic, which under the aforesaid contract between the Government of the French Republic and the company, the company is required to use for that purpose, such moneys shall be forthwith deposited by the company with the trustee to effectuate the release of securities as in this article provided, and in furtherance of the pledge of such moneys made pursuant to part VII of the pledging clauses of this indenture.

Any and all money received by the trustee under the provisions of this section shall be held by it as part of the trust estate, and shall be applied to the purchase and/or redemption of notes outstanding under this indenture in accordance with the provisions of article four of this indenture.

Sec. 5. For (1) any of the purposes of section 1 of this article, the value of the securities deposited pursuant thereto with the trustee, and for (2) any of the purposes of any other of the foregoing sections of this article, the value of the pledged securities released, and the value of the securities substituted therefor, either (*a*) shall be the value placed upon such securities for the purposes of the aforesaid contract between the Government of the French

Republic and the company in case the securities shall be delivered to the trustee under section 1 of this article and the approval of J. P. Morgan & Co. and Brown Brothers & Co. shall not be required therefor under the provisions of said section, or in case the release and substitution be made for any purpose of said contract, or (*b*) shall be the value placed upon such securities jointly by J. P. Morgan & Co. and Brown Brothers & Co. in case the securities shall be delivered to the trustee under section 1 of this article and the consent of said firms to such delivery shall be required under the provisions of said section, and in case the release and substitution of securities be not made for the purposes of such contract. Whether or not any such release and substitution is made for the purposes of such contract, or whether or not request therefor has been made upon the company by the Government of the French Republic, shall be certified in the resolution required in any such instance pursuant to any provision of this article.

Together with each request for payment of cash or the release of pledged securities under any of said sections, there shall be delivered to the trustee either (1) a certificate of the company, dated not more than five days prior to its delivery, respectively specifying, as the case may be, such values of the securities delivered to the trustee, or of the pledged securities to be released and of the securities to be substituted therefor as aforesaid, and setting forth that the values so specified are those upon the basis of which such securities were received by the company, or were released or substituted, as the case may be, under the said contract between the Government of the French Republic and the company; or (2) a certificate addressed to the trustee, signed by J. P. Morgan & Co. and Brown Brothers & Co., dated not more than five days prior to its delivery, containing like specification of the securities delivered to the trustee under section 1 of this article, or of the pledged securities to be released and of the securities to be substituted therefor under section 2 or section 3 of this article. Either such certificate shall be received by the trustee as conclusive evidence of value as specified, but only for the period of ten days after its date, and shall constitute full authority to the trustee for any action thereupon taken by the trustee within such period of ten days.

SEC. 6. The coupons and claims for interest and dividends included in the pledged securities under part VI of the pledging clauses of this indenture, shall be subject to the rights and obligations of the company and/or the Government of the French Republic to deal therewith and with the proceeds thereof as provided in article eleventh (quoted in the preamble of this indenture) of the aforesaid contract between said Government and the company. The release of any pledged securities shall be deemed to release all coupons and claims for interest and dividends appertaining thereto. Coupons appertaining to substituted or additional securities may be detached and deposited in France as provided in said article eleventh of said contract.

SEC. 7. From time to time upon the written request of the company, accompanied by a certified copy of a resolution of its board of directors or of the executive committee of such board authorizing such request, and upon payment to the trustee of a sum in cash to be applied to the redemption (by call or purchase) of notes on or before the next ensuing interest day on which notes may be so redeemed with such cash pursuant to the provisions of article four of this indenture, or in lieu of such cash upon tender to the trustee for cancellation of notes issued under this indenture, then the trustee shall release from the lien and operation of this indenture, and shall deliver to the company or upon its order, such part of each issue of the pledged securities then held by the trustee as shall bear to the whole of such issue so held by the trustee, approximately the same proportion as the principal amount of notes redeemable by such cash so paid to the trustee, or the principal amount of the notes so delivered to the trustee for cancellation, or the aggregate of such notes so redeemable and such notes so delivered, as the case may be, shall bear to the aggregate principal amount of the notes at the time outstanding under this indenture. The approximation of the proportion of the securities to be released pursuant to the provisions of this section shall be made by the trustee in the exercise of its sole judgment.

SEC. 8. For any purpose of this article, any request or certificate of the company, or statement of any matter of fact, shall be sufficiently evidenced to the trustee if made in writing under the corporate seal signed by any one of the following officers of the company, viz: The president, chairman of the executive committee, any vice president, or the treasurer.

Any certificate, consent, or approval by J. P. Morgan & Co. and by Brown Brothers & Co., or either of them, required to be furnished to the trustee under any provision of this article, may be made in one or more writings signed in the name of such firms respectively. Any and all rights and powers of said J. P. Morgan & Co. and of said Brown Brothers & Co., or either of them, shall vest in the co-partnership or firm doing business under such name, and shall pass to and vest in the successors of such firms as from time to time constituted, doing business as such successors repectively.

Neither the firm of J. P. Morgan & Co. nor the firm of Brown Brothers & Co. nor any member of either of said firms shall in any event or in any manner be liable for or because of any act done or omitted to be done, or any certificate, approval, or consent given or withheld hereunder, nor shall any member of either of said firms be liable for the acts, consents, or omissions of any other member or otherwise than each for his own individual bad faith or misconduct hereunder. Each of said firms or the members thereof may become holders of notes issued hereunder or stockholders of the company, and no action, determination, or consent of said firms shall be affected by reason thereof, or by reason of the fact that any members of said firms may be officers, directors, or voting trustees of stock of the company, nor for any of said reasons shall either of said firms be disqualified from acting hereunder. Neither this indenture nor any consent given or withheld by said firms or either of them shall create any fiduciary or other relation, legal or equitable, on the part of said firms or any member of either of them to the trustee or to the holders of notes or coupons issued hereunder.

Sec. 9. Unless and until there shall be some default known to the trustee (1) in the payment of any interest on any of the notes secured by this indenture and such default shall have continued for a period of sixty days; or (2) in the due and punctual payment of the principal of any note hereby secured when the same shall have become payable; or (3) in the due observance and performance of any other covenant or condition herein required to be kept or performed by the company, and such last mentioned default shall have continued for a period of sixty days after written notice thereof shall have been given by the trustee to the company—the company shall have the right to vote upon, or to give any consent in respect of, all shares of stock subject to this indenture for all purposes not inconsistent with the provisions or purposes hereof and with the same force and effect as though such shares were not subject hereto; and from time to time, upon request of the company, the trustee, except upon the occurrence and continuance of default as aforesaid, shall forthwith execute and deliver to the company or to its nominees specified in such request, suitable powers of attorney or proxies, with power of substitution, to vote upon, or to give any consent in respect of, any shares of stock which shall have been transferred into the name of the trustee or its nominee or nominees: *Provided, however*, That the trustee shall not be required to give any such power of attorney or proxy to vote in respect of any such stock, unless the same be limited to be used only at some particular meeting or an adjournment or adjournments thereof.

The trustee shall be protected in the giving of any proxy or proxies, or powers of attorney, to the company hereunder, if upon the face thereof such proxies or powers of attorney shall not be contrary to the provisions of this indenture and each thereof shall contain a specific statement to the effect that it is not to be used or voted upon for any purpose inconsistent with the provisions or intent hereof. The trustee shall not be responsible for any abuse or mistake in the construction of any such proxy or power of attorney so given by it.

Sec. 10. Unless and until there shall be some default known to the trustee (1) in the payment of any interest on any of the said notes secured by this indenture and such default shall have continued for a period of sixty days; or (2) in the due and punctual payment of the principal of any note hereby secured when the same shall have become payable; or (3) in the due observance and performance of any other covenant or condition herein required to be kept or performed by the company, and such last mentioned defaults shall have continued for a period of sixty days after written notice thereof shall have been given by the trustee to the company; the company shall be entitled to retain for its own use any interest, dividends, or other income of the pledged securities which may come into its hands, and the trustee promptly shall pay over to the company such interest, dividends, or other income which it may receive, and shall deliver to the company for collection any coupons and rights for interest and dividends which may become due or payable and which at the time the trustee may have in its possession. Any moneys so received by the company or by the trustee in payment or as proceeds of coupons and rights for interest or dividends deposited in France pursuant to the provisions of article eleventh of the aforesaid contract between the Government of the French Republic and the company, in case under the provisions of the said contract the company shall become entitled to receive the same, shall be deemed to be income of the pledged securities.

SEC. 11. All of the pledged securities deposited with the trustee hereunder may at all times remain in the forms in which the same shall be deposited, and need not be transferred into the name of the trustee. All such pledged securities which shall be registered at the time of such deposit shall be accompanied by instruments of assignment or transfer thereof in blank, but the trustee shall be under no duty or obligation to see or inquire into the sufficiency of any such instrument of assignment or transfer.

ARTICLE FOUR

SECTION 1. Any or all of the notes hereby secured shall be subject to redemption, and may be redeemed, at the option of the company, on any interest-payment date prior to maturity, upon advertisement of notice of redemption as in this article provided, and upon payment to the trustee of an amount, which together with any other moneys applicable to the purpose and held by the trustee, shall equal the principal amount of such notes to be redeemed, and the premium payable on the particular redemption date as below set forth, and a further amount equal to the interest which shall have accrued and be unpaid thereon up to the date fixed for such redemption as hereinbelow provided. If the redemption be made February 1, 1917, the premium shall be one and one-half per cent (1½%) of the principal amount; if the redemption be made on August 1, 1917, or on February 1, 1918, the premium shall be one per cent (1%) of the principal amount; and if the redemption be made on August 1, 1918, or on February 1, 1919, the premium shall be one-half of one per cent (½%) of the principal amount. Each and every holder of any note issued under this indenture hereby agrees to accept payment thereof at such rate upon any such date of redemption.

Unless default shall be made in the payment upon presentation of any notes mentioned in any notice of redemption given pursuant to this article, all interest after the date of redemption designated in said notice shall cease to accrue upon such notes, and the coupons for interest maturing subsequent to said date of redemption shall become and be void.

Upon the receipt by the trustee of moneys applicable to the redemption of notes secured by this indenture, and subject to the provisions of section 2 of this article, the trustee shall apply such moneys to the redemption of such notes as hereinafter provided.

The trustee at the expense of the company, shall publish once in each week for four successive calendar weeks in one newspaper published in the Borough of Manhattan, City of New York, a notice of redemption, stating that upon presentation and surrender to the trustee on the interest-payment date therein specified (which date shall not be sooner than thirty days after the first publication of such notice), of the notes to be redeemed (bearing all unpaid coupons), payment of the principal amount and premium and of the accrued interest to such date of redemption, will be made upon such designated date.

If the moneys applicable to the redemption of notes be less than the amount required to redeem all such notes at the time outstanding, the trustee, prior to such publication of notice of redemption, shall draw by lot notes hereby secured for such principal amount as the moneys in its hands available for the purpose shall suffice to redeem on the date appointed, and the notice of redemption to be published as aforesaid shall specify the numbers of the notes to be redeemed as determined by such drawing. Such drawing by lot by the trustee shall be conducted in such manner and according to such method as it may deem proper. The trustee in such drawings may adopt the following system: All drawings of $1,000 and $100 notes shall be made by reference to the serial numbers borne by the $1,000 notes and the serial numbers of $1,000 notes endorsed upon $100 notes; the ten $100 notes issued in lieu of or in exchange for any $1,000 note, shall be drawn collectively; to avoid the redemption in part of any notes of denominations greater than $1,000, the trustee in any drawing for redemption may apportion to the aggregate amount of notes of each such denomination such part of the funds available for redemption as shall bear to the entire amount of such funds the same proportion that the aggregate amount of notes of such denomination shall bear to the aggregate amount of all the notes then outstanding, and a separate drawing of the notes of each such denomination greater than $1,000 shall be made for such amounts as the moneys apportioned to such denomination shall suffice to pay at the redemption rates above specified.

To the extent of any moneys at any time thereafter in the trustee's possession, upon surrender to it of any such designated note, bearing coupons as aforesaid, the trustee shall receive the same and shall pay therefor the principal amount, the premium payable on the designated redemption date as hereinabove provided, and the accrued interest thereon up to such date.

If upon the presentation of any note for redemption pursuant to the provisions of this section, there shall not be presented with such note all unpaid coupons maturing on and prior to the date designated for such redemption, the trustee shall receive such note, together with all coupons maturing after such designated date, and out of the redemption money held by it as aforesaid, shall pay therefor a sum equal to the principal thereof and the premium, and shall retain the amount applicable to the payment of interest represented by the coupon or coupons maturing on or prior to the redemption date so designated and not presented with the note, and shall hold and apply such last mentioned sum in trust for and to the payment of such coupon or coupons upon surrender thereof to the trustee by the company or by any holder thereof.

A copy of any notice of redemption published pursuant to the provisions of this article, shall be mailed by the trustee to the holder of any note designated for redemption who shall have furnished to the trustee his post-office address for such purpose.

In every case where any such redemption day shall be a legal holiday, payment of the principal, premium, and interest due on the notes called for redemption on such day may be made on the next succeeding day not a legal holiday, with the same force and effect as if made on the nominal interest day.

SEC. 2. In case moneys applicable to the redemption of notes secured by this indenture shall be received by the trustee on a date more than thirty-five (35) days prior to the next ensuing interest date upon which notes may be called for redemption pursuant to the provisions of section 1 of this article, then until the beginning of such thirty-five (35) day period prior to such redemption date, the trustee, in such manner and from time to time in such amounts as the company shall direct by resolution of its board of directors or of the executive committee of such board, shall use and apply such moneys so far as the same shall be adequate to the purchase and payment of notes of any denomination (including all unmatured coupons thereunto belonging) hereby secured at the lowest price found by the trustee to be available but not greater than the redemption price at which notes may be called for redemption on such next ensuing redemption date as hereinabove set forth. The trustee need make no public or general invitation for tenders of notes, nor give public notice before making such purchases. To the extent that such moneys so applicable to the purchase of notes shall not be used in such purchase as aforesaid, such moneys, together with any other moneys that may be received by the trustee for such purpose, shall be applied by the trustee to the redemption of notes as provided in section 1 of this article.

SEC. 3. All notes redeemed or purchased as hereinbefore provided forthwith shall be canceled by the trustee and be delivered to the company.

ARTICLE FIVE

It is agreed between the company and the trustee and the holders of the notes and coupons at any time outstanding under this indenture that the rights and remedies of the trustee and of the holders of notes and coupons under the provisions of this article five of this indenture, and the enforcement of any and all such rights and remedies, are subject to the rights and privileges reserved to the Government of the French Republic under the provisions quoted in the preambles to this indenture of articles ninth and tenth or either of such articles of the aforesaid contract between such government and the company.

SECTION 1. In case of default shall be made in the payment of any interest on any of the notes issued hereunder, and any such default shall continue for a period of sixty days,—then and in such case the trustee may, and, upon the written request of the holders of twenty-five per cent in principal amount of the notes hereby secured at such time outstanding, the trustee shall declare the principal of all notes then outstanding hereunder to be due and payable immediately, and upon any such declaration the same shall become and shall be immediately due and payable, anything in this indenture or in said notes contained to the contrary notwithstanding.

This provision, however, is subject to the condition that if, at any time after the principal of said notes shall have been so declared due and payable, and before any sale of the pledged securities or any thereof shall have been made pursuant to the provisions of section 2 of this article, all arrears of interest upon all such notes shall be paid by the company and the company also shall have remedied any and every default by it theretofore made under this indenture; then and in every such case the holders of a majority in principal amount of the notes hereby secured then outstanding, by written notice to the company and to the trustee, may rescind and annul such declaration and its consequences; but no such rescission and annulment shall extend to or shall affect any subsequent default, or shall impair any right consequent thereon.

In case the trustee shall have proceeded to enforce any right under this indenture, and any such proceeding shall have been discontinued or abandoned because of such waiver, or for any other reason, or shall have been determined adversely to the trustee, then and in every such case the company and the trustee shall be restored respectively to their several positions and rights hereunder in respect of the pledged securities, and all rights, remedies and powers of the trustee shall continue as though no such proceeding had been taken.

Sec. 2. In case (1) default shall be made in the payment of any interest on any of the notes issued hereunder and any such default shall continue for a period of sixty days; or in case (2) default shall be made in the due and punctual payment of the principal of any of said notes; or in case (3) default shall be made in the due observance and performance of any other covenant or condition herein required to be kept or performed by the company, and any such last-mentioned default shall have continued for a period of sixty days after written notice thereof from the trustee to the company,—then, and in each and every such case of default (*a*) the trustee, personally or by attorney, may sell either all, or from time to time any part, of the pledged securities, and all right, title and interest, claim and demand therein, and right of redemption thereof, which sale or sales shall be made at public auction at the place or places and at the time or times and upon the terms which the trustee may fix and briefly specify in the notice or notices of sale to be given as hereinafter in this section provided; or (*b*) the trustee may proceed to protect and to enforce its rights and the rights of noteholders under this indenture, by a suit or suits in equity or at law, whether for the specific performance of any covenant or agreement contained herein, or in aid of the execution of any power herein granted, or for the foreclosure of this indenture or the enforcement of any other appropriate legal or equitable remedy, as the trustee, being advised by counsel learned in the law, shall deem most effectual to protect and enforce any of its rights or duties hereunder.

Any sale pursuant to the provisions of this section, whether made under the power of sale herein granted, or under or by virtue of judicial proceedings, may be made in one or more lots as the trustee shall determine, or as may be requested by the holders of twenty-five percent of the principal amount of the notes at the time outstanding, and shall be made either in the city of New York, State of New York, or in the city of Paris, France, or in the city of London, England, or in part in one and in part in either or each of the other of said cities; and the notice of any such sale shall contain a brief general description of the pledged securities to be sold at each such sale, a statement of the time or times of each such sale, and a specification of the terms of sale, and shall be sufficiently given if published once in each week for four successive calendar weeks prior to any such sale, in two (2) newspapers published in the borough of Manhattan, city of New York, State of New York, and also as follows:

Notice of such sale also shall be given in writing by the trustee to the Government of the French Republic delivered or sent, as provided in article sixteenth of the aforesaid contract between the Government of the French Republic and the company quoted in the preambles of this indenture, at a time not less than thirty days previous to any sale made under any of the provisions of this indenture.

From time to time, any sale to be made under the provisions of this indenture may be adjourned by announcement at the time and place appointed for such sale or for such adjourned sale or sales; and without further notice or publication, such sale may be made at the time and place to which the same shall have been so adjourned.

SEC. 3. Upon the written request of the holders of twenty-five per cent in principal amount of the notes hereby secured, in case of the occurrence and the continuance of default as aforesaid, it shall be the duty of the trustee, upon being indemnified as hereinafter provided, to take all steps needful for the protection and enforcement of its rights and the rights of the holders of the notes hereby secured, or to take appropriate judicial proceedings by action, suit, or otherwise, as the trustee, being advised by counsel learned in the law, shall deem most expedient in the interest of the holders of the notes hereby secured; but anything in this indenture to the contrary notwithstanding, the holders of a majority in principal amount of the notes hereby secured and then outstanding from time to time shall have the right to direct whether the trustee shall proceed to sell all or any of the pledged securities, or shall proceed by suit in equity or action at law, or both, and to direct and to control the method and place of conducting any proceedings for any sale of the pledged securities, or for the foreclosure hereof, or for a receiver, or any other proceedings hereunder; but they shall have no right or power to involve the trustee in any personal liability of any kind to anybody, without first and from time to time indemnifying it to its satisfaction, and the trustee shall have the right to decline to follow any such direction which in its opinion, or as it may be advised, would be unjustly prejudicial to nonassenting noteholders.

SEC. 4. Upon completion of any sale or sales under this indenture, the trustee shall assign or transfer to the accepted purchaser or purchasers such of the pledged securities as shall have been sold to such purchaser or purchasers, and such assignment or transfer shall be conclusive evidence of the validity of the transfer thereby effected. The trustee and its successors hereby are appointed the true and lawful attorney and attorneys irrevocable of the company, in its name and stead, to make all necessary assignments and transfers of the pledged securities thus sold; and for that purpose it and they may execute all necessary acts of assignment and transfer and may substitute one or more persons with like power; the company hereby ratifying and confirming all that its said attorney or attorneys or such substitute or substitutes shall lawfully do by virtue hereof.

SEC. 5. The receipt of the trustee for the purchase money shall be sufficient discharge therefor to any purchaser of the pledged securities or any part thereof sold as aforesaid; and no such purchaser or his representatives, grantees, or assigns, after paying such purchase money and receiving such receipt, shall be bound to see to the application of such purchase money upon or for any trust or purpose of this indenture, or shall in any manner whatsoever be answerable for any loss, misapplication or nonapplication of any such purchase money or any part thereof, or shall be bound to inquire as to the authorization, necessity, expediency, or regularity of any such sale or sales.

SEC. 6. In case of any such sale, whether made under power of sale in this article granted or pursuant to judicial proceedings, the whole of the principal sums of the notes hereby secured, if not previously due, shall at once become due and payable, anything in said notes or in this indenture to the contrary notwithstanding.

SEC. 7. The purchase money, proceeds or avails of any such sale, whether under the power of sale hereby granted or pursuant to judicial proceedings, or the proceeds of any payment made by the Government of the French Republic pursuant to the aforesaid contract between said Government and the company, together with any other moneys that then may be held by the trustee under this indenture, shall be applied as follows:

First. To the payment of the costs and expenses of such sale. Such costs and expenses shall include a reasonable compensation to the trustee, its agents, attorneys, and counsel, all expenses, liabilities, and advances made or incurred by the trustee under this indenture, and the payment of all taxes, assessments, or liens prior to the lien of these presents, except any taxes, assessments, or other superior liens subject to which such sale shall have been made.

Second. To the payment of the whole amount then owing or unpaid upon the notes hereby secured for principal and interest, including interest at the rate of 6 percent per annum on principal after maturity and on overdue coupons; or in case such proceeds shall be insufficient to pay in full the whole amount so due and unpaid upon said notes, then to the payment of such principal and interest, ratably, without preference or priority of principal over interest, or of interest over principal, or of any instalment of interest over any other instalment of interest.

Third. To the payment of the surplus, if any, to the company, its successors, or assigns, or to whosoever shall be lawfully entitled to receive the same. In accordance with said contract between the Government of the French Republic and the company above referred to, and on the conditions therein stated, such surplus, if any, may become payable to the Government of the French Republic.

SEC. 8. Upon any such sale by the trustee or pursuant to judicial proceedings, the trustee or any noteholder or any other person or the Government of the French Republic may bid for and may purchase the pledged securities offered for sale, or any part thereof, for itself or himself and without accountability in respect thereof, except for payment of the purchase price; and in settlement or payment of the purchase price of the pledged securities purchased, any purchaser shall be entitled to use and apply any notes, and any matured and unpaid coupons and claims for interest hereby secured, by presenting such notes and coupons in order that there may be credited thereon the sums applicable to the payment thereof under section 7 of this article; and thereupon such purchaser shall be credited, on account of such purchase price payable by him, with the sums so applicable to the payment of and credited on, the notes and coupons so presented.

SEC. 9. The company covenants that (1) in case default shall be made in the payment of any interest on any note at any time outstanding and secured by this indenture, and such default shall continue for a period of sixty days, or (2) in case default shall be made in the payment of the principal of any such note when the same shall become payable, whether at the maturity of said notes or by declaration as authorized by this indenture or upon a sale as mentioned in section 6 of this article; then, upon demand of the trustee, the company will pay to the trustee, for the benefit of the holders of the notes hereby secured, then outstanding, the whole amount which then shall have become due and payable on all such notes then outstanding for interest or principal or both as the case may be, including interest at the rate of six per cent per annum on principal after maturity and on overdue coupons; and in case the company shall fail to pay the same forthwith upon such demand, the trustee in its own name, and as trustee for an express trust, shall be entitled to recover judgment for the whole amount so due and unpaid.

The trustee shall be entitled to recover judgment as aforesaid, either before or after or during the pendency of any proceedings for the enforcement of the lien of this indenture upon the pledged securities, and the right of the trustee to recover such judgment shall not be affected by any sale hereunder, or by the exercise of any other right, power, or remedy for the enforcement of the provisions of this indenture; and in case of a sale as provided in this article of the pledged securities, and of the application of the proceeds of sale to the payment of the notes secured hereby, the trustee, in its own name and as trustee of an express trust, shall be entitled for the benefit of the holders thereof, to enforce payment of and to receive all amounts then remaining due and unpaid for principal and interest as aforesaid, upon any and all of the said notes then outstanding, and to recover judgment for any portion of the debt remaining unpaid, with interest. No recovery of any such judgment by the trustee, and no levy of execution upon any such judgment upon the pledged securities or upon any other property, shall in any manner or to any extent affect the lien of this indenture upon the pledged securities or any part thereof, or any rights, powers, or remedies of the trustee hereunder, but such lien, rights, powers, and remedies of the trustee and of the noteholders shall continue unimpaired as before.

Any moneys thus collected by the trustee under this section (less expenses, trustee's compensation and indemnification and other proper deductions), shall be applied by the trustee toward payment of the amounts then due and payable upon such notes ratably and without any preference or priority of any kind upon presentation of the respective notes and stamping such payments thereon, if partly paid, or upon cancellation thereof, if paid in full.

SEC. 10. No holder of any note hereby secured shall have any right to institute any suit, action, or proceeding in equity or at law for the enforcement of this indenture, or for the execution of any trust hereof, or for the appointment of a receiver, or for any other remedy hereunder, unless such holder previously shall have given to the trustee written notice of such default and of the continuance thereof, as hereinbefore provided; nor unless, also, the holders of twenty-five percent in principal amount of the notes hereby secured, then outstanding, shall have made written request to the trustee, and shall have afforded to it a reasonable opportunity either to proceed to exercise the powers hereinbefore granted, or to institute such action, suit, or proceeding in its own name, nor unless, also, they shall have offered to the trustee security and indemnity satisfactory to it, against the costs, expenses, and liabilities to be incurred therein or thereby; and such notification, request, and offer of indemnity are hereby declared, in every such case, at the option of the trustee, to be conditions precedent to the execution of the powers and trusts of this indenture, and to any action or cause of action, or for any remedy hereunder, it being understood and intended that no one or more holders of notes and coupons shall have any right in any manner whatever to affect, disturb, or prejudice the lien of this indenture by his or their action, or to enforce any right hereunder, except in the manner herein provided, and that all proceedings at law or in equity shall be instituted, had, and maintained in the manner herein provided and for the equal benefit of all holders of such outstanding notes and coupons.

All rights of action under this indenture, or under any of said notes, may be enforced by the trustee without the possession of any such notes, or the production thereof on the trial or other proceedings relative thereto, and any such suit or proceedings instituted by the trustee shall be brought in its name as trustee, and any recovery of judgment shall be for the ratable benefit of the holders of said notes.

Sec. 11. No delay or omission of the trustee, or of any holder of any note hereby secured, to exercise any right or power accruing upon any default occurring and continuing as aforesaid, shall impair any such right or power, or shall be construed to be a waiver of any such default, or an acquiescence therein; and every power and remedy given by this article to the trustee, or to the noteholders, may be exercised from time to time, and as often as shall be deemed expedient, by the trustee or by the noteholders.

Sec. 12. The company will not at any time insist upon or plead, or in any manner whatever claim or take, any benefit or advantage of any stay or extension law now or at any time hereafter in force, nor will it claim, take, or insist upon any benefit or advantage from any law now or hereafter in force providing for the valuation or appraisement of the pledged securities, or any part thereof, prior to any sale or sales thereof to be made pursuant to any provision of this indenture or to the decree, judgment, or order of any court of competent jurisdiction; nor, after any such sale or sales, will it claim to exercise any right under any statute now or hereafter made or enacted by the United States of America or by any State or Territory or otherwise; to redeem the pledged securities so sold, or any part thereof; and it hereby expressly waives all benefit and advantage of any and all such law or laws, and it covenants that it will not hinder, delay, or impede the execution of any power herein granted and delegated to the trustee, but that it will suffer and permit the execution of every such power as though no such law or laws had been made or enacted.

Sec. 13. Except as herein expressly provided to the contrary, no remedy herein conferred upon or reserved to the trustee, or to the holders of the notes, is intended to be exclusive of any other remedy or remedies, but each every such remedy shall be cumulative and shall be in addition to every other remedy given hereunder, or now or hereafter existing at law or in equity or by statute.

ARTICLE SIX

No recourse under or upon any obligation, covenant, or agreement of this indenture, or of any note hereby secured, or because of the creation of any indebtedness hereby secured, shall be had against any incorporator, stockholder, officer, or director of the company, or of any successor corporation, either directly or through the company, by the enforcement of any assessment or by any legal or equitable proceeding by virtue of any statute or otherwise: it being expressly understood that this indenture, and the obligations, hereby secured, are solely corporate obligations, and that no personal liability whatever shall attach to, or be incurred by, the incorporators, stockholders, officers, or directors of the company, or of any successor corporation, or any of them, because of the creation of the indebtedness hereby authorized, or under or by reason of the obligations, covenants, or agreements contained in this indenture, or in any of the notes hereby secured, or implied therefrom; and that any and all personal liability of every name and nature, either at common law or equity, or by statute, of, and any and all rights and claims against, every such incorporator, stockholder, officer, or director, are hereby expressly waived as a condition of, and as a consideration for, the execution of this indenture, and the issue of such notes.

ARTICLE SEVEN

SECTION 1. Any request or other instrument, provided by this indenture to be signed and executed by noteholders, may be in any number of concurrent instruments of similar tenor, and may be signed or executed by such noteholders in person or by agent appointed in writing. Proof of the execution of any such request or other instrument, or of a writing appointing any such agent, and of the holding by any person of any of said notes, shall be sufficient for any purpose of this indenture, and shall be conclusive in favor of the trustee and the company with regard to due action taken by them or either of them under such request or other instrument, if made in the manner specified in this article.

The fact and date of the execution by any person of any such request, or other instrument, or writing, may be proved by the certificate of any notary public, or other officer authorized to take acknowledgments of deeds to be recorded in New York, that the person whose name was subscribed to such request or other instrument acknowledged to him the execution thereof, or by an affidavit of a witness to such execution.

The fact of the holding of any of said notes by any person executing any such request or other instrument as a noteholder, and the amounts and distinctive serial numbers of the notes held by such person, and the date of his holding the same, may be proved by a certificate executed by any trust company, bank, bankers, or other depositary (wherever situated), if such certificate shall be deemed by the trustee to be satisfactory, showing therein that at the date therein mentioned such person had on deposit with such depositary, or had exhibited to it, the notes described in such certificate. Until the trustee shall be expressly notified in writing to the contrary, the trustee, in taking any action on the faith of any such certificate, may deem that the holding of notes hereby secured, as specified in such certificate, has continued.

SEC. 2. The company and the trustee may deem and treat the bearer of any note or of any coupon, hereby secured, as the absolute owner of such note or coupon, as the case may be, for the purpose of receiving payment thereof and for all other purposes; and neither the company nor the trustee shall be affected by any notice to the contrary.

ARTICLE EIGHT

If, when all the notes hereby secured shall have become due and payable, or within five days before, the company well and truly shall pay, or shall cause to be paid, the whole amount of the principal moneys (and premium, if any) and the interest due or to become due upon all of such notes, or shall provide for such payment by depositing with the trustee for the payment of such notes and coupons, the entire amount then due or to become due thereon for principal (and premium, if any) and interest, and also shall pay, or shall cause to be paid, all other sums payable hereunder by the company, and well and truly shall keep and perform all the things herein required to be kept and performed by it according to the true intent and meaning of this indenture, then, and in that case, all stocks, bonds, and other securities subject to this indenture shall revert to the company, and the estate, rights, title, and interest of the trustee shall thereupon cease, determine, and become void, and in such case the trustee, on demand of the company, and at its cost and expense, shall execute proper instruments, acknowledging satisfaction of and discharging this indenture, and shall redeliver to the company, or upon its order, the pledged securities then held by the trustee hereunder, accompanied by proper instruments of assignment and transfer; otherwise this indenture shall be, continue, and remain in full force and virtue.

ARTICLE NINE

SECTION 1. The trustee shall not be answerable for the default or misconduct of any agent or attorney appointed by it in pursuance hereof, if such agent or attorney shall have been selected with reasonable care; or for anything whatever in connection with this trust, except wilful misconduct or gross negligence. The trustee shall not be under any obligation to take any action towards the execution or the enforcement of the trusts hereby created, which, in its opinion, will be likely to involve it in expense or liability, unless one or more of the holders of the notes hereby secured shall, as often as required by the trustee, furnish indemnity satisfactory to the trustee against such expense or liability; nor shall the trustee be required to take notice of any default hereunder, or any default in any indenture under which any of the pledged securities were issued, or be deemed to have notice of any such default, unless notified in writing of such default by the holders of at least five percent of the principal amount of the notes hereby secured then outstanding, or be required to take action in respect of any default unless requested to take action in respect thereof by a writing signed by the holders of not less than twenty-five percent of the principal amount of the notes hereby secured, then outstanding, and tendered satisfactory indemnity as aforesaid, anything herein contained to the contrary notwithstanding; but the foregoing provisions of this section are intended only for the protection of the trustee, and shall not be construed to limit or to affect any discretion or power by any provision of this indenture given to the trustee to determine whether or not it shall take action in respect of any default, or any power or discretion of the trustee to take action in respect of any default without such notice or request from noteholders.

Any action taken by the trustee upon the request of any person who at the time is the owner or holder of any such note or coupon, shall be conclusive and binding upon all future owners and holders of the same note or coupon.

The trustee shall incur no liability to anybody in acting upon any notice, request, consent, certificate, note, bond, document, or paper believed by it to be genuine and to have been signed by the proper person.

The recitals and statements herein and in said notes contained are and shall be taken as statements by the party of the first part alone and shall not be considered as made by or as imposing any obligation or liability upon the trustee, nor shall the trustee be held responsible for, and it makes no representation in respect of, the legality or validity of said notes, or of this indenture, or of any of the pledged securities, or the validity of such pledged, or the sufficiency of the security afforded thereby.

The trustee may become the owner of notes secured hereby with the same rights which it would have if it were not trustee, and at any public sale of the stocks, bonds, or other securities pledged as collateral hereunder, may become the purchaser thereof without any accountability or responsibility except for the payment of the purchase price.

The trustee, in its discretion, may advise with legal counsel to be selected and employed by it at the expense of the company, and anything done or suffered in good faith by the trustee in accordance with the opinion of counsel shall be conclusive in favor of the trustee as against the company and all holders of notes secured hereby.

The trustee shall be entitled to reasonable compensation for all services rendered by it in the execution of the trusts hereby created, and the company agrees to pay such compensation as well as all expenses necessarily incurred or disbursed by the trustee hereunder, from time to time upon demand; and for payment of such compensation and expenses and proper indemnification the trustee shall have a lien on all the property pledged hereunder, or which at any time hereafter may be pledged hereunder, paramount to the lien of the notes hereby secured.

The trustee shall be under no duty or obligation to see to the application of the proceeds of any note issued under this indenture, or to take any steps towards procuring the deposit with it or for its account of any coupons or claims for interest or dividends held in France, in the event of a default hereunder.

The trustee shall be under no duty at any time to record this indenture or to file or refile the same as a chattel mortgage or otherwise.

In all cases where this indenture does not make other express provision as to the evidence on which the trustee may act or refrain from acting, the trustee shall be protected in acting or refraining from acting under any provision of this indenture in reliance upon a certificate as to the existence or nonexistence of any fact or facts, signed by the president or a vice-president of the company, and by its treasurer or secretary.

The trustee shall allow interest at the rate of two per cent per annum upon all moneys received by it under any provision of this indenture, until it is required to pay out the same conformably herewith. So long as there shall exist no default in the payment of the principal or interest of the notes hereby secured, all interest allowed on any such moneys so deposited may be paid from time to time to the company, or upon its order.

Any notice required or provided by this indenture to be given by the trustee to the company shall be sufficiently given if delivered or mailed to it at No. 7 West 10th Street, Wilmington, Delaware.

SEC. 2. The trustee, or any trustees hereafter appointed, may resign and may be discharged of the trusts created by this indenture, by giving notice thereof to the company and to the noteholders, by publication, at least twice a week, for two successive calendar weeks, in one newspaper at that time published in the Borough of Manhattan, City of New York, State of New York.

Such resignation shall take effect on the day specified in such notice, unless previously a successor trustee shall have been appointed as hereinafter provided, in which event such resignation shall take effect immediately upon the appointment of a successor trustee.

Any trustee may be removed at any time by an instrument in writing under the hands of three-quarters in interest of the holders of the notes hereby secured, then outstanding.

SEC. 3. In case at any time said trustee, or any trustee hereafter appointed, shall resign or shall be removed or otherwise shall become incapable of acting, a successor or successors may be appointed by the holders of a majority in principal amount of the notes hereby secured then outstanding, by an instrument or concurrent instruments signed by such noteholders or their attorneys-in-fact duly authorized: *Provided, nevertheless*, And it is hereby agreed and declared that, in case at any time there shall be a vacancy in the office of trustee hereunder, the company, by an instrument executed by order of its board of directors, may appoint a trustee to fill such vacancy until a new trustee shall be appoitned by the noteholders as herein authorized. Thereupon the company shall publish notice of such appointment once a week for two successive calendar weeks in a newspaper published in the Borough of Manhattan, city of New York, State of New York, but any new trustee so appointed by the company shall immediately and without further act be superseded by a trustee appointed in the manner above provided by the holders of a majority in principal amount of the notes hereby secured, if such appointment by noteholders be made prior to the expiration of one year after the last publication of such notice. Every such trustee appointed in place of Bankers Trust Company or its successor in the trust, shall always be a trust company in good standing, having a capital and surplus aggregating at least $1,000,000 if there be such a trust company willing and able to accept the trust upon reasonable or customary terms.

Any such new trustee appointed hereunder shall execute and acknowledge, and shall deliver to the trustee last in office, and also to the company, an instrument accepting such appointment hereunder, and thereupon such new trustee, without any further act, deed, or conveyance, shall become vested with all the estates, properties, rights, powers, trusts, duties, and obligations of its predecessors in the trust hereunder with like effect as if originally named as trustee herein; but nevertheless, on the written request of the new trustee, the trustee ceasing to act shall execute and deliver an instrument transferring to such new trustee, upon the trusts herein expressed, all the estates, properties, rights, powers, and trusts of the trustee so resigning or removed, and shall duly assign, transfer, and deliver all the stocks, bonds, and other securities pledged hereunder, and all other property and moneys held hereunder by such trustee, to the new trustee so appointed in its place, *subject, nevertheless*, to any lien which the retiring trustee may have pursuant to any provision hereof. Upon requests of any such new trustee, the company shall make, execute, acknowledge, and deliver any and all assignments, conveyances, or instruments in writing for more fully and certainly vesting in and confirming to such new trustee all such property, rights, powers, and duties.

ARTICLE TEN

SECTION 1. All the covenants, stipulations, promises, and agreements in this indenture contained, by or in behalf of the company, shall bind its successors and assigns, whether so expressed or not.

SEC. 2. In case the company shall be consolidated or merged with any other corporation, or shall sell, convey, and transfer to another corporation, its property as an entirety, the successor corporation formed by such consolidation, or into which the corporation shall have been merged, or which shall have purchased and received a conveyance and transfer, as aforesaid—upon executing an instrument satisfactory to the trustee, whereby such successor corporation shall assume the due and punctual payment of the principal and interest of the notes hereby secured, and the performance of all the covenants and conditions of this indenture—shall succeed to, and be substituted for, the company, party of the first part hereto, with the same effect as if it had been named herein as such party of the first part; and such successor corporation thereupon may cause to be signed, and may issue, either in its own name or in the name of the party hereto of the first part, any or all of such notes which theretofore shall not have been signed to by the said party of the first part and delivered to the trustee; and, upon the order of said successor corporation, in lieu of the company, and subject to all the terms, conditions, and restrictions herein prescribed the trustee shall certify and shall deliver any of such notes which previously shall have been signed and delivered by the officers of the company to the trustee for certification and any of such notes which such successor corporation thereafter shall cause to be signed and delivered to the trustee for that purpose. All the notes so issued shall have in all respects the same legal rank and security as the notes theretofore or thereafter issued in accordance with the terms of this indenture, as though all of such notes had been issued at the date of the execution hereof.

SEC. 3. For every purpose of this indenture, including the execution, issue, and use of any and all notes hereby secured, the terms "company" and "American Foreign Securities Company" include and mean not only the party of the first part hereto, but also any such successor corporation formed by consolidation or otherwise under the laws of any State or States of the United States. Every such successor or purchasing corporation shall posses, and from time to time may exercise, each and every right and power hereunder of American Foreign Securities Company, in its name or otherwise.

SEC. 4. Any act or proceeding, by any provision of this indenture authorized or required to be done or performed by any board, committee, or officer of the company, shall and may be done and performed with like force and effect by the like board, committee, or officer of any corporation that at the time shall be such lawful sole successor or purchaser of the company.

SEC. 5. Except when otherwise indicated, the words "the trustee", or "said trustee" or any other equivalent term, as used in this indenture, shall be held and construed to mean the trustee or trustees for the time being, whether original or successor, and the words "trustee", "note", "noteholder", shall signify the plural as well as the singular number, the word "amount", where used in reference to the notes, shall signify principal amount, and the term "majority" shall signify majority in amount, whether or not so expressed.

The date, August 1, 1916, in this indenture first above written as the date hereof, is for the purpose of identification, this indenture being in fact executed and delivered on the date stated in the attestation clause hereof.

Bankers Trust Company, trustee, party hereto of the second part, hereby accepts the trusts in this indenture declared and provided, upon the terms and conditions hereof.

In witness whereof, American Foreign Securities Company, the party hereto of the first part, has caused this indenture to be signed by its president or one of its vice presidents, and its corporate seal to be hereunto affixed and attested by its secretary or assistant secretary, and the due execution of these presents to be proved, and Bankers Trust Company, the party hereto of the second part, has caused this indenture to be signed by one of its vice presidents and its corporate seal to be hereunto affixed and attested by its secretary or one of its assistant secretaries, and the due execution of these presents to be proved, all in duplicate. Executed and delivered the 31st day of July 1916.

GOVERNMENT OF THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND TWO-YEAR 5% SECURED LOAN GOLD NOTES—SYNDICATE AGREEMENT, AUGUST 18, 1916—J. P. MORGAN & CO., SYNDICATE MANAGERS

An agreement, made the 18th day August, 1916, by and between

J. P. Morgan & Co., (hereinafter called the "Syndicate Managers"), a copartnership, parties of the first part, and the subscribers hereto (hereinafter called, severally, the "Subscribers," and, collectively, the "Syndicate"), severally, parties of the second part:

Whereas, The United Kingdom of Great Britain and Ireland (hereinafter referred to as the "Government") purposes to issue $250,000,000 principal amount of two-year 5% secured loan gold notes of the Government, such notes to be substantially in the form marked exhibit A hereto annexed, and the pledge agreement referred to in said Exhibit A to be in form approved by the syndicate managers; and

Whereas, upon the terms of this agreement, the parties hereto desire to form a syndicate to underwrite the sale of the notes at 99% with any accrued interest upon the public offering presently to be made, and to pay to the Government 98% of the principal amount of the notes with any accrued interest; and

Whereas, the syndicate managers are to make no charge hereunder to the syndicate, but are to receive, without accountability therefor to the syndicate or any of the subscribers, a commission to be paid to them by the Government for their services in connection with the loan:

Now therefore, in consideration of the premises, and of the mutual promises herein contained, the parties hereto mutually have agreed and hereby do agree as follows:

FIRST: On subscribing this agreement each subscriber shall indicate opposite his name the principal amount of the notes for and on account of which such subscriber is or shall be bound, and for and on account of such amount of notes so indicated in his several subscriptions, each subscriber agrees to make payment to the syndicate managers, as hereinafter mentioned, at the rate of 99% and any accrued interest. Each subscriber agrees that from time to time and at any time on or after this date, he will make payment to the syndicate managers at the said rate for and on account of such amount of notes so indicated in his subscription, when and as called for by the syndicate managers, and without reference to the receipt or the possession by the syndicate managers or by the subscribers of any of the said notes. The term "notes," whenever used herein, shall be deemed to include receipts and certificates issued for payments on account of the purchase price of such notes.

SECOND. The several subscribers shall be called upon to make such payments of cash, in respect of their several subscriptions, only ratably according to the several amounts thereof; but to the full extent of his several undertakings, each subscriber shall be so responsible, regardless of performance or nonperformance by any other subscriber.

In the same proportion, except as otherwise herein provided, each subscriber shall be entitled to share in the benefits, and shall bear any loss, resulting to the syndicate under this agreement.

Nothing herein contained shall constitute the parties hereto partners, or shall render any one of the subscribers liable to contribute more than the amount of his several subscriptions.

THIRD. The syndicate managers may issue to the several subscribers suitable receipts in respect of moneys paid or advanced hereunder, or certificates of interest of such tenor and form as they may deem suitable. Such certificates of interest and all rights and obligations hereunder of the respective subscribers may be made transferable in such manner and on such terms and conditions as the syndicate managers may prescribe; but no transfer hereunder shall be valid unless assented to in writing by the syndicate managers; and, unless otherwise expressly provided in such assent, the transferrer shall continue to be liable for the payment of the unpaid part of the transferred subscription until the same shall be fully paid.

FOURTH. In case of the failure of any subscriber or of his transferee to perform any of his undertakings hereunder as and when called upon by them, the syndicate managers, in behalf of themselves and the syndicate, shall have. and at their sole and exclusive option they may exercise, the right to exclude such subscriber or his transferee from all interest in or under the syndicate; and in their discretion, without any proceedings either at law or in equity, in such manner and on such terms as they shall deem expedient, and without demand or notice, they may, at public or private sale, dispose of any interest or right of such subscriber or of his transferee hereunder, and thereupon all interest and right of such defaulting subscriber or his transferee hereunder shall cease and determine. At any public sale under this article of any interest or right of any subscriber or his transferee, the syndicate managers, or any party hereto, may become purchaser for their or for his own benefit, without accountability except for the purchase price. Notwithstanding any sale, whether public or private, the defaulting subscriber shall be responsible to the syndicate managers for the benefit of the syndicate for all damages resulting from any such failure on his part, not exceeding the amount unpaid on his subscription hereto with lawful interest.

FIFTH. The syndicate managers shall be the managers of the syndicate, and in behalf of the syndicate they may make any and all arrangements, and may perform any and all acts, even though not herein provided for, that in the exercise of their unrestricted discretion they shall deem to be expedient in order to consummate the purposes of this agreement, or to promote or to protect the interests of the syndicate.

The enumeration of specific powers in any article of this agreement shall not be construed as in any way abridging the general powers by this article intended to be conferred upon or reserved to the syndicate managers.

SIXTH. The syndicate managers shall have authority from time to time and at any time to incur such expenses as they may deem proper in carrying out, or in endeavoring to carry out, this agreement or in doing any act or thing which they may deem to be in the interest of the syndicate, or necessary or proper in discharge of any of its obligations. It is understood that, in addition to other expenses, the syndicate shall bear the cost of preparing, printing, and engraving the notes, the compensation of The Farmers Loan and Trust Company for services as trustee under the pledge agreement, and the expenses of legal counsel in connection with the preparation of the notes, the pledge agreement and other transactions in connection with the loan and the syndicate. All such expenses shall constitute and shall be a prior charge in their favor upon any and all moneys, notes, and property by them received and then held hereunder. Any and all moneys by them received hereunder for account of the syndicate shall be held by them or either of them as syndicate managers in general account. They also shall have power and authority finally to fix and to pay all compensations of depositaries, brokers, agents, and counsel, or others, and in the expense account may be included such commissions to brokers and others (whether or not parties to this agreement), as compensation for services rendered, as the syndicate managers from time to time may have determined and have paid or have become obligated to pay.

SEVENTH. The syndicate managers shall have full power as in the exercise of their unrestricted discretion they shall deem to be for the interest of the syndicate, from time to time, in such manner, upon such terms and for such prices as they shall deem expedient, to make sales of the notes upon the public offering or otherwise in such amounts as they may deem expedient.

In case of any such sale or acquisition, the proceeds thereof shall become and shall be subject to this agreement; and as administered, used, and finally distributed by the syndicate managers under the provisions of this agreement, the same shall be accepted by the syndicate in full and final discharge of any and all obliigation and liability of the syndicate managers hereunder.

Until the termination of the syndicate, the syndicate managers, in such manner, at such prices, on such terms, and in such amounts as they may deem expedient, shall have power, for account of the syndicate, to make purchases of any notes of the issue for delivery by them under sales theretofore or thereafter made, and they may resell any such notes which they may have purchased; and, in their discretion, they may make any further undertakings of any kind with any persons concerning any such notes. They may apply toward any such purchases any sums realized from any sales of notes under any provision of this agreement; and they may make advances, or may procure loans, and may secure the same to such amounts and in such manner as from time to time they may deem expedient for any of the purposes of this agreement.

EIGHTH. The rights and the powers of the syndicate managers and the interests of the subscribers hereunder severally and respectively shall continue until the final distribution hereunder. Prior to the date of such final distribution, no death of any person or subscriber or of any member of any partnership subscriber, nor any dissolution or termination of any corporate subscriber, shall dissolve the syndicate or shall terminate the rights of the powers of the syndicate managers in respect of any interest of any subscriber then living or dead or ceasing to exist, or shall entitle any subscriber then surviving or the representatives of any subscriber then deceased or ceasing to exist, to demand any dissolution, distribution or accounting, or to withdraw any interest hereunder; this stipulation constituting an essential part of the consideration for this agreement.

No subscriber shall be entitled before the termination of the syndicate to receive any of the said notes or the proceeds thereof, subject to this agreement. In the meantime, in their discretion, the syndicate managers either themselves may retain all or any of such notes, or they may deliver to any subscriber his proportionate part thereof, upon his agreement to hold the same subject to sale by the syndicate managers, and to return the same upon the call of the syndicate managers at any time before the termination of the syndicate.

NINTH. The syndicate managers shall be the sole and final judges as to whether at any time it is to the interest of the syndicate to proceed further under this agreement, and whenever they may deem expedient, they may abandon the objects contemplated by this agreement and all further proceedings thereunder. In such event, any and all notes and any and all proceeds of the notes, by them received and then held for account of the syndicate, shall remain charged with the payment of all expenses and liabilities by the syndicate managers incurred for the purposes herein indicated, and after paying to the Government the amount payable to it on the notes as hereinabove recited, shall be applied:

First, to the payment and discharge of any and all expenses and all liabilities incurred by the syndicate managers for any purpose indicated in this agreement;

Secondly, to the payment to the subscribers of all amounts of such securities or of cash held by the syndicate managers subject to this agreement, such payment to be made to the subscribers ratably.

TENTH. After the complete performance of the entire obligation of the syndicate hereunder, and payment of the amount payable to the Government on the notes as hereinabove recited but not before the 1st day of October 1916, unless otherwise determined by the syndicate managers in the exercise of their unrestricted discretion, the syndicate shall be entitled to receive the notes, or proceeds thereof, then held by the syndicate managers under this agreement, and including the net profits of the purchase, use, sale, and disposition of the notes that shall be or become the subject of this agreement.

The syndicate managers will make no charge to the syndicate for their services in forming and in managing the syndicate hereunder; but they shall be entitled to retain without accountability to the syndicate or to any of the subscribers, the aforesaid commission to be received by them from the Government, and also any compensation, profits, or benefits which have accrued or may accrue to them under any contract or arrangement with the Government connected with the loan or otherwise.

ELEVENTH. The syndicate managers shall not be liable under any of the provisions of this agreement nor for any matter therewith connected, except for good faith in performing, or in refraining from performing or carrying out, the obligations by them herein expressly assumed; the implication of any obligations not herein expressly assumed by them being hereby expressly denied and waived. The syndicate managers shall be under no responsibility in respect of the form or validity of the said notes or of any receipts or certificates, nor for the delivery by the Government of definitive notes in exchange for temporary notes or any receipts or certificates which may be issued for payments on account of the notes, nor for the performance of any agreement contained in any such receipts or certificates.

It is understood that in the same manner as other subscribers, the syndicate managers may become subscribers hereto; that as such subscribers they shall be liable for all subscriptions by them made, respectively; and that in all respects they shall be entitled to the same rights and benefits as any other subscriber.

The syndicate managers and any subscriber hereto, without accountability to the syndicate or any other subscribers, may become and be interested in any other syndicate or association for the purchase or the sale of any securities covered by this agreement or for dealings therein.

TWELFTH. This agreement shall bind, and is for the benefit of, the parties hereto, and their successors, executors, and administrators, severally and respectively.

All rights and powers hereunder of J. P. Morgan & Co. shall vest in the copartnership or firm doing business under such name, and without further act or assignment shall pass to and vest in the successor of such firm as from time to time constituted, doing business as such successor.

THIRTEENTH. Nothing herein contained shall be construed as creating any trust or obligation whatsoever in favor of any person or corporation other than the syndicate managers and the subscribers, nor any obligation in favor of the subscribers, excepting only as herein expressly provided.

FOURTEENTH. Each subscriber shall set opposite his subscription hereunder an address, to which notices, calls, or other communications may be sent, and any notice, call, or other communication addressed to any subscriber at the address so given, and either left at such address or mailed thereto, shall be deemed actually given to such subscriber, and shall be sufficient for all the purposes hereof. If any subscriber shall fail so to furnish his address to the syndicate managers, he shall not be entitled to any notice of calls, or offers, or any other notice hereunder, except upon request at the office of the syndicate managers, and he shall be deemed to assent to any action of the syndicate managers.

FIFTEENTH. In consideration of the irrevocable rights in them vested hereunder, and the promises of the several subscribers, the syndicate managers have become parties to, and in good faith will endeavor to consummate the purposes of, this agreement.

In witness whereof the parties of the first part have hereunto affixed their signatures, and the parties of the second part at various dates have affixed their subscriptions hereto, it being understood that for convenience this agreement may be subscribed in several parts and copies with like force and effect as though all the subscriptions were upon one part or copy thereof.

No.________________ $________________

THE GOVERNMENT OF THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND
$250,000,000 TWO-YEAR 5% SECURED LOAN

GOLD NOTE

The Government of the United Kingdom of Great Britain and Ireland (hereinafter termed "obligor"), for value received, promises to pay to bearer the sum of dollars on the first day of September 1918 and to pay interest on such principal sum at the rate of five per centum (5%) per annum, semiannually, on the first day of March and the first day of September in each year, until such principal sum shall be paid, but only upon presentation and surrender of the coupons for such interest, hereto attached, as severally they mature. Such principal sum and the interest thereon will be paid at the office of J. P. Morgan & Co. in the city of New York, State of New York, United States of America, in gold coin of the United States of America, of the standard of weight and fineness existing September 1, 1916, without deduction for any British taxes, present or future.

The notes of the loan, for the aggregate principal sum of $250,000,000, are equally and ratably secured by the pledge with the Farmers Loan and Trust Company, a corporation of the State of New York, of certain bonds, stocks, and other securities pursuant to and upon the terms of an instrument in writing (hereinafter termed "pledge agreement") duly executed and delivered by the obligor to the said Trust Company, to which pledge agreement, held by said Trust Company, reference hereby is made.

This note is subject to redemption at the office of said Trust Company, at the option of the obligor, on any day until and including August 31, 1917, at 101% of the principal sum, or on any day thereafter until and including August 31, 1918, at 100½% of the principal sum, accrued interest to the date of such redemption being also payable. Notice of intention to redeem will be given by advertisement thereof in two newspapers published in said city of New York, once in each week for five successive weeks, the first publication to be not less than thirty days prior to the date fixed for such redemption. After the date of redemption specified in said notice, provided payment be made of the amount payable on this note when presented pursuant to such notice, no interest will accrue hereon and any coupons for interest maturing after such date will be null and void.

In case of the sale of any of the pledged securities in enforcement of said pledge agreement upon a default as specified therein, then and in such case the principal sum of this note and of all other notes of the loan, if not previously due, will become forthwith due and payable.

The notes of the loan are issuable in denominations of $1,000, $5,000, and $10,000. Unless previously called for redemption, any note of a denomination higher than $1,000, with all unmatured coupons thereto attached, when surrendered for that purpose at the office of the said Trust Company, may be exchanged for notes (bearing all unmatured coupons) of equal aggregate principal amount of lower denomination or denominations. For any such exchange, the obligor may prescribe reasonable rules and regulations, and may require payment of a reasonable charge.

This note shall not be entitled to the benefit of the said pledge agreement, nor be valid for any purpose, until authenticated by the certificate hereon duly executed by the said Trust Company or its successor in the trust under said pledge agreement.

Dated September 1, 1916.

[Form of coupon]

No---------------- $---------------

On the first day of , 191 , (unless the note below mentioned shall have been called for previous redemption) the Government of promises to pay to bearer at the office of J. P. Morgan & Co., in the city of New York, State of New York, United States of America, dollars gold coin of the United States of America, without deduction for British taxes, present or future, being six (6) months' interest on gold note no.------------ of the two-year 5% secured loan of the said Government.

[Form of certificate of Trust Company]

This note is one of the notes of the loan within mentioned.

THE FARMERS LOAN AND TRUST COMPANY,
By ——— ———, *Vice-President.*

EXHIBIT NO. 2704

THE GOVERNMENT OF THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND TO THE FARMERS' LOAN AND TRUST COMPANY—PLEDGE DATED SEPTEMBER 1, 1916, SECURING $250,000,000 TWO-YEAR 5% SECURED LOAN GOLD NOTES, INTEREST PAYABLE MARCH 1 AND SEPTEMBER 1

NEW YORK CITY, *September 1, 1916.*

To the FARMERS' LOAN AND TRUST COMPANY,
New York City.

DEAR SIRS: The Government of the United Kingdom of Great Britain and Ireland (hereinafter termed the obligor) is about to issue and to sell its two-year 5% secured loan gold notes for the aggregate principal amount of $250,-

000,000, dated September 1, 1916; such notes (hereinafter referred to as the notes) to be substantially in the form marked schedule A hereto annexed, and to be authenticated by the certificate thereon executed by your company. Pending the preparation of the definitive notes, temporary notes without coupons, substantially in said form, may be issued in any denomination and similarly authenticated.

I. In order to secure the payment, principal, and interest of all of the notes of said issue at any time outstanding according to their tenor, and in consideration of the purchase and acceptance of such notes by the original and subsequent takers and holders thereof, the obligor hereby pledges with your company certain bonds, stocks, and other securities (hereinafter termed, collectively, "pledged securities") of the aggregate value of not less than $300,000,000, as follows—the several issues of such securities, and the unit values at which such securities severally and respectively are pledged hereunder, being set forth in schedule B hereto annexed, viz:

> *Group 1.*—Stocks, bonds, and other securities of corporations organized in the United States, of the aggregate value of not less than $100,000,000.
>
> *Group 2.*—Bonds and other obligations of the Government of the Dominion of Canada, either as maker or guarantor, and stocks, bonds, and other securities of the Canadian Pacific Railway Company, all of the aggregate value of not less than $100,000,000.
>
> *Group 3.*—Bonds and other obligations of the several following Governments, either as maker or guarantor, viz., of Argentina, Chile, Norway, Sweden, Denmark, Switzerland, and/or Holland, all of the aggregate value of not less than $100,000,000.

Such pledge to your company is in trust for the benefit of all present and future holders of the notes, so that subject to the terms hereof the principal and interest of the notes shall be secured ratably by such pledge.

Coupons or warrants for interest or dividends maturing or payable on or prior to September 1, 1918, on any securities held by your company under this writing, may be lodged at the office of your company in London, England, or at such other agencies in London as your company may elect.

II. In case at the time of the authentication by your company of the notes, the obligor shall not have delivered to you all of the securities deliverable under clause I hereof, the obligor will deposit temporarily with you, as part of the security hereunder, (1) corporate stocks, bonds, or other securities that are listed upon the New York Stock Exchange and are approved by J. P. Morgan & Co. as acceptable for the purpose, of a value equal to the difference between $300,000,000 and the aggregate value of the securities that shall have been delivered under clause I; and (2) a sum in cash equal to five-sixths of the difference, if any, between $300,000,000 and the aggregate value of the securities delivered under clause I and the securities delivered under this clase II.

Thereafter from time to time, upon delivery to your company of any securities deliverable under clause I and not theretofore delivered, your company either (*a*) will redeliver such temporarily deposited securities of an amount in value equal to the amount in value of the securities so delivered under clause I, or (*b*) will repay such temporarily deposited cash of an amount equal to five-sixths of the value of the securities so delivered under clause I.

III. From time to time, upon the written request of the obligor and the written approval of J. P. Morgan & Co., your company shall release any of the pledged securities, provided that contemporaneously there be substituted for the securities of each group so released other securities of the same group of equal aggregate value.

IV. If at any time the pledged securities shall have depreciated in aggregate value either because of change in market price or in the rate of exchange, so that such aggregate value shall become less than 120% of the principal amount of the notes at the time outstanding, the obligor from time to time will deliver to your company, as part of the trust estate, additional securities of one or more of the groups sufficient to bring the value of all of the securities pledged to a sum exceeding by not less than twenty percent (20%) the principal amount of the notes at the time outstanding, so that at all times such twenty percent (20%) excess value shall be maintained; provided, however, that if at the time of such depreciation the trustee shall hold, as part of the security under this writing, any cash deposited in lieu of securities, then and in such case the obligor shall not be required to pledge additional securities hereunder unless at the time the aggregate value of the pledged securities held by the trustee shall have become less than 120% of the difference between the aggregate principal amount of the outstanding notes and the amount of such cash, nor to pledge any additional securities except to an amount sufficient to increase the value of the pledged securities to the amount of 120% of said difference in amount.

V. For all purposes of clause I of this writing, the value of the pledged securities is to be computed upon the basis of the unit values respectively set forth in schedule B.

For the purposes of clause II of this writing, (1) the value of the securities therein referred to as deliverable under clause I is to be computed upon the basis of the unit values thereof respectively set forth in schedule B, and (2) the value of the securities temporarily deposited shall be deemed to be such as J. P. Morgan & Co. shall certify to your company in writing to be, in their opinion, the values respectively of such temporarily deposited securities at the time of the deposit thereof when computed upon the basis of the market value on the New York Stock Exchange, if quoted thereon; and, if not quoted thereon, the market value in the general securities market in New York.

For all purposes of clause III and clause IV of this writing, the value at any time of pledged securities released and of securities substituted therefor and of additional securities pledged, respectively, shall be deemed to be such as J. P. Morgan & Co. shall certify to your company in writing to be, in their opinion, the values of such substituted or released or additional securities, as the case may be, at the time of such substitution or release or pledge, as determined upon the following basis, viz.: (*a*) The value of such securities payable in currency of the United States shall be the market value of the securities on the New York Stock Exchange, if quoted thereon, and, if not quoted thereon, the market value in the general securities market in New York; (*b*) the value of such securities not payable in United States currency shall be the market value in London of the securities in pounds sterling, converted into dollars in the city of New York at the then exchange value of pounds in the New York market; and (*c*) if any of the securities, in the judgment of J. P. Morgan & Co., have no quoted market prices, the market value of such securities shall be taken to be such as J. P. Morgan & Co. shall fix for the purpose.

All determinations of value have been made and shall be made without including any amount for accrued interest on any of the securities valued.

VI. The security hereby constituted shall become enforcible in each and every of the following events of default by the obligor (hereinafter termed "events of default"), viz:

(*a*) Default in the payment of the principal of any of the notes.

(*b*) Default in the payment of any instalment of interest on any of the notes, which default shall have continued for the period of thirty (30) days.

(*c*) Default in pledging hereunder additional securities to maintain the margin as provided in clause IV of this writing, which default shall have continued for the period of thirty (30) days after notice to the obligor from your company.

VII. Until the happening of an event of default, the obligor shall be entitled (1) to collect and to receive for its own account all interest, dividends, and other income of the pledged securities, and accordingly, at a reasonable time prior to the due date thereof, to have delivered by your company to the obligor, or upon its order, all coupons and warrants for such interest, dividends, and other income; and (2) to exercise any voting rights appertaining to any of the pledged securities.

VIII. Upon the happening of an event of default, your company in its discretion may, and upon the request of the holders of twenty-five percent (25%) of the principal amount of the notes at the time outstanding and upon being indemnified to its satisfaction your company shall, sell, collect, and convert into money the pledged securities or any part thereof, and all right of redemption thereof.

IX. At any sale, the pledged securities may be sold in one or more lots as in its discretion your company shall determine. Any such sale shall be made at public auction in the city of New York, or in the city of London, or in part in one and in part in the other of said cities. The notice of sale shall contain a brief general description of the pledged securities to be sold, a statement of the time or times of each such sale, and a specification of the terms of sale as determined by your company, and shall be sufficiently given if published once in each week for five successive calendar weeks prior to any such sale in two newspapers published in the Borough of Manhattan, city of New York, and in two newspapers published in the city of London.

From time to time, any such sale may be adjourned by your company by announcement at the time and place appointed for such sale, or any such adjourned sale; and without further notice or publication, such sale may be made at the time and place to which the same shall have been so adjourned.

No purchaser or anyone claiming under him shall be bound to see to the application of the purchase money or to inquire as to the authorization or regularity of any such sale.

X. In case of any sale of any of the pledged securities by your company under the power of sale above granted, the whole of the principal sums of the notes, if not previously due, shall at once become due and payable.

XI. The avails of any sale shall be applied as follows:

First, to the payment of the costs and expenses of such sale, and also a reasonable compensation to your company, its agents, attorneys, and counsel, and of all taxes, expenses, liabilities, and advances made or incurred by your company in the care, administration, or collection of any of the pledged securities.

Secondly, to the payment of the whole amount then owing and unpaid upon the notes for principal and interest, including interest at the rate of five percent per annum on principal after maturity and on overdue coupons; or in case such proceeds shall be insufficient to pay in full the whole amount so due and unpaid upon said notes, then to the payment of such principal and interest, ratably, without preference of principal over interest or of interest over principal.

Lastly, to the payment of the surplus, if any, to the obligor.

XII. At any such sale, any holder or holders of any of the notes (including your company) may become the purchaser or purchasers of the pledged securities, without accountability except for the purchase price, whether the sale be made under the power of sale herein contained or pursuant to judicial proceedings.

XIII. From time to time, acting by its agents authorized in writing (of which authorization a duplicate shall be filed with your company), the obligor may sell any of the pledged securities, provided that the obligor shall not be in default in the payment of the principal or interest of any of the notes, and provided, further, that any default existing prior to such sale in the agreements of the obligor contained in clause IV hereof, may and shall be remedied by the application of the proceeds of sale to the redemption of notes as hereinafter provided. Such sales may be made in such manner and at such place, and whether publicly or privately, as the obligor or its agents authorized as aforesaid may deem advisable. In case of any such sale, your company shall release the securities so sold, upon receipt by your company of the net proceeds of the sale as certified in writing to your company by the obligor or by J. P. Morgan & Co., the date of such release and delivery of such securities to be the date specified in said writing.

XIV. Any and all proceeds of any sale pursuant to the provisions of clause XIII hereof, shall be applied to the purchase or redemption of notes as follows:

Until the delivery to your company by the obligor of a request to redeem notes by call as hereinafter provided, such moneys shall be applied by your company to the payment of the purchase price of notes secured hereby which shall be delivered to you by J. P. Morgan & Co. for cancellation. A writing signed by J. P. Morgan & Co. stating the amount of notes, and the purchase price or prices thereof (which in no case shall exceed the then redemption price), shall be warrant to your company for paying to J. P. Morgan & Co., or upon their order, such purchase price or prices and for any other action taken by your company on the faith of such writing.

If the obligor shall deliver to your company a written request to redeem notes by call, specifying therein the date for such redemption which shall be not less than forty (40) days subsequent to the delivery of such request, your company at the expense of the obligor shall publish once in each week for five successive calendar weeks, in two newspapers published in the Borough of Manhattan, city of New York, a notice calling for the presentation and surrender at the office of your company, on the date so specified (which date shall be not sooner than 30 days after the first publication) of the notes to be redeemed bearing all unpaid coupons. In case less than all the outstanding notes are so to be redeemed, the notice shall specify, by reference to the serial numbers thereof, the notes called for redemption as determined by lot according to any method deemed proper by your company and approved by J. P. Morgan & Co.

To the extent of any moneys applicable to the purpose at any time thereafter held by your company, upon surrender of any such designated note, bearing coupons as aforesaid, your company shall receive the same and shall pay therefor the principal amount, the premium payable on the designated redemption date, and the accrued interest thereon up to such redemption date.

To avoid partial redemption of any note of a denomination greater than $1,000, your company in any drawing for redemption may apportion, as nearly as practicable, to the aggregate amount of notes of each denomination, such part of the funds available for redemption as shall bear to the entire amount of such funds the same proportion that the aggregate amount of notes of each denomination shall bear to the aggregate amount of all the notes then outstanding, and a separate drawing of the notes of each denomination shall be made for such amounts as the moneys apportioned to such denomination shall suffice to pay at the redemption rates above specified.

All notes so redeemed or purchased forthwith shall be cancelled by your company and be delivered to the obligor.

XV. The right to enforce the security given by these presents for the benefit of the notes, shall vest exclusively in your company and its successors in the trust, and all action by your company in such enforcement shall be for the ratable benefit of all of the notes at the time outstanding. No holder of any note or coupon shall bring any suit, action or other proceedings for the enforcement of such security.

XVI. When all of the notes, principal and interest, shall have been paid, or when provision for such payment shall have been made by the obligor by depositing with your company the amount payable to noteholders, your company, at the cost and expense of the obligor, shall re-deliver to the obligor the pledged securities, together with proper instruments of assignment and transfer.

XVII. Any request or other instrument purporting to be signed in behalf of the obligor for any of the purposes of this writing, including the authentication and delivery of the notes, if verified by the countersignature of J. P. Morgan & Co., shall be authority to the trustee for taking action pursuant to such request or other instrument.

All rights and powers of J. P Morgan & Co. shall vest in the copartnership or firm doing business under such name, and shall pass to and shall vest in the successor of such firm as from time to time constituted, doing business as such successor.

Any notice to the obligor required to be given under this writing or by law, shall be sufficiently given if addressed "To the Secretary of the British Treasury, care of J. P. Morgan & Co.," and delivered by hand to any member of the the firm of J. P. Morgan & Co. at their office in the city of New York.

XVIII. Your company shall be under no duty to take notice of any default on the part of the obligor in any of its agreements contained in the notes or in this writing, or otherwise, unless it shall receive notice thereof and request to take action thereupon by a writing signed by persons shown to your company's satisfaction to be the holders of ten percent of the principal amount of the notes then outstanding; but nothing herein contained shall be deemed to limit or affect the right of your company without notice or request from noteholders to take action upon any default.

Any securities delivered hereunder may be retained by your company in the form in which deposited until a default hereunder or until requested by the obligor to have the same transferred.

XIX. In case your company shall be in doubt in any instance as to the meaning of this instrument or its powers or duties thereunder, your company may advise with legal counsel selected by it and shall be protected in anything done or suffered by it in good faith in pursuance of the opinion of such counsel.

CECIL SPRING-RICE, *H. B. M. Ambassador*
(For the Government of the United Kingdom
of Great Britain and Ireland).

SCHEDULE A

[Form of note]

No. -- $------

THE GOVERNMENT OF THE UNITED KINGDOM OF GREAT BRITAIN AND IRELAND $250,000,000 TWO-YEAR 5% SECURED LOAN

GOLD NOTE

The Government of the United Kingdom of Great Britain and Ireland (hereinafter termed "Obligor"), for value received, promises to pay to bearer the sum of dollars on the first day of September 1918, and to pay interest on such principal sum at the rate of five per centum (5%) per annum, semiannually, on the first day of March and the first day of September in each year, until such principal sum shall be paid, but only upon presentation and surrender of the coupons for such interest, hereto attached, as severally they mature. Such principal sum and the interest thereon will be paid at the office of J. P. Morgan & Co., in the city of New York, State of New York, United States of America, in gold coin of the United States of America of the standard of weight and fineness existing September 1, 1916, without deduction for any British taxes, present or future.

The notes of the loan, for the aggregate principal sum of $250,000,000, are equally and ratably secured by the pledge with The Farmers' Loan and Trust Company, a corporation of the State of New York, of certain bonds, stocks, and other securities pursuant to and upon the terms of an instrument in writing (hereinafter termed "pledge agreement") duly executed and delivered by the obligor to the said trust company, to which pledge agreement, held by said trust company, reference hereby is made.

This note is subject to redemption at the office of said trust company, at the option of the obligor, on any day until and including August 31, 1917, at 101% of the principal sum, or on any day thereafter until and including August 31, 1918, at 100½% of the principal sum, accrued interest to the date of any such redemption being also payable. Notice of intention to redeem will be given by advertisement thereof in two newspapers published in said city of New York, once in each week for five successive weeks, the first publication to be not less than thirty days prior to the date fixed for such redemption. After the date of redemption specified in said notice, provided payment be made of the amount payable on this note when presented pursuant to such notice, no interest will accrue hereon and any coupons for interest maturing after such date will be null and void.

In case of the sale of any of the pledged securities in enforcement of said pledge agreement upon a default as specified therein, then and in such case the principal sum of this note and of all other notes of the loan, if not previously due, will become forthwith due and payable.

The notes of the loan are issuable in denominations of $1,000, $5,000, and $10,000. Unless previously called for redemption, any note of a denomination higher than $1,000, with all unmatured coupons thereto attached, when surrendered for that purpose at the office of the said trust company, may be exchanged for notes (bearing all unmatured coupons) of equal aggregate principal amount of lower denomination or denominations. For any such exchange, the obligor may prescribe reasonable rules and regulations, and may require payment of a reasonable charge.

This note shall not be entitled to the benefit of the said pledge agreement, nor be valid for any purpose, until authenticated by the certificate hereon duly executed by the said trust company or its successor in the trust under said pledge agreement.

Dated, September 1, 1916.

[Form of coupon]

No. -- $------

On the first day of , 191 (unless the note below mentioned shall have been called for previous redemption) the Government of promises to pay to bearer at the office of J. P. Morgan & Co. in the city of New York, State of New York, United States of America, dollars gold coin of the United States of America, without deduction for British taxes, present or future, being six (6) months' interest on gold note no. ---- of the two-year 5% secured loan of the said Government.

[Form of certificate of trust company]

This note is one of the notes of the loan within mentioned.

THE FARMERS' LOAN AND TRUST COMPANY,
By *Vice President.*

EXHIBIT No. 2704-A

[File copy]

$250,000,000 UNITED KINGDOM OF GREAT BRITAIN AND IRELAND TWO-YEAR 5% SECURED LOAN GOLD NOTES, DIRECT OBLIGATIONS OF THE GOVERNMENT

Dated September 1, 1916 — Due September 1, 1918

Interest payable March 1 and September 1; principal and interest payable in United States gold coin, at the office of J. P. Morgan & Co., without deduction for any British taxes, present or future; coupon notes of $1,000, $5,000, and $10,000

Redeemable at the option of the Government, in whole or in part, on thirty (30) days notice, as follows: At 101 and accrued interest on any date prior to September 1, 1917; at 100½ and accrued interest on September 1, 1917, and on any date thereafter prior to maturity.

To be secured by pledge with the Farmers Loan and Trust Company, of New York City, under a pledge agreement executed by the Government, of securities approved by J. P. Morgan & Co., of an aggregate value of at least $300,000,000, calculated on the basis of prevailing market prices, sterling securities being valued in dollars at the prevailing rate of exchange, viz:

	Value
Stocks, bonds, and/or other securities of corporations organized in the United States	$100,000,000
Bonds and/or other obligations of the Government of the Dominion of Canada, either as maker or guarantor, and stocks, bonds, and/or other securities of the Canadian Pacific Railway Company	100,000,000
Bonds and/or other obligations of the several following Governments, either as maker or guarantor, viz, of Argentina, Chile, Norway, Sweden, Denmark, Switzerland, and/or Holland	100,000,000

Pending the arrival and deposit of securities as above, the Government is to deposit temporarily with the trust company at the time of issue of the notes, either approved New York Stock Exchange collateral of aggregate value equal to that of the then undelivered securities and/or cash equal to five-sixths of such value. All such temporary collateral is to be exchanged from time to time in the same relative proportions upon the deposit of the above mentioned securities.

If the pledged securities depreciate in value because of change in market price or in rate of exchange, the Government is to deposit additional securities with the trust company, to the end that the aggregate value of the pledged securities shall equal at least 120% of the principal amount of the notes at the time unpaid and not secured by deposited cash.

The Government is to reserve the right from time to time to sell for cash any of the pledged securities, in which event the proceeds of sale are to be received by the trust company and applied to the retirement of notes by purchase, if obtainable at prices not exceeding the then redemption price, and otherwise by redemption by lot at the redemption price.

The Government is to reserve the right also to make substitutions of securities, but such substitutions are not to vary the relative amounts in value of the above-indicated three several groups of securities at the time held by the trust company.

Valuations of securities are to be approved by J. P. Morgan & Co.

This offering is made subject to verification of the list of collateral, and to the approval of the necessary details by counsel.

We offer the above notes for subscription at 99 and interest, yielding slightly over 5½ per cent.

Subscription books will be opened at the office of J. P. Morgan & Co. at 10 o'clock, a. m., August 23, 1916, and will be closed at 10 o'clock, a. m., August 28, 1916, or earlier, in their discretion.

The right is reserved to reject any and all applications, and also, in any event, to award a smaller amount than applied for.

Amounts due on allotments will be payable at the office of J. P. Morgan & Co., in New York funds, to their order, and the date of payment will be given in the notices of allotment.

Temporary certificates will be delivered pending the engraving of the definitive notes.

J. P. Morgan & Co.; First National Bank, New York City; National City Bank, New York City; Harris, Forbes & Co.; Wm. A. Read & Co.; Brown Brothers & Co.; Lee, Higginson & Co.; Kidder, Peabody & Co.; J. & W. Seligman & Co.; Guaranty Trust Company, New York City; Bankers Trust Company, New York City; Farmers Loan & Trust Company, New York City; Central Trust Company of Illinois, Chicago; Union Trust Company, Pittsburgh.

NEW YORK, *August 22, 1916.*

[File copy—Circulars]

$300,000,000 UNITED KINGDOM OF GREAT BRITAIN AND IRELAND, 5½% SECURED LOAN GOLD NOTES

Dated November 1, 1916 Interest payable May 1 and November 1

$150,000,000 three-year notes due November 1, 1919; $150,000,000 five-year notes due November 1, 1921; direct obligations of the Government

Principal and interest payable in United States gold coin, at the office of J. P. Morgan & Co., or, at the option of the holder, in London in sterling at the fixed rate of $4.86½ to the pound.

Principal and interest payable without deduction for any British taxes, present or future.

Coupon notes of $1,000, $5,000, and $10,000.

Redeemable at the option of the Government, in whole or in part, on thirty (30) days notice, as follows:

	Three-year notes	Five-year notes
From November 1, 1916, to October 31, 1917, inclusive	103 and interest	105 and interest.
" " 1, 1917, " 31, 1918, "	102 and interest	104 and interest.
" " 1, 1918, " 31, 1919, "	101 and interest	103 and interest.
" " 1, 1919, " 31, 1920, "		102 and interest.
" " 1, 1920, " 31, 1921, "		101 and interest.

To be secured by pledge with Guaranty Trust Company of New York, under a pledge agreement executed by the Government, of securities approved by J. P. Morgan & Co., of an aggregate value of not less than $360,000,000, calculated on the basis of then prevailing market prices, sterling securities being valued in dollars at the prevailing rate of exchange, viz:

Group I. Stocks, bonds, and/or other securities of American corporations (including the Canadian Pacific Railway Company) and bonds and/or other obligations (either as maker or guarantor) of the Government of the Dominion of Canada, the Colony of Newfoundland, and/or Provinces of the Dominion of Canada, and/or Canadian municipalities: Aggregate value not less than	$180,000,000
(Of the foregoing there will be somewhat over $100,000,000 in aggregate value of securities of corporations of the United States and of the Canadian Pacific Railway Company.)	
Group II. Bonds and/or other obligations (either as maker or guarantor) of any or all of the several following Governments, to wit: Commonwealth of Australia, Union of South Africa, New Zealand, Argentina, Chile, Cuba, Japan, Egypt, and India, and/or approximately $25,000,000 value in bonds or other obligations of dividend-paying British railway companies: Aggregate value not less than	180,000,000
Total	360,000,000

Pending the arrival and deposit of definitive securities as above, the Government is to deposit temporarily with the Trust Company either approved New York Stock Exchange collateral or cash.

If the pledged securities depreciate in value, the Government is to deposit additional securities to maintain the 20% margin.

The Government is to reserve the right from time to time to sell for cash any of the pledged securities, the proceeds of sale to be applied to the retirement of notes by purchase or by redemption by lot.

Upon the retirement of the three-year notes, a proportionate amount of the collateral may be withdrawn approximately ratably from each class.

The Government also from time to time may make substitutions of securities, but such substitutions are not to vary the then relative amounts in value of the groups. All substitutions, withdrawals, and valuations of securities are to be approved by J. P. Morgan & Co.

This offering is made subject to the approval by our counsel of necessary formalities.

We offer the above notes for subscription as follows: The three-year notes at 99¼ and interest, yielding over 5.75 percent; the five-year notes at 98½ and interest, yielding about 5.85 percent.

Subscription books will be opened at the office of J. P. Morgan & Co. at 10 o'clock a. m., October 31, 1916, and will be closed at 10 o'clock a. m. November 8, 1916, or earlier, in their discretion.

The right is reserved to reject any and all applications, and also, in any event, to award a smaller amount than applied for.

Amounts due on allotments will be payable at the office of J. P. Morgan & Co., in New York funds, to their order, and the date of payment will be given in the notices of allotment.

Temporary certificates will be delivered pending the engraving of the definitive notes.

$250,000,000 UNITED KINGDOM OF GREAT BRITAIN AND IRELAND ONE-YEAR AND TWO-YEAR 5½% SECURED LOAN, CONVERTIBLE GOLD NOTES

Dated February 1, 1917 Interest payable February 1 and August 1

$100,000,000 one-year notes due February 1, 1918; $150,000,000 two-year notes due February 1, 1919; principal and interest payable at the office of J. P. Morgan & Co.

Convertible upon notice, at the option of the holder, at any time before maturity, or (if called for earlier redemption) at any time until and including the date of such redemption, into twenty year 5½% Bonds of the United Kingdom of Great Britain and Ireland, payable February 1, 1937, and not subject to prior redemption.

Principal and interest of the notes, and of the bonds into which they may be converted, is to be payable, without deduction for British taxes, present or future, in New York in United States gold coin, or, at the option of the holder, in London in sterling at the fixed rate of $4.86½ to the pound.

Coupon notes in denominations of $1,000, $5,000, and $10,000.

Redeemable at the option of the Government, in whole or in part, on thirty (30) days' notice, as follows:

	One-year notes	Two-year notes
From February 1, 1917, to January 31, 1918	101 and interest	102 and interest.
From February 1, 1918, to January 31, 1919		101 and interest.

The notes are to be secured by pledge with Bankers Trust Company, New York, under a pledge agreement executed by the Government, of securities approved by J. P. Morgan & Co., of an aggregate value of not less than $300,000,000, calculated on the basis of the then prevailing markets, sterling securities being valued in dollars at the prevailing rate of exchange, viz.:

Group I. Stocks, bonds and/or other securities of American municipalities and corporations and of the Canadian Pacific Railway Company, and bonds and/or other obligations (either as maker or guarantor) of the Government of the Dominion of Canada, the Colony of Newfoundland, and/or provinces of the Dominion of Canada, and/or approved Canadian municipalities: Aggregate value not less than	$150,000,000
(Of the foregoing there will be somewhat over $100,000,000 in value in the securities of municipalities and corporations of the United States and of the Canadian Pacific Railway Company.)	
Group II. Bonds and/or other obligations (either as maker or guarantor) of any or all of the several following Governments, to wit: Argentina, Chile, Cuba, Commonwealth of Australia, Egypt, Japan, New Zealand, and Union of South Africa, and/or bonds and/or other obligations of approved railways in Argentina and/or of the Grand Trunk Railway Company of Canada, and/or approximately $25,000,000 value in bonds and/or other obligations of dividend-paying British railway companies: Aggregate value not less than	150,000,000
Total	300,000,000

Pending the arrival and deposit of definitive securities as above, the Government is to deposit temporarily with the Trust Company either approved New York Stock Exchange collateral or cash.

If the pledged securities depreciate in value, the Government is to deposit additional securities to maintain the 20% margin.

The Government is to reserve the right from time to time to sell for cash any of the pledged securities, the proceeds of sale to be applied to the retirement of notes by purchase or by redemption by lot.

Upon the retirement of the one-year notes, or upon reduction of the amount of notes outstanding, through conversion, a proportionate amount of the collateral may be withdrawn approximately ratably from each class.

The Government also from time to time may make substitutions of securities, but such substitutions are not to vary the then relative amounts in value of the groups. All substitutions, withdrawals, and valuations of securities are to be approved by J. P. Morgan & Co.

This offering is made subject to the approval by our Counsel of necessary formalities.

We offer the above notes for subscription as follows: The one-year notes at 99.52 and interest, yielding 6 per cent, the two-year notes at 99.07 and interest, yielding 6 per cent.

Subscription books will be opened at the office of J. P. Morgan & Co., at 10 o'clock a. m., January 24, 1917, and will be closed at 10 o'clock a. m., January 31, 1917, or earlier, in their discretion.

The right is reserved to reject any and all applications, and also, in any event, to award a smaller amount than applied for.

Amounts due on allotments will be payable at the office of J. P. Morgan & Co., in New York funds, to their order, and the date of payment will be given in the notices of allotment.

Temporary certificates will be delivered pending the preparation of the definitive notes.

[Copy of telegram despatched 11 p. m. to Morgan, London]

23860. 20816. We have concluded recommend a 2-year obligation both because of its relation to period for which securities are borrowed and also so that issue price and term of notes will not unduly compete with Anglo-French 5's and American Foreign Securities Company notes. Under this plan it would be well to have dates for return of collateral to original holders modified to, say, October 1, 1918, in accordance with 20734. We feel that $250,000,000 should be amount rather than $300,000,000, and we would suggest the use of, say, $75,000,000 market value of Argentine Government, $25,000,000 Chilian Government, $100,000,000 Canadian Government, and $100,000,000 Americans, divided equally between American dollar securities and securities available for sale. Would suggest that American securities available for sale could be substituted for American dollar securities, if it were necessary to support market to amount in excess of proceeds of the $50,000,000. American salable securities deposited. Under this plan you would at our request withdraw part of American dollar securities and substitute other American securities which would be available for sale, the proceeds of the sale of securities to be used to purchase notes in the market and cancel them, provided notes could be purchased at less than fixed redemption price, which would be, say, 101 during first year and 100½ during second year. As practical matter we should, of course, not sell in such a way as would work hardship on Government; and, if notes had gone to satisfactory premium above issue price without assistance from us, we should sell Americans other than those pledged as collateral rather than disturb American collateral deposited. Value of securities payable in Sterling would be computed at London markets with exchange figured at the rate of the day, and the 20% margin computed upon this basis would be maintained against a decline either in rates of exchange or in market value of securities. In this connection it would be helpful if Canadians mentioned 20654 could be issued in dollar form, as we would hope that if you wished us to do so we might be able to realize on these before maturity of loan. Would suggest that trustee hold cash against securities pending their arrival. You, of course, understand it will be necessary to have all securities in this country.

We have today had confidential talk with First National Bank and National City Bank acquainting them with our proposal, asking each of them to underwrite $25,000,000 of the notes. Subject to approval of their boards, of which we would have no doubt, they have both assented. Counting the $50,000,000 of the Bank of England and our $50,000,000, as arranged, this would provide for $150,000,000. When, therefore, the details are clearly understood between your Government and ourselves, we would endeavor to form a comparatively small syndicate to underwrite the remainder $100,000,000 of the $250,000,000. We would hope this be done promptly and without publicity. By this action we would expect to form a most favorable impression upon publication and secure cooperation of immediate and powerful selling organization.

Thus far we are more than gratified at the prospects of this undertaking, and cannot urge too strongly that matter be expedited as rapidly as possible, in order that issue may be made almost immediately, particularly as we contemplate comparatively easy money for the next four or five weeks, and it is difficult to see beyond that.

For your confidential information, McRoberts, just returned from Russia, is proposing to Russian group, of which we are member, that an offering be immediately made of $50,000,000 or $100,000,000 Russian Government bonds. This would undoubtedly militate against our undertaking somewhat; therefore we would like to get our operation out of the way at earliest possible moment.

In order that we are sure of a perfect understanding regarding terms, we would expect to issue the notes at 99, underwrite them at 98, and receive ½% commission for ourselves. In other words, cost to Government to be 97½. The notes in this country to be free of British income tax.—H. P. Davison.

J. P. Morgan & Co.,
Export Department,
New York, Oct. 27, 1916.

[Copy of telegram despatched 11:30 p. m. to Morgan, London]

29493. 29394. Have simplified collateral question by dividing in two groups, each for $180,000,000. Have arranged for group one to be made up of $80,000,000 Dominion of Canada, Island of Newfoundland, and any Canadian provinces and municipalities included in list mentioned to authorities as being acceptable for conversion plan. Remainder of group one to be American corporations, including Canadian Pacific Railway debenture stock, preference stock, and common stock.

Second group to be, say, $50,000,000 Argentine and Chili, $35,000,000 Australia, $10,000,000 South Africa, $10,000,000 New Zealand, $30,000,000 Japan, $25,000,000 British Railway, first debentures, $10,000,000 Egypt, $10,000,000 India, and small amount Cuba already here.

We expect to utilize among Americans about $50,000,000 Treasury securities supplying balance from American dollar securities. The $37,000,000 Canadian mentioned, 29394, valued at, say, 80, would release $30,000,000 in Canadian Government large pieces now pledged for existing notes. We would plan to utilize this $30,000,000 so released and make up remaining $50,000,000 temporarily out of American dollar securities. As to second group, we have apparently enough Japanese to make up $30,000,000 suggested and approximately enough Egypt, leaving $140,000,000 to be made up temporarily out of stock exchange collateral. We now hold free about $290,000,000 Americans, including Canadian Pacific Railway among American dollar securities, this amount consisting principally, although not entirely, of stock exchange collateral. This will be increased by approximately $40,000,000 when Argentine and Chilean Governments now on hand are permanently pledged under existing agreement, releasing equivalent amount temporary stock exchange collateral. Number of small pieces will require some time in checking Argentine and Chile bonds in to trustee by substitution, but should hope to conclude within week, so there would seem to be ample time before securities required for new operation. You notice we are including South African and India as mentioned, 20394. Your 24767 mentions only Australia and New Zealand. Assume, however, others will be available. It would be helpful if securities to be utilized could be forwarded as promptly as possible rather than sending additional Argentine Railway securities or Grand Trunk debentures at the present time. Appreciate physical difficulties in connection with this, but make suggestion in order to avoid tying up stock exchange collateral unnecessarily, even as temporary expedient. We are hoping to offer publicly on Monday for delivery about the eighth, although it may not be physically possible to close in so short a time.

24750. As A. M. Anderson stated to Governor and Secretary of Treasury, suggestions about clause dealing with British income tax on pledged debentures was not at any time considered necessary by us, but was made to meet objections raised here to including securities peculiarly under British Government influence. Our suggestion would be that some general clause be added to clause 7 in existing pledge agreement, providing that in case of default, obligor will refund income tax as to any of securities pledged.

Forwarded on October 25th, letters to participants along general lines 25072, giving until this morning to reply. Have heard from almost everyone and have had comparatively few declinations. Are cabling you 29491 text of pledge agreement for approval. In order to insert unit prices in pledge letter, important to have complete list of issues of various countries which will be utilized. In view of fact that notes follow phraseology already approved in former issue, we are proceeding with preparation temporaries in order to have ready for signing. Presume you wish Ambassador to sign indenture and letter authorizing us to sell similar to that in 25448 and that you wish Osborne to sign notes. Please cable that letters similar to that set forth 22379, 22441 will be written to Guaranty Trust Co., N. Y., and delivered their London office; also please have Sir Frank Crisp write letter such as is mentioned therein.

20654. Canadian Government are arranging to issue to Imperial Government Canadian dollar bonds to the amount of $107,000,000 in respect of Dominion indebtedness to United Kingdom, to be available in the hands of Imperial Government for the purposes of collateral: $12,000,000 in 3½% bonds 1925–1928 and $95,000,000 in 4½% bonds 1925–1945. Dominion desire to issue bonds of large denominations.

Treasury wish to put them to little trouble as possible. Bearing this in mind, please advise largest denominations suitable and proportions of each denomination. Would large bonds with undertaking to split if necessary be in any way suitable?

23561. 20654. Believe that pieces of $1,000,000 would be satisfactory for the purposes of collateral, provided that bonds should recite in text that at the request of holder exchange could be made for pieces of $1,000 denominations. If these are to be utilized for collateral would be advantageous to have legal opinion of Canadian Attorney General to effect that all steps have been taken to make bonds legal and binding obligation of Canadian Government.

EXHIBIT No. 2713

$250,000,000 UNITED KINGDOM OF GREAT BRITAIN AND IRELAND TWO-YEAR 5% SECURED LOAN GOLD NOTE SYNDICATE

[Confidential]

BOND DEPARTMENT,
New York, August 15, 1916.

GUARANTY TRUST CO.,
140 Broadway, New York City.

DEAR SIR: The Government of the United Kingdom of Great Britain and Ireland proposes to issue $250,000,000 of its two-year 5% secured loan gold notes, to be dated September 1, 1916, to bear interest at the rate of 5% per annum, payable semi-annually, and to mature September 1, 1918, but, at the option of the Government, to be redeemable, in whole or in part, on 30 days' notice on any day until and including August 31, 1917, at 101 and accrued interest, and on any day thereafter until and including August 31, 1917, at 100½ and accrued interest. Both principal and interest are to be payable in New York, in United States gold coin, without deduction for any British taxes, present or future.

The notes are to be secured equally and ratably by pledge with the Farmers Loan & Trust Company, New York City, of certain bonds, stock, and other securities, pursuant to a pledge agreement to be executed and delivered by the Government to the trust company. The pledged securities, which are to be approved by J. P. Morgan & Co., are to have a value of at least $300,000,000, calculated on the basis of prevailing market prices, sterling securities being valued in dollars based on the prevailing rate of exchange.

The pledged securities are to be as follows:

Group 1.	Stocks, bonds, and other securities of American corporations of the aggregate value of not less than	$100,000,000
Group 2.	Bonds or other obligations of the Government of the Dominion of Canada, either as maker or guarantor, and stocks, bonds, and other securities of the Canadian Pacific Railway Company, of the aggregate value of not less than	100,000,000
Group 3.	Bonds or other obligations of the several following Governments, either as maker or guarantor, to wit, of Argentina, Chile, Norway, Sweden, Switzerland, Denmark, and Holland, of the aggregate value of not less than	100,000,000

Pending the arrival and deposit of a portion of such securities, the Government is to deposit temporarily with the trust company either approved New York Stock Exchange collateral or cash or both, under provisions for withdrawals of such temporary deposits to be contained in the pledge agreement.

The pledge agreement is to provide that if the pledged securities shall depreciate in value because of change in market price or in rate of exchange, so that the 20% margin shall have become impaired, the Government will deposit additional securities with the Trust Company to the end that at all times the Trust Company shall hold securities of a value in New York city equal at least to 120% of the amount of the loan at the time unpaid and not covered by cash deposits.

The pledge agreement is further to provide that from time to time the Government may sell for cash any of the pledged securities, in which event the proceeds of sale shall be received by the Trust Company and applied to the retirement of notes by purchase, if obtainable at or below the redemption price, or otherwise by redemption by lot at such redemption price.

The pledge agreement may also contain provisions, approved by J. P. Morgan & Co. for substitutions of collateral, such substitutions, however, not to vary the relative amounts in value of the three several groups of the collateral at the time held by the Trust Company.

It is proposed to offer these notes publicly in the near future at 99 and accrued interest. We are now forming a syndicate to underwrite the notes at 98 and accured interest, such syndicate to expire October 1, 1916, unless sooner terminated by the syndicate managers.

We have reserved for you, subject to the issue of the notes as planned, a participation of $7,500,000 principal amount of notes in the above syndicate.

Please advise J. P. Morgan & Co., by 10 o'clock a. m., August 18, 1916, whether you desire the participation which has been reserved for you.

Yours truly,

[Copy]

Received with F. L. no. 23/2262

TREASURY CHAMBERS,
8th February 1917.

GENTLEMEN: Under the authority of the letters from this department of the 1st and 3d November last (29039/16 29349/16), a letter was addressed by His

Majesty's Chargé d'Affaires at Washington to Messrs. J. P. Morgan and Company on November 6th, 1916, appointing them to be agents of His Majesty's Government to make sales under clause XIII of the pledge agreement of 1st November of the securities pledged with the Guaranty Trust Company as collateral for the issue of 3- and 5-year notes, on the receipt of an understanding (dated 1st November 1916) that without further instructions from the Treasury, Messrs. J. P. Morgan and Company would not sell any securities included in group 1 of the said pledge agreements other than the American securities which are the absolute property of His Majesty's Government.

This undertaking in the terms in which it was given would not preclude Messrs. J. P. Morgan and Company from selling dollar bonds of the Governments of Australia, New Zealand, and South Africa, although it was not at the time in contemplation to provide for the sale of any securities in group 2.

But to avoid any misapprehension my lords think it well to state that They are under pledge not to dispose in the market of the dollar bonds of the three governments mentioned above, equally with the dollar bonds of the Government of Canada; and They would be obliged if Messrs. J. P. Morgan and Company would give Them an explicit recognition that all securities in group 2 are excluded from the authority for sale quoted above.

I am, gentlemen,
Your obedient servant,

(Sd) M. G. RAMSAY.

TREASURY CHAMBERS,
30th January 1917.

GENTLEMEN: I am directed by the lords commissioners of His Majesty's Treasury to inform you that His Majesty's Ambassador at Washington will be authorised to give directions for the signature on their behalf of a fresh letter, in duplicate addressed to Messrs. J. P. Morgan & Company in the following terms:

"With reference to the pledge agreement, dated 1st September 1916, executed by the Government of the United Kingdom of Great Britain and Ireland to the Bankers' Trust Company, New York, you are hereby appointed the agents of the Government to make sales in your discretion of any and all of the securities pledged under the said pledge agreement; to certify to the Bankers' Trust Company, New York, the amount of the net proceeds of any such sale; and to cause payment of such net proceeds to be made to the said company and thereupon to request and to obtain the release from the said pledge agreement of the securities sold and the delivery thereof by the Bankers' Trust Company, New York, according to your order."

The signature of the said letter will be conditional upon Messrs. Morgan undertaking in writing not to sell wtihout further instructions any securities other than those which are absolute property of His Majesty's Government.

Further, the authority to sell will not extend to the dollar bonds of South Africa, New Zealand, and Australia nor to Canadian Pacific Railway common stock, which my lords are under pledge to the Dominion Governments not to dispose of in the market, and Messrs. Morgan's undertaking should contain an explicit recognition of the exclusion of these from the scope of the authority.

I am, gentlemen,
Your obedient servant,
(Sd) JOHN BRADBURY.

GUARANTY TRUST COMPANY,
140 Broadway, New York, N. Y.

DEAR SIRS: We beg to hand you herewith letter signed by Colville Barclay, H. B. M. Charge d'Affaires, appointing this firm agents of the Government to make sales of securities pledged under the letter of pledge dated November 1, and to take other steps in connection therewith; also letters signed by Mr. Barclay for Sir Cecil Spring-Rice, specifically pledging with the Guaranty Trust Company the permanent securities to be pledged under clause I and the temporary securities to be pledged under clause II of said indenture.

Yours very truly,

——— ———.

Enclosures.

29830. 26068. Believe wise to handle matter by our writing letter to authorities, as follows:

"Referring to the authority to be given to us by Colville Adrian de Rune Barclay by warrant of the Treasury to make sales of pledged securities under clause XIII of the pledge agreement, dated November 1st, 1916, we undertake that we will exercise such authority to make sales of only such securities as shall have been purchased by the Government and shall have been deposited under said pledge agreement."

If qualification is put in letter to us, it would put the Trust Company under [duty] to inquire as to whether securities mentioned were those we were authorized to sell, and we wish to avoid disclosing even to Trust Company that only comparatively small amount of securities are as a practical matter available for sale. Mr. Barclay will be here Monday morning to sign pledge agreement and other documents, so please cable to reach us our opening if this course is satisfactory.

25199. For E. C. Grenfell. In order to insure success of undertaking, we first secured firm underwriting from largest interests and then advised dealers and banks of additional reservations subject to their acceptance, making aggregate allotted participations about $60,000,000 in excess of issue. Apparently practically all reservations will be accepted, which will result in the necessity of cutting down $60,000,000.

While we have as yet no definite suggestion to make, we would be willing to relieve Bank of England of their underwriting. our 23656, 23863, your 20816, 20947, but we would still want them not only to stand ready to join us in a subscription to the public offering but also to purchase in the market in case of need as per our 23656, 23702, your 20816. This would carry out our program of being and remaining in a very strong position, and thus we believe insuring marked success of the undertaking. The amount of our joint subscription at public offering would, of course, depend upon public subscriptions and the amount of our purchase in the market would, of course, depend upon the market. As before stated, a strong stand at this stage is more necessary and more helpful than any other one element.

While as yet we would hardly care to predict, it is possible the Bank of England would neither be called upon to subscribe or purchase if they were to do no underwriting.

Of course, if they prefer, it will be entirely satisfactory to us for them to remain as underwriters, we treating their interest and our own alike; that is to say, we would each have the same amount of underwriting whatever it may turn out to be, each make the same subscription, and each purchase the same amount of notes in the market.

Please cable us promptly their attitude so that we may act intelligently. We expect to confirm allotments tomorrow.—H. P. DAVISON.

12392. Denkbar. Had long conversation with London exchange committee who appear to be unanimously in favor of asking you continue selling of securities, provided they can justify the cost in Parliament. The proposed Government action at present is, that it will buy good-class securities for sterling, and send them to United States, to provide dollars for munitions of war and exchange. Neither they nor we can estimate what the amount of these securities will be—they may amount to anything between £20,000,000 and £200,000,000—and only time can show. It is proposed sell these securities on your side when dollars are required and as market permits. It is perfectly understood such realizations might become difficult either through congestion of sales or through demoralization markets, or any other cause. In such case authorities want to know what amount, including loan already arranged for Bank of England, you and your friends would be prepared lend, and what would be the cost and margin required, and what would be the period for which you would obligate yourselves to make a loan. I presume the loan would be as from you to British Government, and if you took in friends these friends would lend to you and not to British Government. I told committee I did not know how you would view this proposition, but that beyond a certain figure you would necessarily have bring in others to assist you. You might also insert a force majeure or war clause. It was intimated that a favorable proposition upon this subject would make it easier arrange the selling of the securities with you on a satisfactory basis. The London exchange committee feel they should not bind themselves entirely to you for selling in the future, but seemed disposed agree that selling of securities should be through you for say 6 months, which would be period for which bankers of London exchange committee had arranged the exchange loans with the Frank A. Vanderlip committee. I think this should suffice for you. I told them probably you would not entertain loan proposition without the selling proposition.

Again, as regards selling commission, bankers on the committee state that their correspondents in New York City charge ⅛ on bonds and 1/16 on short-time notes, and it will be difficult in Parliament to justify an all round charge of ¼. As a compromise, Deputy-Governor begged me most earnestly put up to you following proposition, that you should charge ⅛ on bonds in list A–1 which you already know of, and say ⅛ on 18 leading railway shares of which you will have list tomorrow. Except for these standard securities you should charge ¼ on all others. This seems to them a reasonable way in which meet London exchange committee.

In my opinion, bonds apart from list A–1 and the above-mentioned shares, will be extremely large in volume and provide bulk of the sales.

For your private information, Sir Edward Holden was not present, but other members are extremely anxious business should continue in your hands, and I understood from them Sir Edward Holden also had been entirely in agreement. They do feel, however, there would be a real difficulty in justifying in Parliament the all-round charge of ¼ for what would be in effect a monopoly of the sale of securities for the Government. Do not imagine this is totally unreasonable argument raised by Sir Edward Holden, as they all consider this concession on a few standard bonds would disarm criticism.—E. C. GRENFELL.

[Copy of telegram despatched 9 : 40 p. m. to Morgan, London]

13089. 12392. Denkbar for E. C. Grenfell. We are anxious meet views London exchange committee so far as possible and still carry out plan of obtaining for them highest prices consistent with good dealing. Principle upon which we must work is to receive fair compensation which will enable us to give extra effort, time, and thought, and thereby effect material savings and profits for our clients.

From our wide knowledge of the investment situation, we frequently have obtained and can obtain higher prices by outside work than by merely putting a lot of orders in the stock exchange where there may or may not be buying orders, and where in absence of same a substantial offering is certain to depress prices. As a further illustration, many of the large institutions who buy only in round amounts do not send their orders to stock brokers, but have to be called upon and shown the attractiveness of the offering. Proposed arrangement for initial period of say 6 months agreeable to us. However, it would be quite as satisfactory to us to have no time limit fixed, but rather that committee should feel free at any time to cancel after proper notice, the arrangement made with us, provided they deem it in Government's interest to do so, as we would not want them bound for any time beyond the period of satisfactory service.

We note suggestion that we accept a commission of ⅛ on securities in list A–1, and on leading railway shares as described, charging inclusive ¼ on all other securities. ⅛ is commission which an exclusive stock-exchange house would charge for the sale of securities on the stock exchange where the modus operandi is simply to telephone to the exchange to sell the various securities in the ordinary course of business. We cannot believe that the committee appreciate the difference between such a service and that which we have given and would propose to give, and which they should certainly demand if this business is to be handled to their advantage. In fact, we would not in this case wish to assume the responsibility of receiving an ordinary stock-exchange order to sell, as the character of this business and the importance of the negotiation demand more than that from anybody. Moreover, as you suggest, selling arrangements might involve loans from time to time, which cannot be disassociated from selling arrangements.

We propose therefore to committee that we charge ¼ on all securities, and that subject to force majeure or some development making any financial operation in America entirely out of the question, we shall be prepared to advance for ourselves and friends up to at least $250,000,000 on acceptable American securities, with the usual margin on collateral loans here of 20% to be kept good. In case collateral consisted largely of high-grade bonds, margin would be subject to reduction. If loan is likely to be of any considerable size, we believe major part of advances should be on time, and that remainder should be in form of a demand loan that would be automatically reduced by sale of securities from time to time. Such arrangement would best serve Government's interests and demand loan would probably command somewhat lower rate.

As to either demand or time loan the rate of interest, of course, would have to be governed by money markets. For your guidance we would say that if present conditions continue, rate probably would not exceed 4% for time loans. In case loan was of such size as to make it necessary to farm out, we should necessarily expect fair compensation for handling, to be agreed upon at time.

As to duration of loan, quite impossible to give any adequate reply, but we have no question that we could meet Government's requirements on that point when the time came.

You, of course, appreciate that it is quite impossible to state definite terms and conditions in such a situation as now obtains, but you need have no reservation in assuring the committee that we will meet their requirements to the full extent of our ability.

We hope you will feel free to point out to them the experience of the Government with us in these various matters as best demonstrating what we are disposed and have been able to do to meet emergencies as they have arisen.

We trust foregoing will make clear to committee why we do not feel like undertaking the business at less than ¼ for all securities which, if accepted, will be retroactive.

EXPORT DEPARTMENT,
New York, Jan. 13, 1916.

[Copy of telegram despatched 11:35 p. m. to Morgan, London]

13143. 12429. Denkbar for E. C. Grenfell. We are gratified to feel that our position meets your personal approval.

Our specific answers to your inquiries are as follows:

1. The proposed loan would be handled much as the Bank of England loan has been handled, that is to say, up to a point within our own individual capacity it might be handled by this firm alone, or by the Trio, and we would hope, in strict confidence. If it should reach a point beyond the capacity of our firm and the legal limits of the two banks together, then as in the case of the Bank of England loan when it got beyond a certain point we should invite in, confidentially, close institutions like the Bankers Trust Co., Guaranty Trust Co., Chase National Bank, et cetera. If it were to reach an amount approaching $250,000,000 it would be necessary to go further afield and invite participations from friendly institutions, but ones not so close as the group just men-

tioned. In such case fact of loan would, undoubtedly, become public knowledge.

We are wondering on this point whether it might be feasible on our side and on your side as well, for the promissor to be the Bank of England and for a side guarantee of the loan in all its provisions to be executed by the Government and deposited with us, knowledge of this guarantee being known only to inner group. Technically this might do away with Government's borrowing against collateral here.

Answering specifically your question, the loan would be made by us and participated by us as necessity arises, to other institutions who would technically not lend to us but have a participation in the loan direct, as evidenced by participation receipts.

2. As to margins, there would be no difficulty. We assume that as now there would be lodged with us as warehousemen, a large mass of securities from which you might advise us to add to collaterals as needed such additional securities as might be required to keep loan margin good, but except in the case of violent market fluctuation margin would not have to be made good each day. In general, however, it must be kept unimpaired throughout duration of loan.

3. As to time, we had in mind 6 months, the same as the loan to London banks, but 3 or 4 months, or whatever period might be proposed probably could be very readily settled upon.

4. We would expect compensation by way of commission only in case of necessity of participating loan beyond the trio. Our guess as to the amount of commission is that it would not exceed ½% per annum, and that only upon excess of amount carried by trio. Rate might be less dependent somewhat, of course, upon work and responsibility involved.

[Copy of telegram received 3 : 57 p. m. from Morgan, London]

12451. Denkbar. 13089. 12429. Had a long interview with Chancellor of the Exchequer yesterday, who was greatly pleased with your offer of loan. and expressed himself in the highest terms of all J. P. Morgan & Co. had done for Government. I am writing fully upon this subject.

Today have submitted 13089 to London exchange committee, who express their thanks to you and agree to your suggestion as regards the ¼' selling commission on securities to be sent you for sale. There are two points which London exchange committee raise for further consideration as regards the loan:

First. Government, apart from bonds which they may buy, may borrow certain American securities from holders here who prefer to lend rather than to sell. Government, therefore, may wish to borrow in United States on these securities as well as on securities mentioned in 12392. It would, therefore, be wish of Government that, while you would be doing your best to sell the bought securities, you would be lending against the borrowed securities which would not be necessarily for sale, but which would be sent to your side. We presume this would not make any difference to loan question. I cannot estimate amount of securities to be lent, as I find most big holders prefer to sell outright.

Second. London exchange committee did not view favorably idea of making Bank of England ostensible borrower, and they are, therefore, considering whether it would be possible create a company which, privately, would have the guarantee of the Government, and which might be worked out somewhat on lines 5572.—E. C. GRENFELL.

[Copy]

JANUARY 17, 1916.

[Personal and confidential]

Rt. Hon. LORD FAIRFAX,
London, England.

DEAR FAIRFAX: Referring to our confidential cable of January 13, we are using more money in our business than ever before, and owing to the immobility of much of our capital are borrowing more from banks, everything considered, than we feel is desirable. We have, therefore, adopted the policy of realizing wherever possible, through the liquidation of readily marketable holdings, where feasible without substantial loss.

With regard to the Pacific Gas & Electric common, we may wait a few days, as evidently something is stirring in that direction, probably by way of the renewal of a dividend policy, and we may experience an advance of several points very shortly. If this does not materialize pretty soon, however, we will liquidate the London office holdings.

With regard to the reduction of capital of the London office we feel that, temporarily, at least, this should be done and that you will see the good business reason for it; considering the quiet that reigns in the London office, and is likely to continue indefinitely, it is only the part of common sense to release the funds from there and employ them here where we are very active in our regular business and likely to remain so. We were glad to see your ready response in cabling us to draw for £10,000, and hope you will continue to liquidate there and send us the funds that we require.

Some of our competitors are sending representatives to London for the purpose of buying blocks of bonds in your market. With the present pressure from the English Government upon London institutions and individuals to liquidate such holdings, we think the occasion opportune to cable you to canvass the situation, especially with institutions, insurance companies, and others, make reports of their security holdings, and from these you may be able to obtain the information as to where such blocks lie. If you locate a good sized block of desirable bonds that we could use, I believe that Sir Edward Holden would assist you, and perhaps exercise a gentle pressure to dislodge what you may want, so that this need of the Commonwealth becomes our opportunity. Ways and means, however, will suggest themselves to you; I only made the suggestion because I know that others are at work upon the idea.

You will see from our sales sheets that the business has speeded up materially in sales, and from present appearances our markets should continue to be good.

I had a nice letter from Howard Levis a few days ago to which I have replied.

Mr. Coffin has been ailing of late, having suffered a severe attack of influenza, but he is better again and attending to business, although not yet entirely recovered.

With best regards, as always,
Sincerely yours,

——— ———.

[Copy of telegram despatched 9:45 p. m. to Morgan, London]

17963. 16689. On May 1st we entered temporary loan in the name of His Britannic Majesty's Government for $12,000,000, which was increased to $16,500,000 yesterday and to $17,500,000 to-day. Loan and any increases thereof collateraled by securities now and hereafter held by us for British Government account. Please advise us the form of Government obligation you receive. In view of prospective large payments, loan may have to be further increased, and it seems probable we shall give participations to various banks, in which case loan necessarily would be known to officers and directors of those banks. They will expect good fair rate, as indications here point to higher rates before long. We consider 4% to us entirely reasonable, in view of service rendered and large amount involved, and as indicated 13089, we expect additional ½% per annum upon amounts participated. Special deposit account resulting from exchange ·transactions probably will show overdraft to-morrow. Shall we make separate loan for that account or add amount needed to above mentioned loan?

[Copy of telegram despatched 9 : 15 p. m. to Morgan, London]

19760. Please suggest to Treasury that it endeavor to give us at least one day's notice of any considerable drafts (excepting anticipated weekly payments) and, if convenient, some indication of possible requirements even before that time. For instance, today we make payments of approximately $19,500,000. In view of increasing volume, we are participating outside trio between $15,000,000 and $20,000,000 account no. 2 loan. You will note that it is necessary for us to undertake this step, although loan has not yet reached $100,000,000. Refer to 13143. Situation has materially changed, bank loans having heavily increased, with reserves steadily diminishing.

Refer 18356. No one cause responsible therefor; general business throughout the country has become very much more active in the last six months, requiring constantly increasing supplies of currency and credit, as shown by increasing bank loans. Coupled with these there have been very heavy new issues, not only Government issues, such as Canadian and Argentine, but a large number of re-organizations and re-capitalizations of motor and other stocks boomed by war profits. We do not regard situation as dangerous, and we believe that high-grade American securities, such as you are sending, will continue to find a good market, but authorities here are preaching caution, and low reserves are leading all institutions to be more conservative in amounts of new loans which they are willing to take on.

19914. 18482. Are entirely in accord and are exceedingly anxious to increase volume of gold transfers, not only for purpose of reducing interest cost to Treasury, but to bring about great readiness on the part of outside institutions here to participate; such readiness now being distinctly less than last July, owing to hardening of money rates. Since we began this new loan, call money rates have steadily advanced from 2% and closed today at 4%. If these higher rates should be maintained, we shall be obliged undoubtedly to increase rates for both no. 1 and no. 2 loans.

For reasons already set forth to you 19760, institutions are showing apathy to participate. As result, we are carrying by far the larger part of aggregate; in fact, to such an extent that if necessity were to increase the amount much beyond present figures we might find it necessary to put the matter in more bankable and definite shape and offering participations beyond circles now covered. You appreciate that up to this point we have given meager information and because of loyalty of our friends have been able thus far to handle matter with practically no publicity.

18191. For J. P. Morgan or H. P. Davison. Strictly confidential and for your own use only. In view of present situation exchange and likely pressure in fall and no further commitments of Government, it is proposed to suggest to authorities for their consideration loan in United States, direct obligation of British Government with collateral consisting mainly of debenture stocks of first-class railroads in United Kingdom and also of British railway companies in colonies and dependencies. You will realize that it would be useless to consider a loan so secured except for a large amount and would like your opinion as to whether such an operation could be effected for, say, $1,000,000,000, not necessarily to be issued at one time. I am sure authorities would not consent to longer period than 15 years and would prefer probably 3 years. Plan presumes exemption from income tax of collateral until redemption of loan.

Please inform us your own opinion without consulting anyone outside whether you consider such collateral would be satisfactory and such amount feasible.—E. C. GRENFELL.

MORGAN.

EXHIBIT NO. 2742

66–13

J. P. MORGAN & CO.,
New York, May 26th, 1916.

[Copy of telegram despatched to Morgan, London]

19627. 18191. We have been much perplexed for some time as to plans of Government for handling exchange situation if and in event that sales of American securities here would not take care of matter, and are therefore relieved to know that your authorities are impressed with seriousness of situation. Are we right in concluding that whole matter is brought up by threatened cessation of supply of American securities under Government offers? If so, our recommendations would be:

First. That renewed and continued effort be made to secure American securities for sale here, even if necessary forcing holders to sell by legislation. Your Government has handled this question so well and sales here have been effected with so little publicity and with, so far, such limited effect on market values, that we feel no other course compares with this in certainty of getting the money, and in economy both of effort and cost. We should like to know your opinion of the additional amount which can be secured. While sales have been large, seems to us there must still be very great amount of American securities held on your side.

Second. That a comprehensive study be made immediately of what South American and other foreign holdings of yours could be sold in this market. We refer to such securities as San Paulo, Chilean nitrates, Cuba Company, etc. In making this suggestion we of course fully appreciate great reluctance of your Government and of individual investors to part with investments which might possibly mean the relinquishment of future trading advantages, and of your Government to urge this course. At the same time we are confident that such procedure is absolutely necessary to enable Government to control exchange situation.

Third. That as far as practicable we quietly plan far in advance for a loan to secure the amount which cannot be supplied by the two courses referred to above.

Of course, if collateral to loan were such as usual here, we should feel that it would not be difficult under present situation to deal with amounts of $250,000,000 at a time. If, however, collaterals must be of your home and colonial railway and other securities, we should have to plan for a great deal of education in order to be sure that we could render you any substantial help. We should also have to carefully consider the effect upon the Anglo-French 5's.

We should favor either J. P. M. or H. P. D. going over to discuss the matter if you thought either could be of real help, though it would be difficult to leave just at this time. However, we consider matter of such extreme importance that their or our convenience would not be allowed to stand in the way.

We must urge that at every opportunity you impress upon Government what J. P. M. endeavored to do while there, namely, that if they are to get, as they must get, what they really need in America, they must not neglect any opportunity, even though such opportunity calls for action from them which they dislike taking as much as the conscription, to which they eventually came.

18348. Denkstein for J. P. M., H. P. D. Private. My 18347 was seen by authorities. The following is my personal cable:

Even though American securities are being deposited in large volume they will not meet requirements in the fall, and governor and I will press all we know to stiffen authorities' attitude in cases like San Paulo. If, as I expect, you consider your public will not buy piecemeal any large quantities debentures and shares, even of the best South American companies, please make this quite clear to me in your reply, and I will tell Chancellor that it is only entire properties such as San Paulo for which you can find buyers, and that only after careful negotiations. Also, please explain, for me to show Chancellor, exactly what you mean in 19627 by educating public sentiment as regards loans secured by British railways. Would you adopt a press campaign or a general canvassing of investment firms, and would this education have to be conducted gradually over a long period?—E. C. GRENFELL.

[Copy of telegram despatched to Morgan, London]

19767. For E. C. Grenfell. 18347. Much gratified to learn of the immediate response and increasing offering of American securities. As to second recommendation, we had in mind purchase of entire companies, or such comprehensive unit propositions as Alabama Junctions, where we had worked out fair plan, but where your authorities deemed difficulties too great. We cannot help feeling that in this particular Alabama matter, as in many others, there must be method of conscription that will sweep away difficulties and create large volume of exchange. As to these entire propositions, again we had in mind various groups that might be organized by men like Converse, Monell, T. N. Vail, and others who are able to deal in large figures if they see opportunity for excellent profit, but who do not invest their money for the sake merely of good interest return. As to debentures and shares of British and British owned foreign companies, even though free from British income tax there would be little or no market here unless some plan were adopted such as is fully set forth in our 17819, whereunder you would purchase these sterlings, to be retired by the companies on condition that we simultaneously purchased equal amount of dollar securities. This method we have pursued very successfully, as you know, for the purpose of taking up large amounts of St. Paul, Pennsylvania, and N. Y., New Haven & Hartford R. Rd. franc bonds. Government issues of South American, or other neutral governments such as you suggest, would, within reasonable amounts, be good for collateral here, just as we assume they will serve for collateral to loan which we have discussed with Ribot during past few months, taking form of American financial company to be organized, the French Government pledging these neutral government securities with such American company. Under this scheme Ribot has issued call for American securities. We will consider matter carefully, but for the moment would rather fear receiving but little encouragement, and if we were to discuss even in confidence with friends, fear might be something leak out which might perhaps somewhat injure British credit. Will give you our views later on this point. What we had in mind as to education was not press campaign so much as personal campaign throughout financial centres, endeavouring to get bankers in various regions into a frame of mind, just as we have been for a long time here, of trying to devise some remedy for existing exchange situation so that American trade may be maintained, and of letting these bankers work around to the proposal of trying to persuade Treasury to consider some sort of collateral loan, thus having proposal come from America rather than from England. Such campaign, even if successful, would take several months to consummate into anything definite.

EXPORT DEPARTMENT,
New York, June 8, 1916.

[Copy of telegram despatched 9 : 30 p. m. to Morgan, London]

19992. For E. C. Grenfell. 18516. Answering numerically:

1. Two days ago French Treasury representatives here advised us deposit of neutral Government bonds had been very satisfactory and they would therefore be ready in few days to take up the matter with us for definite action. When they do we will, subject to terms and conditions being satisfactory, then endeavor to organize an American corporation under laws of whichever State most satisfactory, directors perhaps ten or twelve in number, and officers of such corporation to be representatives of banks and banking houses. Capital of corporation paid in to be from $10,000,000 to $25,000,000, dependent upon amount we conclude to raise. Modus operandi then to be corporation make loan to French Government for period of, say, three years on bonds neutral Governments, with proper margin. Bonds to be deposited in this country with power of corporation to rehypothecate. Corporation would simultaneously issue its debentures in, say, units of $1,000 to an amount necessary, together with its capital, to provide the money to lend the French Government; the difference between the interest paid by the French Government to the corporation and the cost to the corporation in borrowing its money would go to the stockholders of the corporation as dividends. Debentures to mature contemporaneously with French Government note. As corporation, in view of capital paid in, would probably find it unnecessary to deposit total amount of collateral given by French Government, it would, therefore, have in its box remainder unpledged and note of French Government. Therefore, corporation debentures will not definitely set out French Government guaranty.

2. We see no special advantage for similar joint Anglo-French arrangement; in fact, on whole, think it would be disadvantageous.

3. Our hope is that sales of securities and shipment of gold will be sufficient to take care of situation; at least, until proposed French negotiations are out of way, which should be within three weeks—though time required concluding French negotiations seem interminable. Our particular reasons for this are that any other loan such as British Government could furnish would, we fear, militate against French negotiations whereas conclusion French business should not militate against British negotiations. We believe wisest plan for British Government would be to furnish some strong obligor, preferably Bank of England, which would issue a time loan, preferably 1 year, of, say, $100,000,000, secured by American securities and if found absolute necessary a percentage of neutral government's, with power on our part to substitute or to sell collateral, prepaying loan is whole or in part upon satisfactory basis to be determined. If this could be accomplished it should find a ready market. Our endeavor would be to issue participating receipts and get them back in the country banks, thus clearing out New York and enabling us to assist by temporary demand loans, as at present. We fully understand that large amount American securities are loaned, not sold, and upon these a time loan could readily be negotiated, but we feel that a movement in this direction for an amount less than $100,000,000 might be a mistake from British Government's point of view. Of course, if you feel differently we will gladly be governed accordingly.

4. We have not definite form and details American corporation, although our lawyers have advised us that same can be promptly organized.

5. Various issues of following Governments: Denmark, Norway, Sweden, Holland, Switzerland, Spain, Uruguay, Brazil, Argentine, Quebec, Egypt, shares of Suez Canal. Argentine to form, say, 25% of total.—J. P. MORGAN—H. P. DAVISON.

[Copy of telegram despatched 9 : 00 p. m. to Morgan, London]

25120. For E. C. Grenfell. While we do not yet want to report, we ourselves have no doubt of success of underwriting. We were notified last night that advertisement offering exchequer bonds was to appear in all morning papers. This gave us a little concern fearing it would chill our underdertaking. The great importance to the British Government of having our underwriting promptly completed made it seem to us our duty to submit the matter to the Ambassador through Captain Gaunt. The Ambassador at once authorized Captain Gaunt to request the newspapers not to release the advertisement for a few days. It was too late to do this, and advertisement appeared, we believe, without harm. We mention this that you may understand if you learn of it through other channels. Our minds for months have continually been on the problem of financing the requirements of the Allies. In anticipation of present undertaking being successful and out of the way, we find ourselves again studying the situation, especially because of the pressure upon us from the French Government for another operation and the pressure for Russian financing as brought to the Russian group by the National City Bank. We think it would be important if possible to secure an approximate estimate of the amount of money which will be required in this country by the Allies during, say, the next six months, and the six months succeeding. With this information we at least can more intelligently consider the matter.—H. P. Davison.

ITALIAN LOAN

To the Italian Ambassador,
Beverly Farms, Mass.

Your Excellency: Referring to Mr. Higginson's conference with you last week, and our talk on Friday last and today with Mr. Ceccato, with whom you asked us to confer, we beg to say that it would give our firm much pleasure to bring out a loan in this country on behalf of your Government.

We have given this subject considerable thought, with special reference to the fact that our financial institutions and individuals have not been accustomed to investments in the securities of other countries, and also with a view to meeting in the best possible way the precise financial conditions which characterize the present moment in this country.

We suggest a 1-year note carrying interest at 6 percent, to be sold probably at par, certainly not less than 99¾; to be free from all tax by your Government; interest to be payable at six months and one year; principal and interest to be payable in this country.

Such a note by itself in these times, and in view of the lack of experience in this country in foreign investments, would not, in our judgment, be salable to a substantial amount; but it seems to us that it can be given a conversion privilege which would bring about a successful issue.

We suggest, accordingly, that the one-year note should give the purchasers the alternative of receiving payment or converting into a precisely similar second note, also running for one year, at the same rate of interest, this second note, at its maturity, to give the holder the option of payment or conversion into a ten-year security carrying interest at 5½ percent, interest and principal of this last security to be payable in this country and Italy.

In our opinion it would be wise, under present conditions, to make this first public issue $25,000,000. We hope that the issue would be so well received that if your Government desired subsequent issues these could be placed also.

In the case of a recent Government loan, where we acted as fiscal agents for the Government, we performed our services for a commission based on the securities sold. We prefer this arrangement, because we think that it makes success more certain for various reasons, some of which we have outlined to Mr. Ceccato. If, however, your Government would prefer to have a part of the loan underwritten—say half—we would be glad to arrange this.

If the loan is to be one-half underwritten, we should expect as compensation a commission of 1½ percent based upon the first-year notes sold, a commission of ½ percent upon the second-year notes taken by the holders of the first-year notes, and a commission of 1½ percent upon the ten-year notes taken by the holders of the second-year notes, with the same rate of commission for the sale of such of the two subsequent maturities as were not taken in exchange by the holders of the existing securities and might be sold by us.

The above commissions would cover the total cost except certain minor expenses such as printing, engraving, certification, counsel fees, etc., in regard to which we can give Your Excellency a close estimate.

We think it can probably be arranged that the noteholders should declare their option as to payment or conversion 30 days before the maturity of the notes.

We are ready to act promptly if Your Excellency should desire us to do so, and to settle immediately the minor details, in regard to which we think there is not likely to arise any basis for difference of opinion.

Very truly yours,

(Signed.) LEE, HIGGINSON & Co.

EXHIBIT No. 2749

(Letterhead) REGIA AMBASCIATA D'ITALIA,
Beverly Farms, Mass., Sept. 14, 1915.

Messrs. LEE, HIGGINSON & Co.,
44 State Street, Boston, Mass.

GENTLEMEN: I have communicated to my Government the suggestions made by you regarding the placing of a loan in this country, and I have been advised by it that it approves the plan as outlined in your letter of September 3rd and in the conferences we had, and authorizes you to act as its fiscal agent to take such steps as are necessary to carry through the transaction along the lines as outlined in your letter and conferences above mentioned: and also to act as its fiscal agent in regard to the payment of the principal and interest on the notes and to hold on deposit, for the account of the Italian Government, the proceeds of such notes and disburse the same as may be arranged.

We can arrange the details of the formal agreement at our mutual convenience.

Believe, me gentlemen,
Yours very truly,

(Signed.) V. MACCHI DI CELLERE,
Royal Italian Ambassador.

EXHIBIT No. 2750

LEE, HIGGINSON & CO.,
70 Federal St., Boston, U. S. A., Oct. 9, 1915.

ITALIAN CONTRACT

Agreement between Count V. Macchi di Cellere, Royal Italian Ambassador to the United States of America, acting in the name and on behalf of the Royal Italian Ministry of the Treasury by special authorization, and Messrs. Lee, Higginson & Company, of Boston, Massachusetts, New York City, New York, and Chicago, Illinois.

1. Lee, Higginson & Company are to offer for sale twenty-five million (25,000,000) dollars par value of notes of the Royal Italian Ministry of Treasury. These notes are to be substantially in the form hereto annexed and marked "Exhibit A", and the Royal Italian Ministry of the Treasury agrees to execute said notes and to comply with their provisions. The text of all the definitive notes and bonds shall be printed thereon in Italian and English, but the legal intent of said instruments shall be determined by the English text thereof.

It is understood that the ten-year bonds referred to in said notes may be registered in Italy and that the Royal Italian Ministry of the Treasury shall make provision therefor.

Provision may be made for temporary notes to be issued in anticipation of the definitive notes and to be exchanged therefor. The temporary notes shall be substantially in the form hereto annexed and marked "Exhibit B", but without provision for registering the same and without coupons, the interest to be payable upon presentation of the notes at either one of the principal offices of Lee, Higginson & Company mentioned therein.

Both the definitive notes and temporary notes shall be signed for the Royal Italian Ministry of the Treasury by said Royal Ambassador, or in the event of his absence, by the Chargé d'Affaires or such other official as may be designated by the Royal Italian Ministry of the Treasury, they shall bear the seal of the Royal Italian Embassy at Washington, and shall be countersigned by Lee, Higginson & Company.

2. None of the twelve million five hundred thousand (12,500,000) dollars of said notes which are not underwritten shall be sold so as to yield the Royal Italian Government a smaller amount than par and accrued interest, less the commission of one and one-half (1½) percent specified herein, nor shall they be sold to the public at less than par and accrued interest unless a lower price is approved by the Ministry of the Treasury.

All expenses in connection with the printing, engraving, or lithographing, and execution of any of the notes contemplated, including the certification and registration thereof, and all expenses incidential to their preparation, shall be paid by the Royal Italian Ministry of the Treasury which shall also pay the expenses incidential to the transfer of funds to any of the offices of Lee, Higginson & Company for the purpose of meeting the interest or principal of said notes and all cost and expense incidential to the preparation for or exercise of the conversion privileges.

It is estimated that these expenses to be paid by the Royal Italian Ministry of the Treasury will be approximately ten thousand (10,000) dollars. But the Royal Italian Government shall, if so requested by Lee, Higginson & Company, furnish and deliver to Lee, Higginson & Company, free of expense to them, the one-year notes of the second series and the ten-year bonds referred to in exhibit A, sufficient in number and denominations to meet the requirements of conversion and sale as provided in said notes. The text of said notes and bonds shall conform to the provisions referred to in exhibit A, and the mechanical execution of said notes and bonds shall conform to the standard bonds issues of the Royal Italian Government. It is understood that these options, if exercised by Lee, Higginson & Company, shall be so exercised by written notice to the Royal Italian Embassy at Washington on or before April 15, 1916, as to the second series of one-year notes, and on or before April 15, 1917, as to the ten-year bonds. Lee, Higginson & Company shall bear all expenses in connection with the advertising and sale of said notes.

After the time limit for the exercise of any conversion privilege has expired, said Lee, Higginson & Company shall within seven days thereafter notify the Royal Italian Embassy at Washington of the number and denominations of the new notes, or bonds, as the case may be, to be issued in exchange for the old notes.

A preliminary certificate that the notes have been authorized and have been or will be executed in accordance with Italian law so as to constitute a valid obligation of the Royal Italian Ministry of the Treasury, will be furnished by said Royal Ambassador and a further certificate to the same effect from the proper official in Rome of the Royal Italian Government will be duly furnished as soon thereafter as it can be obtained.

3. The compensation of said Lee, Higginson & Company for their services in this connection shall be a commission of one and one-half (1½) percent upon the par value of all the first series of one-year notes sold; and an additional commission of one-half (½) of one (1) percent upon the par value of so many of the second series of one-year notes as may be taken in exchange by the holders of the first series one-year notes; and an additional commission of one and one-half (1½) percent upon the par value of so many of the ten-year bonds as may be taken in exchange by the holders of the second series one-year notes; with the same rates of commission as above stated, viz., one-half (½) percent and one and one-half (1½) percent respectively upon par value, for the sale of such of the second series of one-year notes and such of the ten-year bonds as may not be taken in exchange by the holders of prior notes; said Lee, Higginson & Company being hereby given the exclusive right at their option to offer for sale such of the second series of one-year notes and of the ten-year bonds as are not so taken. This exclusive right shall continue for the period of thirty (30) days after the date of maturity of the first series of one-year notes and for the same period after the date of maturity of the second of one-year notes.

4. The Royal Italian Ministry of the Treasury agrees that it will use the proceeds of the first series of notes hereby contemplated in payment for purchases (heretofore made or hereafter to be made) of merchandise and commodities of every kind in markets of the United States, and, pending the application of the said funds, such proceeds, less commissions and expenses, shall be credited on the books of Lee, Higginson & Company to the credit of said Royal Ambassador for the account of the Royal Italian Government and the interest allowed thereon at the rate of two (2) percent per annum. When and as needed by the Royal Italian Government for the purchase of or payment for merchandise and commodities as above, Lee, Higginson & Company shall to the extent of the funds on deposit with them as aforesaid, make transfers therefrom to such bank, trust company, or other depository in the United States as may be designated by said Royal Ambassador. Such transfers shall be made by them when and as instructed in writing so to do by said Royal Ambassador or by such person as he may designate in writing.

5. The provisions of this agreement shall be applicable to said firm of Lee, Higginson & Company as the same may now or hereafter be constituted; and said firm agrees to use its best efforts to accomplish the sale of said notes upon the conditions stated, and daily to advise said Royal Ambassador, or such other person as may be designated by him in writing, of the amounts of the proceeds of said notes, less commissions and expenses as aforesaid, placed to his credit for the account of the Royal Italian Government as above. Information concerning the proceeds of the sale of the second series of one-year notes and of the sale of the ten-year bonds shall be given to said Royal Ambassador in the same manner.

6. It is understood that the sale of twelve million five hundred' thousand (12,500,000) dollars of said notes is to be underwritten to net ninety-eight and one-half (98½) percent thereof, i. e., par less the above-mentiond commission of one and one-half (1½) percent, to the Royal Italian Government by Lee, Higginson & Company, or by a syndicate to be formed by them, of which syndicate said firm may be members and managers.

The public offering of said notes shall be made on October 15th, 1915, with the proviso that Lee, Higginson & Company, acting solely in the interest of the success of the loan, may, if financial conditions in the American market make it wise or necessary, anticipate or postpone this date by a period not to exceed ten (10) days prior or subsequent thereto. But the twelve million five hundred thousand (12,500,000) dollars in notes underwritten as aforesaid will be taken up on said October 15th in any event and the proceeds thereof then placed to the credit of the Royal Italian Government as above.

The offering of said notes, unless they are sold earlier, shall continue for sixty (60) days from October 15, 1915, and thereafter until terminated by ten (10) days' written notice from said Royal Ambassador to Lee, Higginson & Company, or from Lee, Higginson & Company to said Royal Ambassador. All notices hereunder shall be given in writing and mailed either to Lee, Higginson & Company, 43 Exchange Place, New York City, or to the Royal Italian Embassy at Washington, D. C.

It is understood that Lee, Higginson & Company if they so desire may associate with themselves in this undertaking other banking firms or banks or trust companies on such terms as they may approve.

It is further understood and agreed that this contract supersedes all that has heretofore transpired and constitutes the entire agreement between the parties.

In witness whereof said Count V. Macchi di Cellere, Royal Italian Ambassador at Washington, acting on behalf of the Royal Italian Ministry of the Treasury under special authorization as above, has hereunto signed his name and caused the seal of the Royal Italian Embassy at Washington to be affixed, and said Lee, Higginson & Company, by F. L. Higginson, Jr., a partner, has hereunto signed its firm name and affixed its seal this ninth day of October 1915.

[Seal, Royal Italian Embassy.]

EXHIBIT "A"

No.__________ $__________

KINGDOM OF ITALY—ROYAL MINISTRY OF THE TREASURY ONE-YEAR CONVERTIBLE SIX PER CENT SPECIAL TREASURY GOLD NOTE

For value received, The Royal Ministry of the Treasury promises to pay the bearer hereof, or, in case of registration, to the registered holder hereof _______________Dollars (denominations to be $1,000, $500, and $100) in gold coin of the United States of America of the present standard of weight and fineness one (1) year from date, viz: on October 15th, 1916, and to pay interest thereon, from the date hereof in like gold coin until the principal of this note is paid, at the rate of six (6) per cent per annum, semiannually, on the fifteenth days of April and October. Such interest will be paid only upon the presentation and surrender of the annexed interest coupons as they severally become due and payable.

Both the principal and interest of this note are payable at the option of the holder at either of the offices of Lee, Higginson & Company (as the said firm may be now or hereafter constituted) in Boston, Massachusetts, or in the Borough of Manhattan in the city of New York, State of New York, or in Chicago, Illinois, all in the United States of America, and shall be paid and the promises herein contained kept as well in time of war as in peace, without deduction for any taxes or impositions now or hereafter to be established or levied by or within the Kingdom of Italy in connection with or against the holder hereof, or in connection with or against this note or the principal or income or conversion privilege thereof, and irrespective of the nationality of the holder.

This note is one of an authorized issue of six per cent special treasury gold notes of the Royal Ministry of the Treasury, aggregating twenty-five million (25,000,000) dollars in principal amount, and all of like tenor and date, and all issued or to be issued pursuant to and in conformity with law.

The holder shall have the right to convert this note into another convertible note of the said Royal Ministry of the Treasury of the same principal amount, bearing interest at the rate of six (6) per cent per annum, payable semiannually, dated October 15th, 1916, and maturing one (1) year from its date, and otherwise of the same form and tenor except as herein specifically provided, by surrendering this note at one of the said offices of Lee, Higginson & Company on or after October 15th, 1916, and receiving in exchange therefor the new note.

The conversion privilege may be exercised only if this note be first presented at either of said offices of Lee, Higginson & Company not earlier than ninety (90) days and not later than sixty (60) days before its maturity, for the purpose of being stamped with the following notice:

"The holder of this note has irrevocably exercised the conversion privilege therein granted, and is entitled to receive in cash only the interest due or to become due thereon, and a new note for the same principal amount as therein provided."

The actual exchange of this note for the new note shall be made only at the office where it is so stamped.

The convertible provision of such one-year note of the second series given in exchange as above shall read substantially as follows:

"The holder shall have the right to convert this note into a bond of the said Royal Ministry of the Treasury of the same principal amount, bearing interest at the rate of five and one-half (5½) percent per annum, payable semiannually, dated October 15th, 1917, and maturing ten (10) years from its date, and otherwise of the same form and tenor except as herein specifically provided, but containing no conversion privilege, by surrendering this note at one of said offices of Lee, Higginson & Company on or after October 15th, 1917, and receiving in exchange therefor the new bond. This conversion privilege may be exercised only if this note be first presented at either of said offices of Lee, Higginson & Company not earlier than ninety (90) days and not later than sixty (60) days before its maturity, for the purpose of being stamped with the following notice: 'The holder of this note has irrevocably exercised the conversion privilege therein granted and is entitled to receive in cash only the interest due or to become due thereon and a new ten-year bond for the same principal amount as therein provided'.

"The actual exchange of this note for the new ten-year bond shall be made only at the office where it is so stamped. The said ten-year bond shall be payable, principal and interest, in gold coin of the United States ot America, of the present standard of weight and fineness at either of the said offices of Lee, Higginson & Company, or. at the option of any holder, at such branches of the Royal Treasury as the Royal Ministry of the Treasury may indicate, in gold coin of the Kingdom of Italy of the present standard of weight and fineness at the fixed rate of exchange of 5.18¼ lire of Italian money for each dollar."

At least ten (10) days before any instalment of interest on the notes of this issue shall become due, the Royal Ministry of the Treasury shall deposit with said Lee, Higginson & Company a sufficient sum to pay the same in full and, within ten (10) days before the maturity of the said notes, shall deposit a sum sufficient to pay at such maturity the principal and interest of all of said notes which have not been presented for conversion as above provided.

The Royal Ministry of the Treasury shall in due course deposit with Lee. Higginson & Company the new notes or bonds requisite for exchange as herein provided, and shall also, at the option of any holder of the second series of one-year notes, make provision for the issue of the ten-year bonds in exchange therefor in denominations of ten thousand (10,000) dollars and fifty thousand (50,000) dollars, and registered as to principal and interest, or coupon in form registered as to principal, or coupon in form unregistered, but otherwise of the same tenor.

This note shall pass by delivery unless registered on the books of the Guaranty Trust Company of New York, registrar, such registration being noted hereon. After such registration no transfer hereof shall be valid unless made on said books by the registered owner in person or by his duly authorized attorney and similarly noted hereon; but the same may be discharged from registration by being in like manner transferred to bearer, and thereupon transferability by delivery shall be restored, but this note may again from time to time be registered or transferred to bearer as before. Such registration shall not, however, affect the negotiability of the coupons, which shall continue to be transferable by delivery merely. This note shall not be valid until the same shall have been duly authenticated by counter-signature of Lee, Higginson & Company, and the certification form hereon signed by the Guaranty Trust Company of New York, , Registrar.

The legal intent of this note shall be determined by the English text hereof.

The Royal Ministry of the Treasury certifies and declares that this note has been issued in due and strict compliance with the constitution and laws of the Kingdom of Italy.

In witness whereof the Royal Ministry of the Treasury has caused this note to be signed by its duly authorized representative, the Royal Italian Ambassador to the United States of America, the seal of the Royal Italian Embassy at Washington has been affixed hereto and this instrument countersigned by Lee, Higginson & Company, this fifteenth day of October 1915.

Interest payable April 15th, ----------, and October 15th, ----------.

Principal and interest payable at the offices of Lee, Higginson & Company, Boston, Massachusetts, New York City, New York, Chicago, Illinois, United States of America.

[Certification form]

Registered:

---------- TRUST COMPANY OF ----------,

By ----------------------------------, *Registrar.*

The temporary notes may be printed. The text will be like that of the definitive notes except that they will be printed only in the English language and will have no coupons and no provision for registration. There will be added a paragraph substantially as follows:

"This note is a temporary note without coupons. The Royal Ministry of the Treasury shall as promptly as possible prepare engraved coupon notes in denominations of one thousand (1,000) dollars, five hundred (500) dollars, and one hundred (100) dollars, substantially in the form of this note, with provisions for registration of principal, and shall deliver to the bearer in exchange for this note one of said engraved coupon notes of the same principal amount with coupons for the unpaid interest attached, upon surrender for cancellation of this temporary note at either of the said offices of Lee, Higginson & Company.

If the exchange is to be made in Boston or Chicago, the bearer must give notice of his intention to present this temporary note for exchange at least ------ days in advance. This note shall not be valid until the same shall have been duly authenticated by countersignature of Lee, Higginson & Company, and the certification form hereon signed by the Guaranty Trust Company of New York, registrar."

EXHIBIT No. 2751

LEE, HIGGINSON & CO.,
70 Federal Street, Boston, U. S. A., November 14, 1916.

To the ROYAL ITALIAN AMBASSADOR,
Washinton, D. C.

YOUR EXCELLENCY: In our letter to you of November 11th we reported that of the $25,000,000 Italian Government one-year 6 percent notes, due October 15, 1917, there was still to be distributed $4,604,200 notes.

We have now to inform you, in accordance with our telegram of this day, that we have completed the sale by taking over the unsold balance, $4,604,200 notes, for our own account at par less ½ percent commission plus accrued interest for one month, i. e., a total sum of $4,604,200.

On receipt of the definitive notes duly executed the above amount and the proceeds of $2,586,300 notes sold by us, less commission, will be placed at your disposal. We shall also credit your Government with interest at the rate of two percent per annum on the net proceeds of our prior sales from the dates on which these proceeds were received and from tomorrow on the proceeds of the bonds bought by us as above.

We expect to send you a provisional statement tomorrow.

Yours faithfully,

——— ———.

DECEMBER 27, 1916.

DRAFT

We hereby offer and recommend to you for investment, participation certificates issued by the Central Trust Co. of New York, as depositary, in a loan made by us to the French Government, secured by St. Louis & San Francisco 5-percent general lien bond certificates of deposit, with a margin of 20 percent, which margin is to be kept good. The loan matures October 16, 1917, and bears interest at the rate of 6 percent per annum, payable April 16, 1917, and October 16, 1917.

The loan was made for the purpose of permitting the French Government, in connection with its efforts to control the exchange situation, to deal with the St. Louis & San Francisco 5-percent general lien bonds of the French series, and is for a maximum amount of $13,800,000. The actual amount will probably be less than this maximum amount and will depend on the amount of such French series bonds as the French Government may acquire. In any event, the value of the pledged collateral is at all times to be maintained at not less than 20 percent in excess of the face amount of the amount loaned.

The greater part of the participation certificates in above loan have been withdrawn for investment and the amount that we are in a position to offer you is, threfore, limited. Will you be good enough to let us know your wishes in the matter with as little delay as possible.

[Confidential]

SIX-PERCENT THREE-YEAR GOLD BONDS OF THE CITIES OF BORDEAUX, LYONS, AND MARSEILLES

DEAR SIRS: We beg to advise you that, subject to the necessary official action and the approval of counsel, we have completed negotiations for the issue in this country of $20,000,000 six-percent three-year gold bonds, due November 1, 1919, of the city of Bordeaux, $20,000,000 similar bonds of the city of Lyons, and $20,000,000 similar bonds of the city of Marseilles. In connection with the purchase and sale of the above bonds, we are forming a syndicate which is to purchase at 96½ percent and accrued interest from November 1, 1916, $12,000,000 face value of the said bonds of each city, with the privilege of purchasing at the same price, in lots of $1,000,000 or a multiple thereof, on or at any time before February 20, 1917, all or part of the remaining $8,000,000 additional face value of bonds of each city.

We have been advised that these loans are to be made to provide for expenditures for the alleviation of suffering caused by the war and for other municipal purposes.

The principal and interest of the bonds are to be payable, without deduction for any French governmental or municipal taxes or other French taxes, in

New York, in United States gold coin of or equal to the present standard of weight and fineness, or, at the option of the holder, in France in francs, at the fixed rate of francs, 5.60 per dollar, under regulations to be stipulated in the bonds.

It has been stipulated that the Government of the French Republic is to undertake, if necessary, to permit the cities of Bordeaux, Lyons, and Marseilles, or any of them, to pay the interest or principal amount of the loan in gold in the city of New York, to furnish them and each of them with gold in the amount needed, and authorize its exportation for said purpose.

As our negotiations have been conducted in part by cable, we reserve the right to modify, in our discretion, the terms of the bonds and of the purchase, except as to the interest rate and maturity of the bonds, the purchase price, and the fixed rate of exchange.

The bonds are to remain syndicated under our management for a period of three months from November 20, 1916, unless the syndicate be sooner terminated by us. We are to be managers of and may participate in the syndicate, and as managers are to have full control of the affairs of the syndicate, with power, in our discretion, to exercise the privilege of purchasing said additional $8,000,000 bonds of each city in whole or in part, or to leave the same unexercised, and to sell the bonds and to repurchase and resell bonds in our absolute discretion.

We shall make no charge for our services in managing the syndicate, as we are being compensated otherwise.

We beg to call to your attention that, in addition to the very attractive yield of the bonds, there is also the possibility of a very substantial profit in exchange, in view of the option to collect the principal and interest of the bonds at the rate of francs, 5.60 per dollar, while the normal rate of exchange before the war was about francs 5.18 per dollar.

Kindly advise us promptly whether and to what extent you desire to participate in this syndicate, and we shall do our best to meet your wishes. All participations will be on the basis of a syndicate for $36,000,000 bonds, with a proportionate amount in the option.

Yours very truly,

——— ———,

EXHIBIT NO. 2754

FRENCH MUNICIPAL LOANS

$20,000,000	$20,000,000	$20,000,000
CITY OF BORDEAUX	CITY OF LYONS	CITY OF MARSEILLES

SIX PER CENT THREE-YEAR GOLD BONDS DUE NOVEMBER 1, 1919, INTEREST PAYABLE MAY 1 AND NOVEMBER 1

Principal and interest payable without deduction for any French governmental or municipal taxes or other French taxes.

Principal and interest payable in New York in United States gold coin, or at the option of the holder (to be exercised as to principal thirty days before the date of maturity) in France in francs at the fixed rate of francs 5.60 per dollar.

Coupon bearer bonds in denominations of $1,000, $500, and $100 each.

The Government of the French Republic is to undertake to furnish and permit the exportation of gold, so far as necessary, to permit the cities to pay the interest or principal amount of the loans in gold in the city of New York.

We are informed that these loans are the only external loans of the above-mentioned cities and are to be made to provide for expenditures for the alleviation of suffering caused by the war, and for other municipal purposes.

We are advised that—

Bordeaux, one of the three leading French seaports, has, according to the last enumeration, a population of 261,678 and a funded debt of Fcs. 48,500,000 (approximately $9,000,000).

Lyons, next to Paris the leading trade centre of France, has according to the last enumeration, a population of 523,796 and a funded debt of Fcs. 97,000,000 (approximately $18,000,000).

Marseilles, the foremost seaport of France, has, according to the last enumeration, a population of 550,619 and a funded debt of Fcs. 122,800,000 (approximately $23,000,000).

The undersigned will receive subscriptions for the above bonds at 98 percent and accrued interest, at which price the bonds yield about 6.75 percent on the investment.

Particular attention is called to the small per capita debt of these cities, to the attractive yield of the bonds, and to the possibility of a very substantial profit in exchange, in view of the option to collect the principal and interest of the bonds at the rate of francs 5.60 per dollar. Thus, if at the maturity of the bonds the rate of exchange should be fcs. 5.18 (the normal rate before the war) the principal sum payable in France would equal a redemption price in dollars of about 108 percent.

Subscriptions will be apportioned among the three issues of bonds, and allotments will be made on the basis of equal amounts of each issue, insofar as feasible.

The subscription will be closed at three o'clock p. m. on Tuesday, November 28, 1916, or earlier, the right being reserved to reject any applications and to award a smaller amount than applied for. The undersigned reserve the right to close the subscription at any time without notice.

A first payment of $50 per $1,000 bond subscribed for must accompany all subscriptions. The balance of the amount due on bonds allotted upon subscriptions will be payable in New York funds, on December 6, 1916, at the office of the undersigned, against delivery of temporary bonds exchangeable for engraved bonds when prepared.

If not allotment be made, the first payment will be repaid in full, and if only a portion of the amount applied for be allotted, the balance of the first payment will be applied towards the amount due on December 6, 1916. No interest will be allowed on such first payment. If any further balance remains, such balance will be repaid. Failure to pay the second installment, when due, will render the previous payment liable to forfeiture.

All allotments will be made subject to the necessary official action to complete the transaction and to the opinion of counsel as to legality.

NOVEMBER 29TH, 1916.

[Official]

JACQUES DE NEUFLIZE, Esq.,
Room 1219, 2 Rector Street, New York.

DEAR SIR: We beg to inform you that the public response to the offering of the Bordeaux-Lyons-Marseilles three-year bonds has not been such as to enable us, on behalf of the syndicate which we have formed, to call at the present time the $24,000,000 bonds on which the syndicate has an option.

A number of causes have combined to militate against the full success of this issue.

(1) The market for foreign short-term bonds and notes has become greatly overcrowded. The demand for such securities is naturally limited, as they are bought principally by banks, trust companies, and other financial institutions and do not so much appeal, generally speaking, to the individual investors at large, as such investors desire in the main long term securities. Moreover, the placing recently of $300,000,000 *secured* notes of the British Government and the arrangement of a *secured* eighteen months $50,000,000 acceptance credit for French houses and institutions, not only absorbed a very large part of the funds available for short term European investments but also increased the difficulty of placing unsecured short term loans.

It was in realization of this situation that we ventured to urge so strongly in the present instance the issue of 15- or 20-year bonds, of the wide popular success of which we felt entirely certain, instead of 3-year bonds.

(2) You will recall that we were exceedingly desirous to proceed with the public issue within the first few days after the date of the Presidential election—i. e., after November 7th—and that we made free to point out to you repeatedly the necessity of promptest possible action, as *every day's delay* was detrimental to the success of the issue. As we had foreseen, the psychological elements of the general situation, as well as the condition of the money market, have since become somewhat unfavorable. Furthermore, it so happened that our issue coincided with the public offering of the Russian Government notes, the Chinese Government notes, the city of Sao Paulo notes, all of which, though not very large in themselves, tend to increase the existing impression as to the profusion of foreign short-term offerings.

(3) A postponement of the public issue after our syndicate had once been formed would not have been possible, and, moreover, we were and still are convinced that, notwithstanding the circumstances above enumerated, the entire $60,000,000 of our offering would have been covered by public subscriptions if it were not for the official announcement last Friday that the French and British Governments had authorized the placing in America of Treasury notes to an unstated amount. This was followed the day after by the publication of a notice addressed to the banks by our Federal Reserve Council, advising them to place limitations upon the amount of their commitments in the way of such short-term foreign borrowing as was not of a self-liquidating character. And this notice again was followed yesterday by the enclosed formal and official warning on the part of the Federal Reserve Board, addressed not only to the banks but to investors generally and coming on the very day which was announced as the closing day of the public offering of the three-cities loan and on which, in consequence of certain steps which we had taken, we had every reason to expect a great many subscriptions to have come in.

(4) To sum up: Notwithstanding the congested condition of the market for foreign short-term securities and the unpropitiousness of the moment, we are confident that we would have succeeded in placing the $60,000,000 3-year bonds under our issue if it had not been for the official announcement of the contemplated unlimited placing of French and English Treasury notes in America, and for the resulting public warning by the Federal Reserve Board.

On the first day of our offering, Thursday, the subscriptions, while not comparable in size to those for the Paris issue, were fully up to our expectations. On the following 3 days under the influence of the Treasury notes announcement very distinct hesitation set in and the market for short-term securities declined under heavy sales, Paris bonds going to 97⅝, notwithstanding our supporting purchases. Yesterday morning, on the closing day of our offering and the day on which our own and our syndicate's efforts had been concentrated and were to have borne fruit, the Reserve Board's warning appeared. Its effect was seriously disturbing upon investors, corporate and individual, in foreign short-term securities, a heavy and precipitate selling movement set in, causing Paris bonds to fall temporarily to 96⅜ and the demand for the three cities bonds was cut off suddenly and absolutely.

We perfectly appreciate the circumstances which made it impracticable for the French authorities concerned to adopt our suggestion for a long-term loan or to enable us to proceed more promptly with the public offer of the 3-year loan, and you will please understand that we are writing this letter, not in any spirit of criticism but solely as an explanation of the result.

You are entirely at liberty, if you so desire, to forward a copy of this letter to the French authorities concerned, and we beg to remain,

Very truly yours,

—— ——.

EXHIBIT No. 2759

[Carbon copy]

OCT. 9TH, 1917.

SIX PERCENT 3-YEAR GOLD BONDS OF THE CITIES OF BORDEAUX, LYONS, AND MARSEILLES

JACQUES DE NEUFLIZE, Esq.,
Room 1219, 2 Rector Street, New York.

DEAR SIR: The syndicate for the above bonds expires by limitation on October 31st, and under its terms cannot be further extended. As you are aware, approximately $17,000,000 bonds remain unsold in the hands of the syndicate. With its termination these bonds will be freed from the control of the syndicate managers, and syndicate members will be free to dispose of them at their discretion.

In the present state of the investment market, unless some substantial and definite buying power is provided to aid in the absorption of such offerings as may be made, there is danger that, with the termination of the syndicate, a precipitate and very serious decline may set in which naturally would have the tendency to affect materially other French securities in the United States. On the other hand, if a certain capacity and willingness is demonstrated to absorb a reasonable amount of such bonds as will come for sale, it may be assumed, to judge from experience, that this would result in reassuring intending sellers and easing selling pressure and would have a strong psychological effect in preventing sales at inordinately low prices which otherwise might be reached.

We should judge that to accomplish this purpose there should be available a buying power up to a total of $5,000,000 bonds, although we do not think that it will be necessary to purchase such an amount of bonds.

In view of these circumstances, we feel that we ought to submit to the consideration of the French authorities the suggestion that we be authorized upon the termination of the syndicate to support the market by purchasing in our discretion at not exceeding 90 percent all or any part of $5,000,000 bonds and to resell the same at such prices and at such time as we judge advisable; provided, that we are not to make sales below cost unless expressly authorized to do so.

Although it is naturally our policy at this time to avoid the locking up of our funds, we would be willing, in order to demonstrate our desire to be of service, to carry for the duration of six months, at the accruing rate of interest, with margin of 10 percent to be kept good, one-third of such bonds as may be acquired.

We shall be obliged to you if you will be good enough to bring this suggestion to the notice of the proper French authorities, and we beg to remain,

Faithfully yours,

L. ——— ———.

AGENCE FINANCIERE DU GOVERNMENT FRANCAIS AUX ETATS-UNIS,
New York, 2 Rector Street, September 9th, 1918.

Messrs. KUHN, LOEB & Co.,
New York City.

GENTLEMEN: I acknowledge receipt of your letter of September 9th in regard to the purchase by your firm, for account of the French Government, of city of Paris 6 percent gold bonds and cities of Bordeaux, Lyons, and Marseilles 6 percent bonds, with which I am in accord.

I am requesting the Federal Reserve bank to pay you tomorrow, September 10th, the sum of two million dollars ($2,000,000), which kindly credit to the French Government account under advice to me.

Kindly advise me daily of all purchases or sales effected under this agreement which will be charged or credited by you to the French Government account.

Yours very truly,

(Signed) J. FREDERICK BLOCH.

FRENCH FINANCE COMMISSION,
2 Rector Street, New York.

DEAR SIRS: Referring to our letter of the 9th instant, we hereby beg to confirm our understanding as per telephonic conversation between your Mr. Bloch and our Mr. Kahn, according to which the limits of the orders which we have for you are raised, as follows, good till cancelled.

City of Paris bonds, from 95 to 97½ percent and interest.
French municipal bonds, from 97½ to 98½ per cent and interest.

We would ask that you be good enough to confirm the correctness of this understanding, and we beg to remain,

Yours very truly,

—— ——.

CITY OF PARIS SIX PERCENT FIVE-YEAR GOLD BONDS SYNDICATE

Dear Sirs: We beg to advise you that, subject to the necessary official action and the approval of counsel, we have completed negotiations for the issue in this country of $50,000,000 city of Paris six percent five-year gold bonds, due October 15, 1921. In connection with the purchase and sale of the above bonds we are forming a syndicate which is to purchase at 97 percent and accrued interest $30,000,000 face value of the said bonds with the privilege of purchasing at the same price, in lots of $1,000,000 or a multiple thereof, on or at any time before January 15, 1917, all or part of the $20,000,000 additional face value of bonds.

We have been advised that the city of Paris, having for more than two years past been subjected to very important and unusual expenditures for the alleviation of suffering caused by the war, this loan is to be made partly to reimburse the city for such expenditures and to provide for additional similar expenditures and for other municipal purposes.

The principal and interest of the bonds are to be payable without deduction for any French governmental or municipal taxes or other French taxes, in New York in United States gold coin of or equal to the present standard of weight and fineness, or at the option of the holder in Paris in francs, at the fixed rate of francs 5.50 per dollar, under regulations to be stipulated in the bonds. The bonds are to be redeemable at the option of the city of Paris at 102½ percent and accrued interest on October 15, 1918, or on any interest date thereafter on ninety days' previous notice.

It has been stipulated that the Government of the French Republic is to undertake, if necessary to permit the city of Paris to pay the interest or principal amount of the loan in gold in the city of New York, to furnish the city of Paris with gold in the amount needed and authorize its exportation for said purpose.

As our negotiations have been conducted in part by cable, we reserve the right to modify, in our discretion, the terms of the bonds and of the purchase. except as to the interest rate and maturity of the bonds, the purchase price, and the fixed rate of exchange.

The bonds are to remain syndicated under our management for a period of three months from October 15, 1916, unless the syndicate be sooner terminated by us. We are to be managers of, and may participate in, the syndicate, and as managers are to have full control of the affairs of the syndicate, with power in our discretion, to exercise the privilege of purchasing said additional $20,000,000 bonds in whole or in part, or to leave the same unexercised, and to sell the bonds and to repurchase and resell bonds, in our absolute discretion.

We shall make no charge for our services in managing the syndicate, as we are being otherwise compensated.

We beg to call to your attention that, in addition to the very attractive yield of the bonds, there is also the prospect of a very substantial profit in exchange, in view of the option to collect the principal and interest of the bonds at the rate of Fcs. 5.50 per dollar, while the normal rate of exchange before the war was about Fcs. 5.18 per dollar.

Kindly advise us promptly whether and to what extent you desire to participate in this syndicate, and we shall do our best to meet your wishes. All participations will be on the basis of a syndicate of $30,000,000 bonds with a proportionate amount in the option.

Yours very truly,

——— ———.

EXHIBIT No. 2765

$50,000,000 CITY OF PARIS FIVE-YEAR SIX PERCENT GOLD BONDS (MUNICIPAL EXTERNAL LOAN OF 1916), DUE OCTOBER 15, 1921, INTEREST PAYABLE APRIL 15 AND OCTOBER 15

Principal and interest payable without deduction for any French governmental or municipal taxes or other French taxes.

Principal and interest payable in New York in United States gold coin, or, at the option of the holder (to be exercised as to principal thirty days before the date of maturity or of redemption) in Paris in francs at the fixed rate of francs 5.50 per dollar.

Redeemable at the option of the city of Paris at 102½ per cent on October 15, 1918, or on any interest date thereafter on ninety days' published notice.

Coupon bearer bonds in denominations of $1,000, $500, and $100 each.

The Government of the French Republic is to undertake to furnish and permit the exportation of gold, so far as necessary, to permit the city of Paris to pay the interest or principal amount of the loan in gold in the city of New York. This loan is, we are informed, the only external loan of the city of Paris.

The purpose of the loan is stated to be to reimburse the city of Paris for the very important and unusual expenditures to which it has been subjected for more than two years for the alleviation of suffering caused by the war, to provide for additional similar expenditures and for other municipal purposes.

The undersigned will receive subscriptions for the above bonds, at 98¾ per cent and accrued interest, at which price the bonds net 6.30 per cent on the investment.

In addition there is the possibility of a very substantial profit in exchange, in view of the option to collect the principal and interest of the bonds at the rate of francs 5.50 per dollar, while the normal rate of exchange before the war was about francs 5.18 per dollar.

The subscription will be closed at three o'clock p. m. on Wednesday, October 4, 1916, or earlier, the right being reserved to reject any applications and to award a smaller amount than applied for. The undersigned reserve the right to close the subscription at any time without notice.

A first payment of $50 per $1,000 bond subscribed for must accompany all subscriptions. The balance of the amount due on bonds allotted upon subscriptions will be payable in New York funds, on Monday, October 16, 1916, at the office of the undersigned, against delivery of temporary certificates exchangeable for engraved bonds when received.

If no allotment be made, the first payment will be repaid in full, and if only a portion of the amount applied for be allotted, the balance of the first payment will be applied towards the amount due on October 16, 1916. No interest will be allowed on such first payment. If any further balance remains, such balance will be repaid. Failure to pay the second instalment, when due, will render the previous payment liable to forfeiture.

All allotments will be made subject to the necessary official action to complete the transaction and to the opinion of counsel as to legality.

KUHN, LOEB & CO.

NEW YORK, *October 2, 1916.*

EXHIBIT NO. 2766

[Rubber stamp: Kuhn, Loeb & Co., Aug. 31, 1916; filing department]

[Official]

AUGUST 30TH, 1916.

MY DEAR MR. DE NEUFLIZE: Referring to our conversations in regard to the suggestion for placing in this country bonds of the city of Paris, to be used to provide funds for use for humanitarian purposes, such as support of hospitals and care of the sick and needy, I beg to confirm that my firm is prepared in principle to undertake such a transaction on the following terms and conditions:

Subject to there being no material change in financial and investment market conditions here, we are prepared to purchase $30,000,000 face value of five-year 6% bonds of the city of Paris, with the option to us to take $20,000,000 additional of such bonds at the same price, which, in our opinion, bearing in mind the price at which the Anglo-French bonds are selling, and in view of the fact that the last issues of French and British bonds have been secured by collateral, should be not over 96% and accrued interest. The bonds should be issued as coupon bonds to bearer and be in denominations of $1,000, $500, and $100. Principal and interest of the bonds should be payable in United States gold coin of the present standard of weight and fineness, or at the option of the holder in francs at the fixed rate of exchange of say fcs. 5.60 for $1, without deduction for any present or future French or municipal taxes and duties which may be imposed thereon, or which may be retained therefrom. Principal and interest of the bonds should be payable at our office in New York, and we should be placed in funds for this purpose ten days prior to the respective maturities. We should receive ⅛% commission for making such payments. A clause should be inserted in the bonds providing that principal and interest of the same are to be paid in time of war, as well as in time of peace, and to holder, whether he be the subject or citizen of a friendly or of a hostile state, and due provision should be made that the French Government, or the Bank of France, as the case may be, will, if necessary, provide gold and facilitate its shipment to meet the payment of principal and interest as they respectively mature.

In case the city of Paris desires the privileges of earlier redemption of bonds, it will be perfectly agreeable to us to have a provision providing for the redemption of the entire issue, but not of any part, at 102½% and accrued interest on any interest date on and after two years upon, say, sixty days' notice. The proceeds of the loan should be placed in dollars to the credit of the city of Paris with Kuhn, Loeb & Co., who would allow thereon the current bank rate of interest for demand deposits until the money is withdrawn; the withdrawal to be made upon the order of such parties as may be authorized to do so by the proper authorities of the city of Paris.

To conform to the usual custom here, it would be well to have a trust company here, to be selected by us, appointed to act as "bond registrar", to countersign the bonds for identification.

We would also like to have an assurance from the city of Paris that no further issues of bonds, beyond the present issue, will be placed or offered in this country during one year from the date of the present proposed issue.

The legal opinion of leading French counsel should be furnished us in regard to the legality of the issue and its validity in the hands of American holders, and we should further be furnished with the necessary documents in regard to the authorization of the loan, such as certified copies of the necessary acts of the French Parliament, of the municipal council, and of such other parties whose consent or authorization or ratification may be necessary or any other documents counsel may advise as requisite.

We would also require a letter or memorandum signed by the proper authorities, giving the details of the financial position of the city, including its debt, its income, and its expenditures, and stating briefly its system of financial administration and organization, as well as the purposes for which this loan is issued. I enclose a draft of such a letter or memorandum, which shows the information which we would require for the purpose of our prospectus.

We understand that upon an agreement in principle in regard to the above being established, prompt steps will be taken to secure the necessary authorizations and ratifications, and that this can be accomplished by not later than September 15th, but that no definite contract is to be made until this has been done.

With assurances of high regard, believe me,

Very faithfully yours,

——— ———.

J. DE NEUFLIZE, Esq.,
New York.

CITY OF PARIS MUNICIPAL EXTERIOR LOAN OF 1916

DEAR SIRS: Messrs. Coudert Brothers advise us that their Paris office has been furnished with a copy of a letter from the Minister of Finance of the French Republic addressed to the Prefect of the Seine of Paris dated September 23, 1916, reading as follows:

"Comme suite a mes lettres des dixhuit et vingtun Septembre courant relatives a l'emprunt projete de la ville de Paris aux etats unis j'ai l'honneur de vous confirmer que le gouvernment prend envers la ville l'engagement de fournir en cas de besoin l'or necessaire pour faire le service en dollars de l'emprunt et d'en autoriser l'exportation."

We are also informed that a copy of this letter will shortly reach us by post. We are of opinion that you are now in a position to accept and pay for the $50,000,000, face value, of temporary bonds which have been executed on behalf of the city by Mr. deNeuflize.

We are also advised by Messrs Coudert Brothers that they expect shortly to receive word that Mr. deNeuflize is duly authorized on behalf of the city of Paris to sign checks against delivery of the bonds.

Yours very truly,

CRAVATH & HENDERSON.

FRENCH MUNICIPAL LOANS

At a conference held at 3 p. m. on November 20, 1916, at the office of Kuhn, Loeb & Co., at which were present Messrs. deNeuflize, Bloch, Cazenave, Kahn and Mortimer L. Schiff, to formulate a reply to the inquiry transmitted from Monsieur Ribot, Messrs. Kahn and Schiff stated to the other gentlemen and authorized them to so inform M. Ribot, that, as is well known, the policy of K. L. & Co. ever since the beginning of the war, has been one of absolute neutrality; that K. L. & Co. has avoided doing or participating in any financing for belligerent purposes and that the firm of K. L. & Co. propose to maintain this policy and cannot in any way subject itself to any limitation, expressed or implied, upon its freedom of action to do any business not in conflict with this policy; but that under existing conditions, there is no likelihood of Kuhn, Loeb & Co. undertaking the placing here of any German municipal or other bonds and that K. L. & Co. had no present intention to make any such issues.

KUHN, LOEB & CO.,
William and Pine Streets, New York, December 6, 1916.

[Rubber stamp: Kuhn, Loeb & Co., Dec. 6, 1916; Filing department]

(Confidential)

DEAR SIRS: We beg to inform you that, subject to the necessary official action and the approval of counsel, we have completed negotiations with the Royal Dutch Company for the working of petroleum wells, etc., for the purchase of 74,000 of its ordinary shares of 100 guilders each. As the original Dutch shares are in bearer form, with coupons for dividends payable in guilders, we have arranged that they be deposited under an agreement, to be approved by us and our counsel, with a trust company in New York City, which is to issue in respect thereof certificates for "American shares" in registered form, each of such shares representing one-third of a Dutch share of the par value of 100 guilders; the equivalent of the dividends on shares represented by certificates to be paid to certificate holders in dollars. The agreement with the trust company is to provide among other things for the privilege to exchange the trust company certificates at the holder's option, for Dutch shares, at any time after December 15, 1917, upon surrender of certificates representing such shares, and upon payment of the charge as provided in the agreement.

In connection with the purchase of said Dutch shares and the sale of said certificates for American shares, we are forming a syndicate which is to take over from us and our associates the 222,000 American shares representing the 74,000 Dutch shares at the price of $64.50 for each American share, ex the interim dividend of 15 percent to be payable in January. Payment for shares purchased is to be made on five days' notice but no payment will be required before early in January. At the syndicate's purchase price, the return upon the investment, on the basis of the dividend distribution for 1913, 1914, and 1915, would be approximately 10 percent.

Application for the listing of the American shares on the New York Stock Exchange will be made in due course. The company has agreed that application shall be made for the official listing of the new 100 guilder shares in Amsterdam and, as soon as the restrictions upon listing of new securities are removed by the British Government, also in London.

Kindly advise us promptly whether and to what extent you desire to participate in this syndicate for 222,000 American shares and we shall do our best to meet your wishes; upon allotment of your participation, we shall send you a copy of the syndicate agreement for signature, which will provide for the expiration of the syndicate on February 28, 1917, unless the same be sooner terminated by us.

We beg to enclose for your confidential information copy of an advance draft of an explanatory letter from the Royal Dutch Company, giving details as to the company and its status; these have been communicated to us partly by cable and we believe them to be correct, but they are not guaranteed by us.

Yours very truly,

——— ———.

EXHIBIT No. 2775

[Carbon copy]

THE HAGUE, *December 1916*.

(Duplicate.)

Messrs. KUHN, LOEB & Co.,
New York.

DEAR SIRS: In connection with your purchase of common shares of this company, I take pleasure in giving you the following information:

The Royal Dutch Company for the working of petroleum wells in Netherland India, was incorporated in The Hague, Kingdom of the Netherlands, in 1890. Created with a capital of Fl. 1,300,000,[1] the company started business on a small scale, but had gradually extended its activities and through its subsidiaries is now the largest international producer and distributor of mineral oil and its by-products of Europe.

---

[1] Fl. 1=1 Dutch Guilder=about $0.402 gold.

Capital	Outstanding	Authorized
Common shares	Fl.[1] 75,527,200	Fl. 120,000,000
Four per cent preferred shares	Fl. 1,500,000	Fl. 1,500,000
Four and one-half per cent cumulative priority shares	Fl. 28,500,000	Fl. 28,500,000

[1] Exclusive of the present issue.

Surplus: Fl. 53,412,151.

As to the rights, preferences, and voting powers of the various classes of shares I refer you to the articles of association.

The 4½ per cent priority shares were placed in France in 1911 at 98¼ per cent by the credit Lyonnais.

The company has no funded debt and no fixed charges.

Character of business.—The company is engaged in the business of producing, refining, storing, and marketing mineral oil and its by-products through its numerous subsidiaries.

Growth and development.—The company started as a local enterprise of the Dutch East Indies. After the first decade of its existence, it developed rapidly. Its first activity in the international field was the foundation in 1902 in conjunction with the "Shell" Transport & Trading Company of London and the de Rothschild (Paris) group, of the Asiatic Petroleum Company to provide for the distribution of the products of the three associated groups. In subsequent years the company absorbed the principal other oil producing enterprises in the Dutch East Indies, thereby acquiring the predominant position in this field of production. This being accomplished, the "Royal Dutch" amalgamated its interest with those of the "Shell." The combined assets of both the "Royal Dutch" and the "Shell" were turned over to two new companies; the Bataafsche Petroleum Company" and the "Anglo-Saxon Petroleum Company." The "Bataafsche" does the producing, the "Anglo-Saxon" the transportation and distribution business. The "Royal Dutch" holds 60 per cent in these two concerns, the "Shell" 40 per cent. Besides, the "Royal Dutch" owns 12½ per cent of the outstanding ordinary "Shell" shares.

From this time the combined Royal Dutch and Shell interests rapidly expanded their sphere of activity in the international field. They successively acquired, in addition to their possessions in the Dutch Indies, exclusive or controlling interests in important oil fields in Roumania, Russia, Egypt, the United States (Oklahoma and California), Panama, Venezuela, and Mexico—and long contracts for most products of Persian oil fields controlled by other interests. The largest of these interests is in Russia, where the Royal Dutch-Shell interests have been amalgamated with those of the de Rothschild (Paris) group.

The American interests of the combination are expanding rapidly. It owns a predominating interest in the Roxana Petroleum Company of Oklahoma, and the Shell Company of California. The Roxana has an issued capital of $5,000,000, and the Shell of $33,535,575. The Roxana owns fields in the well-known oil districts of Cushing, Healdton, and Bartlesville. There are under construction 140 miles of six-inch pipe line, from Cushing to Healdton, to be put in operation in January next, and 450 miles of ten-inch pipe line, from Cushing to St. Louis, to be put in operation by the end of 1917. The combination has further undertaken the construction of a large refinery in St. Louis. At Martinez, on the Pacific coast, near San Francisco, a refinery capable of handling 25,000 barrels a day and storage facilities at Martinez and on the fields for 4,250,000 barrels have been established, as well as an eight-inch pipe line 170 miles long, from the field to the refinery. In Mexico the allied companies have also storage for 2,000,000 barrels, and further for 500,000 barrels nearing completion. The combination is further occupied in establishing large storage facilities and a refinery of exceptionally great capacity in Curacao (Dutch West Indies) in the immediate proximity of the Pamana Canal.

General policy.—The company's main object has been to acquire throughout the world producing territories and make such arrangements as will enable it to meet the demands of consumers by local production, if possible, or by furnishing oil from the nearest neighboring district. In this way the trade of the company has become more and more independent of freight and transport questions and has benefited the consumer by the resulting economies of supply. In addition to the vast and comprehensive and carefully planned organization of its producing territories, refineries, and distributing arrangements, the company controls through its subsidiary companies a fleet of 292,970 tons. This fleet has always been kept up to a high standard of efficiency in every respect. The affiliated companies have also in course of construction additional steamers of a total tonnage of 5,800. The contracts for these 5,800 tons, as well as for 35,400 tons quite recently put into service, were entered into before the European war, at prices vastly below the present cost of ships. In fact, the companies, if they so wished, could now dispose of these new steamers at profit of over Fl. 20,000,000.

Production.—The production of the company and its affiliates in the East Indies alone amounted—

In 1890 to	1,230	tons
“ 1895 “	90,152	“
“ 1900 “	439,350	“
“ 1905 “	1,136,937	“
“ 1910 “	1,435,240	“
“ 1914 “	1,539,236	“
“ 1915 “	1,594,533	“

The controlled production in Russia in 1914 amounted to 1,526,849 tons, and in the other fields to 568,000 tons and 6,900,000 barrels, making a total production in all the fields of about 4,786,000 tons of 1,000 KG (= about 31,100,000 barrels). In 1915 the production aggregated 4,367,384 tons (= about 28,400,000 barrels). The decrease is due to temporary local conditions and has no relation to the producing capacity of the fields.

Earnings and dividends.—In 1907, before the amalgamation with the "Shell" was consummated, the Royal Dutch Company, in order to re-establish a more nearly correct proportion between its nominal capital and the real value of its assets, distributed its surplus to its shareholders by allowing them a stock bonus of 200 percent, thus trebling its nominal capital. Taking this into account, it will be seen that since 1902, when the "Asiatic" was founded, the dividends have constantly and regularly increased, with the sole exception of 1911, when the company, although the earnings would have allowed the distribution of a much larger dividend, reduced the rate as a matter of policy, with a view to exceptional circumstances prevailing at that time.

Year:	*Dividend*	Year:	*Dividend*
1902	24%	1909	28%
1903	35.85%	1910	28%
1904	65%	1911	19%
1905	50%	1912	41%
1906	73%	1913	48%
1907	[1]27¾%	1914	49%
1908	28%	1915	49%

[1] After trebling the capital by distribution of a stock dividend of 200%.

In June 1916 the company offered its shareholders the privilege to subscribe at par to one new share for each three old shares.

Distribution of profits

4½ percent to priority shareholders.
4 percent to preferred shareholders.
6 percent to ordinary shareholders.

The rest is appropriated as follows:

93 percent to ordinary shareholders.
3 percent to managing directors.
4 percent to commissaires, with a maximum of Fl. 30,000 for each one of them.

Reserves.—In the last published balance sheet of 31st December 1915, the accumulated surplus was stated at Fl. 53,412,151.90. This sum, however, is very far from representing the real extent of the company's surplus, as many of the assets, such as shares in allied companies, stand in the books of the company at only a fraction of their real value. Thus the company owns shares and participations in various petroleum concerns, either controlled or allied with it, of the face value of Fl. 169,247,785, which were producing a net income of slightly over

Fl. 29,000,000. Notwithstanding this large percentage of income and the sound and steadily increasing value of these properties, the above holdings of the company of Fl. 169,247,785 have been written down by Fl. 47,728,075.07. If this income were capitalized, say, on a 7 per cent basis—which in view of the intrinsic value of the properties and their promise of future yield would not seem unreasonable, the value of these holdings would be approximately Fl. 414,000,000, thus constituting what may be considered a "hidden reserve" equaling Fl. 292,000,000, i. e., 385 per cent of the entire outstanding ordinary shares, quite irrespective of the value of the other vast assets of the company.

In addition to the reserves created in the Royal Dutch Company, the Bataafsche and the Anglo-Saxon Petroleum Companies in their turn also established very considerable reserves by writing down their properties to an exceedingly conservative figure, while the shares held by them in the allied and subsidiary companies are valued in their balance sheets at only a portion of their real values.

Shares.—The common shares are of the par value of Fl. 1,000 each, but the company issues sub-shares of Fl. 100 each. The shares and sub-shares are quoted in Amsterdam, and, since December 1913, the sub-shares also in London, where they were introduced by Messrs. N. M. Rothschild & Sons of 620 per cent[1] and application will be made for the listing of the shares, now sold to you, on the Amsterdam Stock Exchange and after the war on the London Stock Exchange. The price of the shares on the Amsterdam Stock Exchange since 1902 has fluctuated as follows:

Year	High	Low
1902	499	381
1903	515	415
1904	587	435
1905	577	305½
1906	798	383½
1907	906 [1] 340	719 [1] 225
1908	324	270½
1909	580	426
1910	580	399
1911	501	406
1912	588	444
1913	652	556¼
1914	639½	487½
1915	563½	453½

[1] After distribution of stock dividend of 200 percent.

In May 1916 the quotation rose to 659 per cent, including both the final dividend of 34 per cent for 1915 and the right of subscription for new shares at par. After the detachment of the dividend and the subscription rights, the quotation was about 500 per cent, since which time it has maintained itself between that price and 530 per cent.

Present position and prospects.—The company should derive great benefit from the development of liquid fuel owing to the favorable geographical location of its supplies and we believe will be in an unique position for the supply of liquid fuel in the future from its different producing centres to navigation companies and other users throughout the world.

Our allied companies (of the respective capitals of which this company owns about 60 per cent) have spent of late years more than Fl.50,000,000 in California and Mexico and are on the point of completing arrangements for organization, which, when completed and in working order, will, we have no doubt, contribute largely to our earnings.

The test to which the company and its allied organizations have been put by the war crisis in Europe has afforded additional proof that its general structure is built on such a basis as will resist the severest upheavals that the world's commerce can be put to. Although in certain countries the company's trade, owing to the war, has been restricted, in others the result has been the opposite, and on the average the earnings and general progress have been fully maintained. On the whole, however, we have not like many other industrial corporations derived benefits from the war, and we feel justified in looking forward in the future when peace will have become re-established to even greater prosperity in every direction in the affairs of our companies.

---

[1] For the purpose of comparing that price with the present price it must be borne in mind that the subscription privileges to new stock offered to shareholders in June 1916 was at the then prevailing price equal to a bonus of approximately 120 per cent.

As regards the current year, although it is yet premature to commit the company to a statement of the probable dividend for the year, we are nevertheless justified in stating that the company's business is developing in an exceedingly satisfactory way, and we believe that our shareholders will have no reason to be disappointed by the results obtained and the dividends distributed for the year 1916.

We are, dear sirs,
Yours very truly,

H. W. A. Deterding,
General Managing Director.

INVESTIGATION OF MUNITIONS INDUSTRY

TUESDAY, FEBRUARY 4, 1936

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m., in the Caucus Room, Senate Office Building, pursuant to adjournment, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), George, Bone, Pope, Vandenberg, and Barbour.

Also present: Stephen Raushenbush, secretary, and Lawrence Brown, financial assistant to committee, and Robert Wohlforth, assistant to the secretary.

TESTIMONY OF J. P. MORGAN, THOMAS W. LAMONT, AND GEORGE WHITNEY—Resumed

The Chairman. The committee will come to order. Mr. Leffingwell and Mr. Rathbone, the committee should like to have both of you on the stand also this morning.

Mr. Leffingwell. Mr. Rathbone is on his way up here now.

TESTIMONY OF R. C. LEFFINGWELL

UNITED STATES POLICY TOWARD PRE-EXISTING ALLIED INDEBTEDNESS [1]

(The witness was duly sworn by the chairman.)

The Chairman. Mr. Leffingwell, you have given the reporter your name?

Mr. Leffingwell. I have, Senator.

The Chairman. And your present address?

Mr. Leffingwell. 38 East Sixty-ninth Street, New York City.

The Chairman. The Chair regrets having to announce this morning the illness of Senator Clark, who was to have continued the examination. In his absence, Mr. Raushenbush will proceed.

Mr. Raushenbush. Mr. Chairman, as I gather the question that Senator Clark was interested in and wanted to talk with the witnesses about, it was that of the sequence of events that followed the absence of legislation prohibiting loans and credits during the war for the purchase of arms and munitions generally. We have gone into that in previous hearings up to about the date we entered the war, and, in fact, had a little discussion on some of the things that took place after we entered the war.

---

[1] For U. S. policy toward Russian private debt see "Exhibits Nos. 3284 through 3333", Hearings, Part XXX; also, "Exhibits Nos. 4020 through 4038", Hearings, Part XXXII; toward Italian, "Exhibits Nos. 4005 through 4019", Hearings, Part XXXII. See also "Exhibits Nos. 4135–A through 4172", Hearings, Part XXXII; and "Exhibit No. 4246", Hearing, Part XXXIII.

As I look over his notes, I see that he was interested particularly in finding out, if I interpret him correctly, whether the sequence of events which happened after we entered the war was inevitable, whether the things that were done then had to be done under the pressure of circumstances.

I will see what I can do with his brief.

Mr. Leffingwell, before we go further, will you be kind enough to state for the record your connection with the Treasury, the dates, and your connections later?

Mr. LEFFINGWELL. I entered the Treasury on the 8th of May 1917, as special counsel and assistant to the Secretary in connection with the Liberty Loans. I became Assistant Secretary of the Treasury at the end of October 1917 and remained Assistant Secretary until the end of June 1920.

I returned to the practice of the law in New York, which was my home, with my old firm, from which I had withdrawn when I entered the Treasury, and I became a partner in J. P. Morgan & Co. in July 1923.

Mr. RAUSHENBUSH. And have been so since?

Mr. LEFFINGWELL. And have been so ever since.

The CHAIRMAN. I see Mr. Rathbone has come in. Mr. Rathbone, will you be sworn?

TESTIMONY OF ALBERT RATHBONE

(The witness was duly sworn by the chairman.)

Mr. RAUSHENBUSH. Mr. Rathbone, will you be kind enough also to state for the record the time of your connection with the Treasury and your connections since then?

Mr. RATHBONE. I do not remember dates, and I will have to get out my memorandum, which I have here.

I started to work in the Treasury, as a member of the War Loan staff, on January 22, 1918. On September 4, 1918, I was appointed Assistant Secretary of the Treasury in charge of foreign loans.

On September 3, 1919, I was requested by President Wilson to go to Europe in the capacity of financial adviser to the Peace Mission.

On October 2, 1919, I sailed from New York for Paris. I was in Paris and London until June 5, 1920.

I resigned from participation in the deliberations of the Reparations Commission on April 1, 1920, and on June 30, 1920, I resigned as Assistant Secretary of the Treasury.

Mr. RAUSHENBUSH. I did not catch the last date.

Mr. RATHBONE. June 30, 1920, my resignation as Assistant Secretary of the Treasury was accepted, as of that date.

Mr. RAUSHENBUSH. What connections have you had since that date?

Mr. RATHBONE. Well, I tried to take a vacation, but I had to start the practice of law in August 1920, and on September 1, 1920, I became again a member of the old firm, legal firm, of which I had been a member when I came to Washington, although the name was then changed to Larkin, Rathbone & Perry. It had been, when I withdrew, Joline, Larkin & Rathbone.

Mr. **Raushenbush.** And you are still there, I take it?

Mr. **Rathbone.** I am.

Mr. **Raushenbush.** We find that there was a great amount of private indebtedness outstanding, private indebtedness of the various European belligerent countries, in this country, and I think I would like to enter those amounts as we have them here.

There was an Italian loan of $25,000,000. The British loans totaled $1,476,000,000.

Mr. **Lamont.** What date is it, Mr. Raushenbush?

Mr. **Raushenbush.** As of April 7, 1917. The British loans outstanding totaled $1,476,511,566.

Mr. **Lamont.** Do those include the joint Anglo-French obligations?

Mr. **Raushenbush.** It includes half of the Anglo-French, $250,000,000.

Then the French loans outstanding were $675,315,988, and the Russian loans outstanding were $86,000,000.

The **Chairman.** You are offering these summaries for the record, Mr. Raushenbush?

Mr. **Raushenbush.** I am offering these summaries for the record.

(The four documents referred to were marked "Exhibit No. 2776, Exhibit No. 2777, Exhibit No. 2778, and Exhibit 2779", and are included in the appendix on pp. 9205 and 9206.)

Mr. **Lamont.** Mr. Raushenbush, you speak of the French in general terms there?

Mr. **Raushenbush.** Yes, sir.

Mr. **Lamont.** Of course, you do not mean in every instance the loan was the obligation of the French Government, do you?

Mr. **Raushenbush.** No; it was not entirely so.

Mr. **Brown.** That included loans of which the proceeds went to the French Government, Mr. Lamont. It includes the Brown Bros. acceptances, the November 11 acceptance credit, and the French City loans.

Mr. **Lamont.** Yes; but I think it is of interest to note the differentiation there, as you have just brought it out, between those various classifications of loans, because they are not all French Government loans.

Mr. **Brown.** They are loans, the proceeds of which went to the French Government?

Mr. **Lamont.** Quite.

Mr. **Raushenbush.** There is no argument about that.

Mr. **Lamont.** I do not think so.

Senator **Vandenberg.** Are those all the loans relating to the war prior to our entry?

Mr. **Raushenbush.** Yes, sir.

The **Chairman.** What do they total?

Mr. **Raushenbush.** They total $2,262,827,544, excluding Canadian obligations. That includes the demand loan at that time.

Mr. Leffingwell, you, as I gather it, were not in the Treasury at the time the Liberty Loan Act was passed, were you?

Mr. **Leffingwell.** No. May 8; and the Liberty Loan was about April 28, was it not, or something like that?

Mr. **Brown.** The 26th, I believe.

Mr. **Leffingwell.** The 26th, was it?

Mr. **Raushenbush.** I want to enter the Liberty Loan Act and call attention to section 2, in which it states [reading from "Exhibit No. 2780"]:

> the Secretary of the Treasury, with the approval of the President, is hereby authorized, on behalf of the United States, to purchase, at par, from such foreign governments then engaged in war with the enemies of the United States, their obligations hereafter issued.

What did that mean? How did you interpret that?

Mr. **Leffingwell.** That meant exactly what it said. It was perfectly clear and explicit. We were to buy obligations issued after the execution of the Act, which was always done.

Mr. **Raushenbush.** But not any obligations issued before?

Mr. **Leffingwell.** Oh, no; we could not buy any obligations issued before, but we could buy obligations issued after, regardless of the fact that they were used by the governments for the purchase or payment of obligations issued before.

The **Chairman.** Was it the purpose and intent of the Act to prevent the Federal Treasury taking up any obligations that had been created prior to our entry into the war?

Mr. **Leffingwell.** No; it was not. It was made very clear in the course of the debates on the first Liberty Loan Act that it was the wish of many of the Members of Congress who participated in that debate that that should not be done, and that the Chairman of the Ways and Means Committee said he did not think it would be done, but he went on to say that it was necessary for the Congress to give authority to the President and the Secretary of the Treasury and the Allied Governments to do what they thought was best.

And it is quite clear to me, and always was, that while it was greatly desired that that should not be done, that the authority was left in the Treasury that it should be done.

Mr. **Rathbone.** Did not they say in the debate in the Congress that the money would be advanced to the Allied Governments, and they could use the money for such purposes as they saw fit?

Mr. **Leffingwell.** Yes. It was said by Mr. Kitchin, it was said by Mr. Mann, it was said by Mr. Mondell, and every one of those men said, and the whole course of the debate showed: "This is a thing we deplore, and we hope it won't happen, but we are fighting a great war, and this is the only contribution we can make to the winning of the war at the present moment because our armies cannot be effective for some time, and we must leave it to the Secretary of the Treasury and to the President and to the Allied Governments, whose obligations we purchase, to use the money as they think best."

That, at least, is the way I interpret the debate. It goes through pages and pages, as you doubtless know.

Mr. **Brown.** Then it was left, in effect, to be a matter of policy, although it was not made a matter of law, that the money was to be used in a certain way, and not in other ways, to pay off previous indebtedness, Mr. Leffingwell?

Mr. **Rathbone.** It was their money when we bought the obligations, not ours. We were not loaning copper to the British, so that they could pay back so many tons of copper at a different price, but we were loaning dollars, and the moment we bought the obligations of the British Government, the French Government, or any other government, the money that they got was their money. They could have used it for anything. While they told us what they were going to use it for, and while we asked them to account for it afterward, it was their money just as much as your money in your pocket is your own money, and you could do what you please with it.

Mr. **Brown**. But Mr. Leffingwell has indicated that there was a policy at least on the part of one section of the American Government, as to what use would be made of that money. No law, to be sure, but a matter of policy.

Mr. **Rathbone**. The moment we loaned them the money it was their $10,000,000. We could say, "We won't loan you another $10,000,000 because you have used this $10,000,000 in a way we do not like"; and we could say, "We will advance this $10,000,000 on our understanding that you are going to use it for this purpose." But the moment they got the $10,000,000, it was theirs and not ours.

Senator **Vandenberg**. It still is.

Mr. **Brown**. I do not think there is any question about it, but there were ways we did not like and ways we did like, and that differentiation was present from the very beginning; that there would be ways that this money should be spent in the United States, and then ways it could be spent which we would not like.

Mr. **Rathbone**. Surely; but it was theirs. We did not control their money.

Mr. **Brown**. There is no question about that.

Mr. **Leffingwell**. I think what Mr. Rathbone says is very clear and very important, and it is necessary to emphasize it, because while in one's dealings with a sovereign state, with a great nation associated with the United States in the war, one might have power to say what was desirable and what was to be avoided, but one could only go so far in enforcing one's judgment and one's wish. One could only do so partly because no Finance Minister, no Secretary of the Treasury, can afford to take the responsibility of determining in too arbitrary a fashion what a great and friendly nation associated with us in the war should do with the money, which is the proceeds of the purchase of its obligations by the United States, and also because the military decisions were so important.

But I think the thing which I wanted to make clear, as my opinion, Mr. Raushenbush, about the point involved here could be put before you in a way which would appeal to you, in a very few words, if I may pursue it.

Mr. **Raushenbush**. I want you to do that; but before you do it, could you say, for our clarification, that you agree with Mr. Rathbone in his general statement that there were really no checks on that money, as I interpret his statement?

Mr. **Rathbone**. I did not say that at all.

Mr. **Raushenbush**. I am sorry.

Mr. **Rathbone**. I did not say that at all. I said it was their money, but they reported to us the use they made of the money.

Mr. **Raushenbush**. You do not interpret that as saying that, roughly, there were no checks, once we turned the money over to them?

Mr. **Rathbone**. Not at all. There were many checks on the way they spent the money.

Mr. **Raushenbush.** I mean checks by the United States Treasury for doing this and not that.

Mr. **Rathbone.** You could not forbid them, when it was their money, but we could say that we wanted the money used in a certain way, and they reported to the Treasury the uses they made of the money and the uses they made of the money were considered and talked over with their representatives, if we did not like it, before we made another loan.

Mr. **Raushenbush.** I am trying hard to understand you, Mr. Rathbone.

Mr. **Rathbone.** I am trying hard to make it plain.

Mr. **Raushenbush.** As I understand it, you say that one could hold up, that is, the Treasury could hold up further later loans, perhaps, if it did not like the way the Allies had spent some money already loaned? Is that right?

Mr. **Rathbone.** That is true.

Mr. **Raushenbush.** To that extent, there was a check?

Mr. **Rathbone.** We had the authority to make or not make the loans.

Mr. **Raushenbush.** To that extent there was some kind of a check?

Mr. **Rathbone.** Some kind of a check.

Mr. **Leffingwell.** I want to see if I can make clear the thing in my mind about the understanding of Congress, which is a question that you first raised.

Mr. **Raushenbush.** Yes, sir.

Mr. **Leffingwell.** It is true that the Congress was clearly desirous that there should be some limitation, or some Members of the Congress were desirous that there should be some limitation in respect to the acquisition of preexisting debts of the Allied Governments, the amounts which you have been mentioning here.

They expressed that in the course of the debate, which was very, very protracted, and every time it came up, it came up in some one of several forms.

For instance, there was a question in the minds of some Members of Congress whether it might be possible that these Allied Governments would go out in the market and buy up bonds at a discount, rather than borrow the money from the United States. We know that was not done. That was one of the fears that was expressed, and that did not happen.

Another fear that was expressed was that some bankers would receive commissions on the loans made by the United States, and of course that did not happen.

The thing which did happen, and it is not quite clear that any Members of Congress had this particular point in their minds—it is not quite clear, but maybe they did—was, that when a maturity occurred, such as the maturity on February 1, 1918, or on September 1, 1918, of British obligations, and the Secretary of the Treasury ascertained that that maturity could not be dealt with except by an issue in our markets, on terms which he considered disadvantageous to the Allied cause and to the credit of Great Britain and to the success of the Liberty loans, it is not quite clear that they did not intend such a critical problem to be dealt with.

The passage about which I want to speak to you in these debates——

The CHAIRMAN. You say passage from debates. Were they debates in committee or on the floor?

Mr. LEFFINGWELL. In the Congress. All the debates in committee, Senator, except on the first Liberty Bond loan bill which preceded my connection with the Treasury, all of them were recorded except on the first, and that was in executive session, and there is no report of it, and I have never seen it, but there are evident references to it on the floor, and there are references to it on both sides of the House.

I want to remind you about Mr. Kitchin. He was one of those devoted men who did not believe in going to war. He voted against the war. He said it was his path of duty, and he would travel it barefooted and alone. But when, a few weeks later, the first Liberty bond bill was presented, he was chairman of the Ways and Means Committee and leader of the House, was he not, sir?

The CHAIRMAN. I think he was.

Mr. LEFFINGWELL. And he brought in a unanimous report from his Ways and Means Committee on the First Liberty bond bill, and he led the debate in the House.

This is only a paragraph which I would like so much to read you, if I may [reading]:[1]

> Mr. HAYES. The thought I had was this: There is nothing to prevent these foreign governments taking up these higher-rate bonds, bearing, some of them, 6-percent interest—

That is what he said—

> There is nothing to prevent these foreign governments from taking up these higher-rate bonds, bearing, some of them, 6-percent interest, and issuing in lieu these bonds or taking the money and retiring those bonds.

Then Mr. Kitchin states [reading]:

> Mr. KITCHIN. There is nothing specifically to prevent that, but I hardly conceive that it would be done. If we are going to lend this money to the governments that we are cooperating with, to more effectively prosecute this war, why not leave it to them to expend the proceeds in any way which their judgment tells them is the best way to achieve success in the prosecution of this war, and not limit or qualify the use of the money?

The Record says "Applause." That is what was done. The bill did not, as Mr. Hayes pointed out, limit the power to do it, and the committee hoped it would not be done, but it definitely passed the bill without that limitation on the power to do it.

That bill passed the House, as I remember it, without a dissenting vote, or with three or four dissenting votes. And the whole course of the debate shows that the Members of Congress, whether they had been for the war or against it, had consciously in their minds the thought that we were in this war and we had to win it, and we could not possibly permit ourselves to be in the position where we placed an insuperable obstacle in the way of financing it successfully. That is my opinion of the course of the debate.

The CHAIRMAN. Mr. Leffingwell, what is the date of this particular debate? Do you have the reference to it there?

---

[1] Entered later as "Exhibit No. 3017," appendix, p. 9433. See also infra, p. 8995 and 9145.

Mr. **Leffingwell.** Yes, sir; it is April 13, 1917, and it begins at page 626. The passage which I have been quoting from is at page 630.

The **Chairman.** Very well.

Mr. **Leffingwell.** This is just a copy from it, because the books are so big, but would you like to look at it? [Handing copy to chairman.]

Mr. **Raushenbush.** In that connection, Mr. Leffingwell, in the Treasury, did you interpret the debate as in any way vitiating the one phrase in the act itself, allowing the Treasury to take up foreign obligations hereafter issued?

Mr. **Leffingwell.** Oh, no. The debate also made it perfectly clear that the Members of Congress had pointed out, as they did in the course of the debate, that while the obligations which the Treasury purchased must be hereafter issued, they made it perfectly clear that, as the bill stood, and as it passed, the proceeds of the obligations hereafter issued might be applied to the purchase of obligations heretofore issued. It was perfectly clear from the debate, and it was perfectly clear in the law.

Mr. **Raushenbush.** In the law there is not anything about that particular point, is there?

Mr. **Leffingwell.** The clause which you have just read?

Mr. **Raushenbush.** I mean the point which you made, that there was nothing——

Mr. **Leffingwell.** I was expressing a legal opinion about the law.

Mr. **Raushenbush.** That was the Treasury's opinion about it?

Mr. **Leffingwell.** And Congress' opinion.

Mr. **Raushenbush.** The section which you read was not on that one point, was it? There would be other sections there?

Mr. **Leffingwell.** There are other sections.

Mr. **Raushenbush.** That law, then, as we understand it—and I want your check on this—did not in any way prevent credits from being used for purchases outside this country, or for the purchase of foreign exchange?

Mr. **Leffingwell.** No; but there was a good deal of debate and talk about those things, and there was a clear preference on the part of the Treasury to confine the use of the proceeds of the loan, so far as it was practicable, to purchases within the United States, and to limit the expenditure of the proceeds for the support of the exchange, as far as practicable.

That latter measure was attempted by steadily creating a procedure, a pressure for a procedure, which took off the foreign exchange the method of financing commodities and provided for their payment here in dollars. There was a gradual shifting of the machinery of finance so as to reduce the amount which appeared as exchange, and to enable the foreign governments to identify the uses to which their expenditures were put.

The very large part, I think, Mr. Raushenbush, of the exchange purchases represented purchases of cotton in the United States, because cotton is one of the commodities which it was most difficult to isolate and handle otherwise than in the course of the ordinary routine of business.

Mr. RAUSHENBUSH. Were you in the Treasury really ever able to find roughly how much the British were paying for exchange, and how much was for cotton purchases?

Mr. LEFFINGWELL. You can answer that better than I, Mr. Rathbone.

Mr. RAUSHENBUSH. We were able to find, as I remember it, no Treasury split between the two.

Mr. LEFFINGWELL. Cotton and foreign exchange were pretty well mixed.

You have the report of the purchases to which these advances were applied, which is attached to the Annual Report of the Secretary of the Treasury for 1920?

Mr. RAUSHENBUSH. Yes, sir.

Mr. LEFFINGWELL. That gives an immense amount of detail which was very carefully prepared, immediately after the close of the war period, and it shows exchange and cotton purchases lumped together.

Mr. RAUSHENBUSH. And it is pretty hard to split.

Mr. LEFFINGWELL. And very hard to split.

Mr. RATHBONE. This is rather interesting. I am reading from an article which was published in Foreign Affairs in April 1925.

Mr. RAUSHENBUSH. By whom, Mr. Rathbone?

Mr. RATHBONE. By myself. I do not want to take the entire credit for the article, because it was made up in collaboration with various members of the War Loan Staff and the Assistant Secretaries, trying to explain to the public generally the theories on which the Treasury worked during the war.

> From the period January 1 to November 30, 1918, the purchases of exchange and for cotton during that period fell to about $296,000,000. During the same period the American exports of cotton to Great Britain, as shown by trade returns, amounted to about $290,000,000.

That is some indication, at least for that period, as to the proportion of the purchases of cotton which were taken care of through the exchange; that is, $290,000,000 out of $296,000,000. And the cotton purchases undoubtedly accounted for a very large portion of the advances which we made to Great Britain and which were used to peg the British exchange.

Mr. LEFFINGWELL. Mr. Chairman, Mr. Rathbone is very modest. May I offer the suggestion that his article on the foreign loans be submitted for the record? It was written in 1925, and by the man who was in charge of the Foreign Loan Bureau for so important a period, and it gives much the clearest exposition of the principles governing our foreign loans, and I am sure it would be useful to the committee.

The CHAIRMAN. I see no objection to its being received.

(The documents referred to were marked "Exhibits Nos. 2780 and 2781" and are included in the appendix on pp. 9206 and 9207.)

Mr. RATHBONE. I have made some notes on this copy, so that I can refer to it.

The CHAIRMAN. Do you have another copy?

Mr. RATHBONE. I have two other copies.

The CHAIRMAN. Let the copy be received for the record and properly identified.

Mr. RAUSHENBUSH. Mr. Leffingwell, as I remember those debates in Congress, there was a general impression given also, in addition to that which you have mentioned, that the Liberty Loan money would not be used, as I think some of the speakers on the floor used the phrase, "to bail out the bankers", or "bail out the foreign governments" that had been borrowing here. That was also a correct impression, was it not?

Mr. LEFFINGWELL. That is what I was trying to convey.

Mr. RAUSHENBUSH. That was in the debate.

Mr. LEFFINGWELL. That was constantly in the debate on the floor, and every time it came up about the same answer was given by the Chairman of the Ways and Means Committee and by the leaders on both sides of the House: "We hope that won't be done; we do not want it done, but we must leave it to the Secretary and the President to decide." And it was left, according to the terms of the bill unamended, and that is a fact, with full power to deal with the problems.

The CHAIRMAN. In running through the excerpts of the debate of that day, which you have passed up to the committee, I find a great deal of fear expressed by individual Members that these loans might be converted to the settlement of old obligations and the salvaging of credit for bankers who had privately invested, largely with the nations at war. So that there was that fear in that day. I notice Mr. Kitchin shared that fear to some extent, but yet was willing, as all were willing in that hour, to not jeopardize our chance of being really useful in helping win the war.

Mr. LEFFINGWELL. You have helped me, and that is exactly what I wanted to make perfectly clear, that this was a point which was very vigorously debated for several days, and the earnest criticism was made that something ought not to be done about these preexisting loans and that it was which led the Secretary of the Treasury to take the very restricted and limited action he did take with respect to these loans when they presented themselves in an acute form.

I do not want to anticipate your discussion of them, but it was that sense of hesitation and the wish to avoid it just as much as possible that led him to refuse point blank to pay off the demand loan, and led him to require their subrogation in respect to the securities for the two British loans.

Senator VANDENBERG. Would it be fair to sum up the whole thing, Mr. Leffingwell, by saying that it was the desire and the intention and the purpose of Congress and the Treasury that the proceeds of these new loans, Liberty Loans, should not be used to fund existing obligations unless you found yourself in the clash of irresistible circumstances which required it as a war measure?

Mr. LEFFINGWELL. I think that is a precisely correct statement of it, and then under such limitations as seemed the most practicable.

Mr. RAUSHENBUSH. And that was specifically——

Mr. LEFFINGWELL. One other thought which I would like to develop, if I may, Mr. Raushenbush, in your minds, because I think that this little preliminary exposition of the principles may help in the discussion of the details as we come to them.

We have spoken of the use of the proceeds of these loans for the purchase of obligations that were pre-existing, but the use of the proceeds of these loans is a term which might be itself too loosely accepted.

In the course of the war we became not merely obligated to provide dollars for the dollar requirements of the Allies, but the Allies became obligated to provide francs and pounds for the franc and pound expenditures of the United States. Roughly, I think the United States was obliged to acquire $1,000,000,000 worth of francs for the support of its armies in France. Roughly, we were obliged to acquire from Great Britain $450,000,000 worth of pounds for the use of our armies abroad.

Now, just to complete the parliamentary record, when the war was just over, and the Treasury applied to the Ways and Means Committee for a further grant of power, both with respect to borrowing and lending, the Chairman of the Ways and Means Committee, Mr. Kitchin, said, "How much has been lent? How much has been used of the proceeds of your loans to meet maturities?" And the answer was about $400,000,000. That was the figure at the end of the year just preceding.

In other words, the Chairman of the Ways and Means Committee said, "How much has gone for that?"—not—"Of course, you have not spent any money for this"—but "How much has gone for this?"

Mr. Rathbone, Mr. May, and I answered in a series of answers that it was not quite fair to say that $400,000,000 had been used for the payment of these maturities, because at that date the Allies had accounted for expenditures greatly in excess of the amount of our loans, and they had been possessed of the dollar equivalent of these francs and pounds, which was not in any sense the proceeds of our loans.

So that you cannot isolate the proceeds of the loans and say, "This much, of every dollar of the proceeds of the loans, went to pay off those maturities."

In another sense, you might very well say that only the dollars that were the proceeds of the francs and pounds they provided for us for the use of our Armies abroad went to pay those loans, or it would have been that way except for the fact that Mr. Rathbone kept such a close check on their expenditures here, and their bank balances here, that they never could accumulate balances big enough in this country to meet such an important maturity. Is that correct?

Mr. RATHBONE. That is correct. We did not allow them to put in a separate account the dollars which we paid, for example, for francs. That would build up a great big bank balance and required us to keep making additional advances of money to them. We said to the French, as an illustration, "You spend those dollars which you have a right to use to pay off your maturities, and then when the time comes that your maturities have got to be paid, we will advance you enough money to pay them, within certain limits."

Mr. RAUSHENBUSH. When was that understood, Mr. Rathbone—this thing which you have just stated—that you told the Allies that when their maturities came due they would be repaid?

Mr. RATHBONE. No such arrangement was ever entered into with the British. It was entered into with the French.

Mr. RAUSHENBUSH. As of what date? Do you know?

Mr. RATHBONE. I have a memorandum here which covers all that. I will be glad to read it.

Mr. Raushenbush. Could you just give me that date offhand? We are going to get into a good many details of this later.

Mr. Rathbone. March 1918.

Mr. Brown. Mr. Rathbone, there is only one point on which I want to get the record clear. When the French and the British required dollars in this market, they got them on loan. When the United States required francs and pounds, those were not offset against the loans, were they, but they were bought with new cash advances?

Mr. Rathbone. That is true; but, of course, they did reduce the amount that we would otherwise have loaned because if France, taking France again as an example, had $50,000,000, say, here, that they had received from us for the purchase of francs, which we required for our Army expenditures in France, we would not loan them another $50,000,000 until they had spent that $50,000,000. So that, in effect, it did reduce the amount of our loans.

Mr. Brown. Yet, if we were to follow the offset theory, we could say that the funds with which we purchased francs could have been applied to two kinds of indebtedness. One, the indebtedness to the Treasury, and the other the indebtedness to the bondholders. It was applied to the indebtedness of the bondholders and not to the indebtedness of the Treasury?

Mr. Rathbone. You could say that, but there were two parties that had to be consulted. One was France. France did not have to say that the French Government would give us francs for our dollars. They could have said, and suggested several times, that we buy our francs over the exchange, that we make the agreement with the Bank of France. Was not that also suggested?

France had to be consulted. We had to get those francs. We had to support our Army over there, and toward the end of the war there were one or two million men over there who had to be taken care of. So that we had to reach an agreement with them.

France maintained, with a good deal of force, that the dollars which we gave them for the francs—we did not borrow the francs from them but bought them, and they had the dollars, and they could use them for any purpose they pleased. And in the summer of 1918, when the Allied cause did not look any too good and the Germans were advancing on Paris, they made a proposition, embodied in a letter from Monsieur Clemenceau to the Secretary of the Treasury, that that money should be put aside, that it should remain the property of France. As it was the property of France, that is, the dollars which they got from selling us something, then they could use it for any purpose they pleased, either during the war or after the war.

Mr. Raushenbush. Mr. Leffingwell, coming back to your statement about the firm attitude the Treasury took toward the matter of not advancing United States Treasury money for paying off the overdrafts and the like was not that backed up also by the fact that the then Secretary of the Treasury had gone before the Ways and Means Committee and definitely said: "Here, we are not going to use it for this, that, and the other"?

Mr. Leffingwell. I have already said that I was not in the Treasury at that time, and just what was in the Secretary's mind about the conversation with the Ways and Means Committee in executive session, there is no record of it whatever. The only record of it is in the debates on the floor of the House, in the course of which it is apparent that this question had been discussed, and I take it that the only record that exists today of it anywhere is that contained in the report in the Congressional Record of debate on the first Liberty Loan bill.

Mr. RAUSHENBUSH. Mr. Lamont, did you not get the impression, that is, in conversations down at the Treasury, that those pledges, if you will, had been made very clearly? We find in your exhibits, volume III, page 1379, a memorandum dated July 30, 1917.

Mr. LAMONT. Yes, sir.

Mr. RAUSHENBUSH. In which there is a paragraph, and you are apparently asking the Treasury to pay off your demand loan.

Paragraph B reads:

> Even if the Treasury had spare cash on hand, which it didn't, it would prove very awkward to turn over money for this particular purpose, because McAdoo, in appearing before the Senate and House Committees originally, in connection with the legislation for the $3,000,000,000 loan to the Allies, had assured them that any part of this sum to be advanced would be for fresh purposes and not to take up existing obligations. He may have made a mistake, but that was over the dam now. He wanted to have us appreciate his viewpoint and try not to force him to undertake a step which would be awkward for him.

Mr. LAMONT. Mr. Raushenbush, with your permission, I think it would be well to introduce into the record that entire memorandum of mine covering the paraphrase of my conversation with Secretary McAdoo at that time, July 30, 1917.[1]

Mr. RAUSHENBUSH. I do not have it in front of me. I would be glad to have you read it.

Mr. BROWN. We will come to that whole memorandum later.

Mr. LAMONT. That may be, Mr. Brown, but inasmuch as Mr. Raushenbush has been good enough to allude to it, I think this might be a very appropriate time to read it in, because just reading one phrase out of it does not give the whole picture.

Mr. RAUSHENBUSH. I was not particularly interested in getting the whole picture as regards the demand loan for the moment, because we will get into that, but I was interested in Mr. Leffingwell's remark that he thought there had been no record made on it, and you, in that paragraph, did seem to be making a record on it.

Mr. LAMONT. Certainly. I may say here, that when I tried to get the Secretary of the Treasury to consider taking up the British demand loan, that is, action taken by the American Treasury, he answered that it might be awkward for him because of what he believed he had stated to Members of Congress. That is all.

Mr. LEFFINGWELL. Mr. Raushenbush, perhaps I have misled you. Undoubtedly the Secretary felt that there was a parliamentary commitment, but the nature of the parliamentary commitment I was trying to explain by reference to debates on the floor of the House, which is the only record that the Treasury had or ever has been able to find of that matter.

I do not think there is any real difference between us except the thing actually done was to confer upon the Treasury this power, with the old expression of the hope that it would not be exercised in regard to foreign loans. And I think, as Senator Vandenberg said, what it really amounted to was it was highly desirable to avoid taking up these maturities, and it would not be done unless an emergency arose which seemed to make it impossible to avoid it.

---

[1] Entered later as "Exhibit No. 2824", see infra, p. 9027.

I think that is the practical interpretation which was given to the parliamentary commitment, both by the Secretary and by Congress and by the Ways and Means Committee.

Mr. RAUSHENBUSH. And the Treasury, as we gather from correspondence between the assistants there, thought, as you say, that was a parliamentary pledge, not only with regard to the paying off of previously incurred indebtedness, but also in regard to our financing the purchases of the Allies outside of this country. Is not that correct?

Mr. LEFFINGWELL. There was unquestionably a strong desire to avoid financing purchases outside the United States, and what was done in that regard is just explained, I think, as carefully and accurately as any part of the war history in Mr. Rathbone's article, of which we have found a copy and put it into the record.

The principles which governed it were expounded by him, and in a way that is as precise as can be. But that was the objective, and every measure that we adopted was directed toward limiting to the utmost the loans for the purpose of purchases outside the United States. However, the burden of financing the inter-Allied purchases outside the United States did ultimately fall on the Governments of the United States and Great Britain, which shared that effort in accordance with formulas which were worked out between them.

Mr. RAUSHENBUSH. Yes. We find here a memorandum later on, signed by Norman Davis, referring to this appearance before the Ways and Means Committee at the time of the passage of the First Liberty Loan Act, covering that, so that I thought that was pretty well understood in the Treasury.

You see, Mr. Leffingwell, what is of interest here, and you perhaps answered it in your reply to Senator Vandenberg, is that a chain of circumstances got started, financial circumstances in this case, and then it gets impossible for any single set of individuals to withstand the thing, once the winning of the war is at stake. That is true, is it not?

Mr. LEFFINGWELL. I think that is not quite the way I should put it, if you turned yourself back. We have been here with you for 2 weeks thinking about the events which led up to the war.

I am asking you to look at these events from the eyes of a man who suddenly found himself commandeered to see how in thunder you can win the war.

Mr. RAUSHENBUSH. Surely.

Mr. LEFFINGWELL. The whole scene changes. It is not a question of standing up against something; it is a question of making your financial policies such as conduce most effectively to the prompt winning of the war, to shortening its duration, to bringing every dollar and every commodity to the service of the men whose lives are at stake on the front.

From that moment, why, your whole problem changes, and you concentrate on the most effective thing to shorten the interallied effort.

Mr. **Raushenbush.** Yes; and this has no academic interest at all. The reason we are going into this is under the head of review. Here was a nation, and as to governing the traffic in arms at that time and at present, it had no provisions in it stopping in any way the whole movement of loans and credits.

So that we have a possibility that in case we ever get into war again, the same sort of circumstances, both before and after we got into the war would take place. And the questions here directed are toward that end. After we got into the war, did we not have to do exactly what you said: Not in any way, even though we had pledged ourselves not to do this, that, and the other, to do anything to impede things and to prevent carrying out the objective, the winning of the war?

So that if that is true, and if you keep on answering that the way you have to Senator Vandenberg and otherwise here, we can see the way open to what would happen in the next war.

Mr. **Rathbone.** I do not think we did anything that was contrary to the pledge that was made by and on behalf of the Treasury.

Mr. **Raushenbush.** The pledge here referred to by Mr. Davis that the Ways and Means Committee had been informed that it was intended the loans authorized to be made to foreign governments would be made only for the purpose of enabling them to make purchases in the United States and not for purchases elsewhere, or for commitments in the United States incurred before our entrance into the war.

Actually, money was paid out for both those purposes, was it not?

Mr. **Rathbone.** Money was paid out. It is hard to say whether it was paid out from the American loans or from the dollars that belonged to the belligerent nations.

Mr. **Raushenbush.** It did not come from the Treasury?

Mr. **Rathbone.** It did not come from the Treasury. Of course, you are reading a memorandum, Mr. Raushenbush, to whom?

Mr. **Raushenbush.** To the Secretary.

Mr. **Rathbone.** They were informal memoranda. They were not supposed to be anything but interoffice communications.

Mr. **Raushenbush.** We will have more of them as we go on.

Mr. **Rathbone.** They are all that way.

Mr. **Leffingwell.** Let me explain it, because I do not think you have quite what is in our minds.

Here was, at least to my mind, the fact that the Secretary had been before the Ways and Means Committee in an executive session. Out of that executive session emerged a perfectly clear and explicit draft of a bill. That bill was conducted through the House by the same Ways and Means Committee. What was the nature of this commitment? An explanation was clearly stated on the floor of the House. When that was all done, the bill was passed, and they left the hands of the Secretary of the Treasury free in this regard, with the approval of the President, and left the hands of the Allies free consciously.

However anxious the Secretary was to carry out the wish as distinguished from the crystallization of the program in the law, the fact remained that the law must be his guiding star, and not some memorandum that anybody wrote about what he had hoped he would be able to accomplish when he laid the bill first before the House.

It was fully explained and fully debated. The whole nature of the problem was explained, and the leaders of the House and the Chairman of the Ways and Means Committee repeatedly, time and time again, said, "We must not tie his hands. We hope this will not be done. We must not tie his hands", and his hands were not tied. The bill was passed practically unanimously.

Mr. RAUSHENBUSH. The point is of some interest, not too much, but you, yourself, I believe, Mr. Leffingwell, in a memorandum I have here for the Secretary, pointed out that the circumstances, this pressure of having to finance the Allies in everything they apparently incurred for the war, whatever it was, these circumstances had piled up so that you were suggesting to him that when he went before Congress in connection with the new bond bill—let me read that paragraph [reading from "Exhibit No. 2782"]:

> I am disposed to suggest that when you go before Congress in connection with the new bond bill you should make a brief statement of the change in the situation which has developed since the first bond bill, which has made it necessary for us to do two things not then contemplated; first, to provide a certain amount of finance outside the United States; and, second, to meet the maturities of the Allied Governments on obligations in the United States incurred before the United States entered the war. I am confident that the change in the war situation, our own increasing activity, and the great enthusiasm of the people will make this easy to do, and, the parliamentary pledges once out of the way, we would be free to deal with the situation as it arises from time to time.

That seems, by the way, in passing, to be something of an answer to Mr. Rathbone's remark that perhaps those two things were done. You seem to state clearly that they had to be done and were done. Is not that correct?

Mr. LEFFINGWELL. I am not quite sure what you mean by what had to be done and were done.

Mr. RAUSHENBUSH. The things you wanted the Secretary to tell Congress now should not be in the next bond bill, because they could not stand out against doing them, first, to provide a certain amount of finance outside of the United States, and, second, to meet the maturities of the Allied Governments on obligations in the United States incurred before the United States entered the war.

So, Mr. Rathbone and Mr. Leffingwell, in this memorandum you seem to think there was not much question that we had been forced to do those things, that that money question you raised was not the important one.

(The document referred to was marked "Exhibit No. 2782" and included in the appendix on p. 9221.)

Mr. RATHBONE. I think that memorandum of Mr. Leffingwell was not suggesting to the Secretary that he get any additional authority, because he had the authority, but to make it plain to the Ways and Means Committee that the exigencies of the war had required in the first place the United States to some extent to finance neutral purchases, and also to some extent to advance money to take up maturities.

The CHAIRMAN. And at once was also an acknowledgment that there was a parliamentary situation that was at least a little bit embarrassing, that ought to be removed.

Mr. Rathbone. I think Mr. Leffingwell fully answered that when he said that whatever parliamentary pledge was made to the Ways and Means Committee it was not put in the bill, the debate which Mr. Leffingwell has read showed that the Congress understood that the Secretary of the Treasury was not limited in those respects.

Mr. Leffingwell. And as to the suggestion that the matter be explained to the Ways and Means Commitee, of course the Secretary, like all Cabinet ministers in those days, maintained with the Chairman of the Ways and Means Committee, frequent and continuous communication. I looked over the record and I find that at any rate 6 months or so later in connection with the Victory Loan bill, which I have spoken of before, these points were brought out fully, and as I explained, Mr. Kitchin said:[1]

> Some of the committee, and I am among the number, would like to know, if you can tell us, how much of the loans we have made to the Allies (and we have made about $8,000,000,000 in round numbers) was used by the Allies to pay their bonds, notes, or indebtedness to others than the United States.

That shows that the suggestion which I made in the memorandum you have just read, Mr. Raushenbush, was in some manner carried out, and that the Chairman of the Ways and Means Committee was aware and the committee were aware that these loans were being paid to some extent out of the proceeds of our loans.

Then Mr. Rathbone, Mr. May, and I explained that the amount was $394,000,000 on December 31, at the end of the year, but that as of December 31 our net loans were $7,685,000,000-odd. This is Mr. Rathbone:[2]

> And they had accounted to us, for expenditures out of our loans and out of their other resources, for $9,200,000,000.

Then Mr. May said:

> That is $1,600,000,000 more than the loans we have made.

On that explanation the committee was satisfied and introduced the Victory Liberty Loan bill, which ratified the lending power, and somewhat extended it, to finance purchases. Furthermore, it is evidence of confidence in the Secretary of the Treasury and in the conduct of this affair by the Treasury of the United States, and it shows that there was complete acquiescence by the Ways and Means Committee in the course which the Treasury had adopted.

Mr. Raushenbush. Mr. Lamont, did you have the same impression, that there was no new legislation needed there to make it possible for the Treasury to freely repay part of the private indebtedness that had been incurred before our entry into the war?

Mr. Lamont. Just say that again, will you, Mr. Raushenbush?

Mr. Raushenbush. Will you read it, Mr. Reporter?

(Question read.)

Mr. Lamont. I see that in the record here there is some allusion on October 2, 1917, in a letter that I wrote to Lord Reading about "The fresh legislation spoken of under this paragraph has now been accomplished." I do not recall the circumstances at all.

Senator Barbour. Why do you use the word "freely", Mr. Raushenbush, because it seems to me the whole burden of the argument was that it was not that, that there was a necessity, that where there might be occasion it would be permitted.

---

[1] Entered later as "Exhibit No. 3017", see appendix, p. 9433. See also infra, p. 9145.
[2] Ibid.

You may have a reason for it. I do not mean just to pick on a word.

Mr. RAUSHENBUSH. The answer is largely in the very paragraph Mr. Lamont was reading, out of the memorandum to Lord Reading, which reads, Senator, as follows [reading from "Exhibit No. 2783"]:

> The fresh legislation spoken of under this paragraph has now been accomplished, and there is no awkwardness in lending to Great Britain and to the other Allies for any purpose, past, present, or future.

So I was trying to get at this, that he thought there had been awkwardness, and now it was a matter of being able to lend freely. The only point in this, as I get it, Senator, is that the financial matters that had been started before we got into the war immediately got tied up, once we entered the war, with all our own interests and our own Liberty Loan financing and the like—we will go into that in some detail a little later—and all the expressions of what it would be good to do and what it would not be good to do, and just could not withstand the pressure of our own war financing.

So the Treasury was very firm about a lot of these things and wanted to stand out against paying off this demand loan and paying off private indebtedness of various kinds of the Allied Governments.

The CHAIRMAN. And the Treasury did stand off for a long time.

Mr. RAUSHENBUSH. Yes; for a long time.

It is simply this chain of circumstances that had gotten started long before that perhaps in the end made it impossible for us to do anything in any way different than what was done. So here is just one letter, where we go from limitations on paying off private indebtedness to doing it freely.

Mr. LEFFINGWELL. It is not really a chain of circumstances. It is one perfectly simple thing, that is, that the Government of the United States began to finance the war itself and closed the market to every other operation.

Increasingly its barriers were raised because it became necessary in order to float a $2,000,000,000 loan, then a $3,000,000,000 loan, then a $4,000,000,000 loan, to create a capital issues committee and to close the capital market to every other nation whatsoever.

Mr. RAUSHENBUSH. The thing that is interesting in connection with that is that all the way through the Secretary of State and some of the assistants did not think so. We will get into that later. But they constantly, if you remember, kept urging the British and the bankers not just to throw their burdens on the Lord, as it were, I mean, throw the burdens on the Treasury and rest easy, but to get busy and do some refunding. That was running all the way through. So that statement you just made with such positiveness, that it was just the closing of the capital market that changed everything, ought to be examined a little more closely, I think, as these things come along.

Mr. LEFFINGWELL. I think what you are speaking of goes to confirm what I said, because what the Treasury did in each instance was to make the most careful and painstaking inquiry about what would be the terms on which financing could be done, and in each case it found that the actual fact was that the preemption of the capital market by Treasury issues had created a situation in which the private financing of the maturity of these loans could be done only on terms so disadvantageous to the credit of the Allied countries and so disadvantageous to our own bond market, that the Treasury could not tolerate it.

Mr. BROWN. Just on the question of the complete closure of the market, it was possible to keep a large number of British Treasury bills afloat, and it was possible to have a small number of French Treasury bills.

Mr. LEFFINGWELL. There was a practically complete closure of the market for public issues, and the Treasury was able to make it possible to maintain a moderate amount of Treasury bills in the hands of banking institutions, but the practical result was that during that war period public issues were nonexistent, except those that were passed for essential war purposes by the Capital Issues Committee, and got sort of a special status in that connection.

Mr. RAUSHENBUSH. In that very connection, Mr. Leffingwell and Mr. Rathbone, did you people in the Treasury see any connection between the amounts we were advancing to the Allies and the territorial aims of the Allied Powers?

Mr. RATHBONE. Before you leave this memorandum that you referred to, I just want to say that of course the Treasury did not have any knowledge of what Messrs. Morgan & Co. advised Lord Reading as to the effect of legislation, and did not care what Messrs. Morgan & Co. advised Lord Reading as to the effect of legislation.

We knew a great deal more about it than either J. P. Morgan & Co. or Lord Reading.

(The document referred to was marked "Exhibit No. 2783" and is included in the appendix on p. 9221.)

Mr. RAUSHENBUSH. That is nice. The question was, however, addressed to Mr. Lamont as to what he remembered about that.

Mr. LAMONT. You see, Mr. Raushenbush, I used in that memorandum to Lord Reading exactly the same phrase that I used in my talk with Mr. McAdoo a few months previously. I just referred to the awkwardness; that was all. When he talks about "fresh legislation", I do not know what further legislation, if any, had been passed. I did not follow that. I do not remember that. Am I right? You are talking about the pressure that seemed to be exerted all the time. Did I not understand Mr. Leffingwell to say a moment ago that of the 7 or 8 billion dollars advanced to the Allies, only 3 or 4 hundred million were actually used to take up preexisting obligations?

Mr. LEFFINGWELL. That was the amount here at the end of December 1918. In the end it amounted to about $638,000,000.

Mr. LAMONT. Of course, the actual specified amounts involved were not very considerable compared to the total, were they?

Mr. RAUSHENBUSH. The total at that time was not so large, either.

Mr. LAMONT. Yes; $7,000,000,000, Mr. Leffingwell said.

Mr. RAUSHENBUSH. That was at the end of the war.

Mr. LAMONT. No; that was in 1918.

Mr. RAUSHENBUSH. That was in 1918, toward the end of the war.

Mr. LAMONT. It ran up to $10,000,000,000 later, as we all know.

Mr. RAUSHENBUSH. We are still in the summer of 1917.

SUPPORT OF ALLIED WAR AIMS THROUGH UNITED STATES ADVANCES

Mr. **Raushenbush.** Coming back to the question before Mr. Rathbone made his remarks, could you answer that, either of you gentlemen? The question was whether you gentlemen in the Treasury saw at that time any connection between all this financing we were doing for the Allies and the war aims of the Allies and their territorial desires at the time.

Mr. **Leffingwell.** When you speak of at that time——

Mr. **Raushenbush.** This was in early 1917, after we had gotten in.

Mr. **Leffingwell.** I do not remember that I had anything to do with foreign lending in the summer of 1917, and I remember that Mr. Rathbone was not in the Treasury then. I do not suppose at that time we had formed any opinion, so far as I can remember.

You remember in answer to your first question, Mr. Raushenbush, I mentioned that I was counsel in connection with the Liberty Loans at that time, and while I was very familiar with what was going on in the Treasury, I am pretty sure that I was so busy working on Liberty Loan circulars and one thing and another that I did not have time to apply my thought to any problem so much the problem of the Foreign Office and so little the problem of the Treasury as the territorial aims of the Allies.

Now, when it came along later on, it may possibly be that I began to think about those things. Correct me, Mr. Rathbone.

Mr. **Rathbone.** I do not think we did. The Treasury was there to make loans for the purpose of trying to win the war. The war was very far from won until pretty late in 1918. I do not believe we knew the territorial ambitions of the Allies, and I do not think it was any of our business. Is that right?

Mr. **Leffingwell.** That is correct.

Mr. **Raushenbush.** Do you see now any connection between financing a war that has large territorial ambitions on the part of the people you are financing and a war which does not have that? It takes less to finance the latter, does it not?

Mr. **Rathbone.** I do not think that I am an expert to give views on questions of that sort. I am here to tell you about the Treasury financing.

Mr. **Raushenbush.** We thought it was pertinent. You do not see any connection there?

Mr. **Rathbone.** We were practically told by Congress to make loans to the Allies to win the war. It was up to Congress and the foreign offices to determine whether we wanted to go in the war or whether we looked with favor or disfavor on the ambitions of the Allied Governments.

And it was very uncertain at that time whether we were going to win the war or not.

Mr. **Raushenbush.** The Secretary of the Treasury was interested in the matter, apparently, and I wondered what other information you could give us.

In a dispatch to the American Ambassador at London on June 30, 1917, he said [reading]:

> I have the honor to request that you be good enough to indicate to me—

* * * * * * *

(9) In the same connection it would be desirable to know whether any territorial determinations or engagements of any kind have been entered into, with the understanding that they should be put in effect in case military successes of those engaged in war against Germany would permit, and, if so, what are such engagements?

The document referred to was marked "Exhibit No. 2784" and is included in the appendix on p. 9222.)

Mr. RAUSHENBUSH. So, while this comes from the Treasury, you do not say that you were not consulted in these matters?

Mr. LEFFINGWELL. I do not remember it.

Mr. RATHBONE. We were not there.

Mr. LEFFINGWELL. I was there but you were not; but I do not remember it, Mr. Raushenbush.

Did you ask Mr. Crosby about that, because, as you know, he was the assistant secretary at that time.

Mr. RAUSHENBUSH. Yes; we did, but I cannot testify as to what he told us. It was very interesting.

Then the Secretary of the Treasury, Mr. McAdoo, wrote the President on July 17, 1917, in a way that seems to contradict somewhat as to what you were saying, Mr. Rathbone, that the Treasury was not interested in these matters:

DEAR MR. PRESIDENT: I hand you herewith tentative draft of a letter which, in my judgment, should be written now to all of the Governments borrowing money from the United States. This is intended to convey to you the idea I have in mind and is not to be taken as the final form in which I think the letter should go. As it attempts to define a general policy of our Government, I would not, of course, think of sending it until it has your approval. Will you be good enough to revise the letter to suit your own views, if you think it should be sent, and return it to me at your earliest convenience? It seems to me of very great importance to put ourselves on record as outlined generally in this letter.

Cordially yours,

(The document referred to was marked "Exhibit No. 2785" and appears in full in the text.)

Mr. RAUSHENBUSH. Then enclosed with the letter to the President was a [reading heading of "Exhibit No. 2786"]—

Draft of letter suggested to be sent by the Secretary of the Treasury to representatives of the various powers with whom he deals in making loans under the act of Congress approved April 24, 1917.

Anything you would care to comment on this would be gladly accepted.

Mr. RATHBONE. The only comment I would make is that the Secretary of the Treasury was a member of the Cabinet. The Cabinet of the Government of the United States, of course, was interested in matters of that character. He did that more as a Cabinet official, I should think, than as Secretary of the Treasury. The Treasury, as I said before, was interested in making loans to win the war. The Treasury itself—and by that I mean the operations of the Treasury in regard to the lending and the borrowing of the money—was not concerned with the ambitions of the Allied Governments. The Cabinet; yes.

Mr. RAUSHENBUSH. You are drawing a very interesting line between the Treasury as the Treasury and the Treasury head as a Cabinet member. We gather from this that Secretary McAdoo was very interested in winning the peace. You have said that the Treasury, as such, was interested in winning the war. If you will let us go on we will see a difference.

Mr. **Leffingwell.** Do you want to read this memorandum?

Mr. **Raushenbush.** I want to read it if I can get to it. I have read the heading [reading "Exhibit No. 2786"]:

> In view of the widely diversified uses to which, directly and indirectly, the moneys loaned to your Government by the United States Government may be put in the existing war against Germany, it seems desirable to point out the fact that the rendering of financial assistance to your Government under the provisions of the act of Congress approved April 24, 1917, should not be construed as an approval or disapproval by the United States Government of any particular national objectives which your Government may have in view, or which in the future may be claimed by it as having been gained by successful military operations. In exercising the discretion reposed in me by the act of Congress above mentioned, the President desires that I should be guided by the principle that sums lent shall be used, as far as possible to the defeat of the German arms and to the accomplishment of such aims as this Government may have announced or may later announce in regard to its participation in the war against Germany. This statement is, on the other hand, not to be construed as in any way trammelling your Government in conducting its military operations; it is intended to free the loan transactions from any suggestion of the acceptance or rejection on the part of the United States of aims which have not been discussed and approved by it.

(The document referred to was marked "Exhibit No. 2876" and appears in full in the text.)

Mr. **Leffingwell.** What was done with the memorandum?

Mr. **Raushenbush.** I will go right ahead with that.

The **Chairman.** What was the date of the memorandum?

Mr. **Raushenbush.** That was sent with the letter of July 17, 1917, to the President.

Mr. **Leffingwell.** In other words, it is a letter to the President, which rather fits with what Mr. Rathbone was saying: It is a discussion between the head of the Treasury and the head of the Government, so far.

Mr. **Raushenbush.** Then on August 11, 1917, there is a reply from Mr. Frank L. Polk, Counselor for the Department of State, to Mr. McAdoo [reading "Exhibit No. 2787"]:

> **My Dear Mr. McAdoo:** I have discussed the attached draft letter with the Secretary and he feels very strongly it would be a mistake to send anything to our associates in this war at this time. He quite sees your point, but feels if we say anything we may raise awkward questions of policy and it would be better not to have anything on record or have any discussion on the subject at this time.
>
> I return the letter, as perhaps you may care to discuss the matter with him.
>
> Yours sincerely,

(The document referred to was marked "Exhibit No. 2787" and appears in full in the text.)

Mr. **Leffingwell.** That is further confirmation of Mr. Rathbone's comment that this was a discussion between a Cabinet member and the President.

The **Chairman.** Let us get this clear:

Are you trying to make the point that Mr. McAdoo was not representing the Treasury in these transactions or in these memoranda?

Mr. **Rathbone.** In which transactions?

The **Chairman.** These memoranda that we have been reading here. Is it your point that Mr. McAdoo was not speaking for the Treasury?

Mr. **Rathbone.** He was speaking, of course, as Secretary of the Treasury and a member of the Cabinet.

Mr. **Raushenbush.** We are not interested simply in the mechanism of the Treasury. The larger question is how you use the Treasury to accomplish or not accomplish certain aims of either keeping the country stable or winning the war or winning the peace.

Mr. **Leffingwell.** Mr. Raushenbush, I want to help just as much as I can, but we are a little weak on this. You understand Mr. Rathbone was not there. So far as I can recall, it was outside my province at that time to have anything to do with what were the policies of the Secretary and of the State Department and the President in relation to such matters as are covered by this memorandum. I do not recall having given any thought to them myself, and I know Mr. Rathbone did not have the opportunity.

Mr. **Rathbone.** No.

Mr. **Raushenbush.** Perhaps we would not have gotten into this discussion unless there had been a certain insistence on Mr. Rathbone's part that they were this and this. Secretary of the Treasury McAdoo came back apparently on August 14, 1917, and made the point again in a letter to Secretary of State Lansing, as follows [reading "Exhibit No. 2788"]:

> Dear Mr. Secretary: Herewith I return Mr. Polk's letter of the 11th instant, together with copy of my letter to the President of July 17, enclosing the memorandum in relation to the credits to foreign governments, which the President, in turn, handed to Mr. Polk. I feel strongly that a notice embodying the substance of what I suggested to the President should be given to the various powers receiving loans from this Government to the effect that the making of such loans by our Government is not to be construed as committing this Government in any way, directly or indirectly, to the national objectives which the various powers have in view. If we fail to do this we may be confronted at the peace conference, if we have to raise an objection to the demands of some of the Allied Powers, with the claim that as we furnished money for the purpose of enabling the powers to prosecute the war to a successful conclusion, we tacitly consented to or acquiesced in the national objectives they had in view. My own conviction is that such a statement by this Government will not prejudice its interests in any way, while a failure to make such statement might eventually prove decidedly prejudicial.
>
> Faithfully yours,

(The document referred to was marked "Exhibit No. 2788" and appears in full in the text.)

Mr. **Leffingwell.** This was to the Secretary of State?

Mr. **Raushenbush.** This was to the Secretary of State, taking the question up all over again. He would not let it be dropped. He saw its importance and connection very clearly.

Would you not agree, Mr. Leffingwell, now that you have heard those memoranda, that it is possible for a governmental official to conceive of Treasury operations including loans as being a weapon and a bargaining power in peace aims?

Mr. **Leffingwell.** I should think that the conclusion the reading of those things led me to was that the Treasury got a little outside its own bailiwick in their proposal and was obliged properly to drop it by the State Department. It was really outside our sphere, and we certainly in my time, so far as I can recall, never as a Treasury matter, gave any consideration to those things.

You correct me, because you have the records, and I may be wrong. Can you, Mr. Rathbone?

Mr. **Rathbone.** No, not at all.

Mr. **Leffingwell.** That we did anything. What happened in relation to that was that Mr. Crosby was sent abroad to coordinate inter-Allied purchases and finance, and it was done purely from the point of view that Mr. Rathbone has outlined here, how the Treasury could best make its loans in a way to help win the war. In our day, I do not recall that we ever gave any thought to such questions as that until, of course, the Peace Conference brought them into the minds of everybody.

Then it was not really a Treasury matter. I imagine this was a little bit wider field than the State Department thought the Treasury ought to concern itself with, and it was dropped. Is not that what happened?

Mr. **Raushenbush.** As far as interdepartmental etiquette goes, Mr. Leffingwell, if that is important to you, perhaps the Treasury was saying that "Here is something we are doing and the Treasury is important to the rest of the Government." It seems to me that is a very intelligent thing for it to say, among other things.

Mr. **Leffingwell.** Oh, yes; it was very intelligent. The Treasury is always intelligent.

Mr. **Raushenbush.** And that loans or the absence of loans have a great deal to do with our foreign policy.

You have been here for the last 2 weeks and have heard us bringing out what we could to show that the trade in munitions was important to the country and affected both the State and Treasury Departments and the welfare of the country.

Would you not agree, by the way, in passing, with Mr. McAdoo's foresight, that he saw that unless we said to these people, our allies, that "We are fighting this kind of a war; you may be fighting a different kind of a war for different purposes, but we would like, if you please, to have our money devoted to our purposes rather than to any of yours that are different"—that was foresight, was it not?

Mr. **Leffingwell.** I think Mr. McAdoo was a very great Secretary of the Treasury, and he had great vision and penetration, but in this case I would say that my experience in the Treasury was that that was a fear which was not warranted by subsequent events. What we were concerned with and what the Allied Governments were concerned with was to get this war won, and it was so serious a business that the division of the territorial gains afterward was a matter for the peace treaties.

Mr. **Raushenbush.** Well, now, let us comment on that. You remember that Congress itself decided to reject the Treaty of Versailles. Congress rejected it. Congress would not ratify the Treaty of Versailles, which was a product of the war aims of everybody, including ourselves, in a way.

Mr. **Leffingwell.** I do not think I made myself clear. What I was trying to say was that my experience in the Treasury showed that the war was so grave and difficult a business that the Allies and the United States could only concern themselves with the business of getting it won until November 1918.

I do not think it ever was a matter of thought in the Treasury after I became acquainted with these problems, or a matter of any serious thought, that the Allies were borrowing money for any other purpose than to increase their military effort and conduct the war as effectively as possible.

The **Chairman.** You would not insist, would you, that our only purpose in entering the war was to help win it? Were we not looking farther ahead? Were we not contemplating the results of that war and the peace that could be afforded after it was over with?

Mr. **Leffingwell.** I was not venturing an opinion about the purpose for which we entered the war. I was speaking about the purpose for which we carried on the war. Those are two very different things. While I was, as a private citizen and a lawyer back in New York, vastly interested in the course of events which led up to the war, I can only testify here concerning the course of events after we were in the war. I am trying to answer that I believe it became clear to the Secretary of the Treasury, who I think was very wise to envisage all possible contingencies, and to his associates, that the problem that the Treasury had to face was to make the dollars they could raise as effective as possible towards the winning of the war, both through our own American effort and through loans to the Allies; and that we were not preoccupied in my time or during the period when I was familiar with these things, with the question of what the Allies were going to do after the war was won.

We were very much preoccupied about the question whether the war was going to be won.

Mr. **Raushenbush.** Yes, of course, and the questions addressed to you are less as a Treasury official interested in the mechanisms of exchange and the like, but as a governmental official wondering why you are doing this and that. Here comes along the Secretary of the Treasury at the time and becomes something more than a Treasury official, he becomes a governmental official wondering why the mechanism is working, and he implies here the financing we are doing for the Allies may, if handled one way or another, change the war aims which we do not happen to agree with, and we should let these Allies know that if we do lend them money, it does not necessarily mean that we underwrite all their terms.

You remember, Mr. Leffingwell, two or three things in this connection, probably, from your general connection and acquaintance with things: That President Wilson thought that all these loans we were making more or less put the Allies into our hands financially. There was some letter of his to Colonel House that has been introduced into the record to that effect. He thought they would be under such obligation to us that they would develop the kind of peace that we wanted.

Mr. **Leffingwell.** Did he?

Mr. **Raushenbush.** He did.

The **Chairman.** Yes; he did. That is a matter of clearly-established record.

Mr. **Raushenbush.** He thought that. So we might get into another war with the same belief that this is the way the mechanism would work, that once we took over loans and credits, and so forth, we would have a weapon in the peace.

Secretary McAdoo, with what seems to me remarkable foresight, away back here in early 1917, was saying something different. He was saying here: "We may be financing the kind of a peace we do not particularly want, and we can use loans and credits as a weapon.

With the Morgan witnesses on the stand we have been going into that at a good deal of length in the previous times as to whether embargoes were not weapons, and whether refusal to lend and refusal to extend the credit were not weapons of a kind in the international situation.

Here again there seems to be a very clear recognition by the then Secretary of the Treasury that that was so. That is the point of that.

Let me finish this:

Mr. Lansing writes there to Mr. McAdoo on August 20, 1917 [reading "Exhibit No. 2789"]:

> Dear Mr. Secretary: In view of your letter of the 14th sending me the correspondence in relation to a proposed letter to be sent by you to the representatives of the powers to whom money is being loaned and your opinion that a notice should be given them such as the one you propose, I have gone over the matter very carefully again, and I am more firmly convinced than ever that such a communication would be a grave mistake.
>
> The same argument which is urged in regard to loans might be advanced in regard to the employment of the embargo, the cooperation our naval vessels about the British Islands, the presence of our military forces in France, and similar active aid of this Government. It seems to me that it is much wiser to avoid statements of this sort, which might be misconstrued. On the other hand, I am not at all afraid that any of the powers will attempt to construe our silence into acquiescence in the national objectives of the various countries. But, even if it should be considered out of abundant caution to make our position plain, I think that it would be unwise to do so until there is some evidence that such a claim may be made. There is no evidence of the sort now.
>
> Faithfully yours,

(The document referred to was marked "Exhibit No. 2789" and appears in full in the text.)

Mr. **Raushenbush.** You see how his statement reads that no claim has been made that our advancing the money is in acquiescence in territorial objectives of other countries.

Mr. **Leffingwell.** For once the State Department was right and the Treasury was right. It could be so arranged and was not used as an evidence of our acquiescence in anything.

Mr. **Raushenbush.** Yes. I forgot to call that to your attention when I was speaking of President Wilson's feeling that we had the Allies in our hands as far as the peace goes, because they owed us all this money. If you follow through the letters which I believe were put in the record by Senator Clark, from the high commissioners of finance in England and France—I cannot give you the number of the exhibit, but it was last Wednesday, when we were having our hearing—they said pretty clearly, "Here the United States has to loan us money to keep their trade going"—that was the loans and credits policy—"and then has to protect the money."

I wish we had that exact quotation here.[1]

Mr. **Lamont.** Who is talking about protecting the money?

Mr. **Raushenbush.** Tardieu. I am trying to quote from memory, which is very bad. I gathered from those people that they felt that we had to go on financing whether we necessarily approved of all the aims they might have had or not.

---

[1] Tardieu, *France and America*, see infra, p. 9055.

Mr. **Leffingwell**. What period did they have to go on?

Mr. **Raushenbush**. After we were in the war.

Mr. **Leffingwell**. During the war period?

Mr. **Raushenbush**. There were some comments by them before then as to why we handled the merchantman question the way that we did, by the same people, Lloyd-George and Tardieu, and why we allowed our trade to increase as much as we did.

Mr. **Lamont**. In your quotations of Tardieu, now, are you not quoting from a book he wrote several years after the war?

The **Chairman**. From his memoirs.

Mr. **Lamont**. Something like that.

The **Chairman**. It may have been.

Mr. **Lamont**. It was not contemporary, was it?

Mr. **Raushenbush**. We are getting that quotation.

Then we find a letter from Mr. Crosby to Secretary McAdoo, on July 21, 1917, of which I want to offer a few paragraphs [reading "Exhibit No. 2790"]:

> The charges upon our Treasury due to this foreign demand are now growing so heavy that in connection with our own war expenses, a grave problem is presented to you in the mere matter of finding the money fast enough to meet all these demands. That phase of the situation, however, is one which for the moment I am not endeavoring to cover. It seems to me that, independently of that great difficulty, the magnitude of our loans to foreign governments is such as to justify on the part of the United States Government a more searching inquiry than it has yet made into the general conduct of the European war. The inquiry, if made promptly, would at least give to our Government a better knowledge than it now possesses of the probable duration of the expenditures which now press so hardly upon it; and, further, our own military preparations and operations would be the more wisely conducted if we had carefully weighed the financial, political, and military conditions of those with whom we are associated in a war which will be exhaustive to our own country if expenditures are continued at the present rate—

Then he goes on, giving the expenditures—

> I have not referred above to any inquiry into the political relationships of Europe save those that may be necessarily involved in a determination of any new military moves which our representatives might desire to suggest to our associates. It is quite within my duty to report to you that the Serbian Minister urges, on behalf of his country, that the United States should inform itself of the political determination that have been made between the Allied Governments since the beginning of the war. The relationship with the United States in preference to a satisfaction of their needs through English and French channels suggests the same uneasiness on the part of the small nations in Europe as to the results to be gained from the war, even on the supposition of a marked success for the arms of the Allies, unless the power of the United States should be felt in the political field as well as on the field of battle.

(The document referred to was marked "Exhibit No. 2790" and is included in the appendix on p. 9224.)

Now, Mr. Leffingwell, coming back to that, would you not accept that as a general proposition, that a government that is getting in the position of lending billions and billions possibly, if it does it at the start, could use those loans to affect the political aims of its allies in case it is joining with allies in a war? Would you not accept that offhand as reasonable?

Mr. **Leffingwell**. As an abstraction, of course, the Government can do that, but the Government of the United States did not do that, and the loans that the United States made were cheerfully made with the single objective of winning the war. Mr. Crosby's very interesting philosophy of things does not represent the course of actual lending by the United States, either by him or by the Treasury Department at any time. The loans were made for the sole purpose and the sole objective of contributing to the prompt and successful conduct of the war. Any outside considerations, so far as I can recall, were excluded rigidly as far as it was possible for intelligent men to exclude things that they thought should be excluded.

Mr. **Raushenbush**. If it happened in another war that somebody should come along and say that sort of thing that you are saying now, that once we get into a war, the only thing we can do is dump money over the river bank.

Mr. **Leffingwell**. I did not say that.

Mr. **Raushenbush**. No; you did not say that, but a loan without question.

Mr. **Leffingwell**. No; we never made a loan without question.

Mr. **Raushenbush**. Well, a loan without question of the purposes of our Allies in a war.

Mr. **Leffingwell**. We never made such a loan. We made every loan with the most vigorous inquiry as to whether this loan conduced effectively to the winning of the war. That was the purpose and the only purpose that the Treasury recognized as a justifiable purpose for the making of a loan. Is that correct, Mr. Rathbone?

Mr. **Rathbone**. Absolutely correct.

Mr. **Leffingwell**. They were not political purposes; they were not political loans.

Mr. **Rathbone**. The ultimate aims of the Allied Governments, so far as I know, had nothing whatsoever to do with the making or the refusal to make any loans that they requested.

Mr. **Raushenbush**. That seems to me horrifying in the way Secretary McAdoo is brushed aside on that, Mr. Rathbone. I would like to come back to that because it is important.

You keep saying, Mr. Leffingwell, that everything contributed to the winning of the war. That is all ancient history, unless we might get into the same situation again and somebody might say what you are saying now.

Here was a very able governmental official, or several of them, not only Mr. McAdoo but Mr. Crosby, and President Wilson later, advancing the idea that you could not laugh off all this matter, that it was important, and you could use this influence one way or the other. On what? On what you call the winning of the war. Well, the winning of the war meant winning a peace that would last.

Mr. **Rathbone**. No; I do not agree with you on that.

Mr. **Raushenbush**. What was winning the war?

Mr. **Rathbone**. Winning the war was to have the Germans surrender.

Mr. **Leffingwell**. That was done on Armistice Day, so far as the Treasury was concerned.

Mr. **Raushenbush**. I am just going by President Wilson's idea that when you won a war you secured the terms you wanted, which was a peace that would last. At least, he said that very often to the people. You may not have been interested in that, but I think the people were, that it was not a war of revenge, particularly, but that he wanted to have his aims—his war aims and his peace aims—accepted by everybody; and if loans and credits handled in certain ways could have changed the purposes of the Allies, from being that of territorial acquisition to being somewhat less so, the war might have definitely been shortened.

There is the proposition we might consider in another war, in any war we got into.

Mr. LEFFINGWELL. I really have a picture in my mind a little different from what is in yours, of what really occurred in the Treasury, and I think it perhaps would be something like this: Mr. McAdoo and Mr. Crosby were wisely, as I think, thoughtfully, as you think, considering all these problems, but by the time Mr. Rathbone and I began to have to do with them the control of loans by the limitation of financing on one hand and the urgent necessity of the war on the other superseded all the philosophical and thoughtful and penetrating inquiries and it became purely the pragmatic question of how to raise enough money to support the armies and the navies and carry on the war as it was.

I do not believe that after we had connection with it, Mr. Rathbone, we had much opportunity to consider what was going to be done to the territorial questions.

The CHAIRMAN. Following as closely as I have been able to the thinking of men and the consideration of men in those days, it is difficult for me to believe that President Wilson at any time lost sight of the opportunity that was ultimately going to be ours in making the winning of the war really count for something; and yet we gather from you, who were playing so prominent a part at that time, that making the world safe for democracy or winning a war to end war really was not what was uppermost in your minds.

You were ready to win the war for whatever it would win. We find other evidence, too, during those days, that there was a clash of opinion on the part of those who were leading in that hour as to what the real purpose was.

Did there exist during those days in the Treasury the clashing of opinion that seems to exist now upon what was involved, and what was and what was not the duty of the Treasury? Was there conflict within the Department?

Mr. LEFFINGWELL. There is no clash of opinion now, Senator, and there was not then, so far as I know. There was interchange of ideas.

The CHAIRMAN. No; there is clash of opinion, decidedly, to this extent, that Secretary McAdoo was obviously moving in the same direction that President Wilson was and wanting our help in the winning of that war to be of such an order and such a nature as would let us have a determining hand in writing the terms of peace after it was over with.

But we gather from you that your primary interest was in winning the war, irrespective of what the peace finally might be.

Mr. LEFFINGWELL. There is a job for the general, there is a job for the colonel, and there is a job for the corporal. Whatever kind you may be, your usefulness in the period, Senator—it was quite job enough for the subordinate officials of the Treasury in my time to raise the money and pass upon the loans. We were content to leave to the President and the Secretary of State and the Members of the Cabinet the formulation of policy.

The CHAIRMAN. Then some of you felt in that day that the head of the Department, Secretary McAdoo, was really borrowing trouble?

Mr. LEFFINGWELL. No. As I say, I know nothing of this. Mr. Rathbone was not there, and I was concerned with the Liberty Loans at that time. And I do not remember having had any opinion about it or having heard about it particularly. It is possible I did. But I had the greatest admiration for Mr. McAdoo and for Mr. Crosby, and I think their penetrating minds opened up very interesting fields of thought. I do not think they were borrowing trouble. I think they showed foresight and vision. But, actually, the practical problem of the Treasury became the controlling one, and the extraordinarily difficult task of raising something in the neighborhood of $40,000,000,000 in 2 years was the one that occupied my attention.

Mr. RAUSHENBUSH. There was nothing academic or philosophical about Mr. Crosby's attitude, particularly, Mr. Leffingwell, as we gather it here from this letter. It cost the United States money for the Saloniki operation, for the Dalamatia operation, and for all those extra-territorial activities, if you will, which we had been underwriting as our own peace aims.

Here he says [reading]:

> However much concern I may feel as an American citizen in respect to the policy of my Government as to intervention in political relationships of the Allies, I am not now urging upon your attention that point, but rather those points only which have to do with a successful issue of the war, as war. I am perfectly convinced that our Government is not now in possession of the information that it should have merely as a belligerent nation and for its belligerent purposes.

I do not want to go into this very much further, but perhaps we can get some light from Mr. Lamont on this.

Mr. Lamont, this is a general question and perhaps you do not care to answer it, but you have been listening to this debate, I take it.

Mr. LAMONT. It is very interesting, very interesting.

Mr. RAUSHENBUSH. Do you not get out of it the perfectly independent judgment now as to this little bit that if we get into a war and under the pressure of circumstances have to lend lots of money for the war and for our Allies, that it is just about impossible for us to have, in the back of our minds, that we want a different kind of peace than the other people do, do they not get merged, the same way these loans and credits got merged? Is that too academic a question?

Mr. LAMONT. That is very academic, Mr. Raushenbush, but I do not draw the same inferences, I think, that you do, because I do not look at the thing the same way you do. Mr. Leffingwell and Mr. Rathbone have put it so well that I do not know that I could venture any opinion, but, of course, as they have said, the whole country was devoted to the winning of the war.

Prior to the entry into the war, Mr. Raushenbush, we all knew that President Wilson enunciated certain views that he had. They were undoubtedly in the back of his mind all the time. But in order to carry out those views, Mr. Raushenbush, is it not evident that we had to win the war first? First of all we had to win the war, then the President, the Cabinet, and the Congress could hopefully attain such other ends or such ideals as they might have had in mind and as they might have voiced. Is not that perfectly clear?

Mr. **Raushenbush**. Not entirely, in this way. I still may have what you think is a confusion in mind. But the only reason I want to go into it is because the country might so easily get into the same situation all over again, that you do not necessarily win a war except in the most technical military sense, in the pure-and-simple sense in which a general would use it, the complete military defeat of a nation. That does not necessarily, in these days, win a war. You may have crushed Germany and Hitler may crop up, and your war, if you have won it, is very briefly won. No; you win a war more in the sense President Wilson wanted to win it, that you accomplish certain objectives, and you do not accomplish them unless you have your allies agreeing from the start.

So almost any war we go into today, a war, for instance, that happened to be in conjunction with the League of Nations or other groups at the time, would not necessarily be won by the crushing of an enemy, because our own terms that we went in for might not be won.

Why? Because the other people, our allies, had different aims.

That is what I was interested in, whether it was possible or not once we embarked on this loans and credits policy with its conclusions to buy a shorter war and a better peace.

If it is impossible to use loans and credits, if President Wilson was entirely wrong, if our governmental officials do nothing but just say: "Oh, well, the aims must be somewhat the same and we will put the money in without question", then we are lost. Then you get into the same international confusion that followed the Peace Conference.

Mr. **Lamont**. Of course, Mr. Raushenbush, nobody knows where the war would lead if anybody were to attack us again, as an aggressor, as Germany attacked us throughout 1916 and 1917. We do not know where it would lead. But now, are we not getting into the field of philosophy, as to whether anybody ever wins a war? I can discuss that with you time without end.

Mr. **Raushenbush**. No, thank you.

Mr. **Lamont**. You can argue that nobody ever wins a war in the sense of getting what he really likes. But what I understand these representatives of the Treasury to have been stating this morning is that their job and the job of the country was to win the war at that time, to lick Germany at that time. That is what they were up to.

Mr. **Raushenbush**. And the rest of the country, which did not know about all these things, may have thought they were simply trying to make the world safe for democracy.

Mr. **Lamont**. That may be your interpretation as you remember the temper of the country in 1917. My remembrance is that the country gave itself over to the winning of the war because they believed what President Wilson had told them and what Congress had voted, namely, that Germany had committed aggression upon us and was waging war upon us, and we had no other recourse.

That, I think, was the attitude of the country.

The CHAIRMAN. Frankly, now, while we are expressing opinions, I do not think that that expression alone would have won the backing of the American population that was necessary for the winning of the war. I think the thing that influenced American thinking in those days more than the need for winning the war was the thought of what we might do with our winning.

Mr. LAMONT. Senator Nye, I entirely agree with you in the impress that President Wilson's speeches made upon the country at large, but after we once got into the war—and that is what I might read out of the testimony of the gentlemen here—then it was our business to win it.

The CHAIRMAN. Yes; and our leadership was doing pretty well the job of keeping up front and foremost the thought of winning out in a way that would let us be instrumental in writing the terms of peace, and the ideals that we were dreaming of accomplishing in those terms of peace were of the highest order and the highest nature.

The committee will be in recess until 2 o'clock.

(Whereupon, at 12 o'clock noon, a recess was taken until 2 p. m.)

AFTER RECESS

(The hearing was resumed at 2 p. m., pursuant to recess.)

The CHAIRMAN. The committee will be in order.

On last January 5, Mr. Lamont presented a statement with a request that it might be incorporated in the record.[1]

Mr. LAMONT. That was January 15.

The CHAIRMAN. January 15—presented a statement which the committee said it would like to see before inserting.

Mr. LAMONT. Right.

The CHAIRMAN. The Chair is ready to state that it be incorporated in the record at this time.

Mr. LAMONT. Thank you, Senator.

(The document referred to was marked "Exhibit No. 2791", and is included in the appendix on p. 9226.)

The CHAIRMAN. Mr. Brown.

REPAYMENT OF THE DEMAND LOAN[2]

Mr. BROWN. Mr. Chairman, the discussion this morning concerned the establishment of the Treasury's loan policy with regard to advances to the Allies, and the purposes to which that money was to be put. The present subject is the question of the demand loan, as it was outstanding on April 6, 1917, and what became of that loan, the suggestion that the Treasury pay it off, and the refusal of the Treasury to do so in accordance with the policy which had been laid down.

The record shows that at the time of the United States' entry into the war this loan amounted approximately to $345.000,000. The record also shows that in July 1917, according to two memoranda from the British Government to the United States, that the British considered themselves in a state of financial exhaustion, so far as their American resources were concerned.

---

[1] See Hearings, Part XXVIII, p. 8653.

[2] See also "Exhibits Nos. 4116 and 4130", Hearings, Part XXXII.

The record also shows that although the British Empire was still possessed of enormous commercial resources—and Mr. Morgan testified very clearly as to that, the untapped equities, for example—that it was very doubtful how rapidly cash could be mobilized to meet the requirements for dollars in America.

The record at this point will take up how rapidly, if at all, those resources were mobilized to supplement Treasury advances. It seems proper to point out that the deposit of securities with the American Dollar Securities Committee in England, under scheme B, was discontinued on May 11, 1917, and that the entire scheme was closed on May 1, 1918. That was the scheme under which securities had been deposited to be pledged or sold for dollars in the United States.[1]

That closes up the record to this point, but I would like to call attention to an exhibit already in the record,[2] a cable from Morgans in New York to Morgans in London. I am very sorry I have not the page reference of the volume here.

Mr. **Lamont**. What is the date?

Mr. **Brown**. It was about March 26. It is a cable in which it was stated——

Mr. **Whitney**. What year?

Mr. **Brown**. 1917. In which it was stated that the Treasury would be prepared to make advances to the Allies, and the phrase was used, "thereby leading to a solution of all the exchange difficulties of the Allies."

Mr. **Whitney**. That is not quite what it said, is it?

Mr. **Brown**. It is in the record under that number.

Mr. **Lamont**. It is page 1239 in our volume. We say [reading]:[3]

> We believe that in due course President Wilson is likely to advocate such a plan to Congress, and we are in hopes that if adopted it might become effective on or about May 1, thereby leading to a solution of all the exchange difficulties of the Allied Governments. Of course, you are well aware that Congress may possibly be cool or very slow in the matter, and hence we are unable to count definitely upon any action as yet.

Mr. **Brown**. The phrase which interests us at the moment, Mr. Lamont, is that, "thereby leading to a solution of all the exchange difficulties of the Allies." We take that to mean that you considered it entirely to include pressure of supporting the sterling rate, the pressure of supplying commodities, the pressure of maturities, perhaps, that all those things went to make up the exchange difficulties of the Allies—that is, the difficulties of raising dollars—and that all those difficulties would find a solution in American advances. Is that a correct interpretation?

Mr. **Lamont**. I do not think I should attempt at this time to envisage every particular thing, Mr. Brown; but of course we were referring to the statement which President Wilson had made, and the Secretary of the Treasury, in regard to granting ample credit to the Allies.

---

[1] For full information on this scheme see "Exhibit No. 4252", Hearings, Part XXXV.
[2] Previously entered as "Exhibit No. 2690", see Hearings, Part XXVIII, p. 8630.
[3] Ibid.

Mr. **Brown**. You felt that the financial problems of these Allies, all the various kinds of requirements that fell upon them, were a unit really? You could not separate one from the other and say, "This can be taken care of, and that is another matter", but they were all involved together?

Mr. **Lamont**. You see, there were no maturities up to that time. We always had the exchange situation on our minds very strongly.

Mr. **Brown**. There were some contractors' notes coming due in the Fall. Of course, that is in the testimony.

Mr. **Lamont**. I beg your pardon.

Mr. **Brown**. I just mentioned that there were contractors' notes coming due in December of that year.

Mr. **Lamont**. That cable expresses a hope, Mr. Brown.

Mr. **Brown**. The question then occurs whether, without these advances—how much of those exchange difficulties the Allied Governments could have cared for themselves.

Mr. **Whitney**. Where does it arise?

Mr. **Brown**. It arises logically, Mr. Whitney. It is a hypothetical question and cannot be answered, but on that point I would like to offer for the record a chart of the British dollar resources quarterly from 1915 to 1921, if someone will expose the chart [referring to chart on easel].

(The chart referred to was marked "Exhibit No. 2792" and is included in the appendix on p. 9231.)

Mr. **Brown**. It is a little difficult to distinguish at this distance, but the darker blocks are sums from the British Government's own resources, and the lighter are Treasury advances, reimbursements, combined. The white squares are Treasury funds for other purposes, as the legend says, sterling exchange, rifle plants, and various factors from the Treasury.

Mr. **Lamont**. What are the dark parallel lines?

Mr. **Brown**. Suppose I explain it in more detail. These solid blocks are the sales of securities through J. P. Morgan & Co. [indicating]. That does not, therefore, include sales which may have been made elsewhere, but that was unquestionably the large bulk.

The parallel white and black lines are gold shipments; the diagonals, black and white, are the sales of sterling exchange. The cross-hatched lines are net receipts from loans; that is, increases in the loan accounts.

That is a small income from securities [indicating on chart]. These long, rather light bars are Treasury advances [indicating] and reimbursements out of Treasury advances—that is, where the Treasury advanced to France or Italy, and paid to the Treasury, and went to Great Britain—and is included along with the direct Treasury advances. That represents sums for which the United States received an obligation of the Italians or French, as to which the proceeds were available to Great Britain.

The white represents sales of exchange and various things by the British Government to the United States Treasury.

In other words, this is the dividing line between Great Britain's own resources and her resources from the Treasury of one sort or another, which began to drop in the first quarter of 1917 and dropped in the second quarter and in the third quarter to $75,000,000, and remained below that figure until the third quarter of 1918, and in the fourth quarter it rose slightly and dropped again.

All this sum in here [indicating] is from United States resources, and this little sum [indicating] along the bottom is Great Britain's own resources.

Mr. Whitney. This is not a chart which we prepared, is it?

Mr. Brown. Oh, no, Mr. Whitney.

Mr. Whitney. Is our name on it for identification?

Mr. Brown. Yes; it is from records in your files.

Mr. Whitney. I thought you said "Treasury account."

Mr. Brown. That is from your files, is it not?

Mr. Whitney. No; Treasury account.

Mr. Brown. The British Government Treasury account is from your files, is it not? We obtained it from you. We will let it go at that.

Mr. Leffingwell. Mr. Brown, may I ask in connection with that figure which you say is the vanishing line of the British Government's own resources, how do you deal with the one-half billion dollars of the proceeds of the pounds in foreign currencies?

Mr. Brown. That is differentiated, Mr. Leffingwell. You see the plain top squares over each column? The purchases of sterling exchange are included in that white square; that is, United States Treasury purchases of sterling exchange.

Now, when we were discussing the demand loans previously there was a great deal of discussion of how it would be financed, and so forth, if the United States had not entered the war; and it seems to us, in line with that, pertinent to ask whether anything like those sums [indicating U. S. Treasury advances] could have been supplied from Great Britain's own resources, if the United States had not entered the war. That, again, is a hypothetical question, of course, but does it seem to you a fair one?

Mr. Lamont. Mr. Brown, it is not only a hypothetical question, but it seems to me you would have to rely upon the merest conjecture to answer it. We do not know what resources the British Government could have mobilized, or what the British Empire would be willing to furnish in certain contingencies. All that we testified to was that until America got into the war the British Government had furnished us with sufficient securities in the way of collateral and in the way of pledge and sale of American securities, and so forth, to meet all their obligations. We cannot go beyond that, can we?

Mr. Brown. You think you could, however, do you not, say that if it had been necessary, those dark squares underneath could have been greater, if the United States had not entered the war? Those are not all the resources available in America if there had been no preemption of the American money market by the Liberty bonds. That is a fair question, is it not?

Mr. Whitney. You will remember, Mr. Brown, that we testified a good many times to the fact that all through the fall of 1916 and the early part of 1917 that we were advising the British Treasury that they would have to watch out for their purchases so that they would be able to handle their purchases. You are now raising a completely different contingency, which did not occur. In other words, you assume that they would have bought the same amount of goods in this country that they did do when they had available credits from the United States Government.

Mr. **Brown**. Let us assume they would have bought less, but they could have raised a far larger revenue than is actually shown on this chart, Mr. Whitney.

Mr. **Whitney**. As we testified before, they had plans which were perfectly consummated, to sell $200,000,000 of Canadian Pacific and $50,000,000 London municipals, all of which were stopped. The obtaining of securities under those plans was stopped when the necessity stopped, as you know. It is hard to tell, if circumstances had been completely different from what they were, what they would have done.

The two alternatives are clear: They either had to collect for the purchases bought here or else curtail their purchases. Those are the alternatives.

Mr. **Brown**. I think that answers the question; thank you, Mr. Whitney.

There was, however, a Canadian loan, was there not?

Mr. **Whitney**. $100,000,000 in the summer of 1917, a note. That was the Canadian Government, $100,000,000.

Mr. **Brown**. I mean floated in this market after we entered the war.

Mr. **Whitney**. For Canadian purposes; yes, sir.

Mr. **Lamont**. With the approval of our own Government.

Mr. **Brown**. Oh, yes.

Mr. **Whitney**. That was not for the British Government. They did not get the credit of that.

Mr. **Brown**. Mr. Whitney, one time in answer to a question of mine on page 12782 of the testimony script, you testified:

> After all, if you assume that certain circumstances had been completely different—I am not saying they could go on indefinitely buying at the same rate in this country, because obviously some time there comes an end to it, but there is no indication anywhere in the record that at the time the circumstances changed the British were not more than able to take care of their full requirements.

I might have saved your answering the question, if I had noted that I had the answer right here.

In contrast, however, to that, is the statement in Exhibits Nos. 2646 and 2647,[1] in the latter of which Sir Cecil Spring-Rice on July 1 said:

> There is danger that the ability of His Majesty's Government to effect payments in America from today onward will be in jeopardy.

I think that covers the position of the British Government at the time we entered the war.

Mr. **Whitney**. That was July?

Mr. **Brown**. That was July.

Mr. **Whitney**. So that circumstances had completely changed?

Mr. **Brown**. The question of the preemption of the American market. Is that what you are referring to?

---

[1] See Hearings, Part XXVIII, p. 8596.

Mr. WHITNEY. And the fact that the United States Government was extending credits.

Mr. BROWN. Did you not, Mr. Lamont, receive $100,000,000 and apply it to the demand loan on April 26?

(The statement showing the figures appearing on chart Exhibit No 2792 was marked "Exhibit No. 2793" and is included in the appendix on p. 9232.)

Mr. BROWN. I offer cable no. 43249 of April 25, 1917.

(The document referred to was marked "Exhibit No. 2794" and is included in the appendix on p. 9234.)

Mr. LAMONT. We received $200,000,000, Mr. Brown, of which $100,000,000 was applied temporarily to the demand note, and then that was filled up from other British resources a little later.

In that connection we have a statement of the whole situation, involving a very recent letter from the British Treasury, because they looked up their records, and I would like to offer this for the record and also for the inspection of the members of the Committee at the same time.

(The document referred to was marked "Exhibit No. 2795" and is included in the appendix on p. 9234.)

Mr. BROWN. The net result of that payment was to leave the loan on April 26 higher than it had been on April 6, was it not? I mean the advances on the loan from April 6 to April 26 were greater than that $100,000,000 payment?

Mr. LAMONT. Five million dollars less, one of my associates says here. I am not familiar with the exact dates.

Mr. WHITNEY. Later on it went up above the figure of $345,000,000. On May 6, 1917, as you know, it was $398,000,000.

Mr. BROWN. Excuse me; I misphrased my question. Let us say before advances ceased on the demand loan, it had reached a total which exceeded the total of April 6.

Mr. WHITNEY. By $53,000,000.

Mr. BROWN. You expected the balance of the demand loan to be liquidated as soon as the United States Treasury received the proceeds of the first Liberty loan, did you not?

Mr. LAMONT. We hoped it might be liquidated from that source, Mr. Brown. The information which we had received from the direct representatives of the British Government led us to entertain that hope, certainly.

Mr. BROWN. I will offer a telegram from J. P. Morgan & Co. to Herman Waldeck, dated June 1, 1917. It says [reading from "Exhibit No. 2796"]:

> We expect this loan—

That is the demand loan—

> to be paid off in full on July 1. (Stop.) If the matter interests you, you might wire us accordingly.

That is the matter of getting a further allotment on the demand loan.

Mr. WHITNEY. To whom was that adressed?

Mr. BROWN. Herman Waldeck, of the Commercial & Continental National Bank.

(The document referred to was marked "Exhibit No. 2796" and is included in the appendix on p. 9236.)

Mr. LAMONT. With your permission, Mr. Brown, I think it might be well to read into the record just a paragraph or two from this British Treasury letter, which bears so directly on that matter. It says [reading from "Exhibit No. 2795"]:

> In reply I am directed to inform you that in the period immediately preceding the entry of the United States into the war it was the intention of His Majesty's Government to issue a market loan out of the proceeds of which the demand loan would be repaid. The proposal to issue a market loan at this time was, however, abandoned in deference to views expressed by the United States Treasury.
>
> After the entry of the United States Government into the war on April 6, 1917, the United States Treasury expressed the wish that no part of the funds being advanced by them to His Majesty's Government should be used for the reduction of the demand loan which, at the time that the United States entered the war, amounted to $345,500,000——

Which is as you have stated.

(Continuing reading:)

> Before this wish was expressed, $100,000,000 out of an advance of $200,000,000 made on April 25, 1917, by the United States Treasury to His Majesty's Government had been applied on April 26, 1917, temporarily against the principal and interest of the demand loan. This amount of $100,000,000 was less than the expenditure of His Majesty's Government in the United States for materials, supplies, and exchange between April 6, 1917, and April 26, 1917. The increase in the demand loan between these two dates was $91,300,000. There were various debits to the demand loan and credits thereon——

Which it indicates.

(Continuing reading:)

> * * * the net result being that the demand loan on May 16, 1917, amounted to $398,500,000, or $53,000,000 more than when the United States Government entered the war—

As Mr. Whitney said.

Then it goes on to explain that out of the sum which was received, the entire $398,000,000 was cleared off from resources of the British Treasury.

As you will note from this exhibit, Mr. Brown, we had asked them to check their records carefully and let us know exactly what they showed, and this reply of theirs covers the situation.

Mr. BROWN. It seems to agree with every other thing.

Apparently Mr. Phillips in this letter states the wish you expressed, that the funds advanced by the Treasury should not be applied on the demand loan, but before that wish was expressed, not only had something been applied on it, smaller than the loan was afterwards extended, but it was expected by yourself and the British that more would be advanced, if that was permitted, was it not?

Mr. WHITNEY. I think, Mr. Brown, our records show as clearly as one can without actual proof, that this was the most normal action in the world. They received $200,000,000 from the United States Treasury and had immediate need for about $100,000,000, and they had a debit, and applied $100,000,000, as any prudent man would, against the $100,000,000 reducing the interest charge.

I did not go into the intricacies of the different accounts which were created, as this went into debit, but they had need for the $100,000,000 which went out quickly, and the other $100,000,000 was devised to carry interest at 4 percent, because we were allowing 2 percent on credit balances and allowing 6 percent on debits. It was a temporary application, and I do not think it was applied to it, although that is the word used.

Mr. BROWN. My question was whether you expected the entire balance of the loan to be paid off.

Mr. WHITNEY. Certainly not at that time.

Mr. BROWN. Not at that time but on July 2.

Mr. WHITNEY. As Mr. Lamont said, we had information from certain representatives of the British Government somewhat later on the proposition, and we hoped that it was going to be paid from the proceeds of the sales of the Liberty Loans. That hope somewhere along at the end of June was changed.

Mr. LAMONT. The record shows, Mr. Brown, as you will recall, that there was a very active discussion going on between the two Treasuries at that time as to the status of the demand loan.

Mr. BROWN. The only point I was trying to get clear on was that up until the end of June, at any rate, you did expect that the loan would be completely liquidated with these Treasury advances?

Mr. WHITNEY. Certainly.

Mr. BROWN. And apparently the British thought that, too.

I offer for the record a letter from Sir Cecil Spring-Rice to the United States Treasury, dated May 3, 1917, in which this paragraph appears:

> I take this opportunity of stating that the requirements of my Government for the next 6 months, in the United States of America, are estimated to amount to $1,500,000,000.

(The document referred to was marked "Exhibit No. 2797" and is included in the appendix on p. 9236.)

Mr. LAMONT. There was a distinct misunderstanding, a perfectly honest misunderstanding, not between us and anybody, but between the British and the American Treasury people about that loan. This cable of July 2, 1917, to which Mr. Whitney calls my attention, said that we had understood that the demand loan would be paid off at that time. The cable to Morgan Grenfell says [reading from "Exhibit No. 2801"]:

> Please inform the Chancellor of the Exchequer that all our plans and movements during the past 2 months have been predicated upon our definite understanding that nos. 1 and 2—

That is the call or demand loans—

> would be liquidated in full on July 2 as the result of advances to the amount of $400,000,000 to be made to the British Government by the American Government and paid to us for that specific purpose.

Instead of that, as we all know, the American Government decided that it must freeze the demand loan, and it would not make advances to pay it off, and would not permit us to sell the collateral to it, and it would not permit the British Government to enter into a refunding operation.

Mr. BROWN. I think we will come to that in just a moment, Mr. Lamont.

In "Exhibit No. 2647", which is already in the record,[1] on July 1 Sir Cecil Spring-Rice makes the specific request for this $400,000,000. He says:

> In view of the practical depletion of our resources in gold and marketable securities, I am instructed to present to you a formal request for the following financial assistance.

I want to state in passing that Sir Cecil was of course not a banker, but he was apparently more concerned with what he considered "the practical depletion of our resources in gold and marketable securities" than in the closing of the American market.

I offer for the record a letter from Mr. Crosby to Mr. Lansing, on June 28, 1917.

(The document referred to was marked "Exhibit No. 2798" and is included in the appendix on p. 9237.)

Mr. BROWN. The only point in that letter is the opening line [reading]:

> Yesterday afternoon, Mr. Henry P. Davison of New York, a member of the firm of J. P. Morgan & Co., called at this office, and asked whether there could be any doubt as to an engagement which had been reported to him as having been made between Mr. Balfour and Lord Cunliffe on the one hand and the Secretary of State on the other, or other representatives of our Government, to the effect that $400,000,000 would be loaned to the British Government on the first of July.

The balance of that is of no consequence.

I offer for the record cable no. 38561, of June 28, 1917, for Mr. Morgan from Mr. Grenfell.

(The document referred to was marked "Exhibit No. 2799" and appears in full in the text.)

Mr. BROWN. That cable reads in full as follows:

> For my private information can you tell me whether you expect large repayments to be made of your no. 1 and 2 loans out of proceeds Liberty loan. Also what is general policy which Washington is going to pursue especially with regard to exchange, in view of constant daily purchases of sterling. E. C. Grenfell.

Mr. BROWN. I offer for the record cable no. 47339 of June 29, 1917, which is the answer to the foregoing.

(The document referred to was marked "Exhibit No. 2800" and is included in the appendix on p. 9238.)

Mr. BROWN. That cable reads in part as follows:

> By reason of representations repeatedly made to us, we have all along been confident of receiving on July 2 a payment sufficient in size to liquidate entirely no. 1 and 2. On Wednesday last, however, we were suddenly informed that this payment was in doubt and it now seems certain that we will not receive payment on July 2 as agreed. We still hope that this is only a short postponement as we consider the matter of the utmost importance.
>
> In regard to exchange, we have as yet been unable to learn the attitude of Washington, and we question whether they have adopted a definite policy in this matter.

That, if I may digress for a moment, would seem to connect it up on the issue which Mr. Leffingwell was discussing this morning with regard to the Government policy which would imply the question of a policy in regard to exchange support was open. Is that correct, Mr. Leffingwell?

Mr. LEFFINGWELL. It would seem to imply that.

---

[1] See Hearings, Part XXVIII, p. 8596.

Mr. **Brown**. You do not recall it, however?

Mr. **Leffingwell**. I do not recall it at that particular moment. As I explained this morning, my attention at that time was concentrated upon the Liberty Loans, and I might very well not have been familiar with it at that time.

Mr. **Lamont**. Those cables, of course, Mr. Brown, simply confirm what has been said so many times, namely, that the British Government representatives had these talks with the American Treasury representatives, and thought that they had arranged for funds to meet these demand loans, and so represented to us, and it was upon their representation that we relied here in Mr. Morgan's cable upon that.

We, too, of course, were pressing the American Treasury for that same solution of the matter, and they did not see their way clear at all to adopt that point of view, as the record shows.

Mr. **Leffingwell**. Mr. Brown, since you were kind enough to refer to me, let me ask if you are in due course going to put in the Treasury communications on this subject?

Mr. **Brown**. Yes, sir.

Mr. **Leffingwell**. Most of them, as you know, were published by the State Department some years ago.

Mr. **Brown**. Yes, sir; they were practically all published.

Mr. **Leffingwell**. It occurred to me, in connection with Mr. Rathbone's suggestion this morning, that if you are interested in ascertaining the Treasury's policies and actions, even during the period when he and I were less or not at all concerned with these matters, it is important that you get in the record the Treasury's own communications and account of these things. The largest part of them, as you know, has been published by the State Department.

Mr. **Brown**. Yes, sir.

Mr. **Leffingwell**. In great detail.

Mr. **Brown**. They do not answer the question of how the loan was paid; and since this matter has had so much misunderstanding, from start to finish, it seems wise to make it fairly complete for the consideration of all.

Mr. **Rathbone**. I do not think the finish was very uncertain. The start was very much mixed up.

Mr. **Brown**. We could quote Mr. Page on it.

Mr. **Leffingwell**. You mean, perhaps, memory of it is uncertain, but the facts are not uncertain.

Mr. **Brown**. I offer for the record cable no. 47404, of July 2, 1917, the one from which Mr. Lamont was just reading.

(The document referred to was marked "Exhibit No. 2801" and is included in the appendix on p. 9238.)

Mr. **Brown**. Taking it up in the middle of the second paragraph, the cable states [reading]:

> It is a cause of great regret that conditions here make it clear that this loan payable on demand cannot be continued longer and unless some other solution can be arranged for immediately, we feel we must proceed to sell collateral and apply proceeds toward reduction of loan. We would expect to begin such sale on Thursday morning. We would, of course, be glad to make an effort to convert this loan into such a time loan as might suit conditions of our market, providing that the Chancellor of the Exchequer desires us to make this effort, and that it meets with the approval of the American Government. But, in any event, steps must be taken providing for the immediate payment

of the loan. We are greatly distressed at the position we now necessarily take, but as we were informed and confidently expected the loan to be paid today, all the arrangements of ourselves and associates have been made accordingly and we are consequently left no alternative.

Mr. Lamont, the loan on July 2 was only some 40 million dollars higher than it had been in April, was it not, or $53,000,000, I believe you said?

Mr. **Whitney.** That was in May.

Mr. **Brown.** At this time it was only some 40 million dollars higher. Why was the pressure of the loan in July so much more pressing than it had been in April?

Mr. **Lamont.** The Treasury correspondence, which Mr. Leffingwell refers to, might be able to answer that, but, as the British Treasury representatives told us, as I recall it, they had fixed a date, July 1 or July 2, as the date when it would be taken up. It was not a question of any more pressure on any one day than on another day, but that was the date, as I understand it, fixed between the two Treasuries.

DEMAND LOAN—EXPECTATION OF UNITED STATES REPAYMENT AND IMPLICATION THEREFROM [1]

Mr. **Brown.** The thing which we find a little difficult to reconcile in the cables is the fact that from December into April the loan was carried to very great heights, with no very great concern with regard to its repayment, and that here, when the question of repaying it becomes difficult, it suddenly becomes a tremendous strain.

Mr. **Whitney.** Mr. Brown, I think that is very easily cleared up. I think the pressure referred to here was the pressure upon us. Here this loan had been going on for a long time and, as you say, it was a very substantial amount on April 6, and had grown $53,000,000 higher. It was common knowledge between the participants of the loan, between the entry of the United States into the war and that date, that the capital markets were closed. Therefore the plans under way to liquidate this loan at least in part had been stopped.

You have got to remember, as you know very well, that this demand loan was an interim loan, pending larger and larger operations. We had given our participants the expectation that this loan was going to be paid off by advances from the American Treasury. Then in a very short space of time, prior to that date, we found that that was inaccurate. We had a very strong moral responsibility to do something about liquidating these banks, the sixty-odd banks which were carrying this very large amount of money, and they were expressing a desire to subscribe to Liberty Loans and our own Treasury needs and, obviously, they were concerned as to what was going to happen about this loan, which they had expected to be paid, and which all the time up to our entry into the war had been paid off and renewed and had gotten up to a point where it was static.

Mr. **Brown.** Except in February.

Mr. **Whitney.** Except, as we testified once before, the banks were all paid off, but we were not.

Mr. **Brown.** For 2 days.

---

[1] See also "Exhibit No. 4116", Hearings, Part XXXII.

Mr. **Whitney**. A few days, certainly, but they were paid off, but so far as they were concerned, every one of the previous refunding operations had cleaned them up on this loan. The pressure was that in the space of 3 days we found instead of getting paid July 2, they have got a participation in $375,000,000, let us say, on a loan which they do not see any immediate way of paying except by recourse to the collateral, and we were in the position of having to deal with them and having a very heavy moral responsibility as to what we were going to do to try to clean up this loan, by reason of the fact that the American Treasury obviously was financing and the banks wanted to do everything that they possibly could do. And that is what runs through all these cables, and it involved the greatest possible urgency on our part to try to clean up this frozen situation. The pressure here is a pressure on us to make good on what we led our participants to believe would happen July 2.

Mr. **Brown**. Would not that apply to the condition of the loan on April 6 equally?

Mr. **Whitney**. April 6?

Mr. **Brown**. The loan on April 6 was like any other funding loan had been.

Mr. **Whitney**. I suppose you mean about April 6, because the Canadian Pacific situation went off afterward.

Mr. **Brown**. You testified that those would not liquidate it.

Mr. **Whitney**. There were plans which would have liquidated it. You must remember during the first few months of the war that everything was in an unsettled state and everything was waiting on the needs and desires of our own Treasury.

Mr. **Brown**. That was after April 6, Mr. Whitney.

Mr. **Whitney**. Surely.

Mr. **Brown**. Here is a loan for which there was no visible liquidation. There were various proposals, none of which culminated, and which you testified would take a great deal of time, and the loan is carried right on up to April 6, and no concern is felt in February or March, whether or not the loan is good, but in July, when the United States declines to pay it off, great concern is felt.

Mr. **Lamont**. If you will examine the cables in February and March, you will see, as Mr. Whitney said, that the plans were to clear that off by the various methods referred to, London Municipals and Canadian Dominion collateral, $200,000,000, or something like that. There was to be another U. K. loan against the Dominion securities. Our principals were unquestionably concerned and informed by us from time to time as to what the plans for financing were.

Mr. **Brown**. Let us put it crudely. I do not see what your point is exactly. Did you have any expectation in February and March that the United States would come into the war after diplomatic relations had been broken and would liquidate the loan?

Mr. **Lamont**. No; certainly not. Read the cables. The cable record states it very clearly.

Mr. **Brown**. You might have thought something, Mr. Lamont, without writing it in a cable.

Mr. **Lamont**. The way we felt was the way the whole country felt. Undoubtedly, when von Bernstorff was given his passports, that put the whole country on notice that a serious situation was approaching.

The fact that we deliberately planned further financing right up to the verge of America getting into the war——

Mr. **Brown**. Mr. Lamont, the record does not show that that financing was ever big enough to take care of the loan.

Mr. **Lamont**. Mr. Brown, you must do one step at a time.

Mr. **Brown**. The loan never stood still, Mr. Lamont, and you got a little, but it grew faster than you could refund it.

Mr. **Lamont**. I do not see your point. That loan at its height, at its highest point, was secured, somewhat after that, by collateral, equal to almost twice the amount of the loan, over one-half of which was American collateral.

Mr. **Brown**. We have been over the collateral, and supposing we move on.

Mr. **Whitney**. Mr. Brown, one thing. In June, of course, the First Liberty Loan had been issued, had it not?

Mr. **Brown**. Yes, sir.

Mr. **Whitney**. And the banks, who were participants in this, had subscribed in a very large way to that loan, so that they had other needs for funds in July, which they did not have in April. That is perfectly obvious, is it not?

Mr. **Brown**. Yes, I imagine that was a factor in it.

I offer cable No. 38679, of July 3, 1917.

(The document referred to was marked "Exhibit No. 2802" and is included in the appendix on p. 9238.)

Mr. **Brown**. That cable reads in part as follows [reading]:

> 47404 communicated to the Chancellor of the Exchequer. He expresses great surprise that it should be necessary so quickly to make provision to liquidate the call loans. He hopes that Lord Northcliffe and Sir Hardman Lever may be able to persuade the authorities Washington, D. C., to make the repayment which you expected.

I offer cable no. 38681 of July 3, 1917, which needs no comment.

(The document referred to was marked "Exhibit No. 2803" and is included in the appendix on p. 9239.)

Mr. **Brown**. I offer cable no. 47445 of July 3, 1917, which needs no comment.

(The document referred to was marked "Exhibit No. 2804" and is included in the appendix on p. 9239.)

Mr. **Brown**. I offer cable no. 47446 of July 3, 1917.

(The document referred to was marked "Exhibit No. 2805" and is included in the appendix on p. 9239.)

Mr. **Brown**. That cable reads in part as follows:

> You can readily appreciate that we would do anything in our power to avoid causing the slightest embarrassment to you or the Chancellor or your Government. We fully recognize that the failure to receive the expected payment of $400,000,000 is in no way the fault of the British Government, but that does not alter the fact that, having been told more than 2 months ago that the payment would be made, all our arrangements since that time necessarily have been based upon that understanding. We have had to contend with serious difficulties. Owing to semiannual settlements and large payments for Liberty Loan, our own deposits have decreased over $100,000,000 * * * In order to avoid requesting the British Government to pay off any part of the loans, we have met these calls ourselves and in order to do so and provide for our own decrease in deposits, we have used our own personal credit.

I offer for the record a cable from Ambassador Page to Secretary Lansing, dated June 28, 1917.

(The document referred to was marked "Exhibit No. 2806" and is included in the appendix on p. 9240.)

Mr. **Brown**. That letter reads in part as follows [reading]:

> Mr. Balfour asked me to a conference at 7 o'clock with him, the Chancellor of the Exchequer, and their financial advisers. It was disclosed that financial disaster to all the European Allies is imminent unless the United States Government advances to the British enough money to pay for British purchases in the United States as they fall due.

Down at the bottom of the same letter it states [reading]:

> He authorizes me to say that they are now on the brink of a precipice, and unless immediate help be given financial collapse will follow.

Mr. **Lamont**. Mr. Brown, may I ask for our information, are you planning to read into the record cable no. 47482, of July 5, because Mr. Morgan's cable there comments on the situation described in the cable of which you have just read a part?

Mr. **Brown**. Yes; we are coming to that.

Mr. **Lamont**. Thank you.

Mr. **Brown**. Then I offer for the record a cable dated July 5, 1917, from Ambassador Page to Secretary Lansing.

(The document referred to was marked "Exhibit No. 2807" and is included in the appendix on p. 9240.)

Mr. **Brown**. That cable reads in part as follows [reading]:

> Late yesterday I attended a financial conference, to which I was called, of the Prime Minister, the Chancellor of the Exchequer, the Foreign Secretary, the Governor of the Bank of England, and their advisers about the $400,000,000 overdraft which the British Government owes Morgan. They informed me that on April 6, Spring-Rice telegraphed that he had received a definite promise that this sum would be paid the British Government to meet this overdraft and that it should be the first call on the Liberty Loan. They say also that on April 9 the Governor of the Bank of England received the same promise from Mr. McAdoo. * * * The conference asked me to report the foregoing and to express the hope that this sum would be speedily paid. * * * I promised to send you this telegram and I suggest that Mr. McAdoo's understanding of the matter be telegraphed me with whatever assurance he may give of the payment of this overdraft and the date when its payment may be expected.

I offer, without comment, in regard to the transfer of loan 1 and loan 2, cable no. 38682 of July 3, 1917, and cable no. 38690 of July 3, 1917.

(The documents referred to were marked "Exhibits Nos. 2808 and 2809" are included in the appendix on p. 9241.)

Mr. **Brown**. I offer cable no. 38691, also of July 3, 1917, from E. C. Grenfell for J. P. Morgan, which reads as follows:

> Refer to my cable 38690. For your confidential information the transfer of so large an amount of gold for no. 1 account will have bad effect. If, therefore, you find Washington willing to change its attitude and make repayment all or part of no. 1, I would ask you to avail as little as possible of transfer of Ottawa gold for no. 1. E. C. Grenfell.

(The document referred to was marked "Exhibit No. 2810" and appears in full in the text.)

Mr. **Brown**. I offer, to complete the Bank of England transactions, cable no. 38786 of July 6, 1917, and cable no. 38708 of July 5, 1917.

Mr. **Lamont**. Did you say no. 47482?

Mr. **Brown**. No, not yet. Also I offer cable no. 38709 and cable no. 47472.

(The documents referred to were marked "Exhibits Nos. 2811, 2812, 2813, and 2814", respectively, and are included in the appendix on pp. 9241 and 9242.)

Mr. **Brown**. We will come to cable no. 47482 of July 5 from Mr. Morgan to Mr. Grenfell. I offer that for the record.

(The document referred to was marked "Exhibit No. 2815" and is included in the appendix on p. 9243.)

Mr. **Brown**. That cable reads in part as follows [reading]:

> Returned this morning and have read cable correspondence from June 28. Sir Hardman Lever goes to Washington tonight; will undoubtedly clear up situation in talk with Secretary of Treasury tomorrow. We will endeavor to keep you fully informed. Meanwhile there is no financial situation between us and Washington. Our financial situation is with British Government's representatives here and it is they who must adjust all questions with Washington. Am enormously impressed with courage and firmness of Lord Cunliffe as shown in your 38690, but we do not wish to avail ourselves of this unless it should be necessary. We shall be entirely satisfied to know gold is in Ottawa and available if we need it and trust that we shall not be forced to call for actual shipment which we should regret from many points of view. Should the American Government now make up its mind that it will not help in paying off this loan, we believe there are various methods which can be applied which will provide enough money and at the present time there is no pressing need for the payment here. Even if it should be necessary later to sell part of the collateral we will not sell it in a hurry nor in such a way as to get less for it than we ought to and, of course, nothing will be done except in consultation with British Treasury agents here.

Mr. **Brown**. The tone of that cable seems to be far more optimistic than the earlier ones, part of the picture about which there seems to be a misunderstanding here. Why was there no pressing necessity on July 5, Mr. Lamont, if it had been pressing on July 2?

Mr. **Lamont**. Perhaps that represents a different point of view. The cable that you read before was from one of the partners, who perhaps had been in contact with some of these banks, and—I do not know—felt the pressure of the thing. Then Mr. Morgan returns from a holiday, as is shown by the record, and he looks over the situation, and he takes apparently a more serene view of it and says it is all right. That is about all there is to that.

Mr. **Morgan**. The payment for the first Liberty Loan had been made by this time, and the pressure on the money market of the transfer of so much funds had lessened very much. It had gotten itself adjusted which made my point of view more natural than it would have been for me to get the same while they were suffering from the shock, and the pressure on the money market of the Liberty Loan was added to that. It made them feel that they had to do something right off quick.

Mr. **Brown**. In other words, the loan was a great burden, but not an impossible one.

Mr. **Morgan**. That is a very good statement of it.

Mr. **Brown**. I offer cable no. 38795, which is the answer to the foregoing, dated July 6, 1917, from Mr. Grenfell.

(The document referred to was marked "Exhibit No. 2816" and is included in the appendix on p. 9243.)

Mr. **Brown.** I wish to read only one sentence:

> We hope shortly to hear that the United States Government have agreed to pay off loans nos. 1 and 2.

I offer for the record a letter from Secretary McAdoo to Secretary of State Lansing, dated July 9, 1917.

(The document referred to was marked "Exhibit No. 2817" and is included in the appendix on p. 9244.)

Mr. **Brown** (reading):

> It is true that the Secretary of the Treasury did not know that there was danger that the ability of His Majesty's Government to effect payments in America would be in jeopardy; nor could the Secretary of the Treasury, without far more complete and detailed information than has been furnished him by the financial representatives of the British Government, have been aware of this. The Secretary of the Treasury has received the information contained in the note of the British Ambassador with the gravest concern.

Mr. **Leffingwell.** Are you going to put in that whole letter?

Mr. **Brown.** I am entering the whole letter for the record, Mr. Leffingwell.

In line with Mr. McAdoo's concern to have things more or less clear, as we have seen in the morning session, I call attention to this sentence [reading]:

> It is to be regretted that general expressions of good will and a general discussion of the needs of foreign governments, and of the possibility of the United States Government's meeting these needs, should have been construed as positive undertakings on the part of the United States to meet requirements which had not been stated in definite terms.

Further on in the letter is a definite refusal to pay.

> If, from what the Ambassador says with reference to these matters, it is to be inferred that the British Government desires to look to the United States not only for the advances indicated in the communications referred to under date of May 3 and May 29 but in addition thereto for whatever sums may be necessary to pay off maturing indebtedness of the British Government in the United States though incurred before the entrance of the United States into the war, the Secretary of the Treasury regrets that he can give no assurances in this respect.

I offer for the record a letter from Lord Northcliffe to Mr. Morgan, dated July 12, 1917, repeating that Mr. McAdoo declined to pay the loan.

(The document referred to was marked "Exhibit No. 2818", and is included in the appendix on p. 9246.)

Mr. **Brown.** I offer for the record another letter unsigned, from one of the partners of J. P. Morgan & Co., to Lord Northcliffe, on July 13, 1917, in which the next to the last paragraph is pertinent here reading [reading]:

> Should the American Treasury not wish to advance you the money to take up the whole demand loan, we would suggest that the British Government be permitted by the American Government to reestablish the balance of the loan in such a way that it shall have a definite due date. This can only be done by the issue of some security in the New York market, which, if the market would take it, would enable you to pay off the balance of the demand loan.

(The document referred to was marked "Exhibit No. 2819" and is included in the appendix on p. 9246.)

In other words, there was a possibility at that time of floating another British secured loan on the American market to take up the demand loan.

Mr. Leffingwell. Does that say that?

Mr. Morgan. If the Treasury permitted.

Mr. Brown. Which Treasury, Mr. Morgan, the British or the American?

Mr. Morgan. Our Treasury.

Mr. Brown. If the American Treasury permitted?

Mr. Morgan. Yes.

There was likelihood of floating another secured loan on the American market.

Mr. Whitney. If the market would take it.

Mr. Morgan. If the market would take it. It was pretty well guarded.

Mr. Brown. I offer for the record cable no. 47701 of July 13, 1917, which needs no comment.

(The document referred to was marked "Exhibit No. 2820", and is included in the appendix on p. 9248.)

Mr. Brown. I offer for the record a long letter, unsigned, from one of the partners of J. P. Morgan & Co. to Lord Northcliffe, dated July 19, 1917, in which the same situation is outlined in more detail.

(The document referred to was marked " Exhibit No. 2821 " and is included in the appendix on p. 9248.)

Mr. Brown. Paragraph 1, toward the end of the letter [reading]:

> By the issue and sale of British Government short-time notes, secured by collateral. The extent to which this would be practicable, no doubt, would depend very largely upon our own Government's requirements from our money markets.

In regard further to the transfer from loan no. 1 to loan no. 2, I offer cable no. 47952 of July 23, 1917.

(The document referred to was marked " Exhibit No. 2822 " and is included in the appendix on p. 9251.)

Mr. Brown. I also offer cable no. 49272 of August 2, 1917. This is a month after, apparently [reading from "Exhibit No. 2823"]:

> As no satisfactory solution of the matter had been made, T. W. Lamont, with the approval of Lord Northcliffe, conferred at length Monday in Washington with Secretary of the Treasury. He was cordial and cooperative in desires expressed, but explained that the demands of Allies upon Treasury were such that it had no funds available to turn over for prompt liquidation of present demand loan, either in whole or in part.

(The document referred to was marked " Exhibit No. 2823 " and is included in the appendix on p. 9251.)

Mr. Brown. There is nothing of importance there until on the second page of the cable.

Mr. Lamont. You are reading into the record the whole cable?

Mr. Brown. The whole cable is entered on the record [continuing reading from "Exhibit No. 2823"]:

> As a second measure, we are discussing among ourselves the possibility of making a comparatively early issue of $200,000,000, 1-year British Treasury notes, secured by collateral now under demand loan and convertible like the last British issue, into 20-year bond—our idea being to try to get present banks and ourselves, who are carrying demand loan to underwrite substantial portion of this note issue, if not the whole of it, on the theory that if the notes do not sell to the public, these institutions will be little if any worse off than

now, and if they do sell, they will be better off to the extent of such sales. We could hardly hope to put out such notes so that the interest cost to British Treasury would be less than 8 percent per annum. Even this, however, we should consider preferable to present unsatisfactory and somewhat dangerous position of loan. Frankly, we have been much disappointed in the sale of $100,000,000 Dominion of Canada issue, see our no. 47895, and we may find it unfeasible to develop foregoing suggestion.

Further along it says [reading]:

> Secretary of the Treasury has given his tentative approval to our suggestion of a 1-year-note issue, and today we discussed with him our suggestion of short-term Treasury bills in event 1-year notes were not feasible. He has reserved his decision on this suggestion, but we shall keep in touch with him.

I enter into the record a memorandum from which an extract was read this morning.[1] It is a memorandum of the conversation at the Federal Treasury on Monday, July 30, 1917.

(The document referred to was marked "Exhibit No. 2824" and included in the appendix on p. 9252.)

Mr. **Brown**. The only point relevant here is paragraph (F) [reading]:

> The Secretary then asked whether we thought we could get up a note issue. I told him that that too we had been discussing and would do our best to work out practical suggestions, keeping in touch with him. In this connection, let me add that on the subsequent day, July 31, I talked with Crosby on the phone, explained that we were considering a 1-year convertible note, and were doing all we could to carry out McAdoo's and his ideas both on a note issue and on selling collateral. Crosby said that that met their hearty approval.

In other words, there was the suggestion of a $200,000,000 secured note issue, which was approved very definitely by the American Treasury, is not that correct. Is not that a correct interpretation of these notes?

Mr. **Lamont**. Approved?

Mr. **Brown**. Approved by the American Treasury.

Mr. **Whitney**. They approved the idea, but 2 days later Mr. Lamont says here on the next line, he told them it was not practical.

Mr. **Brown**. I am coming to that.

I offer for the record a letter to Mr. McAdoo dated August 3, 1917, from Mr. Lamont.

(The document referred to was marked "Exhibit No. 2825" and included in the appendix on p. 9254.)

Mr. **Brown** (reading):

> As I told Mr. Crosby over the telephone the other day, we are working on both the suggestions that you made to me in Washington, namely, first, the disposition, as rapidly as the market will absorb the securities without depressing it unduly, of collateral.

Further along [continues reading]:

> Second, the question of a 1-year collateral British note issue, convertible into a longer term bond.

Then, further down [continues reading]:

> As yet, however, we have not received much encouragement upon the latter plan.

Mr. **Whitney**. That whole letter is in, but, of course, the bulk of the letter is about Treasury bills.

---

[1] See supra, p. 8991.

Mr. **Brown.** Yes; I am coming to the Treasury bills in a moment. I am entering the whole letter.

I offer for the record cable no. 40419, and also cable no. 40420, both of August 3, 1917.

(The documents referred to were marked "Exhibits Nos. 2826 and 2827", respectively, and are included in the appendix on p. 9255.)

Mr. **Brown.** I read from "Exhibit No. 2827":

> Referring to my 40419, it appears that Sir Hardman Lever has sent long cable to Chancellor of the Exchequer giving his views on the financial situation with you, and hinting that there was possibility that certain repayments might be made to you out of the savings on the amounts allotted by McAdoo for British requirements during coming months. He also mentions that certain sums might be repaid by Russia out of the amounts coming to that country from Washington.

I think that is the question that Mr. Rathbone and Mr. Leffingwell will be able to answer. That was not a procedure that was viewed with favor by the Treasury, was it, to effect savings out of amounts allotted and applied in some other way?

Mr. **Leffingwell.** I am not sure that I understand that, Mr. Brown.

Mr. **Lamont.** This is a cable from London, reporting at second hand something that was said to them by somebody else.

Mr. **Brown.** The views of the Chancellor of the Exchequer are what are being quoted.

Mr. **Rathbone.** The Treasury never authorized or expected that. As I tried to explain this morning, the money when we lent it was theirs to do with as they pleased, but if any money that we had advanced for purchases in the United States had been applied by the British Government to make any payment on account of the so-called Morgan overdraft, we would have had a very serious and acrimonious discussion with Hardman Lever as soon as we had gotten the report showing that that had been done.

Mr. **Brown.** Not only just the application specifically to the demand loan, but any such saving would have been disapproved of?

Mr. **Rathbone.** What I mean by that is that he had $10,000,000 to pay on this contract or that contract for food, steel, or one thing and another, and he found he did not have to pay so much right away, and if he could save something, that apparently this was the suggestion, he would apply it on the overdraft.

Mr. **Brown.** Whereas the Treasury's idea was that if he saved anything that was to be taken into consideration in his next demand for a further advance?

Mr. **Rathbone.** Certainly.

Mr. **Leffingwell.** I think there is something in there about that suggestion in regard to Russia, which is different, is it not?

Mr. **Rathbone.** Yes.

Mr. **Leffingwell.** Am I not right in thinking that in that regard there was presented by the British Government a suggestion that at the time the United States entered the war they should assume the responsibility of the Russian contracts and relieve the British Government of those contracts, and there was a question about a set-off of a credit due to England which in the last analysis the American Treasury rejected in regard to those Russian contracts.

Am I mistaken about that?

Mr. **Rathbone**. Of course, this was before I was in the Treasury. I always thought that the attitude we took toward Great Britain in regard to the Russian contracts was a little out of line on our attitude on different questions. I think it may be true that we advanced money to Russia to repay Great Britain the amounts that Great Britain had spent on her behalf in the United States until the Kerensky government fell.

After that we took a rather arbitrary, possibly a little unfair, position, and did not relieve the British Government from the contracts that they had made for the benefit of Russia.

I think that is referred to in the article in Foreign Affairs that was put in evidence this morning.[1]

Mr. **Leffingwell**. In other words, that sentence which refers to Russia, they might well at that time have thought that question was under consideration.

Mr. **Rathbone**. It might have been thought it was allowed for.

Mr. **Leffingwell**. But it was disallowed, was it not?

Mr. **Rathbone**. I am not sure, whether, before the Russian Government fell, it was or not. It was before my day in the Treasury.

Mr. **Brown**. Just to get the record straight on this point, I will offer a group of cables and letters, and to establish it for the record, an issue of Treasury bills, with 90-day maturities was brought out was it not, approximately $200,000,000 of it kept afloat, and the proceeds applied to reduce the demand loan?

Mr. **Whitney**. It was never to have been more than $150,000,000, and we never got up to that. $120,000,000 was the top.

Mr. **Brown**. $120,000,000, roughly, was kept afloat, and the proceeds applied to the demand loan.

To complete the record, I offer the following documents:

Letter from Secretary McAdoo to Mr. Lamont, dated August 13, 1917.

Letter from Mr. Morgan to Secretary McAdoo dated August 16, 1917.

Cable No. 49662, of August 16, 1917, from Morgan, New York to Morgan, London, for E. C. Grenfell.

Letter from Secretary McAdoo to Mr. Morgan, dated August 20, 1917.

Letter unsigned from Morgan & Co., to Mr. McAdoo, dated August 21, 1917.

Letter, presumably to the members of the syndicate organized for the distribution of the Treasury bills, from J. P. Morgan & Co., dated August 22, 1917.

Letter from Secretary McAdoo to Mr. Morgan, dated August 23, 1917.

Press release of Secretary McAdoo on August 23, 1917.

Letter from Sir Hardman Lever to J. P. Morgan & Co., dated August 23, 1917.

Letter from Mr. Morgan to Secretary McAdoo, dated August 24, 1917.

I think that completes that.

(The documents referred to were marked "Exhibits Nos. 2828 to 2837", inclusive, and are included in the appendix on pp. 9255 to 9259.)

---

[1] See "Exhibit No. 2781", appendix, p. 9207.

Mr. **Rathbone.** May I make that Russian situation clear?

Mr. **Brown.** Please do so.

Mr. **Rathbone.** I would like to read this extract from the article mentioned:[1]

> Before we entered the war our manufacturers had quite generally refused to enter into contracts to supply commodities to Russia unless they received some assurance that Russia would make the payments she obligated herself to make under the terms of the proposed contracts. Great Britain supplied the credit required by our manufacturers on Russian orders and in effect guaranteed the payments which Russia obligated herself to make under such contracts. After we entered the war, we, from time to time, loaned to Great Britain and not to Russia, the dollars required to make the payments under these contracts as they became due, because the obligation was incurred by Great Britain before we entered the war. Thus Great Britain was called upon to pay and did pay out dollars we loaned to her (not to a very significant amount in comparison with the aggregate of our loans to Great Britain) in discharge of her old obligation of guaranty under these Russian contracts. To some extent Great Britain recouped these expenditures through the utilization or disposition of material delivered under such contracts, but on balance some small part of our dollar loans to Great Britain was for the purpose of meeting obligations in the United States entered into by Great Britain before we entered the war, but which were settled after we entered the war, and not for the direct benefit or use of Great Britain but for the use and benefit of Russia.

That is set out as an exception to our general policy of the Treasury, that we would make the loan to the country that got the materials. That is, we did not take into account whether it was more popular to lend to France or Great Britain, as it was in the early days of the war, or whether an Italian obligation was a better asset to have in our portfolio than, say, a British obligation. We dismissed those things. We lent and tried to lend to the country that got the materials. This Russian situation was an exception to that general rule.

Mr. **Brown.** Just closing up this Treasury bill episode, those were unsecured, were they not, Mr. Lamont?

Mr. **Lamont.** Oh, yes; straight Treasury bills.

Mr. **Brown.** I offer a letter from Mr. Crosby to Secretary McAdoo, dated August 20, 1917, of which the last sentence in the first paragraph reads:

> There would be one advantage, however, in having it free, namely, that the British Government, by having free collateral, would be able to meet some of the various emergencies which are constantly arising.

(The document referred to was marked "Exhibit No. 2838" and included in the appendix on p. 9259.)

Mr. **Brown.** Do you think that is a correct assumption of Mr. Crosby's there, that those collateral securities could be used either under a note issue or for sale? Is that what he presumably had in mind in being glad to obtain some free collateral for the British?

Mr. **Lamont.** I cannot speak for Mr. Crosby.

Mr. **Brown.** Mr. Leffingwell, do you recall that incident in the Treasury, whether British Treasury bills were secured or unsecured?

Mr. **Leffingwell.** I do not remember that.

Mr. **Brown.** I offer for the record cable no. 49688 of August 17, 1917, from J. P. Morgan to E. C. Grenfell, after the Treasury bill matter was fairly well settled [reading "Exhibit No. 2839"]:

---

[1] Ibid.

You will understand that the issue of Treasury bills 49662 does not at all preclude the idea of a secured note for a longer time a little later on when the market for that kind of security becomes reasonably good again.

(The document referred to was marked "Exhibit No. 2839", and appears in full in the text.)

Mr. BROWN. I offer for the record, cable no. 40742, dated August 20, 1917, from Morgan, London, to Morgan, New York:

Following for Sir Hardman Lever from Chancellor of the Exchequer:

Your telegram 2211 of August 16. I accept your views as to inadvisability of issue at present of British notes. I concur in proposed Treasury bills scheme.

(The document referred to was marked "Exhibit No. 2840" and included in the appendix on p. 9260.)

Mr. BROWN. In other words, Mr. McAdoo and Mr. Crosby had accepted the idea of a secured British note issue and Sir Hardman Lever and the Chancellor of the Exchequer, the British Treasury, in short, turned the idea down after J. P. Morgan & Co. had found it impracticable.

Mr. WHITNEY. Oh, no; you have to read into the record—you said it was in—the fact that a day later we called them up and said it would be an 8-percent basis to the British, then said we had no encouragement, and Mr. Lamont advised Mr. McAdoo that it was impractical.

I said the balance of the letter had to do with Treasury bills. It is right in that letter. Mr. Lamont said that we got no encouragement, and therefore suggested we ought to go to the Treasury bills. Neither of them turned it down. It was a question of the impossible to do.

Mr. BROWN. This cable says, "I accept your views as to inadvisability of issue." That is, Sir Hardman Lever agreed with you it was inadvisable. But a day or two before the American Treasury had considered it——

Mr. WHITNEY. Three weeks before.

Mr. BROWN. Oh, I beg your pardon.

Mr. WHITNEY. May I read that cable?

Mr. BROWN. Please do.

The CHAIRMAN. What is its date?

Mr. WHITNEY. In that memorandum of Mr. Lamont's of his talk with Mr. McAdoo and Mr. Crosby, it says in paragraph (F):

The Secretary then asked whether we thought we could get up a note issue. I told him that that, too, we had been discussing, and would do our best to work out practical suggestions, keeping in touch with him. In this connection, let me add that on the subsequent day, July 31, I talked with Crosby on the phone, explained that we were considering a 1-year convertible note, and were doing all we could to carry out McAdoo's and his ideas both on a note issue and on selling collateral. Crosby said that that met their hearty approval. Further, in this connection, on Thursday, August 2, I talked with McAdoo over the phone again and explained our fear that a 1-year note issue might not be practical, and suggested British Treasury bills (please refer to our letter to the Secretary of this date, also our cable to Mr. Grenfell of London of Aug. 2).

In other words, it was away back on August 2 that we had told the United States Treasury that we did not believe we could do a 1-year note.

Mr. **Brown.** The point, Mr. Whitney, I think is this: That the indication has been given in the testimony that it was the American Treasury that said, "Keep out of the market; we want it for the Liberty bonds." The record here seems to indicate that at first, at any rate until possibly conditions were made clear to them, no doubt——

Mr. **Whitney.** There is no doubt whatever the American Treasury approved the 1-year notes, if we could have done it.

Mr. **Brown.** The British Chancellor of the Exchequer did not.

Mr. **Whitney.** No; excuse me. We told our Secretary we could not do it, and Sir Hardman Lever, who was the Chancellor of the Exchequer's representative, advised him—because, obviously, the British Government would have preferred just as an academic question to put out a 1-year note rather than a 90-day bill.

I do not have Lever's note to the Chancellor, but undoubtedly he told him it was not a practical situation. He did not turn it down, he just agreed with Lever that it was inadvisable.

Mr. **Leffingwell.** I think I can help a little about the Treasury's policies:

There are two kinds of preemption. One is the unauthoritative preemption of the market by the mere fact of the vast issues of Liberty Loans that took place as a matter of fact with the First Liberty Loan, and to a very large extent those Liberty Loans controlled the bond market and absorbed something more than all the investors' funds in the country from the time of the declaration of war until considerably after the Armistice. That was something automatic. Assuming the Treasury of the United States was determined to exercise the sort of policies it could hope to put through in relation to the financing of the war and to avoid inflation, that meant that the Treasury was going to sell all the bonds it could and raise all the taxes it could, and that combination of all the bonds and all the taxes amounted to considerably more than all the savings of the American people. That was the kind of preemption that arises from the facts without any Treasury decree.

Treasury policy as distinguished from the mere fact of these great bond issues and these great taxes, developed gradually over the period from the declaration of war in a series of steps, and you will find that in the summer the Treasury is so concerned with the gravity of the demands made upon it by the Allies, not merely by Great Britain but by all the Allies, the immensity of the sums that the Allies conceived were essential to their purposes in connection with the war, that it was of some concern to see how these problems could be put off, problems of maturity and problems of this and that.

The Treasury had towards the fall and early winter admonished the people who brought in foreign government bond issues and declared it would not tolerate even to the nationals of France an issue of French bonds. That came along in the fall.

Then about the 10th of January the Secretary of the Treasury took another step, and he assumed an affirmative preemption of the capital market and asked the Federal Reserve Board, pending the action of Congress, to visé all capital issues that came into this market. That was done about the 10th of January.

Then about some time in April, in the War Finance Corporation Act, on the recommendation of the Secretary of the Treasury, a Capital Issues Committee was created by act of Congress. That confirmed and strengthened the measures that were taken in January. That Capital Issues Committee offered to supervise all issues that came into this market.

That, of course, was supplemented by the Treasury's supervision of the financial policies of the Allies.

I have been trying from my memory to think back over those times and give you as good an answer as I can, and I believe that is about the way the thing developed, as to the preemption that followed as a matter of fact from the enormous loans and taxes the Government itself was floating and the semiauthoritative preemption by the Capital Issues Committee which was created by the Federal Reserve Board at the request of the Secretary, and the further preemption by the act of Congress in April. I think it developed something like that.

Mr. Brown. Thank you, Mr. Leffingwell. I think the point of interest here is, this is the first of several suggestions, let us say, of the American Treasury, that there might be some refunding, from operations on the American market by the Allies direct.

And this, like all the others, until after the armistice, was found impossible by reason of money-market conditions.

I think the thing that is of interest to the committee is that right at the instant of our entry into the war it was discovered that the financial markets were in such shape, not only by reason of the war, but I think by reason of the financing that had gone on before—is not that a fair statement—that it would be impossible to do anything but carry the whole burden on the American Treasury?

Mr. Leffingwell. It really arises, more than anything else, from the immense war effort that the American people themselves made and the American Congress and the American Army and Navy, because our total expenditures during the war period were almost $40,000,000,000, and of that amount about $10,000,000,000 were loans to the Allies. Then you can say that the demands upon our people, on our resources in taxes and loans, were in proportion of 3 to 1, for ourselves and the Allies, the total being $40,000,000,000. I think that it is approximately what happened. Our entry into the war was the dominating factor in the bond market.

Mr. Brown. At this time $40,000,000,000 was not in the market. It was only $2,000,000,000 of the First Liberty Loan.

Mr. Leffingwell. Don't say "only $2,000,000,000", Mr. Brown, because I was there and I remember that it did not seem like "only" at all.

Mr. Brown. At that time the market was perhaps half and half preexisting Allied obligations and the Liberty Loan?

Mr. Leffingwell. When the United States entered the war, the public debt was perhaps $1,000,000,000, and when the Secretary of the Treasury sent for all the people who knew about those things and asked their advice about the First Liberty Loan, I think the highest man among the bankers of America said he could do $500,000,000 and no more. And he went out to get $2,000,000,000 and he got it. That is what I mean by preemption in fact. He got $2,000,000,000 when the best opinion was that half a billion was all he could do. That was preemption in fact.

Mr. **Brown**. There is just one other point, that this, however, was a refunding issue. It was not a proposal to go out and get new money, as Mr. McAdoo had had to do. It was, as Mr. Lamont's cable explained, the attempt to go to the banks that already held this loan and say, "Take an issue with a definite date of maturity instead." And it was found impossible for the market to take even that.

Mr. **Leffingwell**. About that time I suppose we were all engaged in the preparations for the Second Liberty Loan, which came early in the fall. The process of raising $3,000,000,000 then was already being presented to the bankers of the country. I have no doubt that they had to take into account in connection with any operation which truly in fact was a refunding of an old issue, the fact that their clients, their depositors, their investors, and all the people they knew with any money or any power to borrow money were going to be immediately subjected to an appeal from the Treasury of the United States to buy Liberty bonds again.

There is one further thing I want to say to you about that preemption, just to clear up the record. I do think the Treasury was always more tolerant about the renewal of Treasury bills that did not involve a public issue. I imagine that that authoritative preemption did not extend to Treasury bills; in many cases I think the Treasury encouraged the renewal of Treasury bills as far as that was practicable for quite a long period after the other preemptions were made pretty effective.

Does what I say accord with your recollection?

Mr. **Rathbone**. Yes.

Mr. **Lamont**. Of course, Mr. Brown, too, it became clear, did it not, that the cost to the British Government would be about 8 percent on this secured-loan issue, that a loan issued at a high rate would manifestly interfere with Secretary McAdoo's operations in the Liberty Loan matter, and that was a very prime consideration?

Mr. **Brown**. The only point I was trying to make, Mr. Lamont, was this: The tremendous involvement of the market, which made it essential that all the strain be carried on the Treasury. Of course, as events turned out, that was a very unfortunate strain, because if that issue had been refunded into a longer-term bond it would have had to have been paid, and if it had been paid by Treasury advances, the Treasury advances should still be outstanding in the war debts. Is not that a fair assumption?

Mr. **Whitney**. There are three or four assumptions in there that may be pretty fair.

Mr. **Brown**. I offer cable no. 49765 of August 20, 1917, from Morgan to the Chancellor of the Exchequer, from Lever.

(The document referred to was marked "Exhibit No. 2841", and is included in the appendix on p. 9260.)

Mr. **Brown**. I offer cable no. 49766 from J. P. Morgan to E. C. Grenfell, under date of August 20, 1917.

(The document referred to was marked "Exhibit No. 2842" and is included in the appendix on p. 9260.)

Mr. **Brown**. I offer cable no. 44102 of October 23, 1917, from Morgan, London, to J. P. Morgan in New York.

(The document referred to was marked "Exhibit No. 2843" and is included in the appendix on p. 9261.)

Mr. **Brown**. I offer a letter from Mr. Morgan to Mr. Grenfell, dated November 2, 1917.

(The document referred to was marked "Exhibit No. 2844" and is included in the appendix on p. 9261.)

Mr. **Brown**. Only one paragraph is relevant [reading]:

> As regards finances, we have been wholly unable to find any drastic and thorough-going way of reducing the call loan. Both Reading and Northcliffe have done their best with our Government people, but they have not been able to make much impression. We are, however, continuing to sell very quietly and without hurting the market, and have been quite successful even in the bad times now upon us, so that the loan is very gradually—much too gradually—being reduced. The British Government now keeps with us a very satisfactory balance which it has not allowed to run down for some little time, and everyone is working with the best feeling in the matter. There are two places where the British Government may receive quite large sums:
>
> (1) From the payment for ships taken from them, which should come very soon, and
>
> (2) From the possibility of either France or Russia getting a large advance and using it to pay off some of their indebtedness to the United Kingdom, in which case the United Kingdom would pay us the amount so received in reduction of the loan.

Mr. **Rathbone**. May I say one thing about your suggestion of selling 1-year maturities?

Of course, if the British Government had sold 1-year notes—secured notes or unsecured—and applied the proceeds towards the reduction of the demand loan, at the end of a year the Treasury would have been confronted with the necessity of either letting the British Government default on its obligations in America during the war—which was unthinkable—or lending the money to take them up.

It was much better for the Treasury to let the demand loan stay as it was, because we did not make advances to pay anything on the demand loan. We did not let them sell the collateral to liquidate the demand loan for a considerable time, until they did it in a way that the Treasury could approve without hurting the market, and we did not let them pass it out in the hands of the public. It was much better for us to let it stay there.

Mr. **Brown**. I think with that question we can take up very well the September and February maturities. Those large balances, by the way, of course, were from Treasury funds, were they not?

Mr. **Lamont**. What large balances?

Mr. **Brown**. These large balances that Mr. Morgan is mentioning.

Mr. **Lamont**. He does not mention "large balances", Mr. Brown, if you will excuse me for correcting you.

Mr. **Brown**. Satisfactory balances.

Mr. **Lamont**. Satisfactory balances.

Mr. **Brown**. Which was about how much, do you recall?

Mr. **Lamont**. I have not the slightest recollection.

Mr. **Rathbone**. On the question of balances, that was the trouble that the Treasury had with both the British and the French Governments. They would ask for a loan on the theory that they would have certain expenses to meet during a month, say. Then they would find that they did not have to spend all that money in a month, and they had too-big bank balances. It took a little while to adjust that. I think you will find that by, say, the summer of 1918, 18 years ago—I am guessing a little in the times—that situation was entirely remedied. It was remedied in March with the French, where we found out they had a bank balance of $80,000,000, and we told them $30,000,000 was enough for them to have. We kept their bank balances at approximately $30,000,000 to take care of emergencies.

The British we did not settle quite so easily. The representatives of the British Treasury seemed to like to have very large balances.

It finally was not settled until we said we absolutely would not advance them the money to have those balances, that we would advance them only so much, and if they found their expenditures on Thursday were running over, they could come around to us on Friday and get the money that they needed, but we would not tolerate any longer the keeping of large bank balances by those Governments.

It was said very firmly, and finally very effectively. It had to be said a good many times.

Mr. LEFFINGWELL. You had about the same trouble with your own disbursing officers, did you not?

Mr. RATHBONE. Oh, absolutely. It may be worse with our own Army disbursing officers. But we remedied that after awhile, too.

Mr. BROWN. I wish to offer for the record, to complete this particular point, a memorandum dated January 19, 1918, memorandum for A. E. N.

Mr. LEFFINGWELL. By whom?

Mr. BROWN. It is a Morgan document. It is not exactly clear who it is from or who it is for. It is A. E. N.

Mr. WHITNEY. What date, Mr. Brown?

Mr. BROWN. It is January 18.

Mr. LAMONT. January 19.

I think, Mr. Brown, that was a memorandum for one of the partners of Drexel & Co., Arthur E. Newbold. I think so. I would not be sure.

(The document referred to was marked "Exhibit No. 2845" and is included in the appendix on p. 9262.)

Mr. BROWN. I offer for the record cable no. 61200, of January 19, 1918, from Morgan, New York, to Morgan, London.

(The document referred to was marked "Exhibit No. 2846" and is included in the appendix on p. 9263.)

Mr. BROWN. I offer for the record, cable no. 61326, of January 23, 1918, from T. W. Lamont to E. C. Grenfell.

(The document referred to was marked "Exhibit No. 2847" and is included in the appendix on p. 9264.)

Mr. BROWN. They do not need to be commented on except this, that they concern the application, do they not, of the ship money to the demand loan?

Mr. LAMONT. Yes.

Mr. BROWN. If you have no objection, I think we can drop the demand loan at this point and take up the ship money when we consider the February 1 maturities.

To complete the demand loan, I would like to offer for the record a memorandum prepared by J. P. Morgan & Co., at our request, showing and identifying, insofar as possible, the sources of money used to pay off demand loans nos. 1 and 2, which memorandum has been checked by the committee's staff and found accurate.

The CHAIRMAN. That will be received and properly identified.

(The document referred to was marked "Exhibit No. 2848" and is included in the appendix on p. 9264.)

Mr. WHITNEY. It shows an item on that that answers some of your Russian question. There was one item of $598,000.

Mr. BROWN. That was long afterward.

That is all I have, Mr. Chairman.

The CHAIRMAN. The committee will be in recess for 10 minutes.

(Thereupon a short recess was taken.)

FIRST UNITED STATES REPAYMENT OF ALLIED PRIVATE DEBT

The CHAIRMAN. The committee will proceed.

Mr. RAUSHENBUSH. Mr. Chairman, I would like to ask the witnesses some questions about the first of the foreign loans that were paid off out of the Treasury, which appears to be an Italian loan of $25,000,000, which was issued in 1915, was extended for a year, and fell due then on October 15 of 1917.

Simply in order to establish the agreements concerning that loan, which was the Lee, Higginson loan, I want to offer the agreement and letters in connection with it, which show its existence and history up to this point.

(The documents referred to were marked "Exhibits Nos. 2849 to 2855", inclusive, and are included in the appendix on pp. 9265 to 9272.)

Mr. RAUSHENBUSH. Mr. Lamont, awhile ago, if I remember you correctly—I mean, weeks ago, before history took place—you were stating—and I want to be sure I remember you correctly—that you thought all these loans were pretty good; that they were going to stand up; that they were going to be paid off.

Mr. LAMONT. I spoke in great confidence, Mr. Raushenbush, of all the loans which were issued under our leadership. We had nothing to do with the Italian issue at all, if it was an issue.

Mr. RAUSHENBUSH. If it was an issue?

Mr. LAMONT. If it was an issue. I do not think it was a public issue. Was it?

Mr. RAUSHENBUSH. You held a million dollars, did you not, as participants in it, originally?

Mr. LAMONT. Very possibly.

Mr. WHITNEY. We bought a million dollars.

Mr. RAUSHENBUSH. You bought a million dollars and were participants in the loan?

Mr. WHITNEY. Subscribers.

Mr. RAUSHENBUSH. You would not necessarily apply that statement, then to other loans than your own; is that the way I interpret it?

Mr. LAMONT. I was not attempting to pass upon all those loans at that time. I was describing the loans in which we led, Mr. Raushenbush.

Mr. RAUSHENBUSH. All right.

Here we find—and this immediately becomes a Treasury question, on which Mr. Leffingwell and Mr. Rathbone can probably help—that this becomes a sort of an opening question. This was the first. We see little similarity between this and that distinction that was drawn by the State Department in October of 1914, which Mr. Lamont and Mr. Morgan characterized here as being a distinction that they could not follow, a distinction between loans and credits that they thought was artificial.

Here came along this Italian loan, these maturities on October 15. Does either of you gentlemen remember the circumstances, and can you talk about them, or would you prefer to have me go through these documents as we have them listed here?

Mr. Leffingwell. Mr. Rathbone could not possibly remember it unless he learned something after, could you? Did you learn something about it afterward?

Mr. Rathbone. Of course, I was not with the Treasury then. I understood that loan was made by the United States Treasury to Italy to take up the Italian obligations held by the American public in the same amount, to be repaid—I do not know whether "repaid" is quite the technical word, but I do not think of any better—out of the American dollars received by Italy for lire furnished the United States Government to take care of our troops in Italy.

As a matter of fact, the dollars received from lire were not sufficient to pay the entire amount of that $25,000,000-odd loan.

"To repay" is wrong, because there was no repayment, but the dollars received by Italy for the lire which she sold to the United States were used by Italy to pay for American purchases in the United States before we advanced any further money.

So in effect it was carried into the account.

The amount as shown by the Treasury's report was $14,425,000-odd, but there were other Italian assets, probably not a great many, that were used in this country. What I have in mind particularly is the Italians finally persuaded us, on certain conditions, to be prepared to give them $25,000,000 to maintain the Italian exchange. They complained very bitterly that we had pegged French exchange and British exchange but we had not pegged the Italian exchange. It was pretty hard to defend our pegging the exchange of two of the principal governments and refusing to peg the exchange for the other government. We finally said we would invest $25,000,000, if necessary, to see what could be done with Italian exchange on certain conditions.

One of the conditions was that Mr. Kent—I have forgotten his official position in the Government at that time——

Mr. Leffingwell. Supervising the foreign exchanges for the Federal Reserve Board, was he not?

Mr. Rathbone. Yes; I think that was it—should have charge of their operations.

Curiously enough, we did not have to spend that $25,000,000 or any part of it, because in those operations the Italian Government made a profit, as I recall it, of about $5,000,000. And that $5,000,000 profit the Italians made we said they would have to spend for their purchases in the United States before we would advance them any more money, and it was in fact so spent.

Mr. Raushenbush. Do you describe that first $25,000,000, then, as a sort of reciprocal loan?

Mr. Rathbone. I have not the documents before me as you have. I am just telling you my general recollection, that it was to be taken care of out of the dollars Italy got for supplying lire to our troops.

Mr. Raushenbush. I have an impression, Mr. Rathbone, from what you say, that there was a confusion there, perhaps, between two different transactions. In the first one we find no discussion of exchange of rates or the like, which there would be if it were a reciprocal-credit matter.

This first one, this $25,000,000 about which we are talking now, looks like simply an outright repayment.

Mr. Rathbone. You mean that Italy was to repay us out of the proceeds——

Mr. Raushenbush. No; we would repay her. We were paying off these maturities that became due.

Mr. Rathbone. No; we were advancing money to Italy, and Italy paid off her own maturities. That sounds as if it were a little captious difference, but it really is not. We really did not get the Italian maturities; we did not buy them. We advanced the money to Italy.

Mr. Raushenbush. I think you are correct on that.

Did you want to say something, Mr. Leffingwell?

Mr. Leffingwell. I thought I would perhaps answer your question a little, supplementing what Mr. Rathbone said. I have no first-hand recollection of this matter at all. Perhaps you have documents which will refresh my recollection.

Mr. Raushenbush. Perhaps we had better do it that way.

Mr. Leffingwell. But before you come to them, understand, Mr. Rathbone has pointed out there that in the annual report of the Secretary of the Treasury for 1920, exhibit 26, page 338, there appears an item, "Special credit against credits to be established for United States Government war purchases in Italy, $25,000,000."

And in exhibit 27, on page 340, the item is reported as having arisen in the period from April 6, 1917, to December 31, 1917. That is not conclusive proof that the item of $25,000,000 established as a special credit in favor of Italy was a countervailing, or, as you say, reciprocal item, but it suggested to my mind, as I think it has to Mr. Rathbone, the probability and the theory that the Treasury at the time when it was dealing with this matter, which was before Mr. Rathbone was there and before I was actually related to those things, was actually covering its anticipated war requirements from Italy for lire in this manner. That at least is a suggestion of a possibility.

Mr. Raushenbush. It is a suggestion. Perhaps you would like to reserve your comment on that, Mr. Leffingwell.

Mr. Leffingwell. I would much prefer to do so until you can give us the documents.

Mr. Raushenbush. Until we go through this.

Mr. Leffingwell. I do not remember first hand.

Mr. Raushenbush. I want to offer, without comment, a letter from the Italian Ambassador to Mr. Crosby, of September 10, 1917, in which he points out that the bankers considered the possibility of selling the bonds very slight and takes up the matter with the Treasury generally.

(The document referred to was marked "Exhibit No. 2856", and is included in the appendix on p. 9273.)

Mr. **Raushenbush**. I now offer for the record, a letter of September 17, 1917, from Lee, Higginson & Co., to Mr. Crosby, saying:

> We believe it would be impossible to extend these notes even under pressure. The investors' market for securities has fallen absolutely flat, owing to the near approach of the next Liberty Loan, and the Italian Government has no collateral to pledge which would make these notes in any way attractive to the banks.

(The document referred to was marked "Exhibit No. 2857" and is included in the appendix on p. 9274.)

Mr. **Raushenbush**. That seems, by the way, to make a distinction between loans that have a collateral behind them as being ones that might still be refunded as against loans that do not, does it not?

Then I offer for the record a wire from Lee, Higginson & Co. on October 4, 1917, in which Lee, Higginson points out to the Treasury that—

> it is absolutely impossible through no fault of our own. The fact that other governments have collateral and this Government has none and the market fields on foreign loans are as they are makes it out of the question to renew any portion of this loan. A compulsory renewal would be interpreted as a partial default and would be extremely unfortunate at this time in the midst of our own Liberty Loan campaign, when it would receive either publicly or quietly wide attention among bankers and would tend inevitably to reduce funds available for the Liberty Loan on October 15. Vast amounts of foreign loans are held in the banks and this would, in their mind, be a frightening precedent. The Government in question understands our position and agrees thoroughly with it. It seems to us some way should be figured out to establish a credit in the country in question in connection with our Government's war purchases there and thereby furnish them with funds to take up their loan here. October 5 is the date under the contract when money should be in our hands. Many are asking us about it, as the date is quite widely known, and if we are not able to say definitely after that date that the note will be paid, great anxiety will be caused.

(The document referred to was marked "Exhibit No. 2858" and is included in the appendix on p. 9274.)

Mr. **Raushenbush**. Do we not get another case there of where the bankers, in this case, anyhow, see a very definite reduction of bank credit in case Allied credit is even allowed to lag a little bit? Is not that fairly clear from that?

Mr. **Leffingwell**. It did not occur to me as you read it. Would you go back to the passage from which you draw that suggestion? I do not remember the cable.

Mr. **Raushenbush**. The part where it says [reading from "Exhibit No. 2858"]:

> In the midst of our own Liberty Loan campaign when it would receive either publicly or quietly wide attention among bankers and would tend inevitably to reduce funds available toward the Liberty Loan on October 15. Vast amounts of foreign loans are held in the banks and this would, in their minds, be a frightening precedent.

The precedent being that of letting the bonds go.

Mr. **Rathbone**. Letting them default.

Mr. **Raushenbush**. Yes; you have said that before.

Mr. **Rathbone**. I do not think it would be so much a reduction of the credit of the United States as of the willingness of the

United States to support one of the Allied Governments in the United States.

Mr. **Raushenbush.** You do not think a default of any Allied credit would have that effect, of shaking people up a little bit?

Mr. **Rathbone.** I think it would have shaken them up tremendously, but I do not think that the credit of the United States Government would have been affected.

Mr. **Raushenbush.** Or their ability to raise money?

Mr. **Rathbone.** They might think that the United States Treasury was not able to raise enough money to prevent an Allied country's obligations going in default on our markets. They might have thought that.

Mr. **Raushenbush.** If it had gotten to a point where they had been forced to support these Italian loans at some terrific rate, 8, 9, or 10 percent, it would have had a bad effect on your own Libertys, would it not?

Mr. **Rathbone.** I think it would have had a terribly bad effect on the market; yes.

Mr. **Raushenbush.** Coming back to the question of whether these private loans were really good, there is a letter from Mr. Crosby to the Attorney General on September 28, 1917, in which he said [reading]:

> The Italian Ambassador is now urging, with very great concern, that funds should be lent to his Government in order that these bonds may be taken up, stating that his own Government is wholly without means to meet their indebtedness.

(The document referred to was marked "Exhibit No. 2859" and is included in the appendix on p. 9275.)

Mr. **Raushenbush.** Is that your own interpretation? Oh, you were not there in September.

Mr. **Rathbone.** I was not there, but I do not see where they could get the dollars.

Mr. **Raushenbush.** It was probably true, was it not——

Mr. **Rathbone.** I believe it was true.

Mr. **Raushenbush.** That at the same time these Allied loans, whether of Italy, for instance, or some of the other Allies, became precarious matters?

Mr. **Lamont.** Are you alluding to all the Allied loans or just two or three of them?

Mr. **Raushenbush.** I am going to allude to them all.

Mr. **Rathbone.** Of course, it was one thing for Italy to find the dollars in war conditions to pay the loan.

Mr. **Raushenbush.** Yes.

Mr. **Rathbone.** And an entirely different thing as to the ultimate payment of those loans by Italy after the war conditions had passed.

Mr. **Raushenbush.** That was just a matter of finding money enough to keep the exchange and pay off the maturities as they came due.

Mr. **Rathbone.** Because if they could not find the money to keep the exchange until we loaned them some money for that purpose, the Italian exchange went to——

Mr. **Raushenbush**. You see, this is not quite in point, but it is interesting in any discussion of a policy of allowing loans and credits.

Here you have the Italian Ambassador saying in September—that was 5 or 6 months after we go into the war—that his Government was absolutely without means to meet the indebtedness, and the British had said it on July 1, that their Government was without funds or means and would have to rely almost exclusively on the United States to pay.

Mr. **Whitney**. The British had no maturity, of course.

Mr. **Raushenbush**. Not at this time; no.

Mr. **Whitney**. Not at that time.

Mr. **Raushenbush**. But the documents introduced the week of the 15th or 16th show that Sir Cecil Spring-Rice, I believe, was going to our Treasury and our Department of State and saying very clearly, "On July 1 we are"—I think I remember the vulgar phrase I used—"bust." He did not say that. He did not use that phrase. He said that they could not carry on from that point.

Then we want to go on here a minute to note the rest of this letter to the Attorney General. Do you remember this letter, Mr. Leffingwell, this letter to the Attorney General?

Mr. **Leffingwell**. I do not seem to. I might well have known about it, but I do not seem to remember it.

Mr. **Raushenbush**. Mr. Crosby raises some interesting points here.

Mr. **Leffingwell**. Mr. Wohlforth has been kind enough to show me Mr. Crosby's letter. It does not look as if I had written it, because it is not concerned with law but with the military position, the general nature of the financial problem, is it not?

Mr. **Raushenbush**. It is asking for a vise, for an O. K. from the Attorney General on this particular transaction. It reads [reading from "Exhibit No. 2859"]:

> **Dear Mr. Attorney General**: I have the honor to request that you be good enough to advise this Department as to whether, under the operations of section 2 of an act of Congress approved September 24, 1917, copy enclosed, the Secretary of the Treasury, with the approval of the President, would be authorized to lend money to a foreign government engaged in war against Germany, which money would, with the knowledge of the Secretary of the Treasury, be used for paying any obligations of such government issued before the date of the act and maturing after that date.
>
> In order that the particular difficulty now presented may be better understood, permit me to state that the Italian Government, some time last year, borrowed $25,000,000 in this country on relatively short-term bonds, which were issued through the various Boston banking houses. These bonds mature early in October of this year. The Italian Ambassador is now urging, with very great concern, that funds should be lent to his Government in order that these bonds may be taken up, stating that his own Government is wholly without means to meet their indebtedness. If money were loaned under the operations of the act of Congress above mentioned, the Secretary of the Treasury would indeed purchase "a hereafter-issued obligation"——

Mr. **Rathbone**. He would not, of course. He would not have purchased the obligation because that is not what he did. He lent the money on the obligation of the Italian Government for the money lent, and the Italian Government paid their obligations. The United States Treasury did not buy Italian obligations, except the obligations issued by the Italian Government after we entered the war.

Mr. Crosby was not a lawyer.

Mr. **Brown**. That is what Mr. Crosby says, "hereafter-issued obligations."

Mr. **Leffingwell**. As I understand, Mr. Crosby was mistaken.

Mr. **Raushenbush**. Let me finish that paragraph [reading from "Exhibit No. 2859"]:

> If money were loaned under the operations of the act of Congress above mentioned, the Secretary of the Treasury would indeed purchase "a hereafter-issued obligation", being a proper bond of the Italian Government, the terms and conditions conforming to that statute.

Mr. **Leffingwell**. Did he contemplate buying some of these Lee, Higginson bonds?

Mr. **Rathbone**. No; apparently not.

Mr. **Brown**. That is not his language. He said he would be complying with the law in lending the money to Italy.

Mr. **Leffingwell**. I see. I beg your pardon. I was confused.

Mr. **Raushenbush** (continuing reading):

> If money were loaned under the operations of the act of Congress above mentioned, the Secretary of the Treasury would indeed purchase "a hereafter-issued obligation", being a proper bond of the Italian Government, the terms and conditions conforming to that statute. But there is reason to doubt the propriety or legality of an action which is indirectly a purchase of obligations which were issued by the Italian Government before the passage of the act—

As we get it here, he is up against the difficulty of the situation——

Mr. **Leffingwell**. That is an exposition of the law by a civil engineer.

Mr. **Rathbone**. That is where I absolutely disagree with what he said. Absolutely, there was no doubt.

Mr. **Leffingwell**. You have been getting expositions of law from lawyers all morning.

Mr. **Rathbone**. Not the slightest question as to the propriety or legality of such an action.

Mr. **Raushenbush**. You disagree with Mr. Crosby there?

Mr. **Rathbone**. Yes, sir. We had the undoubted right to do it. There was no question as to the propriety or the legality of such an action. If Mr. Crosby had had lawyers at his heels in the Treasury, they would have told him it was utterly unnecessary to go to the Attorney General of the United States for an opinion on a point that was perfectly plain.

Mr. **Raushenbush**. Were you not there?

Mr. **Rathbone**. I was not in the Treasury Department at that time. We were not consulted about that.

Mr. **Raushenbush**. Let us go on. The letter ends [reading from "Exhibit No. 2859"]:

> The matter is one of very grave concern to the Italian Government, and indirectly to this Government. I therefore venture to ask that, if convenient, you will be good enough to advise the proper course in this matter at an early date.

Then the Attorney General, on October 1, 1917, wrote to the Secretary of the Treasury as follows [reading "Exihit No. 2860"]:

> **Dear Mr. Secretary**: I am in receipt of an inquiry from the Acting Secretary of the Treasury, dated the 28th ultimo, which I understand to be this. in substance: Under the provisions of section 2 of the act of Congress, approved September 24, 1917, authorizing the Secretary of the Treasury to purchase the obligations, hereafter issued, of foreign governments then at war with the

enemies of the United States is the Secretary debarred from purchasing obligations of the Italian Government, otherwise meeting all requirements of the act, because he has knowledge that the proceeds will be used to pay obligations of the Italian Government contracted before the passage of the act? I do not think so. I base this opinion on the face of the provision. I have not stopped to inquire into its legislative history, assuming that if there were anything in that bearing on the question, the Acting Secretary would have called it to my attention since the legislation was initiated by the Treasury Department.

The Acting Secretary states that a question of propriety is also involved. Of course, I pass upon the legal question only.

Respectfully yours,

(The document referred to was marked "Exhibit No. 2860" and appears in full in the text.)

Mr. Raushenbush. There is nothing in this record to show that the Attorney General had been given the legislative history of the thing, is there, the various pledges?

Mr. Rathbone. Is it not the law that the legislative history of an act is pertinent to consider only when there is some ambiguity in the act? There was no ambiguity in this act.

Mr. Raushenbach. Enough so that Mr. Leffingwell was reading us quite properly quotations from the congressional debates, this morning.

Mr. Leffingwell. No; that was on an entirely different point. You raised the question this morning of Secretary McAdoo's parliamentary promises.

Mr. Rathbone. Yes.

Mr. Leffingwell. I read the legislative history to show you that he kept his parliamentary promises, as in my opinion, he did. I also made the further point that the law itself settled the decision of Congress on what ought to be done. And as Senator Vandenberg pointed out, the law was absolutely clear, and no lawyer would ever doubt its meaning. Congress hoped this would not be done any more than it had to be, but it left the hands of the Secretary clearly free.

Mr. Raushenbush. Mr. Leffingwell, the Supreme Court, practically every time it tries to find out what Congress meant, goes back to the legislative record, and that, it seems to me, is what the Attorney Gentral was saying here.

Mr. Leffingwell. Only in case of doubt.

Mr. Rathbone. Only where there is ambiguity in the law.

Mr. Raushenbush. The fact that the Attorney General had been advised by the Treasury, the Acting Secretary of the Treasury, as to a doubt, is certainly enough to raise a doubt.

Mr. Rathbone. No; the Acting Secretary of the Treasury was not a lawyer. He might have had doubts to beat the band—to use an expression—but that does not affect the legal question, and there was no ambiguity in the act, and I say it advisedly, because I spent plenty of time studying it and I have had some experience as a lawyer. There was no ambiguity in the act, and there was no need to look at the legislative debates to determine what an act, as plain as that, meant. If you did look at the legislative proceedings, if it had been proper to look at them, you would have been even more fortified in your opinion that the act was plain, and which would confirm the action in the Treasury.

Mr. **Raushenbush.** I understand the disagreement with Mr. Crosby, but the Attorney General was presented with a question regarding doubt about the matter, and it seems perfectly proper that he had the legislative history called to his attention.

Mr. **Rathbone.** It did not do any harm. He gave his opinion as to what the act meant. I have never found anyone who disagreed as to what that act meant.

Mr. **Raushenbush.** Outside, perhaps, of Mr. Crosby?

Mr. **Rathbone.** Mr. Crosby had some doubts.

Mr. **Leffingwell.** Mr. Crosby went ahead and established credits, and he could not have had much doubt.

Mr. **Raushenbush.** After the letter from the Attorney General, they could not have stopped.

Mr. **Rathbone.** I have heard of a great many laymen going to a lawyer and asking what a law meant, and the lawyer would advise from the face of the law what it meant and would not go to the legislative debates whatever, unless there was an ambiguity in the law.

Senator **Bone.** Did the Attorney General enter a formal opinion?

Mr. **Raushenbush.** That was an informal opinion, I take it. There is nothing further than that in the record which we have found.

Now, after this we find this letter of October 15, 1917, which is the date in question, a letter from the Italian Ambassador, Macchi di Cellere, to Acting Secretary Crosby, which I offer for the record with appropriate number.

(The document referred to was marked "Exhibit No. 2861" and appears in full in the text.)

Mr. **Raushenbush.** That letter reads as follows [reading]:

> My Dear Mr. Secretary: Referring to the demand certificate of indebtedness of the Royal Italian Government for $25,000,000 dated today:
>
> It is understood that the advance made by the United States and evidenced thereby is made with a view to the fact that the United States contemplated having large payments to make for itself and its nationals in Italy at an early date on contracts made or soon to be made; and the Royal Italian Government obligates itself immediately, upon request of the Secretary of the Treasury, to establish credits in Italy in lire to the extent required up to the amount of this certificate of indebtedness, and that drafts upon such credits will be honored and accepted by the Italian Government or any of its nationals for any payments to be made by the United States Government or any of its nationals for the purchases of goods, materials, or supplies, or any other requirements. When and as payments are made under such credits the amount thereof will be credited here on said certificate of indebtedness. The understanding herein expressed is, of course, without prejudice to the right of the Secretary of the Treasury to require payment upon demand in the United States.

Mr. **Leffingwell.** Does that fit in with Mr. Rathbone's suggestion about the exhibit?

Mr. **Raushenbush.** Yes; and the thing which interests me is, if that were a reciprocal credit, as it apparently seems to be from this letter ,there was no indication at what rate those lire would be made available, and that leads me to doubt whether it was really such a thing.

Mr. **Leffingwell.** What was the date of the letter which you just read?

Mr. **Raushenbush.** The thing became due on the 15th, and that was the date of the letter.

Here is another letter which may throw some light on the situation, dated October 19, 1917, Mr. Leffingwell, regarding the files of the Chairman of the War Trade Board, which I now introduce in the record.

(The document referred to was marked "Exhibit No. 2862", and is included in the appendix on p. 9275.)

Mr. **Raushenbush.** That letter reads in part as follows [reading]:

> There is a request now before the Secretary of the Treasury for an additional credit of $100,000,000 for the Italian Government. Action upon this was delayed because an extremely difficult case was presented, which was solved a few days ago after much negotiation by advancing $25,000,000 to the Italian Government to meet its notes placed in this country long before our entrance into the war, and finally maturing on the 15th of October. This case presented difficulties, first, on account of certain doubts as to the legality of advancing funds for paying an old debt of this sort and, second, because it seemed desirable in any case to exhaust all possible efforts to have such maturities renewed rather than have them paid by additional advances from the Treasury of the United States. Ambassador Cellere has been indisposed for some days, and I am now awaiting his recovering in order that we may have further discussion as to a further credit that may be established as against possible future needs of his Government as they were indicated in the request for the $100,000,000 credit now in suspense.

It is interesting to us to note that there is nothing in this letter referring to a reciprocal credit at all, but this acts as if it were a loan, taken care of out of the Treasury.

Mr. **Rathbone.** You say there is no authority in the law for an advance of that sort?

Mr. **Raushenbush.** I say there is no indication in here that Mr. Crosby considered this a reciprocal credit.

Mr. **Rathbone.** I do not know exactly what you mean by "a reciprocal credit", but Mr. Crosby in making that loan to the Italian Government got the agreement of the Italian Government to supply all the lire that we needed in Italy for our Army purchases at least up to $25,000,000.

Of course the Italian Government was not under any obligation to supply the lire.

Mr. **Raushenbush.** Are you sure?

Mr. **Rathbone.** Except under this agreement; yes. I mean, he got something in addition to making that loan, and the Italian Government's obligation.

Mr. **Raushenbaush.** According to your recollection, was that $25,000,000 there actually used by our American Army when it got into Italy for expenses in Italy?

Mr. **Rathbone.** No; it was not. That is what I pointed out. There were only $14,000,000.

Mr. **Raushenbush.** Of that $25,000,000, or was it another $14,000,000?

Mr. **Rathbone.** I do not understand just what you mean by "of that $25,000,000." We loaned them $25,000,000. They used that $25,000,000 to pay their obligations in what you call the Lee, Higginson loan.

Mr. **Raushenbush.** Yes, sir.

Mr. **Rathbone.** They then said at that time that the Government would furnish us against our paying dollars the lire we needed for our Government's use in Italy. They did furnish us fourteen million-odd dollars' worth of lire. That $14,000,000 was not placed as a payment on account of the Italian obligations, because, if that had been done, it would have meant $14,000,000 paid on the obligations theretofore given, and we would have to have loaned them $14,000,000 more for their purchases in America. But the $14,000,000 which they received for the lire that they sold us in Italy was used for their purchases in the United States before the Treasury made any more dollar advances to them.

In effect, you will see, it is exactly the same thing.

Senator BONE. Mr. Rathbone, may I ask you a question?

Mr. RATHBONE. Yes, sir.

Senator BONE. Apparently, from the record, the Italian Government made it very plain that it was unable to meet this Italian loan of Lee, Higginson at the time it matured. It paid that loan after it effected this new loan from the Treasury Department here?

Mr. RATHBONE. That is correct.

Senator BONE. Obviously there can be only one conclusion, namely, that Treasury funds from the United States Treasury were employed in a circuitous route to take up this Lee, Higginson loan.

Mr. RATHBONE. That is true.

Mr. LAMONT. Not a circuitous route.

Senator BONE. I want to know if there is any question about that being a fact? There is no question?

Mr. RATHBONE. That the United States Treasury advanced $25,000,000 to Italy, and Italy received the money to pay the back loan?

Senator BONE. Immediately paid it back to Lee, Higginson.

Mr. RATHBONE. Yes. I do not know whether I made it plain, but the default of a government associated with us in the war on dollar obligations held by the American people, plus the failure of the United States Treasury to advance the money necessary to take up that obligation would have been as great encouragement to the common enemy as could have possibly been given by the United States Treasury.

Senator BONE. I understand that, but I am merely concerned now with the fact of this operation, and not what its moral or political effect would have been. I want to get the record straight, so far as I am concerned, as to what actually transpired in the United States, and what you said, Mr. Rathbone, would always be true, that if we got into another war we would have to do the same thing?

Mr. RATHBONE. I do not know that we would have to do the same thing. It depends on who we are fighting against, our position and their position. I cannot prophesy on those things. I am not coming before your committee as an expert but coming to tell you anything I can tell you about our Treasury operations during the war.

Mr. RAUSHENBUSH. This was a perfectly normal operation?

Mr. RATHBONE. It was not normal because we did our very best not to have to advance money to enable governments to take up their own obligations. That was the exception.

Mr. RAUSHENBUSH. There were a sufficient number of exceptions, before it was through——

The CHAIRMAN. To make it rather normal.

Mr. RAUSHENBUSH. To make it rather normal.

Mr. RATHBONE. I do not agree with that.

Senator **Bone**. What sort of security did the Italian Government give this Government for the loans made to them at that time? Were they notes of the Italian Government or a mere memorandum?

Mr. **Rathbone**. There were credit obligations. I have forgotten what the forms are, but they have all been published in the report of the Secretary of the Treasury. They were, under American law, legal and enforceable obligations by the various governments.

Senator **Bone**. They may have been enforceable, but we have not enforced them.

Mr. **Brown**. How would you enforce them?

Mr. **Rathbone**. There is no way of enforcing an obligation given by one Government to another, except by seizing any property they may happen to have in your own jurisdiction, or by sending your Army and Navy over to collect them, that I know of.

Senator **Bone**. Were they bonds or notes, or what?

Mr. **Rathbone**. The obligation given for this particular Italian loan was like those given by all the Allied Governments at the early stages of the war. They had a short-term maturity. I have forgotten what it was, but 6 months or a year or something like that, and it contained a provision that they were exchangeable for long-term obligations in accordance with the terms of the First Liberty Loan Act.

The obligations subsequently given at a later date were straight promissory notes, payable on demand.

Mr. **Raushenbush**. When you said a minute ago that this business of taking over these private loans was an abnormal Treasury operation, Mr. Rathbone, you mean that it is an operation that might have been avoided?

Mr. **Rathbone**. We could have refused any loans of any kind to those Governments.

Mr. **Raushenbush**. Could you have?

Mr. **Rathbone**. But we were trying to win the war.

Mr. **Raushenbush**. If you wanted to win the war, you could not have, could you?

Mr. **Rathbone**. I do not think you could have allowed defaults to have been made by the governments in our market without giving the greatest encouragement to the enemy.

Mr. **Raushenbush**. Yes, sir.

Mr. **Leffingwell**. May I supplement that a little bit, Mr. Raushenbush, because I think it is easy to allow the urgency of this particular question which presented itself to Mr. Crosby on October 15 to lead us to generalizations which are perhaps not clearly established.

I take it that the emergency which existed on October 15 could scarcely have been greater. If you recall, within 2 or 3 weeks the Italian disaster occurred at Caporetto.

Mr. **Raushenbush**. Yes, sir.

Mr. **Leffingwell**. How far the Acting Secretary of the Treasury was apprised of the course of military events by the Italian Ambassador, I cannot say, but I assume that the Italian Ambassador was not lacking in frankness as to the gravity of the problem presenting itself to his country. This was an unsecured loan. The disaster at Caporetto, which followed so soon, was very grave.

If the bankers knew the situation, they were justified in saying, "We cannot float an Italian loan to take up this maturity on October 15."

On the other hand, when we generalize from the particular Italian loan that Mr. Crosby was discussing in his correspondence too quickly, and think back perhaps to those $2,000,000,000 of obligations which you mentioned this morning, I think it is important to bear in mind that the United States Government did not have to take up, as a matter of course, the obligations of the Allied Governments in this market. For instance, we have been reading about a demand loan. That is $400,000,000 which the United States refused to pay.

Mr. **Leffingwell.** Never paid any part of it.

Mr. **Raushenbush.** There is a ship money question.

Mr. **Leffingwell.** It is not a question. Whenever you are ready to discuss it, we will discuss it with you. That was money which was due to England, and not money borrowed by England. The United States Government was obliged to pay this ship money because it obliged England to part with the ships.

Mr. **Brown.** Mr. Leffingwell, we might apply Mr. Rathbone's argument on that. If they had not spent the money on the demand loan, they would have had to get the next loan. I am pointing out only the fact that Mr. Rathbone's argument works both ways.

Mr. **Leffingwell.** If you are in the position of a creditor, you can take unjust, harsh, and unreasonable measures, but if you are in the position of the Secretary of the Treasury of a great Nation fighting a war with another great power, you do not do arbitrary, harsh things, and if you owe money and pay it, you do not undertake to go beyond the point of persuasion in the effort to induce the debtor to apply the money to some purpose other than that to which he feels obligated to apply it. Therefore, I say this ship money was owing by the United States, and it was obliged in the last analysis to yield to the British Government as to its application.

I want to say what I was about to say with regard to the ordinary course of these things. There was not any ordinary course about these things. As Mr. Rathbone pointed out, each one of these things was taken up and fought over and worried over, and an analysis made of the market situation. I believe you used the figure of 2 billion.

Mr. **Raushenbush.** $2,660,000,000 plus.

Mr. **Leffingwell.** In other words, of the $2,660,000,000 which you speak of, a total amount during the entire war period of $650,000,000 was accounted for by the Allied Governments among the expenditures which they reported to the United States Government. In other words, that was the sum of the total that was reported by them among their expenditures.

Now, against that total of loans which they reported to us among their approved expenditures, we have the fact that the British Government alone provided us with $450,000,000 worth of foreign currencies, and the French Government provided us with $1,000,000,000 worth of foreign currencies. And, I may add, that we speak now of the fact, with concern, that these loans are in their present condition, these loans made to the Allied Governments, but we forget that these Governments made a great effort, and made great payments to the Government of the United States. The total amount of the payments made to the Government of the United States on those loans was two billion and three-quarters of a billion dollars.

Mr. **Raushenbush**. On loans totaling altogether how much?

Mr. **Leffingwell**. On loans totaling 10 billion dollars, 2 billion dollars was interest and three-quarters of a billion was principal, and that exceeds the amount of loans which went to meet maturities. $750,000,000 was principal. That exceeds by $100,000,000 the amount of the maturities included in their approved expenditures.

Mr. **Raushenbush**. I do not want to make too much of this $650,000,000.

Mr. **Leffingwell**. I do not want you to think that it was automatic, but we offered resistance which was first rate and tremendously effective and completely effective as to the demand loan, and completely effective as to the British maturity on the 1st of February 1919. Of the total amount of $2,650,000,000, which you speak of, the total amount that was ever included in their approved expenditures was only $650,000,000.

Mr. **Raushenbush**. I do not want to make too much of the $650,000,000, Mr. Leffingwell, but, after all, it is an impressive sum.

Mr. **Leffingwell**. It is an immense sum.

Mr. **Raushenbush**. It is an immense sum. Here we find in this transaction and others to come, that with the exception in part of the demand loan, all the maturities as they came along, the Governments failed to take care of them.

Mr. **Leffingwell**. Not all.

Mr. **Rathbone**. They had to be taken care of.

Mr. **Raushenbush**. They had to be taken care of. When that happens with such regularity, it seemed to me a very important question as to whether we can expect that in any other war we get into, in other words, whether it will be a normal transaction. It seems to me clear that on the face of the Treasury evidence——

Mr. **Leffingwell**. Of course, if there is any question that war is costly——

Mr. **Raushenbush**. That is not the question——

Mr. **Leffingwell** (continuing). In anybody's mind, it is not in mine. This was the least costly of our war expenditures, in our opinion.

Mr. **Raushenbush**. Let us leave off this $650,000,000, if you will. The question is something else. Suppose you do the thing over again, and let a lot of financing for munitions generally and arms specifically get piled up, and then because of many things, regardless of that, we might get into another war, and would we not have, under present law, to repeat the business of keeping up Allied credit for the sake of winning the war? That is where, as a subpoint, this question came in on these particular maturities as they came along.

Mr. **Leffingwell**. To put it another way around, Mr. Raushenbush, would it not be your first problem to see that in one way or another you did maintain the credit of the governments which were fighting the war shoulder to shoulder with you?

Mr. **Raushenbush**. I would suppose that once you accepted the war, you would do it. It is knowing ahead of time what is going to happen.

Mr. **Leffingwell.** You are in the war, and once you accept the fact you are in the war, then you have to consider how most effectively to go about the business of winning it.

Mr. **Raushenbush.** Yes, sir.

Mr. **Leffingwell.** And that is what the Treasury did.

Mr. **Raushenbush.** Yes, sir.

Mr. **Leffingwell.** And it did it with the extreme reservation that it put every barrier it could devise, short of something which would amount to a military disaster, in the way of taking up these old maturities.

Mr. **Raushenbush.** I think what you have said there in the last 2 minutes is very important, Mr. Leffingwell, from this angle: That if Congress realizes that once it goes into the war, that the thing to do is to win it, at all costs, and that it will therefore have to keep up Allied credit, and that that might throw some light upon the situation before you get into the war.

Mr. **Rathbone.** If you go into the war, the uppermost thought is that we have got to win the war.

Mr. **Raushenbush.** Of course, but that still does not change what I have been commenting on, Mr. Rathbone.

Mr. **Leffingwell.** I still wish you would think of what I was saying this morning about those debates in Congress, because I know that every member of this committee would put himself in the place of those Congressmen and Senators and understand how they sat there, those who voted against the war and those who voted for the war, and unanimously decided, after this question of the maturity of the loans was taken up time and time again by men who said, "The bankers got us into the war", or "the munitions makers got us into the war", and said, "They ought not to get their money back." Time and time again that argument was made, and time and time again the chairman of the Ways and Means Committee, who himself had voted against the war, and the leader of the minority of the Ways and Means Committee, and the leaders of the House on both sides got up and said, "Why, we do not want it done. We do not think it is going to be done, we hope it won't be done, but we must leave the power to the President and the Secretary of the Treasury to buy the obligations of these governments and let these governments who are fighting with us decide what to do with the money, because it is going to be months and perhaps a year before we can put an army over there, and we dare not do otherwise."

That was the decision, and it was the decision of the Congress that we must leave that power open, and that is what was felt in the Treasury.

Mr. **Raushenbush.** You still would seem to forget that you said that the Congress thought that a program was coming along that would eventuate that way, and that we would have to pay off all those maturing obligations.

Mr. **Rathbone.** We did not pay them all off.

Mr. **Raushenbush.** Except in small part.

Mr. **Rathbone.** About six and a quarter.

Mr. **Leffingwell.** We did not buy them, but we bought the obligations of foreign governments, and we did what Mr. Kitchin on the floor of the House said we should do, we left it for them to decide what should be done with the money. If you will read that long, long debate through, you will find time and again that the members of the House of Representatives, under the leadership of Mr. Kitchin, Mr. Mann, Mr. Mondell, Mr. Fordney, and Mr. Longworth, and Mr. John Garner, and Mr. Shirley, and Mr. Hull, were saying, "Yes; the war is important now, and although some of us voted against the war, and some of us were making the very same argument that has been presented here, that the country has gotten into the war for economic reasons, we are in it now and we must not omit one single thing, and must not tie the hands of the President of the United States, the Commander in Chief of the Army and the Navy in time of war, so that he cannot do what is necessary to win the war."

That runs all through the debate. Then, on top of that, Mr. Rathbone, I and our associates went to the Ways and Means Committee, as I mentioned this morning,[1] and Mr. Kitchin said, "Now, how many maturities have been taken up?" And we gave him the figures as they stood then, $400,000,000, and explained to him just what I have explained to you today, that the Allies had credits representing their own money coming to them for the pounds and francs which they had provided, and the Ways and Means Committee were satisfied and brought in again a unanimous report, except as to the War Finance Corporation, which was irrelevant to the Liberty Loan legislation, and the House passed it with a minimum of dissenting votes, after the war was over, after President Wilson had been over to Europe once, and after he had lost the election in the Fall.

That was the reaction of the Ways and Means Committee, to whom this parliamentary commitment, if any, had been given.

Mr. **Raushenbush.** There is no particular implication here that Congress was not, in due time, informed to what extent those rules and regulations had been used.

A while ago, in a spirit of jest, I am sure, Mr. Bernard Baruch, who was on the stand, nominated me for Secretary of the Treasury. [Laughter.]

May I note for the record laughter from the witnesses, Mr. Chairman?

Mr. **Leffingwell.** Did you not mean us to laugh, Mr. Raushenbush.

Mr. **Raushenbush.** It seems to me that if any Secretary of the Treasury were going in, and knowing that as soon as we got into the war we would practically have to peg the credit of the world, or of our Allies, and that our obligations would normally entail that, that he would think twice about accepting his job anyhow, or would be confronted with something that is not generally accepted.

From your intimate knowledge, you know it has to be done. I do not think the people generally know the implications.

Mr. **Leffingwell.** I do not think anybody in the United States had any conception of the magnitude of the task which was before them when they entered the war. I do not suppose anybody who ever undertakes a job realizes how difficult it is. It is not one of those things which develops beforehand. That is one reason why the human race achieves so much. It has not vision enough to foresee the extent of the difficulties which present themselves.

---

[1] See supra, p. 8995.

Mr. RAUSHENBUSH. Coming back to this Italian matter a minute, later on, on April 25, 1918, you, Mr. Leffingwell, were writing to the Italian Ambassador about some additional arrangements, and at that time you did talk about fixing a matter of exchange. Do you have that exhibit to put before Mr. Leffingwell of April 25, 1918, Mr. Wohlforth?

That seems to be something else and something different from the other one. That seems to be more in the nature of a reciprocal credit than the other one was, does it not?

Mr. LEFFINGWELL. I cannot read the date.

Mr. RAUSHENBUSH. April 25, 1918. In the second paragraph it says [reading]:

> Under this plan, it would be necessary for us to agree upon a fixed rate of exchange for each month in order to systematize the accounting of the Army departments.

That letter is offered for the record.

(The document referred to was marked "Exhibit No. 2863" and is included in the appendix on p. 9277.)

Mr. RAUSHENBUSH. Then later on, on May 6, 1918, the Ambassador writes back to you: "My dear Mr. Leffingwell", and in the second paragraph of the letter he states:

> You are perfectly aware that under the credits already granted by the United States Government to the Italian Government only 30 million dollars ($30,000,000) are still available besides the 25 million dollars ($25,000,000) advanced, under special conditions, for the payment of the debt contracted with Messrs. Lee, Higginson & Co., the solution of which is not yet settled.

Still bearing on the difference between that and the Army arrangements later. If you have no comment, we will go on to the French loan.

That letter is offered for the record.

(The document referred to was marked "Exhibit No. 2864" and is included in the appendix on p. 9278.)

Mr. RAUSHENBUSH. Mr. Morgan?

Mr. MORGAN. Mr. Chairman or Mr. Raushenbush, may I interrupt a moment?

Mr. RAUSHENBUSH. Yes, sir.

RELATION BETWEEN PRE-EXISTING INDEBTEDNESS AND TREASURY POLICY[1]

Mr. MORGAN. Your feeling that the country was not aware as to what it would involve has been brought up, and I thought it would perhaps be helpful to read Mr. Wilson's address to Congress when he asked for war to be declared. He said [reading]:

> What this will involve is clear. It will involve the utmost practicable cooperation in council and action with the governments now at war with Germany, and as incident to that the extension to those governments of the most liberal financial credits in order that our resources may be, so far as possible, added to theirs.

Mr. RAUSHENBUSH. I was trying to apply the question to another war, rather than the World War.

Mr. MORGAN. Any other war would have the same effect. You have got to join with your Allies wholeheartedly or you should not join with them.

---

[1] See also "Exhibit No. 3242", Hearings, Part XXX; and "Exhibits Nos. 4135-A through 4172", Hearings, Part XXXII.

Mr. Raushenbush. And, if necessary, pay off their private debt?

Mr. Morgan. Yes; do everything necessary.

Mr. Raushenbush. And pay one billion dollars for exchange?

Mr. Morgan. Do everything necessary to win the war. Of course you have got to.

Mr. Leffingwell. Mr. Raushenbush, may I add just a little word to that on this subject? I believe this was a very serious enterprise and the American people and the Treasury, as well as all the rest of the American people, looked upon it as a war of duty and a war that was meant to express the highest ideals of the American people.

Mr. Raushenbush. Yes, sir.

Mr. Leffingwell. And their utmost aspirations were involved during that whole war period and the people, the Government departments and the Congress of the United States responded to the idealism and the aspirations of the American people, as they were expressed by the President of the United States. From the point of view of those who lived through it, it was an idealistic war, and the loans that we made to the Allies by just so much reduced the expenditure that the American people had to make and the military effort they had to make on their own account.

Mr. Raushenbush. Yes, sir.

Mr. Leffingwell. I think that the Congress, as well as the departments of the Government in the last analysis, always preferred that something should be done that sustained the ability of Great Britain or of France or Italy to maintain its armies in the field. Whether it took the form of maintaining their credit or the selling of supplies to them, they always preferred that to any expenditure which amounted to increase of the peril of American lives.

Mr. Raushenbush. No question has been raised at all about our idealism, and I am sure you did not raise it in any negative sense yourself. The foreign governments, it seemed to us as we plowed through various records which have been entered here, were quite aware of financial power, and the quotation I was citing today from Lloyd George and Tardieu shows during the period of our neutrality they were very much aware of those things, much more aware, perhaps, than we were.

I am sure you are not commenting or reflecting upon the conduct of our administration in portraying it as naive. I do not think you intend that at all. But compared to the attitude, apparently taken by the foreign statesmen in availing of the power of money, the power of private loans and the power of trade, our officials held a very different or negative attitude. They did not take those things into consideration very much.

Mr. Leffingwell. You think our officials did not take——

Mr. Raushenbush. Compared with them.

Mr. Leffingwell. Compared to the foreign officials?

Mr. Raushenbush. According to their writings; yes, sir.

Mr. Leffingwell. I always hesitate to express a general opinion about the policies of nations, and it is quite outside my function, but I did think it important to bring before you the approach to the operation, and the desire of Congress and the Treasury in relation to their foreign loans, and how it seemed to us we should conduct ourselves. Those were considerations of the utmost moment.

Mr. **Raushenbush.** In that connection, we cannot seem to get any witnesses, either from Morgans or anywhere else, to be willing to say that the sort of thing that the French High Commissioner of Finance, for instance, decided about in the neutrality period, which did involve these things, was true.

This is Tardieu, who was the French High Commissioner over here, and he is writing a book called France and America and he states on pages 150 and 151 [reading]:

> * * * but the increasing volume of Allied needs afforded the Americans almost unlimited trade possibilities. Prices had risen enormously. Profits had swollen tenfold. The Allies had become the sole customer of the United States. Loans the Allies had obtained from New York banks swept the gold of Europe into American coffers.
>
> From that time on, whether desired or not, the victory of the Allies became essential to the United States. The vacillations of Wilson's policy only made this necessity more apparent. The note of the Federal Reserve Board forbidding further loans to the Allies jeopardized American financial interests as much as it did the fate of the Allies. This note, coming too late or too soon, placed buyers and sellers, borrowers and lenders, in equal peril. If deprived of resources the Allies lost the war, how could their debts be paid and what would their signature be worth? The carefully weighed policy of the President, permitting sales and stopping credits, worked against neutrality and in favor of a break; it worked against Germany and in favor of the Allies. Between the Allies and the American market a common bond of interest had been created.

That seems to me to be a recognition of American trade.

Mr. **Leffingwell.** Who is this talking? When did he write it?

Mr. **Raushenbush.** This is "France and America."

Mr. **Lamont.** Two or three years after the war.

Mr. **Leffingwell.** Book writing is interesting, but it does not establish principles that are conclusive in regard to the policies of his country or ours, do you think?

Mr. **Raushenbush.** No; but this is an interesting recognition of a fairly prominent person, who was Prime Minister.

Mr. **Leffingwell.** A brilliant man and very penetrating, but I do not know whether either of us would subscribe to all of that, would we?

Mr. **Lamont.** You said, Mr. Raushenbush, that you had difficulty in getting any one of the Morgan partners to subscribe to that. I think you would have difficulty. We do not subscribe to it.

Mr. **Raushenbush.** In giving way to the power of trade?

Mr. **Lamont.** No; we all recognize the economic factor which exists in every situation, pre-war and war, and everything else, but I do not myself agree for a minute with Tardieu's explanation there to the effect that because we were selling goods to the Allies and because we were extending credit to them, most of them secured credits, that, therefore, a victory on that account was necessary for us. Perhaps a victory was necessary for our civilization, but it was not necessary on those particular counts, in my judgment. Therefore, I do not agree with my friend, Mr. Tardieu.

Mr. **Raushenbush.** And you disagreed before with Ray Stannard Baker when he said somewhat the same things? Do you remember the colloquy?

Mr. **Lamont.** I do not remember the colloquy, but I should not hesitate to disagree with him.

Senator BONE. Mr. Morgan, you responded that some question of Mr. Raushenbush led you to read a section of Mr. Wilson's pronouncement upon our entry into the war.

Mr. MORGAN. Yes, sir.

Senator BONE. And our suggestions here about what might happen in another war leads me to ask you this: You stated that in the event we went into a war where we would have allies, that it was our duty to put all our resources behind our allies.

Mr. MORGAN. I meant that it was our duty so to use our assets that they helped our allies as well as us. It is most important to us to keep our allies going.

Senator BONE. That is right; but let me assume something which might occur in another war and see what you think of this present situation, if it arises, because we must assume a different aspect existed then, and our reluctance to get into another war now is indicated by the general attitude of the public, which might compel us, by public opinion, to remain out a long time. But, assume that we were finally drawn in, toward the end of a war, if another great international war could be financed, and our then allies presented and placed in our lap a mass of indebtedness that was simply staggering in its proportions, and our entry into the war took place in such a fashion that it came almost abruptly, do you think under those circumstances that the United States should underwrite all those loans, which is a possibility in another war?

Mr. MORGAN. I should think that possibility is rather extreme, Senator.

Senator BONE. I will admit that, but if we went in, could we expect otherwise?

Mr. MORGAN. My idea would be that if the country had found itself compelled to go into the war it must do everything it could, to the limit of its power, to see that that war was won and won very properly by them.

Senator BONE. That is true. If we get into another war, notwithstanding the fact that the world was almost bankrupt by the last war, do you not agree that this Government would again find itself in the position of having to underwrite all those activities?

Mr. MORGAN. It might not be able to, and in that case we might lose the war.

Senator BONE. And probably pull down the whole western civilization with it?

Mr. MORGAN. I should think that is very likely.

Mr. WHITNEY. Our Government did not underwrite all of the Allied debts of the last war.

Senator BONE. No; but we underwrote them to the extent of assuming a staggering burden, which is now reflected in our income-tax statements.

Mr. LEFFINGWELL. Let me interject a word, Senator. From the Treasury's point of view, limiting myself to that, it needs no argument that a war is an economic and financial misfortune of the first magnitude, not to say a human misfortune of the first magnitude. We can take all of those things for granted. We all should stay out of war.

But I think from the Treasury's point of view the problem was, being in it, first to win it, and, second, to win it with the least possible cost of American lives—with the least possible cost of American lives. That war cost us $40,000,000,000, roughly, in loans and taxes, and of that $40,000,000,000 war cost, $650,000,000 is the total amount that the Allies reported to the United States Government among their approved expenditures to meet maturities.

Now, when you think of the cost in human suffering, the cost in human lives, and the cost in American material, it does seem that the loans that the United States Government made to meet these maturities were among the most economical loans that the United States Government made, $650,000,000 to maintain the credit of the governments that were fighting in France, and wherever they were fighting, which was a moderate sum.

Mr. **Raushenbush.** There was a question of exchange.

Mr. **Rathbone.** A good part of that $650,000,000 was paid for, so far as France is concerned, entirely out of her own resources.

Mr. **Raushenbush.** But Mr. Leffingwell's figure of that small proportion did not take into consideration the other things which were used to maintain the credits, such as the exchange operation.

Mr. **Leffingwell.** There is no reason for leaving out the exchange, but I understood that the inquiries which you have been making today were practically concerned with the question of the maturities, and I thought it proper to isolate this a little while ago. I have illustrated it in another relation, and that was that we loaned roughly $10,000,000,000 to the Allies, and that was one-fourth of the war cost.

Now, the view of the Treasury and the view of the Government of the United States and of the Congress of the United States at that time was, and it was clearly declared in all the debates and in every hearing on every Liberty Loan bill, the view clearly was that so far as we were able to support the effort of the Allies and the armies of the Allies and the credit of the Allies, by so much we shortened the war, we reduced the risk of the loss of American lives, and that was the most economical way to meet this problem.

Senator **Bone.** Have you any doubt in your mind, if we become engaged in another war, in which we might have allies, of the same character, that we would again be compelled to finance their operations? We paid our own war cost and in addition gave them 10 or 12 billion dollars. We did not do a bad job, either in the way of manpower or finance.

Mr. **Leffingwell.** A superb job, Senator.

Senator **Bone.** In the event of another war, we would again have to underwrite their war operations?

Mr. **Rathbone.** We would have to finance their operations in the United States?

Senator **Bone.** Yes, sir. Probably, with more tremendous natural resources than any other country, they would look to us for copper and raw materials. We have now to face realistically the fact that if we got into another war, in which we have other allies, we are going to carry just about the same burden which we carried in the late war. Do you see any escape from that conclusion?

Mr. **Rathbone.** No, sir; I do not.

Senator **Bone.** Certainly, the European nations are all broke today.

Mr. RATHBONE. No; but they have not the same amount of American securities they had before the war.

Mr. LEFFINGWELL. Senator, these have been hard years, but is not that an exaggeration?

Senator BONE. Perhaps that is an exaggeration, but that shows the aspect of the situation to us when they stated they cannot pay this money.

Mr. LAMONT. They state they cannot find the dollar exchange.

Mr. LEFFINGWELL. Of course, this country is one of the largest countries, and it has the better part of the continent, and it is undoubtedly true that its financial stake in the human enterprise is tremendous; and if it be the senior partner in the human enterprise, it may take it for granted, whether it is in a war or out of a war, it has a tremendous stake in the success of the enterprise, and it had better stay out of war, because it will have to pay some very heavy war bills.

Senator BONE. What I am getting at is, in a very cold-blooded way, that we would have to face the situation of having to finance the war in part of those with whom we were engaged in the war.

Mr. MORGAN. That, or stay out.

Senator BONE. That is what I am getting at, or stay out.

Mr. MORGAN. You might not be able to stay out.

Senator BONE. That is what I am trying to get at. I think the American people should know from the experience of the past war, what we are likely to meet in another war, in order that we may be guided by the experiences of the past, and what we are trying to do is to give the American people a cold-blooded, hard, realistic picture of what they will probably be confronted with financially in another war.

Mr. MORGAN. And the same sentiment arises, and it is the thing which will meet you in another war, as otherwise, and when it does come, you have got to put everything you have got, and it is as Lloyd George said, that England, in starting in on the war, was in this situation:

> Do not think this will be a short war, but it will be a long war, and it is going to be won by the people who have the last man, the last shell, and the last bullet.

Senator BONE. I think you will agree with me, Mr. Morgan, that it is probably the part of wisdom for the American people to contemplate this thing. You have no objection to that?

Mr. MORGAN. I am delighted to have them contemplate anything it is wise for them to do, but I only want to assure them that if those things come to pass, that the thing they will be confronted with is that, "You will have to win the war", and you cannot help yourself.

Senator BONE. Of course it is necessary.

Mr. MORGAN. We are not one of the nations who go out to war to get something else. We have never done that. All of our wars have been defensive.

Senator BONE. We did not get anything out of the last war except a burden of debt.

Mr. MORGAN. I think we saved our souls and civilization, do you not?

Senator BONE. I am talking about things like money or colonies, and so forth.

Mr. MORGAN. They do not count greatly in winning the war.

Mr. LAMONT. Senator Bone, we agree with you, that if possible, the facts respecting the last war and our entry into it should be laid before the American people for their consideration and thought. But, after all, as Mr. Morgan has intimated it is not the dread of the financial sacrifice that is going to affect the American people the most, but it is the dread of the other terrible things in war, rather than financial burdens.

Senator BONE. Of course we cannot hope to capture all of the imponderables of that period, and to visualize them here, but what we can do is to put the facts on the record and let people draw whatever conclusions they please from them.

Mr. MORGAN. Yes, sir.

The CHAIRMAN. Mr. Lamont and Mr. Morgan, what do you think of the possibilities—we have not any better time to question it than now, when you are before us—what do you consider to be the possibilities in the event of another war of writing off the chances for large profits to be gathered by individuals or by groups who are in that war?

Mr. LAMONT. You mean the current war profits?

The CHAIRMAN. Taking the profit out of that abnormal period which war is.

Mr. LAMONT. Senator, answering for myself and not attempting to answer for Mr. Morgan of course—you addressed me first—this would seem to me very clear: That, as in the last war, the best method for attaining the very end that you desire is to tax profits very heavily, rather than to try to put any definite roof on too many of them. Because when you attempt to do that, then you do not know where to put the roof on the profits of the farmer and all that sort of thing. But assuming you let industry go its course, after you have let industry develop itself, then in time it will be able to make profits, which you can tax to the very limit. It is a very complex question, but I should think that the experts here, Mr. Leffingwell and Mr. Rathbone, could speak far better on that than I could. Our experience in the late war showed that taxing profits afterward was better than limiting profits beforehand.

Mr. MORGAN. I would like to make my part of the answer.

The CHAIRMAN. I wish you would, Mr. Morgan.

Mr. MORGAN. My experience was that the profits which were made out of the last war were made before we went into it. I am sure for ourselves, that we were very much more prosperous during the time when we were working for the Allies and wishing them well, and doing every possible thing we could to keep them going, than we were afterward. When we got into the war, we fell in with everybody else, and everybody had to pull up his belt and get to work and invest everything he could in Liberty bonds and join every movement that it was possible to do, for everybody to help the war along.

The CHAIRMAN. Do you feel that we could go further with our taxation in another emergency than we did the last time?

Mr. MORGAN. I do not know. I think you got pretty nearly the top taxing power.

The CHAIRMAN. You think we reached about the limit of taxation at that time?

Mr. MORGAN. On direct taxation, I think so; yes; but that is a question on which I am not a doctor.

Mr. LEFFINGWELL. The Treasury does not agree with Mr. Morgan. Secretary McAdoo presented a proposal for increasing the taxes to the Congress in the midsummer of 1918, which was of a most drastic character, and it involved something like doubling the tax revenue of the country and imposing a war-profits tax; and those measures of taxation were very seriously considered by the Congress; and I think it was the profound thought and expectation of the Treasury of the United States that those drastic taxes would be imposed, when Armistice Day came and the Treasury modified its proposals.

Mr. RAUSHENBUSH. Mr. Morgan, coming back to your reply; do you think the war would have been won less economically if a person with an income, let us say, of $5,000,000 a year paid more than $1,500,000 taxes, if the ratio had gone up somewhat?

Mr. MORGAN. I am not prepared to judge on that question. I do not know.

Mr. RAUSHENBUSH. You said that you thought that the limit had been reached.

Mr. MORGAN. I thought that you had reached the limit of productivity in taxes. You have got, in order to get more taxes now, to broaden the base.

Mr. RAUSHENBUSH. I was asking about a particular individual, Mr. Morgan, in the higher brackets. I agree with you that we would have to broaden the base. But coming back to this individual getting an income, let us say, of about $5,000,000, and, if I remember correctly, the rate came to about $1,500,000. Is not that right?

Mr. LAMONT. I thought it was two-thirds.

Mr. LEFFINGWELL. It was 73 percent, I am told. One of the most drastic of the measures of taxation which the Treasury proposed, as I remember it, at that time was the addition of a war profits tax on corporations, in addition to the excess profits tax, which was already contained in the law, and the Treasury had a plan of having an alternative tax which would fall upon a corporation, so that it would have to pay whichever tax turned out to be higher. The war profits tax was measured by the excess over their profits in a preceding period of years, and the excess profits tax was a tax on income over a given rate of return on capital. The Treasury thought that would have been productive; yes.

Another change would have been the broadening of the income-tax base, as Mr. Morgan says, and another was consumption taxes in every form. But I think the total program for taxation amounted to something like $8,000,000,000 in 1918, if it had been adopted.

Mr. Raushenbush. If it had been adopted.

Mr. Leffingwell. But broadening the base would have made a tremendous increase, and the war-profits tax would have been a tremendous increase. The Treasury's program was to collect one-third of the total cost of the war in taxes. We hoped that these proportions would work out.

Mr. Raushenbush. I agree with you on the Treasury plan, of course. But, Mr. Morgan, did I understand you correctly, that you thought a sort of limit had been reached? Was that it? That they could not have collected much more?

Mr. Morgan. If you are talking simply about war taxes, there is certainly room to put in an excess-profits tax on some of the war profits.

Mr. Raushenbush. I was not talking so much of corporations as individuals. Would the efficiency of the people who were taxed, their willingness to work for the country in time of war, be lowered or done away with and be abolished if their income were reduced to but $1,000,000? Would that individual be less ready to work for the country?

Mr. Whitney. You mean the very top brackets?

Mr. Raushenbush. Yes, sir.

Mr. Morgan. What does that amount to? That amounts to 20 or 30 people in the country. It is no good legislating for 20 or 30 people, but of course you should legislate for 20 or 30 million people.

Mr. Lamont. Are not we all agreed that in time of war it is perfectly natural and a normal thing for the Treasury to tax everybody to the limit of what he can stand, always bearing in mind that with the tremendous expansion in industry and all that sort of thing, you do not want to kill off capital so completely that you are crippling your efforts. But, certainly, in time of war we all agree that everybody should be taxed everything he can be taxed.

Mr. Raushenbush. I was trying to develop the point as to everything that he could be taxed. This is not academic, because in the bill now in the Senate Committee on Finance, tending to take the profits out of war, as to that bill there has been a good deal of dispute as to whether one can do ahead of time what the Treasury tried unsuccessfully to do in the war time, to raise the taxes very much. I was trying to get, if possible, what the definite limit was, at which point there would be a refusal to work.

Mr. Morgan. Did I understand you to say that the Treasury did it unsuccessfully? They got one-third of the cost of the war.

The **Chairman.** The Treasury wanted to go further.

Mr. Leffingwell. There was a delay and the armistice came before the legislation was passed, but the actual effect was that we borrowed about $26,000,000,000, and we raised about $13,000,000,000 in taxes, and that made the $40,000,000,000 I have been speaking of. That is about what the Treasury did.

The problem, of course, was a very acute one. It was a very unpopular measure which the Treasury suggested, and the people in the country, like statesmen and the Secretary of the Treasury and the President of the United States, called upon the congressional leaders to do that. It was a very, very serious thing indeed. In my opinion, that drastic taxation would have been passed, if the Armistice Day had not come, because the American people were prepared to make the sacrifice which they were called upon to make. It was the most ingenious taxation the Treasury was able to think of. Experience adds, no doubt, to the intellectual prowess of the tax gatherer, and no doubt today the Treasury may be able to think up things we could not think of then, but our program was to raise all the taxes we could raise without slowing down the productive effort of the country for the purposes of the war. That was our purpose.

Senator BONE. Mr. Morgan, you say it would have been necessary to broaden the tax base. I assume that you take in a larger bracket of potential taxpayers in the income-tax field and in the sales-tax field.

Mr. MORGAN. Possibly. They have a system in England by which the income tax is the same for everybody up to 5,000 pounds a year.

Senator BONE. You mean in the percentage?

Mr. MORGAN. I mean in the percentage. They all have to pay 4s. 6d. now. That is 22½ percent. After they have what they call the surtax or supertax, which is calculated on everything, and that goes up to 60 percent altogether, everybody above 5,000 pounds has to pay—between 5,000 and 7,000 there is a certain reduction—and then they have to pay up to 60 percent, all of them.

Senator BONE. Do you think, as a practical matter of taxation, that is a superior system to our current system of taxation?

Mr. MORGAN. Yes; that is the more effective system.

Senator BONE. It may be a little out of order here, but I am rather curious to get your reaction, Mr. Morgan, as a very great number of very prominent gentlemen have avoided expressing themselves concerning the matter, and I hope you will.

In view of our experience in the last war, and the experience in Europe as the result of the last war, where a great many governmental systems were violently overthrown, and where their picture does not appear to be a very healthy one, I am wondering what you might think might happen to western civilization, in the event the western world became embroiled in another great international war which went several years?

Mr. MORGAN. I cannot guess. It is quite impossible.

Senator BONE. Do you feel that it might jeopardize those things which have come to us as a heritage of thousands of years?

Mr. MORGAN. In every war you must interfere with the capital structure in a country. And if the war destroyed the country to such an extent that it destroyed what you might call the leisure class. the people in comfortable positions, that will eventually destroy civilization. But civilizations have died before now and come back. They are always based on the same thing.

Senator BONE. You know what I mean by "the Western World."

Mr. MORGAN. The civilization of western Europe and America.

Senator BONE. That is right. Do you think that that civilization could stand the tortuous strains of another long drawn-out war. without perhaps being in grave danger of a collapse that would involve our civilization, perhaps so hopelessly financially and with social upheavals as perhaps to do irreparable damage?

Mr. MORGAN. I think it might do irreparable damage, of course, but how great that damage would be, I do not know. I have never been able to make up my mind about that situation, Senator.

Mr. LAMONT. It is dreadful to contemplate, Senator.

The CHAIRMAN. We do know that under more modern methods, it is apt to be very more devastating than the last war. We have a right to expect that in a general way, Mr. Morgan, have we not?

Mr. MORGAN. I rather think so.

The CHAIRMAN. The committee will be in recess until 10 o'clock in the morning, and before taking the recess let it be announced that it is our expectation of finishing tomorrow afternoon, and we shall probably recess for not over one hour and a half tomorrow noon.

(Thereupon, at 5:05 p. m., the hearing in the above-entitled matter was adjourned until 10 a. m. of the following day, Wednesday, Feb. 5, 1936.)

INVESTIGATION OF MUNITIONS INDUSTRY

WEDNESDAY, FEBRUARY 5, 1936

United States Senate,
Special Committee to Investigate
the Munitions Industry,
Washington, D. C.

The hearing was resumed at 10 a. m., in the Caucus Room, Senate Office Building, pursuant to adjournment, Senator Gerald P. Nye presiding.

Present: Senators Nye (chairman), Clark, Bone, and Vandenberg.

Also present: Stephen Raushenbush, secretary, Lawrence Brown, financial assistant to committee, and Robert Wohlforth, assistant to the secretary.

TESTIMONY OF J. P. MORGAN, THOMAS W. LAMONT, GEORGE WHITNEY, R. C. LEFFINGWELL, AND ALBERT RATHBONE—Resumed

The Chairman. The committee will be in order. Mr. Raushenbush.

REPAYMENT OF FRENCH OBLIGATIONS[1]

Mr. Raushenbush. Mr. Chairman, I would like to take up rather briefly with Mr. Leffingwell and Mr. Rathbone the actions of the Treasury in regard to the French private indebtedness in the United States prior to our entry into the war.

Does either of you gentlemen remember about these first French transactions so you would care to inform the committee, or would you prefer to have me go over these documents as I have them here?

Mr. Leffingwell. Which do you mean by the "first French transactions"?

Mr. Raushenbush. The first one to mature was the Seligman loan; that came due on November 16, 1917.

Mr. Leffingwell. November 16, did it? I do not seem to remember much about it. I think you had better start us off, Mr. Raushenbush, and that may refresh my recollection. Do you remember about it?

Mr. Rathbone. I do not remember anything about it. It was before I had anything to do with the Treasury.

Mr. Raushenbush. I think we have seen already the French had a total of $675,547,000 plus in the United States maturing after April 6. We have already gone through the Italian maturities that came due and were paid off, and now we come to the first French maturity, the Seligman loan, which I believe was originally $12,800,000, and by this time had been reduced to $10,072,000. It was a 1-year loan secured by collateral consisting of railway shares.

---

[1] See also "Exhibits Nos. 4184 through 4189", Hearings, Part XXXIII.

Just to establish the loan, I want to offer two exhibits, one being a draft by the issuing house of the investment, and there is another one.

Mr. **Wohlforth.** A further letter concerning the same transaction.

Mr. **Raushenbush.** Just establishing the existence of the loan.

(The documents referred to were marked "Exhibits Nos. 2865 and 2866", and are included in the appendix on p. 9278.)

Mr. **Raushenbush.** On October 4, 1917, we find a letter from the French High Commission of the French Republic, Tardieu, to the Secretary of the Treasury, who was then Mr. Crosby. We have both the French and English here, in case you want to go back of this translation.

(The document referred to was marked "Exhibit No. 2867", and is included in the appendix on p. 9279.)

Mr. **Raushenbush.** He is saying to the Acting Secretary of the Treasury [reading]:

> On the one hand you believe that the American laws do not permit you to authorize the reimbursement of our loans with funds advanced by the American Government and that therefore, at their expiration, these loans should either be renewed or replaced by similar credit operations; at any rate that the French Government should plan to pay them off with resources completely independent of funds advanced by the United States since their entrance into the war.
>
> On the other hand, you recognize as we do the considerable interest that there is in retaking possession of the shares from the collateral of the Seligman loan of 1916, in order to apply them to release the Spanish securities from the collateral of our other loans, so necessary at this time. On the other hand, you consider as well as we do, the grave damage that a renewal of a loan of this nature at 7 percent will cause to French credit.
>
> Between these two lines of consideration I have searched for a loyal conciliation and I believe I have found it. This solution consists, for the French Government, in proceeding immediately to the issue on the American market of Treasury bills similar to those which the British Government is now issuing—and for an amount corresponding to the loan to be repaid.

Do you gather from that Mr. Leffingwell, that on October 4, 1917 the Treasury was still trying very hard to get the French to refund their private loans over here, and also did it hold that they were not authorized——

Mr. **Leffingwell.** I do not gather any conclusion about what the Treasury held from what a French High Commissioner said in a letter. His impressions might have been somewhat confused.

Mr. **Raushenbush.** Surely, but do you remember that?

Mr. **Leffingwell.** I do not remember any opinions formed in October 1917, on the subject, myself, at first hand.

Mr. **Raushenbush.** Do you remember, Mr. Rathbone, at this moment that transaction?

Mr. **Rathbone.** I was not there.

Mr. **Raushenbush.** That is right. Will you remind me again when you came in?

Mr. **Rathbone.** I left New York on January 21, 1918, and reported to the Treasury on January 22, 1918. I think on January 23, 24, and 25, I was engaged in fighting off an attack of ptomaine poisoning from the food that you got in Washington during the war. So it was practically the first day of February that I went into the Treasury, knowing nothing about its policies or its foreign loans or anything else. But I soon learned something about them.

Mr. RAUSHENBUSH. Then we have a letter from the Seligman files to the French financial agent, pointing out that it is pretty hard to renew this loan, saying [reading]:

> Under the circumstances, the rate of interest which we suggested to you, namely, 7 percent for a 6 months' extension, would seem to be not unduly high. Of course, if the French Government should prefer to pay off the loan rather than extend on these terms, we should understand its point of view, but I feel certain that the French Government will similarly appreciate our attitude in the matter of interest rate, which must necessarily have to be in conformity with money market conditions.

(The document referred to was marked "Exhibit No. 2868" and is included in the appendix on p. 9281.)

Mr. RAUSHENBUSH. That was not a particularly high rate, was it, 7 percent on a 6 months' extension?

Mr. RATHBONE. Was it 7 percent for 6 months, or at the rate of 7 percent per annum for 6 months?

Mr. RAUSHENBUSH. It says, "7 percent for a 6 months' extension."

Mr. RATHBONE. That would be extremely high. Fourteen percent a year would be a very high rate of interest.

Mr. MORGAN. Oh, they do not mean that.

Mr. RAUSHENBUSH. I beg your pardon, Mr. Morgan.

Mr. MORGAN. I should say that in general parlance you say you extend them at 7 percent for 6 months. That means 7 percent per annum, of course.

Mr. RAUSHENBUSH. I do not know; here is the way it reads, "7 percent for a 6 months' extension."

Apparently the paragraph before shows that they had been running over 7 percent on an annual basis [reading from "Exhibit No. 2868"]:

> With the French Republic secured bonds having 18 months to run selling on a 7.7 percent basis of interest yield, and with the United Kingdom of Great Britain and Ireland secured obligations having a little less than a year to run selling on a 7.1 percent basis—not to mention longer maturities, selling in the case of the United Kingdom of Great Britain secured bonds falling due November 1, 1919, on an 8-percent basis—the rate of interest would naturally have to be comparatively high.

How would you interpret that?

Mr. RATHBONE. I think in general the bankers like as high a rate of interest as they can get. It makes their transaction very much easier. I suppose this is a negotiation between the Seligman firm and the French Government.

Mr. RAUSHENBUSH. Would you interpret that phrase as being 14 percent on an annual basis?

Mr. RATHBONE. I do not know what Seligman meant. I should not think so.

Mr. MORGAN. You say "a rate of 7 percent." That means per annum.

Mr. WHITNEY. It always means per annum. I do not know anything about that transaction, of course.

Mr. RAUSHENBUSH. It says "7 percent for a 6 months' extension."

The CHAIRMAN. This does not say "at the rate of."

Mr. **Morgan**. It says, "at the rate of 7 percent", does it not?

The **Chairman**. No.

Mr. **Raushenbush** (reading):

> Under the circumstances, the rate of interest which we suggested to you, namely, 7 percent for a 6 months' extension."

Mr. **Lamont**. Well, 7 percent.

Mr. **Raushenbush**. I now offer a letter from the Acting Secretary to Mr. Tardieu, dated October 9, 1917, showing that Mr. Lamont apparently was interested in this. Do you remember that, Mr. Lamont?

Mr. **Lamont**. Interested in what?

Mr. **Raushenbush**. In this first French maturity, this Seligman matter.

Mr. **Lamont**. No; I have no recollection of it.

Mr. **Leffingwell**. Who was the Acting Secretary then, Mr. Raushenbush?

Mr. **Raushenbush**. Mr. Crosby [reading "Exhibit No. 2869"]:

> My Dear Mr. Tardieu: I have the honor to acknowledge receipt of your communication of the fourth instant relating to the loan of your Government falling due in New York on the 15th of October. Understanding that Mr. Lamont of Morgan & Co. is expecting to see me on this subject tomorrow, I presume no specific answer to your communication is now needed. I may say, however, that if you can conveniently relocate this loan in any banks other than those now holding it, and at a better rate of interest, and without public adverstising, I would think it a very desirable thing to be done. I wish you every success in the efforts you are making to that effect. As to future issues, amounting to $50,000,000, besides the $12,000,000 now in question, it seems to me rather premature now to discuss the question until more precise terms as to the omission may have been studied.
>
> I can but express regret that the opportunity which you had for the renewal of the $12,000,000 maturing on October 15 was not accepted by you. I trust indeed that this offer is still open, and if so it is my duty, I think, to recommend that you accept it.
>
> Holding myself in readiness at all times to take up the question further with you, I remain,
>
> Very sincerely yours,

(The document referred to was marked "Exhibit No. 2869" and appears in full in the text.)

Mr. **Lamont**. No; I have not the slightest recollection of that.

Mr. **Raushenbush**. During all this time, Mr. Lamont, your main interest was in the demand loan. If you were seeing the Treasury about anything, that is presumably what you were seeing it about, was it not?

Mr. **Lamont**. What time is this?

Mr. **Raushenbush**. This is October 9, 1917.

Mr. **Lamont**. We had nothing to do with it. I do not recall that we were having any talks in the autumn of 1917 about anything.

Mr. **Raushenbush**. Do you not remember, Mr. Lamont, that a little while after this they decided to switch over into Treasury bills, and you were interested in that?

Mr. **Lamont**. Oh, certainly, certainly.

Mr. **Raushenbush**. Do you care to make any comment, Mr. Leffingwell?

Mr. **Leffingwell**. I think during all that period—this letter is an illustration of it—the Treasury was pressing the Allies to finance their maturities and so far as it was practicable to do so without public issue, that is, by Treasury bills or other short-term paper. This letter of Mr. Crosby's is an illustration of a policy which was pursued with only moderate success, but pursued to the full extent it could be pursued all through that period.

Mr. **Raushenbush**. Then we have a letter from Mr. Lamont to Mr. Crosby, dated October 13, 1917 [reading "Exhibit No. 2870"]:

> Dear Mr. Secretary: Referring to our conversation last Tuesday, the French people accepted in very good part your decision to make no public statement, at any rate for the present, in connection with their desire to issue Treasury bills, and we reiterated to them our inability to offer these bills in the absence of the express approval of the Treasury.
>
> The Commission thereupon requested that we cooperate with it in arranging for a line of discount not to exceed $10,000,000 with its present bank depositaries. This, of course, we were glad to do, not as a matter of business, but as a matter of good will; and for your confidential information I may state that the New York depositaries let them have, upon their 90-day note, approximately the sum requested. Very possibly, through some director in one of these institutions who talks, the matter of this confidential transaction may appear in the newspapers. If it does, and we are asked to comment upon it, I plan to say, in effect the following:
>
> "The report that there has been an offering of French Treasury bills is incorrect. The French Treasury carries considerable current balances in New York, and may occasionally arrange temporary accommodations with its depositaries, like any other banking customer. If any such temporary loans have recently been made, they are inconsiderable in amount."
>
> I am confident, from my thorough talk with you, and your complete outline of the situation and your own attitude, that the foregoing falls in with your own ideas.
>
> Very truly yours,

(The document referred to was marked "Exhibit No. 2870" and appears in full in the text.)

Mr. **Raushenbush**. Does that remind you of the thing, Mr. Lamont, and what was going on then?

Mr. **Lamont**. I am sorry, Mr. Raushenbush; I have not the slightest recollection of the thing.

Mr. **Whitney**. Mr. Raushenbush, we did sell $9,200,000 French Treasury bills in October 1917.

Mr. **Raushenbush**. Yes; and those were paid out of the United States Treasury, were they not?

Mr. **Whitney**. I would not know that.

Mr. **Raushenbush**. We have a memorandum for Mr. Leffingwell dated March 29, a Treasury memorandum, showing the French bank balance of April 1 and the balance on the morning of April 15, and there is listed there, under the head of "April 15 purchases" Treasury bills, $9,200,000. Do you remember this at all, Mr. Leffingwell?

Mr. **Leffingwell**. What is that memorandum you are reading?

Mr. **Raushenbush**. It is the memorandum signed by A. R., which we presume is Mr. Rathbone, and N. H. D., which we presume is Mr. Davis, indicating that the French had gotten from the Treasury that $9,200,000 in the Treasury bills.

(The document referred to was marked "Exhibit No. 2871" and is included in the appendix on p. 9282.)

Mr. **Leffingwell**. The memorandum seems right to me, but you have omitted, of course, the most fundamental thing that happened in the relations between the two Governments, and that is the arrangement made by the Secretary of the Treasury with Mr. Andre Tardieu on or about the 12th of March, which entitled the French

Government to apply the dollar equivalent of the francs which the French Government was providing to the American Government for the payment of its indebtedness.

It seems to me important that, instead of attempting to understand the course of events as between the French Government and the American Government by sidelights furnished from the files of Seligman or Morgan, who were, after all, bystanders in a great war being waged by two great countries, you should take the opportunity to introduce at this stage the fundamental agreements, at least, which were entered into between the Governments. You cannot otherwise understand the course of events.

Mr. **Raushenbush**. Mr. Wohlforth has that material. I do not have that to introduce it at the moment.

Mr. **Leffingwell**. Do you not think that for your own understanding of it and in order to help your Treasury witnesses, at least, it would be well if Mr. Wohlforth would introduce it in evidence at this point Because here is a little intradepartmental memorandum about an item of expenditure and a bank balance, which is quite incomprehensible except in the light of the arrangements which the two Governments had entered into.

Mr. **Raushenbush**. Before deciding on that, could you answer this sort of a question:

As you remember the thing now, was there any other purpose in this particular transaction which started before this agreement? It started back in October, you see. It was long before your general arrangement with the Treasury. This pay-off part came later. But before that the whole thing went through, and seems to have been an arrangement by which the French would convert this loan into Treasury bills and then be able to withdraw their collateral from underneath that loan for the use of other loans.

We have a letter from Mr. Whitney to the French financial agency, still dated in October, before your arrangement, and pointing out the wish of the French with respect to this collateral. All this is before your general agreement.

Mr. **Rathbone**. The payment was not before.

Mr. **Leffingwell**. The payment was not before, but was subsequent, and you introduced the intradepartmental memorandum which makes notation of a payment which is dated March 29, and is signed by the initials of Mr. Rathbone and Mr. Davis, and addressed to me.

I am only pointing out the extraordinary difficulty of attempting to interpret the course of Treasury policy in the absence from the record of the perfectly well-defined arrangements entered into between the Government of the United States and the Governments of Great Britain and France.

It seems to me the orderly procedure requires that you give us the benefit of those agreements, because both J. P. Morgan & Co., Seligman & Co., and all the other bankers of America, from the time of the declaration of war became just like other American citizens, sitting on the sidelines and watching the great effort that the American people were making under the leadership of their Government and in association with their Allies for the winning of the war.

You cannot interpret the Treasury in the light of bystanders' comments.

Mr. **Raushenbush.** It was a little more than sitting on the sidelines.

Mr. **Leffingwell.** They were not sitting, they were standing, and doing their part to the best of their ability, in my opinion.

Mr. **Raushenbush.** Here is a memorandum signed by R. C. L.—I take it that is you, Mr. Leffingwell—to the Secretary, with an attached draft of a letter to Mr. Tardieu. The memorandum is headed as follows:

> This letter has been carefully prepared to cover the situation which Tardieu presented to you personally sometime ago. It will be accepted by Tardieu if you approve.

The letter itself has the initials A. R. and R. C. L. on it. I take it that is the document?

Mr. **Leffingwell.** That I take to be the document. Have you had the copies carefully checked?

Mr. **Raushenbush.** I think so.

Mr. **Leffingwell.** Because that is very fundamental.

Mr. **Raushenbush** (reading):

> Dear Mr. Tardieu: I wish to thank you for your ready acceptance of my views as expressed in the recent conferences which you have had with the Treasury Department. As a result of these conferences, I understand the arrangements to be as follows:
>
> (1) All available funds of the French Government in the United States from whatever source arising, shall be used as may be required for the purpose of meeting the dollar expenditures of the French Government in the United States; and
>
> (2) Advances are not to be made to the French Government by the United States Treasury as long as the cash balances of the French Government in the United States may be sufficient to meet its day-to-day cash requirements in the United States, for which an average daily bank balance of $30,000,000 will be considered sufficient.
>
> You call my attention to the fact that the amounts which the French Government receives from the United States Government in reimbursement of the sums advanced in France by the French Government for United States Army expenditures, together with any sums received by the French Government from other sources than those advanced from the United States Treasury to France, should be available to meet the interest and principal of the obligations of the French Government created before the entry of the United States into the war, or for any other like needs of the French Government in the United States.
>
> I appreciate the force of this proposition and although I have heretofore been unwilling to assent to the use by the French Government of funds advanced to it by the United States for such purposes, I now accede to the principle that future dollar advances that may be made to the French Government by that of the United States may be used to pay, when due, the interest upon and principal of the obligations made by or for the French Government, payable in the United States, or for other like cash requirements of your Government in the United States, up to the aggregate of the amounts received by the French Government in reimbursement of the advances made by that Government for the United States Army expenditures in France, together with the amounts which may be received by the French Government from sources other than United States credits, and on the understanding that all securities now held as collateral to obligations of the French Government, and which will be released by the payment of the said obligations, as well as all other securities held by your Government in the United States, shall be used by you in such manner as may be agreed between us as most advantageous in the common interest.
>
> In accepting the distinction between the two classes of funds above referred to, I wish to express the hope that before making arrangements to pay maturing obligations you will confer with the Treasury Department in relation to the matter. In the common interest it may well be more desirable

when obligations mature, either to extend them or to make some other arrangement in respect thereof, rather than to pay them off.

A full exchange of views between your Government and the Treasury Department in relation to all such matters, will, I am confident, be mutually advantageous.

(The document referred to was marked "Exhibit No. 2872" and is included in the appendix on p. 9284.)

Mr. RATHBONE. I think that is exactly correct; yes. Of course, I have no opportunity of comparing it with the original as it was sent.

I would like, if it meets with the approval of the Committee, to state just what the arrangement was between the French Treasury and the American Treasury regarding these matters.

Mr. RAUSHENBUSH. As of what date, Mr. Rathbone?

Mr. RATHBONE. It began in March 1918 and was continued throughout the rest of the period of the Treasury advances. I would like to read this statement into the record [reading "Exhibit No. 2873"]:

MEMORANDUM REGARDING FRENCH MATURITIES (BY ALBERT RATHBONE)

I. The United States Treasury never obtained any rights of subrogation in respect of securities pledged by the French Government to secure loans floated in the United States prior to the entry of the United States into the war. As a result of conferences theretofore had between our Treasury and the French Government an arrangement (set forth in Secretary McAdoo's letter to M. Tardieu of March 1918, and confirmed a few days later by the reply of a representative of the French Government) was entered into substantially as follows:

(1) All available funds of the French Government from whatever source arising were to be used as required to meet the dollar expenditures of France in the United States.

(2) Advances were not to be made by the United States Treasury to France while its cash balances in the United States were sufficient to meet its day to day cash requirements in the United States.

(3) Future dollar advances made by the United States to the French Government might be used to pay when due the interest upon and principal of the obligations made by or for the French Government payable in the United States or for other like cash requirements of the French Government in the United States up to the aggregate of the amounts received by the French Government in reimbursement of the franc advances made by the French Government for the United States Army expenditures in France, together with the amounts which might be received by the French Government from sources other than United States credits.

(4) All securities then held as collateral to obligations of the French Government released by the payment of said obligations as well as all other securities held by the French Government in the United States were to be used in such manner as might be agreed upon between the United States Treasury and the French Government as most advantageous to the common good.

II. In June 1918 the Secretary of the Treasury received a communication from M. Clemenceau, then President of the French Cabinet, calling upon the Secretary "* * * personally at the most critical time of the war, in order to ask a financial assistance just as indispensable to victory as the military assistance which your country is giving us so generously." Among other things, it called attention to the peculiar financial position of France because of its being the battlefield, and set forth that the productive capacity of France had been diminished by more than one-third, that its currency, practically reduced to paper money, must suffice not only for French needs but also for those of "the Allies because the Allied armies are fighting on French soil." It further stated that the French treasury had placed at the disposal of the "Allied Governments" for the month of April 460,000,000 francs (of which 310,000,000 were for the American Army), for the month of May 940,000,000 francs (of which 750,000,000 were for the American Army), and for the first 6 days of June 220,000,000 francs for the American Army.

Mr. Clemenceau requested:

(1) That a discrimination be made between the advances made to France by the American Treasury "which must be repaid after a period of time" and the dollar equivalent of the francs advanced by the French Government to provide for the expenses of the American Army in France. He suggested that these dollars be put at the disposal of the French Government in the form of a current account, the actual drawings therefrom during the war to take place on conditions to be agreed upon.

(2) That the equivalent of 2,300,000,000 francs be deposited in gold in a bank of the Federal Reserve System to the credit of the Bank of France "against an equal previous deduction in our cession account" to be employed for French purchases in the United States after the war or if the Secretary of the Treasury preferred putting this gold at the disposal of the Federal Government when France's money circulation came down after the war to a level to be agreed upon.

M. Clemenceau further stated that he addressed this communication as the head of the French Government, that it was a question of direction of the war, important for the security of our troops as well as theirs, that France was menaced with a crisis of its fiduciary circulation and was facing a terrible situation.

Parenthetically, that was a communication at a very dark day in the war from the head of the French Government, and had to receive the most serious consideration.

III. Early in July 1918 Secretary McAdoo replied at length to the communication from M. Clemenceau. He refused to assent to any change in the arrangement of March 1918 and stated that he did not feel he could sanction advances of dollars to an Allied Government while it had dollar funds available. Further he stated that he noted the apprehensions of the President of the French Cabinet of the gravity of the financial situation due to the increased issue of bank notes in France and fully appreciated the serious consequences which might result from a depreciation in the French bank notes. He stated further that to meet the conditions presented as an emergency he was prepared immediately to establish in favor of the French Government against its obligations in a corresponding amount a special credit in dollars to an amount equivalent at the then rate of exchange to 1,000,000,000 francs, to be made available and dealt with in such manner as should be agreed upon between the Secretary of the Treasury and the representatives of the French Government.

IV. The maturities the payment of which the French Government reported aggregated $289,744,755 and the dollar equivalent of the francs furnished by the French Government, for our army expenses aggregated $1,025,438,235.88 (1920 Report of the Secretary of the Treasury). Had it not been for the agreement of March 1918 or some similar arrangement it would have been the absolute property of France and could have been used by it at any time and for any purpose it saw fit. It aggregated an amount very greatly in excess of the aggregate of the French obligations sold in this country before we entered the war and paid from our Treasury advances to the French Government and by France using, for war supplies it purchased in the United States in accordance with the March 1918 agreement, dollars it received for francs. Our Treasury loans to France were smaller by a considerable amount than otherwise would have been the case.

(The document referred to was marked "Exhibit No. 2873" and appears in full in the text.)

Mr. Wohlforth. Mr. Rathbone, may I ask this at this point?

All the French maturities coming due in this country between April 6, 1917, and the armistice were taken care of out of the United States Treasury; is not that correct? You mentioned it here on the top of page 4, and there were other maturities in addition.

Mr. Rathbone. Those are the payments which the French Government reported as having maturities paid out of the American Treasury advances, and are shown in the report of the Secretary of the Treasury for 1920.

Mr. **Raushenbush.** Mr. Rathbone, that first sentence—

> The United States Treasury never obtained any rights of subrogation in respect of securities purchased by the French Government to secure loans floated in the United States prior to the entry of the United States into the war—

that would seem at first glance to be, as I read it, a little different from the March arrangement, would it not?

Mr. **Rathbone.** It is stating a fact. We never were given any rights of subrogation.

Mr. **Raushenbush.** In this letter I have just read from Secretary McAdoo to Mr. Tardieu, there was this phrase [reading from "Exhibit No. 2872"]:

> On the understanding that all securities now held as collateral to obligations of the French Government, and which will be released by the payment of the said obligations as well as all other securities held by your Government in the United States, shall be used by you in such manner as may be agreed between us as most advantageous in the common interest.

Mr. **Rathbone.** That is not a right of subrogation.

Mr. **Raushenbush.** No; it is not exactly.

Mr. **Rathbone.** It is very different.

Mr. **Raushenbush.** What did happen? The British securities were subrogated, were they not, on the British maturities?

Mr. **Rathbone.** You cannot just say the British securities were subrogated. I can tell you about the British, if you want, at this time.

Mr. **Raushenbush.** Mr. Leffingwell, could you give us an idea of the difference between the two policies with respect to the two governments there?

Mr. **Rathbone.** I can give you an idea of the difference in the policy of the two governments.

Mr. **Raushenbush.** Could you answer that specific question, though, first?

Mr. **Rathbone.** No; you cannot answer a question like that. You speak of British securities. That comprises——

Mr. **Raushenbush.** On the maturities coming due, as they were paid off in the Treasury.

Mr. **Rathbone.** Yes; but that comprises a great many more securities than the United States Treasury was ever given any so-called "right of subrogation to", so you cannot answer that question specifically.

Mr. **Raushenbush.** Let me try to rephrase it:

On the British maturities coming due after our entry into the war, which were paid out of the United States Treasury, was not the Treasury subrogated to the securities behind those maturities?

Mr. **Rathbone.** Supposing I read this, because it will explain the whole thing.

Mr. **Raushenbush.** What is that?

Mr. **Rathbone.** This is in regard to the subrogated British maturities.

Mr. **Raushenbush.** All right.

Mr. **Rathbone.** I am going to ask Mr. Leffingwell if he will read it for us.

Mr. **Raushenbush.** You can ask one of our staff here to read it, if you want to.

Mr. **Wohlforth**. The document handed to me is entitled, "Memorandum Regarding Subrogated and Other Securities of the British Government Physically in the United States", by Albert Rathbone[1] [reading 'Exhibit No. 2874"]:

1. The arrangements between the United States Treasury and the British Government in regard to securities owned by the British Government and physically within the Unied States on February 1, 1918 (whether pledged to secure the so-called overdraft or pledged to secure the 1-year and 2-year 5½ percent notes of the British Government which matured February 1, 1918, or pledged to secure the 2-year 5 percent secured loan gold notes of the British Government which matured September 1, 1918, or unpledged), were arrived at by interchange of cables or letters and through many oral discussions between the United States Treasury officials and representatives of the British Government. This arrangement is accurately set forth in a letter addressed by Sir Hardman Lever, Financial Secretary of the British Treasury, to Albert Rathbone, Assistant Secretary of the United States Treasury, under date of July 8, 1919, and the accuracy of the arrangement as therein set forth was confirmed by Mr. Rathbone's letter to Sir Hardman Lever of the same date.

2. In view of the changes in personnel in both the United States and British Treasuries that were bound to occur sooner or later, it was thought advisable that the arrangements between the Treasuries before referred to which were thoroughly understood by those then controlling both Treasuries, should be set forth in detail in one document. Accordingly the letters above-mentioned were prepared originally in draft form and as the result of conferences between representatives of the two Treasuries, the original drafts were changed so that said arrangements were succinctly set forth in Sir Hardman Lever's letter of July 8, 1919.

3. As by July 8, 1919, it was apparent that the war, so far as active fighting was concerned, had terminated, the foregoing arrangements except those affecting the subrogated securities of the British Government had been entirely fulfilled and the British Government was so advised.

4. The securities covered by Sir Hardman Lever's letter, other than those in respect of which the United States Treasury was given the right of subrogation, were never pledged to secure any loan which was paid out of our Treasury advances to the British Government. Those securities were owned or controlled by the British Government which, so far as our Treasury was concerned, had the absolute right to deal with them as they pleased until at Secretary McAdoo's request the British Government entered into the aforesaid arrangement in respect thereof. The purpose of that arrangement was to give the United States Treasury a voice in determining the use during the war of such securities for the common good and to help if necessary in obtaining the finance required in order to win the war. It was never intended nor agreed that such securities should ever be pledged to secure any loans made by the United States Treasury to the British Government.

5. The subrogated securities consisted of: (1) 91,931/234,837 of the securities deposited under the trust agreement to secure the 1- and 2-year 5½-percent notes of the British Government; and (2) the securities deposited under the trust agreement to secure the 2-year 5-percent secured-loan gold notes of the British Government.

Except that insofar as any of such securities, with the consent of the Secretary of the United States Treasury, were used by the British Government for the purpose of rectifying neutral exchanges, they were not to be included in the arrangement stated and were not to be considered in determining the proportion of the securities formerly pledged to secure the 1- and 2-year notes, as to which subrogation was given the United States Treasury.

The United States Treasury had the right of subrogation in respect of its advances to the British Government in the sum of $91,931,000 of the securities under subdivision (1) above and in respect of its advances to the British Government in the sum of $192,842,000 in respect of the collateral specified in subdivision (2) above.

---

[1] In this connection see also "Memorandum about Subrogated Securities and other Securities" and "Postscript about Subrogated Securities and other British Securities", both by R. C. Leffingwell, which are included in the appendix on pp. 9492 and 9493. They were submitted to the committee under dates of Feb. 6 and Feb. 24, 1936, respectively, by Mr. Leffingwell.

6. The securities pledged under the trust agreements last mentioned were the only securities as to which at any time the United States Treasury had the right of subrogation except only as by agreement between the two Treasuries from time to time certain subrogated securities were released against the addition to the subrogated securities of other securities of substantially equal value.

7. The "subrogated securities" were never in the possession of the United States Treasury. That term was used to define the securities which the British Government was obligated at the request of the Secretary of the Treasury to deposit with the Treasurer of the United States or in case the Secretary of the Treasury should so request, with such depositary as the British Government should approve to secure as to one lot of such securities British Government obligations held by the United States Treasury to the amount of $91,931,000 and as to the remainder of the subrogated securities to secure British Government obligations similarly held to the amount of $192,842,000. No such request was made by the Secretary of the Treasury prior to July 1, 1920, nor it is believed thereafter.

Mr. RATHBONE. May I just interpose there? I put in the date July 1, 1920, because that was the first day that I had ceased to be an Assistant Secretary of the Treasury and I knew of my own knowledge up to that date what happened. After that date I am pretty sure I am credibly informed that no such request was made.

Mr. WOHLFORTH (finishing reading "Exhibit No. 2874"):

8. It is believed that until the funding of the British short-term obligations into long-term obligations, and certainly until June 30, 1920, the right of the United States Treasury to require the pledge of the collateral to secure the British Government obligations in the amounts aforesaid remained unimpaired. There was no payment made which diminished the principal amount of the debt to the United States in respect of which the British Government was obligated to pledge the subrogated securities unless possibly (and it is not believed to be the case) the proceeds of sale of certain of the subrogated securities were so applied.

9. After the Armistice the British Treasury representatives urged the United States Treasury to release the British Government from its obligation in respect of the subrogated securities, but no such release was given by Secretary Glass or Secretary Houston although both Secretaries stated they were prepared to give such release in connection with an agreement for the exchange of the British short-term obligations into long-term obligations and were so advised by Assistant Secretaries Leffingwell, Rathbone, and Davis.

10. In this connection it is interesting to note that the maturities the payment of which the British reported aggregated $353,501,561.66, while the dollar equivalent of the pounds furnished by the British to meet our war expenses which had to be paid in English currency aggregated $449,496,227.55 (Report of the Secretary of the Treasury for 1920). This latter sum in no sense was a loan from our Treasury, but a British asset derived from its sale of its currency.

(The document referred to was marked "Exhibit 2874" and appears in full in the text.)

Mr. RAUSHENBUSH. What was the reason, Mr. Leffingwell, for the difference between the treatment of the French in regard to subrogation, and the treatment of the British?

Mr. LEFFINGWELL. It is always a little difficult to analyze the course of negotiations between governments without analyzing also the course of events and how the problems presented themselves to the two governments.

The situation presented itself really in rather reverse form. The acuteness of the problem in relation to the maturities of Great Britain occurred at an earlier date. I think that was probably one reason for the difference. I think partly the reason for the difference was that the French presented their case through Mr. Andre

Tardieu very effectively at that period in February or March when our very large disbursements in France first became a burden upon the American Treasury.

It is very hard to give you a succinct answer, but the British maturities came faster than French maturities in important amounts, I should say, and the need of the American Government for francs presented itself faster and in larger amounts. We had our Army in France and France was the battlefield, and the urgency of the pressure for francs was heavier.

I think the French case was better presented and probably the Treasury saw the point more clearly; that probably explains the fact that the arrangements entered into which Mr. Rathbone has described in these two to me admirably clear memoranda were undoubtedly more severe toward the British than toward the French.

Is that approximately responsive to your question?

Mr. **Raushenbush.** Yes; surely.

Was there also the fact that during the situation there was more danger of the French credit going to pieces than the British? In the second paragraph of this memorandum of Mr. Rathbone's he quotes Clemenceau as calling attention to the fact that France was reduced practically to paper money as far as its currency was concerned. Was not that also one of the key factors?

Mr. **Leffingwell.** This agreement made on March 12, which you read into the record, was presented at a time before any such acute problem in regard to the French currency had occurred, either to the American Government or to the French Government. I think it is safe to say that that problem which Mr. Clemenceau presented so forcibly to the Secretary of the Treasury of the United States became vividly acute in the minds of either Government only when the German advances had proceeded so far that Paris was under gunfire, and when the American Army in France had reached such numbers that immense expenditures were presenting to the French Government a very grave problem in the creation of francs.

So I imagine that probably the proper conclusion is the one I first indicated, that the March agreement really settled the general character of the relations of the two Treasuries in regard to the provision of foreign currencies before there existed the kind of apprehension which was reflected in Mr. Clemenceau's cable, which came along in June, did it not?

Mr. **Rathbone.** Yes; I think it was June.

Mr. **Raushenbush.** Yes; it was June or July; June.

Mr. **Rathbone.** About that time, too, the representatives of the French Treasury were suggesting that we get our francs in some other way than getting them from the French Government, either buying them on the exchange or making some arrangement with the Bank of France, because it would be better for them than the arrangement we had with the French Government to supply the francs.

Really, it comes down to this, it seems to me: The difference in the arrangements of the United States Treasury with the British Treasury and the French Treasury was that we had two different governments dealing with us; we were anxious, as far as possible with each one of them, too, to have as much benefit as we could get from their resources derived from other means than the United States

Treasury advances, and we made the best bargain with each of them that we could make for the purpose of diminishing our loans. Is not that a fact?

Mr. LEFFINGWELL. That is correct.

Mr. RAUSHENBUSH. I notice here in a Treasury memorandum dated March 19, 1918, which I offer for the record, the following sentence [reading from "Exhibit No. 2875"]:

> It was necessary during the period—

That is, the period since March 1917—

> to provide funds to enable the French Government to meet its maturing obligations in the United States, that Government having then no other funds available for such purposes—

Which would seem to indicate that by the March before this Clemenceau letter, the situation had——

Mr. RATHBONE. You are reading from what?

Mr. RAUSHENBUSH. It is being put before you.

Mr. LEFFINGWELL. I think the answer that occurs to me is that by that time—and Mr. Rathbone will correct me—the Treasury control of the bank balances of the Governments was becoming more and more effective, so that the control of bank balances prevented the accumulation of the dollar equivalent of the francs provided on the other side in the banks here, and the absence of other cash resources was partly the result of that measure of control.

But Mr. Rathbone could explain it better than I, and I hope he will correct what I have said.

Mr. RAUSHENBUSH. Do you have any comment on the paragraph I have just read, Mr. Rathbone?

Mr. RATHBONE. I am afraid I was trying to identify the document and not listening to just what was read.

Mr. RAUSHENBUSH. I had read that first line in the second paragraph.

(The document referred to was marked "Exhibit No. 2875" and is included in the appendix on p. 9285.)

Mr. RATHBONE. I think you will understand the situation if I take a moment to explain the actual operations.

Under the March 1918 agreement with the French Treasury, they were to have the use of the dollars we paid them for francs that we needed for the purposes of paying their maturities.

We did not, however, permit them to put in a separate fund the dollars they thus received and hold them in their own bank balance in order to pay their maturities when their maturities became due. We made them use that money for their purposes and purchases in the United States, and when it was exhausted, then we made additional loans.

Therefore, when a French maturity became due, a loan was made by the United States Treasury for the purpose of paying their maturities.

Mr. RAUSHENBUSH. Yes.

Mr. RATHBONE. The other way around, of course, would have been that France would have built up a big bank balance and idle money when money was needed for so many other purposes.

Mr. Raushenbush. Completing this Seligman transaction with a few exhibits, one is from Mr. Whitney to Mr. Bloch, dated October 29, 1917, showing the pulling out of the collateral there.

Letter dated December 9, 1917, from de Billy, the High Commissioner, to the Minister of Finance of France.

Letter of December 3, 1917, from Mr. Leffingwell to Mr. Simon, having to do with the deposit of francs abroad.

Telegram dated the 17th of December 1917, from Finance to the High Commissioner concerning the restriction on the use of dollars.

Letter from Mr. Leffingwell to Mr. Tardieu, dated February 12, 1918.

(The documents referred to were marked "Exhibits Nos. 2876 to 2780", inclusive, and are included in the appendix on pp. 9285 to 9287.)

Mr. Raushenbush. Do you have that in front of you, Mr. Leffingwell?

Mr. Leffingwell. Yes.

Mr. Raushenbush. Please note the second paragraph [reading from "Exhibit No. 2880"]:

> I ought, perhaps, to mention that Mr. Simon was mistaken in thinking that there has been any change in the view of the Secretary as to the maturing obligations of your Government.

So, up to February, about a month before that March letter, the Government was still holding to that position, was it not, that we were not going to pay money for these maturing obligations of the French; is that correct?

Mr. Leffingwell. Evidently.

Mr. Raushenbush. A wire from Crosby to the Secretary of the Treasury from Paris, dated March 11, 1918, in which he points out in the middle of the wire [reading]:

> My own view is that it is better to make adjustment by having them invest some of the moneys advanced to us here in our certificates of indebtedness to be used when their quarterly mature rather than to enter into any positive engagements for meeting their quarterly a long time in advance.

(The document referred to was marked "Exhibit No. 2881", and is included in the appendix on p. 9287.)

Mr. Raushenbush. Do you remember about that, Mr. Leffingwell? Was Mr. Crosby all the time trying to put on pressure to have these Governments refund, if possible at all?

Mr. Leffingwell. I do not understand that and I do remember about it. I do not know just what you mean by the question you ask, Mr. Raushenbush.

Mr. Raushenbush. We seem to get from some of these letters as we have gone through them that Mr. Crosby happened to have the idea that these Governments should try hard to refund their loans instead of coming to the United States and asking that they be paid off; that they should try under various circumstances to get them refloated. That particular letter is only one of many.

Mr. Leffingwell. I do not remember what Mr. Crosby's views were at that time, but this cable, as I understand it, is a suggestion. The passage that you have underlined says [reading]:

> My own view is that it is better to make adjustment by having them invest some of the moneys advanced to us here in our certificates of indebtedness to be used when their quarterly mature—

I suppose that means when they quarterly mature?

Mr. RAUSHENBUSH. Yes.

Mr. LEFFINGWELL (continues reading):

> rather than to enter into any positive engagements for meeting their quarterly——

Mr. RAUSHENBUSH. That is the way it reads here.

Mr. LEFFINGWELL (continues reading):

> quarterly a long time in advance.

It is hard to know just what that does mean. That has evidently been garbled in transmission, as so many of the cables were. They were put in codes.

But if Mr. Crosby's suggestion was that the proceeds of the dollars which were the equivalent of the francs which the French Government was providing—that cable, which is dated March 11, the same date as the arrangement entered into by the Secretary of the Treasury, must have been received, therefore, after that arangement was entered into—that cable would seem to have suggested an increase in the notes or certificates of indebtedness of the United States and to have necessitated the Government of the United States borrowing money from the French Government. That would have been wholly unacceptable to the Treasury of the United States and the Secretary of the Treasury of the United States—to put itself unnecessarily and avoidably in the position of a debtor to any of the Allied Governments. It was far better to make the arrangement which was set forth in the agreement bearing the same date, by which they established the set-off and the United States did not have to pay interest to France, but acknowledged the fact that France had an equity on account of having provided those francs for the use of our Army in France, and that having that equity, without paying interest to France, or incurring an indebtedness to France, we would recognize the equity when the requirement arose, in due course.

And actually, if I assume that that cable means what it might have meant, the suggestion of Mr. Crosby, on the other side—of course at that time he had no responsibility for domestic finance—must have been rejected as any such suggestion would have been rejected because of the fact that it involved an increase in the indebtedness of the United States, the creation of an indebtedness to a foreign government.

It was one of the main objectives of our relations with the Governments of the Allies so to conduct our arrangements that the United States Government should never become a debtor to foreign governments, even Governments of the Allies. Those arrangements were effective, and whereas each of the major governments other than the United States emerged from the war with a very heavy foreign debt and took the part both of a borrower and a lender, the Government of the United States adopted a different policy, one which has worn well, and that was the policy of so arranging set-offs and intergovernmental accounts that the Government of the United States emerged from the war without any foreign debt whatever.

For that reason, any suggestion of the creation of an indebtedness of that sort would have been most unacceptable to the policies of the Treasury of the United States.

Mr. **Raushenbush.** I did not quite understand that, "emerged without any foreign debt." You mean without having borrowed from any foreign government?

Mr. **Leffingwell.** Yes. In other words, instead of borrowing from a foreign government and paying interest on that borrowing, we said "No; you have cash in the bank. We are not going to borrow money from you. But we recognize the fact that you are providing us with francs today, and that those really are your francs, and the fact that you have provided us with those francs establishes in your favor an equity when you have an obligation of yours that you have to honor, and you assert the right to honor it out of the funds which are yours and not ours."

Mr. **Rathbone.** May I say one word generally about cables?

The **Chairman.** Just a moment.

Mr. **Raushenbush.** After this March 11 agreement, Mr. Leffingwell, picking up what you said, the thing was not quite fixed still, was it, the whole policy? Here on March 19, about a week after that, there is a memorandum from Mr. Rathbone to yourself that seems to indicate the thing was still in flux to a large extent.

May I ask you about that before Mr. Rathbone interjects here? This is from a "Memorandum for Mr. Leffingwell" [reading]:

> The French maturities for 1918 aggregate but $74,000,000. While it might be possible to pay one-half of the industrial credits of $50,000,000 and extend the balance for a short period, in view of the amounts of the past and expected future reimburements to the French for our Army expenditures in France and the French maturities after 1918, about $200,000,000 in 1919 (exclusive of cities of Lyons, Marseilles, and Bordeaux loan of $36,000,000) and $250,000,000 in 1920 (one-half of Anglo-French bonds), it is recommended that the Treasury make no objection to the payment by the French Government of these maturities up to the equivalent of the amounts reimbursed the French for our Army expenditures.

(The document referred to was marked "Exhibit No. 2882" and is included in the appendix on p. 9288.)

Mr. **Raushenbush.** Did we not get the impression from the discussion here that that was all settled in the McAdoo to Tardieu letter? And here Mr. Rathbone is recommending still that there be no objection to the payment by the French Government of these maturities up to the equivalent of the amount to reimburse the French for Army expenditures.

Mr. **Rathbone.** There is no question that the matter was settled by the March letters which you have read. The question came up as to a possible extension of part of these industrial credits. Probably the words that "the Treasury make no objection" were not very good language. But it is true that the French Treasury officials were consulting with us on what was best for the common good. My recommendation as embodied in that memorandum was to pay the thing off rather than to try to extend part of it.

Mr. **Raushenbush.** In mentioning these maturities that did not come due until 1919, you were including those, too, in your recommendation, that there be no objection that these be reimbursed in that way?

Mr. **Rathbone.** We were referring in that memorandum to the French maturities aggregating some $500,000,000, and at the date the amount that the French were entitled to use to pay maturities under the arrangement was a little less than $51,000,000.

Mr. **Leffingwell.** But the answer to the question is, if I understand your memorandum, you were not making the suggestion that they pay the Anglo-French bonds at all?

Mr. **Rathbone.** No.

Mr. **Leffingwell.** That had nothing to do with it. That was just a recital of the amount of the indebtedness they had, was it not?

Mr. **Rathbone.** That was really it, yes.

Mr. **Leffingwell.** The question had to do with these 1918 maturities of $74,000,000, did it not?

Mr. **Rathbone.** Yes.

Mr. **Leffingwell.** And the industrial credits?

Mr. **Raushenbush.** Those in 1919 are interesting, too. Did it not work out that we did pay off all the French maturities from April 6 up to the time of the Armistice, and then paid about $200,000,000 after the Armistice? Is not that the way it worked out?

Mr. **Rathbone.** I do not remember whether we paid $200,000,000 after the Armistice.

Mr. **Raushenbush.** We will come to that in a minute.

Mr. **Rathbone.** But the purpose of that memorandum is to show that maturities in 1918, $74,000.000, were greater than the amount of the dollars received by France for francs up to that time, and it was my thought that, although France had received just under $51,000,000, they were going to receive a great deal more, and we had better not stand on the question of time but go ahead in accordance with the arrangement already made and pay off those maturities.

Mr. **Leffingwell.** Mr. Raushenbush, I think I can supplement Mr. Rathbone's memory in answer to your question about those French maturities. As a result of that telegram from Mr. Clemenceau and subsequent negotiations with his advisers here, special credits were established in aid of the Bank of France and the French Government, which did result in the creation in the early autumn of 1918 of two French credits and the release—and you correct me, Mr. Rathbone, if I am wrong—of the securities pledged behind those French credits for the purpose of the support of the neutral exchanges, and the ultimate payment, the deferred payment, of those two French maturities in 1919, as you correctly stated. But the credits were established and the arrangements made for them in the course of a series of negotiations which began with the French Premier's cablegram in June, and which continued on into October. Is that correct?

Mr. **Raushenbush.** Just one further question of memory there: Was not that $200,000,000 that was paid after the armistice of maturities in addition to the $200,000,000 that were paid to the Bank of France direct?

Mr. **Leffingwell.** Yes, correct; but they both grew out of that request of Mr. Clemenceau's, if I remember correctly.

Mr. **Raushenbush.** I want to enter a memorandum of payments made by the financial agency of the French Government at New York from May 1 to June 15, from the $150,000,000 received from the American Government, it just being a list of the things to which they put the expenditures.

(The document referred to was marked "Exhibit No. 2883", and is included in the appendix on p. 9288.)

Mr. **Raushenbush.** I also wish to offer for the record a schedule of all expenditures from the United States Government credits during the period from May 1 to December 31, 1917, and to point out that on May 2, 1917, we were paying the interest on the du Pont Treasury bills, given to this company by the French Government in payment for powder.

(The document referred to was marked "Exhibit No. 2884", and is included in the appendix on p. 9290.)

Mr. **Raushenbush.** Mr. Chairman, there is one interesting thing about that. When the du Pont witnesses were before us, they testified that they had supplied the United States Government with relatively cheap powder, 53 cents a pound, as I remember it, and they had charged the Allies, it is true, $1, $1.12, and $1.25, various ranges. They made the point several times very emphatically that all their taking of profit was at the expense of the Allies, and here it develops that some of that was paid directly out of the United States Treasury. The committee might be interested in that.

Mr. **Leffingwell.** What is this paper?

Mr. **Raushenbush.** French Government schedule of all expenditures from United States Government credits from May 1 to December 31, 1917.

Mr. **Leffingwell.** Do you know when that was filed in the Treasury?

Mr. **Wohlforth.** I think it was some time in 1918. It was not the monthly report. They made monthly reports and then later on made consolidated reports on the various expenditures during the months.

Mr. **Leffingwell.** But it was filed in the Treasury at some time along in 1918?

Mr. **Wohlforth.** Yes, sir; that document is in the files of the Treasury.

Mr. **Raushenbush.** This same memorandum on page 3 shows the commissions and sundries, item 4. This item refers especially to the commission paid to Messrs. J. P. Morgan & Co. a total from May to December of $1,331,727.

When did that purchasing agent agreement close, Mr. Lamont? When was this closed?

Mr. **Lamont.** The actual agency agreement closed late in the spring of 1917, as I recall it, subject to correction. August, they tell me.

Mr. **Raushenbush.** This was simply a hangover?

Mr. **Lamont.** Necessarily we continued for both the British and French Governments to pay accounts presented to us for materials.

Mr. **Raushenbush.** And about $100,000,000 worth of business, I take it, still passed through. There is a commission listed.

Mr. **Lamont.** Our commission for payments was one-eighth of 1 percent.

Mr. **Raushenbush.** I see. Then a much smaller sum would have been passed through?

Mr. **Lamont.** A much larger sum.

Mr. **Raushenbush.** A much larger sum.

Mr. **Lamont.** It went through to the end of the war, that is, those payments, and perhaps beyond.

Mr. **Raushenbush.** Then I want to offer the French Government schedule of all expenditures from United States Government credits during the period April 1 to April 30, 1918, which shows payments of Treasury bills and the first part of the fourth series of the Creusot loan of $5,000,000.

(The document referred to was marked "Exhibit No. 2885" and is included in the appendix on p. 9295.)

Mr. **Raushenbush.** I also offer for the record a similar schedule for the period March 1 to March 31, 1918, showing reimbursement of French one-year Treasury bill given to du Pont de Nemours & Co. in March 1917, in payment for powder, showing again by that item that that high-priced powder was finally paid for by the United States Government.

(The document referred to was marked "Exhibit No. 2886" and is included in the appendix on p. 9297.)

Mr. **Leffingwell.** Mr. Raushenbush, it is perhaps not important to you, but it is from the Treasury's point of view——

Mr. **Raushenbush.** Yes, sir.

Mr. **Leffingwell.** You speak of things being paid for by the United States Government. The United States Government did not pay for any of those things. The United States Government bought obligations of the French or British Governments or the Italian Government, and the French, British, or Italian Governments paid for those things, and unless the United States Government was able to establish and maintain an objection to the use which these Governments made of the sums which were the proceeds of the obligations bought by the United States Government, why, it was not a matter which the United States Treasury could take exception to.

It is terribly important to clear-thinking to realize that the United States Government did not pay any of those things. It bought obligations of its Allies in the late war.

Mr. **Raushenbush.** I elided a couple of steps there. The thing becomes important because the du Pont people put so much stress on the ground that they had been very generous toward the United States Government, and that it was the Allies who had paid for it. And I should have put in the step that if the French Government had paid in full all the obligations, then there would have been no question about it.

Mr. **Leffingwell.** Mr. Rathbone brought it out clearly yesterday, and I do not want to be overinsistent, but there is all the difference in the world between one great government buying the obligations of another great government and then not saying to that great government, "you cannot pay your bills out of that money lent you."

There is all the difference in the world between that and having the United States Government pay anybody's bills, before or after the war. The moral and economic and financial import of it to the Government and people of the United States was just as nearly opposite as it could possibly be.

Mr. **Raushenbush.** You cannot say that sort of thing, as you point out, to a foreign government, "You cannot pay this and that", and you cannot say in the last analysis that they must pay their own bills, when dealing in a field like that.

Mr. **Leffingwell.** There is another thing which you must keep in mind, and that is that the United States Treasury did not spring full armed into this war. It was a small concern when the war started.

Mr. **Raushenbush.** It grew fast.

Mr. **Leffingwell.** The mechanism of control took time to establish. These governments found it very distasteful to be invited to submit their affairs to supervision by another government, however friendly, and the gradual effect of these things was that after bills had been paid, and after maturities had been met, and after cotton, munitions, or guns had been bought, the Government of France, or the Government of Great Britain, sent in a report to the Foreign Loan Bureau, saying what they had done with the money.

When that was shown to the Treasury, if there was some item that the Treasury felt obligated to take objection to, it still had time to do it. Efforts were made in the utmost good faith, and with the utmost good will by the Allied Governments to correct, so far as they were able, anything that had been done in the next settlement of the accounts, and to find some other way of dealing with their problems.

Mr. **Raushenbush.** These schedules simply show, on their face, what the money was used for, according to the French statements.

Mr. **Leffingwell.** Yes, sir.

Mr. **Rathbone.** May I elaborate for just a moment on what Mr. Leffingwell said?

Mr. **Raushenbush.** If you think it is necessary.

Mr. **Rathbone.** The Allied Governments would ask for a loan from the United States Treasury. They would say, "We want $1,000,000 for that and $10,000,000 for this." We would then buy their obligations to that aggregate amount, if we approved of the purposes for which they wanted to borrow the money. Then that money was theirs, and we had no control over it. They could have done anything they wanted to with it. Then they reported to us, when they had spent the money.

If there was an item on the actual expenditure of the money that we did not approve, we did not think was right, there were just two courses open to the United States Treasury: We could say, "See here; we do not want you to do things of that sort with the money we loaned you"; and talk to them and argue with them and try to get an understanding, and we did always get an understanding, but if we did not, that is, get an understanding, there was nothing we could do except say, "We won't loan you any more money."

Mr. **Leffingwell.** And that you could not do.

Mr. **Raushenbush.** You could not stop, could you?

Mr. **Leffingwell.** No; not unless you stopped the war, Mr. Raushenbush, short of victory, and nobody wanted to do that.

Mr. **Raushenbush.** I offer French Government schedule of all expenditures from the United States Government credits during the period of May 1 to May 31, 1918, which shows the use of it, to pay off the biggest part of the fourth series of the Creusot loan.

(The document referred to was marked "Exhibit No. 2887", and is included in the appendix on p. 9298.)

Mr. **Raushenbush.** I also offer for the record French Government schedule of all expenditures from United States Government credits during the period of June 1918, which shows the third and last part of the fourth series of the Creusot loan, $5,000,000.

(The document referred to was marked "Exhibit No. 2888", and is included in the appendix on p. 9299.)

Mr. RAUSHENBUSH. I also offer for the record French Financial Agency memorandum showing the payments for certificates accruing on the French industrial credit, $50,000,000.

(The document referred to was marked "Exhibit No. 2889", and is included in the appendix on p. 9300.)

Mr. RAUSHENBUSH. I offer for the record a memorandum of United States advances to France during July 1918, showing [reading]:

> The following figures on the assumption that no reimbursements for United States Army expenditures in France will be paid after July 8, 1918.

(The document referred to was marked "Exhibit No. 2890", and is included in the appendix on p. 9301.)

Mr. RAUSHENBUSH. I also offer the French Government schedule of all expenditures from United States Government credits and from other credits involving purchases in the United States during the month of July 1918, showing that on July 11 payments of interest and matured credits on French industrial credit amounted to $50,000,000.

(The document referred to was marked "Exhibit No. 2891", and is included in the appendix on p. 9302.)

Mr. RAUSHENBUSH. Mr. Wohlforth, will you pick up from that point?

Mr. WOHLFORTH. Before I go ahead, Mr. Rathbone, I think I made an error in reading your memorandum on the subrogated securities.

Mr. RATHBONE. Is this the British?

Mr. WOHLFORTH. The British.

I said: "The subrogated securities consist of"—is that supposed to be a fraction?

Mr. RATHBONE. Yes; a fraction.

Mr. WOHLFORTH. That is roughly three-eighths?

Mr. RATHBONE. I have not computed it.

Mr. WHITNEY. It is the proportion of the total amount of loans outstanding for 1 and 2 years.

Mr. WOHLFORTH. At this time we want to finish up and close the record on these French maturities, coming into 1919, and, Mr. Rathbone, you have already covered some of the material in your memorandum regarding the French maturities. So that we will submit some of the documents here in order to clarify certain of your statements.

Three loans to the French had their maturities in 1919—American Foreign Securities, the 5½-percent loan due April 1, 1919, and the Three Cities Loan, loaned to the cities of Paris, Bordeaux, and Lyons, on March 15, 1919.

In order to show that there was collateral under these loans, I will offer for the record a memorandum of obligations outstanding March 18, 1918, of the Allied Governments payable in the United States. That shows French Treasury securities of $50,000,000 and neutral securities of $10,000,000 under the industrial credits, and under the two other large loans of $100,000,000 each, that there is $120,000,000 of collateral under each of those $100,000,000 loans, part of which was American collateral.

(The document referred to was marked "Exhibit No. 2892" and is included in the appendix on p. 9303.)

Mr. **Wohlforth.** You have already touched upon the condition of the dollar with respect to neutral currencies after our entrance into the war. In the document which you entered yesterday, entitled "Making War Loans to the Allies", on page 8 you say [reading]:

> The dollar was at a discount and generally at a very heavy discount, and the pound was at an even heavier discount than the dollar, as compared with currencies of various neutral countries—

And so forth.

Also in that connection I will offer for the record a letter from Tardieu to you, Mr. Leffingwell, dated April 18, 1918, in which substantially the same statement is made. I offer that for appropriate number.

(The document referred to was marked "Exhibit No. 2893", and is included in the appendix on p. 9304.)

Mr. **Wohlforth.** Under the agreement of March 11, 1918, as I understand it, the French were permitted to use United States funds to take care of some of their maturities. And in this letter, which I have just entered, Mr. Tardieu raised the point of making further allowances in that connection.

There is a letter here, dated April 25, 1918, from Mr. Leffingwell to Mr. Tardieu, showing in substance that that request was declined with a promise of further consideration. That letter is offered for the record.

(The document referred to was marked "Exhibit No. 2894", and is included in the appendix on p. 9305.)

Mr. **Wohlforth.** On the same day, April 25, 1918, you also wrote to Mr. Simon, concerning the securities under the American Foreign Securities Co. and the 2-year 5½-percent French loan, but nothing further seems to have been considered at that time.

Mr. **Leffingwell.** That is still March?

Mr. **Wohlforth.** That is April 25, 1918. I offer that letter for the record with appropriate number.

(The document referred to was marked "Exhibit No. 2895", and is included in the appendix on p. 9305.)

Mr. **Wohlforth.** Then we enter in its entirety the letter of June 9, 1918, of Clemenceau to the Secretary of the Treasury, describing the financial conditions of France. I think he says on page 2 that the financial plight of the French was due in part to the large franc advances which were being made to the American Expeditionary Forces, and he requests that a billion francs in gold would be made available to the Bank of France.

Mr. **Rathbone.** Was it one billion?

Mr. **Wohlforth.** Yes; I think it was.

Mr. **Rathbone.** Did he not say at the end that it should be in installments?

Mr. **Wohlforth.** Yes, sir.

Mr. **Rathbone.** It was the equivalent of 2,300,000,000 francs, as I recall the figure.

Mr. **Wohlforth.** Yes, sir; that is correct.

Mr. **Rathbone.** And then he said it could be done in installments, the equivalent of 1,000,000,000 francs at a time, which would be the first payment.

Mr. **Raushenbush.** You mean at a time?

Mr. **Wohlforth.** At a time.

(The document referred to was marked "Exhibit No. 2896", and is included in the appendix on p. 9305.)

Mr. **Wohlforth.** In reply the credit of $200,000,000 was offered, and that is contained in a letter from the Secretary of the Treasury to Clemenceau, dated July 3, 1918, of which I will enter a copy, including a draft of another letter.

First, I will enter the letter from Mr. Crosby, Acting Secretary of the Treasury, to the President at the White House; and then the draft of the letter from the Secretary of the Treasury to Mr. Clemenceau, which sets down substantially the same matter as you have outlined in your memorandum.

(The documents referred to were marked "Exhibits Nos. 2897 and 2898", and are included in the appendix on p. 9307.)

Mr. **Wohlforth.** I will next offer for the record the reply of the French officials, Mr. Klotz, I think, was then the Minister of Finance, having succeeded Mr. Ribot, and there are two things in this letter which might be mentioned. The French Minister of Finance says [reading]:

> Under these conditions the offer of $200,000,000 made a painful impression at the Ministry of Finance—

Further on he says—

> because I see in the present operation, in spite of its imperfection, the first step in a way in which the fairness of the Federal Government will induce them to follow us.

(The document referred to was marked "Exhibit No. 2899", and is included in the appendix on p. 9309.)

Mr. **Wohlforth.** Then these negotiations resulted in the establishment of the $200,000,000 credit granted by the United States Treasury to create the additional reserve for bank notes for the Bank of France.

On July 20, 1918, we find a cable from the French Minister of Finance to his representative in this country, which reads in part as follows [reading]:

> We note with pleasure the indications gathered by Mr. Simon from his conversation with Messrs. Crosby and Leffingwell regarding the willingness of the Treasury to open additional credits in our favor, for the purpose of paying off before maturing a part of our loans in the United States.
>
> Evidently this is a slightly different proposition from the one set forth by Mr. Clemenceau to Mr. McAdoo. However, the addition of a special credit sufficient to pay off our two secured loans (American Foreign Securities and loan of April 1917) to the credit of $200,000,000 which the Federal Government recently offered to us, would in fact make a total approximately equal to the counterpart of the francs transferred so far to the United States Army. On the other hand, the withdrawal of our collaterals could help us considerably to obtain new credits in neutral countries, such a result, although it would

not be as far-reaching as the measures suggested by Mr. Clemenceau, would be very interesting and would to a certain extent work for the protection of the franc, the same way as an increase of the metal reserve behind our currency.

(The document referred to was marked "Exhibit No. 2900" and is included in the appendix on p. 9310.)

Mr. **Wohlforth.** I will offer next a letter, the substance of which is that Mr. Leffingwell was willing to permit up to $50,000,000 worth of Treasury advances to France to be used for the purchase, before maturity, of outstanding notes of the two secured loans.

Mr. **Raushenbush.** Do you want to have that read, Mr. Leffingwell?

Mr. **Leffingwell.** I would like to get an impression of what it is.

Mr. **Raushenbush.** Put a copy before him, Mr. Wohlforth.

Mr. **Wohlforth** (handing copy of said document to the witness). This is a letter from Mr. Leffingwell, probably a draft of that letter, with a memorandum. That is intialed "A. R." And it says, "My dear Mr. de Billy." He was the financial commissioner of France in this country. That letter states [reading]:

> You will recollect the talk which Mr. Crosby and I had with Mr. Simon the early part of this month in relation to the situation in France presented to the attention of the Secretary of the Treasury by Mr. Clemenceau's message of ——. In the course of this conversation it was suggested that if the Secretary of the Treasury assented to the immediate use of some part of the United States advances to your Government for purchasing in the market or otherwise anticipating the maturity of some of the outstanding obligations of the French Government maturing during the year 1919 it might have a favorable effect upon the situation under discussion in relation to the outstanding notes of the Bank of France. While obviously retiring obligations of your Government payable in United States in advance of their due date would not affect the amount of the Bank of France notes outstanding nor the security held therefor, yet the psychological effect of such action upon the public ought to be favorable, and if the neutral securities held as collateral for such obligations were used in such a manner as to improve the position of the franc as against certain neutral currencies it should serve to maintain public confidence.
>
> I now understand from Mr. Simon's talk with Mr. Rathbone on the 20th instant that it is the opinion of your Government that an operation of this character would be advantageous. It seems to me that for the present at least our attention should be directed to the obligations in neutral securities, both because these are the next maturing obligations of your Government in this country and because there are pledged to secure the same securities of neutral countries. I think it would be wise to commence these operations by purchases of these obligations in the open market, and if these securities are now selling on the same basis of interest yield it ought to be possible to purchase considerable amounts thereof without advancing the quotations. You will, of course, appreciate that it is of some concern to the Treasury how rapidly funds are used for the purpose of retiring, by purchase or otherwise, the securities above mentioned, and I suggest that at the outset the operation be limited to the expenditure of not exceeding $50,000,000. When this money has been expended for the purpose I shall be pleased to confer with you as to the best method of continuing the proposed operation.

Mr. **Rathbone.** Was that letter sent, or was it a draft?

Mr. **Wohlforth.** That is what I would like to ask you. It appears to be a draft.

Mr. **Rathbone.** I cannot tell you.

Mr. **Leffingwell.** It appears from Mr. Rathbone's memorandum to be a suggestion of a letter that might be sent. I really do not remember at all.

Mr. **Rathbone**. Mr. Leffingwell was particularly concerned with it, and whether he would have the $50,000,000 available to let them take up the maturities at that time, or whether, from the standpoint of the Treasury, it would be better not to loan $50,000,000 then but to loan it some months later. From the standpoint of the neutral securities and the transactions of the Treasury with the foreign governments, it was better to let them anticipate the date of the maturities.

I did not pass on the question of whether Mr. Leffingwell would have the $50,000,000 which I wanted to spend.

(The document referred to was marked "Exhibit No. 2901" and is included in the appendix on p. 9310.)

Mr. **Wohlforth**. Apparently there was some conversation about it as will appear from a later exhibit. At this time I offer a letter of August 14, 1918, from W. G. McAdoo, Secretary of the Treasury, to Mr. Edward de Billy, French Deputy High Commissioner, which is offered without comment.

(The document referred to was marked "Exhibit No. 2902", and is included in the appendix on p. 9311.)

Mr. **Wohlforth**. Next there is offered for the record a document dated July 24, 1918, which is 2 days later than the date of the draft to which we have been referring, being from Mr. de Billy to Mr. Leffingwell, which states [reading]:

> Referring to the conversation which Mr. Simon and Mr. Bloch had with Mr. Rathbone this morning—

And so forth.

And then, further at the bottom of the first page, Mr. de Billy raises the interesting suggestion that:

> Another solution would be the substitution of United States Government securities for the collateral now securing the loans. In fact both these procedures could be used simultaneously to great advantage.

(The document referred to was marked "Exhibit No. 2903", and is included in the appendix on p. 9312.)

Mr. **Wohlforth**. The credit to the Bank of France seems to have been deferred, the completion of the negotiations, and the transaction next appears in what was probably a draft of a letter dated September 4, 1918, to be sent by the Secretary of the United States Treasury to the French representatives. I will enter that in the record.

(The document referred to was marked "Exhibit No. 2904", and is included in the appendix on p. 9312.)

Mr. **Wohlforth**. The only thing of note is that this apparent draft of a letter raises the amount from $50,000,000 to $200,000,000.

Mr. **Leffingwell**. Wait a minute. I wonder if that is right. Do you not think that that first draft, as Mr. Rathbone explained it—and, as I followed it, his explanation sounded right to me—contemplated merely a control over the expenditure of the credit to be established for meeting these maturities? As I understand Mr. Rathbone's explanation, which sounds perfectly clear, that draft of letter which he submitted to me, because of the fact that while he was in charge of the foreign loan bureau, I was in charge of the fiscal bureaus and was engaged in the task of raising the money—he submitted to me a draft of a letter which said:

> In connection with the suggestion for meeting these maturities, I do not want you to anticipate payments to more than $50,000,000 at the present time.

Do you see? It was a question not of the amount of the credit, because that was fixed by the amount of the maturities, but the willingness of the United States Treasury to permit certain of these maturities to be paid off ahead of time in order to get collateral to be made available in neutral countries.

Whereas for the purposes of the foreign-loan bureau, it was desirable to get as much out as fast as possible, for the purposes of the fiscal bureaus it might not be quite convenient to pay it out just as fast. I imagine that that is what it is. Is not that correct?

Mr. **Rathbone.** I should think so.

Mr. **Wohlforth.** That is substantially the point I wanted to make that, first, the amount under consideration was $50,000,000, and then later on, in September, it was raised to $200,000,000, so that all the collateral could be taken out from under the two loans.

Mr. **Leffingwell.** That was not really a question of the amount of the credit but merely a question of the rate of expenditure, and the amount unchanged was $200,000,000. Is not that so?

Mr. **Rathbone.** I think that is so. It seems to me that this is a draft of an intradepartmental memorandum, more than a letter sent.

In the second place, I would like to call your attention to the difference between establishing credits and advancing money. Of course, there were special instances, but speaking generally as to credits, the United States Treasury would say to a foreign government:

> We have established a credit in your favor of $200,000,000 or $500,000,000 to be availed of if and when the Secretary of the Treasury shall so determine.

In other words, it was a bookkeeping entry. The credit did not obligate the Secretary of the Treasury to advance a single dollar under it. That is speaking generally. That is not true with respect to the credit given to the French Government by the transfer to the Bank of France. That is what we called an effective credit, because we were obligated to make the advances, but generally in establishing a credit we were not obligated to advance a penny of it.

Mr. **Wohlforth.** It was only on that basis that you could make a loan?

Mr. **Rathbone.** The Secretary of the Treasury had to get the consent of the President to establish a credit, and after a credit was established, then the Secretary of the Treasury had full power under the law to make a full advance up to the amount of that credit, but he was not obligated to do it, and he did not agree with the foreign governments that he would advance the money. That was a subject of further application and determination. Some of the credits toward the end of the war which were established were canceled and withdrawn.

Mr. **Raushenbush.** Mr. Wohlforth, may I interject a question, addressed to Mr. Leffingwell?

Mr. **Wohlforth.** Yes, sir.

Mr. **Raushenbush.** Mr. Leffingwell, as I gathered that conversation, it seemed important in the Treasury at the time to keep up the standing of French credit in the neutral markets, as well as at home, in France?

Mr. **Leffingwell.** You are addressing that to me, and I would be glad to give you the best answer I can, but Mr. Rathbone can give you a better one.

Mr. **Raushenbush.** Very well.

Mr. **Leffingwell.** As a matter of fact, as I understand it, it was not a question of maintaining French credit. It was a question of maintaining the buying power of the Allied and associated governments in the neutral markets and not increasing the expenses of the conduct of the war, because some part of that expense must ultimately come back upon the United States Government. And the price that we had to pay for our purchases in Spain or Switzerland or continental European countries might often depend upon the rate of exchange for the French franc in those countries, because the French would be able to find means of financing purchases for the American Army, which purchases we would not be able to arrange. Therefore, it was a matter of very great concern to the United States Treasury, not because it hurt the credit of one of the Allies, but because it cost more money to allow a depreciation of the exchange to occur.

Mr. **Raushenbush.** If I changed that and said that we were then terribly interested in keeping the currency of our Allies from depreciating in the neutral markets, you would assent to that without question, would you not?

Mr. **Leffingwell.** Yes, sir; but for the reasons I indicated.

Mr. **Rathbone.** I was going to say that the franc and the dollar being kept on a comparatively steady basis, the increased value of the franc in neutral markets would necessarily mean an increase in the purchasing power of the dollar for those neutral securities.

Mr. **Wohlforth.** Continuing, the documents reveal that Mr. Crosby, although abroad at that time, was consulted about this proposed transaction of releasing the collateral under these two loans, and in a cable, dated September 10, 1918, for Rathbone, from Mr. Crosby, there were four conditions set down concerning this transaction. If I may just read them hurriedly, I would appreciate it [reading]:

> First, that the transaction will be understood to have no bearing upon or constitute a precedent for any discussion of the modification of March agreement such as French Treasury has recently urged upon us. Second, that arrangements shall be made by virtue of which a certain proportion of the collateral in question shall be sold to realize neutral currencies, and that some proportion of the neutral currencies thus realized shall be available of the United States at cost to the French Government. Third, that purchase before maturity from American citizens by French Government of its obligations with funds advanced by the United States Treasury shall be made through public announcement at a figure satisfactory to the Secretary of the Treasury. Fourth, that any sums advanced for the purpose shall be specifically understood to be repayable out of any current monthly surplus of dollars made available to the French Government through advance of francs to us over the French current monthly expenditures in the United States, and as fast as such surpluses may be accumulated consider that our interest in the matter lies chiefly in possible benefit from use of collateral.

The fourth item connects with the statement which you just made.

(The document referred to was marked "Exhibit No. 2905" and is included in the appendix on p. 9313.)

Mr. **Wohlforth.** Then we come next to a letter from Mr. Rathbone to Mr. Simon, dated September 13, 1918, and you write Mr. Simon substantially the same as Mr. Crosby suggested in his cable of September 10, laying down various conditions. However, the third condition was omitted from your letter to Mr. Simon. In other words, you omitted any provision for public announcement of the purchase of French obligations by funds advanced from the United States Treasury. I offer that letter for the record with appropriate number.

(The document referred to was marked "Exhibit No. 2906" and is included in the appendix on p. 9313.)

Mr. **Wohlforth.** It would seem that up until this point there was really no definite proposal which looked toward the release en bloc of the neutral securities or the substitution of the United States Treasury obligation for them.

Along late in September 1918 some negotiations leading to this object were begun with the Bankers Trust Co., which was the trustee of the collateral of the American Foreign Securities, and also negotiations were opened with the Central Union Trust Co., the trustee of the collateral on April 1, 1919, French maturity.

Remember on July 24 Mr. de Billy suggested the substitution of United States securities for the collateral then securing the loans but at that time it seems apparent that the consideration of the Treasury—that the Treasury should give its obligations of $200,000,000 to secure the French loans—was not exactly what Mr. de Billy intended.

From the documents we have had available, it is impossible to learn who took the initiative in proposing this use of the United States Treasury obligations to replace the French collateral under these two loans.

However, about September 26, 1918, the Bankers Trust Co. was approached by the United States Treasury with a proposal for a book credit of $100,000,000 in favor of the Bankers Trust Co., the idea being that with $100,000,000 of book credit given to the Bankers Trust Co., as trustee for the collateral, they could release all the neutral securities.

There are quite a few negotiations concerning this, and I will try to go over them as rapidly as possible.

Mr. **Raushenbush.** Mr. Wohlforth, do you want to question the witnesses about that particular matter at all?

Mr. **Wohlforth.** I think we will come to that in just a moment.

In the first instance, this idea of taking a $100,000,000 book credit of the United States Treasury in favor of the Bankers Trust Co. was not acceptable to the trust company. The collateral indenture of the loan set forth the terms under which a substitution could be made, and at the time that the collateral indenture was signed, August 1, 1916, the attitude of the Treasury as regards this book credit was probably not foreseen, and the provisions anticipating a possible replacement by collateral which, although equal to that replaced, would, nevertheless, be inferior to a United States Treasury obligation, did not apply to the situation.

Article III, section 2, of the collateral indenture[1] listed several conditions that had to be filled, if any of the pledged securities were to be released. That indenture is already in the record, and I just want to call attention to section 3, paragraph 2, that if any collateral was to be released under this American Foreign Securities loan—

> There shall be pledged under this indenture, and be substituted for the pledged securities released as aforesaid, other securities of which each shall be such obligation of the Government of one of the following countries, viz: Denmark, Norway, Sweden, Holland, Switzerland, Spain, or Egypt, and which substituted securities in the aggregate shall be of value equal to or greater than the value of the released pledged securities.

Article 3, section 3, paragraph 3, states [reading]:

> That the aggregate value of all such obligations of any one of the governments mentioned in subdivision (2) of this section—

Being the governments that I just read off—

> or of any other issue of securities, shall not be increased by such substitution to an amount which at any time shall exceed $22,680,000.

I read that merely to make the point that the substitution under this collateral indenture of the American Foreign Securities was definitely limited with the conditions which we have outlined here.

A $100,000.000 book credit of the United States Treasury would not be an obligation of one of the enumerated governments, and it would be of less value than the securities released, because the securities were $120,000,000.

Mr. **Rathbone.** An obligation of the United States Government, at least at that time, to pay $100,000,000 was worth $100,000,000 at any time, under any conditions.

Mr. **Wohlforth.** The Bankers Trust Co. did not think so.

Mr. **Raushenbush.** Was it worth $120,000,000?

Mr. **Rathbone.** I beg your pardon?

Mr. **Raushenbush.** The question seems to me to be, Was it worth $120,000,000?

Mr. **Whitney.** Brown Bros. and ourselves had the right to change that under the indenture.

Mr. **Rathbone.** Whether they changed it or not, what difference does it make? There were certain securities put up to guarantee the payment of the obligation. I have forgotten them. If the United States said, "We will give you the money to pay those obligations", what interest had anyone in the collateral, if the United States Government obligation was good, as it was good, and if they said they would put it up.

Mr. **Wohlforth.** There is an interest, Mr. Raushenbush, because the American Foreign Securities Co. loaned money to the French Government at, I think, 7¼ percent, and the French Government charged interest on the face of the loan at 5 percent. So that there was 2¼ percent that the American Foreign Securities Co. would receive as their compensation, I think it was, for making the loan. And if you switch this collateral and put United States Treasury obligations under it, and when the loan comes due cash that obligation, obviously some of the profit coming to the American Foreign Securities Co. would be paid out of the United States Treasury.

---

[1] Previously entered as "Exhibit No. 2702", see Hearings, Part XXVIII, p. 8642.

Mr. RATHBONE. We were only paying, were we not, the obligations held by the American people?

Mr. WOHLFORTH. Yes; but there was a difference there.

Mr. RATHBONE. Not as far as the American people were concerned, not as far as the obligations outstanding in the hands of the people were concerned.

Mr. WOHLFORTH. I think if we go along here, our only desire being to make a complete record, that we will see from this transaction that the United States Treasury did pay some of this profit when that certificate of indebtedness was cashed.

Mr. RATHBONE. Go ahead.

Mr. WOHLFORTH. That is really our only interest. There is nothing else in it except to get a complete record made.

Mr. RATHBONE. You have got the entire agreements as they were entered into, irrespective of the various steps and negotiations with regard to them, and the letter from the Treasury to the French Government in regard to the same. The agreement was made between the French Government and the Bankers Trust Co. There was a letter from the Treasury to the French Government, to which a copy of that agreement was attached, and the understandings of the American Treasury in regard to that are set forth fully in the letter.

Mr. WHITNEY. Mr. Wohlforth, do you think, in clarification of the question, since you have read but a very small portion of the pledge agreement, do you not think it would be well to put in the record the whole pledge agreement, and also the agreement between the French Government and American Securities? You talk about profit and a loan. A loan by a company to the French Government is a different matter. Do you not think you should put in the whole record? All this substitution was subject to the approval of Messrs. Brown Bros. and ourselves, and we could change these terms.

Mr. WOHLFORTH. I understand that the whole indenture has been previously entered in the record.[1]

Mr. WHITNEY. Has it been entered?

The CHAIRMAN. It has been entered.

Mr. WHITNEY. Excuse me.

Mr. WOHLFORTH. It is all there.

Mr. LEFFINGWELL. Mr. Wohlforth, may I go back again? I do not want to bore you with the distinction I made in speaking with Mr. Raushenbush a little while ago, but when you say something about a profit having been paid by the United States Government, I suppose what you mean is that a profit was paid by the French Government out of the proceeds of the money loaned by the United States Government.

Mr. WOHLFORTH. Yes; probably I did not explain that.

Mr. LEFFINGWELL. I do not know what the transaction was, and I do not know that there was such a profit, but if there was one, it was surely not paid by the United States but may have been paid out of our loans.

Mr. WOHLFORTH. Going along, we come to a letter from White & Case to the Bankers Trust Co., of November 16, 1918, and those two departures from the terms of the indenture, which I mentioned before, and White & Case say in a memorandum attached to this letter—

---

[1] See "Exhibit No. 2702", Hearings, Part XXVIII, appendix, p. 8642.

> That J. P. Morgan & Co. and Brown Brothers & Co. were unable to give their approval to the transaction, because at the time the indenture was delivered and the notes issued those firms filed with the Securities Co. a letter stating that they would not at any time approve the substitution of collaterals of less value than the value of the collaterals released thereby. The face value of the United States certificates of indebtedness and the aggregate face value of the securities to be released.

I would like to enter that.

(The document referred to was marked "Exhibit No. 2907" and is included in the appendix on p. 9314.)

Mr. **Olds.** Are you going to put in the subsequent opinion from White & Case?

Mr. **Wohlforth.** I think that is coming along. We will offer this for the record.

Mr. **Rathbone.** Did the Treasury have any knowledge of that letter?

Mr. **Wohlforth.** Of this letter? I could not say at this moment that they did.

Mr. **Rathbone.** Naturally they would not have, being a letter from the counsel of the Bankers Trust Co. to the Bankers Trust Co.

Mr. **Wohlforth.** James Brown, of Brown Brothers & Co., on November 13, 1918, wrote to Mr. Vermilye, who was the secretary of the American Foreign Securities Co. at that time, as I recall, and said [reading]:

> First, let me say that the transaction has my entire approval and that it is desirable to put it through—also that it is far safer for the noteholders than their present status—

I offer that document for the record.

(The document referred to was marked "Exhibit No. 2908", and is included in the appendix on p. 9315.)

Mr. **Wohlforth.** The counsel to the Bankers Trust Co. had advised the Bankers Trust Co. that the proposal of the Treasury was legally satisfactory; that with the proper formalities a $100,000,000 credit on the books of the United States Treasury would comply with the terms of the trust agreement.

That is contained in a document we have here. I do not have it before me, but I think it covers the point you made.

Mr. **Olds.** My firm approved the thing when it was done, and there is a letter at the Bankers Trust Co. which exists to that effect.

Mr. **Wohlforth.** I will come to that and get to that point. Counsel approved this transaction. The Bankers Trust Co. seemed to feel that they would be better secured if the Treasury's obligation was in the form of a negotiable certificate of indebtedness, and they insisted upon that, and there was some telephone conversation between Mr. Rathbone and Mr. Seward Prosser and Mr. Close of the Bankers Trust Co., and we have a record of that telephone conversation here, and in that document it says that Mr. Rathbone said to Mr. Prosser on September 26:

> Mr. Rathbone to Mr. Prosser: I am very much surprised to hear from Mr. Close, in view of our interview here and the advice of your own counsel, that the Trust Co. could question the protection of a credit on the books of the Treasury of the United States and that they want a Treasury certificate of indebtedness ——— and in view of the fact that they were absolutely pro-

tected in taking a book credit with the Treasury I think it is very extraordinary for them to take the position that they want a certificate of indebtedness; paricularly too in view of the fact that it is against the policy of this Department to put up United States obligations as collateral, I do not think we could handle the business that way.

Mr. Prosser further along says:

Why can't it be done in the way we want?

Mr. Rathbone says:

Because we are not willing to issue certificates of indebtedness and have them held as, security for other governments.

All of this document will go into the record, Mr. Rathbone, but further along you express surprise that the Bankers Trust Co. took such an attitude.

(The document referred to was marked "Exhibit No. 2909" and is included in the appendix on p. 9315.)

Mr. RATHBONE. Of course I cannot recollect just what was said in that conversation. How many years ago was it?

Mr. WOHLFORTH. September 26, 1918.

Mr. RATHBONE. Of which I made no record at the time.

Mr. WOHLFORTH. Somebody made a record.

Mr. RATHBONE. I do not know whether somebody made a record or not. I know I did not. It was a tempest in a teapot. I have a very vivid recollection of it. Mr. Leffingwell and I talked about the matter, and we both agreed that it was a mistake, if we could avoid it, to give a certificate of indebtedness, and that we would rather give a credit on the books of the Treasury for that amount.

I said to Mr. Leffingwell:

I do not believe the trust companies in New York will assent to that. I think they will require a certificate of indebtedness, but I will try it out and see what I can do with it.

I then saw Mr. Case and discussed the thing with him and got his O. K. on it, that they would take it.

I told Mr. Leffingwell, "We got that point over all right."

Then I was annoyed because the officers of the Bankers Trust Co. went back on their own counsel and said that they would require a certificate of indebtedness.

It did not make a particle of difference whether it was a credit on the books of the Treasury in an amount of $100,000,000 or whether they had a piece of paper, to show that it was an indebtedness. It meant that the United States Government was obligated to pay the $100,000,000, and they would have done it anyhow.

Mr. WOHLFORTH. I agree with you entirely, Mr. Rathbone. My interest is just in making the record complete here, because it might have had a different interest to the bank than to the Treasury.

Mr. RATHBONE. It just meant $100,000,000 going out, if that is the figure, in either way.

Mr. LEFFINGWELL. It would not make any difference to the bankers except the directors prefered a certificate of indebtedness instead of having it inscribed on the books of the Treasury.

Mr. RATHBONE. A piece of paper which they could hold.

Mr. WOHLFORTH. That is apparently what they got, because on October 14, 1918, there was drafted an indenture for the release of the securities, this to be agreed to by the French Government, the

Securities Co., and the Bankers Trust, and which provided for a certificate of indebtedness, non-negotiatble, but a certificate of indebtedness.

I will offer it complete for the record, being an indenture dated the 14th of October 1918, the sample of the certificate of indebtedness, and a letter to Mr. de Billy, probably a draft, unsigned, but they were all together in the source from which we secured this.

Mr. **Rathbone**. Have you not got a copy of the actual letter sent?

Mr. **Wohlforth**. I think that comes along in just a minute. Yes; here it is. A few days later, on October 19, 1918, the Secretary of the Treasury formally notified Mr. de Billy of the operation of the $100,000,000 credit to purchase the certificate of indebtedness, and the provision was made to give the United States Treasury an option to pay in any of the currencies for the collateral to be released. I will offer those two documents for the record.

(The documents referred to were marked "Exhibits Nos. 2910 and 2911" and are included in the appendix on pp. 9316 and 9319.)

Mr. **Wohlforth**. So while you say in your memorandum on the French security that the United States Treasury never obtained any rights of subrogation in respect to the securities pledged by the French Government, and so forth, there was some interest in the release of those securities, as shown here.

Mr. **Rathbone**. No right of subrogation of any kind obtained.

Mr. **Wohlforth**. But an interest.

Mr. **Rathbone**. No; not an interest.

Mr. **Wohlforth**. I will read from that letter [reading from "Exhibit No. 2911"]:

> All securities now held as collateral under the collateral indenture as and when released therefrom are to be used by the French Government in such manner as may be agreed upon between us as most advantageous in the common interest and on the understanding that the United States Treasury shall have an opportunity of sharing in the foreign currencies provided by the use of the neutral securities so released upon making payment for such foreign currencies so obtained by the United States Treasury in dollars equivalent at the then current rate of exchange of the foreign currencies thus made available to the United States Treasury; or, if such foreign currencies are obtained at a less cost by the French Government, then upon making payment in dollars equivalent at the then current rate of exchange to such cost.

I interpret that as the Treasury having some interest in the use of this collateral.

Mr. **Rathbone**. They had no interest in the securities whatever.

Mr. **Raushenbush**. An academic interest, you mean?

Mr. **Rathbone**. They had an understanding with the French Government, set forth in that letter. There was no agreement, such as the British made, to deliver the securities to the Treasurer of the United States as collateral for designated loans.

Mr. **Wohlforth**. Then I offer for the record a letter of November 6, 1918, from White & Case to the Bankers Trust Co., which gave their opinion on the Treasury proposal. That is the one to which you referred, and it just came along chronologically.

Mr. **Rathbone**. As I recall it, it was a proposal of the French Government, assented to by the Treasury.

Mr. **Wohlforth**. Yes, sir.

(The document referred to was marked "Exhibit No. 2912" and is included in the appendix on p. 9320.)

Mr. **Wohlforth.** Then I offer for the record a copy of the actual certificate of indebtedness in the amount of $81,050,800. I offer that for the record with appropriate number.

(The document referred to was marked "Exhibit No. 2913" and is included in the appendix on p. 9323.)

Mr. **Wohlforth.** Then on November 15, 1918, Mr. Prosser, of the Bankers Trust Co., wrote a letter, or, rather, Mr. Bloch, of the French Finance Mission, wrote to Mr. Prosser on November 15, 1918, that the board of directors of the Bankers Trust Co. made objection to the operation as contemplated "on the ground that according to the terms of the pledge, it is necessary, in order to release the securities constituting the collateral, to substitute securities of an equal value."

I will offer that for the record. The difficulty was overcome.

(The document referred to was marked "Exhibit No. 2914" and is included in the appendix on p. 9323.)

Mr. **Wohlforth.** Part of that is in a memorandum already entered in the record, and then there is a letter dated January 29, 1919, from J. P. Morgan & Co. and Brown Bros. & Co. to the Bankers Trust Co., as trustee under the collateral indenture, with the American Foreign Securities. That was the date, apparently, when the deal was finally consummated.

I also offer for the record a document——

Mr. **Wardwell.** Is that consenting to the transaction?

Mr. **Wohlforth.** It says [reading]:

> The undersigned hereby approve of the release and substitution of securities called for in the accompanying request of American Foreign Securities Co. * * *.

That is the final letter.

(The document referred to was marked "Exhibit No. 2915" and is included in the appendix on p. 9324.)

Mr. **Wohlforth.** Then there is a document, I think from the Bankers Trust Co., dated January 28, 1919, which sets down in general the whole transaction. It is entitled "Statement by Mr. Anderson." I imagine that is Mr. Anderson of J. P. Morgan & Co.

Mr. **Whitney.** Let me look at it.

Mr. **Wohlforth.** It just goes through the various securities.

I offer for the record the list of securities under the American Foreign Securities Co., as secured from the files of the trust company which was trustee under the collateral indenture.

(The two documents referred to were marked "Exhibits Nos. 2916 and 2917" and are included in the appendix on pp. 9325 and 9326.)

The **Chairman.** The committee will be in recess until 1:30 o'clock.

(Thereupon, at 12:10 p. m., a recess was taken until 1:30 p. m. of the same day.)

AFTER RECESS

(The hearing was resumed at 1:30 p. m., pursuant to recess.)

The **Chairman.** The committee will be in order.

Please proceed, Mr. Wohlforth.

TESTIMONY OF THOMAS W. LAMONT, GEORGE WHITNEY, R. C. LEFFINGWELL, AND ALBERT RATHBONE—Resumed

Mr. WOHLFORTH. In order to complete the matters we were discussing this morning in regard to the American Foreign Securities Co.'s collateral, I want to offer for the record a letter dated July 31, 1919, from the vice president of the Bankers Trust Co. to Mr. Bloch, of the French Financial Mission, showing that the bank had collected the principal amount of the United States of America certificate of indebtedness amounting to $79,405,800; and as provided by the agreement, they have reserved for the payment of all outstanding American Foreign Securities notes, $73,905,800; and for the payment of interest due August 1 on the above notes, $1,847,645; and the bank had handed its check to the American Foreign Securities Co. for the balance of $3,652,355. Attached to that document is a memorandum which will also be offered.

(The documents referred to were marked "Exhibit No. 2918" and is included in the appendix on p. 9328.)

Mr. WOHLFORTH. In other words, the obligation of the French Government to the American Foreign Securities Co. was greater than the obligation of the American Foreign Securities Co. to its noteholders; and the United States Treasury was, in effect, providing funds so that the American Foreign Securities Co. would receive this $3,652,000.

Mr. RATHBONE. Hold on a minute. The Treasury was complying with their obligations to France under the March agreement.

Mr. WOHLFORTH. That is correct.

Mr. WHITNEY. And France was fulfilling its obligation to the American Foreign Securities Co.

Mr. WOHLFORTH. That is right. The American Foreign Securities Co. received the difference of the $3,600,000 from the bank, which was the trustee under the collateral indenture.

To show how the interest was handled, I will offer a letter without comment, from Mr. Verge, of the French Financial Commission, to Mr. Rathbone, dated August 7, 1919, showing that the interest was paid to the Treasury.

(The document referred to was marked "Exhibit No. 2919" and is included in the appendix on p. 9329.)

Mr. WOHLFORTH. Going along rather rapidly here, there is a group of documents I want to offer, the substance of which deals with the announcing of the substitution of the certificate of indebtedness, and various correspondence between the American Foreign Securities Co. and the New York Stock Exchange. I do not think that any comment on it is needed. I will simply offer it for the record.

(The documents referred to were marked "Exhibits Nos. 2920 to 2927", inclusive, and are included in the appendix on pp. 9329 to 9332.)

Mr. WOHLFORTH. When the April 1, 1919, maturity came due, there do not seem to be so many negotiations in securing the release of this particular collateral.

I will offer for the record a letter dated September 25, 1918, from Mr. Rathbone to Mr. Perry, introducing Mr. Bloch.

(The document referred to was marked "Exhibit No. 2928" and is included in the appendix on p. 9332.)

Mr. **Wohlforth.** I will offer a letter of October 7, 1918, from Mr. Bloch to Mr. Wallace, president of the Central Union Trust Co., simply outlining the various conferences and negotiations which led up to a similar plan with this loan; that is to say, there was a plan that consisted of the substitution for the present collateral of an obligation of the United States Treasury as in the other instance with the American Foreign Securities Co.

(The document referred to was marked "Exhibit No. 2929" and is included in the appendix on p. 9333.)

Mr. **Wohlforth.** I will also offer a letter to show that $20,000,000 of notes of this April 1 loan was purchased in the market. It is a cable from Mr. Rathbone to Mr. Crosby under date of October 25, 1918. That is the only point I want to make there.

(The document referred to was marked "Exhibit No. 2930" and is included in the appendix on p. 9333.)

Mr. **Wohlforth.** I offer another letter showing a special credit of $80,000,000 on terms similar to the credit for securing the American Foreign Securities loan that was opened by the United States Treasury. It is a letter from Mr. de Billy to Mr. McAdoo, under date of November 12, 1918.

(The document referred to was marked "Exhibit No. 2931" and is included in the appendix on p. 9334.)

Mr. **Rathbone.** You are going to put in the agreement to show just what was done?

Mr. **Wohlforth.** Yes.

I offer a letter of December 7, 1918, showing that $28,011,000 of the notes were bought in by the Treasury funds.

(The document referred to was marked "Exhibit No. 2932" and is included in the appendix on p. 9335.)

Mr. **Wohlforth.** I offer a letter further confirming that same transaction dated December 5, 1918.

(The document referred to was marked "Exhibit No. 2933" and is included in the appendix on p. 9335.)

Mr. **Wohlforth.** I now offer a series of documents showing how the Treasury certificate was reduced to seventy-one million-and-odd dollars:

Letter of December 10, 1918, from Mr. Rathbone to Mr. de Billy.

The certificate of indebtedness dated December 10, 1918.

Letter dated December 10, 1918, also on the same subject, explaining the transaction, from Mr. Rathbone to Mr. de Billy.

(The documents referred to were marked "Exhibits Nos. 2934, 2935, and 2936", respectively, and are included in the appendix on pp. 9335 and 9336.)

Mr. **Rathbone.** That was really setting forth the terms, was it not, under which we were doing this? It was not explaining it; it was laying down the law, as it were.

Mr. **Wohlforth.** It explains the whole transaction here.

So the record will be complete on this one transaction, we want to follow out the release of the $200,000,000 securities to the French in 1918 and 1919.

I offer a letter of January 8, 1919, from the Central Union Trust Co. to the French Finance Commission. It is offered without comment for appropriate number.

(The document referred to was marked "Exhibit No. 2937", and is included in the appendix on p. 9337.)

Mr. **Wohlforth.** I offer for the record a letter of March 15, 1919, from the vice president of the Central Hanover Bank & Trust Co.—the name of the bank was changed at that time.

Mr. **Rathbone.** It is the same institution. It was a consolidation on merger.

Mr. **Wohlforth.** It is the same bank. They were still trustees of the collateral.

(The document referred to was marked "Exhibit No. 2938", and is included in the appendix on p. 9338.)

Mr. **Wohlforth.** I offer for the record a letter from Mr. Bloch to Mr. Rathbone, dated April 3, 1919, showing how many of the bonds were converted. The French 2-year notes, I think, were converted into 20-year bonds and 588,000 of those had been so converted.

(The document referred to was marked "Exhibit No. 2939", and is included in the appendix on p. 9338.)

Mr. **Rathbone.** Of course, the Treasury did not furnish any money to pay these notes that were converted into long-term obligations.

Mr. **Wohlforth.** No; that is right.

I will offer for the record a memorandum of December 12, 1918, signed "A. R." I guess that is Mr. Rathbone. It is for Strauss, who was in the Treasury at that time. The substance of the letter is that the release of the neutral collateral securing these two loans was the chief factor in the Treasury's willingness to substitute its certificate for them.

(The document referred to was marked "Exhibit No. 2940", and is included in the appendix at p. 9338.)

Mr. **Wohlforth.** If I can just mention this, you say to Mr. Strauss [reading from "Exhibit No. 2940"]:

> Through an arrangement made with the Secretary of the Treasury there has been released from the lien thereon of the instrument of pledge securing the French Government notes which will mature April 1 next, a large amount of neutral securities. Under an arrangement with the French Government these securities are to be used to rectify exchanges in such a manner as may be agreed upon. I shall be glad to have your views as to the best method to use the securities in question to attain that purpose.

I think we discussed that this morning, that the idea of releasing these securities was to rectify neutral and other exchanges in favor of the Allied Governments.

Mr. **Rathbone.** In advance of the maturity, although that memorandum does not say that was the principal reason that we did it.

Mr. **Wohlforth.** I offer for the record a letter dated December 12, 1918, from Mr. Rathbone to Mr. Simon, of the French High Commission. I think the substance of this letter is that you are asking Mr. Simon his views on the best way to use the neutral securities for the common good. I just offer that for the record.

(The document referred to was marked "Exhibit No. 2941", and is included in the appendix on p. 9339.)

Mr. **Wohlforth.** You have already stated this morning, Mr. Rathbone, that the dollar in relation to neutral exchanges improved somewhat in the last quarter of 1918, and that neither the United States nor these neutral countries was much less in parity than in September of 1918, when the negotiations for the release of the collateral were made.

In a memorandum of December 13, 1918, Mr. Strauss replies to you, and he says, in the last paragraph:

> As to the best method of using the securities in question to rectify exchanges, I take it that the French are not willing that these securities should be sold for their account for that purpose. * * * I do not think that we require them as collateral, for under present conditions we could, I think, borrow on our unsecured obligations in any market, or where the Treasury promotes the transactions through the banks, Treasury certificates would be accepted as security, as in the *Spanish case.* I will discuss this matter with you at your convenience and, in any event, I think we might discuss it with Kent next week.

(The document referred to was marked "Exhibit No. 2942", and is included in the appendix on p. 9339.)

Mr. RATHBONE. Did you say that our needs were less then for neutral foreign exchange than at some other time?

Mr. WOHLFORTH. No; but the relation of the dollar to foreign exchange had improved somewhat as compared with earlier in 1918.

Mr. RATHBONE. I remember that about that time, probably a little before this, General Lord, from the Army, came in and told me that the American Army was free and were intending in any market in the world at any time they thought right to go in and spend as much money there as they pleased.

Mr. WOHLFORTH. I offer for the record two letters dealing with the request to turn the securities back to France to be pledged or sold in a neutral market, and with the acquiescence of the United States Treasury in such a request.

The first letter was of January 7, 1919, from Mr. Simon to Mr. Rathbone, and the second letter is apparently your answer. I am offering them both for appropriate number.

(The documents referred to were marked "Exhibits Nos. 2943 and 2944", respectively, and are included in the appendix on pp. 9339 and 9340.)

Mr. WOHLFORTH. I read from the answer of Mr. Rathbone to Mr. Simon on January 11, 1919 [reading from "Exhibit No. 2944"]:

> This department has no objection to the shipment to France of the neutral securities mentioned in your letter and in the order therein set forth, on the understanding that as rapidly as possible the same will be sold by your Government or used as collateral to secure loans to your Government,

and so on.

I will offer for the record without comment a letter of January 21, 1919, from Mr. de Saint Phalle of the French Finance Commission to the Central Union Trust Co., and also another letter from the same gentleman on March 11, 1919, which shows that the securities under the April 1 maturity were accordingly sent abroad.

(The documents referred to were marked "Exhibits Nos. 2945 and 2946", respectively, and are included in the appendix on p. 9341.)

Mr. WOHLFORTH. I will also offer a memorandum from the files of the Bankers Trust Co. showing that the securities which were released under the American Foreign Securities Loan were also sent abroad.

(The document referred to was marked "Exhibit No. 2947", and is included in the appendix on p. 9341.)

Mr. **Wohlforth**. I have just a few more letters here, to show that the French Ministry of Finance had several plans for the disposition of these securities so released, and in several instances approval was requested from the United States Treasury for such disposition before the disposition was made.

The letters are from Mr. de Billy to Mr. Rathbone, dated April 2, 1919; a letter from Mr. Bloch to Mr. Rathbone, dated May 28, 1919, with a telegram attached, from Paris; a letter of July 15, 1919, from Mr. Bloch to Mr. Rathbone, also with a telegram attached; similarly a letter from Mr. Rathbone to Mr. Bloch on July 16, 1919, merely showing the disposition of the securities.

(The documents referred to were marked "Exhibits Nos. 2948 to 2951", inclusive, and are included in the appendix on pp. 9342 to 9344.)

Mr. **Wohlforth**. I have no other point to make, Mr. Chairman, other than that I think the record is clear that the securities were released by the United States Treasury——

Mr. **Rathbone**. Not released by the United States Treasury.

Mr. **Wohlforth**. I mean, the United States Treasury advanced money to the French in the form of certificates of indebtedness, which were used in connection with these two loans to permit the release of the securities by using these United States Treasury certificates as collateral in the substitution, and that the securities were returned to the French Government.

Mr. **Rathbone**. The release by the trustees under the indenture.

The **Chairman**. Let the Chair leave the advice at this time that before the day is over, and when the Committee has completed making a matter of record such papers as it believes pertinent, if witnesses or others feel that there are any evidences being left out of the record which are pertinent, the Committee will want its attention called to that fact, and opportunity will be afforded to make those papers or evidences a part of the record.

Mr. **Leffingwell**. Senator, I appreciate that courtesy. I wonder whether in case of the memorandum I have already handed you you would receive it now, so that I might refer to it in the course of the afternoon's questioning.

The **Chairman**. Frankly, I have not had the opportunity to look at that myself.

Mr. **Brown**. I have read the bulk of that, Senator. I see no objection to its introduction.

The **Chairman**. The staff sees no objection. I am sure the Chair has no objection to it being received for the record at this time.

Mr. **Leffingwell**. I appreciate your courtesy, sir.

The **Chairman**. That is a memorandum about the $400,000,000 demand loan, subrogation, and British and French public maturities. That has been offered for the record.

Mr. **Leffingwell**. That is entirely from the Treasury point of view.

(The document referred to was marked "Exhibit No. 2952" and is included in the appendix on p. 9344.)

Mr. **Rathbone**. May I say one thing, Senator?

The **Chairman**. Yes.

Mr. **Rathbone**. Of course, Mr. Leffingwell and I were connected with the Treasury a long time ago. We have not at our disposal the Treasury records. There have been a great many documents introduced in evidence during the short time I have been here, communications from various individuals or representatives of various governments which stated or tried to indicate what the Treasury's views were as to certain questions.

It is absolutely impossible for either Mr. Leffingwell or me, with such a general permission, to put anything in that contradicts them or to make records available to this Committee, because we do not have them; the Treasury records which might show whether the ideas of these individuals and representatives as to what the Treasury's attitude was were correct or incorrect are not controlled by us.

The CHAIRMAN. The Chair wishes to announce that there has been no purpose on the part of the Committee or its staff——

Mr. RATHBONE. I was not suggesting that for a moment, sir.

The CHAIRMAN. To avoid offering for the record all that we found that was pertinent to the question in hand.

Mr. RATHBONE. I quite understand that, but what I am trying to say is that Mr. Leffingwell and I cannot take up one by one these various communications from individuals not authorized to speak for the Treasury and say that what they say is correct as to the Treasury's views.

It is an impossibility for us to do that.

The CHAIRMAN. Oh, of course, that would be an impossible thing for you to do at this stage.

Mr. BROWN. I think, Mr. Rathbone, the Chair's offer was more particularly directed to certain records of J. P. Morgan & Co., that it might be desirable to add to the record, rather than any question of Treasury records.

Mr. RATHBONE. Not only Morgan records but the French High Commissioner or anybody else.

Mr. LEFFINGWELL. I understand that the Chair is intending to put in the Treasury records, so far as they have been accessible?

The CHAIRMAN. So far as we find it possible to do.

Mr. LEFFINGWELL. That really covers your point, does it not?

Mr. RATHBONE. Yes.

The CHAIRMAN. The Morgan people have had entered in a volume, which has been before us here during all of these weeks, a great many communications. If you feel that any parts of those that have not already been entered by the Committee should be entered, some time during the day, please confer with some member of the staff.

Mr. LAMONT. Thank you.

The CHAIRMAN. Please indicate which of those papers you should like to have entered, and we shall see that that is done.

Mr. LAMONT. Thank you, Senator.

The CHAIRMAN. Mr. Brown.

SUPPORT OF STERLING EXCHANGE FROM UNITED STATES ADVANCES[1]

Mr. BROWN. The subject at the moment is the matter of the support of foreign exchange in the period from April 1917 to the end of the war, and concerns chiefly the support of sterling exchange, which was the most important of the three principal exchanges.

---

[1] Certain industrial aspects of financial support to the Allies are illustrated by "Exhibits Nos. 3334 through 3361", Hearings, Part XXX; and "Exhibits Nos. 3531 through 3556", Hearings Part, XXXI. See also "Exhibits Nos. 3161 through 3166", Hearings, Part XXX; and "Exhibit No. 4116", Hearings, Part XXXII.

I would like to recall at the outset, from "Exhibit No. 2646", which is already in the record,[1] the phrase of the Chancellor of the Exchequer, in which he declared that the maintenance of the sterling rate on New York had created a situation in which—his quotation is—"the nerve center of the Allies' financial system was as much in New York as in London."

Mr. Leffingwell. Mr. Brown, what was the date of this?

Mr. Brown. That is in July 1917, Mr. Leffingwell.

I recall further that from "Exhibit No. 2647",[2] which is in the record of about the same date, Sir Cecil Spring-Rice's declaration that the collapse of the sterling rate would destroy—his quotation is—"the basis of financial relations of all the Allies with the rest of the world would be removed."

Mr. Chairman, as we see the exchange situation, the general proposition would be something along the following line, that the British financial arrangements late in 1916 or 1917 over and above such dollar exchange as was created in the United States by imports and payment on capital account brought by the United States included the following:

The first would be British Government purchases in America and all purchases through the commercial agency account of J. P. Morgan & Co. were paid for directly in dollars raised either by loans, by gold, or by security sales.

That in the aggregate is correct, is it not, Mr. Lamont?

Mr. Whitney. Yes.

Mr. Lamont. Yes. Excuse me; I thought this related to the Treasury. Mr. Whitney has answered.

Mr. Brown. Second, that British purchases in America for other governments were also paid for largely in the same manner, though also by sterling bills.

Mr. Lamont. Yes.

Mr. Brown. Third, that British private commercial purchases in the United States were paid for by sterling bills altogether.

Mr. Lamont. In the ordinary routine commercial channels.

Mr. Brown. Yes.

Mr. Lamont. We assume they were.

Mr. Brown. Yes; presumably in large bulk, they must have been, at least.

Fourth, that the British Government and British private purchases in the neutral world and in such parts of the belligerent world as Japan, India, and the British Dominion were paid for in sterling.

Mr. Lamont. I cannot answer that.

Mr. Brown. Can you answer that from your experience as international bankers, not from your own knowledge from the wartime but just as a matter of general information?

Mr. Lamont. I should not dare answer that in the affirmative or in the negative, Mr. Brown, because London was for years, for generations, the great exchange market for the world. I should not venture to attempt to answer your specific question.

---

[1] See Hearings, Part XXVIII, p. 8785.
[2] Ibid, p. 8789.

Mr. **Brown**. By that time—that is, the fall of 1916—the only market in the world where sterling could be sold in unlimited quantities was in New York. That is correct, is it not?

Mr. **Lamont**. Let Mr. Whitney comment on that.

Mr. **Whitney**. Going back to the previous question, Mr. Brown, for instance, Japan in cotton and copper, I do not know at that time, but there had been a lot of credits established. They might have done it by a dollar credit in Japan. It would not necessarily go to the sterling market. But we would have no knowledge of it.

Mr. **Brown**. Were not such dollar credits as were arranged with Japan the other way around; they were American dollars owned by the Japanese that were lent to the English by the Japanese?

Mr. **Whitney**. You asked about commercial purchases.

Mr. **Brown**. I asked about British purchases in these countries, if they were not in general paid for by sterling or sterling bills.

Mr. **Whitney**. I misunderstood your question. I just do not know the answer to that.

Mr. **Lamont**. Then you asked a second question.

Mr. **Brown**. Yes; if the New York market was not, in the fall of 1916, the only market in the world where sterling could be sold in unlimited quantities.

Mr. **Lamont**. I am not familiar enough, again, with the exchange market to answer that. America was rapidly changing, of course, from a debtor nation to a creditor nation, and the exchange market in New York in sterling, of course, was exceedingly active. But I am unable to answer your specific inquiry.

Mr. **Brown**. Was there anywhere else in the world at that time any such arrangement as J. P. Morgan & Co. had with the British Government to buy all the sterling at a fixed rate that came on the market?

Mr. **Lamont**. I have no idea. I do not know what the arrangements of the British Exchequer were anywhere, or the Bank of England.

Mr. **Brown**. So far as you knew, at that time, you knew of no other market in which sterling could be sold in unlimited quantities, did you? There may have been such, but you did not know of them?

Mr. **Lamont**. When you ask me that question—I do not want to seem to quibble about it—but you indicate I was giving thought to that question at that time, that I had rather canvassed it and had come to the conclusion you have come to. I had not.

Mr. **Brown**. But, Mr. Lamont, the exchange support in New York was, as we all know and as the record shows, a very serious matter. It took an enormous sum of money and was a constant worry. I should have imagined that if there were any such market support anywhere else in the world, you, as J. P. Morgan & Co., as the British fiscal agents in America, would perhaps have been aware of it. If they could have sold sterling against guilders in unlimited quantities the way they could sell it against dollars, I suppose you might have known of it.

Mr. **Lamont**. I am awfully sorry, Mr. Brown, but I am not an exchange expert. I had nothing to do with exchange transactions during the whole period of the war. I was in an entirely different phase of the work. I should have to get an exchange expert of 20 years ago to answer your question intelligently.

Mr. BROWN. At least, you knew of no other account similar to your own in New York, did you?

Mr. LAMONT. No; I knew of no other, but at the same time I did not give any thought to the question. If I had investigated at the time, I might have found another, but I do not know of any.

Mr. BROWN. Maybe Mr. Rathbone or Mr. Leffingwell can speak of the period after April. Was there any market, Mr. Rathbone, in which sterling could be sold in unlimited quantities except in New York?

Mr. RATHBONE. I do not believe there was any place they could sell sterling in unlimited quantities. That is a pretty big order.

Mr. BROWN. In undetermined quantities, let us say, quantities as to which you never knew how great they might become; an open market, in other words.

Mr. RATHBONE. I do not believe I could answer that question. I am not an exchange expert. As far as the policy of the Treasury was concerned with regard to exchange, I relied very largely on Mr. Albert Strauss, and to some extent on Mr. Kent, both of whom knew something about exchange, and I did not.

You are talking now about before we entered the war?

Mr. BROWN. Well, that point is immaterial. In "Exhibit No. 2646",[1] which is in the record, which is a memorandum by the British Chancellor of the Exchequer, appears the following:

> By the beginning of 1916 they—

the British Government—

> had to go a step further and come to the support of commercial exchange by making a blanket offer through their agents in New York to purchase sterling from all comers at a fixed minimum rate of $4.76 7/16.

Mr. LAMONT. Who said that?

Mr. BROWN. This is a memorandum from the British Chancellor of the Exchequer on July 22. It is already in the record.

That standing offer to purchase from all comers sounds like a market in which you can sell unlimited quantities so long as the offer is open, at least.

The point towards which this is leading is that as a result of this situation, not only did sterling purchases in America come over the New York exchange market, but equally sterling purchases from all over the world, from all the sellers of goods who desired any other currency than sterling, could at any rate, and in a large measure did, come over the New York market.

Is that correct, Mr. Lamont, by your recollection of that situation?

Mr. LAMONT. I am awfully sorry, Mr. Brown, to seem so stupid about that, but I had nothing to do with exchange and I cannot answer the question intelligently. Presumably a lot of sterling bills did come from all over the world and presumably when the British Government asked us to buy sterling, we bought sterling bills from all parts of the world, but to the extent or in the volume you indicate, I am sorry I cannot answer.

---

[1] See Hearings, Part XXVIII, p. 8596.

The CHAIRMAN. Mr. Whitney, do you have any knowledge on that at all?

Mr. WHITNEY. I think there is a certain amount of confusion here. Let us suppose a man in the Argentine wanted to sell a sterling bill. Our instructions were to buy sterling, or, rather, sell dollars. The man that owned that sterling bill, whether it was a Japanese or an Argentine, or whoever he might be, got dollars. Obviously, if he wanted Argentine pesos, he had to use his dollars to buy pesos. We would not know anything about that. The only thing we would know was that there were certain offers of sterling bills on the market, and there was a standing offer to buy for our clients.

What that seller of exchange did with the dollars we paid him we have no means of knowing. I cannot conceive that we would have made any examination of the source of the selling, because, after all, our instructions were to buy sterling with dollars. What happened to the dollars thereafter we would have no means whatever of knowing.

Mr. BROWN. But the result of such a situation would be that the heavy buying of sterling at New York would tend to draw all the surplus sterling of the world to New York?

Mr. RATHBONE. If they wanted dollars.

Mr. WHITNEY. If they wanted dollars.

Mr. BROWN. Even if they wanted neutral currencies, Mr. Rathbone?

Mr. RATHBONE. If they wanted neutral currencies, it would be a question whether they could buy them better with sterling or with dollars. I am just guessing.

Mr. BROWN. If the only standing offer in unlimited quantities was at New York, if you would try to sell sterling for guilders in any great quantity, you would break the rate.

Mr. WHITNEY. You are not talking about selling guilders, you mean, buying guilders.

Mr. BROWN. Selling sterling for guilders; you would break the rate. If you sold your sterling over this unlimited market, in New York, and got your dollars, you could then buy your guilders with dollars.

Mr. WHITNEY. It would depend on whether there was an offering of guilders at that time.

Mr. BROWN. It would have a depressing rate on the dollar against the guilder?

Mr. WHITNEY. Quite.

Mr. BROWN. Did not that in fact occur even before we entered the war? The dollar was at a discount against a number of neutral currencies, was it not?

Mr. WHITNEY. You are sort of speculating on certain things. As Mr. Lamont has said, we have no knowledge whatever on that.

Mr. BROWN. I am asking from your general knowledge of the exchange situation, Mr. Whitney.

Mr. WHITNEY. Have you not knowledge that there were credits established by the British Government prior to the American entry into the war, both in the Paris and the neutral markets to the extent they could? Whether there was a larger market here for sterling and a larger market for the neutral currencies somewhere else I would not know. The neutrals did not want dollars. They wanted their own currencies. Whether there was a larger market here for guilders, for example, than there would have been for sterling in Holland, I would not know. We would have no possible means of knowing, as Mr. Lamont has said.

Mr. BROWN. Just as an academic question, Mr. Whitney, if the dollar declined against the guilder or any other currency at a time when there was a favorable balance of United States trade with that country, it would be presumably because of the drag of sterling, would it not?

Mr. WHITNEY. That would be a fairly good assumption. We were not handling the exchange market. All we were doing was buying sterling and selling dollars.

Mr. LEFFINGWELL. I cannot assert any competence in the field of exchange, and as Mr. Rathbone says, the foreign exchange problem was under the charge of the Federal Reserve Board, and particularly the man who became its vice governor, Albert Strauss, and also Mr. Kent, who had his headquarters in New York and managed it.

To a very large extent the support of the neutral exchange for the dollar was imposed upon the Treasury by our own Army expenditures, direct Army expenditures of the United States. For instance, we had the greatest possible difficulty in finding enough pesetas in Spain to meet the disbursements of our Army quartermasters. The shortage of shipping and the submarine peril made it extraordinarily important from the Army's point of view to buy whatever military supplies they could on the continent of Europe. Therefore, they bought freely and as freely as they chose in Spain or anywhere else on the continent of Europe, if they could get it there and they needed it. We had to get the assistance of France, and indeed of England, as I remember it, but certainly, of France, in the first instance to provide us with some pesetas. Later on we sent a special commission over to Spain with a view to obtaining pesetas for our own account.

We had the same problem in Switzerland, to a less degree, and an exchange arrangement was worked out with the Swiss Government. They were most cooperative, and they provided us with Swiss francs for our own needs.

In the Argentine we also found it necessary and desirable to make exchange arrangements, and we made such exchange arrangements against earmarked gold, as I remember it. So all over the world we made it a major business of the Treasury of the United States to find foreign currencies for our own use. That was in addition to and not instead of the general need of maintaining the buying power of the Allies and of the United States wherever military expenditures were being made for the common cause.

Mr. LAMONT. But I do not think, Mr. Brown, we must overlook the fact that London continued to be a great international market in exchange, war or no war, and the basis of that was, to a considerable measure, of course, the enormous overseas investments which the British people had other than their American investments, which they had sold to a considerable extent, a large extent back to America. But yet they were supposed still to have something like the equivalent of $15,000,000,000 of foreign investments, which was sort of a basis for operations.

Mr. **Brown**. I return again to just one more point on the mechanics of exchange.

When sterling was bought by the British Government through J. P. Morgan & Co., the sterling then belonged to the British Government?

Mr. **Lamont**. Yes.

Mr. **Brown**. After the United States entered the war this exchange support was furnished almost entirely by the United States advances, was it not?

Mr. **Leffingwell**. You mean in New York?

Mr. **Brown**. Yes; in New York.

Mr. **Leffingwell**. Of course, the British Empire was a great going concern, and its own main market probably continued to be the central market for the world, and what came to New York was whatever excess was unpurchased in London.

Mr. **Brown**. Whatever people held who did not want sterling, which had not been in some other way transferred to some other currency, would come over to New York, is that correct, Mr. Leffingwell?

Mr. **Leffingwell**. You will always find that any salable surplus moves to the best market and the best bid was in New York for any excess purchases. There was an enormous amount naturally being bought and sold in London, which never ceases to be, I suppose, the main market in volume for sterling.

Mr. **Brown**. I offer for the record—it does not need to be read—a telegram from Mr. Balfour dated August 3, 1917, which is printed in the Foreign Relations Supplement, merely stating that "at the present time we are supporting exchange only by means of dollars supplied by the United States Government."

(The document referred to was marked "Exhibit No. 2953", and is included in the appendix on p. 9352.)

Mr. **Brown**. I offer for the record a letter from Mr. Crosby to the Secretary of the Treasury, dated February 20, 1918, of which I would like to read only one part, concerning exchange operations in New York.

> Concerning exchange operations in New York, I am satisfied that the British Treasury will not be keen to diminish the amount of sterling thus handled. As a matter of fact, I have learned in conversation with Mr. Booth that, in his judgment, one of the advantages accruing to the British Government from the present system is this: that they obtain pounds at a cost of $4.76, and, assuming the future stability of their finances, these pounds will really be then worth $4.85 to the Government. We must constantly bear in mind that cotton, cereals, a large part of the oil, and other similar articles, are resold to their citizens, thus giving the British Government a large domestic revenue against their long-while obligations made to us. It amounts to a diminished need of interior borrowing in Great Britain, undoubtedly, the British Treasury is under great pressure in every direction, and its needs will doubtless increase, both internally and externally, as the war goes on. I am not now, therefore, criticizing their action, but am placing before you some of the facts which must tend, consciously and unconsciously, to dampen their activity in lines which may be desired by us.

(The document referred to was marked "Exhibit No. 2954" and is included in the appendix on p. 9353.)

Mr. **Brown**. We find, Mr. Chairman, from an analysis of the British Treasury account and demand loan no. 1 for a short period, from April 1, 1917, to April 1, 1919, purchases of sterling exchange in the New York market total, roughly, $1,710,000,000, and we find further from the Treasury account that in the period from January 1, 1918, to January 1, 1922, $545,000,000 of sterling was sold back. By "sold back" I mean merely sterling sold. It was dollar income of that amount from the sale of sterling.

I would like to offer for the record a "memorandum on relation of the United States to foreign exchange", addressed to Mr. Crosby from, I believe, Governor Harding, but I am not certain. It seems indicated in the Treasury files to have been submitted by Governor Harding, but that is not certain.

(The document referred to was marked "Exhibit No. 2955" and is included in the appendix on p. 9355.)

Mr. **Brown**. From this I would like to read one part:

> The direct problem with which the United States would have to deal should it undertake to maintain the pound sterling at $4.76 would be that of providing exchange at the specified rate in amount sufficient to provide means foi the settlement of balances of indebtedness growing out of the rest of the trade. It would also have to purchase all offerings at that or a lower rate. It should further be borne in mind that in undertaking this task the United States will also be undertaking to "stabilize" the exchange of those countries whose market is dependent on that of Great Britain, or which are in the habit of drawing sterling bills.

That, in effect, was what was done by that support, was it not, Mr. Rathbone? I mean, at that time. Later on the Treasury set up other machinery to deal with the problem, but at that period, when that support was undertaken, that was the result of that policy, was it not?

Mr. **Rathbone**. Yes; but I think you have to bear in mind what I called attention to in the article in Foreign Affairs, that because of the control exercised by the Allied Governments over exports and imports and over shipping, the great bulk of the purchases for which payment would be made over our exchange market would be for war materials and other commodities necessary for maintaining the civilian populations of Allied countries.

Mr. **Brown**. There is no question of that. We will come to that.

Mr. **Rathbone**. That cut it down. It was not the world-wide situation, it was the situation of exchange coming there, to be paid for commodities that were controlled by the Allied Governmets as much as they could to prevent the import into their countries of commodities not required for war purposes.

Mr. **Leffingwell**. Mr. Brown, there is an interesting thing, and you rather suggested it by your very pertinent comment about the fact that the Treasury had set up other mechanisms. I think it is perfectly relevant to mention the fact that that other mechanism resulted in this, that in the period of April 6 to December 31, 1917, exchange and cotton purchases were $1,615,000,000; in the next 6 months' period, from January 1, 1918, to June 30, 1918, they were reduced to $491,000,000; that in the next 6 months' period, from July 1, 1918, to November 30, 1918, they were reduced to $60,000,000.

I want to mention that because it supplemented your own very proper statement and showed how swiftly as the Treasury set up its controls under Mr. Rathbone and the Foreign Loans Bureau, the unidentified item of exchange was divided into its several component parts and converted into purchases of this and that, provable war necessities. Of course, it took time to do it.

Mr. Brown. Thank you, Mr. Leffingwell.

Mr. Leffingwell. Those figures, may I mention, are taken from the annual report of the Secretary of the Treasury for 1920, "Summary by Periods of Credits Established in Favor of Foreign Governments, and Advances Made to Them and Expenditures Reported by Them April 6, 1917, to November 1, 1920", "Exhibit No. 27", page 340.

(The document referred to was marked "Exhibit No. 2956" and is included in the appendix on p. 9360.)

Mr. Rathbone. May I also call attention to the fact that from January 1 to November 30, 1918, the United States Treasury advances for purposes of British exchange amounted to $296,000,000—I am just giving round figures—and during the same period, as shown by our trade returns, the exports of cotton to Great Britain amounted to $290,000,000.

Mr. Brown. There is no question, however, Mr. Leffingwell, that before this machinery was set up a tremendous sum was involved.

Mr. Leffingwell. $1,600,000,000 in the first 8 months.

Mr. Brown. Still reading from "Exhibit No. 2955", Mr. Harding's memorandum:

> The principal argument against maintaining the rate as specified is the cost involved in it and the general disarrangement of American foreign trade relations. Only very remote estimates can be given of the cost of conducting these operations, these depending essentially upon the extent to which interference with rates of exchange are actually carried into operation, not merely as regards trade with England, but with other countries as well.

Further along in the memorandum it says:

> Assuming that the United States had practically committed itself to financing all of the war munitions, the question would then arise whether the British Government would undertake to supply the accommodation needed in order to enable its people tc go on importing goods for private use, and, if not, whether the United States Government would be willing to increase its advances or loans in a corresponding degree. This would probably be the greatest advantage accruing from withdrawing the support now given to exchange—it would show clearly and unmistakably exactly where trade relations between the two countries now stand, and would make it possible to deal with them very much more intelligently than would otherwise be practicable. It would tend to cut off exports for unnecessary purposes which, in the present state of trade, would probably be a desirable thing to accomplish. It would also relieve the United States of a very large element of expense, as well as eliminate a troublesome financial operation whose management is almost certain to give rise in one way or another to criticism.

That just bears out, practically, Mr. Leffingwell, what you said. The only point was that it was approximately a year before the machinery was in operation.

Mr. Leffingwell. It seems to me that it is closer to 6 months, because you see how quickly the figures drop.

Mr. Brown. As I recall, they ran fairly heavily into the first quarter of 1918.

Mr. Leffingwell. The figure for the first half of 1918 has dropped a good deal. The first half of 1918 was $491,000,000 as against $1,615,000,000 for the period ending December 31, 1917, so the progress was pretty rapid.

Mr. **Brown**. That is the half year. My recollection is that the second quarter was very low, so that it is still fairly heavy in the first quarter.

Mr. **Leffingwell**. Oh, I see. We do not have that, then.

Mr **Brown**. A final remark from the Harding memorandum [reading from "Exhibit No 2955"]:

> The maintenance of the pound sterling at a stable parity, while letting our exchange trade take care of itself, tends, of course, to protect the British international financial market at the expenses of others, and to preserve in some measure the competitive power for the commercial contest which it is supposed will be inaugurated with the close of the war.

Mr. **Leffingwell**. What was the date of that letter, Mr. Brown?

Mr. **Brown**. This is dated June 1917, a day uncertain, but late in June of 1917.

I would like to offer for the record with no comment, a letter from Secretary McAdoo to President Wilson on this question, dated September 26, 1918, which gives a very good summary and review of the situation.

Mr. **Leffingwell**. Is that the one about the French problem?

Mr. **Brown**. No. It deals almost exclusively with the British.

(The document referred to was marked "Exhibit No. 2957" and is included in the appendix on p. 9361.)

Mr. **Brown**. I offer for the record a group of letters including the following:

A letter from the Treasury, unsigned, to Sir Hardman Lever, dated June 14, enclosing a request for advances.

A letter from Sir Hardman Lever to Mr. Crosby, dated June 15, 1917, in which a statement is made in connection with this exchange item.

A letter from Mr. Crosby to Sir Hardman Lever on June 21, 1917, repeating request for information in regard to this exchange item on the statement.

A letter of June 25, 1917, from Sir Hardman Lever to Mr. Crosby, in which there is only one relevant passage [reading from "Exhibit No. 2961"]:

> In regard to your third question, you are correct in assuming that substantially the whole of the exchange item represents purchases of materials for Great Britain, Italy, or France, and that the withdrawal of banking funds or sterling balances in London, to which I referred, occurred in the month of June.

indicating that it was a commercial rather than a banking transaction at that time.

(The documents referred to were marked "Exhibits Nos. 2958 to 2961", inclusive, and are included in the appendix on pp. 9366 and 9367.)

Mr. **Brown**. I offer for the record a letter from Paul M. Warburg to Mr. Leffingwell dated December 13, 1917, discussing the exchange, in which he says [reading]:

> What I am after is this—that we ought to have a direct connection with the purchase of goods and thereby better control the spending of the money. By adopting this method we shall be consulted first, while now the money is being spent first by outside purchasers, as above outlined, or by foreign governments, and we are being faced with the fact afterward when the harm has been done and when we have to buy bills of exchange indiscriminately without knowing

exactly what has brought about the accumulation of sterling exchange in our market.

Merely the point that you made, Mr. Leffingwell.

(The document referred to was marked "Exhibit No. 2962" and is included in the appendix on p. 9368.)

Mr. **Brown**. I offer for the record a letter from Mr. Crosby to President Wilson on June 26, 1917, which needs no comment.

(The document referred to was marked "Exhibit No. 2963", and is included in the appendix on p. 9369.)

Mr. **Leffingwell**. What was the subject?

Mr. **Brown**. Just reporting the exchange situation and the urgent demand from Great Britain for additional funds.

Mr. **Leffingwell**. Oh, yes.

Mr. **Brown**. I offer for the record a memorandum of a conference dated July 5, 1917, where there were present Lord Northcliffe and Sir Richard Crawford; Messrs. Tardieu, Simon, Casenave, and de Billy; Messrs. Crosby and Leffingwell.

(The document referred to was marked "Exhibit No. 2964", and is included in the appendix on p. 9369.)

Mr. **Brown**. This is a memorandum of a conference at the Treasury.

Mr. **Leffingwell**. Whose memorandum is it?

Mr. **Brown**. It is a memorandum of a conference at the Treasury. It has all these gentlemen there whose names are at the top.

Mr. **Leffingwell**. Is it signed? Do you know who made the memorandum?

Mr. **Brown**. No.

Mr. **Leffingwell**. And the date is——

Mr. **Brown**. July 5, 1917 [reading from "Exhibit No. 2964"]:

> In respect to the matter of British exchange, Mr. Crosby asked whether the British Government expected that the United States Government would be called upon for money to assist in the maintenance of the existing rate. Lord Northcliffe answered: "That is our business."

However, that did not remain Lord Northcliffe's business, did it?

Mr. **Leffingwell**. Lord Northcliffe evidently was not a diplomat.

Mr. **Lamont**. Nor an exchange expert.

Mr. **Leffingwell**. Nor a financier.

Mr. **Brown**. I call attention to the fact that exhibit 2646 only some 12 days later asked for some large sums for the support of exchange.

Mr. **Leffingwell**. Mr. Brown, I am sure you want to do justice to the British Government, and I am sure you will mention it now because of that little memorandum, and you will record the fact that even at that early date the British Government did respond in the utmost detail to the Treasury's inquiry about its needs and plans and accept the United States Treasury Department's determination. I have reference to those cables and telegrams that were exchanged between the Governments in which the British Government showed how great was the effort it was making in support not only of its own war effort but in the support of the requirement of the Allies, and gave detailed figures to Mr. Crosby. Those have all been published some years now by the State Department. I am sure you do not want to leave the impression that that curt little memorandum reflected the attitude of the British Government toward the American.

Mr. **Brown**. I do not want to leave that impression at all. If I could have a personal opinion from going over the document, it would be that nobody at the beginning realized quite what a complex and terrific problem the matter was to become. We were a little cavalier, perhaps, about it at the beginning.

I offer for the record an excerpt from a letter from Governor Harding to Governor Strong, dated August 10, 1917 [reading "Exhibit No. 2965"]:

> In regard to sterling exchange, I would say that I doubt more than ever, since my return to Washington, the feasibility of an extension of credit by the United States to Great Britain in an amount sufficient to insure the support of sterling under present trade arrangements. It seems to me that in order to secure the necessary legislation to make available the large credits which will be required, British purchases in this country should be drawn against very largely in dollars.

(The document referred to was marked "Exhibit No. 2965", and appears in full in the text.)

Mr. **Brown**. My impression of that is probably correct, is it not, that Governor Harding is referring to legislation not to change the terms under which money could be advanced, but to increase the amounts that would be required. Would you not conclude that?

Mr. **Leffingwell**. I am afraid I did not hear that. Will you repeat it?

Mr. **Brown**. It seems to me that in order to secure the necessary legislation to make available the large credits which would be required, new legislation——

Mr. **Leffingwell**. That is, credits abroad.

Mr. **Brown**. New legislation here; that presumably was for sums of money rather than for any legal restrictions against any such arrangement.

Mr. **Rathbone**. I should think so.

(Discussion off the record.)

Mr. **Brown**. As a lawyer, that would be the proper answer.

I offer for the record a letter from Governor Harding to Mr. McAdoo, dated August 14, 1917. It merely bears out what we have been saying, and at this point does not need to be read.

(The document referred to was marked "Exhibit No. 2966", and is included in the appendix on p. 9370.)

Mr. **Brown**. I offer a letter from Sir Richard Crawford to Mr. Crosby, dated August 16, 1917, in which he says that [reading from Exhibit No. 2967"]:

> With regard to cost of neutral exchange arbitraged over New York, I would like to point out that the amount involved under this head represents purchases of American commodities by neutral countries paid for out of dollar exchange against sterling credits created in London.

That is not quite the whole story. It was not only American purchases by neutrals; it might also be the conversion of sterling balances into neutral balances, might it not?

Mr. **Leffingwell**. I should think it might be different countries on the exchange.

(The document referred to was marked "Exhibit No. 2967" and included in the appendix on p. 9375.)

Mr. **Brown**. I offer another letter from Governor Harding to Secretary McAdoo, dated August 17, 1917, in which he says:

> I submit, therefore, that unless America takes advantage of the opportunity now afforded she is liable to incur the contempt of other nations. In my study of the international exchange conditions I am more and more impressed with the thought that exchange is now being regulated by governmental fiat more than it is by natural trade and economic conditions; and as other nations have taken an arbitrary stand in the matter, I ask you to consider whether the logic of the situation does not require that the United States should decide for itself its own attitude.

(The document referred to was marked "Exhibit No. 2968", and is included in the appendix on p. 9376.)

Mr. **Leffingwell**. That is also Governor Harding, is it not, Mr. Brown?

Mr. **Brown**. Yes.

Mr. **Leffingwell**. Were they then running the exchange control?

Mr. **Brown**. That, Mr. Leffingwell, I believe, was before the American exchange-control situation.

Mr. **Leffingwell**. Before the exchange control was set up by the Federal Reserve?

Mr. **Brown**. While support was still being given blindly.

I offer a letter from Mr. Warburg to Mr. Crosby, dated August 29, 1917, in which he has this to say [reading from "Exhibit No. 2969"]:

> In this connection, may I quote from a letter of a Dutch friend of mine, as follows:
>
> "From an advertisement in a Dutch paper I see that England does not renew 5-percent 1-year Treasury notes maturing in Holland in the course of July. This gives the impression that England uses your money, which cost her 3½ percent, to pay off her debts in neutral countries, to which she pays 5 percent. At the same time she upsets your foreign-exchange markets."

Do you think Mr. Warburg's Dutch friend had a correct idea of that?

Mr. **Leffingwell**. It was an interesting suggestion to make. I suppose it was just one more thing to pass along, but I am not at all sure he had——

Mr. **Brown**. If at first it might be true—that is, if there were any such performance of paying off neutral indebtedness at a higher interest rate—there was the further advantage that the British could borrow their interest in this country when it came due.

Mr. **Leffingwell**. Yes; but the British Government, I am pretty well satisfied, and I should think you probably were pretty well satisfied, Mr. Rathbone, were under sufficient pressure from the Treasury of the United States to hold their borrowings here down and to borrow abroad whatever they could, so that I do not believe they were ever very apt to take advantage of such a differential. Such a suggestion was a proper one to pass on, and I have no doubt it got ample consideration.

But, actually, the effect of the pressure upon the British Government to restrict borrowings here was very severe at every turn. All this correspondence, beginning away back before I had anything to do with the foreign affairs, all goes to show that Mr. McAdoo and Mr. Crosby were pressing the British Government to find finance in other countries.

But I think that Mr. Warburg's Dutch friend possibly is pointing out a possibility but not something that the British Government actually did, because actually the thing they did was to arrange loans in Switzerland and Holland, where they could make the loans. I am pretty sure they cooperated very freely and vigorously with the United States Treasury in the effort to reduce their demands upon the United States Treasury from the very earliest possible date.

Mr. Rathbone. You also ought to remember that the American Government loans bore interest at 3.5 percent only for a comparatively short period.

Mr. Brown. Oh, they always were able to borrow the interest on them, were they not?

Mr. Rathbone. Borrow the interest?

Mr. Brown. Yes.

Mr. Rathbone. That they paid to the Government?

Mr. Brown. To the Treasury.

Mr. Rathbone. Yes.

Mr. Leffingwell. Only for 18 months, not always.

Mr. Brown. I mean during the duration of the war, then for a while the interest was suspended.

Mr. Leffingwell. It was suspended for 3 years.

Mr. Rathbone. Two or three years, I think.

(The document referred to was marked "Exhibit No. 2969", and is included in the appendix on p. 9378.)

Mr. Brown. I offer for the record a letter from Governor Warburg to Secretary Lansing, dated August 29. It needs no comment.

(The document referred to was marked "Exhibit No. 2970", and is included in the appendix on p. 9378.)

Mr. Brown. In passing, I would like to point out that from July 1917 on, wheat was bought directly by dollars through the Treasury Account. Do you recall that?

Mr. Rathbone. The British Treasury Account?

Mr. Brown. Wheat was removed from the exchange in July 1917.

Mr. Rathbone. I just wanted to make sure it was British Treasury Account at that time.

Mr. Brown. But the exchange demands remained as heavy as ever for a long period after that.

I offer for the record a letter from Acting Secretary Crosby to President Wilson, dated October 24, 1917.

(The document referred to was marked "Exhibit No. 2971", and is included in the appendix on p. 9381.)

Mr. Brown (reading from "Exhibit No. 2971"):

> Lord Reading now repeats, with much urgency, the statements made in Bonar Law's despatches of several months ago to the effect that it is wholly impossible for the British Government to meet these bills in any other way at present than by borrowings made here. Just what proportion of those bills represent settlement of their balances in neutral countries, and what proportion represents settlements of certain purchases of American goods that are expressed still in sterling bills, we cannot now definitely determine. We must assume, however, that something like $60,000,000 per month will represent those outside purchases; the remainder of about $100,000,000 a month being spent in exchange operations covering purchases of cotton and other American supplies, in the same way in which cereal purchases have been made by the British Government in the past.

Everybody has testified that it was almost impossible to come to any real accurate analysis of this exchange item. Mr. Lamont, I believe, and Mr. Whitney both have had that to say. If we applied that rule of thumb, which is, of course, only a terrific rule of thumb, of 6 to 10, it would indicate that out of that total of $1,700,000,000 shown in the Treasury account, something over $600,000,000 of the exchange purchases represented financing in neutral markets of various kinds.

Mr. RATHBONE. I do not think so. I think as the control of the foreign governments over their imports was made more and more strict, that the purchases in the neutral markets for other than war purposes and the ordinary commercial dealings between the private individuals was necessarily dropping all the time.

Mr. BROWN. Yes; but, Mr. Rathbone, the control over those neutral markets coincides exactly with the terrific drop in the exchange purchases. The program of exchange purchases occurred in a period before any control was set up, so that in that sense, we apply this estimate and come to a rough figure of $600,000,000 applied on all kinds of financing by the British Government in neutral markets.

Mr. RATHBONE. I should not think that that proportion would apply after the private transactions were done away with, on account of the heavy control. I am not talking about amounts, but proportions.

Mr. BROWN. The proportions changed but the amounts under a different situation were small.

Mr. LEFFINGWELL. Did you not read an estimate of the figures here yesterday?

Mr. RATHBONE. I read it a moment ago.

Mr. BROWN. That was at a later period.

Mr. RATHBONE. That was at a later period.

Mr. BROWN. In any event, the strain thrown on the American exchange, either through sterling support or through the war channels, resulted in forcing the United States to embargo the export of gold, did it not?

Mr. LEFFINGWELL. I do not remember that—that there ever was a formal embargo. There was a control.

Mr. BROWN. There was an informal control.

Mr. LEFFINGWELL. Under the Federal Reserve Board, established very early. When was it?

Mr. BROWN. It is my impression that it was late in 1917, but inasmuch as it was informal, it is something on which there is nothing specific.

I offer for the record a letter from Mr. Crosby to Secretary McAdoo in regard to this question of inducing the Allied Governments to borrow in neutral markets for their own requirements instead of having them come over the New York exchange.

Mr. LAMONT. About what is the date of that, Mr. Brown?

Mr. BROWN. Excuse me; October 25, 1917.

(The document referred to was marked "Exhibit 2972" and is included in the appendix on p. 9381.)

Mr. BROWN. That letter reads in part as follows [reading]:

> I believe it is already quite familiar to you that a considerable portion of the loans made by this Government to the British Government and also to the French Government, acting more or less indirectly through the British

Government, have been used for the purpose of buying all French and English exchange offered on the New York market. Insofar as the amount thus purchased represents final balances of trade between France and England on the one hand and neutral countries on the other, the purchase of these bills is in fact a payment of the debts of English and French nationals or their Governments for the balances thus incurred. Until a recent date, it was possible for the sellers of these goods throughout the world to receive ultimate payment, if they so desired, by the shipment of gold from the United States. This movement, as has been indicated to you in the past, had attained very considerable proportions when the tentative embargo upon gold shipments was established by our Government.

Presumably, in Mr. Crosby's mind, to a large extent, by reason of that drain.

Mr. Leffingwell. I do not want to be too narrow in my interpretation of that point, but you mentioned it twice, and I should think that it was a mistake to isolate any one of the many financial burdens thrown upon the United States by the war and say, "This is what made it desirable to impose an embargo."

You see, the ultimate fact was—and this is rather significant, I think—the ultimate fact was that in the course of 2 years and a few months the United States Government was called upon, in the immense war effort which it made, to obtain $40,000,000,000. Now, if you find the foreign exchange of any country weak you may attribute it to several causes. One may be a distorted balance of international payments, another may be an unbalanced budget. Those perhaps may be taken to be the two major burdens on the foreign exchange of a country which lead to an export of gold.

You have only to look back over the post-war period, or even over the brief period of distress in many countries that began with the collapse of a bank in Austria in 1931, to see that not all weaknesses of currency in foreign exchange are attributable to the support of somebody else's exchange.

Mr. Brown. No.

Mr. Leffingwell. Or to an unbalanced international economy. Now, the real burden on the American exchange—and I think it is really important, because so much of our discussion here these last 2 days concentrates on what was, after all, one of the minor points of America's war effort—I thing it is really important for you to consider the fact that in those 2 years and a little more—I speak of this perhaps with some enthusiasm because as fiscal assistant secretary to the Secretary of the Treasury I was concerned primarily with the business of issuing the Liberty loans and the Treasury certificates and with the business of suggesting or advising with the Ways and Means Committee as to tax bills; and in the course of that very brief period there was thrown upon the economy of the country and upon the dollar exchange the burden of raising $40,000,000,000. Now, of that $40,000,000,000, $10,000,000,000 was foreign loans and of that $10,000,000,000, $650,000,000 were maturities.

Now, if you will consider the maturities to which we have devoted ourselves for 2 days——

Mr. Brown. We are not devoting our attention to that now.

Mr. Leffingwell (continuing). And realize that they were 1¾ percent of the money that the Treasury had to raise, 1¾ percent, and that the loans to foreign governments altogether were only 25 percent of the money that the Treasury had to raise, you will see why I think it is important to call your attention to the fact that the gold embargo and the great burden which the American people took up in consequence of entry into the war were only partly attributable to the necessity of supporting the Allies' exchange in this and that country as well as our own.

Now, as to supporting the Allies' exchange in this and that country, as well as our own, the real essential answer that the Treasury made—I cannot say at what date because I have not the records here—but the essential answer that the Treasury made was this:

> The Allies have been at war for 3 years. During those 3 years the British Government has set up an unparalleled mechanism for the purchase of supplies all over the world and financing those purchases for themselves and for their Allies in all the markets of the world.

And it was quite unthinkable that the Treasury of the United States should jeopardize the war by breaking down the machinery which the British Government, with its vast experience and vast resources, had taken 3 years to build up.

Now, to break it down in the most effective way, and to throw the whole burden of finance and of purchase and of organization of purchase throughout all the markets of the world, to break it down in the most effective way, would have been this: Stop the support of the sterling exchange—stop the support of the sterling exchange, because then the whole machine would have instantly come to a full stop and the United States Treasury would have had to buy at anybody's prices anywhere, because the dollar would have then been the only currency with which you could buy.

That, I think, is the true answer to all the questions which suggest themselves from your very interesting analysis of these problems.

Mr. Brown. I think that connects up with this, Mr. Leffingwell. I think the only point that should be added to that is, that the Treasury never dreamed of wrecking this before.

Mr. Leffingwell. Not for one moment.

Mr. Brown. But it did seem that it was a system which was fundamentally disadvantageous to the United States, and it set to work, as rapidly as it could, to substitute for it one which was more advantageous to the United States.

Mr. Leffingwell. It was fundamentally very advantageous, but a better system could be worked out in detail, and we worked out a better system in detail just as soon the Federal Reserve Board, the Federal Reserve agents, and the Foreign Loan Bureau could work out that system with the cooperation of the Allies.

But, fundamentally, it was extremely to the advantage of the United States to make sure that nothing interfered with the facility of purchasing and the facility of financing, which had been established by the British Government so effectively during those 3 years in which they preceded us in the war.

Mr. Brown. I offer for the record cable no. 44839, of November 19, 1917, from Morgan, Grenfell & Co., reading in part as follows:

> For your confidential information, Crosby is, as before, apprehensive lest the whole burden of Allied financing may prove too heavy for his resources and feels that any break in America would be so serious that it must at all hazards be prevented. In this I concur. Crosby fears lest the present exchange situation may prove the last straw, * * *.

I do not think anything else in that cable need to be read.

(The document referred to was marked "Exhibit No. 2973" and is included in the appendix on p. 9383.)

Mr. LAMONT. It is not important, Mr. Brown, but I would like to indicate that I was simply pointing out, for the information of my partners, views which had been expressed to me in London by Secretary Crosby, simply passing it on.

Mr. BROWN. I will offer the answer to that, cable no. 55812, of November 21, 1917, Mr. Lamont, which needs no comment.

(The document referred to was marked "Exhibit No. 2974" and is included in the appendix on p. 9384.)

Mr. BROWN. I will also offer cable no. 55811 for Mr. Lamont, of November 21, 1917, without comment.

(The document referred to was marked "Exhibit No. 2975" and is included in the appendix on p. 9384.)

Mr. BROWN. I might read this part of the cable [reading]:

> From your cable I judge that Crosby is in the same condition as when I saw him in Washington and what he needs is a foot warmer.

I offer cable no. 44975 of November 23, 1917, for Mr. Morgan.

(The document referred to was marked "Exhibit No. 2976" and is included in the appendix on p. 9385.)

Mr. BROWN. I might state that in this cable no. 55811 Mr. Morgan has this to say also [reading from "Exhibit No. 2975 "]:

> After all, if we could shorten the war by 10 days at an expense of even £100,000,000 or more, as a purely monetary transaction it would show a profit, and since we have Great Britain's obligation to repay that 100,000,000 later on, I do not think the United States should be too drastic in its requirements.

Mr. BROWN. I offer cable no. 44975, or I think I did offer it before.

Mr. LAMONT. That, of course, was just a subject of conversation between our offices in London and New York and had nothing to do with the Treasury transaction.

Mr. BROWN. No; it is just completing the discussion of the exchange situation.

I offer for the record a cable for Secretary McAdoo from Mr. Cravath in London, dated March 23, 1918, after the proposal had been made to remove some of the strain on the exchange by having more advances to France and Italy for their neutral purchases [reading from "Exhibit No. 2977"]:

> There is one point which seems to require additional elucidation: The advances of British Government to France and Italy which for some months have averaged about $118,000,000 a month exclusive of advances for interest have been used partly to pay British Government for commodities purchased in the British Empire, of purchases elsewhere by the British Government and resold, and partly to pay for purchases of France and Italy in neutral countries. The advances of the latter category have usually taken the form of sterling bills, which have helped swell the volume of sterling exchange which has come on the New York market.

(The document referred to was marked "Exhibit No. 2977" and is included in the appendix on p. 9385.)

Mr. BROWN. On that same subject I offer a cable of March 30, 1918, from Mr. Crosby to Secretary McAdoo, which states in part [reading from "Exhibit No. 2978"]:

> Referring Chancellor's long cable to Reading. While I believe in general that if dollars were made to France and Italy for payment of their purchases

> throughout world that there would be a diminution in dollar need of Great Britain, I cannot adopt view that French and Italian purchases in Great Britain should be covered by United States.

That was never intended, was it, Mr. Leffingwell, to mean that the needs of France and Italy, in England would be financed out of dollars?

Mr. LEFFINGWELL. It was never contemplated by the United States Treasury, Mr. Brown. That was a subject of long discussion.

Mr. RATHBONE. By the British Treasury; that we should finance in dollars the French and Italian purchases in Great Britain. Very serious requests were made of the United States Treasury to that effect.

Mr. BROWN. The Treasury never considered them?

Mr. RATHBONE. The Treasury never adopted that view.

(The document referred to was marked "Exhibit No. 2978" and is included in the appendix on p. 9386.)

Mr. LEFFINGWELL. It is a very interesting point, and I would like to add a footnote to what you said, that it has been a subject of discussion between the British and American Governments for a great many years, and you will recall in the Balfour note. The British always contended that the United States Government was adopting a method of financing the war which resulted in the British Government being obliged to go on lending to the other Allies, while the United States Government was lending to her. In other words, that was the basis of the theory of the conduit, which was the basis of the Balfour note, and a long series of discussions resulted from that. And Mr. Rathbone's article in Foreign Affairs[1] expounds the solutions which were found for the problem of readjustment of the basis of borrowing and lending between the countries.

Mr. BROWN. Further on in this cable it states [reading from Exhibit No. 2978"]:

> Besides powerful political reasons against this step—

that is paying for French and Italian expense in England and also to some extent in neutral countries—

> it is clear that diminution in dollar demands of Great Britain would correspond to increase of dollar credits to France and Italy, without effective check upon Allied purchases in neutral and Allied countries, all of which, unless controlled, might be increased so that demand for dollars to cover sterling offerings in New York could not be guaranteed to diminish in proportion to furnishing of direct dollar credits to Italy and France.

The net result of this situation was that from the beginning, we had, to some extent, at least, financed Allied purchases in neutral markets, whether we intended to or not, and when the exchange control was set up, we financed them by direct advances instead of through exchange, but we continued, as we had from the beginning, to finance them upon the neutral markets.

Mr. RATHBONE. France's and Italy's purchases, to some extent.

Mr. LEFFINGWELL. Not completely.

Mr. RATHBONE. Not completely.

Mr. LEFFINGWELL. There was a settlemet of accounts, as a result of which the British and American Governments agreed on a basis for financing French and Italian purchases in neutral markets. Is not that correct, Mr. Rathbone?

---

[1] See "Exhibit No. 2781", appendix, p. 9207.

Mr. RATHBONE. An agreement was finally reached, and I think in my article it states it.

Mr. BROWN. The memorandum is May 28, 1918, I think, being a memorandum concerning foreign loans.

Mr. RATHBONE. May I ask whose memorandum that is?

Mr. BROWN. Lots of these Treasury memoranda are not signed and are in the files.

Mr. RATHBONE. They were probably interdepartmental communications, a suggestion from somebody to somebody else.

Mr. LEFFINGWELL. Intradepartmental, you mean.

Mr. RATHBONE. Yes, sir; intradepartmental.

Mr. BROWN. This was a fact and not a policy. The memorandum states [reading from "Exhibit No. 2979"]:

> Great Britain is now asking that the United States Treasury should hereafter make loans to France and Italy for their expenditures in neutral countries and their expenditures (except for interest on British debt, coal and maritime freights) in Great Britain and the British Empire, such loans to be in substitution for the British net monthly loans to France and Italy.

In other words, to do formally what had been done informally over the foreign exchange.

(The document referred to was marked "Exhibit No. 2979" and is included in the appendix on p. 9387.)

Mr. BROWN. I might point out in passing——

Mr. LEFFINGWELL. Mr. Brown, it is a little unsatisfactory, as Mr. Rathbone points out, to take too seriously a memorandum about the exchange problem which some man in the Department wrote to some other.

The CHAIRMAN. All of them taken together, it seems to me, afford the committee an opportunity to determine what the general thought and the general thinking in those hours was, and what the thought was leading to ultimately. I am sure that is the limit of Mr. Brown's intent.

Mr. LEFFINGWELL. Senator, I want to point out that sometimes a man would write a memorandum and then have a talk with the man to whom it was addressed and say, "That was a foolish idea of mine. I think you are right." Don't you see? I think what they do show, which is very satisfactory to me, Senator, is that there was a lot of hard thinking and careful discussion going on in the Treasury of the United States, and the most vigorous effort being made to see that the interests of the United States were protected in every way imaginable.

Mr. BROWN. I offer a letter to you, Mr. Leffingwell, from Mr. Crosby, dated December 21, 1917. That letter states in part [reading from "Exhibit No. 2980"]:

> I suppose you may have been disappointed and perhaps a little surprised that I indicated in some of my recent telegrams the likelihood of presentation of demands for more money——

Mr. LEFFINGWELL. I was indeed.

Mr. BROWN (continuing reading):

> and that I showed a disposition to suggest that we should meet those demands if at all possible.

He mentions maturities and exchange.

Then he continues [reading]:

> The next thing is constant payments in neutral countries. I do not think I can tell you in a letter just how constant the pressure has been in order to produce some effect upon Great Britain, France, and Italy in this respect. They do understand now that they must get about this business, but it has been a very hard job to keep them up to it.

That was in December 1917.

He mentions that he finds the same situation with respect to Spanish exchange. With regard to an Argentine loan, he has this to say [reading from "Exhibit No. 2980"]:

> A telegram has just come to me from Cravath indicating the probable success of efforts to obtain a loan in the Argentine.

That is a British loan in the Argentine [continuing reading]:

> The dilatory and unintelligent conduct of these negotiations by cable is a heartbreaking story.

Mr. **Leffingwell.** By whom?

Mr. **Brown.** These British negotiations in the Argentine.

Mr. **Leffingwell.** You mentioned the name of a man.

Mr. **Brown.** It says [reading from "Exhibit No. 2980"]:

> A telegram has just come to me from Cravath indicating the probable success of efforts to obtain a loan in the Argentine—

That is, with regard to the British Argentine situation.

Mr. **Leffingwell.** Read it again.

Mr. **Brown** (continuing reading):

> The dilatory and unintelligent conduct of these negotiations by cable is a heartbreaking story.

Mr. **Leffingwell.** Cable?

The **Chairman.** Small "c."

Mr. **Leffingwell.** I was wondering who was getting the compliment.

Mr. **Brown** (continuing reading):

> I have had to take a stronger ground than I ever expected to take in discussing these matters, which are other people's business in a way, in order to keep them up to the mark. The tendency was, in the British Treasury particularly, to be discouraged at the outset and to instantly offer terms which meant substantially that we should bear the whole burden.

(The document referred to was marked "Exhibit No. 2980" and is included in the appendix on p. 9390.)

Mr. **Brown.** I offer for the record a telegram from Mr. Crosby to Secretary McAdoo in regard to the Argentine loan. It states in part [reading from "Exhibit No. 2981"]:

> Argentine transaction includes establishment of reciprocal credit equal in amount to nominal loan made by Argentine to British and French. Consider all this arrangement extremely bad and have so indicated to interested parties here. Negotiation has been conducted in very irregular way, without due cooperation between London and Paris. This reciprocal-credit idea was introduced with view to stabilizing exchange of Great Britain and France on one hand, and Argentine on the other, not recognizing that it opened the door to the sale of sterling and franc drafts in New York, thus substantially transferring burden of loan to us.

(The document referred to was marked "Exhibit No. 2981" and is included in the appendix on p. 9393.)

Mr. **Brown**. I offer a letter of Mr. Crosby to Secretary McAdoo dated January 16, 1918, in regard to the feeling toward the American advances [reading from "Exhibit No. 2982"]:

> This feeling—

of objection to the lack of time—

> was expressed by Sir William Wiseman, a friend of Colonel House, whom probably you already know. He left for America just before Christmas, and before leaving said to me that he expected to say to our Government that if we could not find a way to do more, the British Government might have to find a way out of the war. Probably something of this sentiment has already been expressed at least to Colonel House and the President, and I suppose has reached you.

The rest of the letter discusses Mr. Crosby's difficulties in getting loan negotiations for the British and French under way. I do not think we need to go into it.

(The document referred to was marked "Exhibit No. 2982" and is included in the appendix on p. 9394.)

Mr. **Brown**. I offer a memorandum of Lord Reading, dated October 29, 1917, simply because Mr. Crosby comments on it extensively in the preceding exhibit.

Mr. **Leffingwell**. Is it very long? Could you read it?

Mr. **Brown**. Lord Reading's memorandum?

Mr. **Leffingwell**. I think it is important.

Mr. **Brown**. I think if we read Lord Reading's memorandum, we should read Mr. Crosby's analysis of it, and it would take about a half hour. They are in the record.

Mr. **Leffingwell**. That is all right.

(The document referred to was marked "Exhibit No. 2983" and is included in the appendix on p. 9399.)

Mr. **Brown**. Neither one should be used without the other, and I wanted to keep them together.

Mr. **Rathbone**. I have found what I was looking for in the article in Foreign Affairs:[1]

> The cost of the neutral finance so found after we entered the war was ultimately furnished, in the case of Italy, approximately one-half by the United States and one-half by Great Britain, and—in the case of France—something over one-half by the United States and the balance by Great Britain.

Mr. **Brown**. That is exclusive, is it not, Mr. Rathbone, of such support as might have been indirectly afforded before over the exchange?

Mr. **Rathbone**. No.

Mr. **Brown**. Or is that an estimate of the exchange, as well as the direct advances for neutral purchases?

Mr. **Rathbone**. That was intended to give approximately the proportion of Great Britain's and the United States' financial help to France and Italy in purchases in neutral markets and in exchange.

Mr. **Leffingwell**. From the time of our entry into the war.

Mr. **Rathbone**. From the time of our entry into the war.

Mr. **Brown**. It includes an estimate of neutral arbitrage exchange?

Mr. **Rathbone**. That was included and was an estimate made up, but if you wish the breakdown figures, I cannot now tell them and have no idea.

---

[1] See "Exhibit No. 2781", appendix, p. 9207.

Mr. Brown. I offer a letter from Lord Reading to Secretary McAdoo, under date of February 27, 1918, as to a Dutch loan, showing that the British desired to have some securities subrogated to the United States and Holland for that loan.

(The document referred to was marked "Exhibit No. 2984", and is included in the appendix on p. 9401.)

Mr. Brown. Concerning loans in Holland and Switzerland, I offer a group of documents, being a letter from Lord Reading to Secretary McAdoo of March 11, 1918; a letter of Secretary McAdoo to Lord Reading of March 12, 1918; a letter from Mr. Blackett to Mr. Rathbone of September 20, 1918; a letter from Mr. Rathbone to Mr. Blackett of September 21, 1918; a telegram to Mr. Crosby from Mr. Rathbone of September 21, 1918; a letter from Mr. Rathbone to Mr. Crosby of September 27, 1918; a memorandum initialed by Mr. Rathbone on September 27, 1918.

(The documents referred to were marked "Exhibits Nos. 2985 to 2991", respectively, and are included in the appendix on pp. 9402 to 9404.)

Mr. Leffingwell. Those all bear on what subject, Mr. Brown?

Mr. Brown. On the Dutch and Swiss loans, to complete the record.

Then to complete the record further, I will offer a cable from Mr. Crosby to Secretary McAdoo of March 13, 1918, concerning the then status of British and French borrowings in neutral markets.

(The document referred to was marked "Exhibit No. 2992" and is included in the appendix on p. 9404.)

Mr. Brown. I offer for the record tables taken from copies of financial reports submitted from 1918 to 1922, showing the amounts of neutral borrowings by Great Britain.

(The three documents referred to were marked "Exhibits Nos. 2993, 2993–A, and 2993–B", and are included in the appendix on pp. 9405 and 9406.)

Mr. Brown. Mr. Rathbone, I believe you have spoken a number of times about the number of dollars furnished the British and French in exchange for sterling and francs needed by the American Army and Navy. All the francs and sterling furnished were purchased by original new dollar sums? They were in no case offset by sterling purchases, advances, and so forth? They were always bought fresh?

Mr. Rathbone. That is true.

Mr. Brown. In regard to some of the uses to which some of this money was put—and possibly we cannot determine any accurate figure, and therefore it perhaps should stay in the record and not be described at any great length—I offer a group of letters from L. L. Summers, who was the vice chairman of the War Industries Board and Chairman of the Inter-Allied Council on Munitions, to Mr. Bernard Baruch. The only point about them is an old yarn. It states [reading from "Exhibit No. 2994"]:

> One thing that surprises me as absurd is that the French charge the British a rental for trenches and they also charge the Americans this rental. In the little villages in France where the troops have been billeted, the residents have made claims for damages, for instance: they claim damages where windows in a house have been broken, and it looks as if these charges could be made against each lot of soldiers who arrive.

In regard to the trench-rent story, there is a more accurate account given in a letter from Mr. Crosby to Secretary McAdoo, in which he has this to say [reading from Exhibit No. 2995"]:

> Contrary to widely prevalent rumor as to payment of rental for trenches, Lord Gainford tells me that no such charge has been made in the actual fighting zone. His Government has paid rental for trenches constructed several years ago approximately 20 miles in the rear of the fighting zone. These were likened in principle to training camps, and compensation has been made to the proprietors of the land across which these trenches were dug.
>
> The general line of demarcation in respect to damages to, or occupation of, private property may be thus stated—

Then he goes on into the subject.

The CHAIRMAN. In that connection, Mr. Brown, what were the rentals paid for trenches?

Mr. BROWN. There is no possible way of estimating. These letters, Mr. Chairman, indicate that all kinds of considerations, of all sorts, entered into these franc and sterling needs. It was not a very simple matter, and an accounting analysis is quite out of the question.

The CHAIRMAN. In analyzing the charges, is it true that while we were charged for our occupation of the secondary trenches, second-line trenches, the French let us use the first line or front-line trenches without any charge?

Mr. BROWN. Oh, certainly.

(The documents referred to were marked "Exhibits Nos. 2994 to 2998", and are included in the appendix on pp. 9406 to 9417.)

Mr. LEFFINGWELL. I do not know anything about it, Senator, but is it not true that if you wanted to know about all that, you would have to make inquiry from the War Department and find out what their disbursing officers paid?

Senator CLARK. They charged us for everything they could get us to pay.

Mr. BROWN. Mr. Leffingwell will recall, I am sure, the tremendous complexities in trying to settle those accounts.

Mr. LEFFINGWELL. The Treasury was not designated the disbursing officer of the Government, but the bank on which they drew, and the checks came back. While a Treasury official in France would pick up stories passing about there and write home letters about them, if you really want to know about the whole matter, the natural thing to do would be to go ask the disbursing officers of the Army about it.

Mr. BROWN. I think the real point about it, even down to the minutia, expenses of Americans in Europe were paid for by dollars right over the table, whereas the expenses of Great Britain and France in this country were paid for by loans. Mr. Rathbone was making such a large point of the fact that the maturity payments were less than the amounts furnished in exchange for francs and sterling, and the two items are not in essence so separate as Mr. Rathbone would have us believe.

Mr. RATHBONE. Mr. Brown, you do not consider for a moment that the Army got appropriations from the Treasury. They got the appropriations from the United States Congress, and it was the Army and not the Treasury that spent those appropriations. The Treasury's duty was to give to the Army whatever dollars it had a right to get under its appropriations.

We could not concern ourselves or dictate to the War Department whether they would pay for a front-line trench, or something of the sort.

Mr. **Brown**. May I interrupt? That is not the question at issue. The question is simply the distinction between advances and purchases of sterling and francs. As you have said yourself, if they used the money from purchases in some approved way, that meant that that much less had to be advanced. The two sums are not altogether separate. However, I think we can drop that subject.

I offer for the record a letter from Mr. Blackett to Mr. Leffingwell of April 2, 1918, which shows in the table one interesting point.

(The document referred to was marked "Exhibit No. 2999" and is included in the appendix on p. 9419.)

Mr. **Brown**. These are the accounts between France and Great Britain: Counter value of dollar amount placed at the disposal of the British Treasury—that is, by France—£25,000,000.

(The document referred to was marked "Exhibit No. 3000" and is included in the appendix on p. 9420.)

Mr. **Brown**. In other words, it is presumed from this table that Great Britain was buying dollars loaned to France with sterling furnished to France.

Mr. **Rathbone**. I do not quite get it.

Mr. **Brown**. This table would indicate that the sum of £25,000,000 on that particular date had been paid the French in exchange for dollars, which was not at all unusual or in accordance with the Treasury custom?

[Several minutes of study of the document by Mr. Rathbone.]

Mr. **Brown**. Could we not come back later? In the meantime, I want to clear this up. I offer for the record a letter from Mr. Kent to Mr. Rathbone of February 28, 1919, showing purchases of £15,000,000 of sterling over the New York market by the Bank of France and the Treasury's objection to that proceeding, which is shown in a letter from Mr. Rathbone to Mr. Kent, of March 3, 1919; that is, the objection to use dollars by the Bank of France to buy sterling was then up.

(The documents referred to were marked "Exhibits Nos. 3001 and 3002", and are included in the appendix on p. 9421.)

Mr. **Brown**. I offer for the record in regard to the balance of this material on the French exchange, which was of a different character, a group of documents which I believe can be identified without comment in that way.

The **Chairman**. They can, if it is agreed upon.

Mr. **Leffingwell**. Will you tell us their general subject?

Mr. **Brown**. It is simply about the French exchange and the attitude on the part of the British and some slight loan negotiations important to it. They are all Treasury documents. Also certain negotiations about the establishment of the franc rate from time to time, as the American advances dried up the private needs of the French for dollars.

Mr. **Leffingwell**. It is around the summer of 1918?

Mr. **Brown**. Yes; that the French were taking advantage of the unnatural franc market to raise the rates against the needs of the Army.

(The documents referred to were marked "Exhibits Nos. 3003 to 3016", and are included in the appendix on pp. 9422 to 9433.)

THE WAR DEBTS [1]

Senator VANDENBERG. Mr. Leffingwell, I have been very much interested in the joint memorandum which you submitted this morning, and I want to read one sentence from the last page, page 25 [reading] [2]:

> The loans the Treasury made were wisely and cautiously made; and, given a rational peace settlement and rational policies—political and economic—of the nations of the world, including our own, after the treaties of peace had been signed, the loans would for the most part have been collectible.

I would be tremendously interested in having you enlarge upon what we could have done to keep the loans collectible.

Mr. LEFFINGWELL. That seems an awful thing to invite a man like me to start—on a subject as large as that, at the end of 2 days, Senator.

Senator VANDENBERG. Would it be a large subject?

Mr. LEFFINGWELL. I think it is a very large subject, but I will try to make a very short answer.

I think that what was in my mind, and I suppose what was in the minds of the group in the Treasury that were considering these problems together at the end of the war, after the fighting stopped, was that a peace of appeasement, a peace of political and economic appeasement might result in a world that had a hope of recovery and the hope of a future, a permanent and lasting future for mankind, and that America's contribution to that might be the lowering of the economic barriers to world recovery.

By that I mean less restrictions on trade, lower tariffs, facilitating the foreign exchanges, reducing the reparations claims against the then vanquished enemies, making territorial readjustments, such that errors found in the first settlements would be ameliorated with reasonable promptitude and creating a world in which the nations of the world, including the United States, instead of isolating themselves from each other and trying to cut off each other's trade and grab everything for themselves, would attempt to restore a world in which it was conceded that every man and every nation was every man's and every nation's neighbor; and that we could all get prosperous together again more rapidly if we tried to help each other constantly, conceding something here and conceding something there, and help to build a prosperous world and a peaceful world and a good-natured world to trade in.

Senator VANDENBERG. You did not have in mind anything that we could have done under the status as developed to accomplish that?

Mr. LEFFINGWELL. I think the status, as it developed—it is very, very dangerous for any man ever to say, as he looks at his own country or his own conduct, that a very unhapply situation is wholly attributable to everybody else and not in any respect to himself. And I suppose that the United States Government might have taken the lead in economic and political adjustments, just as some other government might. I am not more critical of one country than another. It is not well to attempt to decide who is at fault. We all know that the disasters that the world has endured are attributable not less to the economic war after the war than to the war itself.

---

[2] See "Exhibit No. 2952", appendix p. 9344.

Senator CLARK. As a matter of fact, Mr. Leffingwell, the economic war which followed the war was really the inevitable result of the war itself, was it not?

Mr. LEFFINGWELL. I am an optimist, Senator, and I always like to think that no failure is inevitable.

Senator CLARK. Suppose I strike out the word "inevitable." It has actually followed in the immediate train of the war itself?

Mr. LEFFINGWELL. It has actually followed in the immediate train of the war itself.

Senator CLARK. Every economic condition which we have in the world today, including the United States, the tremendous depression, all the debts, really follow directly from that conflict, do they not?

Mr. LEFFINGWELL. It follows after it.

Senator CLARK. Do you not think it follows directly from it?

Mr. LEFFINGWELL. No; I think all those things are very difficult to state. The history of the United States of America was a constant development of economic nationalism as the national policy of the United States. It did not begin with the World War—it did not begin with the World War.

Senator CLARK. I will grant you that that is true.

Mr. LEFFINGWELL. I want to make a confession. I am a free-trader, and I believe in free trade, and I believe in it as one of the things which makes for the economic welfare of mankind. That is not a popular view. Certainly economic nationalism in the United States was not a consequence of the Great War. It went on and increased after the war, but it had been a national policy almost from the foundation of the Republic.

Senator VANDENBERG. Mr. Leffingwell, did you have anything to do with the refunding debt agreements?

Mr. LEFFINGWELL. Nothing at all, sir. I was out of the Treasury in June 1920. Mr. Rathbone and I resigned about the same moment in June 1920, and the funding agreements were made in 1923. Mr. Rathbone made a suggested funding agreement in 1919 and 1920, with which I was fully familiar and in complete accord, but that funding agreement failed of accomplishment because the British Treasury found itself unable to accept the terms that Mr. Rathbone offered to them and——

Mr. RATHBONE. The British Cabinet.

Mr. LEFFINGWELL. The British Cabinet; not the British Treasury. Mr. Rathbone could tell you about that.

Senator VANDENBERG. Mr. Lamont, were you consulted in connection with the refunding agreements?

Mr. LAMONT. Oh, no, sir.

Senator VANDENBERG. Are you familiar with them?

Mr. LAMONT. In a general sense, Senator, just as you are.

Senator VANDENBERG. This may be a little afield, but I do not know when I will have a chance at such talent again in this expert field. I would like to know what you think would happen if the United States Government were to exercise its option under the refunding agreements to ask for marketable obligations from the debtor countries at the present time.

Mr. LAMONT. You mean what would happen if they were to ask for those obligations, and then consider peddling them out?

Senator **Vandenberg**. In the first place, are you sufficiently familiar with the agreements to say whether or not you think we would be entitled to ask for these marketable obligations?

Mr. **Lamont**. No; I am not. I have not refreshed my mind recently, Senator. I see you have that before you. Where is that clause?

Senator **Vandenberg**. It is clause 9, page 110, being the clause from the British agreement, in which they seem to give us a rather definite option to ask for these marketable securities, whenever we please.

Mr. **Lamont**. Yes; of course, aside from this particular provision, Senator, if you jump over one or two hurdles and come to the question of whether the American investors would buy obligations of any of these governments which are now in default, I should think the answer would be that, as long as they remained in default, the obligation would not find a market here.

Senator **Vandenberg**. I am not thinking of that. I am thinking about the fact that if, as a result of the exercise of this option, you could procure marketable obligations of the debtor countries, which are indistinguishable from any of their other bonded securities on the markets of the world, that you have not got to sell them to American investors, but you can put them into the world market, precisely the same as all the other obligations of these debtor countries flow from day to day. Would not that be true?

Mr. **Lamont**. These would necessarily be dollar obligations, would they not?

Senator **Vandenberg**. They are payable in sterling also, I think, and they are subject to all the conditions of the existing general bond collateral. Assume, for the sake of argument, that you have got marketable securities that are indistinguishable in respect to their terms and value from other securities of these foreign countries, would they not be automatically marketable in the markets of the world, rather than depending upon sale to American investors?

Mr. **Lamont**. Senator, let us examine that for a moment. In the first place, I am not aware that the two chief obligors, the British Government and the French Government, have their obligations outstanding in any other markets of the world. So that the consequence would be, that these would have to be distinguishable, because they would be practically the only obligations of those Governments that were being offered.

And no matter to what nationality of investors they were offered, as long as the obligor remained in default of his obligation to his creditor, I should not think that they would be salable anywhere.

Senator **Vandenberg**. This default does not seem to affect the credit of these defaulting obligors in raising other current funds, does it?

Mr. **Lamont**. Well, it certainly does in the United States market.

Senator **Vandenberg**. Oh, yes; but I mean in the world market.

Mr. **Lamont**. Again I point out that so far as I am aware, the British Government and the French Government are not borrowing funds in foreign markets in that way.

Senator **Vandenberg**. Are there no British or French governmental securities on the markets of the world?

Mr. **Lamont**. I do not know of any.

Senator **Vandenberg**. Are there no British consols, or anything of that sort?

Mr. **Lamont**. Not issued in foreign markets. There are British consols, payable in sterling, but I do not know of any British consols payable in other currencies.

Senator **Vandenberg**. Suppose we got our marketable obligations payable in sterling, would not, ipso facto, the British find it necessary to sustain and absorb them for the protection of their credit?

Mr. **Lamont**. I should not think so, because I do not see how you can make them identical, Senator, with British consols existing today, how you can possibly do it. They constitute the obligations of the British Government to our Government. We all deplore the fact that they are in default.

Senator **Vandenberg**. That is what they are now, but under the terms of the refunding agreement, we are entitled to transfer them, Mr. Lamont, into definitive bonds, in forms suitable for sale to the public in such amounts and denominations as the Secretary of the Treasury may request, and so forth.

I am asserting nothing, but I am simply inquiring from you, as an expert on this subject, whether you think that there is any field in that option that could be effectively explored by the American Government in pursuit, at least, of the transfer of the defaulted section of the loans into marketable obligations? Do you think that that option could be exercised effectively?

Mr. **Lamont**. Let me answer it, if I may, Senator, in this way: I am not a lawyer and I think it would require a lawyer to construe these paragraphs, and I notice that lawyers here are very sensitive to the construction of laws by laymen, so that I shall not attempt to construe that.

Senator **Clark**. No more so than the construction of banking matters by lawyers.

Mr. **Lamont**. You may be right there.

Senator **Vandenberg**. The batting average of lawyers is not so high at the moment in Washington. [Laughter.]

Mr. **Lamont**. Senator, you have read this more recently than I. Is it not true, that when the payments under this agreement became in default, as they did in 1931 or 1932, or whatever it was, after these governments had paid up 2½ billion dollars on them, when they came into default, did not the agreement itself fall to the ground, and in the absence of a new agreement between our Government, the British, French, and other governments, these agreements no longer exist?

Senator **Vandenberg**. That may be entirely true, but I would a good deal rather have the British Treasury say that than take it for granted in advance. I would like to ask them.

Mr. **Lamont**. If the Government solicitors advise you that you are well within your rights in asking them as to their view on such an inquiry, why not let the State Department address a letter? They address a letter every 6 months, as I recall it, to the general officials of these defaulting governments, commenting on the situation, and I should think they would be quite capable of that.

Senator **Vandenberg**. Mr. Lamont, have you any suggestion to offer—and I apologize for getting so far away from home base—but do you have any suggestion to offer as to what the Government of the United States could do in respect to these defaulted loans?

Mr. **Lamont**. I cannot permit myself to be drawn into a discussion of the whole question of intergovernmental debts, because it is so complex a one, and I hope that my partners will freely interrupt me in any replies that I give.

Replying direct to your question, the only possible way that I can see is for a fresh negotiation on the part of the Governments to be undertaken, to see whether fresh agreements can be arrived at, applicable to both sides, under the circumstances, and, if it is, then and thereafter the matter of payment, whether it might be by the sale of foreign obligations in this market or not, might well come up.

Senator **Vandenberg**. Suppose we made a new agreement, would it be possible to write that agreement in terms of payment which would defy default?

Mr. **Lamont**. I should not think so, in such sweeping terms, Senator, but I should think that if we would rather have a half loaf than no bread at all, you might reach with your chief obligor governments some basis of settlement that within all reasonable conditions would be susceptible of fulfillment.

Senator **Clark**. Have not we already done it once, Mr. Lamont, and found it rather ineffectual? In one case we scaled down about 80 percent, did we not?

Mr. **Lamont**. I think you did in the case of Italy, Senator, but without attempting to give the side of the obligor governments in any sense, I may recall these facts to you; namely, that when the British entered into the refunding agreement in 1922 or 1923—and at the time I think it was considered a fair agreement on both sides; you are quite right—when that happened, the British were figuring on being able, when they returned to the gold standard, to maintain themselves on the gold standard. They were feeling or believing they could achieve increase in their foreign trade by lowering the cost of labor in Great Britain, and neither of those happy events was carried out.

Despite that fact, Great Britain and France were able and did pay to our Government as a total sum on their debts not less than $2,486,000,000. Those are the figures I took down from Mr. Leffingwell's statement of the other day. So that they paid a very considerable sum, showing their good faith and their tremendous desire to meet their obligations.

Then along came the break-down in central Europe, to which Mr. Leffingwell alluded a moment ago, with the break-down of the credit of all the powers in central Europe, followed by the Hoover moratorium, and by the depression that has been common all over the world, not our own country alone, where it has been very deep and severe, but all over the world, and the consequence is that these governments state—and I do not question it—that they are unable to find dollar exchange sufficient to enable them to pay the full total which they are obligated to pay under those agreements.

Senator **Vandenberg**. Do they find dollar exchange to buy large amounts of American securities in our markets?

Mr. **Lamont**. Their investors find dollar exchange sufficient to make certain investments—I do not know how considerable—but that, of course, is a very different thing from translating all the savings of the British investor, for instance, into Government taxes and then enabling the Government to transfer that sterling into dollars.

As I recall it, I heard some years ago that at the time the American Government here invited the British Government to consider what they could do in the way of a fresh agreement, the British Government, according to rumor—I did not have it authoritatively—stated that they might be able to settle on a basis of a very considerable sum, provided it was in form so that American investors would be attracted to buy those obligations, which is the very point, apparently, that you have in mind.

But that again, necessarily means that the American Government must reach a fresh settlement with these people on a basis which will work it out.

Senator CLARK. That, of course, means also, does it not, Mr. Lamont, that if we would scale down the debt, they would be willing to transfer it from a public American debt to a private American debt? That follows from your statement, does it not?

Mr. LAMONT. It would be more easy to handle, but there is no specification that it should be so transferred. The question of the Senator from Michigan is addressed to the point, referring to the American Treasury, as I understand it, whether there is any way by which they could be relieved, whether any means could be devised.

Senator CLARK. I do not want to interrupt Senator Vandenberg, but I was referring to the portion of your statement in which you said you had learned by rumor that the British Government had indicated, when the United States Government requested further negotiations, that the British Government had indicated that if we would scale the debt to a suitable amount, they would be willing to enter into some obligation to pay it, provided they could sell their securities to the investors in this country and simply have the effect of transferring the debt from a public debt to a private debt, which I gather is the opposite of what has gone on before, and that according to what has gone on before they transferred it from private debts to public debts, and the question would be the reverse of that procedure, would it not?

Mr. LAMONT. The way you put that, Senator, with all due respect, laid undue emphasis on the report which I heard at the time. The American Government, according to the public press, was desirous of trying to settle the debt matter and find some basis for settlement, and I think that possibly they were canvassing every possible means at that time to relieve our Treasury, and so forth. It was not a proposition, as I understood it, at all, but it was a back-and-forth conversation, but the matter bears considerably on Senator Vandenberg's inquiry.

Senator VANDENBERG. I am very much obliged to you, Mr. Lamont, for your discussion.

Mr. LAMONT. I am very sorry I have not been able to suggest a means for immediate payment, Senator.

Mr. RATHBONE. To get back to an earlier question, this exhibit[1] which Mr. Brown put in I do not think indicates that the United States Treasury loaned dollars to France in order to enable them to obtain sterling.

---

[1] See "Exhibit No. 3000", appendix, p. 9420.

Senator VANDENBERG. Mr. Lamont, may I ask one other question? Supposing we had exercised this option before there was any default in the obligations, at which time there could have been, I assume, no legal question about the validity of the option. If the debt had been transferred into marketable obligations at that time and had reached the investing public, do you think there would have been a default under it?

Mr. LAMONT. Oh, in that amount? I do not see how there could have been any avoidance of default in that amount. But, you see, Senator, you make that assumption, which I think would be hardly possible of fulfillment. It is this, that there would be an American market for a total of $4,000,000,000 of British Government securities, putting it in that form, or for an equivalent of $2,500,000,000 of securities of the French, putting it in that form, or perhaps three quarters of a billion of Italian securities.

But I do not think the American markets would possibly have absorbed any such quantity as that.

Senator VANDENBERG. You are insisting constantly, of course, that the only market is the American market. Would that be true with respect to a sound British obligation? Would there not be a British market for a sound British obligation, and would there not be a French market for a sound French obligation? Why did it all have to be absorbed in the American market?

Mr. LAMONT. There would be a fair British market for a British obligation that was strictly British, but you have to have regard for your present domestic obligations existing in both the British and French and other markets.

Senator BONE. As I look at this provision, this seems to imply the issuance by the British Government of a strict legal and governmental obligation, and it provides for sale in Great Britain of the obligations of the British Government. This appears to authorize specifically the sale in Great Britain of British governmental securities. If they are sold in Britain you could translate the sterling into American dollars, could you not? Great Britain certainly would have no great difficulty in refunding all her great blocks of debt.

Mr. LAMONT. Where would you get the dollars from, Senator Bone?

Senator BONE. You are the expert and I am not. I want to know. The contract itself provided for the issuance of governmental securities. It authorizes the sale in Britain of these British securities, for the option to be exercised by the British Government to make some other disposition of the debt.

Mr. LAMONT. Senator Bone, are you sure that that defaulted agreement provides for the issuance of sterling securities?

Senator BONE (reading):

> The United States, before offering any such bonds or interim receipts for sale in Great Britain, will first offer them to Great Britain for purchase at par and accrued interest.

I do not know what that language means if it does not mean exactly what it says.

Mr. WHITNEY. Where are the dollars?

Senator BONE. This says the British Government, as I read it. will issue its own governmental securities, precisely as the United

States Government issues its own bonds, and they will be sold here or in Britain or anywhere on world markets.

Mr. LAMONT. Mr. Leffingwell, are you more familiar with that agreement which Senator Bone is quoting from?

Senator BONE. I do not think it may permit of more than one construction; perhaps it does. I know that was the general understanding in this country at the time it was entered into. I never have been able to understand why a debtor defaulting a payment of a debt thereby invalidates the debt. This debt has as much life today as the day it was incurred.

Mr. LAMONT. Oh, certainly; it is just as much of an obligation.

Senator BONE. But we have been talking here of a default in a debt as though it somehow, by some mysterious process, wiped out the debt and compelled us to start afresh. We do not have to negotiate these debts all over again. They are an accomplished fact. Here is the British Government. If the Government wants to repudiate its own debts, of course there is no way, as I explained yesterday, that we can compel them to pay it.

Mr. WHITNEY. But the United States wants dollars, does it not?

Senator CLARK. Yes; but Mr. Whitney, we had better suffer some loss in exchange. But assuming we are able to take sterling bonds, about which there seems to be some disagreement among us——

Mr. LAMONT. Very great.

Mr. CLARK. Assuming we had a right to demand sterling bonds of small denominations, let us assume that instead of taking a series of bonds for $4,000,000 apiece, the agreement was executed and we said, "All right, give us bonds of $1,000, payable in sterling at the current rate of exchange." There was nothing in the agreement that said we had to sell them all at one time. We might have sold them from time to time as the stock of gold flows from this country, or anything else.

It seems to me we would much better have taken some loss in exchange if that were necessary than to lose as large a proportion as we are about to lose, or have already lost.

Mr. LAMONT. I am not a lawyer, but I do not see anything in that wording to indicate the obligation of Great Britain to deliver sterling bonds. On the contrary, the whole agreement is drawn up on the basis of dollar bonds.

Senator BONE. Obviously, they cannot issue United States bonds.

Senator VANDENBERG. May I call your attention to the language in the body of the bond itself, which says, "Gold coin of the United States or its equivalent in gold bullion."

What does that mean? Is not that sterling? Is not that the equivalent of sterling?

Mr. LAMONT. No; that is just gold. Of course, as you recall, before the default occurred, Great Britain shipped over here in that final payment, $80,000,000 in gold itself. That conformed to that part of the agreement.

Senator VANDENBERG. If you had this contract in J. P. Morgan & Co., and you had this gold bullion privilege, I would like to bet about 50 cents to a plugged nickel that you would make your contract stick.

Mr. LAMONT. Senator Vandenberg, I think we should have to persuade you to become a member of our firm in order to carry that out.

Senator VANDENBERG. And bearing on the other subject, as to where it is going to be sold, I understand that the French agreement contains a clause which specifically binds the French Government to list these marketable obligations on the French Exchange, which would indicate that it is not contemplated that it would be an American market operation.

Mr. LAMONT. Just to wind it up, so far as I am concerned, I think it has required a great deal of effrontery on my part even to comment in any way upon a matter which is so purely governmental. I mean to say, I think that the members of the administration here and Treasury officials might well think I was going far outside my province.

I hope that you will hold me harmless, sir, for having tried to answer your personal questions.

Senator VANDENBERG. Oh, certainly, and there is no criticism of the Treasury or the administration or the Government intended in my inquiry. I am simply wondering if there is not something in the letter of this contract which entitles us to make some more tangible progress toward integrating this apparently hopeless obligation.

Mr. LAMONT. I think the only substantial answer to that is this:

The situation in which the world is today apparently has made it impossible for these foreign governments to get dollars to transfer in payment of their obligations in the amount stated in the contract.

Senator VANDENBERG. Do you think that is the reason they have defaulted?

Mr. LAMONT. I have no question about that. I think they are very anxious not to default. I give them that credit.

Whenever you or I go to England, you can hear the same expression on the part of the people there. They regard the so-called defaulted debt, I think, as a very difficult point in the friendly relations between the two countries. Either the economy of the whole world has to improve in the way that Mr. Leffingwell hoped it would improve in 1919, from that time on, or else we, being a wise creditor, must see whether we can make any arrangement that will mean an amount which can be transferred into dollars.

Senator VANDENBERG. As a practical proposition—and I am through after I ask you this, and I apologize to everybody for the time I have consumed——

The CHAIRMAN. Not at all. I think the matter has been wholly pertinent.

Senator VANDENBERG. As a practical proposition, would you favor the basis of lump-sum settlement as against this type of agreement?

Mr. LAMONT. There again I am impinging on the preserves of our own Government, but surely, as a financial matter, if you could make a lump-sum settlement that could be translated into some sort of a security which would take it away from the United States Treasury entirely and make it a nonpolitical matter, remove it from the field of controversy, or remove it from the field of any ill will or resentment on both sides of the water, I think that would be an admirable solution.

Senator BONE. If your viewpoint is correct, we might as well just dispose of any hope of ever collecting anything from these defaulting Allied governments.

Mr. LAMONT. No; I do not think so, Senator Bone.

Senator **Bone**. How do you think the monetary situation confronting the world today could improve so that these governments that have deliberately defaulted on these payments will resume payment on their debts?

Mr. **Lamont**. I did not say, Senator Bone, that it could improve. Senator Vandenberg asked me what the alternatives were and I pointed out that in the case—take Great Britain as a typical case, they still owe in principal something, I suppose, like four billions of dollars. It is not possible, apparently, for them to fulfill that amount under present conditions.

Now, either the world has to improve so that they can meet the obligation as it stands today, or, lacking that improvement, if we want to get a final settlement we have to arrange to take less than the full face of the bond.

Senator **Bone**. If they cannot get gold, how could they make any kind of a settlement?

Mr. **Lamont**. Oh, well, of course, in the same way, Senator, that they paid this very large sum that Mr. Leffingwell was thinking about and that I mentioned a moment ago. They did pay, both Great Britain and France, a total of almost 2½ billion dollars on their debts. They paid that in all sorts of ways—some gold shipments, but mostly through the exchanges.

Senator **Bone**. Is there anything in the mechanism of the exchange that would prevent Britain from today resuming that operation and making some payments on this debt?

Senator **Clark**. As a matter of fact, they have even dropped it out of consideration in their budgets.

Senator **Bone**. I understand they have simply dismissed it very casually, apparently. But is there anything in the present-day picture that would prevent Britain and others from resuming payments, however small, on this debt, instead of repudiating it?

Mr. **Lamont**. That I cannot answer, Senator Bone.

Senator **Bone**. Of course, I merely seek information about the condition of the money markets of the world. I frankly cannot see any reason for what has been suggested here, why they should not resume some sort of payments on these debts.

Mr. **Lamont**. It is conceivable, is it not, that having been put in the position of default, they would wish to reach what might be considered a final settlement again—possibly a fresh settlement—before beginning payments on even a very trifling scale?

Senator **Bone**. We have written these debts down in times past, and there is apparently no reason why we should try to arrive at a further composition of these debts. I am frankly at a loss to understand why you gentlemen and others—it is no reflection on you or anyone else, for that matter, but I am at a loss to understand why a fixed governmental document of this character would be drawn in such confusing language that apparently no one knows what it means.

It is small wonder that the mass of people lose respect for government when Jovian-browed lawyers and statesmen and whatnot draw papers of this kind, so that we sit around this table now when this is sprung on us—I never saw this until Senator Vandenberg brought it to our attention—and all of us sitting about this table are unable to interpret the meaning of this what you have suggested is rather obscure language.

Senator **Vandenberg.** I might add that I asked the Treasury for an interpretation 10 days ago, and I am still waiting for the interpretation.

Senator **Bone.** I would like to see the interpretation of the Treasury Department of the United States on this language.

Mr. **Lamont.** Senator Bone, no matter how deplorable the nonpayment of these debts is at the present time—and it is deplorable—nevertheless, as Mr. Leffingwell pointed out this morning, we would rather lose some dollars as a country than to have lost any more lives in place of the dollars.

Senator **Clark.** Coming back to these statements made here about the payments that have been made by Great Britain, for instance, and by France on those debts, as a matter of fact the British took out of this country in the shape of loans more money than they paid in on the public loan; is not that true?

Mr. **Lamont.** Oh, no.

Senator **Clark.** Year by year?

Mr. **Lamont.** Oh, no; the British and French took out between them one loan of $500,000,000, and then the British Government borrowed here a total of $800,000,000, amply secured. That is all the British Government ever borrowed here.

Mr. **Leffingwell.** Is it not further true that the British Government has been repaying its private indebtedness in this market rather than increasing it?

Senator **Clark.** I was going to ask about that in just a moment, whether Mr. Lamont's suggestion a moment ago, that they might transfer this loan, if it was scaled down and the American investors took it, might possibly result in benefit to the United States as a nation in this, that I understand the British have always been better pay with regard to their private obligations than they are on their public obligations.

It is a fact, is it not, that the British have never defaulted on a debt to private individuals?

Mr. **Whitney.** That is a fact.

Mr. **Lamont.** I have never heard of a default.

Senator **Clark.** That was their record, and that record is very much higher than their record in regard to public debts. It might be desirable from the national standpoint to transfer this to the hands of private individuals if the hands of private individuals are willing to take the chance.

Mr. **Leffingwell.** Senator Clark and Senator Vandenberg, would it be appropriate for me to say that this discussion is giving an almost perfect illustration, to my mind, of that economic nationalism which is retarding the payment of debts and world recovery? We must try to put ourselves in the shoes of the other fellow if we want to come to an agreement.

I care so much about this, Senator, because it does seem to me that the solution—and I am a man who believes in free trade, who believes in what President Wilson said in 1919 to the Congress of the United States, that the way to handle these debts and bring about recovery was to lower tariffs—I do believe that we must recognize, if we want to bring about an understanding, whether it be by the sale of bonds in the market or by the payment of a capital sum or a lump sum, that we will never reach a solution of this problem on the theory that the others are the 11 stubborn jurymen.

We must recognize that they probably have some case on their side.

Senator CLARK. Wait just a minute, Mr. Leffingwell. I agree thoroughly with what you say as to the dangers of economic nationalism. I am an extremely low-tariff man myself. I think that the United States has aggravated a very bad situation by its policy of a protected tariff, if that has anything to do with this question.

But coming back to the question of these debts, which is a very important matter in our whole fiscal set-up, we are the only Nation in the world—and I say we are very blameworthy for some of our economic policies—that has ever made any effort whatsoever in this regard.

We gathered around the board with these other nations and conceded in one case 80 percent of the obligations honestly incurred, in another case 50 percent, and in another case 20 percent. We conceded 80 percent in the case of Italy, and in the case of Great Britain about 20 percent; and they were agreements entered into in perfectly good faith. They not only have not paid us but they have actually flouted us by dropping them out of consideration in their budgets.

I say that with all agreement with your suggestions about economic nationalism, when you begin to talk about these debts, we are the only nation in the world that has done anything to work out an economic situation.

Senator BONE. I wonder if any of you gentlemen can advise us if Britain became indebted to other neutral countries during the war, and, if so, whether she subsequently paid her debts to those neutral countries. Can you enlighten us on that point?

Mr. LAMONT. I have no information on that.

Senator CLARK. She borrowed $25,000,000 of Denmark, and a certain amount of Japan.

Mr. LAMONT. The other way around, I think, Senator.

Mr. LEFFINGWELL. I have the impression that whatever borrowing was done by the British Government abroad in neutral countries was done in the private market, that there were no real debts of the character we are discussing incurred by Great Britain or any—were there any intergovernment debts?

Senator BONE. How could the British Government make any moral distinction between borrowing the money of an individual in Switzerland, say, and borrowing the money from the United States Government?

Mr. LEFFINGWELL. That is the real thing, and I was going to try to say that to Senator Clark and Senator Vandenberg, too, because I do think it is important, and I think it is important with all my heart, gentlemen, that we should try to understand the point of view of all of the other 11 jurymen, right or wrong.

The Treasury of the United States, in my time, and so far as I know in all other times, has said they were wrong; but right or wrong, you must understand their point of view. They are men like ourselves and nations like ourselves, who place a value upon their honor and their credit, like ourselves.

Their points of view come down in effect to this, that their whole war financial structure ties in together; that it was not practicable for them to surrender their claims against Germany and Austria, admit default in their claims against Germany and Austria, for England to admit nonpayment of her claims against France, Italy, and Belgium, for France to admit nonpayment of her claims against Russia, and still make payment of the war debt incurred to the United States, after the economic catastrophe of 1931 which befell the whole western world.

This Government in 1931 recognized that fact and tendered to the Allied governments and Germany a plan of a moratorium, and I think it is important—I do not ask for any consideration as to the merits of the problem and I do not ask anybody to state that the Allied governments are right; but if you wish, as I think we all do, to see peace and good-will among the nations and national reconstruction, every well-disposed person must wish to see this war debt problem solved—I think it is important that we must recognize that other great nations of the world are as clear in their minds that they are right and that what we ask is impossible as we are in our minds that we are right and that what we ask, they should do.

I am only making this plea for peace because, gentlemen, I assure you your inquiry into the causes of the war must lead you to the conclusion that the fundamental cause of war is ill-will and bickering among nations. If we cannot guide our foreign policy in the spirit of accommodation and good will among nations, we cannot avoid war.

Senator CLARK. So that as we are in this situation as a matter of good will toward the other nations of the world, we ought to sit with our hands folded while they spend the money that they could pay us on preparation for another war.

Mr. LEFFINGWELL. No; I do not want you to sit with your hands folded for 1 minute. What I would like best of all in the world would be that you should sit down, you, the Government of the United States, the President of the United States, and the Senate advising and consenting and arrange further plans for peace and good will and economic and political cooperation among nations.

Senator CLARK. Do you think that if the United States were to propose, as it has been practically proposed, that we were willing to make a pro-rata scale down of debts, in consideration for a pro-rata scale-down of armaments throughout the world, it would meet with favorable response from the nations of the world?

Mr. LEFFINGWELL. I am only giving you an objective; I am not giving you a solution.

Senator CLARK. I am giving you a very practical answer to that objective. Do you think that the other nations of the world would agree to it? I am certain that would have the overwhelming support of the American people.

Mr. LEFFINGWELL. When you ask for disarmament, you must ask for a plan which would meet universal acceptance. That is to say, no nation, having a next-door neighbor that is disposed toward war, can disarm out of hand in return for the cancelation of debts, unless satisfied that that next-door neighbor is no longer disposed toward war. You cannot take the guns and the billies from the policemen unless you are sure that you have exterminated the gangsters.

Senator **Clark**. Suppose you have a prorated reduction of armaments throughout the world conditioned on a pro-rata scale-down of all debts. Who would be the sufferer from that except the munitions makers and the people who expect to make some money out of a war?

Mr. **Leffingwell**. I am heartily in favor of such a solution.

The **Chairman**. Now, gentlemen, we have skidded a long ways away from our direction and from our schedule.

Senator **Vandenberg**. We have not skidded any further than we have skidded from collecting our war debts.

The **Chairman**. Quite so. I am not saying that this has not all been quite pertinent, but we did have in mind certainly the finishing of the hearing, so far as this banking study was concerned, this afternoon.

It becomes now apparent that we are not going to be able to do it. Perhaps Senator Clark can indicate how long the Committee might be in finishing.

Senator **Clark**. I hope to be through by noon, Mr. Chairman. It is always difficult to tell.

The **Chairman**. You mean if we were to start in tomorrow morning?

Mr. **Lamont**. Would it by any chance be possible to do as you suggested 2 weeks ago, hold an evening session, so as to enable us to get away by midnight?

The **Chairman**. Then, gentlemen, that is what we will do.

Mr. **Lamont**. We have kept ourselves open the last 3 weeks to come down here.

The **Chairman**. We will go until 5 o'clock now and come back at 8 o'clock.

Mr. **Lamont**. Let me ask if that suits my partners and associates here. Everybody seems in favor of it except our friends of the press. We will go to 5 o'clock now and come back at 8.

The **Chairman**. That will be the plan.

All right, Senator Clark.

BRITISH MATURITIES AND SUBROGATION [1]

Senator **Clark**. We have passed over the questions of the financial involvements of the neutral years which created such a situation in the money market after our entrance into the war that the American Treasury was forced to default on its pledges to Congress not to pay off British maturities or obligations incurred before the war.

Mr. **Rathbone**. Was there any such pledge, Senator?

Senator **Clark**. Mr. Leffingwell said in one of his letters the other day, and Mr. McAdoo indicated that he considered there had been a pledge to the Ways and Means Committee, and in the early days I think that the correspondence put in the record yesterday very clearly showed that it was considered that there was a pledge not to advance money of the first and second Liberty loans either for the paying off of obligations prior to our entrance into the war or for the purchase of goods outside the United States.

Subsequently, through the exigencies of the situation, it became necessary, and an opinion was obtained from the Attorney General that it might be done, and those funds were used, not only for the paying off of maturities of obligations entered into before the war, but also for purchase of materials outside the United States.

---

[1] See also "Exhibits Nos. 4135–A through 4172", Hearings, Part XXXII.

Mr. **Rathbone**. I was not in the Treasury at the time, but I thought the papers that were put before the committee yesterday indicated very plainly that there was not any such parliamentary pledge.

Senator **Clark**. A portion of that put before the committee yesterday indicated very clearly that Mr. Leffingwell, one of the responsible officials of the Treasury Department, and Mr. Crosby, the Acting Secretary, and at a later time I think Mr. McAdoo himself, indicated that he considered that there had been a pledge.

Mr. **Leffingwell**. Senator, you unfortunately were not here yesterday. I went into that at great length.

Senator **Clark**. I understood that you did; yes, sir.

Mr. **Leffingwell**. If I may have the privilege of going back over it briefly, I would like to do so——

Senator **Clark**. I would be very glad to have you do so.

Mr. **Leffingwell**. Because I think it is so important that I should make clear to you just as clearly as I can what I thought about it.

So far as I can recall, the Secretary was under the impression that at an executive session of the Ways and Means Committee, he had indicated that he was not going to take up these maturities, certainly not if he could help it.

I pointed out, however, that I never was quite clear in my mind how far that went because there never was any record of that session of the Ways and Means Committee.

Senator **Clark**. I understand that to be true.

Mr. **Leffingwell**. That preceded my arrival at the Treasury by some weeks, so that I have no first-hand knowledge of what went on there. But there certainly was enough of that impression that he was under an obligation to hold down such loans that the Secretary of the Treasury made manful efforts to avoid making any loans to take up maturities.

Now, you would know about this.

Senator **Clark**. I propose to put into the record this afternoon somewhat of the manful efforts that Secretary McAdoo made. I agree with you that he did make every effort to prevent those difficulties inch by inch and foot by foot which lead into the situation we have just been discussing of loans which never have been paid back.

Mr. **Leffingwell**. Allow me, before you go further with that, to mention this other thing, because there is no greater authority on the subject than yourself. When the Ways and Means Committee, which was under the chairmanship of Claude Kitchin, who had voted against the war and was the leader of the House, as I recall it, took that bill into the Congress of the United States in April, he made a unanimous report, supported without any dissent by his committee.

This question about the maturities was raised again and again and again and again on the floor of the House. Morgans' name was mentioned; the fear that Morgans' or some other bankers might get some bad loans paid off was mentioned.

At the time that the question came up, Mr. Kitchin and other leaders of the Ways and Means Committee and leaders of the House said something like this, and I would like to read you again, if I may, this very brief colloquy[1] [reading from "Exhibit No. 3017"]:

> Mr. HAYES. The thought I had was this: There is nothing to prevent these foreign governments from taking up these higher-rate bonds bearing, some of them, 6 percent interest, and issuing in lieu these bonds or taking the money and retiring those bonds.
>
> Mr. KITCHIN. There is nothing specifically to prevent that, but I can hardly conceive that that would be done.

There is the promise, you see. There is a parliamentary pledge, "I can hardly conceive that that would be done." But then he goes on.

> If we are going to lend this money to the governments that we are cooperating with to more effectively prosecute this war, why not leave it to them to expend the proceeds in any way which their judgment tells them is the best way to achieve success in the prosecution of this war and not limit or qualify the use of that money?

Then they went on and discussed the effect if some of the money might be spent out of the United States, and he wanted it spent in the United States, and Mr. Kitchin said:

> I will say to the House that the committee has considered what the gentleman has suggested, and we are of the opinion that most of this money that we will loan to the Allies for the purchase of their bonds will, of necessity, have to be expended in the United States.

Then there was more discussion about this question, whether maturities were going to be taken over, and Mr. Mondell, who, if I remember correctly, was the Republican whip at that time, said:

> In reference to the suggestions that have been made by gentlemen that the loan we make may be used by foreign governments to cover obligations already issued, is not this the fact: If you make this great loan, the greatest in all history, it will be for the purpose of sustaining and extending the credit of foreign governments at war with our enemy?
>
> Mr. KITCHIN. That is true.
>
> Mr. MONDELL. We shall accomplish our purpose best if we use these funds in the way by which the cause of these foreign governments will best be sustained and their credit extended, and what if they should refund some of the bonds now outstanding in order to bring them under the provisions and conditions of this bill?
>
> If, in the opinion of these governments, such action would best sustain, extend, and strengthen their credit, will we not have accomplished just what we have set out to accomplish through that method? And therefore why should we be disturbed if, by reissuing or refunding some obligations already existing on foreign governments, they may be relieved through the loans we make? [Applause.]
>
> Mr. KITCHIN. The gentleman is correct.

I say this with great earnestness, Senator, because the great Secretaries of the Treasury under whom I served were conscious of the highest obligation to the Ways and Means Committee and to the Congress and respected that minority opinion, that strong, even impassioned, opinion, that these maturities should not be taken care of.

But the responsible leaders of the House on both sides said, "We must leave it to the President and the Secretary to purchase the obligations of foreign governments, and we must leave it to the Allied governments to use their best judgment."

I shall not burden you with the record; the debate goes on and on and on. The whole tenor of it, sir, is that: We are in this war now. Some of us think we ought not to be there, but we are in this war now. If we can lend money to the Allies in any way that helps them to win the war before our boys get over there, then we must do it; we are not going to obstruct the power of the President as Commander in Chief in time of war to deal with this problem as it rises.

---

[1] See supra, pp. 8985 and 8995.

That is my interpretation of the parliamentary situation.

(The document referred to was marked "Exhibit No. 3017" and is included in the appendix on p. 9433.)

Senator **Clark**. Mr. Leffingwell, the phrase "parliamentary pledges" was not my phrase; it was yours.

Mr. **Leffingwell**. Right, sir; perfectly right.

Senator **Clark**. You wrote this in 1918. This was to Secretary McAdoo, the man who is more familiar with it than anybody else [reading]: [1]

> I am disposed to suggest that when you go before Congress in connection with the new bond bill you should make a brief statement of the change in the situation which has developed since the first bond bill, which has made it necessary for us to do two things not then contemplated: First, to provide a certain amount of finance outside of the United States; and, second, to meet the maturities of the Allied governments on obligations in the United States incurred before the United States entered the war. I am confident that the change in the war situation, our own increasing activity, and the great enthusiasm of the people will make this easy to do; and the parliamentary pledges once out of the way, we would be free to deal with the situation as it arises from time to time.

Senator **Clark**. I would like for you to understand this: That I am not criticizing Secretary McAdoo or the officials of the Treasury Department for the change they made in that policy. I cannot fail to believe, from the whole correspondence, the references made in various letters in the Department, and the request made of the Attorney General for an opinion, that the Treasury Department itself believed that pledges had been made to the Ways and Means Committee that the law would not be construed in such a way as it was finally construed.

Mind you, there was no specific provision in the law, which the debate indicated. But the purpose of this study and this investigation is to indicate that the exigencies of the situation after we got into the war forced a course of action which was not, to say the least. contemplated by the Treasury Department as late as the passage of the first Liberty Loan act.

That is the purpose of all the studies that this Committee has made, to indicate the step-by-step involvement, financially and morally, which led us into the war, and which has led to our present deplorable state of depression. I am not saying for a minute that I might not have done what Secretary McAdoo did, or what other officials of the Treasury Department did, if I were faced with a similar situation.

Mr. **Leffingwell**. I appreciate your expression, but I want to supplement your reading of that memorandum with a reading from the hearings before the Ways and Means Committee on the fifth Liberty Loan bond, which shows, I believe conclusively, that the Treasury did in fact explain the situation to the Ways and Means Committee, if not sooner, then later, and perhaps sooner, although the record does not show it [reading from "Exhibit No. 3017"]:

---

[1] Previously entered as "Exhibit No. 2782", see supra, p. 8994.

> The **Chairman**. Some of the committee, and I am among the number, would like to know, if you can tell us, how much of the loans we have made to the Allies (and we have made about $8,000,000,000 in round numbers) was used by the Allies to pay their bonds, notes, or indebtedness to others than the United States.
>
> Mr. **Rathbone**. You mean to pay their bonds issued in the United States?
>
> The **Chairman**. Yes; to pay individuals they owed in the United States, or bonds they owed to other countries.

Then Mr. May, who was on the Treasury war-loan staff, says [reading]:

> On December 31 it was $394,000,000. That is the total they had paid off.

Then we went on, Mr. Leffingwell, Mr. Rathbone, and Mr. May, to explain that the Allies had credits growing out of their dollar balances for francs and pounds, etc., and that they had accounted to us for expenditures, which Mr. May put at $1,600,000,000 in excess of the amount of our loans.

The Ways and Means Committee passed the recommendations of the Treasury and renewed and extended the authority of the Treasury to make foreign loans on that report.

Senator **Clark**. There has been no controversy. It was necessary for the Nation to back up whatever the Treasury had done in that regard, because after the state of war developed, as I propose to point out, we drifted from one situation to another.

I want to take up this matter of this ship money, which I believe was discussed during my absence.

The ship money came out of an agreement—it was called ship money because it was referred to in the correspondence very many times as ship money—by which the United States agreed to pay to England and to the Cunard Line, and other parties to the agreement, approximately $80,000,000 for ships which had been received in this country after we got into the war. Is that correct?

Mr. **Leffingwell**. That is correct. I do not remember the lines.

Senator **Clark**. About $40,300,000 of that sum had been spent by the United States.

Mr. **Leffingwell**. Spent by the United States?

Senator **Clark**. By the United States, had it not? We had a claim for that amount?

Mr. **Leffingwell**. I never heard of that.

Mr. **Brown**. The Treasury account after the period of United States advances shows debits in the amount of $40,000,000 on these ships. The exact proportion is impossible to determine.

Mr. **Leffingwell**. This was a Shipping Board payment.

Mr. **Brown**. The British Government Treasury account shows payment on those ships after the United States advances began in the amount of $40,000,000, so that some of the value of the ships——

Mr. **Leffingwell**. You mean, of ships that were uncompleted and the ultimate cost was $120,000,000?

Mr. **Brown**. No; some of the value of the ships as they stood when they were taken over had been built in them by money borrowed.

Senator **Clark**. The British Government used part of our advances to help build these ships.

Mr. LEFFINGWELL. I never heard of any such thing.

Senator CLARK. The British Treasury account shows that.

Mr. LEFFINGWELL. Can you show me that?

Senator CLARK. I will be glad to produce it and show it to you, Mr. Leffingwell.

In any event, the United States felt that in view of the possible interest growing out of the situation and in view of the settlement, the money should be applied either to reduce the advances being made by the United States to Great Britain or spent to apply on this maturity of February 1, 1918. That is correct, is it not?

Mr. LEFFINGWELL. Senator, I explained yesterday my two positions in the Treasury overlapped this period, and the views of the Treasury during the earlier period are expressed in the published documents. I am not very familiar with every phase of it.

Senator CLARK. I am not trying to infer anything you do not remember, Mr. Leffingwell.

Mr. LEFFINGWELL. I want to say this, that what happened was that Secretary McAdoo asked to have subrogation in respect to the securities which were pledged to secure the demand loan, if the proceeds of the ships were applied upon the demand loan. He asked for that and he asked for it repeatedly.

Senator CLARK. That is perfectly true. To begin with the question was whether this $80,000,000 which the Shipping Board was paying to the British Government should be used to reduce the advances which we were being called on to make to the British Government or to apply on those maturities of February 1, 1918, for obligations preceding our entrance into the war, or, as the British Government desired to do, to pay off a portion of the demand loan.

Mr. LEFFINGWELL. I think that the Secretary, so far as I can recall the record, and as far as I can remember anything about it—and my memory is not complete, because most of the early part of those discussions preceded my connection with the affair—always conceded that this was British money owing by the United States to Great Britain, and that he could not interpose an objection to the use by Great Britain of that money for whatever purpose the British desired to use it.

Senator CLARK. In that case, Mr. Leffingwell, what would be the basis of Secretary McAdoo's demand for subrogation; if it was British money he was not entitled to subrogation?

Mr. LEFFINGWELL. That was not his conclusion.

Senator CLARK. His contention was that since during the period of these British expenditures on the ships after our entrance into the war, the bulk of British dollar revenues on loans from the United States, a large portion of the value of these ships, was already loaned in the United States, therefore we ought to have some sort of subrogation?

Mr. LEFFINGWELL. I never heard of that before.

Senator CLARK. What did you understand was the basis of Secretary McAdoo's demand for subrogation, just an arbitrary demand?

Mr. LEFFINGWELL. There is no indication of that in the papers that I have seen, and I never heard of it before this afternoon. The basis of it, I think, was that he was most reluctant to deal with the demand loan and most reluctant to deal with the February 1 maturity, and I think he thought that having regard to the fact that he must concede the payment of this ship money as the British demanded, and persistently demanded it should be used on the demand loan, and as at the same time he was being asked to meet the February 1 maturity, it was perfectly proper and orderly and suitable for him to suggest, as he did suggest, that he be granted subrogation with respect to the payments made on both.

But you will recall, Senator, when it came down to the February 1 maturity, time got very short, and most of this correspondence went by cable back and forth by cable between Secretary McAdoo and the Chancellor of the Exchequer, Bonar Law, and got down to January 28 with no agreement reached.

Senator **Clark**. Yes; I am getting to that in detail. I am going back now to the original question and as to what Secretary McAdoo's contention was as to his right of subrogation.

Mr. **Leffingwell**. I am trying to explain to you, because I do not want you to think he ever made consciously an arbitrary or unreasonable suggestion. The reason why it was a reasonable suggestion——

Senator **Clark**. I think it was a very reasonable suggestion, and that is the reason I am trying to lay the foundation here.

Let me start in with reading a portion of a letter from Lord Reading, which I offer as committee exhibit 1 in this study.

(The document referred to was marked "Exhibit No. 3019" and is included in the appendix on p. 9444.)[1]

Senator **Clark**. I will read the second paragraph [reading]:

> In regard to the reimbursement to the British Government——

Mr. **Leffingwell**. What is the date of that, Senator?

Senator **Clark**. That is dated November 1, 1917, at 2315 Massachusetts Avenue, Washington, D. C., to Secretary McAdoo from Lord Reading [reading from "Exhibit No. 3019"]:

> In regard to the reimbursement to the British Government of sums expended on ships which the United States Government is to acquire, I fully agree that the question of the application of these funds should be discussed with you. It is certainly not the desire of my Government to borrow more than is absolutely necessary to meet its essential requirements in this country. I should, however, point out that from the first it has been assumed by my Government that any moneys reimbursed in respect of its expenditures on ships would be applicable to a special purpose, viz, the reduction of the call loan or overdraft which originally stood at close on $400,000,000, and I have always understood that the matter was discussed with you on this basis.

A few days after that, Mr. Lamont sent a cablegram from London to Morgan, New York, which reads as follows:

> 44748. Denkstein. For your confidential information American Mission is urging Lord Reading and me to devise some method of new security issue to take up British note issue maturing New York February 1. I have explained to Mission utter impossibility in my judgment of any such operation unless security markets completely change, which does not seem likely. I believe Mission now agrees with me in this judgment. However, please cable whether you think any 1-year security could be devised which, under conditions as they exist today, could be sold and if so at what cost to British Treasury.—T. W. **Lamont**.

(The document referred to was marked "Exhibit No. 3020" and appears in full in the text.)

---

[1] There was no exhibit marked "No. 3018."

Senator CLARK. Now, I will read a cable from Mr. Lamont to Morgan, New York, dated November 16, 1917:

> 44774. My 44748. Denkstein. Believe American Mission actuated chiefly by not unnatural desire to curb Allied expenditure, but perhaps difficult for them to comprehend entirely the unfortunate sentimental effect which I believe such an attempt would produce, even if it were possible to force it to a comparatively successful conclusion.
>
> Cravath rather insistent that could be accomplished through some group of banks that we might form and possibly he may make inquiries elsewhere, though I do not think so.
>
> I called their particular attention to the probable injury to future United States financing, if question of British ability to pay is raised. Believe American Mission perfectly reasonable and will not adhere to present position if convinced of both impossibility and inadvisability of step suggested, and hope I so convinced them.
>
> Wish, however, to be prepared for any further questions and will therefore appreciate full expression of your personal views alone.
>
> Have you conferred with du Ponts concerning renewal December 15 maturities? T. W. LAMONT.

(The document referred to was marked "Exhibit No. 3021" and appears in full in the text.)

Senator CLARK. In this connection I offer committee exhibit 4, cablegram No. 55633, to Mr. Lamont in London, under date of November 16, 1917.

(The document referred to was marked "Exhibit No. 3022" and is included in the appendix on p. 9445.)

Senator CLARK (reading from "Exhibit No. 3022"):

> Agree with you in belief it would be impossible to make arrangements now that would be acceptable or, even if accepted, would be wise in general situation. Will discuss the matter with all partners on their return Monday.

I call your attention again to the suggestion which runs throughout this correspondence, the suggestion in "Exhibit No. 3021", that if the banks in the United States do not care for this financing the United States will have to undertake the loan for the purpose of saving its own credit. That was your opinion, was it, Mr. Lamont?

Mr. LAMONT. Oh, Senator, I think you stress that cable message of mine too much.

Senator CLARK. The same view appears so constantly, both from the correspondence of various of these officials and from the correspondence of Morgan & Co., and from the recognition of various Treasury officials, including Secretary McAdoo and Assistant Secretary Crosby and Mr. Leffingwell and others throughout the Department and throughout the whole transaction, that that was the situation, of unwilling recognition on the part of American officials that they were forced to do something they did not want to do, because once they did it would be an injury to British credit and thereby an injury to American credit. Is not that true?

Mr. LAMONT. Yes; but might I put it in my own words?

Senator CLARK. Yes; you certainly may.

Mr. LAMONT. Thank you. Mr. Leffingwell explained that this morning and yesterday, I think, when you were not here. But this cable that you have just quoted, of mine, does not suggest any ruin of American credit, which is the word you used a moment ago. It refers simply to the conversations that we had in the spring and summer of 1917 with the Treasury officials when we had hoped that funds would be found for paying off the demand loan, and when they declined to consider the matter. At that time you recall the demand loan had reached a position where we were really not being permitted to sell securities for a time to liquidate it.

The American Government would not undertake the liquidation of it, nor was it timed well, as the Treasury officials told us, to have the British Government come in with an operation at a much higher rate of interest. Those are the conversations that are alluded to.

Senator CLARK. That whole story runs throughout this correspondence on the various phases of the transaction. Here is the $80,000,000 that the British had come into possession of for work, much of which was done after advances by the United States had begun.

We were making advances month by month to them, very large advances from month to month. Yet they say, "All right, we want to pay off this obligation here."

Mr. LAMONT. You are not talking about ship money now?

Senator CLARK. I am talking about the $80,000,000; yes, sir.

Mr. LAMONT. Oh, well, in this cable we were talking about the February 1 obligations, were we not?

Senator CLARK. Yes; I understand, but the two things were going along almost exactly hand in hand, Mr. Lamont. The question of where it would be applied, and the question of subrogation came up in regard to both of them.

Mr. WHITNEY. May I just interrupt here?

If you go back to an exhibit that is already in the record of a memorandum of Mr. Lamont's conversation with the Secretary, back on July 30,[1] there is section G under that that I would like to read, if I may. This is quoting the gist of Mr. McAdoo's and Mr. Crosby's attitude. Then it goes on, A, B, C, and G is this [reading]:

> There is one possible source, said the Secretary, for reducing the loan, and that is $65,000,000, which the Treasury would like to pay Great Britain, being the sum advanced by Great Britain for the building of ships here.

Then he goes on and says these will be turned over to the United States.

So, in other words, at that time, back on July 30, he told Mr. Lamont that there was going to be this purchase by the United States of certain British assets, and he suggested at that time that that sum, the proceeds of a sale of the British assets in this country, might be a source to reduce the demand loan.

So that it was away back on July 30. You see, this is all discussion with the Secretary and Assistant Secretary by Mr. Lamont as to possible means of reducing this demand loan. That was suggested by him back on July 30.

Senator CLARK. Yes; but these two matters were going along at the same time, and the controversy as to subrogation——

Mr. WHITNEY. There was nothing to subrogate on the ships, because they were owned by the British.

Senator CLARK. The $80,000,000 was subrogated.

Mr. LAMONT. No.

Senator CLARK. It was agreed to be subrogated.

Mr. WHITNEY. No, sir. The $91,000,000 was subrogated.

---

[1] Previously entered as "Exhibit No. 2824", see supra, p. 9027.

Senator CLARK. I think this correspondence will show that the $80,00,000 was included in the agreement made before the February 1 maturities.

Mr. LEFFINGWELL. Let me explain that to you, because it is just as simple as anything could be. We had it this morning. It will not take me very long. The reason you think we ultimately got subrogation in respect to the ship money is this: The Secretary asked for it. The Chancellor of the Exchequer refused it.

Senator CLARK. As he did with regard to the same thing on the securities.

Mr. LEFFINGWELL. As he did with regard to the February 1 notes. The Secretary found himself obliged to accept the much more limited assurances which the British Treasury tendered to their representatives here which were, in effect, that they would consult the United States Treasury in respect to the use of the securities in this country.

Then in that state of the case Mr. McAdoo telegraphed Mr. Bonar Law, "Well, of course, I am going to take up your maturity on the 1st of February; I am not going to let that go to default."

"But," said Mr. McAdoo to Mr. Bonar Law, "I am very much disappointed that you do not meet my views."

Six days after the maturity and after the advance had been made to the British Government, Mr. Bonar Law came back to the Secretary, evidently having said, "Well, that is a kind of a personal appeal from the Secretary of the Treasury of the United States, who is lending us all this money and helping us in every way he knows how, and I had better meet his views."

And Mr. Bonar Law came back on about the 6th of February——

Senator CLARK. Yes; I am going to put all that correspondence in later.

Mr. LEFFINGWELL. Let me tell you what he said, because it is important, and I have studied this. He said, "I agree to give you a subrogation in respect to the securities for the notes held by the public which mature on the 1st of February; and in respect to those securities and also the securities for the demand loan I agree to be guided by your instructions", or words to that effect.

Senator CLARK. That is perfectly true. I will get the letter in just a moment. That will speak for itself.

But there were three questions, I should say, involved: First was the subrogation in regard to the maturities for February 1st, second, a question of subrogation with regard to the $80,000,000 on the ship money, and then McAdoo made a separate request that as to general securities in this country in excess of those he ought to be consulted.

Those were the three questions involved.

Mr. LEFFINGWELL. But he never got subrogation for the ship money.

Senator CLARK. I think that any fair construction of this correspondence would show that.

I now refer to letter received from Assistant Secretary Crosby at London for the Secretary of the Treasury, dated November 18, 1917.

Mr. LEFFINGWELL. This is from Crosby?

Senator **Clark**. From Crosby to McAdoo. This still has to do with reference to the question of the advances from the United States Treasury for those maturities of February 1. The question was still to the front as to how that would be handled. In this cablegram Crosby clearly shows that it was his opinion that if they were advanced it would simply be a refunding operation instead of a payment out of the Treasury of the United States; that the United States might carry the British until they could refund it out of private sources in this country.

I will read a paragraph on page 2 of the letter, and insert the whole letter in the record (reading):

In an interview today with Bonar Law and Reading, former states that there will be no difficulty in agreeing to higher rates of interest than now paid. States they are charging France and Italy 5 percent, but with indication that rate will be made permanently as high as that which they pay to their public on long-term bonds, this rate now being net about 5½ percent. I urged importance of prompt action by British Government in obtaining loans in neutral countries with the result that special men are to be sent on this business at an early date. Learn from the British Government and from Lamont that renewal of loan of about 95 millions maturing February 1st impracticable, because it is represented by widely scattered obligations in small amounts, nor could a new loan be placed at that time unless market conditions are very much changed for the better. Considering these statements, have urged Chancellor of the Exchequer to revise and if possible reduce other needs for that period. British delegates to council will take all this in consideration at an early date. If on later presentation of urgent need you should decide to advance money for meeting the above maturities, I think there will be no difficulty in obtaining special obligation from the British Government secured by collateral now protecting it, thus laying foundations for direct British loan to our public when market conditions permit.

(The document referred to was market "Exhibit No. 3023" and is included in the appendix on p. 9445.)

Senator **Clark**. So that evidently Mr. Crosby was still considering that this would be a refunding operation rather than a payment.

(The document referred to was marked "Exhibit No. 3024" and is included in the appendix on p. 9446.)

Mr. **Leffingwell**. However, 3 days later, on November 21, in a cable to the Secretary of the Treasury—I am now reading from the State Department publication of Treasury Papers, "Foreign Relations of the United States, 1917, supplement 2, volume 1"—he says [reading from "Exhibit No. 3025"]:

Referring to ship-construction funds returnable to British Government, understand from Treasury here that they prefer application of all of it to overdraft. Have called attention to fact that this leaves their obligations with du Pont and others and their February maturities entirely unprotected. They, however, seem to urge whole amount be applied to Morgan account. Have notified them I would cable you facts. Am uncertain how far you may feel committed to Morgan account by virtue of conversation in your office with Lamont some months ago.

That no doubt refers to the same conversation.

Senator **Clark**. That no doubt refers to the same conversation.

Mr. **Rathbone**. Crosby had no actual facts on the subject.

(The document referred to was marked "Exhibit No. 3025" and is included in the appendix on p. 9447.)

Mr. **Rathbone.** On December 4, 1917, taken from the same publication, which was made some years ago, there is a reply to Crosby from McAdoo, which reads [reading from "Exhibit No. 3028"]:

> Treasury 19. Willing that funds paid British Government by Shipping Board should be applied to Morgan overdraft, but insist upon subrogation in respect to proportionate value of selected collateral.

Senator **Clark.** That is precisely what I understand to be his contention.

Mr. **Rathbone.** That is what he tried to get.

Senator **Clark.** We will go on and come to that in a moment.

Coming back to committee "Exhibit No. 3023", it seems to me there are two points. The loan was convertible into 20-year issues, was it not?

Mr. **Whitney.** Yes, sir.

Senator **Clark.** The loan maturing February 1. Was it ever suggested that the Morgan Co. underwrite the conversion, as they did the equally scattered 2-year notes of this issue later?

Mr. **Lamont.** I do not remember, Senator. If any suggestion like that were made, its acceptability of course would depend upon conditions.

Senator **Clark.** I understand that; but it is clearly indicated by Secretary Crosby in the last sentence, which I will read, that he anticipated this would be a refunding operation, providing the money was advanced by the Treasury, rather than a payment out of the Treasury, which it subsequently turned out to be, and I am asking you as to whether any suggestion was made as to refinancing by Morgan & Co. as a 20-year loan, rather than on 2 years?

Mr. **Lamont.** What do you think, Mr. Whitney?

Mr. **Whitney.** I think it was considered. The suggestion which Mr. Lamont made, as I remember it, was a renewal for 1 year, and he asked from London about it, and the idea was it would be convertible. A year after the war was over, the prices of the bonds were such that you could force the conversion and make an operation of it. At that time the notes were selling at a point where that was not practicable. That was included in the suggestion when Mr. Lamont, of course, there suggested as to whether it would be feasible to renew it by a 1-year note.

I do not know whether that answers your question, because I happened to be abroad myself, but I know the suggestion was made, and they considered it was not possible. Do I make it clear?

Mr. **Lamont.** Senator, before they replied to my inquiry, they undoubtedly canvassed every possible avenue to give me an adequate response.

Mr. **Whitney.** The market was not such as to permit.

Senator **Clark.** I understand you were advising both the British Government and the Treasury at that time that the market was not such that you could float another issue, but was there any suggestion as to what the refunding terms should be, or as to when it would be made, as indicated in Mr. Crosby's cablegram to McAdoo?

Mr. **Lamont.** Undoubtedly every avenue, as I said, Senator, was canvassed in New York before the reply was given to my cable, and the market conditions were found impossible. I have no doubt that they canvassed every possible avenue.

Mr. **Leffingwell.** Senator, as I recall it—and I suppose you will be reading it into the record—as I recall it, when Secretary McAdoo presented the suggestion for the establishment of a credit to meet this maturity to the President, for his approval, as all credits were submitted, he stated, if my memory is not very far wrong, that he had satisfied himself that a refunding issue could not be made upon this market except on terms which would reflect upon British credit and interfere with the successful flotation of the United States Government's own bonds.

My mind does not carry it over at the time as to just what steps he took to satisfy himself on that.

Senator **Clark.** I can readily understand that.

Mr. **Leffingwell.** But it is evident from that very formal communication to the President, that he did satisfy himself.

Senator **Clark.** Now I offer committee exhibit 6, being a memorandum taken from the files of the Treasury Department, and it does not indicate by whom it was written.

(The document referred to was marked "Exhibit No. 3026" and is included in the appendix on p. 9447.)

Senator **Clark.** That cable reads [reading]:

> Mr. Crosby first suggests that in case it should be decided to furnish the funds for meeting these maturities, the corresponding collateral should be subrogated and that the British Government reduce its needs for that period. Later, he suggests that the reimbursements to the British Government by the Shipping Board should be applied for this purpose and for taking up $13,000,000 in notes to du Pont maturing December 15th and $17,800,000 maturing March 15. Later, he advises that the British Treasury desires to apply such funds for the Morgan overdraft. I notice from one of Lord Reading's letters last month to the Department that he understood that the negotiations for taking over the shipping contracts were carried on with the understanding that the British Government would apply the reimbursements to the Morgan overdraft.

Senator **Clark.** I now read "Exhibit No. 3027", being a letter from Mr. Leffingwell to Mr. Blackett, dated December 5, 1917, which is offered for the record with appropriate number [reading]:

> Dear Mr. Blackett: Referring to Lord Reading's letter of November 1 concerning the 400,000,000 call loan or overdraft: For your information the Secretary has cabled Mr. Crosby to the effect that he does not object to the use of any moneys, which may become payable to the British Government for ships acquired by the United States Government, toward the reduction of this overdraft, but in that case the United States will desire to be subrogated to the rights of the British Government with respect to a proportionate value of the collateral, to be selected.
>
> I am, my dear Mr. Blackett,
>
> Very truly yours,

(The document referred to was marked "Exhibit No. 3027" and appears in full in the text.)

Mr. **Leffingwell.** You have also, have you not, the Secretary's cable which that letter was reporting to Blackett? That cable gave at first hand the same advice to Secretary McAdoo's representative abroad, who was in communication with the British Chancellor of the Exchequer.

Senator **Clark.** If you have it there I would be very glad to have you read it, Mr. Leffingwell.

Mr. **Leffingwell.** What is the date?

Senator **Clark.** The date of your letter is December 5, 1917.

Mr. LEFFINGWELL. That is there. It is in the same State Department publication, on page 42 in the little pamphlet that I sent up to you.

> December 4, 1917. For Crosby from McAdoo. Willing that funds paid British Government by Shipping Board should be applied to Morgan overdraft but insist upon subrogation in respect to proportionate value of selected collateral. Have in mind selecting Argentine collateral with a view to use in Argentina to relieve exchange situation.

Then it goes on about the du Pont and maturing notes.

That sentence about Argentine collateral, Senator, is significant, because it shows what the Treasury was working towards, and how the two things, subrogation and this inferior right in respect to the use of British or French collateral in this country merged into each other, and while we had the rights of a creditor, or the right to become subrogated in respect to the subrogated securities, we also had the rights with respect to the subrogated securities and the unsubrogated securities indicated by that reference to the Argentine collateral, that is, that the Treasury was seeking not merely some collateral security for a commercial loan but were seeking a broad plan looking towards meeting interallied finance requirements throughout the war.

Senator CLARK. Mr. Leffingwell, I cannot read this language, admitting that the Secretary changed his mind about the condition later, I cannot read this language in any other way than that the statement of Secretary McAdoo that that $80,000,000 would apply to the demand loan was conditioned on subrogation.

Mr. LEFFINGWELL. As to this point.

Senator CLARK. He said:

> Willing that funds paid British Government by Shipping Board should be applied to Morgan overdraft but insist upon subrogation in respect to proportionate value of selected collateral.

(The document referred to was marked "Exhibit No. 3028" and is included in the appendix on p. 9448.)

Mr. LEFFINGWELL. Quite right.

Mr. RATHBONE. Then in fact you would agree——

Senator CLARK. I am referring to Mr. McAdoo's statement.

Mr. RATHBONE. There was not an agreement at that time.

Senator CLARK. He said he was willing.

Mr. RATHBONE. He said he was willing.

Senator CLARK. As you suggest, that word of Mr. McAdoo, "willing", was subject to subrogation at that time?

Mr. RATHBONE. At that time.

Senator CLARK. That is all this exhibit was intended to establish.

Mr. LEFFINGWELL. The only point I wanted to make was to call attention to the relation between subrogation, which was one thing, and the use of securities for the support of foreign exchange, which was another thing, and how the two wove themselves together in the mind of the Secretary of the Treasury.

Senator CLARK. I can understand how all the questions are interwoven, and yet I think you will agree that Mr. McAdoo repeatedly stated that the money would be applied in connection with the question of subrogation. I cannot read this language which has just been read here in any other way than his willingness to agree that the

$80,000,000 be applied on the demand loan, which was conditioned on the right of subrogation.

Mr. **Leffingwell.** He asked again and again for subrogation, and finally failed to get it.

Senator **Clark.** That is the point of the whole course of action, Mr. Leffingwell, that Secretary McAdoo at the time, when he was shoveling out American money by the millions, literally by millions a month, and in some cases by hundreds of millions a month——

Mr. **Leffingwell.** $500,000,000 a month.

Senator **Clark.** And they asked for security for a particular thing as to the British, and it was said, "It will hurt your credit", and he was forced into a course of conduct that has brought us to the situation where we are unable to collect any substantial part now of the sums which we have advanced.

Mr. **Leffingwell.** Let me offer a suggestion there, because you are interested in these things, and the interesting questions which you have asked me before lead me to refer to that.

One reason why we had every reason to think that in the last analysis the way for a great creditor country to deal with its debtors in this particular manner, was this: If a creditor, in the last analysis, declines to pay a debt due by that creditor, clearly and plainly due, except upon conditions imposed against the creditor's will, then he is undermining the basis of credit and his own reasonable expectation of repayment. And it was not a possible thing for Secretary McAdoo, after urging in every way——

Senator **Clark.** I can understand that.

Mr. **Leffingwell.** After urging in every way subrogation, it was not a possible thing for him to maintain it.

Senator **Clark.** Let me say again, Mr. Leffingwell, that I am not blaming Secretary McAdoo, and I am not blaming anybody who was drawn into that particular circumstance, with only two or three outstanding facts or turning points, as I see it, in the whole story of the United States getting into the war. The first essential turning point, to my mind, was the differentiation arrived at in 1914 of loans and credits, which enabled the Allies to build up large amounts of credits in this country, which led to the changed policy with regard to loans which eventually brought about so tremendous a commercial interest in this country in favor of the Allies, before we ever entered into the war.

The next important turning point was the failure of the Allies even to give consideration to the modus vivendi proposed by Secretary Lansing for dealing with the question of armed merchantmen and submarines, which brought up the other side of the problem which drew us into the war.

The third was our actual entry into the war. The fourth was the discovery by the United States that they must finance their then Allies for all the debts contracted, practically before our entrance into the war, and step by step the thing leads on to the present situation.

Mr. **Leffingwell.** Senator, that last one is out of proportion, because every other thing which you have mentioned is a matter of major significance. Whatever view one takes of it, every other one of those four steps is a matter of major significance, but the total amount of loans that we made to the Allies during the war was one-fourth the total cost of the war and of the total amount of loans that we made to the Allies during the war period, those maturities were only 6½ percent.

Senator CLARK. I can understand that.

Mr. LEFFINGWELL. And it is getting things out of their relative importance.

Senator CLARK. No; it is not getting things out of their relative importance.

The CHAIRMAN. Not at all.

Senator CLARK. One step followed another, and the fact that one step followed another was inevitable.

Mr. LEFFINGWELL. Of course, you may think of me as thinking about these things from the point of view of a fellow who became involved in these questions on the 8th of May 1917.

Senator CLARK. Yes; I can very readily understand that.

Mr. LEFFINGWELL. Who had no prior knowledge or interest in the problem of international finance. Looking at it purely from the Treasury's point of view, it was of no such importance as the other three steps. That is all I meant to say.

Senator CLARK. I think the events show it was one of the major turning points. However, I agree with you that it is not of outstanding importance, such as the others I mentioned.

Mr. LAMONT. Senator, I hate to comment even at all, but on the one step you mentioned, you stressed what you are pleased to call the immense importance of the pre-war loans upon our economy, population, and so forth. There again, if I may, I would like to call your attention to the views which I have expressed in the record before, namely, that in the neutral years the four great Allied nations bought from this country $7,000,000,000 worth of goods. Of that amount $1,000,000,000 only was financed by means of publicly issued loans and another $1,400,000,000 by secured loans.

Senator CLARK. Of course, that is perfectly true, Mr. Lamont.

Mr. LAMONT. If I may finish——

Senator CLARK. Yes, sir.

Mr. LAMONT. So that the total was only one-fifth of their entire purchases. In that respect I would not think that considering the very moderate distribution of those, in the way of the number of investors—and I would not agree with you nor should I expect you to agree with me necessarily—that that one factor in itself was a very considerable influence.

Senator CLARK. Mr. Lamont, it has always been my opinion, and I think this record conclusively shows, that the question of the loans and the question of those credits having to do with trade and commerce, and the question of trade itself, acted on each other necessarily. The tremendous volume, as was repeatedly said, the tremendous volume of trade which had grown up made necessary large credits. The existence of the credits and the necessity for financing the Allies in this country, all the reasons cited by Secretary McAdoo and Secretary Lansing and by everybody else who advocated a change in the loan policy of the Government, urging on President Wilson until he changed his loan policy; the tremendous stake in the game that the United States had undoubtedly had a great deal to do with influencing public sentiment in this country. All these elements work interchangeably on each other. I will never believe that the question of these loans was entirely responsible for it, or the commercial development connected with them, but they contributed to our trade interest in the Allied success and to the creation in the minds of a great many people, and I think very properly, that the prosperity of this country was absolutely tied up with Allied success, which was repeatedly asserted.

Mr. Chairman, I see it has now come to 5 o'clock.

The CHAIRMAN. If you are willing, Senator, we can take a recess until 8 o'clock this evening.

Mr. LAMONT. Mr. Chairman, may I inquire from you and Senator Clark, if there is any chance of our not finishing tonight, we would prefer to sit here with you until 6 o'clock and have a briefer recess.

The CHAIRMAN. I am afraid if we would stay, we could not finish by 6 or 6:30.

Mr. LAMONT. Will we be sure of getting away tonight, by sitting another hour now and having a briefer recess?

The CHAIRMAN. Some of us have commitments for the dinner hour tonight that makes that quite inconvenient, and since we have had a very definite understanding with respect to returning at 8 o'clock, I think we had better take our recess now and come back then.

The committee will be in recess until 8 o'clock tonight.

(Thereupon, at 5 p. m., a recess was taken until 8 p. m. of the same day.)

EVENING SESSION

The committee reconvened at 8 p. m., pursuant to recess.

TESTIMONY OF THOMAS W. LAMONT, R. C. LEFFINGWELL, AND ALBERT RATHBONE—Resumed

The CHAIRMAN. The committee will be in order.

Senator CLARK. Mr. Chairman, just before the recess was taken some of the witnesses and myself had rather wandered off into a discussion of our own views as to war, investigations, bankers' loans, and commerce and trade during the war. In order that these witnesses may get away and catch their train, I am going to be as brief as possible and return immediately to the subject under discussion, namely, the events leading up to the payment by the United States Treasury of the maturities of the United Kingdom loan falling due on February 1, 1918, together with the associated subjects which, as I have said from time to time, was the money being applied on the demand loan.

Referring to committee exhibit 8, which I will insert in the record in full but read only a portion of, being a communication from Mr. Crosby in Paris to Secretary McAdoo in Washington, of which I will read the pertinent paragraphs showing the progress of the negotiations at that time.

(The document referred to was marked "Exhibit No. 3029" and is included in the appendix on p. 9448.)

Senator **Clark**. That communication reads in part as follows [reading]:

> In response repeated inquiries from British Treasury, have said am not authorized offer any encouragement except ship money that money will be provided for overdrafts including Treasury bills and February 1 maturity.

I think it may be agreed from the previous testimony, gentlemen, that there was an effort being made on the part of the British Government to have the funds supplied for the payment of the February 1 maturities and also funds supplied progressively for the payment of the demand loan. That is true, is it not, Mr. Lamont?

Mr. **Lamont**. Certainly, I think on the first part, the demand loan, that they ceased to press the American Treasury after the money had been applied.

Senator **Clark**. No, sir. I think that will appear.

Mr. **Leffingwell**. What is the date of this letter?

Senator **Clark**. This is January 10, 1918.

Mr. **Leffingwell**. Yes, sir.

Senator **Clark**. From Crosby in Paris to McAdoo in Washington. It states in part [reading from "Exhibit No. 3029"]:

> In response repeated inquiries from British Treasury, have said am not authorized offer any encouragement except ship money that money will be provided for overdrafts including Treasury bills and February 1 maturity. In response to requests for suggestions as to how these obligations to be met, have said it seems to me to be a problem which must be worked out by British Government and their bankers with such cooperation as the United States Treasury can give. Have suggested that British Government should, if necessary, urge bankers to release them from promise to apply ship money to overdrafts so that it can be used for February 1 maturity. Bonar Law suggests that small amount of gold, roughly estimated by him now at $5,000,000, can be brought down from Canada to aid in February 1 settlement. Am also informed that Danish loan to British of $25,000,000 now available in New York in part and balance by instalments. Chancellor has expressed hope that inasmuch as pledged collateral, even at present market values, exceeds overdraft Treasury bills and February maturity combined, some way can be worked out whereby, with aid of ship money, Danish loan, and Canadian gold, a new secured loan may be established. Have said that this can only be done by negotiations at New York and Washington, and if additional cash advances required from Treasury, it would probably involve diminution in January and February loans for other purposes.

The rest has nothing to do with this particular matter.

At that time, apparently, Secretary Crosby thought that a British war issue was not impossible in this country, considering the great amount of collateral on hand. Is that correct?

Mr. **Lamont**. I do not remember what his views were.

Senator **Clark**. Would not that be your deduction from the letter? You do not have to answer that if you do not want to.

Mr. **Lamont**. I did not draw any particular deductions from that. I thought Mr. Crosby was giving his view without having reached any definite conclusion.

Senator **Clark**. I think the record shows that he was undoubtedly contemplating a new issue, secured in the various ways he suggested.

Mr. **Leffingwell**. Senator, Mr. Crosby was sent over to Europe by Mr. McAdoo about the latter part of October, as I remember the date, and his task there was to allocate the loans which we made, as head of the Commission, and at that time he was out of touch with things here.

Senator **Clark**. He was in touch with the situation, as the cable shows, and was reporting to his senior.

Mr. **Leffingwell**. He was reporting it to his chief.

Senator **Clark**. I offer committee exhibit 9, being a telegram of January 19, 1918. It reads as follows [reading]:

> In all our discussions the understanding has been that this $94,000,000 (to meet February maturities) will be a first installment of a larger amount and that ultimately whole of overdraft, including ripe bills, might possibly be paid off. Secretary of the Treasury is not willing to make a prior commitment as to further advances and question as to whether any will be made depends to a considerable extent (a) on general banking situation; and (b) on political reception of the advance now under consideration.
>
> (In pencil): Above is Treasury's latest information on the scope of the new loan.

(The document referred to was marked "Exhibit No. 3030" and is included in the appendix on p. 9450.)

Senator **Clark**. In other words, the political reception of advances made would depend on how the American people would take to the idea of "bailing out the bankers."

Mr. **Leffingwell**. Whose telegram is it?

Senator **Clark**. It is a memorandum taken from the Treasury files here, but evidently sent to Cravath in London, because it is a London Treasury memorandum, and it records the conversation reported to London by Sir Hardman Lever.

Mr. **Rathbone**. It was Sir Hardman Lever's view of the situation.

Senator **Clark**. That is undoubtedly true.

I now offer Committee exhibit 10, which it is not necessary to read, being a memorandum from Mr. J. M. Keynes to Mr. Cravath, as to the amount of the funds under consideration, Mr. Cravath being then in London.

(The document referred to was marked "Exhibit No. 3031" and is included in the appendix on p. 9450.)

Senator **Clark**. I also offer Committee exhibit 11——

Mr. **Leffingwell**. Mr. Keynes being of the British Treasury in London.

Senator **Clark**. Yes, sir; I should have explained that. It is written on the letterhead of the British Treasury.

I offer Committee exhibit 11, of which I will read the pertinent part and offer the whole for the record, and, Mr. Lamont, you may read any other part of it you please. This is a telegram from Mr. Lamont to Morgan & Co. in London: Morgan Grenfell & Co., dated January 19, 1918.

(The document referred to was marked "Exhibit No. 3032" and is included in the appendix on p. 9450.)

Senator **Clark**. That cable of Mr. Lamont's reads, in part, as follows [reading from "Exhibit No. 3032"]:

> Since T. W. Lamont's return from abroad, he and A. M. Anderson have spent much time in Washington in following up with United States Treasury the matter of British call loan and February 1 maturities, so fully discussed in London. Federal Treasury appreciates bad effect upon American money market of having this call loan continue indefinitely, and it has therefore been frankly desirous of arranging means to effect reduction and eventual cancelation of loan.
>
> We have now agreed to suggestion made by the Treasury under which we purchase next week $150,000,000 United States Treasury 4-percent certificates due June 25 next, proceeds of $86,000,000 of which will be turned over to Brit-

> ish Treasury to be applied to that extent in reduction of its call loan. In order to carry out this plan we and our associates are obliged as you can see to purchase an amount of certificates greatly in excess of amount to be applied upon the call loan. This is the consideration which the Federal Treasury receives for lending its cooperation to the plan.

Then on the third page of this communication it states [continuing reading]:

> Federal Treasury has been in conference with British Treasury authorities here in regard to plans to utilizing to best possible mutual advantage such British-owned securities now held in its country, and free from pledge, subject, of course, to all conditions under which securities are borrowed from owners and to any engagements British Government has undertaken. Discussion of this matter has not been within our province, but we are convinced that all Federal Treasury desires is generous cooperation on part of British Treasury in working out method for handling increasingly heavy allied finance demands here, including those which result from purchases in neutral markets. You will not misunderstand us, we are sure, when we say that we are convinced that British Treasury can well afford to be very broad in its attitude on this point. Fortunately, relations between Sir Hardman Lever and Federal Treasury are on such basis that all such questions can be handled—we are convinced—without difficulty as they may arise.

So that by that time you indicate that the United States Government had advanced to the point where it was not only consenting to pay the British maturities as they arose, but consenting to finance British purchases in neutral countries outside the United States?

Mr. **Rathbone.** That was Mr. Lamont's opinion.

Senator **Clark.** That was Mr. Lamont's opinion. He was very intimate with this matter.

Mr. **Rathbone.** Not for the Treasury.

Senator **Clark.** That was your opinion, was it not, Mr. Lamont?

Mr. **Lamont.** Certainly it is my opinion, expressed in this cable, Senator.

Senator **Clark.** Mr. Rathbone, it is true that about that time began the financing of British purchases in neutral countries outside the United States?

Mr. **Rathbone.** I do not know.

Senator **Clark.** So that Mr. Lamont's opinion was correct?

Mr. **Lamont.** I said discussion of this matter was not within my province, you know.

Senator **Clark.** I understand, but a little later I find you discussing matters of that kind as in your province.

That was a fact, Mr. Rathbone or Mr. Leffingwell?

Mr. **Rathbone.** When the advances were first made for neutral purchases——

Senator **Clark.** I am not interested in the dates, but I am interested in knowing if at this time the United States did not begin to finance British purchases outside the United States.

Mr. **Rathbone.** Through the exchange?

Senator **Clark.** No; these were direct advances from the United States Treasury, Mr. Rathbone. You will recall that from that time on that there was a constant matter taken up that the United States financed Allied countries in their purchases in neutral countries, which marked a departure from the original policy of the Government.

Mr. **Lamont.** Senator, you said for me to read any part of the cable.

Senator **Clark**. I would be very glad to have you read it all, Mr. Lamont. I did not read it all for the purpose of saving time.

Mr. **Lamont**. I would like to read a part of it, so that the former Treasury representatives can hear it [reading from "Exhibit No. 3032"]:

> Federal Treasury has been in conference with British Treasury authorities here in regard to plans to utilizing to best possible mutual advantage such British-owned securities now held in this country. * *. *

Senator **Clark**. Yes, sir; that is precisely what I read.

Mr. **Lamont**. I know it. The matter of the purchases in neutral markets goes back to that on which Mr. Leffingwell was testifying this afternoon in connection with various matters.

Mr. **Rathbone**. That was the use of the British securities to aid in the neutral markets and not the American securities. I do not recall that any advances were made to Great Britain to enable them to finance in neutral countries, unless it was through the support of exchange.

Senator **Clark**. That is not what Mr. Lamont says. He states [reading from "Exhibit No. 3032"]:

> * * * but we are convinced that all Federal Treasury desires is generous cooperation on part of British Treasury in working out method for handling increasingly heavy allied finance demands here, including these which result from purchases in neutral markets.

Mr. **Lamont**. That is referring to the topic indicated in the first part of the cable, Senator, having to do with British securities.

Senator **Clark**. Do I understand that any of you gentlemen deny that through advances to the British Government from time to time, from this period on, or a little before this period, British purchases in neutral countries were financed by the United States Government?

Mr. **Rathbone**. They might have been through the support of exchange. I do not recall any instance where they were helped in neutral markets by the United States advances.

Mr. **Leffingwell**. Senator, may I attempt a comment on that?

Senator **Clark**. Yes; I would be glad to have you, Mr. Leffingwell.

Mr. **Leffingwell**. Because I do not consider this is in connection with the question which you asked.

Senator **Clark**. It is rather an incidental matter, to which I was attracted by the language of Mr. Lamont's cablegram.

Mr. **Leffingwell**. I do not know about it because I have not given any attention to it before, but I think probably what it reflects is what I call in my thought about this subject the secondary arrangement which was made to release other securities that were not subrogated; and that arrangement contemplated the use of those securities in neutral markets under an agreement between the United States Government and the Government of Great Britain, and later on between the Government of the United States and the Government of France, in such a way as to facilitate purchases made by Great Britain, or the United States, and to protect the exchanges of the several associated governments in those neutral markets in which we, because of the purchases of our army quartermasters, or they, because of their similar purchases, had occasion to make purchases.

Now I think the answer to the question which you asked about Mr. Lamont's understanding of the matter is that Mr. Lamont was misinformed, because the Treasury was not, as he was convinced at that time, asking only generous cooperation but, in addition, it was asking for subrogation.

Senator **Clark**. There is no question about that.

Mr. **Leffingwell**. In respect to the February 1 maturity.

Senator **Clark**. I was just coming to that.

Mr. **Leffingwell**. So that I think Mr. Lamont's information, which was no doubt acquired from Sir Hardman Lever, and perhaps reflected Sir Hardman Lever's opinion, was incorrect.

Senator **Clark**. The United States Treasury was undoubtedly asking for generous cooperation, when they were expending millions and millions of dollars a month, but they were also asking for subrogation, as shown in committee exhibit 12, dated January 22, 1918, which is from Secretary McAdoo in Washington to Assistant Secretary Crosby in London, which I offer for the record.

(The document referred to was marked "Exhibit No. 3033", and is included in the appendix on p. 9451.)

Senator **Clark**. That letter reads in part as follows:

> Treasury No. 59. I have indicated my readiness to assent to the use, out of our advances to the British Government, of a sum of about $93,000,000 required for the purpose of paying off the 5½-percent secured notes maturing February 5, as well as my assent to the use of the ship money in retirement of the overdraft.

I presume wherever the word "overdraft" appears, Mr. Lamont, it refers to what you call the demand loan?

Mr. **Lamont**. I think so, Senator.

Mr. **Rathbone**. I think there is no doubt of that.

Senator **Clark**. Both the British Treasury officials and others referred to it as an overdraft, but that was explained in the beginning of these hearings as being technically a mistake, and being in your contemplation a demand loan?

Mr. **Lamont**. Quite.

Mr. **Leffingwell**. In London they call it an overdraft, and in New York they call it a demand loan.

Senator **Clark**. Then hereafter, when the word "overdraft" is used here, it means the demand loan [continuing reading from "Exhibit No. 3033"]:

> In that connection, however, I have felt obliged to ask not only certain general assurances in respect to the use of the securities owned by the British Government but also specifically that the United States Treasury should be subrogated to the rights of the pledgees with respect to the collateral released in connection with the payment of the February 1 maturity and on account of the overdraft. As to the latter, I have understood from your cables that no objection would be raised.

That is, Secretary McAdoo said to Secretary Crosby, with respect to subrogation on the matter of the overdraft, he had understood from Crosby's cables that no objection would be raised [continuing reading]:

> I have made it my personal request that my views as to the requirement of expediency in respect to this transaction be assented to . You are fully informed as to the reasons which make me most reluctant to assent to the retirement of this indebtedness, and of the reasons of expediency which lead me to feel that some special sanction should be thrown around the transaction. I

should be glad to have you indicate to the Chancellor of the Exchequer and to any others with whom you may have occasion to discuss the matter that the suggestions which I have made are based upon my judgment as to the best course to be pursued in the interests of the Governments concerned.

That is the 22d of January, which is 8 days before the maturity of February 1.

Now, apparently Secretary McAdoo was also considering at this time the possibility of refinancing this matter through a British loan issue, because in his letter dated January 23, 1918, addressed to the President, of which I will insert the whole but read only the pertinent part in this connection, he says [reading from "Exhibit No. 3034"]:

> In connection with these credits, I should call your attention to the fact that Great Britain has maturing on the 1st of February the unpaid balance, amounting to about $93,000,000, of an issue of 1-year 5½-percent secured notes. I have been very reluctant to permit the repayment of this loan out of advances made by the United States, but I am satisfied that it could be refunded upon our markets in the existing situation only at a rate of interest so high and secured by so great an amount of collateral as would gravely impair the credit of Great Britain and the ability of the United States to carry through successfully its own financing. In connection with the refunding of this indebtedness, I am asking assurances with respect to the collateral securities held by the pledgees and I am asking other collateral advantages for the United States which, in my judgment, make the transaction in every way a wise one.

(The document referred to was marked "Exhibit No. 3034", and is included in the appendix on p. 9452.)

Mr. **Leffingwell.** That letter, Senator, if you read back over the text, as I recall that letter, is limited to the financing of the February 1 maturity and does not suggest in its text any reference whatever to the ship money.

Senator **Clark.** That is perfectly true; and let me explain, Mr. Leffingwell, that the question of the subrogation of the ship money only increases the amount—whether my view be correct or the view of you gentlemen be correct—only increases the amount of the subrogation, because there is unquestionably a subrogation as to the February 1 maturities, and it is really only a question of the amount and the question of the atmosphere surrounding the general circumstances.

I will put in the record, without a discussion, the documents which lead me to believe that, in connection with the language I just read, which would indicate that he also had that in mind.

But so far as the question of subrogation is concerned, the ship money, the question of the ship money, enters in only as to the amount of the subrogation which we had, because, as I say, I think everybody will agree that there was subrogation ultimately as to the maturities of February 1.

Mr. **Leffingwell.** The thought which I wanted to suggest to you, sir, was that in writing this to his own President, he asked for authority to establish a credit to take care of the February 1 maturity, and he himself suggested that division of thought, which is possibly in Mr. Rathbone's mind, and talked about the pledged collateral for that.

Senator **Clark.** The important thing in connection with all this, to my mind, is that by force of circumstances, which were compelling, a very reluctant Secretary of the Treasury was compelled to enter into a course which he had not contemplated originally and which our Government had not contemplated originally; and struggling desperately for something concrete in the matter, as he had done, he was forced step by step throughout these negotiations.

I now offer for the record Committee exhibit 14, being the cablegram from Mr. Lamont to Mr. Grenfell on January 23, 1918, the same date as McAdoo's letter.

(The document referred to was marked "Exhibit No. 3035" and appears in full in the text.)

Senator CLARK. That cable reads as follows:

> 61326. For E. C. GRENFELL: 48630. Sir Hardman Lever has not yet heard from the Chancellor. If you have any inkling as to his attitude we should be glad to hear it. The arrangement outlined to you is not easy to arrange, and we are anxious not to let the present opportunity escape. T. W. LAMONT.

Senator CLARK. Then on January 24, 1918, another cable for E. C. Grenfell from J. P. Morgan & Co., which reads [reading "Exhibit No. 3036"]:

> 61353. For E. C. GRENFELL. 61236. To supplement such information as you may already have on hand, we understand Chancellor of the Exchequer is agreeable to plan which we have worked out for reducing call loan, but fells it impossible adopt all of Federal Treasury's suggestions with reference to handling securities, that being now subject of conference in Washington, D. C.

(The document referred to was marked "Exhibit No. 3036" and appears in full in the text.)

Senator CLARK. I offer a letter from Sir Hardman Lever addressed to Secretary McAdoo, received January 29 and being dated January 25, of which the whole will be printed, but I will read only the pertinent paragraphs.

(The document referred to was marked "Exhibit No. 3037" and is included in the appendix on p. 9453.)

Senator CLARK. That letter reads in part as follows [reading from "Exhibit No. 3037"]:

> I am authorized by my Government to say that in the event of such advance being made by the United States Treasury and applied in reduction of capital liabilities the British Government is willing to undertake that, subject to all previously existing liabilities, and insofar as not inconsistent with its existing pledges and undertakings:
>
> (1) It will refrain, during the continuance of the war, from selling, pledging, or otherwise dealing in the United States of America with any securities owned by or deposited with the British Treasury, except with the approval of the Secretary of the Treasury of the United States of America; and
>
> (2) The British Treasury agrees to cooperate with the Secretary of the Treasury of the United States in facilitating during the course of the war the issue of loans by or, on behalf of, the United States Government, by the use of such British-owned securities as may be owned or controlled by the British Treasury, subject to the limits of such control and to the requirements of the British Treasury in connection with its own prospective financial operations.

Then following this, or probably before it was received anyhow, on the next day, January 26, 1918, Secretary McAdoo cabled Secretary Crosby in London, as follows [reading from "Exhibit No. 3039"]:

> Treasury No. 63, supplementing Treasury No. 59. Informed today that British Government declines to subrogate United States to rights of pledges with respect to collateral released in connection with payment of February 1 maturity and on account of overdraft. British Government assents to request that during continuance of war it refrain from selling, pledging, or otherwise dealing in United States with any securities owned by or deposited with British Treasury except with approval of Secretary of the Treasury. It is, of course,

already in my power to compel this. In lieu of assurance desired that British Government will cooperate with me in lending, selling, or hypothecating such securities, whether in the United States or elsewhere, in aid of the financial requirements of the Government of the United States or of the Allies, the British Government proposes an assurance "to cooperate with the Secretary of the Treasury of the United States in facilitating during the course of the war the issue of loans with the United States Government guaranty by the use of such British-owned securities as may be owned or controlled by the British Treasury subject to limitation of such control and to requirements of British Treasury in connection with their own prospective financial operations." As you know, I have been extremely reluctant to permit our advances to be used to pay off this old indebtedness. You are very familiar with my views in this connection. Nothing but the feeling that this loan could only be renewed, if at all, in our market upon terms so onerous as to reflect upon credit of British Government and to suggest a lack of willingness or ability on the part of the United States to support the British Government induced me to assent in principle to such use of our advances and then only if the British Treasury were willing to place the United States in respect to the collateral in a position approximately as advantageous as it would gladly have placed American bankers in if any could have been found willing to undertake this loan upon any terms. I do not want to make this loan; I cannot make it unless the British Treasury can see its way to meet my views in the matter. I had made arrangements with the British bankers here—

I presume he refers to Morgan & Co. as the British bankers here, does he not, Mr. Lamont?

Mr. **Lamont**. I should think so.

Senator **Clark** (continuing reading):

which would have enabled me to make the advance necessary to meet the February 1 maturity as well as to pay the ship money without infringing upon $500,000,000 a month for Allies for current purposes. These arrangements fail if British Government finds itself unable to meet my views. The situation is very acute because of the near approach of February 1, and, while I shall, of course, do what may be necessary to prevent an actual default on that date, failing their assent to my suggestion, I shall be obliged to insist that any sums advanced for the purpose of meeting the February 1 maturity be deducted from amounts otherwise available for current purposes, which means, of course, that the British Treasury will have to issue a secured loan on our market within a week or two, provided I should be willing to permit such an offering.

In other words, I understand the Secretary to mean there that if he paid off the maturity of February 1, without an agreement of some sort with the British Government, he would then deduct the other advances to be made to the British in the next amount, which would compel the British to float the loan in the American market, if he permitted them to do it.

Mr. **Lamont**. When he alludes to us as bankers, he is alluding to our undertaking to buy $150,000,000 of Treasury certificates.

Senator **Clark**. I presume so; yes [continuing reading from "Exhibit No. 3039"]:

British representatives here offer no encouragement as to bringing in gold from Canada and state that the Danish loan will not be available until April or thereabouts, the part of it already rendered available having been heretofore applied in reductions of the overdraft or of British Treasury bills here. Though the most serious difficulty in this transaction is utter refusal of British Treasury to subrogate in respect to the collateral whether in connection with February 1 maturity or payment on account of overdraft, I am also much disconcerted by the very restricted assurance of cooperation above-quoted with respect to the use of securities here and in neutral markets. I have no reason to suppose that there will be for some time to come a need of collateral security for loans issued with the United States Government's guaranty. You have shared my disappointment at the apparent failure of the British and French Governments to realize the importance of settling their balances in neutral countries by placing securities in such countries. While our loans to Great Britain so greatly exceed the amount of her purchases here, I feel justified in expecting hearty cooperation in lending, selling, and hypothecating securities in the United States or elsewhere in aid of the financial requirements of the Government of the United States or of the Allies. I hope that you will take this matter up with the Chancellor of the Exchequer in your own graceful way and explain to him the limitations of our statutes, both express and implied, and the reasons, with which you are fully familiar, which made me desirous, if in any way possible, to avoid retirement out of our advances of indebtedness now in question.

I presume when he said "the limitations of our statutes, both express and implied", he had reference to the discussions which transpired with regard to so-called pledges. In other words, while there is no express limitation in our statutes against these loans, there had been, for a long time, a belief that there were implied limitations [continuing reading]:

Bear in mind that although the ship money is the result of the purchase of ships belonging to Great Britain this money should properly be applied to cover adverse balances in neutral markets rather than to retirement of preexisting indebtedness. On that account as well as on account of our own political and economic situation feel obliged to request subrogation in respect to the collateral released from proceeds of the ship money as well as in respect to the collateral released in connection with the February 1 maturities. It is of the utmost importance that this matter receive full patient and comprehending consideration from the highest authorities in Great Britain since it seems inevitable that without a satisfactory understanding on this subject the British Treasury will be obliged to offer upon the American market a new secured loan under conditions most unfavorable to this Government and with possibilities of failure.

(The document referred to was marked "Exhibit No. 3039" and is included in the appendix on p. 9454.)[1]

Senator CLARK. Now, with reference to the statement of Secretary McAdoo in that cable, in which he said that the only thing that induced him to consent to these advances in any event was certain things and then only, as he said, "if the British Treasury were willing to place the United States in respect to the collateral in a position approximately as advantageous as it would gladly have placed the American bankers in if any could have been found willing to undertake this loan upon any terms."

That is perfectly true, from negotiations which had gone on before, is it not, Mr. Lamont, that the British would gladly have given Morgan & Co., or any other bankers. the collateral that Secretary McAdoo was demanding in his negotiations? That cannot be doubted, can it?

Mr. LAMONT. I cannot answer a general question of that kind.

Senator CLARK. The negotiations indicate a great desire on their part to float a loan at one time.

Mr. LAMONT. Whenever they had to issue a loan in this country, of course, they furnished the collateral subsequent to October 15, 1915, necessarily through——

Senator CLARK. What I am getting at is, do you think it was unreasonable on the part of Secretary McAdoo toward the British Government to want them to deal as generously with the American Government in the matter, at least at a time when they were receiving hundreds of millions of dollars from the United States, as generously as they would have dealt with Morgan & Co. or other private bankers?

---

[1] There was no exhibit marked "No. 3038."

Mr. LAMONT. Not at all; I thought his message was very strong and clear.

Senator CLARK. I thought so, too.

Senator LAMONT. We felt at the time the very same way.

Senator CLARK. I will now offer a cable from Mr. Lamont to Mr. Grenfell in London, dated January 26, 1918, for appropriate number.

(The document referred to was marked "Exhibit No. 3040", and appears in full in the text.)

Mr. LAMONT. This was a message intended for Lord Reading.

Senator CLARK. Yes. It states [reading]:

61473. Denkstein. For E. C. Grenfell. 61353.

If Lord Reading is available, I wish you would show him our 61200 and add the following personal message from me:

I did not notice that heading [continuing reading "Exhibit No. 3040"]:

Message begins: Our hope as expressed towards end 61200 that all questions could be handled without difficulty is apparently not being realized. Without wishing to do any injustice to Sir Hardman Lever, whose capacity and courage have always commanded our admiration, I fear that his attitude in this matter of handling the securities to be released may be somewhat rigid, and that he is failing to urge upon the Chancellor a policy of being extremely broad in its attitude to Federal Treasury on this point. Certainly, I do not wish to urge upon Chancellor any attitude not comporting with the dignity of the British Treasury, yet I am perfectly certain that the best policy for Treasury to adopt would be, if expressed in words to the Federal Treasury, the following:

"We are, of course, completely dependent upon you for our monthly advances; therefore, whatever requests that you make in regard to the handling of our securities in America as may be released in the future must be acceded to by us, and we are very glad to meet your ideas, knowing perfectly well that you will not wish us to do anything unworthly of our own general position. Certainly, with respect to the handling of these securities, you should have the utmost freedom consistent with any obligation that we may be under with regard to them."

At the risk of repetition, I have a pretty clear idea that if Sir Hardman Lever had the authority and were able to say to the Treasury:

"Certainly, do what you like, and any solution that you make will be satisfactory to us; what you want is the control of the disposition of the securities. This we are quite willing to leave in the hands of Secretary McAdoo, according to a method satisfactory to him, although we should greatly prefer that it should not take the form of a formal pledge in the nature of a collateral-loan agreement."

The result would be that our Treasury would turn around and make no solution of the questions that was not satisfactory to the British Treasury. By reason of failure to agree on this end of the program, the delay in completion of the plan is likely to upset it completely. The institutions associated with us in the commitment of our $150,000,000 of United States Treasury certificates are becoming restive and the whole plan is likely to drop. Further, the Federal Treasury officials at Washington are beginning to feel hurt and are likely to wind up the whole negotiation and abandon the theory of trying to pay off the call loan.

I suppose that necessity exists for working out some written formula covering the questions at issue, but if further delay is incurred in working out this formula, I think we might just as well throw up our hands on the whole plan. It is conceivable that it is far more important to Great Britain's larger interests to have our Treasury officials feel that they have had their way and that Great Britain has trusted completely in their sense of fairness than it is to have the British Treasury be completely satisfied as to some formula to be written out beforehand concerning the handling of a few million dollars of securities. Message ends. T. W. LAMONT.

Now, Mr. Lamont, that cablegram is a very broad-minded and high-minded cablegram; but I must comment that it does not quite bear out the assertion heretofore, and many times made by the partners of Morgan & Co., that they had nothing to do with matters of high politics and intergovernmental affairs. That is the kind of cablegram that might be sent by an ambassador to the nation to which he was accredited, and giving very sound advice, as I say.

Mr. Lamont. Senator Clark, you are very complimentary, I am sure, and I appreciate that; but, you see, this had to do with a transaction in which we were very much concerned.

Senator Clark. Yes, sir; I understand that.

Mr. Lamont. We had pledged ourselves, with our associates, to buy $150,000,000 of United States Treasury certificates; and we thought it was important, as Secretary McAdoo had made plain, that the plan should be carried out. Therefore, if there was anything possible that we could do to facilitate it we were bound to do it; and if we thought the British representative was being a little stuffy it was our bounden duty to do it.

Senator Clark. I repeat that you were taking a statesmanlike method of doing it, Mr. Lamont.

Mr. Lamont. Thank you.

Senator Clark. I offer another cablegram from Mr. Lamont to E. C. Grenfell, in London, under date of January 28, 1918. It reads [reading "Exhibit No. 3041"]:

> 61504. 61473. Denkstein. For E. C. Grenfell: If Lord Reading is unavailable, I am very doubtful as to the advisability of presenting this message to any Treasury official. Sir Hardman Lever is in Washington. I have not told him of this message, which I intended as purely personal and private to Lord Reading. We regard the situation, however, as of serious importance. T. W. Lamont.

(The document referred to was marked "Exhibit No. 3041" and appears in full in the text.)

Senator Clark. Then, on January 28, 1918, a letter from Sir Hardman Lever, signed by A. Bonar Law, the Chancellor of the Exchequer, which reads as follows [reading "Exhibit No. 3042"]:

> I desire you will communicate following as a personal message from me to the Secretary of the Treasury.
>
> Lever has kept me fully informed as to progress of negotiations. I understand proposals to be as follows:
>
> 1. Dollars reimbursed to us for requisitioned ships will be used for reduction of call loan.
>
> 2. United States Treasury will make special advance up to amount required to enable us to meet February 1 maturity.
>
> 3. I am not quite clear as to meaning of what I understand to be condition of two, namely, that Secretary of United States Treasury "To be subrogated to rights of holders of February 1 maturity." But I presume this means that securities now held in trust for holders of 1-year notes should be held for future as security for advance by United States Treasury.
>
> I so much appreciate assistance you are offering us in dealing with great anxiety of February 1 maturity that I feel difficulty in objecting to above condition if you think it will help you in meeting your political difficulties of which you alone can be judge. But I am afraid pledging of British owned securities to United States Treasury is bound to cause unfavorable comment in this country and that I shall have to face British Parliamentary crisis for consenting to a precedent for which it will be pointed out there is no parallel in our own dealings with Allies. I trust, therefore, that this aspect of matter will be borne in mind before a final decision is reached. Would it not be possible for you to nominate some bank or group of banks who would

nominally take over both loan and collateral making your own arrangements with banks so that transaction would be in effect on account of United States Treasury? This would obviate direct pledging of securities to United States Treasury and might thereby meet both your and my political difficulties.

(The document referred to was marked "Exhibit No. 3042" and appears in full in the text.)

Mr. LEFFINGWELL. Senator, may I comment that that message, which as I recall it is dated January 28, 1918——

Senator CLARK. Yes, sir.

Mr. LEFFINGWELL (continuing). Clearly indicates that by that time Bonar Law had come to understand that the United States Treasury was insisting only upon subrogation with regard to the February 1 maturity, and was not insisting upon subrogation as to ship money.

Senator CLARK. I think Secretary McAdoo's letter, which I will put in the record in a minute, indicates that while he was going to pay the February maturity, he was still insisting on both.

Mr. LEFFINGWELL. I only meant to point out what was in the mind of the Chancellor of the Exchequer when he wrote this letter of January 28.

Senator CLARK. That may be, but undoubtedly what was in Secretary McAdoo's mind was subrogation as to both, and finally as we will see in a minute, Bonar Law wrote him to use his own judgment.

On January 29, 1918, Mr. Crosby in Paris cabled Chancellor Bonar Law [reading from "Exhibit No. 3043"]:

> Have just learned by wire from Cravath of cable addressed to me by Secretary McAdoo expressing surprise and regret that British collateral now in New York is not made available to protect a loan arranged in form the particulars of which are not known to me, but which represents balance due by your Government on February 1 maturity and Morgan overdraft after applying approximately 90 millions ship money. If the conditions of pledge of collateral are objectionable, and if that is the reason for refusal of collateral, I suggest that transaction might be put through to save the situation on February 1 with proposal on your part that these conditions might be revised after that date even though this would not bind those to whom the pledge is made. It is not improbable that if the conditions are judged by Secretary McAdoo as being harsh that modification might be obtained later.

In other words, Secretary Crosby is suggesting to Bonar Law that he accede to Secretary McAdoo's demand as to subrogation as to the overdraft, which included the ship money, and as to the February 1 maturities, in the hope that later McAdoo might let him off, which is somewhat the suggestion made by Mr. Lamont from a different standpoint, that that might be done [continuing reading]:

> It would be most unfortunate if the transaction which has presumably been negotiated between your representatives, those of the Treasury of the United States, and the New York bankers should fail, in which case at the last moment you might think it necessary to appeal to our Treasury to meet the $100,000,000 due February 1. Being unaware of the details, I am telegraphing somewhat in the dark—

And so forth.

(The document referred to was marked "Exhibit No. 3043" and is included in the appendix on p. 9455.)

Then, on January 29, the same day, Mr. Cravath writes to Lord Reading and informs him it is necessary for him to go to the hospital, sending him Crosby's cable, and adds this suggestion on his own part [reading from "Exhibit No. 3044"]:

> What I hope the Chancellor of the Exchequer will do is this: Promptly cable Secretary McAdoo that he acquiesces in such arrangements as Secretary McAdoo regards proper for providing for the February 1 maturity, and the so-called overdraft (which includes Treasury bills), but, expressing an earnest hope that some suitable arrangements will be made by which, hereafter, the loan can be refinanced and the surplus collateral made available for other purposes of the British Government. In case it should develop at any time that changed financial conditions would render such a transaction possible.

(The document referred to was marked "Exhibit No. 3044" and is included in the appendix on p. 9456.)

Mr. **Leffingwell.** You see, Mr. Cravath was misinformed there, because he speaks of arrangements providing for the overdraft and the Treasury bills.

Senator **Clark.** Yes, sir; but neither one of them was misinformed as to what McAdoo wanted.

Mr. **Leffingwell.** Yes, sir; they were. Cravath was talking about providing for the overdraft and the Treasury bills, which was a matter of $400,000,000, whereas McAdoo was not talking about anything but paying off the ship money.

Senator **Clark.** McAdoo expressed himself very frankly and freely in a letter of January 29, 1918, as follows [reading "Exhibit No. 3045"]:

> AMEMBASSY, *London.*
>
> Urgent. Please deliver the following telegram from Secretary McAdoo to the British Chancellor of the Exchequer and furnish a copy thereof to Crosby:
>
> Quote. I have received your personal message with respect to the February first maturity and the ship money. In view of what you say as to the situation which would be created in Great Britain if you should assent to my desire to be subrogated to the position of pledgees in respect to the collateral of these loans and in view of your statement that there is no parallel for such an arrangement in your own dealings with the Allies, I am constrained, though with great reluctance, to defer to your wishes in this matter, although I cannot alter my judgment that the course proposed by me is wise and right in aid of the general situation and would have been welcomed in this country as indicating a readiness on the part of Great Britain to deal not less liberally with the Government than with the banks, especially when the sole purpose of the United States in suggesting that it have the use of such collateral is to promote and serve the common cause and for no other. The suggestion you make as to handling the transaction indirectly through a bank or group of banks is not feasible under our own laws. I have received from the British representatives here certain assurances in respect to the securities owned or controlled by the British Government. These assurances are more restricted in form than I had expected. I am confident that your Government will cooperate with me to the full extent in your power, whether in respect to securities owned or controlled by the British Treasury or otherwise, both here and elsewhere, in meeting the financial burdens in aid of the common cause, however and whenever these burdens may have their inception, and thereby facilitating the financing of the requirements of Great Britain and assisting in lightening the almost intolerable burden which the war is placing upon the Treasury of the United States. Unquote.
>
> (Based on letter dated Jan. 29, 1918, from Mr. McAdoo.)
>
> (s) LANSING.

(The document referred to was marked "Exhibit No. 3045" and appears in full in the text.)

Senator **Clark.** Then we come to a letter dated January 30, 1918, being from Mr. Leffingwell to Sir Hardman Lever, simply confirming instructions which are contained in the letter of Mr. McAdoo of the day before, and which I will not take the trouble to read except to say that he again uses the phrase that the Secretary was constrained to yield in the matter, and it refers briefly to certain Japanese loans and Danish loans on which the British are receiving funds. I will place that letter in the record.

(The document referred to was marked "Exhibit No. 3046" and is included in the appendix on p. 9456.)

Senator CLARK. The next exhibit is a cablegram dated January 30, 1918, from Crosby to McAdoo, which reads as follows [reading "Exhibit No. 3047"]:

> 8452, JANUARY 30, 11 P. M. From Crosby to McAdoo: Difficulty here over arrangement proposed by you for dealing with February first maturity caused by misunderstanding. Chancellor's today's cable to you seems to meet situation fully and leave you free to deal with matter as you think best. Chancellor anxious that any announcement shall make plain that arrangement is a special one providing, in effect, for continuing previous secured loans, thus explaining use of collateral and that United States Treasury is not changing its policy of not requiring collateral for its regular loans to Great Britain, this especially desired because British Government has not received collateral for loans to Allies. Chancellor also hopes arrangement will take such form that with our approval surplus collateral may be available hereafter for use in promoting common ends. PAGE.

(The document referred to was marked "Exhibit No. 3047" and appears in full in the text.)

Senator CLARK. Then another exhibit, from Mr. Crosby in Paris to Mr. Cravath in London, which reads [reading]:

> Wired last night to Chancellor—

Which refers to the cablegram I just read.

Mr. LEFFINGWELL. Was Mr. Crosby in Paris when the one you just read was sent?

Senator CLARK. Most of Mr. Crosby's communications at that time were sent through Ambassador Page in London, and would be transmitted that way.

Here is the cablegram or telegram from Crosby to Cravath, dated January 30, 1918, in which it states [reading "Exhibit No. 3048"]:

> Regret exceedingly your illness. Wired last night to Chancellor and am wiring this morning to Reading concerning loan urging that acquiescence be given to conditions negotiated in New York and assume that refusal has thus far been based upon some conditions entering into the pledging of collateral, probably by Keynes. Have suggested that possibly Secretary of Treasury, after February first, might modify these conditions if he considers them unfair, but that it would be most unfortunate if at the last moment appeal should be made to Treasury to take care of February first maturities.

Apparently Mr. Crosby did not realize that Secretary McAdoo on the day before had sent this message to Mr. Bonar Law [continuing quotation]:

> I must stay here two or three days longer in order to obtain any result from my work with Bliss and others concerning cooperation in matter of munitions. You know how difficult the task is, but am hopeful of some good results. Best wishes for rapid return to health.

(The document referred to was marked "Exhibit No. 3048" and appears in full in the text.)

Senator CLARK. Then on February 2, 1918, Secretary McAdoo, through Secretary Lansing, communicates the following to the

British Chancellor of the Exchequer [reading from "Exhibit No. 3049"]:

> As indicated in my message of January 29, I have felt constrained to meet your views as presented to me by your representatives here. Mr. Crosby was mistaken in supposing that the proposed arrangements make provision for the overdraft beyond what the ship money would suffice to pay.

That is in accordance with your view, Mr. Leffingwell [continuing reading]:

> On the contrary, I am obliged to ask that such moneys as may be made available to your Government in the United States by the Japanese Government or the Danish Government or by shipments of gold shall be applied in reduction of your demands for current purposes rather than to retirement of capital liabilities.

That, I take it, was an indication that he was going to punish the British for not acceding to his demands as to subrogation.

This is to Secretary Lansing and it states further [continuing reading]:

> May I ask you to have a copy of the foregoing message delivered to Mr. Crosby together with the following:
>
> "Treasury No. 70. Your cable of January 30 and your no. 58 received. Simultaneous therewith personal message from Chancellor of the Exchequer whose understanding apparently quite different from yours. British Embassy will hand you copy my reply to the Chancellor. Ask Chancellor to give you copy of his cable to me which apparently shows that he still is unwilling to subrogate me to rights of pledgees with respect to collateral. In addition to credit of $185,000,000 previously established for British Government, $65,000,000 was advanced January 31, making total of $250,000,000 for January. For February, $210,000,000 credit has been established, of which $30,000,000 was advanced February 1. With these sums British Government is taking care of February first maturities. British Government also received February 1 from Shipping Board $80,794,000 for ships, which was applied on overdraft. Expect that moneys received by British from Japanese and Danish Governments shall be applied to current expenditures and not to retirement of capital indebtedness. British representatives here indicate possibility of having to ask for $40,000,000 this month in addition to $210,000,000 credit established but this question is being held in abeyance and my judgment is that nothing further will be needed for February.

(The document referred to was marked "Exhibit No. 3049" and is included in the appendix on p. 9457.)

Senator **Clark**. Next is a letter from Sir Hardman Lever to Mr. Leffingwell, which will be placed in the record; the only pertinent part of which deals with this particular discussion as follows [reading from "Exhibit No. 3050"]:

> In accordance with your letter the sum of $80,794,041.65, representing payment for the ships requisitioned from the British Government, has been applied in reduction of the call loan or overdraft, while a sum of approximately $92,000,000 is being applied to meeting the secured notes of the British Government which matured on February 1.

Mr. **Leffingwell**. What is the date of that?

Senator **Clark**. The 5th of February 1918. He refers to your letter of January 30.

Mr. **Leffingwell**. This is an official report from him of what was done with the money which they borrowed?

Senator **Clark**. Yes, sir.

(The document referred to was marked "Exhibit No. 3050" and is included in the appendix on p. 9458.)

Senator **Clark**. Then a cablegram for Mr. Lamont from Grenfell, London, dated January 29, 1918, which reads:

> 48840. Denkstein for T. W. Lamont: 61473, 61504. As Lord Reading was not available, I considered advisability communicating your message to Treasury and settled not to do so, so that you and I are in accord.
>
> I propose, however, if opportunity should occur today or tomorrow, to take up the matter with Bradbury, but not to show your cable.
>
> I fully realize the importance of the matter as regards British Treasury, but as Sir Hardman Lever in constant communication with Treasury, it is not always wise for me to bring pressure support our views.

(The document referred to was marked "Exhibit No. 3051" and appears in full in the text.)

Senator **Clark**. A cablegram from Mr. Lamont to Grenfell in London, dated January 29, 1918, reading as follows [reading]:

> 61587. Denkstein. For E. C. Grenfell. 48839. 48840.
>
> Have just received word from Washington that all difficulties have been adjusted. We therefore expect to put the transaction through promptly.

(The document referred to was marked "Exhibit No. 3052" and appears in full in the text.)

Senator **Clark**. I take it, Mr. Lamont, that was on the basis of Secretary McAdoo's cable of January 29?

Mr. **Lamont**. About the $150,000,000. I assume that it had to do with the February 1 maturities and our undertaking to buy $150,000,000 of Treasury certificates.

Senator **Clark**. That was determined by Secretary McAdoo's cablegram of January 29 to the Chancellor of the Exchequer.

Mr. **Lamont**. I expect that was it.

Mr. **Brown**. I suggest that we put in, with respect to Mr. Crosby's misunderstanding, three cables which will clear it up. They do not need to be read but just entered in the record.

Senator **Clark**. These are three cablegrams, one dated January 30, 1918, the second dated January 31, 1918, and the third one dated February 1, 1918, from Mr. Crosby, explaining the mistake he was under with respect to the payment of overdrafts, which subject has been mentioned heretofore.

(The documents referred to were marked "Exhibits No. 3053, 3054, and 3055" and are included in the appendix on pp. 9458 and 9459.)

Senator **Clark**. The next exhibit is a cablegram from Mr. Lamont to Mr. Grenfell, dated February 1, 1918, which reads [reading "Exhibit No. 3056"]:

> 61709. For E. C. **Grenfell**: 48839. Whole transaction referred to has gone through smoothly today, and call loan has been reduced by approximately $80,000,000. Sir Hardman Lever handled matter in Washington very satisfactorily from all points of view, and our belief is that agreement finally arrived at between him and Federal Treasury should be very satisfactory to all concerned.

(The document referred to was marked "Exhibit No. 3056" and appears in full in the text.)

Senator **Clark**. That $80,000,000 was the ship money, Mr. Lamont, was it not?

Mr. **Lamont**. Yes, sir.

Senator **Clark**. A statement from Morgan & Co. as to the state of the British accounts in their hands at that time, being a cable to London dated February 1, 1918. It is offered for the record.

(The document referred to was marked "Exhibit No. 3057" and is included in the appendix on p. 9460.)

Senator CLARK. The next exhibit is a letter from Morgan & Co. to Morgan, Grenfell in London, setting forth approximately the same statement.

(The document referred to was marked "Exhibit No. 3058" and is included in the appendix on p. 9461.)

Senator CLARK. Then a cablegram from Crosby to McAdoo, dated February 5, 1918, reading as follows [reading "Exhibit No. 3059"]:

> For McAdoo from Crosby:
>
> Am convinced Chancellor has intended all along to leave you free to deal as you thought best with February first maturity and British securities in America. Believe that the failure of his cables to make this entirely clear due to his preoccupation with parliamentary duties and manner in which matter was handled by subordinates especially in Washington. Unfortunately during discussion last week I was in Paris and Cravath confined to house with sore throat which rendered him almost speechless. Reading fully informed. PAGE.

(The document referred to was marked "Exhibit No. 3059" and appears in full in the text.)

Senator CLARK. Now bearing in mind that Secretary McAdoo's last communication to Bonar Law was the statement that he was constrained, under duress, to pay these maturities on February 1, but renewing his assertion that he was entitled to subrogation both as to the collateral on the February 1st maturities and the ship money, we come to a cablegram dated February 6, 1918, or rather, a letter signed by Richard Crawford, to Secretary McAdoo, communicating a cablegram. It states [reading "Exhibit No. 3060"]:

> I am directed to communicate to you the following personal message from Mr. Bonar Law, the Chancellor of the Exchequer:
>
> "Further telegram received and conversation with Cravath shows that my telegram of January 30 may have been misunderstood. I intended last paragraph to mean that I left myself entirely in your hands. The last thing I should have thought of would have been that I should make conditions as to financial assistance accorded us by the United States Government. You have to bear great burden of Allied finance in the United States and you rightly rely on our cooperation in every way and to leave you a free hand as to proper solution of current problems.
>
> "I am giving instructions that you are to be subrogated to lien of former lenders upon securities previously pledged to holders of 1-year notes and that these securities as well as other securities pledged to secure overdraft be dealt with according to your instructions."
>
> Believe me, my dear Mr. Secretary,
>
> Yours very sincerely,

(The document referred to was marked "Exhibit No. 3060" and appears in full in the text.)

Senator CLARK. Apparently Bonar Law followed the suggestions made separately by Mr. Lamont and Secretary Crosby and Mr. Cravath and placed himself unreservedly in Secretary McAdoo's hands, both as to securities back of the February 1 maturities and the securities back of the demand loan. Is not that correct?

Mr. LEFFINGWELL. The last paragraph of that letter, Senator, to my mind, is just as clear as a bell.

Senator CLARK. It is just as clear as a bell to mine, too, Mr. Leffingwell.

Mr. LEFFINGWELL. The Chancellor says two things: The first part is the general expression of leaving himself in the Secretary's hands, and the last part is as plain as language can be, and it says: [reading from "Exhibit No. 3060"]:

> You are to be subrogated to the lien of the former lenders upon securities previously pledged to holders of the 1-year notes and that these securities as well as other securities pledged to secure overdraft be dealt with according to your instructions.

There is the clearest possible separation, Senator, between the securities pledged for the 1-year notes, to which we were to be subrogated——

Senator **Clark.** According to your own notion, all that Secretary McAdoo had to do was to order the securities subrogated.

Mr. **Leffingwell.** No; Senator. The subrogation concerned securities for the 1-year notes, and there was a general agreement that all securities are to be dealt with in accordance with his instructions. That does not mean that the Secretary of the United States Treasury can appropriate the securities of the British Government. It means what we have all the time been trying to explain, that the British Treasury was going to comply with the views of the American Treasury as to the best use that could be made of the unsubrogated securities in the common cause.

Senator **Clark.** Let me ask you, Mr. Rathbone, what did you have in mind on the 14th of February 1918, when you drew up the form of a letter for Mr. Leffingwell's approval, in which you assert the purposes to be [reading from "Exhibit No. 3061"]:

> to insure the subrogation of the United States Treasury to the rights as a creditor in respect of the securities pledged to secure the 1-year secured gold notes of the British Government, which were paid on or about February 1, 1918, and the securities, which were released on or about that date, from the charge of the call loan or overdraft * * *.

There were no securities released from the charge of the call loan.

Mr. **Rathbone.** It is pretty hard to ask me to explain what I did that many years ago.

Senator **Clark.** That is a form letter which you prepared for Mr. Leffingwell's approval. It was evidently the position of the Treasury officials that the machinery was to secure subrogation. I admit that the machinery never went into effect, either as to the February 1 maturities or the others, and the actual pledge was never made, for some reason which is still unaccountable.

(The document referred to was marked "Exhibit No. 3061" and is included in the appendix on p. 9462.)

Mr. **Lamont.** You quoted me, advising our firms in London to try to make arrangements as to February 1 and subrogate as to ship money. I did not advise that.

Senator **Clark.** What you advised them to do——

Mr. **Lamont.** Just a minute.

Senator **Clark.** Excuse me.

Mr. **Lamont.** I did not advise them that. The telegram of mine, which you were good enough to read, advised them in very general terms to put themselves in the hands of Secretary McAdoo.

Senator **Clark.** If that is a correction, Mr. Lamont, I stand corrected. I did not mean to put any words in your mouth which you had not already said.

Mr. **Rathbone.** Senator, answering your inquiry, let me say that my understanding of the Chancellor's cable, confirmed also by Mc-

Adoo's acknowledgment of it, was exactly the same as Mr. Leffingwell has stated.

Senator **Clark.** Mr. McAdoo's acknowledgment was in the same terms, almost verbatim, as the Chancellor's.

Mr. **Rathbone.** Yes, sir.

Mr. **Leffingwell.** Excuse me a second. Except, Senator, that the Secretary's acknowledgment contained an additional sentence which was that he appreciated very much the Chancellor's acquiescence in his suggestion, and that these securities would be used for your and our countries' needs, indicating it is in the common cause, rather than a use of them as collateral securities.

Senator **Clark.** That is what he had always insisted in connection with all the subrogations, Mr. Leffingwell.

Mr. **Leffingwell.** I wanted to point out the distinction between the rights which Secretary McAdoo conceived himself as acquiring with respect to these securities, and the rights which we were speaking of in an early cable, where he spoke, or someone spoke, of the fact that the British Government would have been glad to have given any bankers who could have arranged to meet the February 1 maturity the same rights which he was asking for in respect to the February 1 maturity.

Now, of course, the British Government would not have given anybody any rights to collateral for a payment made with their own money, owing to them, and there is an important distinction, sir, between the character of the two payments. And I think a very important distinction was present in the mind of the British Chancellor of the Exchequer and the mind of the Secretary of the Treasury, when those letters were exchanged, between the subrogated securities, which related to the February 1 maturity and the whole lot of securities, as to which he finally gave satisfactory assurances instead of the very restricted assurances which Sir Hardman Lever had offered, which were most unsatisfactory to Secretary McAdoo. He said:

> These restricted assurances are most unsatisfactory. We do not want to borrow on collateral. What we want is the use of collateral in neutral markets and all over the world, where it will most help the Allied cause.

And those restricted assurances were most unsatisfactory, as McAdoo points out in his cable to the Chancellor.

The Chancellor said:

> You misunderstand me. I meant to put myself in your hands.

Senator **Clark.** Sir Hardman Lever never referred to any subrogation of any sort.

Mr. **Leffingwell.** The letter which you read into the record contained no subrogation, but contained something with respect to the use of collateral.

Senator **Clark.** I offer for the record Senator McAdoo's letter, which I won't read, if nobody objects.

Mr. **Leffingwell.** I interrupted Mr. Rathbone.

Senator **Clark.** I beg your pardon, Mr. Rathbone.

Mr. **Rathbone.** My understanding is exactly as Mr. Leffingwell has explained it, and this was a communication between employees of the department. I ought to have said, "And as to the securities which were released on or about said date."

That is undoubtedly what I had in mind, the use of the securities, their release from the loan.

Mr. **Brown**. But you say, Mr. Rathbone [reading from Exhibit No. 3061"]:

> or at the option of the Secretary of the Treasury the use of such securities in such manner as he shall approve * * *.

Mr. **Rathbone**. Yes.

Senator **Clark**. Evidently, Mr. Rathbone, you thought the Government was entitled to subrogation, because you say [reading from "Exhibit No. 3061"]:

> To ensure the subrogation of the United States Government to the rights of the creditor in respect of the securities pledged to secure the 1-year secured gold notes of the British Government, which were paid on or about February 1, 1918, and the securities, which were released on or about said date, from the charge of the call loan or overdraft, or at the option of the Secretary of the Treasury the use of such securities in such a manner as he shall approve. * * *

In other words, the provision for segregation or at the option of the Secretary of the Treasury be used. In other words, that is the form proposed by you, which evidently indicates your view of the matter, which would indicate a layman's view, such as mine, at this late date, is not out of line with that of an eminent Assistant Secretary of the Treasury at that time.

Mr. **Rathbone**. I was not an eminent Assistant Secretary of the Treasury at that time. I had been in the Treasury about 2 weeks, and I was sending a memorandum to Mr. Leffingwell on the subject, and it is a little difficult to say how your mind was formulated as to a certain thing.

I do say this without any exception or without any hesitation: You have been reading from cables from the Chancellor of the Exchequer, who said he was going to send instructions to his representatives to do certain things. There were any number of conferences that the Treasury officials had, probably Mr. Leffingwell, because he was an Assistant Secretary of the Treasury, and I was not anything, and just sat in listening to them, making comment maybe once in a while, which defined absolutely what the so-called subrogation was, and to what it applied.

And, as a result I can say very distinctly, so far as Secretary McAdoo was concerned, Mr. Leffingwell and myself, there was no doubt but what we understood what was the agreement between the United States Treasury and the British Treasury in regard to that matter. The term "subrogation" is a very loose term. What it was worked out to mean with the agreement of both Treasuries was an agreement on the part of the British Government, if and when we requested it, to pledge—an agreement to pledge, not a pledge.

Senator **Clark**. I understand that was your instruction, that of Mr. Leffingwell and Mr. Davis later, which I am coming to in just a few minutes.

Mr. **Rathbone**. An agreement to pledge the securities, if the Secretary of the Treasury requested it as collateral to the loans of the United States in certain definite amounts.

There was not a pledge for several reasons. One of the reasons was given in the cable of the Chancellor of the Exchequer that it would hurt British credit.

Another reason was that, if there had been a pledge of those securities——

Senator CLARK. It would have taken an act of Congress to release them.

Mr. RATHBONE. It would have taken an act of Congress to release them, and maybe they ought to have been used.

Senator CLARK. That was the argument used, as I will presently show in connection with this not being a pledge but as a promise to make a pledge.

Mr. RATHBONE. A promise to make a pledge; yes, sir.

Senator CLARK. We will come to that in a minute, but let us finish with this thing. Apparently Mr. Leffingwell, who was an eminent Assistant Secretary at that time, if you were not—I think you underestimate your own importance—but Mr. Leffingwell was not apparently in doubt on the subject of the subrogation for the demand-loan release, because he put in a proposal: "Let us see what Reading will propose."

Mr. LEFFINGWELL. That was a pretty good suggestion.

Mr. RATHBONE. It would not have affected the Treasury, if we had gotten them the way we thought it would.

Senator CLARK. You would not have taken that extra sock at your Allies?

Mr. LEFFINGWELL. Senator, just a minute before you proceed, in connection with Mr. Rathbone's comment in relation to that memorandum.

Senator CLARK. We are at a later stage.

Mr. LEFFINGWELL. I understood him to say he meant "as to."

Mr. RATHBONE. That is unquestionably correct, but it does not say that.

Mr. LEFFINGWELL. He meant as to those securities such and such was the case.

Senator CLARK. That does not change the sense of the sentence.

Mr. RATHBONE. I should think it would.

Senator CLARK. Apparently other gentlemen were making the same mistake. Here is a memorandum of conversation with Mr. Blackett, of the British Treasury, signed by Mr. Rathbone, on February 23, 1918, which said [reading from "Exhibit No. 3062"]:

> Mr. Blackett promised to furnish a statement of the collateral now held under the overdraft; the list formerly submitted is not accurate owing to sales of securities since May. He stated that while there was no right to release collateral held under the over-draft as payments were made on account of the same, Morgan & Co. had agreed, however, to deliver a fair proportion of this collateral. He also stated that under the arrangements made, the collateral held under the overdraft was not to be sold for the present. The United States was to be subrogated to the rights of the creditor in respect to this collateral, and the collateral held under the obligations paid February 6 (a list of which Mr. Blackett agreed to furnish), in accordance with the arrangement made. He said he had not worked out any plan in respect to such subrogation, as Lord Reading intended to discuss that matter.

Does that refer to this transaction? I am asking you for information. It would seem that that fitted in with the view taken apparently by Mr. Rathbone at the time.

Mr. RATHBONE. I am not sure, but I do not think that is my memorandum.

Senator CLARK. It is signed by your initials.

Mr. RATHBONE. Are you sure it is "A. R." and not "A. S."?

Senator CLARK. It is taken from the Treasury files.

Mr. RATHBONE. Have you got the original?

Senator CLARK. No; but this is taken from the Treasury files [handing copy to witness].

Mr. RATHBONE. It may be, but I do not think it was.

Senator CLARK. The point is, gentlemen, whatever may be the fact as to subrogation as to ship money on the demand loan there is no dispute there as to the fact that there was subrogation as to it.

Mr. LAMONT. On the February 1 maturity?

Senator CLARK. On the February 1 maturity?

Mr. LAMONT. You said the demand loan?

Senator CLARK. I said whether it be true that there was subrogation as to the ship money, on the demand loan there is no question that there was subrogation as to the collateral back of the February 1 maturities.

Mr. LAMONT. Quite.

Senator CLARK. So that the question as to subrogation is really a question, as I said earlier in the evening, a question of amounts, more than anything else.

(The document referred to was marked "Exhibit No. 3062" and is included in the appendix on p. 9462.)

Mr. LEFFINGWELL. Before you go on, Senator, may I ask permission to read, if you will, into the record at this point three cables or letters exchanged between Shipping Board and the British Government, represented by Arthur Balfour?

Senator CLARK. What is this, Mr. Leffingwell?

Mr. LEFFINGWELL. I was going to ask your permission just to finish about the ship money.

Senator CLARK. I will be glad to have you.

Mr. LEFFINGWELL. With your permission, I wanted to offer for the record certain communications exchanged between the United States Shipping Board and Mr. Arthur Balfour, who was the British Foreign Minister, who visited this country at the head of a mission at the beginning of the war. It is on page 28 of the little pamphlet of reprints from the Foreign Relations of the United States, 1917, and at the appropriate time I was going to take advantage of the permission the chairman gave us to submit for the record any documents which seemed to be useful.

Senator CLARK. I would be glad to have you insert it, Mr. Leffingwell, or read it.

Mr. LEFFINGWELL. If I may read just a passage or two.

Senator CLARK. I would be glad to have you do it.

Mr. LEFFINGWELL. Because I think it throws a very real light upon the nature of the problem which Secretary McAdoo found himself confronted with in connection with the subrogation he had asked for in relation to the ship money, as he insisted upon it.

This is a personal letter from Mr. Arthur Balfour, who I scarcely need to say was not only the British Foreign Minister but probably the most eminent of living British statesmen. This is dated August 21, 1917, 5 months before the February 1 maturity [reading from "Exhibit No. 3063"]:

MY DEAR AMBASSADOR: When I was in the United States the question was raised as to whether the shipping under construction in American yards on British account should be taken over by the American Government or should

> remain in the ownership of the country for which it was being built. Mr. Denman, at that time head of the Shipping Board, raised this point in the course of a conference at which both he and General Goethals were present which the British Government had adopted; his line of argument being that British orders occupied all the yards in the United States. * * *

Then, skipping down toward the end, with your permission, to save time, this being a cabled letter and the argument very full, it states [continuing reading:]

> From the very nature of the case, the largest losses in merchantile shipping have been borne by Great Britain. It is on Great Britain, in the main, that the Allies have relied for the maintenance of the sea-borne traffic on which not merely their capacity for fighting but their very existence depends. It is on Great Britain that the full brunt of the submarine campaign has fallen. Our losses have been heavy, and unless we obtain the ships now under construction for us in America we cannot easily tide over the critical period which must elapse before our own extended shipbuilding program bears its full fruit.
>
> We should, therefore, feel much gratified if the United States Government thought it consistent with the claims of their own national interests to allow the ships now building for us in America to remain in their present ownership, though for the reasons given above we shall not press the point. We rely—as I said at Washington—on their justice and good will.

(The document referred to was marked "Exhibit No. 3063" and is included in the appendix on p. 9465.)

Mr. LEFFINGWELL. Next is a letter or statement communicated by the Chairman of the Shipping Board, who by that time must have been Mr. Hurley, if I remember correctly, dated at Washington. September 7, 1917 [reading from "Exhibit No. 3064"]:

> After giving very careful thought and consideration to Mr. Balfour's views, the Chairman of the Shipping Board has made the following reply to the Secretary of State, which represents the views of this Government: * * *

That was a very serious matter, and it is there explained that the Shipping Board insisted on taking over those ships.

(The document referred to was marked "Exhibit No. 3064", and is included in the appendix on p. 9466.)

Mr. LEFFINGWELL. The third is Mr. Balfour's reply, which begins on page 633 with the statement [reading from "Exhibit No. 3065"]:

> His Majesty's Government accept without question the decision of the United States Government to requisition all vessels building in American shipyards, including those building to British orders.

Then he goes on to say again the reasons why the United States ought not to take their ships, but he maintains the position that it is accepted without question.

(The document referred to was marked "Exhibit No. 3065", and is included in the appendix on p. 9467.)

Mr. LEFFINGWELL. There are about two or three pages of that last exhibit, and I only meant to ask permission to introduce it at this moment, because to me it suggests the reason why the Secretary very likely found it a little awkward to go all the way, in the view that the ship money was not payable absolutely and unconditionally to the British Government, or in the view that he was entitled to subrogation.

Senator CLARK. So far as the record shows, Mr. Leffingwell, he did protest to the bitter end, claiming he was entitled to subrogation.

Mr. LEFFINGWELL. Up to 2 days before the bitter end.

Senator CLARK. It was up there when he said [referring to "Exhibit No. 3039"]:

> I have got my head against the wall, and it will impair United States credit, and they are not fair enough to do the things, and I am going to pay the February 1 maturities, but I still say we ought to be subrogated not only with respect to the February 1 maturities but with respect to ship money.

That was his last word on the subject. The record from that time on changes, but it does not change the construction I have put on the record, namely, that he said he was entitled to have subrogation on ship money, but it is a question of amounts.

Mr. LEFFINGWELL. I understand you have said that I should put this into the record.

Mr. WOHLFORTH. If we can hold it and put it in the record at the end, it would be better, because we have different pieces of it.

The CHAIRMAN. Very well.

Senator CLARK. As soon as the question of maturities was concluded, efforts were again started for paying off the demand loan. I offer a letter dated February 14, 1918, from Mr. Lamont, signed "T. W. L.", addressed to Sir Hardman Lever, which reads in part as follows [reading]:

> It has seemed to us that it would be well for us to put this information in his hands, particularly to point out the amounts which this market has actually advanced to the British Government through the medium of this call loan since the United States dismissed the German Ambassador, so that if the Treasury at some future time has funds available for a further reduction of the demand loan, it will have ample basis for so doing on the ground of reimbursing advances made since the United States became, in effect, a belligerent.
>
> Won't you please let me know if there is any part of this that you would particularly like to have altered in any way.

(The document referred to was marked "Exhibit No. 3066" and is included in the appendix on p. 9468.)

Senator CLARK. There was in effect a contention, was there not, Mr. Lamont, that there had been running what amounted to an open account with one belligerent, and that you thought that the United States ought to assume that obligation from the time of the entries, if it had been shown that the entries had been made after the United States fell out with Germany?

Mr. LAMONT. No, sir; I should not draw that inference. I think it means exactly what it says. The occasion of von Bernstorff being handed his passport was, of course, a very striking matter, and I mention it here, but there is no contention that you indicate. This is to show the working of the demand loan, as the letter says, the amounts advanced by the British Treasury. I think that is about all there is to say.

Senator CLARK. I offer also the letter presumably enclosed with your letter to Sir Hardman Lever.

Mr. LAMONT. Yes; to see whether it checked with his own records.

Senator CLARK. Yes. It amounted to your contention the United States Government ought to pay off the demand loan.

Mr. LAMONT. Oh, not off. We never took the position where we could advise the United States Government what it ought or ought not to do. But it was explained here the other day the position of the demand loan was such—it was frozen so hard that it was our duty to try to get it unfrozen if we could.

Senator CLARK. That was the purpose of it, though. I will amend my language and say to induce the United States Government to pay off a demand loan.

Mr. LAMONT. Yes; and they always turned us down on it.

Senator CLARK. Very properly, in my opinion.

(The document referred to was marked "Exhibit No. 3067", and is included in the appendix on p. 9468.)

Senator CLARK. I now offer a memorandum by Mr. Davis for Mr. Leffingwell, dated May 20, 1918.

(The document referred to was marked "Exhibit No. 3068", and appears in full in the text.)

Senator CLARK (reading):

In your letter of January 30 to Sir Hardman Lever, in reference to February 1 maturities, you stated the following:

"In this connection and referring to our various talks concerning the loan of $40,000,000 in the United States which your Government is negotiating with the Japanese Government, and the balance of the Danish loan of $25,000,000, which I understand will be made available to your Government in New York from time to time in the next few months, the Secretary of the Treasury is of the opinion that in view of the very heavy demands which are foreshadowed for current purposes these sums, when made available to your Government, should be applied in reduction of those demands rather than of the capital liabilities of your Government in this country."

Under date of February 5, Sir Hardman Lever wrote, in part, as follows:

"I note that the Secretary of the Treasury is of opinion that the proceeds of the Japanese loan of approximately $40,000,000, and the balance (which will not be available until April) of the Danish loan of $25,000,000, should be applied for current outgoings rather than in reduction of capital liabilities. I have at once conveyed this opinion to the Chancellor of the Exchequer, and at the same time I am making further inquiries in regard to the possibility of bringing a small amount of gold from Canada."

Under date of May 4, Sir Hardman Lever enclosed a statement for the month of April, supplementing statements previously sent, which showed that $10,000,000 had been received from the Danish loan and $1,116,324.78 from proceeds of due bonds, called bonds, etc., and that $11,116,324.78 had been paid in reduction of call or demand loan.

It appears that $15,000,000 of Danish loan was probably almost entirely applied on amount of call loan before February 1 and also that the balance, or $10,000,000, was applied in April (without consultation, and in opposition to our understanding as expressed in the letter of Jan. 30).

Senator CLARK. I offer a letter dated May 23, 1918, from Sir Hardman Lever, financial secretary to the Treasury, to Mr. Leffingwell [reading "Exhibit No. 3069"]:

DEAR MR. LEFFINGWELL: I have your letter of May 20 regarding the statement supplied to you for the month of April, containing the receipt of the balance of the Danish loan and its disbursement. In reply I desire to amplify somewhat the statement sent you by adding that the balance of the Danish loan, namely, $10,000,000, was applied after very careful consideration in part payment of British Treasury bills maturing in the early part of April, in view of the difficulties of renewal owing to the Liberty Loan issue.

Lord Reading tells me he referred to this matter at an interview which he had with you on cognate questions at the end of March, and informed you that this $10,000,000 would be applied as above stated. It was one of various incidents discussed, and probably did not leave an impression upon your mind.

I am, my dear Mr. Leffingwell,

Yours very cordially and sincerely,

(The document referred to was marked "Exhibit No. 3069", and appears in full in the text.)

Senator **Clark**. I could not believe that you would not remember a discussion about $10,000,000, Mr. Leffingwell.

Mr. **Leffingwell**. Did you read my letter of May 20?

Senator **Clark**. No.

Mr. **Leffingwell**. That is an answer to a letter from me.

Senator **Clark**. Evidently it is. I do not seem to have the letter of the 20th. If you have it, I will be glad to put it in the record. I have Mr. Davis' memorandum.

Mr. **Leffingwell**. I am pretty sure we have it.

Senator **Clark**. I think your letter has been placed in the record.

Mr. **Leffingwell**. Did you read that this morning? I think you did read that.

Mr. **Brown**. Very likely.

Senator **Clark**. I am not sure I have it here, but I would be glad to get it, and if it is not already in the record we will put it in.

Mr. **Leffingwell**. It was a pretty short letter, calling him to account for the matter that Mr. Davis had called to my attention.

Senator **Clark**. I offer for the record a letter from Mr. Crosby to Lord Reading, dated June 15, 1918 [reading "Exhibit No. 3070"]:

> **Dear Lord Reading**: May I thus venture to remind you of the hasty conversation we had, in which Secretary McAdoo informed you of the hope that you would endeavor to finance the British maturities through banking channels. It is, of course, important that as early as possible some solution of the matter should be reached.
>
> Cordially yours,

(The document referred to was marked "Exhibit No. 3070", and appears in full in the text.)

Senator **Clark**. By this time, Mr. Leffingwell, having gotten the February maturities out of the way, the question of the September 1 maturities is beginning to come on. During this correspondence the reference is being made on the part of the United States Government or the Treasury to have some arrangement made for taking care of the September 1 maturities.

Mr. **Leffingwell**. That was dated June 15, was it, Crosby's letter?

Senator **Clark**. Yes; and that was the first discussion I have come upon on that subject.

Mr. **Leffingwell**. It would be helpful to mention in that connection that Crosby had returned to this country for a time.

Senator **Clark**. Senator McAdoo had gone over to the Railroad Administration for a good deal of his time.

Mr. **Leffingwell**. I think at that particular moment he was out of Washington.

Senator **Clark**. I offer a letter to Mr. Leffingwell from Mr. Lamont, dated July 3, 1918, in regard to the demand loan.

I will read portions of it and insert the whole letter in the record. You can read any other part of it that you please, Mr. Lamont.

Mr. **Lamont**. Thank you.

Senator **Clark** [reading from "Exhibit No. 3071"]:

> Furthermore, all the institutions who have now carried the burden of this so-called demand loan for almost a year and a half, have been, as you know, most loyally cooperative with the American Treasury.

Mr. **Lamont**. May I interrupt to ask you if you will read the first three lines of the second paragraph? I wanted to make it clear we had acceded to that request, of course.

Senator **Clark** [continuing reading]:

> In fact, with this in mind, we were glad to accede to the condition that you laid down, that, until further notice, we should refrain from marketing any of the collateral.

Mr. **Lamont**. That is it. I wanted to make it clear we had acceded to that request, of course.

Senator **Clark** [continuing reading]:

> Furthermore, all the institutions who have now carried the burden of this so-called demand loan for almost a year and a half, have been, as you know, most loyally cooperative with the American Treasury. They will continue to be so, and that statement, of course, includes each and every one of us. But I must say that on the whole I don't think those institutions are fairly treated when they are compelled to carry this burden indefinitely and yet not allowed to collect the loan by the only means manifestly possible, and so lighten the burden. Further, if the amount were so considerable that it really made a vital difference to the situation of the American Treasury, it would be different. While, of course, it is large, remaining at approximately the $220,000,000 figure (including the 90-day Treasury bills), yet it almost seems to me that it could be cleaned off without an undue strain upon our own Treasury.
>
> Looking at the other side of the picture, you have no idea how helpful it would be, as a constructive measure, to bury this dead horse completely, and once and for all. When a man takes on a loan as purely a demand obligation, and then finds it remaining as a permanent burden, it becomes after a while rather a sore point, and it isn't a good thing, as it strikes us, for either the British or the American Treasury to have this situation continue indefinitely. Furthermore, if the loan were cleared off, that would, as it seems to me, give us a good fighting chance to do something with the British maturity of $200,000,000 on September 1, or, at any rate, with a substantial part of it.

There comes in again, does it not, the suggestion once more made, that, if the demand loan were taken care of, some future maturity could be financed outside of advances from the United States Treasury.

Mr. **Lamont**. Oh, certainly. As we pointed out in that letter, the reason that the loan was in the shape that it was in, was because, of course, the United States Treasury had been unwilling—it stated specifically—to take it up; second, they had been unwilling to have us market the collateral on the thing, and, third, they thought market conditions made it difficult to float a refunding issue.

Senator **Clark**. Yes, sir; I can understand that.

The point I am making, Mr. Lamont, is this, that every time that they advanced we might say it was by echelon:

First they say: If you pay off the February 1 maturities, something can be done on something else. Then you come along and say if you can help on the demand loan, pay off the demand loan, then you can finance the September 1 maturities outside, probably. Then, the next thing, of course, all that talk is abandoned and the February 1 maturity is paid off.

The ultimate fact that I am getting at is that in the end of the thing the United States Treasury held the sack for the whole business.

Mr. **Lamont**. Oh, no, not at all; because they refused to pay another penny on these demand loans, and the balance of the demand loan was paid off entirely from the independent resources of the British Government.

Senator **Clark**. I did not mean to say that the United States Government ever did pay off the demand loan, but the United States

Government paid off the September 1 maturities, then they went right ahead making advances, and then they released the subrogation that they had had on the maturities.

Mr. LEFFINGWELL. Senator, I do not want to seem to be too precise, but when you say the United States Government paid these maturities, I want to remind you that what the United States Government did was to buy the obligations of the British Government.

Senator CLARK. Yes; they loaned their money to the British to pay their obligations. That is technically what they did. Of course, that is part of the present interallied debt.

Mr. RATHBONE. But they did not release the subrogated securities until the funding operations under Mr. Mellon's administration.

Senator CLARK. They did not formally, but they had previously agreed to practically release them and not to demand that the pledge be made and the securities be put up.

Mr. RATHBONE. No, no; that was not released.

Mr. LEFFINGWELL. No such agreement was ever made. It was discussed but it was never made.

Senator CLARK. I will come to that in just a minute. The United States decided not to demand the pledge.

Mr. RATHBONE. They did not demand the pledge, but they did not decide they never would demand the pledge.

Senator CLARK. That is apparently decided in the memorandum exchanged between the Secretary of the Treasury and various Assistant Secretaries, which will be put in the record in a very few minutes.

Mr. LEFFINGWELL. Senator, let us wait until that comes, but your impression of it is, I assure you, in my opinion quite incorrect. It never was decided not to exercise the right.

Senator CLARK. It never was exercised?

Mr. LEFFINGWELL. Right.

Senator CLARK. And after considerable consultation the Secretary of the Treasury wrote to the President explaining why it ought not to be exercised.

Mr. LAMONT. Senator Clark, completing the answer to your question, so far as we are concerned, it is perfectly true that we were urging the United States Treasury to see whether they could find a way to pay off any further demand loan, and we were constantly being told no. That is perfectly true.

Senator CLARK. I will finish the next paragraph of this letter, Mr. Lamont [reading from "Exhibit No. 3071"]:

> Of course, unless the demand loan is taken care of, there will be no chance at all to do anything with the September maturities, the reason being that, in order to try to handle a new issue, we must look for underwriters largely to the very same institutions that are now carrying the demand loan. The British issue due on September 1 is in the form of bearer bonds, scattered all over the country, and it is quite out of the question to look to them with any confidence to take a fresh obligation. They have been trained to well to buy Liberty bonds and nothing else. But if we could get the loan underwritten, then there would be a fair chance of gradually peddling it out to the investor and getting it well planted. A condition precedent, however, as I have explained, to the underwriting of any new British issue, is the liquidation of the present call loan.

(The document referred to was marked "Exhibit No. 3071", and is included in the appendix on p. 9470.)

Senator CLARK. I will now offer a letter to Lord Reading, signed J. P. Morgan. This is dated July 16. It is on the same subject discussed in your letter. It is rather confirmatory of it than otherwise.

I will read it; it will take but a minute [reading from "Exhibit No. 3072"]:

> In Washington last week you asked me for a definite answer to the following question:
>
> "(1) If the demand loan which the British Government now has with bankers should be paid off, would it be possible to form a syndicate to guarantee the sale of about $200,000,000 of British Government notes to meet the maturity of the $194,000,000 of secured notes due September 1?
>
> "(2) If such a syndicate could be made, what would have to be the terms and conditions of the new notes and what would be the price to the public and the cost of the money to the British Government?"
>
> In view of the need for care lest the public should fancy that there is any question as to the payment of the maturing notes, it has not been possible to make any very extensive inquiries—

By "maturing notes" he refers to the September 1 maturities, does he not, Mr. Lamont?

Mr. LAMONT. I should assume so.

Senator CLARK [continuing reading]:

> but after discussion with those best able to judge I can answer your questions as follows—

Then he goes on with practically the same thing you said in your preceding letter.

Mr. LAMONT. Yes; the creation by the American Government of a bond market.

Senator CLARK. Yes, sir. The same thing is set forth.

(The document referred to was marked "Exhibit No. 3072" and is included in the appendix on p. 9471.)

Senator CLARK. I offer a letter to Mr. Leffingwell from Lord Reading, transmitting the letter from Mr. Morgan, which I have just read.

(The document referred to was marked "Exhibit No. 3073", and is included in the appendix on p. 9472.)

Senator CLARK. I offer for the record a matter which I do not think is necessary to read, from Mr. Leffingwell. It is a memorandum for the Secretary dated June 10, 1918, having to do with the September 1 maturities.[1]

Mr. LEFFINGWELL. That should have gone in with the letter from Mr. Crosby.

Senator CLARK. That should have gone in a moment ago. It has been referred to here but not entered.

Mr. LEFFINGWELL. You read that this morning, did you not, Mr. Brown?

Senator CLARK. It was read but it was not put in the record.

Senator CLARK. I also offer a letter dated July 17, 1918, from Mr. Leffingwell to Hon. W. G. McAdoo, Director General of Railroads, Portland, Oreg. [reading "Exhibit No. 3075"]:

> Everything running smoothly here. Second issue of Treasury certificates oversubscribed. It may be desirable to make third issue for reduced amount, receipts from various sources having been larger than estimated. Reading will probably not be able to wait until your return. May I tell him that if it becomes necessary we will deal with September 1 maturity on lines similar

---

[1] Previously entered as "Exhibit No. 2782", see supra, p. 8994.

to those adopted February 1. After making inquiry suggested by you, I am satisfied that we shall have to do this, and I think it would be very helpful in connection with certain other questions which, as you know, are under discussion if I could give this assurance at this time. Everyone anxiously inquires for you. I do hope you are quite restored. Warmest regards.

(The document referred to was marked "Exhibit No. 3075" and appears in full in the text.)[1]

Senator CLARK. I offer a telegram from Secretary McAdoo to Mr. Leffingwell, authorizing him to make the assurances to Lord Reading suggested in the preceding letter.

(The document referred to was marked "Exhibit No. 3076" and is included in the appendix on p. 9472.)

Senator CLARK. I offer a letter from Mr. Leffingwell to Lord Reading, dated July 23, 1918 [reading "Exhibit No. 3077"]:

DEAR LORD READING: I received your letter of July 18 with the enclosed copy of the letter addressed to you by Mr. Morgan in regard to the terms on which a public issue could be made on the market of a British Government loan. Secretary McAdoo authorizes me to assure you that if it becomes necessary the Treasury will be willing to deal with the notes of your Government maturing on September 1 on lines similar to those adopted with respect to the notes which matured on February 1.

Mr. Morgan told me that if this were done and if his firm had permission to liquidate the call loan gradually through sales of collateral pledged as security for it, made in consultation with you and with the United States Treasury, the call loan need give us no further concern.

I am, my dear Lord Reading,
Very truly yours,

(The document referred to was marked "Exhibit No. 3077" and appears in full in the text.)

Senator CLARK. I offer a letter from Mr. Leffingwell to Mr. Lamont dated July 27, 1918 [reading "Exhibit No. 3078"]:

DEAR LAMONT: I received your letter of July 3. I have since had a talk with Lord Reading and Mr. Morgan. Mr. Morgan said that if the United States Treasury were to loan money to the British Government to take up its notes maturing on September 1, and if your firm might liquidate the call loan gradually through sales of collateral pledged as security for it, made in consultation with Lord Reading and the United States Treasury, the call loan need give no further concern. It is possible that the matter will be disposed of in this way.
Very truly yours,

(The document referred to was marked "Exhibit No. 3078" and appears in full in the text.)

Senator CLARK. I offer a letter from Mr. Lamont to Mr. Leffingwell under date of July 29, 1918 [reading]:

DEAR LEFFINGWELL: Thanks very much for your letter of July 27. When Mr. Morgan returned and told me of his conference with you and Lord Reading, it seemed to me that the solution that you had tentatively arrived at was, all things considered, as feasible as any other plan that could be suggested. I think that if this plan is carried out it will help the general money-market situation somewhat, will enhance Great Britain's credit, and such effect as it will have on the impending Liberty loan will certainly be favorable. If it comes to the question of marketing securities, of course, you may rely upon the fact that we shall use the utmost circumspection in that regard.

(The document referred to was marked "Exhibit No. 3079" and is included in the appendix on p. 9472.)

---

[1] There was no exhibit marked "No. 3074."

Senator CLARK. I offer a letter from the Chancellor of the Exchequer to Secretary McAdoo. It is simply a letter from Lord Reading thanking Secretary McAdoo for his authority to renew the September 1 maturities.

Mr. LEFFINGWELL. Is it from Lord Reading? You said the Chancellor of the Exchequer.

Senator CLARK. I should have said Lord Reading. He starts out: "The Chancellor of the Exchequer desires me to express his warm thanks to you."

Mr. LEFFINGWELL. It is really a communication from the Chancellor of the Exchequer.

Senator CLARK. I took that to be a communication from the Chancellor of the Exchequer.

Mr. LEFFINGWELL. That is right.

(The document referred to was marked "Exhibit No. 3080" and is included in the appendix on p. 9473.)

Mr. LAMONT. Here is a short cable that might complete that record contained in Mr. Leffingwell's letters. It is cable no. 79657 to Morgan, Grenfell & Co., London, dated July 30, 1918 [reading "Exhibit No. 3081"]:

> 79657. 73926. Are advised by Lord Reading through Sir Hardman Lever that we may begin sales of free collateral for the purpose of reducing the call loan, which now amounts to $128,000,000. Sales would, as heretofore, be made very carefully, with a view to avoiding any disturbance of quotations. He asks us to advise you and be instructed specifically to proceed.

Senator CLARK. I will be glad to have that included in the record.

(The document referred to was marked "Exhibit No. 3081" and appears in full in the text.)

Senator CLARK. The next exhibit is a cablegram from Mr. Leffingwell to Mr. Crosby through the American Embassy in Paris [reading]:

> Treasury 325. Embassy's 4719. August 9, 6 p. m. Your unnumbered of August 9. Have indicated to British our willingness to permit payment September 1 maturity from United States advances on lines similar to February 1 maturity including subrogation and on assurances from holder of demand loan or overdraft that it need not give us concern if they may gradually dispose of collateral as favorable opportunity offers. Will cable later regarding Metropolitan Water Board bonds.

(The document referred to was marked "Exhibit No. 3082" and is included in the appendix on p. 9473.)

Senator CLARK. Then a personal message from the Chancellor of the Exchequer to Mr. McAdoo, received by telegram August 18, 1918 [reading "Exhibit No. 3083"]:

> I have been hearing personally from Lord Reading of the arrangements which he made with you for meeting the British loan falling due on September 1.
>
> I wish to thank you most cordially for assistance which you are according me in this matter. Any other method of dealing with the maturity would have been most onerous, and your solution relieves me of anxiety and the British taxpayers of an additional burden.

(The document referred to was marked "Exhibit No. 3083" and appears in full in the text.)

Senator CLARK. The next exhibit is a letter from Secretary McAdoo to the President explaining the reasons for the action on the September 1 maturities and following maturities and following the lines of Mr. Leffingwell's memorandum.

(The document referred to was marked "Exhibit No. 3084" and is included in the appendix on p. 9473.)

Senator CLARK. The next exhibit is a memorandum from Secretary McAdoo to Mr. Leffingwell dated August 26, 1918 [reading]:

> I think it would be well to give the President an idea of the character of the collateral security for the British loan. The insertion could be made at the end of the first paragraph.
>
> I think it would be well also to say that it is necessary, in my opinion, to take up the British loan for the protection of our financial situation. * * *

In other words, directions to Mr. Leffingwell for preparing a letter to the President.

(The document referred to was marked "Exhibit No. 3085" and is included in the appendix on p. 9474.)

Senator CLARK. I offer a letter dated August 26, 1918, from Secretary McAdoo to Mr. Colville Barclay, Chargé de Affaires of the British Embassy, answering the letter of thanks from the Chancellor of the Exchequer. It says:

> DEAR MR. BARCLAY: Will you be good enough to convey to the Chancellor of the Exchequer the following personal message from me:
>
> "Your cordial message regarding the arrangements made for meeting the British loan, which falls due Steptember 1, is very gratifying to me. You will I am sure, understand that the considerations which governed me last winter made it necessary that I should stipulate that the advance to be made to meet the September 1 maturity should be made on the same conditions, including the subrogation of collateral, as those upon which the advance was made to your Government to meet its February maturity. Warm congratulations on the splendid work the British Army is doing."
>
> Cordially yours,

(The document referred to was marked "Exhibit No. 3086" and appears in full in the text.)

Senator CLARK. I offer a letter from J. P. Morgan & Co. to the Guaranty Trust Co. of New York, 140 Broadway, New York, dated September 13, 1916 [reading "Exhibit No. 3087"]:

> DEAR SIRS: We beg to enclose copy of a letter received by our London house, Messrs. Morgan, Grenfell & Co., from the Treasury, advising that the proceeds of $6,400,000 Metropolitan Water Board bills discounted with yourselves are to be paid over to us for account of British Government Treasury on the 18th instant.
>
> You will observe that the Treasury wish to have advise of the receipt of this money in time to place the sterling equivalent to the credit of the Metropolitan Water Board in London on the same day. We shall be glad, therefore, if you can make arrangements for the early payment of the money to us so that we may cable promptly to London.
>
> Yours very truly,

(The document referred to was marked "Exhibit No. 3087" and appears in full in the text.)

Senator CLARK. The Metropolitan Water Board bills, Mr. Lamont, were an issue of a London municipal corporation or private corporation sold in this country for the benefit of the British Government, were they not?

Mr. LAMONT. I do not remember; I am sorry.

Senator CLARK. Then I will read a letter from Mr. Leffingwell to Lord Reading, dated July 30, 1918, in which he says [reading "Exhibit No. 3088"]:

> DEAR LORD READING: I notice an item in one of the New York papers to the effect that the British Treasury has authorized the Metropolitan Water Board to

issue 1,300,000 pounds sterling in bills at London to meet $6,300,000 in gold notes maturing in New York in September. I would be obliged if you will inform me in regard to this matter, as it seems to me that the result of the operation indicated would be a loan from the United States Government to the British Government of the amounts needed to pay the obligations of the Metropolitan Water Board above mentioned.

I am, my dear Lord Reading,
Very truly yours,

(The document referred to was marked "Exhibit No. 3088" and appears in full in the text.)

Senator **Clark**. That was the effect of it, was it not, Mr. Leffingwell?

Mr. **Leffingwell**. What did he answer? I was calling on him to tell me what was the effect of what he was proposing to do. What did he answer? It shows we were following him closely.

Senator **Clark**. It is answered by Mr. Blackett.

The next exhibit I offer is a telegram from Paris from Mr. Crosby to Secretary McAdoo, August 9, 1918 [reading "Exhibit No. 3089"]:

4719, August 9, 6 p. m. For McAdoo from Crosby. Understanding from Guarantee Trust Co., London, that they have received notification that the six million three hundred thousand Metropolitan Water Board bonds maturing September 18, will be repaid, as this is in fact a government loan. The question arises as to what funds they will use to effect repayment. Please advise me on this, and also as to whether negotiation was completed with Lord Reading before his departure re British loan maturing September 1st. **Sharp.**

(The document referred to was marked "Exhibit No. 3089" and appears in full in the text.)

Senator **Clark**. I offer a letter addressed to Mr. Leffingwell by Basil B. Blackett, for the Financial Secretary to the Treasury, dated August 9, 1918 [reading "Exhibit No. 3090"]:

My Dear Mr. Leffingwell: In reply to your letter of July 30, addressed to Lord Reading, I am informed that the statement to which you refer is correct and that the British Treasury had authorized the Metropolitan Water Board to pay off the $6,300,000 1-year bills maturing in New York on September 18. The British Treasury proposes to find the dollars required in this connection not out of United States advances but out of sums received in respect of the sale of wool. In this connection I refer to Sir Hardman Lever's letter of May 9, reporting the receipt of $10,650,299.52 on account of wool sold to the United States Government.

I am, dear Mr. Leffingwell,
Yours sincerely,

(The document referred to was marked "Exhibit No. 3090" and appears in full in the text.)

Senator **Clark**. To that you reply, Mr. Leffingwell, in a letter dated August 13, 1918, addressed to Mr. Blackett [reading "Exhibit No. 3091"]:

My Dear Mr. Blackett: I am in receipt of your letter of August 9 advising that the British Treasury has authorized the Metropolitan Water Board to pay off the $6,300,000 1 year's bills maturing in New York on September 18, and that the British Treasury proposes to find the dollars required out of sums received from the sale of wool, and not out of United States advances. The Treasury Department, however, regards it as a fundamental principle that proceeds of sales of imports into the United States controlled by the British Government should be applied to meet British expenditures in the United States and that United States advances in respect to such expenditures should not be asked except to the extent that the amount may exceed the funds available from the sale of imports.

On referring to Sir Hardman Lever's letter of May 9 and the accompanying statement, I note that Sir Hardman Lever treated the sum of $10,659,299.52 as a part of the funds available to meet dollar expenditures of the British Treasury for April, and I note also that during that month the exchange purchases amounted to $14,960,148.73.

The principle above-stated is, of course, equally applicable whether British expenditures do or do not include exchange purchases, but its applicability is particularly clear where purchases of exchange exceed the proceeds of the imports as in this case.

Had the wool been paid for in sterling through commercial channels the price thereof would have gone to reduce the item of exchange purchases. Therefore, it is evident that the payment for the wool in dollars should go to reduce the dollar borrowings to meet exchange purchases, and cannot be considered as constituting an available balance of the British Government.

I feel, therefore, that the position as to the proposed transaction is as stated in my letter of July 20 to Lord Reading.

Yours very truly,

(The document referred to was marked "Exhibit No. 3091" and appears in full in the text.)

Senator **Clark**. I offer a telegram from Mr. Leffingwell to Mr. Crosby, dated August 14, 1918, which reads as follows:

For Crosby from Leffingwell. Treasury 333. Supplementing our 325. British have just advised they intended to pay Metropolitan Water Bonds from proceeds wool sold United States Government. Have advised British we regard it as a fundamental principle that proceeds sale of British Government imports into United States should be applied to meet British expenditures therein and advances in respect to such expenditures should not be asked except as amount of expenditures exceeds amounts realized from imports.

(The document referred to was marked "Exhibit No. 3092" and appears in full in the text.)

Senator **Clark**. Then a letter dated August 29, 1918, signed by Mr. Leffingwell and addressed to Sir Hardman Lever [reading "Exhibit No. 3093"]:

August 29, 1918.

Dear Sir Hardman: Mr. Rathbone has told me of your talk with him on the 20th instant in relation to the payment of the Metropolitan Water Board bonds which mature next month and are guaranteed by the British Government. I wrote Lord Reading on July 30, 1918, in regard to this subject and Mr. Blackett's reply under date of August 9 I answered on the 13th instant.

I do not understand that the proceeds of wool sold in the United States or the proceeds resulting from the sale of exchange constitute any separate fund from which obligations for the payment of which your Government is responsible may be paid without previous consultation with the United States Treasury while the United States is making advances to your Government to cover the balance of your Government's requirements. As the date of maturity of the obligations of your Government, which become due September 1, approached this subject was taken up and discussed with the result with which you are familiar, and I regret that the same procedure was not followed in the case of the Metropolitan Water Board bonds.

I am, my dear Sir Hardman,

Very truly yours,

(The document referred to was marked "Exhibit No. 3093" and appears in full in the text.)

Senator **Clark**. Now that indicates, Mr. Leffingwell, you were up against a situation you have been up against before in the case of the payments from the Danish loan, that you were confronted with something that had already been done and could only protest against it.

Mr. **Leffingwell**. A fait accompli.

Senator **Clark**. Yes; the same thing happened a little bit later in the case of the English Sewing Cotton Co. amounting to $4,900,000, a loan maturing on December 2, 1918, in which the British went right ahead and did as they pleased before you could find out about it or have anything to say about it. Is not that correct?

Mr. LEFFINGWELL. I cannot remember that.

Senator CLARK. I understand the record shows that, and it will be placed in the record.

Mr. LEFFINGWELL. What was that date? What was that transaction?

Senator CLARK. The English Sewing Cotton Co., $4,900,000.

Mr. LEFFINGWELL. You are coming to that in due course, are you, Senator?

Senator CLARK. It is shown in the British Treasury Account, Mr. Leffingwell. I propose to make a reference to it and not go into details on it. It is exactly the same transactions as this one.

Mr. LEFFINGWELL. The same thing?

Senator CLARK. Here we come to the question of the February 1, 1919, maturities. That was after the war was completed, and the British were still asking that the United States Government finance their maturities and make advancements to them.

I will now place in the record a letter from Mr. Norman H. Davis to Mr. Rathbone, dated in London on the 6th of December 1918 [reading "Exhibit No. 3094"]:

DEAR RATHBONE: Keynes told me yesterday that Lever had reported an interview with you and your refusal to advance funds to take on their February 1 maturities. He seemed very much worried about it and stated, in substance, that they could not possibly be in a position to pay this off by that time, and that he thought we ought to make the advance. I told him that this was essentially a matter which must be handled in Washington, because the changed conditions had necessarily altered the position of the Treasury. I assume that you naturally doubt the power of the Secretary of the Treasury or the advisability of making such an advance. It seems to me that they should be able to float a renewable loan in the United States, provided this does not conflict with any of Leffingwell's plans for domestic finance. Keynes took the position that even in normal times the only possible way they could pay this off would be to sell sterling against dollars or to ship gold, and that as they have to apply all of the dollars received from the sale of sterling to meet their purchase requirements and that as they cannot spare the gold, it is rather difficult to know what to do. I merely call your attention to the fact that if they cannot place a new loan and you wish to assist them in the matter, our Army will owe the British, according to present estimates, about $400,000,000, a part of which might be applied for the above purpose. I realize that this would be a certain camouflage if they are still borrowing from us at the time these accounts are paid. I do not remember the class of securities that are back of this loan or how rapidly they could be sold to pay off the loan, but it had occurred to me that you might make a definite short-time loan against those securities for later treatment, but, not knowing the conditions at home, I could not give a definite opinion, even if it were desired.

Another word about Italy: I am told our total pre-war exports to Italy amounted to about $160,000,000 per annum. If this is correct, it would seem that, aside from advancing them the money to liquidate their war contracts in the United States, and the $90,000,000 already advanced for wheat, they should not require very much more from us.

I enclose herewith copy of a letter and statement received from the British Treasury regarding Italian neutral expenditures.

Sincerely yours,

(The document referred to was marked "Exhibit No. 3094" and appears in full in the text.)

Senator CLARK. It was found actually necessary, was it not, Mr. Leffingwell—or Mr. Rathbone, I believe you handled this matter—to underwrite the conversion of the issue maturing February 1, 1919?

Mr. RATHBONE. I did not get the question.

Senator CLARK. I said, in spite of Mr. Davis' pessimism and regardless of the reluctance of the Treasury Department, it was found possible or necessary to underwrite the conversion of that issue?

Mr. RATHBONE. We thought things were getting back to normal, and that the British normal method ought to take care of that problem, and we refused to advance the money.

Senator CLARK. You did more or less underwrite it, did you not?

Mr. RATHBONE. I do not think so.

Mr. LEFFINGWELL. Oh, no; the United States Treasury refused point-blank to do that.

Senator CLARK. I beg your pardon?

Mr. LEFFINGWELL. The conversion, I think, was underwritten by the bankers.

Senator CLARK. It was underwritten by Morgan & Co.?

Mr. LAMONT. And our associates; yes.

Senator CLARK. Yes. Well, I mean the group headed by Morgan & Co.

Mr. LAMONT. Quite.

Senator CLARK. I was in error about that, Mr. Rathbone. I was referring to a memorandum here that had to do with another matter.

I offer a letter of Mr. Rathbone to Sir Hardman Lever, declining on behalf of the Treasury.

(The document referred to was marked "Exhibit No. 3095" and is included in the appendix on p. 9475.)

Senator CLARK. I offer a letter from Morgan & Co. to the First National Bank, dated January 21, 1919.

(The document referred to was marked "Exhibit No. 3096" and is included in the appendix on p. 9476.)

Senator CLARK. I also offer a letter dated February 6, 1919, from J. P. Morgan & Co. to the First National Bank.

(The document referred to was marked "Exhibit No. 3097" and is included in the appendix on p. 9476.)

Mr. LAMONT. Are they of any interest, Senator?

Mr. BROWN. They are merely the terms of the underwriting of the conversion.

Mr. LAMONT. Oh, yes. Thank you.

Senator CLARK. I will have them included in the record, and will be glad to have you read them if you desire.

Mr. LAMONT. If they are simply routine, never mind.

Senator CLARK. I now offer a letter to Mr. Rathbone from Sir Hardman Lever, an offer to substitute certain securities, in the subrogated account, and dated January 18, 1919. I do not think it is necessary to read it.

(The document referred to was marked "Exhibit No. 3098" and is included in the appendix on p. 9477.)

Senator CLARK. I also offer Mr. Rathbone's answer, in which he states that it is the understanding [reading from "Exhibit No. 3099"]:

> It is the understanding of this Department, however, that the rights of the Secretary of the Treasury are to be precisely the same in respect to these securities as in respect to those which are to be released; that the rights of the persons to whom the British Government are under moral obligations in respect thereof are wholly subordinate to the rights of the Secretary of the Treasury in respect thereto, and that the British Government is solely responsible regarding the moral obligations referred to with which the Secretary of the Treasury is not concerned.

(The document referred to was marked "Exhibit No. 3099" and is included in the appendix on p. 9477.)

Senator CLARK. I offer the formal agreement, dated the 8th of July 1919, or rather, the offer of formal agreement on behalf of Sir Hardman Lever to subrogation.

This was a memorandum of the agreement, and I also offer the acceptance of the same.

I call attention to the fact that this agreement was executed July 8, 1919, and nearly a year and a half after the original subrogation agreement had been made.

(The documents referred to were marked "Exhibit No. 3100" and "Exhibit No. 3101", respectively, and are included in the appendix on pp. 9478 and 9480.)

Senator CLARK. I offer a letter from Mr. Blackett to Mr. Rathbone, offering further substitution in the substituting of collateral, and a letter from Mr. Rathbone discussing the matter, and setting up certain objections to it.

(The documents referred to were marked "Exhibit No. 3102" and "Exhibit No. 3103", respectively, and are included in the appendix on pp. 9480 and 9481.)

Senator CLARK. I now come to the discussion of the matter in the Treasury Department, a memorandum for the Secretary initialed by Mr. Davis, dated November 21, 1919, in which he discusses the whole status of the subrogation [reading "Exhibit No. 3104"]:

Memorandum for the Secretary:

At the time of the passage of the First Liberty Bond Act, Secretary McAdoo informed the Ways and Means Committee of Congress that it was intended that the loans authorized to be made to foreign governments would be only for the purpose of enabling them to make purchases in the United States and not for purchases elsewhere or for commitments in the United States incurred before our entrance into the war. On February 1, 1918, there became due about $92,000,000 of an issue of 1-year 5½-percent secured notes of Great Britain. The security of these notes was a large amount of foreign securities which either were owned by the British Government or had been lent the British Government by its citizens upon certain understandings as to their return. Secretary McAdoo was satisfied that the notes could be refunded upon our markets in the then existing situation only at a rate of interest so high and secured by so great an amount of collateral as would gravely impair the credit of Great Britain and the ability of the United States to carry through successfully its own financing. At the same time the progress of the war had resulted in a diminution of the resources of the United States and the Allies in the financial markets of neutral countries and dollars were at a considerable discount. In these circumstances control by the United States Treasury over the foreign securities owned by the British and held in this country was a matter of importance to us. The Treasury, therefore, assented to the use by the British of United States advances to meet the $92,000,000 maturity February 1, 1918.

Such assent was given, however, upon the understanding that the Treasury should be subrogated to the rights of the noteholders in respect of the collateral security and upon the further undertaking by the British Government to hold available for use in such manner as should be agreed upon between the British and the Secretary of the Treasury until the termination of the war the other foreign securities which the British Government owned and controlled and which were on February 1, 1918, physically within the United States. About $193,000,000 of British 2-year 5-percent secured gold notes matured September 1, 1918. With the greatly increased program of our own expenditures at that time and the tremendous issues of Treasury certificates which were then being made, the Treasury considered it impossible for the British to finance a renewal of this loan on reasonable terms and thought that it would be unwise for the Treasury to permit the British to resume sales of American securities as this would have a very depressing effect on the market for securities and would tend to make it difficult for us to get the money we needed ourselves. The Treasury also thought that if it stood firm in the position that it would not finance expenditures of the Allies in neutral markets and British dependencies, we might well provide for the financing of the Allied maturities in this market, since that was no strain upon our own financial resources, because no money went out of the country and by paying off the maturities we released credit for our own purposes. The Treasury also considered that borrowing by the British Government in our markets on extortionate terms would be injurious to British credit, would create an unfavorable impression as to the extent of sympathy between the two Governments and would impair our own position, because of the shadow it would throw upon the credit of our largest debtor.

The Treasury, therefore, assented to the use by the British of United States advances to meet the maturity of September 1, 1918, upon the same conditions as in the case of the February maturity. Subsequently, in December 1918 and January 1919, the Treasury made arrangements with the French Government by which the French Government should, out of United States advances, meet maturities on April 1 and July 31, 1919. In the case of the French Government, however, the Treasury did not require that it be subrogated to the rights of the noteholders in the collateral security, but an understanding was entered into that the French Government would make the securities available for use in neutral countries if the Treasury so required. While the principle of subrogation was agreed upon at the time of making the advances, the actual arrangement in respect of the British collateral was not defined in writing until July 8, 1919, under which date Sir Hardman Lever wrote Mr. Rathbone on the subject at length. Copies of this letter and of Mr. Rathbone's reply are attached. It will be noted that the arrangement as defined in Sir Hardman Lever's letter is a promise by the British Government to deposit the collateral to secure payments, respectively, of $91,931,000 and $192,842,000. The Treasury has not requested such deposit, and no such deposit has been made. The right of subrogation is not connected with any particular British obligations held by us, and the obligations, the proceeds of which were used to meet the British maturities, are not identified. The securities against which such right of subrogation may exist may, under the terms of Sir Hardman Lever's letter, be changed from time to time, and, in fact, before the letter was written, many changes had been made in them. Technically and legally, there is not yet a pledge of the securities which are subject to the right of subrogation, although the promise of the British Government to deposit them at the request of the Treasury is, of course, good. Mr. Rathbone, in his cable no. 35, advised that conference with Blackett has developed that the British are concerned over their situation regarding the borrowed securities which are subject to our right of subrogation and fear the political effect if arrangements are now made for payment of any of their loans to us without corresponding arrangements for collecting similar sums from Allied Governments indebted to them.

There was the first suggestion that the British loans to their allies were connected with our loans to the British, was it not, Mr. Rathbone?

Mr. RATHBONE. I would hate to say just when that suggestion was first made. It was made several times by several different people. As far as the Treasury was concerned, it was always repudiated as strongly as we could.

Senator CLARK. As far as a careful examination has developed, this is the first suggestion in the Treasury files to that effect [continuing reading "Exhibit No. 3104"]:

The existence of our claim against the British securities here must greatly embarrass British financing in this country, thus adding an important factor to the depression of sterling exchange. This tends to weaken further all other exchanges, reduces Europe's power to purchase American products, and adds to the pressure on us to incur commitments to help the exchange situation.

That is the old suggestion again, is it not, Mr. Rathbone, that we ought to lend money to Europe to buy goods from us, even if the money is never repaid?

Mr. **Rathbone.** I do not quite get that.

Senator **Clark.** The way these large obligations were incurred was on the theory that we should continue to lend money to Europe to buy goods from us.

Mr. **Rathbone.** Do you mean, after the war?

Senator **Clark.** Before the war, during the war, and after the war, that we should lend money to the people in Europe to buy goods from us, on the theory that that adds to the prosperity of the United States. But it has never appeared that it adds to the prosperity of anybody to lend somebody money to buy goods from him if he loses the goods and does not get his money back.

Mr. **Leffingwell.** That is true. But, Senator, "even though that money is never repaid", just that single phrase—of course, we tend as we think of these things to collapse 15 or 20 years in human experience. At the particular moment that Mr. Davis was writing that memorandum, he was writing it commenting upon a cable from Mr. Rathbone.

Senator **Clark.** I understand that.

Mr. **Leffingwell.** Mr. Rathbone was over in Europe for the express purpose of arranging a funding agreement with Great Britain which contemplated in the utmost seriousness on the part of both Governments that that money would be repaid.

Senator **Clark.** I understand that.

Mr. **Leffingwell.** Of course, we know now it is not now being repaid.

Senator **Clark.** I do not contend that a man ought to be criticized for his views from a vantage point of 20 years. I am not criticizing Mr. Davis in any respect. I am pointing out that that theory has in experience proved to be a great fallacy.

Mr. **Leffingwell.** That is true now. We were thinking then in terms of a definite and very advantageous settlement, a permanent settlement of the debts, which Mr. Rathbone had gone over there to discuss; and what he was discussing was the permanent solution of the debt problem so far as regards 5 billion dollars of British debt to the United States. This memorandum related to a suggestion that it might be well to use as a trading point in connection with that settlement of 5 billion dollars, the British anxiety in regard to security for $285,000,000.

Senator **Clark.** I understand that, Mr. Leffingwell, but what we are trying to do is to apply the lessons of the past for guidance in the future, not to point out that certain matters have in the light of after events turned out to be a mistake.

Mr. **Leffingwell.** That judgment of ours in 1919 that this was a serious debt settlement that was under discussion was maintained until 1931, that is, for 12 years, although there was a delay for a period granted by the United States. There never was any default for 12 years afterward on the British debt.

Senator **Clark.** That is true.

Mr. **Leffingwell.** So it was a very serious debt proposal that Mr. Rathbone was discussing in Europe.

Senator **Clark** (concluding reading "Exhibit No. 3104")

The amount of security obtained by exercising the right of subrogation would be insignificant compared with the total amount of British indebtedness to us. The reasons which led the Treasury to obtain the right of subrogation were (1) that it was desirable, in view of the statements made to Congress as to to purposes for which loans were intended to be made, that the permission to use United States advances for meeting maturities should be upon an understanding which made the loans so used clearly different from our other loans to Great Britain, and (2) that it was desirable at that time to obtain a certain control over foreign securities for use in meeting requirements which we were then expecting in neutral countries. Mr. McAdoo explained the matter to Congress in connection with the Fourth Bond Act and after we had assented to the use of our advances to meet the British September 1 maturity. Our exchange on neutral countries has righted itself. The reasons for which the right of subrogation was accepted, therefore, no longer exist. It is desirable, consequently, to release our claim upon British securities arising out of that right. Although the Treasury is not bound to take security for the loans which it makes to foreign governments, I am inclined to believe that if it does take security, it has not power, without further authority from Congress, to release the security before the loan is paid. I am inclined to the opinion, however, that the present right to subrogation is not a security, but is rather a right to obtain security, and that the Treasury does not require authority from Congress in order to refrain from exercising the right, and, therefore, that the matter can properly be disposed of at the proper time by advising the British that we shall not request them to deposit the securities. If you should consider it inadvisable to forego our right to obtain this security, then we should so notify Britain. We should, however, in my opinion, then inform them also that the first amounts received in payment of obligations held by us will be considered as applying toward the amounts in respect of which we have a right of subrogation, and that right of subrogation will be released in a proportionate amount of collateral as payments are made. Since the date of Sir Hardman Lever's letter, the British have paid $57,164,000 on their obligations held by the Treasury. I think that this payment may be so treated as was apparently contemplated by Sir Hardman Lever's letter. This would leave a balance of $227,610,000. If you agree with the foregoing, I think it would be advisable to obtain the views of Mr. Rathbone, who is more familiar with the matter than anybody here. Attached is a cable to him which I have prepared on this subject for your signature if you approve.

N. H. D.

(The document referred to was marked "Exhibit No. 3104" and appears in full in the text.)

Mr. LEFFINGWELL. If that particular suggestion of Mr. Davis' had been incorporated in the funding agreement which Mr. Rathbone had under consideration, then it would be true that those advances to Great Britain had been paid, because Great Britain did, in fact, even under the modified debt settlement which went through, pay to the United States Government a sum which in the aggregate amounted to something like 2 billion dollars, and $450,000,000 was principal indebtedness. That all is in support of the view that the Treasury officials at that time were considering a very serious proposal for the payment by Great Britain of her indebtedness to the United States, which Great Britain took seriously.

Senator CLARK. Undoubtedly the British Government has paid the United States more than the amount of the subrogated indebtedness.

I offer now a memorandum for the Secretary from Mr. Leffingwell. It is substantially along the same lines as Mr. Davis', and I do not think it is necessary to read it.

(The document referred to was marked "Exhibit No. 3105", and is included in the appendix on p. 9482.)

Senator CLARK. I now offer a cablegram to Mr. Rathbone from Senator Glass on the same subject, which I do not think it is necessary to read because it follows in the main almost verbatim the language of Mr. Davis' memorandum.

(The document referred to was marked "Exhibit No. 3106", and is included in the appendix on p. 9483.)

Senator **Clark**. I also offer a cablegram to Mr. Rathbone from Mr. Davis, being further negotiations along the same subject.

(The document referred to was marked "Exhibit No. 3107", and is included in the appendix on p. 9484.)

Senator **Clark**. I also offer in evidence a cablegram from Mr. Rathbone in London to the Secretary of the Treasury, having to do with negotiations on the same subject.

(The document referred to was marked "Exhibit No. 3108", and is included in the appendix on p. 9484.)

Senator **Clark**. I now offer a further letter in connection with the same matter, being a letter to Mr. Rathbone from Mr. Basil Blackett, in which he asserts the principle that the British lenders have superior rights in these subrogated securities to the American Treasury. I do not think it is necessary to read the exhibit.

Mr. **Rathbone**. Of course, we cannot help what they asserted.

Senator **Clark**. I understand that.

(The document referred to was marked "Exhibit No. 3109", and is included in the appendix on p. 9485.)

Senator **Clark**. I also offer the letter of Mr. Rathbone to Mr. Blackett, dated January 15, 1920, in which you reject that contention.

(The document referred to was marked "Exhibit No. 3110", and is included in the appendix on p. 9486.)

Senator **Clark**. I also offer a letter from Mr. McAdoo dated February 25, 1920, to Secretary Houston of the Treasury, inquiring as to what had become of what he speaks of as three or four hundred million dollars which had been subrogated to claims.

(The document referred to was marked "Exhibit No. 3111" and is included in the appendix on p. 9487.)

Senator **Clark**. The next exhibit is the letter of Secretary Houston in answer, setting forth the position and contentions of the Department as heretofore set forth.

(The document referred to was marked "Exhibit No. 3112" and is included in the appendix on p. 9487.)

Mr. **Rathbone**. I would like to say something about that subrogation at an appropriate time when you get through with your papers.

Senator **Clark**. All right; in just a minute I will be glad to hear you.

The next exhibit is Mr. Davis' memorandum, from which Secretary Houston's letter was written.

(The document referred to was marked "Exhibit No. 3113" and is included in the appendix on p. 9488.)

Senator **Clark**. I offer a cablegram to Mr. Rathbone from Secretary Houston. It is not necessary to read the whole cablegram as it will be inserted in the record, but the last paragraph explains the failure of the agreement as to subrogation. He says:

> In this connection and referring to our R–114 from Glass and our R–163, paragraph 15, and your R–354, it is my understanding that no concession will be made concerning rights of subrogation in respect of British securities except as part of comprehensive settlement of all pending questions.

(The document referred to was marked "Exhibit No. 3114" and is included in the appendix on p. 9489.)

Mr. **Rathbone**. That was my understanding, too.

Senator CLARK. You were unable to get a comprehensive settlement from the British of pending questions, and therefore the actual agreement as to the release of subrogation was not made until 1923, when the comprehensive agreement was entered into, is that correct?

Mr. RATHBONE. The debt settlement? Yes, that is true, the subrogation rights were retained.

Senator CLARK. I offer a cablegram to Mr. Rathbone from Mr. Davis, on the same general subject.

(The document referred to was marked "Exhibit No. 3115" and is included in the appendix on p. 9489.)

Senator CLARK. I offer for the record appropriate sections of the agreement that was finally made between the United States and Great Britain, which was the subject of discussion here this afternoon, the terms on which the United States could receive bonds.

Mr. RATHBONE. That was not the agreement that I was trying to negotiate.

Senator CLARK. No, this was the one that was negotiated in 1923.

Mr. LAMONT. The full agreement, or just that section?

Senator CLARK. Sections 11 and 12.

Mr. LAMONT. Would it be well to have a full agreement, do you suppose?

Senator CLARK. I will be glad to insert it, but I do not happen to have it.

Mr. LAMONT. It is not a matter that concerns J. P. Morgan & Co. in any sense.

(The document referred to was marked "Exhibit No. 3116" and is included in the appendix on p. 9490.)

The CHAIRMAN. Gentlemen, are you prepared at this time to indicate what exhibits you would like to offer for the record?

Mr. LAMONT. I will ask Mr. Wardwell to answer that.

Mr. WARDWELL. I would suggest that you permit us to have entered into the record anything that your representative, Mr. Brown, particularly, and we could agree upon. I think we would have no difficulty. We are quite willing to check that with Mr. Brown, either tonight before we go or, if necessary, tomorrow morning.

Senator CLARK. Mr. Brown suggests that he is willing to do that tonight or tomorrow morning.

Mr. WARDWELL. We could go right on with it to a very considerable extent right now. If we cannot finish it tonight, we can do it tomorrow morning.

The CHAIRMAN. Let it be a matter of record that the Committee will refer to Mr. Brown and Mr. Wardwell the determination of the additional exhibits that are to be offered for the record.[1]

Mr. WARDWELL. I think the most are merely formal cables that may complete the story a little better; no substantial change of any kind.

The CHAIRMAN. There is nothing that will prevent these entries being made before our hearing tomorrow morning?

Mr. WARDWELL. No.

The CHAIRMAN. We want them to run in order of course.

---

[1] See "Exhibits No. 3118 to 4261" re wartime and post-war financing, Hearings, Parts XXX to XXXV, inclusive.

Mr. LEFFINGWELL. Senator Clark may I ask one question?

Senator CLARK. Yes; certainly.

Mr. LEFFINGWELL. In the memorandum which the chairman accepted from me earlier in the day, I made reference to the fact that the Rathbone proposed debt settlement, which was under discussion in 1919 and 1920, was reported to the Finance Committee of the Senate by Assistant Secretary Wadsworth, acting under Secretary Mellon, in 1921; also, that the Mellon debt settlement, which actually took place, the Rathbone settlement having fallen through, was reported in the annual report of the Secretary of the Treasury for 1923, and attached to that annual report was the release by Secretary Mellon as Secretary of the Treasury and as Chairman of the Debt Funding Commission of the subrogated securities. I do not know whether you care to put those in your record.

Senator CLARK. I will be very glad to put them in, Mr. Leffingwell.

Mr. LEFFINGWELL. They are in the annual report. I have a copy here. I have not a loose copy, and I would hate to lose my copy of the report, but I offer it to you. There is that very short letter in connection with it.

(The document referred to was marked "Exhibit No. 3117" and is included in the appendix on p. 9491.)

The CHAIRMAN. How much of this collateral was actually sent back home?

Mr. LEFFINGWELL. I suppose, when the Mellon debt settlement was made in 1923, which is reported in the annual report for 1923, the collateral was released.

Senator CLARK. As a matter of fact, by the time they got along to 1923, the collateral had been very, very materially changed, had it not, Mr. Leffingwell?

Mr. LEFFINGWELL. Oh, yes. Its value——

Mr. RATHBONE. By substitutions.

Senator CLARK. The British had taken out some very marketable securities and replaced them with securities which were of less value.

Mr. LAMONT. Oh, no.

Mr. RATHBONE. I do not think so.

Mr. LAMONT. The Treasury can answer that, but so far as J. P. Morgan & Co. were concerned, they were charged with a serious responsibility for safeguarding the securities and for suggesting substitutions as certain securities were redeemed or utilized in other ways. Always the greatest possible care was utilized to see that the substituted securities were the same class and same value as those taken out.

Senator CLARK. The thing that caused me to make that remark, Mr. Lamont, is that it is a fact that there had been a great increase in the collateral of securities of the British dominions, had there not?

Mr. LAMONT. I do not recall, Senator. I do not recall the details. I only recall the correspondence with the Treasury Department, which laid down the general rules that should be followed and which were followed by us so far as we were concerned.

Mr. RATHBONE. There was certainly that general rule laid down by the Treasury that we would consent to substitutions only if the values were not impaired and the marketability of the securities was generally about the same.

What I wanted to say about subrogation was this——

The **Chairman**. Just a moment, before we go on to that. How much was actually sent back, how much collateral?

Mr. **Leffingwell**. Senator, I left the Treasury at the end of June 1920. So did Mr. Rathbone. Such changes and exchanges as were made subsequent to that time left the account in a position of which I am not informed in 1923, 3 years later, but I assume that there remained subject to the agreement of subrogation up to the time of the agreement of funding made by Secretary Mellon and the World War Debt Funding Commission, an amount of collateral in value equal to that which was stipulated for at the time that the securities were subrogated.

The **Chairman**. You understand that to have been in excess of $290,000,000?

Mr. **Leffingwell**. I assume it to have been.

Mr. **Rathbone**. $285,000,000.

Senator **Clark**. In regard to the matter of changing the securities in the collateral, I call attention to the fact that between 1921 and 1923 there were £24,300,000 of New Zealand securities, £9,000,000 of South African securities, and £9,500,000 of Australian securities added, a total of £45,532,823 of securities of those three dominions alone. That would seem to be a substitution of a very large item of one particular class of securities, namely, dominion securities, which would be in the same class as the British Government itself.

Mr. **Rathbone**. Of course, Mr. Leffingwell and I—neither of us was in the Treasury during that period, so we cannot answer.

Senator **Clark**. We are making a record here, and not gunning for you and Mr. Leffingwell, we want you to understand that.

Mr. **Rathbone**. What I wanted to say about the subrogated securities in a word was this:

We advised—when I say "we" I mean Mr. Leffingwell and myself advised—the release of the subrogated securities only if we got a debt settlement of the kind we wanted.

There were very much bigger things involved in that debt settlement than security for $285,000,000; for instance, whether the rate of interest would be—I am using arbitrary figures—1 percent or 2 percent, would have made a great deal bigger difference than that amount.

Also, whether we would have the right, under our debt settlement, to get British obligations payable in pounds or payable in dollars, as we should elect, so that we could sell them to the nationals of this country or the nationals of Great Britain. It was also a very important element.

Another important element was the Pitman silver advances, which, as you know, amounted to about $200,000,000. One of the terms of that settlement which I tried to negotiate was that the Pitman silver advances of $200,000,000 to the extent they had not been already paid should be paid out in 5 years. The British carried out that agreement. That is the only successful agreement I negotiated.

We did get all of that $200,000,000 paid back within approximately a 5-year period.

The **Chairman**. Anything further?

Mr. **Brown**. You asked a question, Senator Nye, about the amount of collateral, and the account shows $314,000,000 was the amount of subrogated securities returned at the time of the debt settlement.

The **Chairman**. That statement will become a part of the record.

Mr. **Rathbone**. It was collateral for $283,000,000 or $284,000,000 of indebtedness.

Mr. **Leffingwell**. Which means, of course, that the United States Treasury was limited as to the amount that it could collect out of the securities, whatever was their value, to $285,000,000. But it also shows that, if it is true that that figure is correct, there was a margin in those securities which was more than ample at the time of the debt settlement in 1923 to cover that debt. But we are now speaking, Mr. Rathbone and I, of the period 3 years, almost——

Senator **Clark**. You are speaking of a different negotiation.

Mr. **Leffingwell**. Of a different negotiation, and as I have mentioned, the general character of Mr. Rathbone's negotiation was reported to the Finance Committee of the Senate in—1921 I think is the year.

Mr. **Rathbone**. I might add about that settlement of mine that it was practically concluded and agreed upon between the Chancellor of the Exchequer and myself until the Chancellor of the Exchequer advised me that it had become a Cabinet question, and the Prime Minister was going to write President Wilson on the subject. Of course, the American Treasury could not do anything more than have its representatives come home.

Mr. **Leffingwell**. That was in May 1920.

Mr. **Rathbone**. That was in the latter part of May or the first of June 1920.

The **Chairman**. Gentlemen, unless there is more, the committee is about to recess.

The committee will be in recess until 10 o'clock tomorrow morning, and the witnesses will understand themselves now to be excused.

(Whereupon, at 10:50 p. m., the committee adjourned until 10 a. m., Thursday, Feb. 6, 1936.)

EXHIBIT No. 2780

[PUBLIC, No. 3 (H. R. 2762), 65TH CONGRESS, 1ST SESSION, APRIL 24, 1917]

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury, with the approval of the President, is hereby authorized to borrow from time to time on the credit of the United States for the purposes of this Act, and to meet expenditures authorized for the national security and defense and other public purposes authorized by law not exceeding in the aggregate $5,000,000,000, exclusive of the sums authorized by section four of this Act, and to issue therefor bonds of the United States.

PURCHASE OF OBLIGATIONS OF FOREIGN GOVERNMENTS AT WAR WITH U. S. ENEMIES

SEC. 2. That for the purpose of more effectually providing for the national security and defense and prosecuting the war by establishing credits in the United States for foreign governments, the Secretary of the Treasury, with the approval of the President, is hereby authorized, on behalf of the United States, to purchase, at par, from such foreign governments then engaged in war with the enemies of the United States, their obligations hereafter issued, bearing the same rate of interest and containing in their essentials the same terms and conditions as those of the United States issued under authority of this Act; to enter into such arrangements as may be necessary or desirable for establishing such credits and for purchasing such obligations of foreign governments and for the subsequent payment thereof before maturity, but such arrangements shall provide that if any of the bonds of the United States issued and used for the purchase of such foreign obligations shall thereafter be converted into other bonds of the United States bearing a higher rate of interest than three and one-half per centum per annum under the provisions of section five of this Act, then and in that event the obligations of such foreign governments held by the United States shall be, by such foreign governments, converted in like manner and extent into obligations bearing the same rate of interest as the bonds of the United States issued under the provisions of section five of this Act. For the purposes of this section there is appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $3,000,000,000, or so much thereof as may be necessary: Provided, That the authority granted by this section to the Secretary of the Treasury to purchase bonds from foreign governments, as aforesaid, shall cease upon the termination of the war between the United States and the Imperial German Government.

SEC. 3. That the Secretary of the Treasury, under such terms and conditions as he may prescribe, is hereby authorized to receive on or before maturity payment for any obligations of such foreign governments purchased on behalf of the United States, and to sell at not less than the purchase price any of such obligations and to apply the proceeds thereof, and any payments made by foreign governments on account of their said obligations to the redemption or purchase at not more than par and accrued interest of any bonds of the United States issued under authority of this Act; and if such bonds are not available for this purpose the Secretary of the Treasury shall redeem or purchase any other outstanding interest-bearing obligations of the United States which may at such time be subject to call or which may be purchased at not more than par and accrued interest.

Exhibit No. 2781

Making War Loans to the Allies

(By Albert Rathbone)

[Reprinted from Foreign Affairs, an American quarterly review, New York, April 1925]

The debts of other governments to the United States have been the subject of much discussion since the end of the World War. The effect which their payment would have upon us and upon the countries indebted to us has been the subject of articles written by economists here and in Europe. Suggestions have been made both at home and abroad that these debts should be cancelled or readjusted. Some progress has been made toward their refunding, that is, the conversion of the promissory notes of the respective foreign governments which we held, which by their terms were payable on demand, into long term obligations with fixed dates of maturity. In some quarters it has been suggested that reparation payments by Germany are in some way inextricably bound up with our loans to foreign governments. In other quarters such a suggestion has been strenuously opposed. The obligations of a government, indebted to two or more other governments, and the rights of the creditor governments as between themselves, both legal and moral, have been the subject of speeches widely circulated in the press. It is not intended in this article to discuss these controversial questions, but to attempt to clarify the issues by making a brief statement of some of the basic facts relating to our Government loans and the principal considerations which governed the United States Treasury in making the loans to the Allied Governments under the authority of the Liberty Loan Acts.

Under the provisions of the Liberty Loan Acts the Secretary of the Treasury was authorized to make loans to the Allied Governments only out of credits established in their favor with the approval of the President before the declaration of peace. From time to time, therefore, when the government concerned had requested the establishment of a credit in its favor, the Secretary of the Treasury would obtain the approval of the President to the establishment of such a credit, and thereupon the Treasury would notify the government concerned that a credit had been established in its favor in a designated amount and that from this credit the Treasury would make loans if, and to the extent which, it should determine and for purposes which it should approve. The establishment of each such credit constituted the President's approval of loans by the Treasury up to the amount of such credit; ordinarily it had no other effect. It did not constitute a liability of the United States nor an engagement on the part of the Treasury to make loans or to pay out dollars. It was subject to withdrawal at pleasure by the Treasury, and in the cases of credits established in favor of Cuba and of Russia the unused portions of such credits were in fact withdrawn after our Treasury had determined that loans to those governments were not required to the full amount of the credits established in their favor. There were other cases too where established credits were in part withdrawn. In a very few special cases what were called effective credits were established in favor of Allied Governments, that is, credits which the governments concerned were assured would be devoted by the Treasury to making loans to them in the future. This was done in cases where dollars were not immediately required and if, in lieu of furnishing the dollars at once, the undertaking of the United States to furnish the dollars at a future time met the need of the Allied Government. Obviously it was to our interest not to furnish dollars more quickly than needed, and to the interest of the borrower not to have interest run from an earlier date than necessary.

When we commenced establishing credits and making loans the foreign governments desired that credits should be established in their favor sufficient in amount to cover all their dollar commitments and all their dollar needs that they could foresee in the near future. On the other hand, our Treasury felt that in view of our own large dollar requirements for war purposes and the limit placed on war expenditure in this country by the country's productive capacity, the total amounts of credits established in favor of Allied Governments should not average more than about $500,000,000 each month. The dollar needs of the Allied Governments as so estimated by them considerably exceeded $500,000,000 a month, so that there naturally ensued a competition between the Allied Governments regarding the extent to which each should participate in the credits we were prepared to establish. Each Allied Government was reluctant to reduce its estimate of its need for dollar credits so as to bring the aggregate of all such requests within the limit of $500,000,000 monthly, fixed by our Treasury. The Treasury was not equipped to determine with certainty whether the effective prosecution of the war required the establishment of a credit in favor of Great Britain for one purpose rather than a credit in favor of France for another or in favor of Italy for a third. In relief of these perplexities, it soon became apparent that the estimated dollar requirements of the Allied Governments were one thing, and the supply of commodities obtainable upon our markets in a given time was quite another, and that in consequence, while our Treasury might have been staggered to supply dollars quickly to the aggregated amount indicated by the Allied Governments, it would be able to supply all the dollars required by the Allied Governments as fast as the commodities they purchased could be delivered to them by our producers. In view of these considerations, the Treasury adopted towards Great Britain, France, and Italy, the general policy of establishing credits the amounts of which bore no definite relation to the amount of their commitments nor to the amount of their requirements here, but which aggregated approximately the estimated amount of dollars which they would require for disbursement during a period of thirty or forty days. As a consequence of this method of procedure, competition between the Allied Governments for our credits ceased and we were able in due course to establish for all of them the credits which were needed, in addition to their own available dollar resources, to meet their dollar requirements for war purposes. In the case of certain of the smaller countries it was found necessary to continue to establish credits up to the amount of their commitments in the United States, as without such credits in their favor they found it difficult to place to advantage orders upon our markets.

After putting into effect the practice of establishing credits to cover estimated cash disbursements for a period of thirty or forty days, the Treasury fixed Tuesdays and Thursdays of each week as the days when it would ordinarily make loans from these established credits. In a case of urgent necessity the Treasury would make loans on other days, but it was found to be less disturbing to our banking institutions if the bulk of our loans were made on days fixed in advance. In general the dollars we loaned were made available by the Treasury instructing the New York Federal Reserve Bank (in accordance with the previously received request of the borrowing government) to hold subject to the order of that government a stated amount in dollars, and so notifying the borrowing government. Ordinarily on the same day the borrowing government withdrew from the Federal Reserve bank the funds placed to its credit and deposited the same with its own depositary in the United States. Loans were not made on every Tuesday and on every Thursday to every Allied Government availing of our loans, but while the war was going on and for some time thereafter, while deliveries were constantly being made to the Allied Governments under existing incompleted contracts requiring the payment ot our producers of a large amount of dollars, there were not many Tuesdays or Thursdays on which some loans were not made by our Treasury. The general purposes for which loans would be made to the Allied Governments having been approved, the amount of loans to be made by our Treasury on any given day was determined by a consideration of the amount of the bank balances of the Allied Governments and the estimated dollar demands upon them for the next few days. In connection with the sale of Liberty bonds, the Treasury had carefully built up a system under which its balances were *pro rated* among various banking institutions throughout the land in proportion to their subscriptions to Liberty bonds and Treasury certificates. As the money which the Allied Governments borrowed belonged to them, and in consequence they could deposit it where they pleased, care had to be taken that the equilibrium established by this system should not be disrupted by unnecessarily large cash balances being built up by the Allied Governments with their own depositaries. The governments borrowing on Tuesdays would advise the Treasury regarding their approximate cash balances at the close of business on the preceding Monday, any other dollar resources expected to become immediately available to them, and their estimated dollar disbursements on that day and the next; in the light of that information the Treasury determined the amount of dollars it would loan that Tuesday. Similarly the Treasury on Thursdays would be advised of the approximate amount of bank balances at the close of business the preceding day and of the estimated dollar receipts and payments that day and on the succeeding Friday, Saturday, and Monday.

At the same time that we made them our loans, the borrowing governments, through their representatives duly authorized for the purpose, executed promissory notes for the dollars borrowed, payable upon demand, except in the case of a few of the earlier notes which were expressed to be payable on a specified early date and which after their maturity were carried as past due or demand obligations. By their terms, these notes, or certificates of indebtedness as they were often called, bore interest at a specified rate, were payable in gold coin of the United States, and contained an agreement on the part of the borrowing government to convert the notes upon the request of the Secretary of the Treasury of the United States into an equal par amount of convertible gold bonds of the borrowing government, conforming to the provisions of the acts of Congress specified in each note under the authority of which the loan was made. These notes were in all respects as valid and binding as would have been long-term obligations payable on fixed dates.

Under the terms of the acts of Congress our loans could be made to the Allied Governments only for the purpose of more effectually providing for the national security and defense and prosecuting the war. But to prosecute the war against Germany effectively the Allied Governments were obliged to purchase on our markets not only munitions and supplies for their armies but also foodstuffs and commodities required for the sustenance of their civilian populations. In consequence, their war purchases in the United States for which we made our loans consisted of supplies required both by the military forces and the civilian populations of the allied countries.

The financial requirements of each of the Allied and Associated Governments fell into three classes—according as they arose at home, in allied or associated countries, or in neutral countries. In general, the view of the United States Treasury was that the first class could and should be met by the government concerned through taxation or domestic loans; that as regards the second class, each country (if necessary) should stand ready to provide or arrange finance for the requirements of its allies for expenditures within its borders; and that expenditures in neutral countries should, for reasons of finance, be reduced to a minimum and should be met under some equitable arrangement by those countries able to provide the necessary finance in the required currency.

From the time it received the necessary authority from Congress, the United States Treasury was prepared to make to the Allied Governments whatever loans were required to enable them to make in the United States their necessary war purchases n so far as an Allied Government was unable itself to effect such purchases from other dollar resources at its disposal here. If the Allies were successfully to carry on the war, it was absolutely essential that they should make heavy purchases of our commodities. In view of our own stupendous financial program it would have been unwise to permit new issues of bonds of foreign governments to compete in our market with our own Liberty Bonds; and in any event no considerable amount could have been raised by the Allied Governments in that manner. It was clear that through taxation and loans we could gather in dollars, and that the dollars we loaned to the Allies and which were expended by them here remained subject to our taxes or available for the purchase of our Liberty Bonds. These same considerations, however, were applicable to the requirements of all the Allied Governments so far as they could be supplied in any allied country. Thus there was linked with the proposition that we would find and loan to the Allies the dollars they required for war expenditures in our country, the corollary that each allied country could and should, to the extent necessary, find and loan its currency to other Allied Governments for their war purchases within its territory. That is, for war purchases within the British Empire, Great Britain should supply and loan the necessary pounds to France, Italy, and Belgium, and France should similarly supply and loan the francs needed for war expenditures of the Allied Governments in France.

For its own war purposes in Great Britain, France, and Italy, the United States did not borrow pounds or francs or lire. Our Treasury was obliged to procure these currencies for the use of our army abroad. We bought pounds, francs and lire from the governments of Great Britain, France, and Italy and made payments therefor in dollars here. The dollars thus obtained by Great Britain, France, and Italy were applied by them towards the cost of their war purchases here, and thus the amount of the dollar loans required by these countries from our Treasury was diminished in a corresponding sum. Similarly Great Britain, loaning to France and Italy much larger values than the British requirements for francs and lire, paid for the francs and lire required for British use by crediting to France and Italy the sterling equivalent of the francs and lire turned over to her. By this means, or by some similar transaction, Great Britain met her needs for those currencies. Some other of the Allied Governments, however, required francs which were loaned them by France and substantially all of the Allied Governments actively engaged in the war in Europe required sterling and obtained advances thereof from Great Britain.

The United States financed its own requirements in neutral countries. To some extent our loans to support sterling exchange (which are referred to hereafter) provided the means necessary to pay for British purchases in neutral countries, and, to the extent they did not suffice, Great Britain obtained for herself the neutral currencies she required. Direct aid was required, however, chiefly by France and Italy, to finance much of their necessary war purchases in neutral countries. It was evident that the United States or Great Britain or both would have to find much of the finance required by France and Italy in neutral countries. There was no particular principle under which all such finance should be furnished by one of those countries and none by the other; both the United States and Great Britain were financially able to assume and to carry the burden. Great Britain before we entered the war had supplied such neutral finance as France and Italy required and had not been able themselves to supply. Until we declared war on Germany the war had been the Allies' war, not ours, and our Treasury therefore could not accept the theory that, because before we entered the war Great Britain alone had furnished the assistance required by France and Italy for finance in neutral countries, it was our duty alone to furnish such assistance after we entered the war.

Various considerations had to be taken into account in determining how and to what extent the United States should aid in financing, in neutral countries, necessary requirements of France and Italy, arising from the time we entered the war. Great Britain as the great creditor nation had available facilities for obtaining neutral finance which we, at that time a debtor nation, did not have. The apparent large balance of trade in favor of the United States, after there had been eliminated therefrom the United States exports paid for by the dollars which we had loaned the Allied Governments, became a heavy adverse balance against the United States, and this seriously handicapped the ability of the United States to furnish financial aid to Allied Governments in neutral countries. Through its pre-war commercial interests and its well-established war organizations, Great Britain was actually in a better position than we were in, or could put ourselves in, to handle the obtaining and utilizing of such neutral finance. Great Britain had capital interests in many neutral countries and for years the ocean transportation of exports and imports of neutral countries had been largely carried on by British ships. Between April 1917 and November 1918, as compared with the currencies of Sweden, Norway, Denmark, Holland, Switzerland, Spain, India, Japan, the Argentine, Chile, Peru, and Bolivia, the dollar was at a discount, and generally at a very heavy discount, and the pound was at an even heavier discount than the dollar. Consequently, purchases in these countries, if paid for in dollars or in pounds at their current exchange value, meant costs largely in excess of the high war prices as measured in terms of the currencies of these countries. If we alone were to finance these neutral requirements, it was as a practical matter impossible for us to delegate to Great Britain the control of the expenditure of our dollar loans for the neutral requirements of France and Italy for which they were unable themselves to provide. For the reasons elsewhere referred to, from the financial standpoint it was to our interest, and to the interest of Great Britain as well, that purchases which France and Italy could make in the United States or in Great Britain should be made there rather than in neutral countries. After we entered the war, in view of the considerations mentioned, Great Britain continued to furnish in the first instance most of the neutral finance required by France and Italy, but the United States Treasury, being prepared to bear its fair portion of the burden of securing finance for France and Italy in neutral countries effected arrangements by which, after we entered the war, such purchases were ultimately in part financed by our dollar loans to France and Italy. The cost of the neutral finance so found after we entered the war was ultimately furnished, in the case of Italy, approximately one-half by the United States and one-half by Great Britain, and—in the case of France—something over one-half by the United States and the balance by Great Britain.

Having thus fixed its general policy as to which countries should be the lenders, the United States Treasury formulated its general policy as to the Allied Governments which should be the borrowers. This was, that our loans should be made to each Allied Government to meet the cost of commodities purchased here for its own use; that we would not loan to one government the dollars needed for purchases to be made by or on behalf of another government, and that neither the financial condition of the borrower nor questions of political expediency in our own country should be factors in determining the government to which our dollars should be loaned and whose obligation we would consequently take. In view of the discussions since the war regarding our loans, it is interesting to recall that sympathy here at the time we were making our loans was strongly with France and that it was believed that loans to France would be more popular in our country politically than loans to Great Britain. However, as stated, no such consideration was permitted to influence our Treasury in the making of its loans.

A difficulty arose in applying the principle that we should loan to each Allied Government the dollars required for war purchases here for its own use. Before we entered the war various purchasing organizations had been built up and were functioning. It was deemed unwise to disturb or disrupt them. Many purchases were effected by a single organization set up by one of the Allied Governments which pooled the necessary purchases for the use of the three principal Allied Governments. To have insisted that each government make its own purchases separately would have caused them to compete with each other and would have further raised prices in the United States, with the resultant increase in the amount of our loans. To meet this situation, what was known as the dollar reimbursement plan was devised. Under this plan, if one Allied Government borrowed dollars to pay for purchases made by it in whole or in part for the use of another Allied Government, we loaned the government for whose benefit the purchases were made a sufficient amount of dollars to permit it to reimburse the government originally making the purchases. This was done on a settlement of the account, and sometimes indeed before its final settlement, and the government to which reimbursement was made either applied the dollars thus received toward the repayment of our loans to it or else held them to meet its dollar expenditures for purposes for which dollars would otherwise have been loaned to it by the United States. For example, if a British agency purchased in the United States a commodity, say copper, part of which was to be used by Great Britain, part by France and part by Italy, the British Government in the first instance borrowed of our Treasury sufficient dollars to make payment for all the copper so purchased. Later, when a specified amount of the copper so purchased was turned over to France and a specified amount to Italy, the British Government made claims against the French and Italian Treasuries for reimbursement in dollars for the cost to the British agency of the copper turned over to those countries, the price charged them being determined by the price of all copper so purchased, including expenses incident to the purchases, cost of transportation to seaboard, interest, etc. When these accounts of copper purchases were settled between these three governments, and sometimes pending final settlement, the French and Italian Governments would ask loans of the United States Treasury for the purpose of repaying in dollars to the British Government the amount of dollars which the British Government had thus expended for them in buying the copper turned over to France and to Italy, and dollar loans in the required amount having been made to France and to Italy, they would then pay the dollars to Great Britain in settlement of the cost of copper delivered to them by the British agency. The next step would probably have been to require the British Government to repay the dollars thus received to the United States Treasury on account of our loans to Great Britain and to have cancelled a corresponding amount of British obligations, had it not been that the cost of the copper bought for France and Italy then would have figured twice in calculating the aggregate amount of our loans to the Allied Governments; once when purchased from the American producer by the British agency for France and Italy, and once when purchased at cost by France and Italy from the British agency. Ordinarily, therefore, instead of requiring the dollars so received by Great Britain from France and Italy in reimbursement of the cost of its copper purchases for those countries to be applied on the British obligations which we held, our Treasury would require Great Britain to expend the dollars so received by it from France and Italy for other of its dollar purchases, in all respects as if the dollars so received had been loaned by the United States to the British Government. In its essence the dollar reimbursement plan was merely bookkeeping which, when applied, resulted in our loans being made to the appropriate country for whose use they were expended in accordance with the policy of the Treasury as stated. Its practical effect was to substitute for British obligations in our portfolio the obligations of other Allied Governments to the extent that purchases were made from our dollar loans to Great Britain for the use of other Allied Governments.

The difficulties which naturally occurred in giving effect to the principles which our Treasury adopted and the modifications which became necessary in the methods which we used in making our loans inevitably caused some extension of these principles. As already stated, we were prepared to loan the dollars needed to buy available commodities produced here so far as required by the Allied Governments for war purposes. It had, however, been the business custom for years, and such custom could not be changed in a day, to pay for various of such commodities, notably cotton, by means of the foreign exchanges.

For example, British manufacturers had for years been large buyers of raw cotton in the United States. The British manufacturer in payment for the cotton he purchased would authorize the American seller to draw on him for pounds sterling in a specified amount. The American seller would accordingly make his draft payable in sterling, and as he did not want pounds sterling in England but dollars in the United States, he would sell such draft on the New York exchange market for dollars. In ordinary peace times there was a commercial demand in New York for pounds, and these sterling drafts could readily be sold at or about the par of exchange, *i. e.*, for an amount of dollars the gold content of which would equal the gold content of pounds to the amount specified in such draft. In peace times, fluctuations in exchange where the supply of pounds offered on the New York exchange market exceeded the demand, and *vice versa*, were checked by England exporting gold to us, or if the demand for pounds exceeded the supply of sterling drafts offered, by our exporting gold to England. War-time conditions fundamentally changed this situation. Great Britain in effect prohibited the export of gold and we permitted gold to be exported only under special licenses which were issued only in exceptional cases. Great Britain's exports were curtailed and her commercial carrying trade was disrupted. As we bought much less of British commodities and services during the war than in peace times, we required much less sterling than in peace times to pay for such British commodities and services as we bought during the war. On the other hand, the British need of dollars had largely increased over her peace-time requirements. Necessarily the effect of these conditions was to increase the British demand for dollars and to lessen the demand for pounds on our exchange market. Therefore, if cotton and other commodities purchased of us, which in peace times were ordinarily paid by sterling drafts, were still to be paid in that manner, it would not be possible to sell these sterling drafts for dollars at or near the par of exchange; and instead of drafts payable in pounds sterling commanding in our market something near the par of exchange in dollars ($4.86+) they could be sold only at a great sacrifice, how great it was impossible to foresee. Certainly on our exchange market the value of the pound as compared with the dollar would have tremendously declined and the credit of Great Britain would have been seriously affected at a time when it was of the utmost concern to all the governments at war with Germany that the financial credit of the Allied Governments should be maintained. It was recognized that the sterling drafts offered for sale on the New York exchange market were not only drafts issued in payment of purchases in the United States, but also drafts used in payment of purchases in other parts of the world, both within and without the British Empire; and that such purchases were not only governmental purchases but also private purchases, not only purchases by residents of Great Britain but also by residents of other countries. Hence our making loans for the purpose of supporting British exchange necessarily would involve an extension of the principles formulated by our Treasury to govern it in making our loans. However, it was believed that, because of the control exercised by the Allied Governments over exports and imports and over shipping, the great bulk of the purchases for which payments would be made over our exchange market would be for war materials and other commodities necessary for maintaining the civilian populations of the allied countries, and that through such control and cooperation between the governments the amount of drafts coming on the exchange market, representing purchases in neutral countries, could be kept within reasonable limits.

It was decided, therefore, that British exchange should be pegged and that the Treasury would make the necessary dollar loans for the purpose. British exchange was pegged by supplying sufficient dollars through our loans to Great Britain to enable its representatives to purchase on the New York market, at a price agreed upon in advance, all sterling drafts offered for sale which were not purchased at or above that price. Thus there was created an unlimited demand for such drafts at a fixed price. The total amount expended by Great Britain in support of exchange and for cotton purchases was approximately $1,682,000,000 of which about $1,275,000,000 was during the period from April 6 to December 31, 1917, when our Governmental agencies for the control of purchases were being established. It is impossible to analyze this large amount of expenditures but a study of our trade returns for 1917 suggests that, during that year, the amount of our advances to the Allies not represented by purchases and other expenditures in the United States was only a very small proportion of the total. By the first of January, 1918, most of the important purchases, other than cotton, had been taken off the exchange market and were being paid for direct in dollars and the advances to Great Britain for the purchase of exchange and for cotton for the period from January 1 to November 30, 1918, fell to about $296,000,000. During the same period our exports of cotton to Great Britain, as shown by the trade returns, amounted to about $290,000,000. The United States also made loans to support French exchange, though the method employed was somewhat different and the amount involved much less than in the support of sterling exchange. British exchange was pegged at a fixed point ($4.76 7/16 per pound for cable transfers) for the entire period. French exchange was pegged at a point, generally in the neighborhood of 5.70 francs to the dollar, agreed upon practically each month. Italian exchange lacking our support had depreciated to about 9.15 lire to the dollar, but after support was arranged through our standing ready to make loans to purchase drafts payable in lire, Italian exchange was brought to about 6.35 lire to the dollar.

As many French purchases were paid for by sterling drafts which were offered for sale in our markets, the dollar reimbursement plan was utilized to reimburse Great Britain for her borrowings of dollars to support sterling exchange to the estimated extent that French purchases were paid for in such sterling drafts. The cost of sterling drafts representing French purchases, paid for from our loans to Great Britain to support sterling exchange, was approximately $50,700,000, and accordingly we ultimately were given French obligations in lieu of British obligations to that amount.

The Treasury as rapidly as practicable arranged that payment for American commodities purchased by the Allies should be made direct in dollars, and eventually by far the greater part of the commodities (including cotton) which at the time we entered the war were being paid for by drafts payable in foreign currencies, were paid for direct in dollars by the Allied Governments out of our loans to them.

Next the shipping situation presented difficulties in the way of carrying out the Treasury's theory as to the particular government to which a loan should be made. These difficulties were most acute in connection with the supply of cereals. Apart from the United States, the principal sources for the supply of cereals were within the British Empire (Canada, Australia, India, etc.) or in neutral countries, especially the Argentine, in which Great Britain was in a position to secure finance. Considerations, both of time and of risk in shipping, made it expedient that Italy and France should be supplied largely from British Empire sources and that Great Britain should be supplied from America, rather than that all British Empire supplies should move to Great Britain and a corresponding amount of American supplies should move to France and Italy. It was recognized, however, that such an arrangement made for the common good should not have the effect of increasing Great Britain's borrowings in America on the one hand, and its loans to France and Italy on the other. The difficulty was worked out by means of a theoretical cereal allocation. That theory assumed that each country would receive, and so far as necessary apply to its own needs, the cereals available within its own territorial boundaries, and that it would purchase cereals here and borrow dollars for the payment thereof only to the extent that each country required for its consumption cereals in addition to the supply available within its own territories. Actually, in order to economize in the use of ships, the cereals were taken from the sources most available in view of the shipping situation and the German submarine menace.

Under the cereal allocation theory, the British Empire's supply of cereals was to be allocated in the first instance solely to Great Britain, and the cereal supply purchased in neutral countries was to be allocated to the country finding the finance, which was to be procured in such manner that sterling and franc drafts issued in payment therefor would not come upon the New York market as exchange and would not therefore be purchased with dollars from our loans to support exchange. The exportable supply of the United States was to be allocated in proportion to the requirements of the various allied countries in excess of those covered in the manner previously indicated; and our Treasury was prepared to make advances to the Allied Governments, in accordance with such allocation, up to the f. o. b. cost of the United States supply purchased and allocated to them.

The cereal allocation theory dealt with further allocations of minor importance and also with the allocation of any excess of the British supply over British requirements. In point of fact, however, the British supply fell somewhat short of British requirements, and consequently a small part of the American supply was allocated to Great Britain. The practical effect, therefore, of the cereal allocation theory was that we received British obligations for the cost of cereals to the extent only that the British supply (obtained from the British Empire and neutral sources) was inadequate to meet the needs of Great Britain, although something over one-half of the cereal import requirements of the United Kingdom were actually met from the United States supply; and that we took the obligations of other Allied Governments for the cereals furnished them, although their requirements were actually met, at least to a considerable extent, by shipment from the

British Empire source of supply. Before the cereal allocation theory was entirely worked out and accepted by the American and British Treasuries, and to meet a pressing emergency, at the urgent request of Great Britain we loaned her in the neighborhood of $200,000,000 to purchase wheat in Canada. The inability of Canada to finance its export of cereals was due largely if not entirely to purchases being made by Canada in the United States of the same character as those for which our Treasury was prepared to make loans to the Allied Governments, so that in making this Canadian cereal loan to Great Britain the departure from our principle of not ordinarily making loans to an Allied Government to finance purchases within its own territory was more apparent than real.

Much discussion took place regarding the extension of the principles of the cereal theoretical allocation to other supplies. In general, our Treasury expressed willingness to apply the principle to all cases where Great Britain was buying in the United States and furnishing to other Allied Governments similar supplies in substantially the same condition or stage of manufacture, whether Great Britain had obtained such supplies from the United States or from other sources, and on this basis British claims for reimbursement by France for pig iron and steel billets were accepted by the United States. Our Treasury, however, refused generally to extend the principle to raw materials of American origin used in producing manufactured articles for the Allies in Great Britain. Obviously many new considerations would have arisen in connection with any such extension, one of the most important being the difficulty of applying it with any degree of accuracy or completeness, particularly as such application to be logical would have to be bilateral, so that against any adjustment for, say, American pig iron entering into shells supplied by Great Britain from its loans to other Allied Governments there would have had to be an adjustment for, say, Indian jute contained in American sacks purchased with the dollars we loaned to the Allies. It is probable that on balance the amount involved in any such extension of the principle would have been relatively unimportant. Nevertheless, in certain specific cases where, to meet a military emergency, the Interallied Munitions Council required deliveries from one army to another of manufactured munitions containing American raw materials, the Treasury did consent that dollar reimbursement might be made for the cost of the American raw materials entering into the munitions so delivered.

The question of what items of British expenditures were made for account of other Allied Governments, and hence entitled to full reimbursement in dollars if made in the United States and part reimbursement if made in neutral countries, was a frequent subject of conference between the treasuries of the countries concerned. It was not easy of solution. Great Britain made purchases for France for which dollar reimbursement was claimed from France to an aggregate amount in excess of $1,000,000,000. For a considerable period France paid Great Britain on account of such purchases the sum of $10,000,000 a week, derived from loans to France by the United States Treasury. It was easy to determine that certain of the advances made to Great Britain were for the use of Great Britain and of no other country. Munitions, cotton, foodstuffs, tobacco, and other commodities purchased by Great Britain out of our loans were transported to England and there consumed because Great Britain had not a sufficiency of these commodities and required them for consumption if the war was to continue. So, too, interest on the advances we had made to Great Britain and the amounts required to meet the principal and interest of dollar obligations of the British Government to private holders as they matured during the war period were loans for the benefit and use of the British alone. In other cases it was just as easy to determine that certain purchases were effected out of our advances to Great Britain for the benefit not of Great Britain but of other Allied Governments. Such advances were repaid in dollars to Great Britain by the respective Allied Governments out of our loans made to them for that purpose. It was not so easy to determine other questions—for example, the division between the United States and Great Britain of purchases made in neutral countries for the use of other Allied countries, the proper settlement of the complicated figures dealing with the cereal allocation theory and the transportation of cereals, or the extent to which French purchases were paid for out of our loans to Great Britain to support sterling exchange. These and other debatable questions were argued *pro* and *con* and eventually an agreement was reached by the American and British Treasuries as a result of which dollar loans were made by the United States to the countries concerned and by them paid to Great Britain in full and final settlement, certainly as far as the United States Treasury was concerned, of the claim of Great Britain that it had used part of its dollar advances from the United States to effect purchases for the benefit of other Allied Governments.

The dollars so received by Great Britain were either paid to the United States Treasury on account of British obligations which we held, or, as previously stated, used for dollar requirements of Great Britain in lieu of further loans to Great Britain from the United States. In either case the effect was to decrease the aggregate amount of British obligations which otherwise would have been held by us and correspondingly to increase the aggregate amount of the obligations of the other Allied Governments to us.

It will be observed from the table hereinafter set forth that the total amount of dollars paid in reimbursement to Great Britain by the other Allied Governments from our loans to them aggregated about $1,850,000,000. Without making a detailed analysis of this figure it may be broadly stated that of this sum roughly $1,100,000,000 represented reimbursement on account of cereals, $500,000,000 reimbursement for other replacements of a similar character such as iron, steel, meat, etc., and $250,000,000 neutral purchases and other special items.

These were the general theories on which the bulk of our war loans were made; there were special cases which had to be specially treated, such as the loan of our melted silver dollars to Great Britain under the Pitman Act, for use in India, which loan has now been repaid in full; loans to France in lieu of compliance with a request for one billion gold francs which M. Clemenceau made of President Wilson at a time when the Germans were advancing towards Paris and when our franc requirements for the purposes of our Army in France were large; and loans for Austrian relief to prevent the spread of anarchy and the continuation of war. Attention should be called, however, to one notable departure from the principles adopted by our Treasury in making loans for expenditure in the United States, namely, the loans we made to Great Britain to enable that Government to make payment here in dollars of obligations which, before we entered the war, it had assumed in connection with American contracts entered into by the Russian Government. Before we entered the war our manufacturers had quite generally refused to enter into contracts to supply commodities to Russia unless they received some assurance that Russia would make the payments she obligated herself to make under the terms of the proposed contracts. Great Britain supplied the credit required by our manufacturers on Russian orders and in effect guaranteed the payments which Russia obligated herself to make under such contracts. After we entered the war, we from time to time loaned, to Great Britain and not to Russia, the dollars required to make the payments under these contracts as they became due, because the obligation was incurred by Great Britain before we entered the war. Thus Great Britain was called upon to pay and did pay our dollars we loaned to her (not to a very significant amount in comparison with the aggregate of our loans to Great Britain) in discharge of her old obligation of guaranty under these Russian contracts. To some extent Great Britain recouped these expenditures through the utilization or disposition of material delivered under such contracts, but on balance some small part of our dollar loans to Great Britain was for the purpose of meeting obligations in the United States entered into by Great Britain before we entered the war, but which were settled after we entered the war, and not for the direct benefit or use of Great Britain but for the use and benefit of Russia.

Some of our dollar loans had resultant effects which were of importance. Lending the dollars needed to support sterling exchange resulted in the purchase by the British Government, from our loans, of drafts payable in sterling, and to the extent that such drafts were drawn in payment of purchases not made by the British Government itself, that Government collected the sterling called for by the drafts purchased. The sterling thus obtained was available for the governmental purposes of Great Britain and to a corresponding extent diminished the sums the British Government was obliged to raise through loans or by taxation. When we loaned dollars with which the British Government purchased commodities, notably foodstuffs, for the use of the civilian population, the pounds paid therefor to the British Government on the sale of these commodities in Great Britain to the inhabitants of that country became available to the British Government. The French Government obtained a supply of francs through our support of French exchange, and France, Italy and, to a lesser extent, other countries obtained supplies of their currencies through the sale to their civilian populations of commodities purchased through our dollar loans. Our support of British and French exchange necessarily had the effect of maintaining the purchasing power of the pound and the franc, with consequent savings to the Governments of Great Britain and France. The purchasing power of the lira was increased when the arrangements we made effected its rise on our exchange market.

In the latter part of March 1918 the Chancellor of the Exchequer for the British Treasury proposed a modification of the methods theretofore in use by the United States Treasury in making its loans to the Allied Governments. It was proposed that our Treasury should take over all the future obligations given to Great Britain by France and Italy, except obligations which they should enter into for the payment of interest on advances previously made to them by Great Britain, and that Great Britain should remain primarily responsible for arranging the finance of supplies to France and Italy outside of North America. For the supplies thus purchased for France and Italy it was proposed that France and Italy should make payment to Great Britain in dollars received by France and Italy from our loans, instead of making payment therefor to the British Treasury by their treasury bills, and that the dollars so received by Great Britain were to be used to meet in part the approved purchases of Great Britain in the United States. The British Treasury estimated at that time its monthly loans to France at about $75,000,000 and to Italy at about $43,000,000, exclusive of loans for interest due Great Britain upon her previous advances, and that the result of adopting the proposal would be that the United States would loan to France and Italy about $118,000,000 per month more than we were then loaning those countries, and to Great Britain monthly about $118,000,000 less than we had been loaning her. This proposal was not accepted.

An excellent editorial entitled "The Balfour Note Once More", appearing in the British financial journal, *The Economist*, of March 10, 1923, states that the United States refused to accept this proposal largely on the ground that if it did so it would have no control over the expenditure of the money spent by agencies of the British Government for France and Italy. It is true that this consideration was one reason for declining the proposal. It was, as a practical matter, impossible for the United States to loan dollars to France and Italy for purposes and in amounts which were to be determined, not by our Treasury, but by agreement between Great Britain on the one hand, and France and Italy on the other hand. It was, however, a part of the proposal that Great Britain should remain responsible for financing in the first instance the supplies to France and Italy outside of North America, and indeed it would have been most unwise to scrap the efficient purchasing organization built up during the war by Great Britain. But while this consideration was important, the real reason for the rejection of the proposal was that it was in conflict with what our Treasury strongly believed should be the fundamental principle in making Government loans, namely, that each government should find the finance required within its own territory by itself or by an allied government to the extent that such allied government was unable itself to provide the same. The reasons for the formulation of this principle have already been discussed. It was the least burensome manner of finding the necessary war finance and our Treasury felt that any radical departure from that principle could not be logically defended and was fraught with financial and political danger. Through the cereal allocation theory and its extension to other commodities already referred to, the United States relieved Great Britain from the necessity of making loans to other Allied Governments for their purchases from her of commodities of substantially the same character and in the same state of manufacture as Great Britain was buying concurrently in the United States. But the fact that the Allied Governments required and were purchasing coal and woolen goods from Great Britain seemed no reason for our accepting French or Italian obligations, whether given before or after we entered the war, in payment for British purchases here of raw cotton or copper for its own use.

The fundamental cause of Great Britain borrowing from us while loaning to the Allies was that there were commodities here which Great Britain required for her own use and was obliged to pay for in dollars which she borrowed of us, and there were commodities within the British Empire required by the Allies which had to be furnished them and for which they could not pay except from loans. The same condition existed, though to a smaller extent, in the case of France, which, while borrowing both of the United States and of Great Britain, nevertheless made loans to Belgium, to Italy, to Russia and to others of the Allies.

The position of the British Government as both a borrower and lender unfortunately has led to some misapprehension regarding our own loans. In some quarters there has apparently existed the erroneous impression that while we made loans to other Allied Governments we did so only on British security, or the equally mistaken view that the dollars Great Britain borrowed of us enabled her to make loans to other Allied Governments.

The London *Economist* has done yeomen's service in removing these misunderstandings. Thus in its editorial already mentioned it is said:

"In the circumstances described we sympathise with the complaint of the American Ambassador against the sentence in the Balfour Note in which it says, 'Under the arrangment then arrived at the United States then insisted, in substance, if not in form, that, though our Allies were to spend the money, it was only on our security that they were prepared to lend it.' This sentence certainly suggests that the American Government refused to accept the credit of our European Allies, and that in some way we were made to underwrite the loans they made from America for all purposes—an implication which is entirely incorrect. We regret, therefore, that Lord Balfour should have said on Thursday that 'I am unable myself to find in those words anything which is either misleading or obscure.' "

Again in an editorial entitled "Inter-allied Debt", appearing in *The Economist* of January 10, 1925, it is stated:

"Again, the fact that we are paying the United States is not in itself an argument for bringing pressure upon France, for it is not in any sense true, as is commonly supposed, that we borrowed from the United States merely to relend to France and Italy. Our loans from America are quite independent of our loans to our European Allies. America lent to Italy, to France, and to Great Britain moneys required to enable them to make necessary purchases from the United States, and far the larger part of what we bought in America consisted of wheat, meat, metals, explosives, oil fuel, and other essentials, either of our national existence or of our war effort. But France had to borrow not only in America; the fact that the greater part of her pigiron production was in German hands and that her mines were destroyed, meant that she had to buy iron and steel and coal in Great Britain, as well as woollen cloth, chemicals, and a great variety of manufactured products for which we advanced her sterling credits. It is an accident that the amount of these advances to France and Italy for purchases in Great Britain amounted during the latter part of the war to about the same amount as we had to borrow for British needs in the United States. But we cannot argue that if we had not been compelled to lend to our European Allies we need not have borrowed from America; the reason we had to borrow from the American Government was that—large though our internal loans might be—we had no means of securing credit in dollars. It is true we might have raised further sums by continuing to sell conscripted American securities, but it was already becoming difficult to make further sales, and this method of raising money would have been increasingly costly. On the other hand, the United States Government, as soon as it came into the war, was determined to control the purchases of ourselves and our Allies. For all parties concerned, therefore, it was the cheapest and most convenient plan for us to borrow from the United States Government. It is quite certain that even if France had not had to make any further purchases in Great Britain in 1917 and 1918, we should still have been under the necessity of borrowing in dollars in the United States in order to feed Great Britain and to provide the material which America alone could supply."

It would appear, however, that during the latter part of the war Great Britain's loans to France and Italy were considerably less than her borrowings from us. Official British statistics show Great Britain's loans (probably including interest on loans made before March 31, 1917) from March 31, 1917, to March 31, 1919, to France at about £243,200,000 and to Italy at about £255,500,000 (an aggregate of something under £499,000,000), and Great Britain's loan from the United States Government outstanding March 31, 1919, at over £840,800,000.

That our loans to the Allied Governments attained the magnitude they did is due to the fact that we were not able to put an army at the battle front immediately upon our entering the war. When we first entered the war the Allied Governments were able to purchase large quantities of supplies here requiring large expenditures of dollars and huge loans to them. As our army took the field it began to absorb an increasingly large share of our products and thus the amount of our commodities available for purchase by the Allied Governments correspondingly decreased. So, too, when we first entered the war our governmental requirements for sterling, francs, and lire were almost negligible, but as our military strength on the fighting line increased, our requirements for foreign moneys became correspondingly greater and the increasing amounts of dollars which we paid for such currencies furnished dollar resources to Great Britain, France, and Italy which were utilized by those countries instead of borrowing from us equivalent amounts.

Our Treasury quite naturally felt that its duty did not cease with the actual making of our loans to the Allied Governments. It was of the utmost concern to the United States just how the dollars we loaned were expended, yet having purchased obligations of the Allied Governments the dollars we paid for such obligations were theirs, not ours. It would have been undignified for them as sovereign states to have permitted even a friendly power to exercise control over their dollar balances. Had the Treasury insisted on controlling the expenditures of the dollars loaned, it could not have escaped responsibility for the use of the borrowed dollars. The Treasury was not equipped to act as a purchasing agency. The acquisition of commodities was imperative, time was most important, and reasonable certainty of prompt deliveries far outweighed ordinary price considerations. Our Treasury concluded that the control of the dollars loaned must be given exclusively to the borrowers; it was so given, and the purposes of the Treasury were served and the interests of the United States protected by other measures taken by our Treasury to which reference will now be made.

In making their written requests for dollar loans the Allied Governments were required to specify generally the uses which they proposed to make of the dollars asked for, and the written replies of the Secretary of the Treasury granting applications for loans likewise specified the general purposes for which the dollars loaned were to be expended. Thus the borrowing governments became obligated in respect of their use of the dollars we loaned them.

The Allied Governments, in compliance with the request of the Treasury and to enable the Treasury to consider further applications for loans in the light of full information as to the use made of dollars previously loaned, reported to the Treasury, in detail and on forms prepared by the Treasury, the use made of the dollars previously loaned them.

Under arrangements entered into in September 1917, purchases were made by the appropriate agencies of the various foreign governments under the general supervision of a Purchasing Commission established by agreement between the Secretary of the Treasury and the respective foreign governments for the purpose of coordinating governmental buying in the United States. The Interallied Council on War Purchases and Finance was organized through the efforts of our Treasury for the purpose of considering and coordinating the demands of the Allied Governments upon the United States Treasury. Later the War Industries Board was organized and passed upon the necessity of purchases on our markets by our Government and by foreign governments as well, and the Treasury in general required the Allied Governments to obtain the consent of the War Industries Board to their purchases of commodities in the United States. Purchases of food in the United States by the Allied Governments were made only if the consent of our Food Administration was obtained, and purchases of fuel (coal and oil) only if the consent of our Fuel Administration was obtained. Arrangements were also made with our War Trade Board whereby the issue of export licenses to the Allied Governments was withheld except for commodities purchased with the approval of one or the other of the above-mentioned agencies.

The organizations effected by our Treasury and our Government proved to be of considerable value to the missions of the foreign governments making purchases in the United States in aiding them to make their purchases on the best possible terms. War prices were high in the United States, as elsewhere. That war prices in the United States did not go much higher than they actually did was due to the efforts of our Treasury and our governmental agencies to eliminate competition among governmental buyers, to coordinate purchases, and to check price inflation as far as practicable.

The annual report of Secretary of the Treasury Houston of 1920 contains an interesting analysis of the expenditures in the United States of the dollars which we loaned to the Allied Governments. From this analysis has been prepared the following table, in which fractions of $1,000,000 have been adjusted, dealing with the advances, repayments, expenditures, etc., of Great Britain, France, Italy, and other countries for the period April 6, 1917, to November 1, 1920.

	Great Britain	France	Italy	All others	Total
Cash advanced	$4,277	$2,997	$1,631	$680	$9,585
Less refunds and repayments	80	31		8	119
Net	4,197	2,966	1,631	672	9,466
Expenditures:					
Munitions and remounts	1,331	827	259	77	2,494
Munitions for other governments	205				205
Exchange and cotton	1,683	807	87	68	2,645
Cereals	1,375		42	5	1,422
Other foods	1,169	295	142	24	1,630
Tobacco	99	41		5	145
Other supplies	215	277	63	58	613
Transportation		32	100	4	136
Shipping	49	122	1	1	173
Reimbursements	19	1,046	784	24	1,873
Interest	388	269	58	16	731
Maturities	353	290		5	648
Relief	16	143	16	363	538
Silver	262	6			268
Food for Northern Russia	7				7
Purchases from neutrals			19		19
Special for U. S. war purchases in Italy			25		25
Miscellaneous	48	41	56	24	169
Total reported expenditures	7,219	4,196	1,652	674	13,741
Less—					
Reimbursement from U. S. credits	1,854	19			1,873
U. S. dollar payments for foreign currencies	450	1,026	14	1	1,491
Proceeds of rupee credits and gold from India	81				81
Total deductions	2,385	1,045	14	1	3,445
Net expenditures	4,834	3,151	1,638	673	10,296

It will be observed that this table shows expenditures reported to the Treasury exceeding by $830,000,000 the total amount of our loans within the period, and yet the expenditures for the full period had not been reported to the Treasury by many of the governments. It will doubtless be impossible ever to bring about an exact balance between the amount of our loans and the expenditures reported by the Allied Governments. As the Treasury would not in general make loans to an Allied Government so long as such government had available for use dollars however obtained, it is necessary in attempting to balance our dollar loans to the Allied Governments with their dollar expenditures to take into account the dollars which were or became available to the Allied Governments from sources other than our loans. When we entered the war a certain amount of dollars were available here to Allied Governments. After hostilities ceased there was some liquidation here by the Allied Governments of supplies they no longer required, which produced dollars. After the armistice the Treasury urged the Allied Governments to provide their dollar requirements through independent action on our financial markets. The British, French, Italian and Belgian Governments all found means to obtain dollar funds here. Even during the war dollar funds were to some extent provided by some of the Allied Governments. The support of Italian exchange resulted, not in dollar loans to Italy for that purpose, but in dollar balances here in favor of the Italian Treasury derived from private purchases of lire on our market. Various departments of our government became indebted to Allied Governments for services rendered or materials purchased, for which payment was made in dollars. American securities owned or controlled by Allied Governments were disposed of in our market, thus increasing their dollar resources. All these factors must be determined and applied if a balance is to be struck between the amount of the dollar resources of the Allied Governments, including the dollars we loaned them, and their dollar disbursements.

Our loans naturally divided themselves, on the basis of time, into two classes: those made before the armistice and those made thereafter. The following table, in which fractions of $1,000,000 have been adjusted, shows the amount of our loans both before and after the armistice, up to November 1, 1920 (all of our loans after the armistice except to a comparatively insignificant amount were made before November 15, 1919), after crediting repayments on account of principal prior to that date, all of which repayments were in the nature of bookkeeping entries except the payment of $500,000 on account of its obligations by the Government of Cuba:

Period	Great Britain	France	Italy	All others	Total
April 24, 1917 to Nov. 15, 1918	$3,696	$1,970	$1,051	$381	$7,098
Nov. 15, 1918 to Nov. 1, 1920	501	996	580	291	2,368
Total	4,197	2,966	1,631	672	9,466

In general, we made our loans for the same purposes after the armistice as we did before. Our Treasury absolutely declined to make post-armistice loans for reconstruction or trade purposes. We did loan in the aggregate some $48,000,000 in substantially equal parts to Great Britain, France, and Italy to purchase foodstuffs and relief supplies which those countries furnished Austria. The loan made to Great Britain for this purpose has been repaid to us. Our Treasury had no authority to make loans to Austria, an enemy country, and it was important as a war purpose that relief should be furnished Austria to prevent the spread of anarchy which might have led to a resumption of hostilities, and delayed the ending of war. For the same purposes we made loans direct to Czechoslovakia, Rumania and Serbia. For a time we continued after the armistice our loans to the Belgian Government for use by the Commission for Relief in Belgium. Loans were also made in relatively small amounts to Czechoslovakia, to furnish part of the cost of returning soldiers to Europe. Prior to the armistice, in lieu of complying with M. Clemenceau's request for 1,000,000,000 francs in gold, to which reference has been made, we had established in favor of France an effective credit in the sum of $200,000,000. This credit the French Government had transferred to the Bank of France, and the Bank of France had included the same as part of its reserves. The Bank of France drew dollars against this credit only after the armistice.

When it is recollected that at the time of the armistice we were loaning Great Britain only the dollars needed to meet her day-to-day expenditures, the aggregate of our net post-armistice loans to her of about $500,000,000 seems exceedingly moderate. At the time of the armistice Great Britain was obligated to make dollar payments against deliveries under existing contracts. In March, 1919, the British Treasury estimated its outstanding dollar commitments at about $273,000,000 in addition to about $88,000,000 interest on our loans to Great Britain which became payable and which was paid during April and May, 1919. It was not until some time after the actual signing of the armistice that the Allied and Associated Governments became reasonably certain that hostilities had come to an end, and until so satisfied it was impracticable for them to begin demobilization or to cut down a considerable part of their dollar expenditures here. Our net post-armistice loans to Great Britain were kept down only because of her other dollar resources, including dollars paid to Great Britain by the other Allied Governments under the dollar reimbursement plan.

The French and Italian post-armistice net borrowings included in the case of France the advances of the $200,000,000 effective credit assigned to the Bank of France, and in the case of both France and Italy loans made to enable those countries to reimburse Great Britain for purchases made by Great Britain for the use of France and Italy, respectively.

Consideration has here been given only to the bulk of our loans. There are few rules without exceptions and special circumstances had to be given weight in certain cases, but in general the principles stated, which were formulated by our Treasury, were carried into effect, sometimes through the use of complicated methods of procedure forced by war conditions.

The purpose of our loans to the Allies was to win the war. They were made without stint but without waste. We supplied to each country availing of our loans all the dollars each required in excess of its own dollar resources available for purchases in the United States. The dollars we loaned, used in this country by the Allied Governments, were expended for purposes approved by our own governmental agencies. We did not make loans for purposes which in our judgment were unnecessary and not calculated to help win the war. We kept the amount of our loans down by requiring the countries borrowing of us to use to the extent available their other dollar resources for purposes we approved. In conjunction with Great Britain we furnished the finance required to effect necessary war purchases of other Allied Governments in neutral markets. Upon final adjustment we held the promissory notes of each Allied Government to which we had made loans, in an amount corresponding with the financial assistance we had furnished it under the general principles herein outlined.

EXHIBIT No. 2782

JUNE 10, 1918.

Memorandum for the Secretary.

As you doubtless recall, the British Government had a secured loan in the amount of $102,000,000 in our markets which matures on the 1st of September. I do not think that, with the greatly increased program of our own expenditures and the tremendous issues of Treasury certificates which we must be making from now forward, it will be possible for the British to finance a renewal of this loan on reasonable terms nor do I think it would be wise for us to permit the British to resume sales of American securities. This would have a very depressing effect on the market for securities and tend to make it difficult for us to get the money we need ourselves. On the whole, I am inclined to think that if we stand firm in the position outlined in the draft reply to the Chancellor of the Exchequer as to financing the Allies in neutral markets and British dependencies, we might well provide for the financing of the Allies' maturities in this market. That is no strain upon our own financial resources because no money goes out of the country, and by paying off these maturities we release credit for our own purposes. I think the borrowing on the part of the British Government on our markets on extortionate terms would be injurious to British credit, create an unfavorable impression as to the extent of the sympathy between the two governments, and impair our own position because of the discredit it would throw upon the credit of our largest debtor.

I am disposed to suggest that when you go before Congress in connection with the new bond bill you should make a brief statement of the change in the situation which has developed since the first bond bill, which has made it necessary for us to do two things not then contemplated; first, to provide a certain amount of finance outside of the United States; and, second, to meet the maturities of the Allied Governments on obligations in the United States incurred before the United States entered the war. I am confident that the change in the war situation, our own increasing activity and the great enthusiasm of the people will make this easy to do, and, the parliamentary pledges once out of the way, we would be free to deal with the situation as it arises from time to time.

We should, of course, in connection with taking up the maturities get assurances, in respect to the collateral, satisfactory to you.

I have specially referred above to the loan which is in the hands of the public, rather widely distributed, maturing September 1. I am inclined to think it might be well from time to time gradually to enable the British Government to reduce the overdraft and also the British Exchequer bills which are being sold on a 6% basis all the time and have many attractions which interfere to a certain extent with our 4½% certificates. The exchequer bills and the overdraft together aggregate about $200,000,000 today.

(Initialed) R. C. L.

EXHIBIT No. 2783

[File copy]

OCTOBER 2nd, 1917.

To the Rt. Honourable Lord READING.

DEAR LORD READING: In reference to the attached memorandum, it may be well for me to explain one or two points in the situation which have changed since my talk at Washington:

(A) The fresh legislation spoken of under this paragraph has now been accomplished, and there is no awkwardness in lending to Great Britain and to the other Allies for any purpose, past, present, or future;

(F) The remarks at the end of this paragraph refer to the conferences which finally resulted in the Secretary giving us permission to put out the Treasury bills, this having been taken up in a letter which I wrote to him and to the terms of which he consented.

Very truly yours,

——— ———.

EXHIBIT No. 2784

[Cablegram]

(Date in pencil) JUNE 30, 1917.

AMERICAN AMBASSADOR,
London, England.

The Secretary of the Treasury requests that the following despatch be transmitted to the Chancellor of the Exchequer:

In the exercise of the discretion imposed by an act of Congress approved April 24, 1917, permitting loans to foreign governments engaged in war against the Imperial German Government up to a total of $3,000,000,000, I find it desirable to obtain information which, in my judgment, properly enters into the making of determinations in the matter in question, and which Your Excellency may perhaps be willing and able to furnish us.

Up to this time, I have, with the President's approval, authorized various loans to your Government now aggregating $585,000,000. On May 1, your Ambassador submitted a statement indicating the desire of your Government to borrow, for expenditure within a period of six months, the sum of $1,500,000,000. About the same time, other belligerent governments, through their proper representatives, submitted similar statements indicating their desire to borrow sums which, added to your Government's figures, in the aggregate exceeded the $3,000,000,000 authorized for these purposes by the statute above mentioned. The Government of Russia did not at that time submit such representations, but has since requested a credit of $100,000,000, which has been established in its favor, and its recently arrived representatives here now indicate their desire to submit further representations calling for large sums not yet fully indicated.

These facts are stated in order that Your Excellency may more clearly understand the difficulties attendant upon the determination, first, of the period over which an allocation of the total of $3,000,000,000 should be made if it seems best thus to allocate the total, and second, as to the division between the various belligerent powers engaged in war against Germany. In addition to the sums above mentioned advanced to your own Government and that of Russia, the following sums have been loaned or credits established: France, $210,000,000; Italy, $180,000,000; Belgium, $45,000,000; Serbia, $3,000,000. During the last sixty days, representatives of your Government have been called upon to purchase considerable sums of exchange upon London offered in New York, and have forcefully represented the great importance of maintaining British exchange at the rate now established. I am also informed by them that your Government owes various American banks a sum approximating $400,000,000, practically on call, although at present, according to verbal information furnished, these loans seem to be protected by a pledge of all the American securities controlled by your Government and which had not previously been pledged as collateral for specific loans of longer duration. I have been informed that your Government has guaranteed on behalf of the Russian Government, contracts which originally amounted to approximately $200,000,000, upon which your Government has paid various sums, among others about $58,000,000 during the last sixty days. No request has been made upon this Government by the Russian Government for loans to cover their remaining obligations on these contracts. The Government of Belgium on June 5, 1917, through its Minister, made application for a loan of $10,000,000 in addition to the loan above mentioned, stating that your Government had declared to them that it would be impossible that further sums should be paid by it on Belgian account for purchases in the United States, and that said sum of $10,000,000 is now in arrears in this country. No lists have been submitted either by your own Government or by the Belgian Government indicating what these accounts are. The Belgian Government further requests an additional credit of $1,500,000 per month for a period of six months in advance. In view of the above recital, I have the honor to request that you be good enough to indicate to me:

(1) Whether your government desires that the Government of the United States shall in any way render assistance in the matter of maintaining British exchange save insofar as the establishment of credits for purchase in the United States of materials needed in the conduct of the war by your government should contribute to the maintenance of the existing rate:

(2) Is your government prepared to continue payments on Russian account for any of the sums in which that government may become indebted pursuant to the execution of the above-mentioned contracts, and if your Government should be relieved of its responsibility in this matter, is there any consideration originally

connected with the undertaking by your government of this credit which could be transferred to the United States Government;

(3) If other countries now neutral should declare war against the Imperial German Government, would your Government be prepared to assist such powers financially in the conduct of the war, and if so to what extent? Is the policy of your Government to encourage entrance into the war against Germany of any powers now neutral, and if so, what are such powers and upon what conditions does your Government consider it desirable that they should enter the war?

(4) In respect to loans heretofore made since the war by your Government to other belligerents, will you be good enough to state the amounts, maturities, and interest rates of such loans?

(5) As it is important to know your financial commitments in this country, may I be supplied with an official list of the debts of your Government in the United States, with a statement of their maturities, rates of interest, and the collateral if any pledged as security therefore, and engagements of probabilities if any of their renewal?

(6) Intimations having been received that the Government of Canada would soon be embarrassed if it did not receive financial aid from the United States, it would be desirable to learn from you whether your Government expects to continue such support as may be required by Canada for maintaining such military activities as it may determine upon, and whether we have been correct in assuming that the sums which your Government has indicated its desire to have advanced to it include the requirements for Canada, it being understood that according to the statute under which I am acting no loans could be made directly to the Canadian Government.

(7) Understanding from a recent announcement by Lord Curzon in the House of Lords that your Government is now engaged in constructing large additions to your navy, apparently with a view to attaining greater proportions than are required for the operations of the present war, I would be glad to be informed as to whether it would be possible for your Government to modify its plans, if Lord Curzon has been correctly reported, and thus perhaps to directly diminsh the need of borrowing money from the United States. The statement to which reference is herein made is quoted in newspaper despatches in the following terms: "The Admiralty has first claims upon the ship-building facilities of the United Kingdom, and at the end of the war the British navy will be found to possess a tonnage greater than the navy tonnage of all of the rest of the world combined."

(8) As affecting the probable future ability of various Governments involved to meet their obligations, may I venture to ask whether your own Government has given or received, in connection with loans made to other belligerents, or otherwise, any preferential trade relations effective either during the war or after?

(9) In this same connection it would be desirable to know whether any territorial determinations or engagements of any kind have been entered into, with the understanding that they should be put into effect in case military successes of those engaged in war against Germany would permit, and, if so, what are such engagements?

(10) Am I to understand that the statement of May 3, submitted by your Ambassador remains as a statement of the total amount that your Government desires to borrow, less the amount already advanced for expenditure, during the remainder of the period of six months dating from May 3, 1917? In this connection, permit me to point out that approximately $170,000,000 of the amount therein indicated as probably required was, according to statements made here by your representatives, for payment on account of ships being built in the United States for British account, and that at present it appears that not only will this amount be relieved from your Government as a probable expenditure, but that a sum of approximately $60,000,000 will be repayable to your Government when said ships shall be taken over by the Government of the United States. As the remainder of the period of six months covered by your Ambassador's statement of May 3 is now but four months, I should be glad if you would indicate the amount of loans which your Government would desire to obtain from the Government of the United States for expenditures during a succeeding period of six months, and also the nature of the expenditures, if such loans are desired.

Exhibit No. 2790

Treasury Department,
Washington, July 21, 1917.

My Dear Mr. Secretary: Yesterday the Russian Ambassador presented his Government's request for financial assistance for the remainder of the current year. The total is $733,000,000 for a period of about five months. This may be roundly taken as a sum of $150,000,000 per month. This figure includes, however, approximately $150,000,000, which in the nature of the case will go over into the succeeding months in 1918 for actual payment. Roughly, therefore, there remains something like $120,000,000 per month requested by the Russian Government as absolutely essential to its successful conduct of the war.

Among the items shown are two to which I invite your especial attention. These are: (1) A large sum destined for the purchase of rubles in order to prevent the drop in the price of Russian money which is now becoming disastrous; and (2) an item running into a good many millions for the payment of indebtednesses of Russia in Sweden. Attention is called to these two specifically because they open a vista of unknown magnitude, bounded neither by limitations of shipping nor by limitations in the capacity of our market to meet the foreign demand. As you will recall, there have already been requests for the expenditure of money as such in distant portions of the theater of operations for the Russian Army.

You have also in the last few days received notifications, more or less explicit, of the desire of other belligerent powers to borrow from the United States for expenditures considered necessary by them in countries outside of the United States. The question of the maintenance of the exchange of several foreign powers besides Russia, whose specific figures are now submitted to you, is also indicated as presently to be urged upon your consideration.

In the approximate estimates which I handed you a few days ago, indicating the period of exhaustion of the fund for foreign powers in your hands, I took as a basis approximately $500,000,000 per month as the present rate of loans. In that figure, however, Russia was figured at only $50,000,000 per month. If her requests as now submitted should be acceded to, obviously the figure used by me must be increased somewhat.

The charges upon our Treasury due to this foreign demand are now growing so heavy that, in connection with our own war expenses, a grave problem is presented to you in the mere matter of finding the money fast enough to meet all these demands. That phase of the situation, however, is one which for the moment I am not endeavoring to cover. It seems to me that, independently of that great difficulty, the magnitude of our loans to foreign governments is such as to justify on the part of the United States Government a more searching inquiry than it has yet made into the general conduct of the European war. The inquiry if made promptly would at least give to our Government a better knowledge than it now possesses of the probable duration of the expenditures which now press so hardly upon it. And, further, our own military preparations and operations would be the more wisely conducted if we had carefully weighed the financial, political, and military conditions of those with whom we are associated in a war which will be exhaustive to our own country if expenditures are continued at the present rate.

In this connection, it is well to note that we are now, for war purposes alone, spending or appropriating a great deal more money than the German Government has spent on an average in carrying its whole burden for the past three years. The war debt of Germany is published as approximately $20,000,000,000. That is at the rate of a little less than $7,000,000,000 per annum. We are lending to our associates at the rate substantially of $6,000,000,000 per annum solely for their purchases in the United States. The indications given above show that the demands will soon exceed that amount, and they will be presented as being *absolutely essential* for the conduct of the war. In other words, the expenditures of our associations in the United States alone may be taken as substantially equal to the total war expenditures of the German Government.

What are associates are spending in Europe, we do not now know, save as is indicated by the total of their war debts thus far published. Published figures are perhaps, however, not reliable. It is not necessary now to be exact in the matter. It is sufficient to dwell upon the fact that the expenditures of our associates in the war, including our own, are approximately three or four times as great as those indicated by the German war debt. In addition to this drain upon the resources of the countries making war against Germany, it should be noted that the monthly destruction of a million tons of shipping represents approximately $500,000,000 of loss per month. These figures cannot be made accurate without a great deal more research than is possible now to me. I am taking, roughly a figure of $150 as the value of the tonnage itself and the remainder of the $500 per ton to cover the value of miscellaneous cargo and the expenses of transportation, in the destruction of these ships which fails to complete its journey. Without attempting to distribute this loss between the various nations engaged in war against Germany, we should yet bear in mind that there is this diminution at the rate of $6,000,000,000 per annum in the available resources of the countries with which we are associated due to the submarine warfare alone. These figures marshalled together indicate that we cannot be confident that financial exhaustion will fall earlier upon Germany than upon those engaged in war against her. It seems also apparent that we cannot count upon the exhaustion of supplies, either of food or munitions, as occurring earlier in Germany than possibly in England, where supplies of food particularly are seriously menaced by the submarine, and in Italy, where supplies of coal are even more critically threatened.

As the general situation which I have endeavored above to define in certain figures is entirely familiar to you, I shall not go further in endeavoring to portray it. The conclusions which I should like to call to your attention are these:

A study of the whole operation of the war by American authorities should now be undertaken, with two objects in view, first, to determine whether or not the cost of carrying on the war can be in any way diminished without impairing the efficiency of the military operations as such; and, second, to determine whether there is any great change in those military operations which may be urged upon our associates in the war with a view to bringing a military conclusion to the struggle. These two questions are, of course, closely linked together. The carrying out of the second point might require for a time even a larger expenditure on our part than we are now undertaking; but that, in turn, might be wholly justified if a great military move should result in a considerable shortening of the war.

Among the suggestions which, in my judgment should be at once considered as involving both of the questions just above raised, I note the following:

(1) The use of Italy's soldiery not required for defending the Italian frontier or for continuing the offensive directed against Trieste. It seems not improbable that something like a million and a half Italian soldiers might be made available in other theaters of war if the political and financial questions involved were properly solved. It is not necessary in order to appreciate the importance of this observation to endeavor to determine now where those men should be used, whether on the western front or in Salonica, or even further in Asia Minor.

(2) In my judgment, the whole question of the Salonica situation should be freshly studied in order to determine whether the 500,000 men there established should be and can be so strengthened as to warrant an offensive, or whether, on the other hand, it could be diminished, if necessary, to a force sufficient merely to hold the Grecian front against enemy attacks. In this is involved the question of the desirability of Grecian belligerence, as compared with Grecian armed neutrality. Obviously, the Allied Powers in Europe have been hasty in determining that Roumanian belligerency was more desirable than Roumanian neutrality. The same error may be involved in their attitude toward Greece. *If* the armies in Greece can be strengthened and properly supplied for the necessary military operations, then Greek belligerency seems very desirable, and from it should follow a vigorous attack upon the railway line at the nearest point, which is approximately eighty miles away, and which, being cut, would very largely cut off the communication between Germany and Turkey. There is, of course, one other line which now permits communication. But it is probable that, being successful in the first undertaking, we might reasonably hope to cut also that

line, particularly as Bulgaria has been represented by Americans who have somewhat recently returned from that country as being ready to enter into some sort of armistice arrangement, if not to make a separate peace. The latter, of course, would be a highly dangerous operation, indeed quite an impossible one unless the Allied Armies intervened between Bulgaria and Germany.

(3) I have talked recently with Americans lately returned from Turkey and Asia Minor. The indications are that there are possible weaknesses in the Turkish situation which, apparently, at relatively small cost, might be turned into a considerable disruption of German power in that region. I am aware that any suggestion of our cooperation with our associates in this theater of war involves the very undesirable step of a declaration of war against Turkey. Yet it may well seem wise to take all these steps if serious blows can thus be dealt tending to hasten the time when Germany will find herself unable to hope for a successful conclusion to the war.

(4) Further assistance from Japan may possibly be obtained if certain very grave political and racial prejudices can be eliminated. I do not at all underrate these difficulties, the importance of which will be quickly appreciated by any American if he supposes the problem to be presented of having Asiatic armies invited to operate in America. Nevertheless, the situation of the world is such that, in my judgment, every tradition and every prejudice should now be challenged; and if it seems probable that the sacrifice of such prejudice may tend to an earlier winning of the war, then that sacrifice should be made.

(5) While we have no direct part in the operations of the Russian Army in Persia and Asia Minor, yet it seems to me wholly sensible that we should be informed of what is being done there; and that, having been informed, we should at least, if our representatives come to have positive opinions on the subject, represent those opinions to Russia and Great Britain, since both of those powers have now stated to you that they are wholly dependent upon help from the United States for continuing the war. Indirectly, we are supporting every effort throughout the world made by any of our associates in the war.

I have not referred above to any inquiry into the political relationships of Europe save those that may be necessarily involved in a determination of any new military moves which our representatives might desire to suggest to our associates. It is quite within my duty to report to you that the Serbian Minister urges, on behalf of his country, that the United States should inform itself of the political determinations that have been made between the Allied Governments since the beginning of the war. The strong desire of the Belgian representatives for an independent financial relationship with the United States in preference to a satisfaction of their needs through English and French channels suggests the same uneasiness on the part of small nations in Europe as to the results to be gained from the war, even on the supposition of a marked success for the arms of the Allies, unless the power of the United States should be felt in the political field as well as on the field of battle.

However much concern I may feel as an American citizen in respect to the policy of my Government as to intervention in political relationships of the Allies, I am not now urging upon your attention that point, but rather those points only which have to so with a successful issue of the war, as war. I am perfectly convinced that out Government is not now in possession of the information that it should have merely as a belligerent nation and for its belligerent purposes.

I have some particular steps to suggest concerning methods of obtaining the information which we should have, but in the haste of this writing I cannot lay them before you. I am concerned now to emphasize to you the importance of the general question covered by this communication.

Very hastily yours,

/s/ Oscar T. Crosby,
Assistant Secretary.

Exhibit No. 2791

[Submitted for record Jan. 15, 1936]

Statement by J. P. Morgan & Co.

Statements heretofore made in various public addresses by members of the Senate Munitions Committee indicate their belief that the activities of American business and of American bankers were a chief factor having to do with America's entry into the World War.

If there is one thing certain, it is that the whole American people are determined today to avoid war. The only question is as to the best means to attain that end. Quite properly, we are studying today the events of twenty years ago, to learn from history how to chart our course now. Before the overwhelming importance for us all to keep our country at peace, it is of small moment whether any particular theory of history is vindicated. It is, however, of very grave moment that a nation should not chart its national policy toward other nations on the strength of fatal misapprehensions about the past. When peace and war are at stake, we cannot afford the luxury of bad history.

WHEN AMERICA ENTERED THE WAR

The World War began in the early days of August 1914. Two years and nine months later the United States Congress by an overwhelming vote (82 to 6 in the Senate and 373 to 50 in the House) confirmed President Wilson's message of four days earlier, and declared that a state of war existed between the United States and Germany It is a fair question to ask whether President Wilson, distinguished for his persistence in the advocacy of peace and a Congress re-elected in 1916 on the same anti-war platform, were influenced in declaring war primarily by economic factors, and particularly by industrialists and bankers.

MR. MORGAN'S INITIAL STATEMENT

On the very eve of the war, Mr. J. P. Morgan issued on July 31, 1914, a public statement expressing the earnest hope that a general conflict in Europe might be avoided, and warning that "the wholesale waste of capital involved in such a catastrophe would result in a distribution of losses the world over." He, in common with millions of his countrymen, realized that such a war would be a disaster for the whole world.

THE ADMINISTRATION'S NEUTRALITY DECLARATIONS

On August 4th, immediately following the outbreak of war, President Wilson issued a proclamation of neutrality, pointing out that American citizens were free to trade with the belligerent countries in any products whatever, including munitions of war, and reserving the "right of free and full expression of sympathies in public and private." This official declaration regarding trade was supplemented on August 15th and on October 15th by more complete statements from the Department of State, reaffirming the right of American citizens to trade all over the world.

In December 1914, the German Government, through its Ambassador von Bernstorff, confirmed and avowed the same neutral rights of trade with belligerents that the American Department of State had set forth. Germany throughout the war carried on an enormous trade with and through the European neutral countries. Secretary Bryan himself did not question the legality or propriety of trade with belligerents.

AMERICA IN THE MIDST OF A DEPRESSION

The immediate effect of the outbreak of the World War was catastrophic in this country as well as abroad. Export and import trade came to a standstill, the investment markets and foreign exchange were completely demoralized. There were American maturities abroad of close to $100,000,000 which were in serious danger of immediate default.

Further, the catastrophe of the war fell during a period of hard times that had continued in America for over a year. Business throughout the country was depressed, farm prices were deflated, unemployment was serious, the heavy industries were working far below capacity, bank clearings were off.

A marked change, however, became evident in the late autumn of 1914. This change was due to the heavy buying of American products by the belligerent governments; the favorable effect upon agriculture upon the cotton industry, and upon manufacturing becoming plainly evident by November of that year. The American community welcomed, with a feeling of relief, the orders coming from Europe, for at that time such purchases meant that America still a debtor country, could meet its foreign obligations by the shipment of commodities and goods. And as our foreign trade grew, unemployment decreased and pay rolls increased.

PURCHASE ARRANGEMENT FOR ENGLAND AND FRANCE

Allied governmental buying was, however, confused and disorganized in the extreme. The result was added confusion in the American markets, and frequently runaway prices. The British Government, realizing the waste incident to its confused purchasing, made an arrangement, publicly announced on January 16, 1915, to handle through us the bulk of its buying in the American markets. The French Government made with us in May 1915 arrangements identical with those existing with the British.

When these agency agreements were entered into neither the foreign governments nor we had the slightest idea of the magnitude that the American purchases would attain. Lord Kitchener, Minister of War, declared to the late Henry P. Davison, who negotiated the arrangement for our firm, that his Government's purchases here would not exceed the sum of £10,000,000. Yet the fact is, as more than once published, that the total of our purchases for the Allies (roughly two-thirds being for Great Britain) reached $3,000,000,000 over the years of our work. Our commission approximated 1%.

RAPID INCREASE OF AMERICAN EXPORTS

Our purchases for the two Allied Governments, and in a few instances for other Allied governments, through the medium of the British Government, although they included an enormous variety of agricultural and industrial products, were less than one-half of the total imports from America by the Allied belligerent countries in the period under discussion. America's export trade, as the figures show, increased enormously also to the world as a whole; growing from $2,364,579,148 for the year ending June 30, 1914, to $6,290,048,394 for the year ending June 30, 1917.

WITHDRAWAL FROM PURCHASING

Almost coincident with the American declaration of war against Germany, the late Edward R. Stettinius of our firm (who had been in complete charge of the purchasing, or Export Department as it was called) made known to the British and French Governments our desire to withdraw from the Purchasing Agency arrangements. It was clear that the United States Government could best handle the whole purchasing situation of the Allied Governments.

LOANS TO ALLIED GOVERNMENTS

We turn now to the other phase of our activities, namely the arrangements in which we took a leading part to enable the two Allied Governments to pay for a part of their American purchases "on time." At the outset it should be said that the amount of unsecured Allied borrowing in this country, through the medium of public loans, has frequently been much exaggerated. The unsecured loans came to hardly more than 15% of the total American purchases of the four chief Allied belligerent nations.

The first bond issue of importance offered by the Allies in the American investment markets was the Anglo-French loan of $500,000,000 in October 1915, made with the cognizance of the Washington authorities; the Bryan ban against public loans, which we had scrupulously observed, having been withdrawn some time before. These bonds bore the joint and several obligation of the two Governments involved, were distributed to insurance companies and investors, and were actively traded in on the New York Stock Exchange.

AMPLE COLLATERAL SECURITY

Following this loan all the public issues of the British and French Governments that were handled by our firm were secured by collateral, chiefly American and other neutral securities, having a market value 20% in excess of the face value of the loan. Of such secured loans issued prior to America's entry into the war, there were three for the British Government aggregating $800,000,000, with collateral security valued at upwards of $1,000,000,000. There were two loans for the French Government aggregating $200,000,000 with security valued at $240,000,000. On these operations, including the Anglo-French, our profit averaged a trifle under ¼ of 1%.

We call particular attention to the secured nature of these loans, because there has been an impression fostered in certain quarters to the effect that the Allied loans were worthless unless America entered the war; that the holders of these loans urged our Government into the war "to make the loans good." There was nothing in the facts remotely justifying this fantastic theory. The loans were always good. No one feared for their safety.

ATTITUDE OF AMERICAN INVESTORS

Before the issuance of these loans, American investors had never been accustomed to buy foreign Government securities on any considerable scale, and even with the successful offering of these loans it is estimated that the number of American investors in them hardly exceeded 400,000 individuals out of a total population of 110,000,000. And no investor puts more than a fraction of his means in any one bond. Who were the holders in this group who, as alleged, were so fearful about the goodness of their investments that they brought pressure upon President Wilson and the Congress to get us into war?

Investors do not act like that. If they thought any of their bonds were in jeopardy they would promptly sell them, rather than hazard their all in a war. Every administration at Washington is interested in the prosperity of the American people. But does any one believe that President Wilson or the American Congress was concerning itself with the safety of scattered bond holdings, whether owned by investors or bankers?

THE BRITISH DEMAND LOAN

In addition to these public issues, there were some banking credits arranged by ourselves and other houses, which were promptly liquidated upon maturity.

There was also the so-called Demand Loan to the British Government, which was shared in by ourselves and by various other banking institutions. At the time of America's entry into the war this amounted to about $345,000,000, amply secured. After a reduction it expanded shortly to about $400,000,000 with collateral valued at over $700,000,000, of which over $462,000,000 was in American stocks and bonds. We mention particularly the security behind this loan, because a member of the Senate Committee of inquiry only last spring characterized the loan as "uncollectible."

HOW ALLIED PURCHASES WERE PAID FOR

In any examination of the manner in which the allied nations paid for their purchases in America, careful account should be taken of the many sources for payment available to, and utilized by, them. These sources included invisible items, such as England's income from her American investments and from her shipping receipts; the heavy short-term debts owed by America in Europe at the outbreak of the war, estimated by the United States Treasury at upwards of $500,000,000; gold shipments to America amounting in the three neutral years to over $1,100,000,000; sale or pledge in our markets of American and neutral securities held by citizens of the allied countries, estimated at more than $3,000,000,000; and finally America's heavy imports of over $1,100,000,000 from the allied countries—all these sources being liquid and readily available.

BALANCE SHEET OF PAYMENTS

A very rough estimate showing how the Allies (Great Britain, France, Italy, and Russia are included) paid for the goods they imported from the United States prior to April 1, 1917, would show about like this:

American exports to Great Britain, France, Russia, and Italy		$7,000,000,000
Paid for by imports to America and normal invisible items, about	$1,600,000,000	
Paid for by gold	1,100,000,000	
Paid for by liquidation of short-term American debts abroad, estimated by U. S. Treasury as exceeding	500,000,000	
Paid for by sale of securities and other assets, say	1,400,000,000	
Paid for by pledge of securities (collateral loans)	1,400,000,000	
Paid for by *unsecured* loans, not to exceed	1,000,000,000	
		7,000,000,000

Even a cursory study of these round figures serves to indicate how limited a part unsecured Allied loans played in financing Allied requirements in America and in the general economic situation here.

ECONOMIC FACTORS IN THE WAR

In every great conflict the economic factor of course exists. Nobody would for a moment ignore or deny it. But it is easy to exaggerate the importance of this or any other single influence. From the start, opinion throughout the entire American community, not limited to those agricultural, industrial, labor, commercial, and banking groups that were benefiting by trade with the Allies, was heavily in favor of the Allied cause. American investors bought Allied securities because they believed in the soundness of the securities offered, and because they already favored the Allied cause.

NO INCENTIVE FOR WAR EXISTED

Neither sympathy with the Allies from the outset nor sales to the Allies later meant, however, that the American people wanted to get into the war. On the contrary there was strong country-wide sentiment against participation in the conflict by the United States. To whatever extent, if any, the so-called economic tie-up with the Allies was a war cause, such tie-up applied not to any single groups, be they industrial, agricultural, or banking, but to the whole country which had shared in the prosperity due to the Allies' enormous purchases here of wheat, cotton, munitions, and other supplies. For two years or more American agriculture, labor, business, and banking had benefited in a material way from America's great export trade. They were having their profits or their rewards without war. What possible material advantage could it be to them to have America enter the war?

WHY PRESIDENT WILSON ADVOCATED WAR

Mr. Wilson made clear in his successive protests against the German submarine outrages what were the basic causes driving America towards the brink of conflict. He was having great difficulty with the British Government on the matter of contraband seizures, and with the German Government on the matter of submarine warfare. But he drew a sharp distinction between what he called America's "property rights" and her "human rights"; between his difficulties with the British, which concerned shipment of goods, and his difficulties with Germany, which concerned ruthless destruction of American lives. After all, the record of those successive submarine outrages upon American ships, with repeated loss of American lives, of President Wilson's infinitely patient protests to Germany, and of Germany's disregard of her pledges to our Government, reveal a primary cause, both fundamental and immediate, that finally drove America into war

[Copy of cable despatched 9:30 p. m. to Morgan, Grenfell & Co., London]

43249. 34992. Secretary of Treasury has issued temporary loan certificates maturing June 30th, at 3% amounting thus far to $250,000,000, of which $200,000,000 has been put through Federal Reserve Bank to us. We are not informed as to further programme but are inclined to believe additional similar certificates will be issued. We understand conferences are being held in Washington, D. C. to consider further advances not only to British Government but also to Italian and French Governments. At the request of Sir Hardman Lever, K. C. B. we are placing $100,000,000 in current account of British Government, applying the balance upon demand loan and interest thereon to date. We understand that authorities propose to issue long term 3½% bonds in latter part of June, but as yet we do not know for what amount.

MORGAN.

[Release by J. P. Morgan & Co.]

THE BRITISH DEMAND LOAN

The attached letter from the British Treasury, here made public for the first time, describes the liquidation of the $400,000,000 collaterally secured demand loan made by a group of American banks to the British Government:

TREASURY CHAMBERS,
31st July, 1935.

(Any reply to this letter should be addressed to The Secretary, Treasury, Whitehall, London, S. W. 1., and the following number quoted: F. 14218.)

Messrs. MORGAN, GRENFELL AND COMPANY LIMITED,
G. P. O. Box No. 56, 23, Great Winchester Street, E. C. 2.

GENTLEMEN: I have laid before the Lords Commissioners of His Majesty's Treasury your letter of the 11th ultimo, with reference to the so-called "demand loan" which was arranged by Messrs. J. P. Morgan and Company on behalf of His Majesty's Government during the war. In reply I am directed to inform you that in the period immediately preceding the entry of the United States Government into the war it was the intention of His Majesty's Government to issue a market loan out of the proceeds of which the demand loan would be repaid. The proposal to issue a market loan at this time was, however, abandoned in deference to views expressed by the United States Treasury.

After the entry of the United States Government into the War on April 6, 1917, the United States Treasury expressed the wish that no part of the funds being advanced by them to His Majesty's Government should be used for the reduction of the demand loan which, at the time the United States entered the war, amounted to $345,500,000. Before this wish was expressed, $100,000,000 out of an advance of $200,000,000 made on April 25, 1917, by the United States Treasury to His Majesty's Government had been applied on April 26, 1917, temporarily against principal and interest of the demand loan. This amount of $100,000,000 was less than the expenditure of His Majesty's Government in the United States for materials, supplies, and exchange between April 6, 1917, and April 26, 1917. The increase in the demand loan between these two dates was $91,300,000. There were various debits to the demand loan and credits thereon (including the above-mentioned sum of $100,000,000) between April 6, 1917, and May 16, 1917, the net result being that the demand loan on May 16, 1917, amounted to $398,500,000 or $53,000,000 more than when the United States Government entered the war. The demand loan was not increased after May 16, 1917.

This demand loan of $398,500,000, in accordance with the wish of the United States Treasury, was eventually repaid out of the independent resources of His Majesty's Government, including $80,800,000 received from the United States Government for certain British ships taken over by the American authorities, proceeds of the sales of securities, gold shipments, and, from the spring of 1919 onwards, of purchase of exchange.

In this connection I am to observe that a periodical statement was supplied to the United States Treasury showing the utilization of all funds advanced by the United States Government in order that the United States Treasury might be in a position to verify that these funds had been applied only to such purposes as had been approved by them. These statements did not, of course, include any expenditure for the reduction of the demand loan and thus afford independent proof that it was repaid from other sources.

The disbursements by His Majesty's Government in the United States for materials, supplies, and exchange between April 6, 1917, and the date of the last advance from the United States Treasury were in excess of the entire advances made by the United States Treasury to His Majesty's Government (see pages 298–9 of the Combined Annual Reports of the World War Foreign Debt Commission).

I am, gentlemen,
Your obedient servant,

F. Phillips.

The British Treasury letter as above set forth was a reply to the following:

11th June, 1935.

The Secretary, Treasury,
Whitehall, S. W. 1.

Dear Sir: As you are aware representatives of the United States Senate committee enquiring into munitions are at present engaged in making certain investigations regarding the transactions of Messrs. J. P. Morgan & Co. on behalf of the British Government during the war. Among other matters their enquiries have been directed towards the so-called "demand loan" which, as you will recollect, was a secured loan arranged by Messrs. J. P. Morgan & Co. on behalf of the British Government.

Messrs. J. P. Morgan & Co. have, of course, the complete detailed accounts of the transaction from its inception to its close, but to supplement this technical record they would be glad if the treasury would inform them as to the resources from which repayment of the loan was in due course effected.

Yours faithfully,

Morgan Grenfell & Co. Limited,
(Sgd.) Charles F. Whigham, *Director.*

FACTS AS TO THE DEMAND LOAN

Testimony has already been given to the committee covering the operation of the demand loan by a group of American banks under the leadership of J. P. Morgan & Co. It has been pointed out that up to April 1917 the demand loan was utilized by the British Government as an interim measure of financing in America.

ITS CHARACTER SOMETIMES MISSTATED

The nature of the demand loan has frequently been misunderstood. It was never in the nature of an "overdraft", as sometimes stated. On the contrary, it was at all times fully secured by collateral, with ample margin.

On April 6th, 1917, when America entered the war, the amount of the demand loan was approximately $345,500,000, secured by available collateral valued at roughly twice that amount. President Wilson in his message of April 2nd to Congress announced that the Federal Government should extend to the Allied Governments the most liberal financial credits, so that the resources of the United States should be added to theirs. Loans, however, from the United States Treasury to Great Britain were not immediately forthcoming, and plans for further British public financing in the United States were suspended so as not to interfere with the financial program of the Federal Government. Therefore further advances by the American banks were made under the demand loan, and by April 26, 1917, it had reached a total of $437,000,000 with collateral securities valued at more than $700,000,000. Of these upwards of $400,000,000 were American.

On the date just mentioned the British Government received from the American Treasury, the sum of approximately $200,000,000. Out of this sum $100,000,000 was applied by the British Government against principal and interest of the demand loan. The reduction in the loan was only temporary, however. Within a few days new advances were made so that, by May 5, 1917, the loan totalled

$398,500,000. The aggregate of the advances under the demand loan subsequent to April 6th totalled about $150,000,000, as compared to the $100,000,000 credit on April 26th. Between April 6th and April 26th, British expenditures in this country for supplies and exchange, had amounted to more than the $100,000,000.

METHOD OF LIQUIDATION

After May 5, 1917, the demand loan was not increased. The loan, as it then stood in the amount of about $398,500,000 or $53,000,000 more than at America's entry into the war, was completely liquidated out of the independent resources of the British Government, as follows:

From importations of gold	$33, 750, 359. 57
From sales of sterling exchange	26, 562, 114. 99
From British ships taken over by United States Government	80, 794, 041. 65
From sales of British-owned securities	134, 630, 528. 88
From payments by Russian financial attaché	598, 486. 37
From sales of British Government treasury bills	[1] 122, 210, 000. 00
Total	398, 545, 531. 46

[1] These British Government treasury bills were paid off from British sources identified as follows:

Cash from C. J. Hambro & Sons and Bank of Northern Commerce	$19, 900, 000. 00
Cash from Danish Government	5, 100, 000. 00
Cash from sales of British-owned securities	97, 210, 000. 00
	122, 210, 000. 00

UNITED STATES TREASURY DECLINED TO PAY OFF LOAN

It is already a matter of public record that the British treasury representatives who visited this country in the spring of 1917 with the British mission headed by Mr. Arthur J. Balfour requested the American Treasury to assist in taking up this loan in whole or in part by direct advances for that purpose. American Treasury authorities, however, declined to accede to this request and, as was brought out in testimony in these hearings two weeks ago, the demand loan continued to be held by the American banks (although in diminishing amount, as the British Government made payments against it) until July 1919, when it was finally paid off from British Government sources as above set forth.

STRICT COMPLIANCE WITH GOVERNMENTAL VIEWS

The attitude of our firm as to this loan was, as always, in strict compliance with the expressed wishes of our own Government. When its officials explained to us that, although they could see the advantages that might arise from reducing the holdings of American banks in this demand loan, they deemed it preferable that, for the benefit of their own pending bond operations, we should refrain from liquidation of the securities held collateral to the loan until such time as they gave us advices to proceed. This was precisely the course which we followed.

JUNE 1, 1917.

HERMAN WALDECK,
Vice President, Continental & Commercial National Bank,
Chicago, Ill.

We can probably arrange to let you have a further allotment of demand loan if you desire it. We expect this loan to be paid off in full on July first. If the matter interests you you might wire us accordingly.

J. P. MORGAN & Co.

EXHIBIT No. 2797

BRITISH EMBASSY,
Washington, May 3rd, 1917.

SIR: Adverting to my letter of the 24th ultimo with reference to the loan of $200,000,000 made by the United States Government to the British Treasury, I now have the honour to apply for a further advance of an equal amount on similar terms to cover the obligations of my Government falling due in the United States of America during the month of May.

In accordance with the suggestion made in the conference of yesterday it is proposed that the advance should be made in three parts, as follows: $50,000,000 on the 5th instant, $75,000,000 on the 15th instant and the balance of $75,000,000 on the 25th instant.

I take this opportunity of stating that the requirements of my Government for the next six months in the United States of America are estimated to amount to $1,500,000,000.

This figure may conveniently be divided into two sums. The first covers the existing open account in which the British Government are indebted to the extent of $400,000,000. A large proportion of this debt has been contracted on behalf of our Allies, both by direct advances to them and by indirect payments on their behalf made over the London exchange in New York. It is hoped that this may be regarded as a first charge on the credits to be advanced by the United States Government.

The balance of $1,100,000,000 has been arrived at after a careful scrutiny of our requirements and an effort to curtail them to the bare necessary minimum. It is based both on experience of the rate of our expenditure in the past, and on the actual present commitments of British War Departments, which now amount to $650,000,000.

I beg to emphasize that in estimating our requirements at the above figure of $1,500,000,000 it is assumed that all the expenses of our Allies in the United States of America including their expenses for exchange so far as that is required in connection with American transactions, and including existing commitments on their behalf for munitions for which we are at present responsible to the extent of $190,000,000 are disposed of by direct advances by the United States Government to those Allies individually.

I have the honour to be, sir,

Your most obedient, humble servant,

[s.] CECIL SPRING-RICE.

EXHIBIT NO. 2798

TREASURY DEPARTMENT,
ASSISTANT SECRETARY,
Washington, June 28th, 1917.

Hon. ROBERT LANSING,
Secretary of State.

DEAR MR. LANSING: Yesterday afternoon, Mr. Henry P. Davison of New York, a member of the firm of J. P. Morgan & Co., called at this office, and asked whether there could be any doubt as to an engagement which had been reported to him as having been made between Mr. Balfour and Lord Cunliffe on the one hand and the Secretary of State on the other, or other representatives of our Government, to the effect that $400,000,000 would be loaned to the British Government on the first of July. Sir Richard Crawford was present at the time this conversation took place. Both he and I stated that we knew nothing of any such engagement. Mr. Davison stated that his knowledge of it was based upon perfectly specific statements made to him personally by Lord Cunliffe and Sir Hardman Lever. It is a matter of the first importance that such a misunderstanding, as I now take it to be, should be removed. I desire therefore, even before communicating this fact to Secretary MacAdoo, to lay this statement before you, asking that you will give such weight to it as you deem fit.

In the meantime, Mr. Secretary, I beg to remain

Very sincerely yours,

OSCAR T. CROSBY,
Assistant Secretary.

[Copy of cable despatched 9:00 p. m. to Morgan, Grenfell & Co., London]

47339. 38561. For E. C. Grenfell. Jack is away for over July Fourth. By reason of representations repeatedly made to us, we have all along been confident of receiving on July 2nd a payment sufficient in size to liquidate entirely no. 1 and 2. On Wednesday last, however, we were suddenly informed that this payment was in doubt and it now seems certain that we will not receive payment on July 2nd as agreed. We still hope that this is only a short postponement as we consider the matter of the utmost importance.

In regard to exchange, we have as yet been unable to learn the attitude of Washington, and we question whether they have adopted a definite policy in this matter. It would be very helpful to us if they would.—THOMAS COCHRAN.

MORGAN.

CABLE DEPARTMENT,
New York, July 2, 1917.

[Copy of cable despatched 9:30 p. m. to Morgan, Grenfell & Co., London]

47404. Denkstein. Please inform the Chancellor of the Exchequer that all our plans and movements during the past two months have been predicated upon our definite understanding that number one and two would be liquidated in full on July 2nd as result of advances to the amount of $400,000,000 to be made to the British Government by the American Government and paid to us for that specific purpose.

Relying upon this understanding we have in many cases committed ourselves accordingly to financial institutions who are participants in this loan to the extent of approximately $235,000,000, there being in all about sixty such part ticipants. It is a cause of great regret that conditions here make it clear that this loan payable on demand cannot be continued longer and unless some other solution can be arranged for immediately, we feel we must proceed to sell collateral and apply proceeds toward reduction of loan. We would expect to begin such sale on Thursday morning. We would, of course, be glad to make an effort to convert this loan into such a time loan as might suit conditions of our market, providing that the Chancellor of the Exchequer desires us to make this effort and that it meets with the approval of the American Government. But in any event steps must be taken providing for the immediate payment of the loan. We are greatly distressed at the position we now necessarily take, but as we were informed and confidently expected the loan to be paid today, all the arrangements of ourselves and associates have been made accordingly and we are consequently left no alternative.

MORGAN.

38679. Denkstein. 47404 communicated to the Chancellor of the Exchequer. He expresses great surprise that it should be necessary so quickly to make provision to liquidate the call loans. He hopes that Lord Northcliffe and Sir Hardman Lever may be able to persuade the authorities, Washington, D. C., to make the repayment which you expected. He is cabling the contents 47404 to Sir Hardman Lever with request to consult Lord Northcliffe.

With regard to conversion into time loan, Chancellor states he is instructing Sir Hardman Lever that any arrangement possible on these lines may be made by Sir Hardman Lever or Lord Northcliffe, they having full authority to act for Treasury. If you have not already done so, please show 47404 and this cable to Sir Hardman Lever, as cable delays may prevent Chancellor's message reaching them as soon as this reaches you. Further cables follow.—E. C. GRENFELL.

38681. For J. P. Morgan. Denkstein. Please refer to my long letter of May 11th describing situation as regards Treasury. My cable 38561 was sent to you because I heard rumors there was doubt of repayment nos. 1 and 2 as promised. I think, however, you should keep me at all times fully informed of financial situation between you and Washington for following reason: We believe Sir Hardman Lever cables very fully to Treasury, but owing to attitude of party mentioned page four of my letter this gentleman carefully refrains from telling anything either to Governor or myself, so that not only the Governor and Morgan, Grenfell & Co., but also the London Exchange Committee are kept absolutely in the dark. This may seem inconceivable to you when you consider that the Governor has only just returned from occupying the position of financial member of Rt. Hon. A. J. Balfour's mission. For reasons stated, page three, Chancellor of the Exchequer, though most friendly, is unable to give adequate time to financial questions.—E. C. GRENFELL.

47446. 38679. For E. C. Grenfell. Denkstein. You can readily appreciate that we would do anything in our power to avoid causing the slightest embarrassment to you or the Chancellor or your Government. We fully recognize that the failure to receive the expected payment of $400,000,000 is in no way the fault of the British Government, but that does not alter the fact that, having been told more than two months ago that the payment would be made, all our arrangements since that time necessarily have been based upon that understanding. We have had to contend with serious difficulties. Owing to semi-annual settlements and large payments for Liberty Loan, our own deposits have decreased $100,000,000. Besides this, some of the out of town participants in your two demand loans have called for payment. In order to avoid requesting the British Government to pay off any part of the loans, we have met these calls ourselves and in order to do so and provide for our own decrease in deposits, we have used our own personal credit. We have also made positive commitments to participants who have been asking for repayment promising such repayment on July 2nd. We have done this relying confidently upon assurance repeatedly made to us that the loans would be fully liquidated on that date. It has been a constant struggle to meet the situations that have arisen from day to day and the strain has been beyond description. We feel confident that if the Chancellor fully understood what we have been through he would realize the necessity for the prompt liquidation of the loan. Your 38690 will give a large measure of relief, and you may rest assured that we shall earnestly co-operate in every possible way to meet the situation. In using 38690 we will bear constantly in mind 38691, and will avail ourselves of 38690 only to the extent that in our judgment is absolutely necessary.

Sir Hardman Lever has been most helpful and courageous throughout. We will take no action with regard to sales of collateral or otherwise without full consultation with him.

MORGAN.

EXHIBIT No. 2806

[The Ambassador in Great Britain (Page) to the Secretary of State]

LONDON, *June 28, 1917*.

Mr. Balfour asked me to a conference at 7 o'clock with him, the Chancellor of the Exchequer and their financial advisers. It was disclosed that financial disaster to all the European Allies is imminent unless the United States Government advances to the British enough money to pay for British purchases in the United States as they fall due.

Bonar Law reports that only half enough has been advanced for June and that the British agents in the United States now have enough money to keep exchange up for only one day more. If exchange with England fall, exchange with all European Allies also will immediately fall and there will be a general collapse. Balfour understood that in addition to our other loans and our loans to France and Italy, we would advance to England enough to pay for all purchases by the British Government made in the United States. He authorizes me to say that they are now on the brink of a precipice and unless immediate help be given, financial collapse will follow. He is sending an explanatory telegram to Spring-Rice.

I am convinced that these men are not overstating their case. Unless we come to their rescue we are all in danger of disaster. Great Britian will have to abandon the gold standard.

(*The Ambassador in Great Britain* (*Page*) *to the Secretary of State*)

(Telegram)

LONDON, *July 5, 1917, 8 a. m.*
[Received 5:30 p. m.]

6645. Late yesterday I attended a financial conference, to which I was called, of the Prime Minister, the Chancellor of the Exchequer, the Foreign Secretary, the Governor of the Bank of England, and their advisers about the $400,000,000 overdraft which the British Government owes Morgan. They informed me that on April 6 Spring Rice telegraphed that he had received a definite promise that this sum would be paid the British Government to meet this overdraft and that it should be the first call on the Liberty Loan. They say also that on April 9 the Governor of the Bank of England received the same promise from Mr. McAdoo. On June 29 Mr. Balfour telegraphed Spring Rice reminding him that this overdraft was to be paid out of the Liberty Loan. The foregoing was made quite clear in their statement to me; then followed something less clear, namely, that they understood that since the Liberty Loan was received by our Treasury on July 1 this overdraft was to be paid July 2. I remarked that first call did not necessarily mean July 2, but it turned out that the British officials in the United States, for some reason not made very clear, expected to receive the $400,000,000 on July 2 and that Morgan then expected to receive that sum from British officials. Yesterday Morgan telegraphed his expectation and disappointment. The conference asked me to report the foregoing and to express the hope that this sum would be speedily paid. In the course of an extended conversation I reminded them of the disadvantage of failing to have all financial agreements reduced to writing and of the probable confusion caused by having so many persons taking up financial subjects with our Government. They then informed me that Northcliffe was their authorized financial agent and that he had not lately been able to see McAdoo because of McAdoo's absence. I promised to send you this telegram and I suggest that McAdoo's understanding of the matter be telegraphed me with whatever assurance he may give of the payments of this overdraft and the date when its payment may be expected.

[Copy of cable despatched 6:00 p. m. to Morgan, Grenfell & Co., London]

47472. Denkstein for E. C. Grenfell. 38708. Our information with reference to time of payment is derived from conversation of H. P. Davison and others with Sir Hardman Lever and Lord Cunliffe. Our recollection of those conversations is not different from Lord Cunliffe's as reported your 38709, to-wit: That payment was to be made "out of the first proceeds of the Liberty Loan." You will note that date of first payment of Liberty Loan was June 28th. Undoubtedly all of us fixed in our minds that a day or two for clearances might be required and that therefore the first business day of July, to wit July 2nd, would be the day on or before which payment would be made.

We have shown this cable to Sir Hardman Lever, who concurs that the above furnishes the real explanation of the July 2nd date, which was in his mind as well as ours.

[Copy of cable despatched 7:45 p. m. to Morgan, Grenfell & Co., London]

47482. Denkstein for E. C. Grenfell. Returned this morning and have read cable correspondence from June 28th. Sir Hardman Lever goes to Washington tonight; will undoubtedly clear up situation in talk with Secretary of Treasury tomorrow. We will endeavor to keep you fully informed. Meanwhile there is no financial situation between us and Washington. Our financial situation is with British Government's representatives here and it is they who must adjust all questions with Washington. Am enormously impressed with courage and firmness of Lord Cunliffe as shown in your 38690, but we do not wish to avail ourselves of this unless it should be necessary. We shall be entirely satisfied to know gold is in Ottawa and available if we need it and trust that we shall not be forced to call for actual shipment which we should regret from many points of view. Should the American Government now make up its mind that it will not help in paying off this loan, we believe there are various methods which can be applied which will provide enough money and at the present time there is no pressing need for the payment here. Even if it should be necessary later to sell part of the collateral we will not sell it in a hurry nor in such a way as to get less for it than we ought to and, of course, nothing will be done except in consultation with British Treasury agents here.

Quite understand your remarks on page four of your letter of May 11th and will endeavor to keep you fully informed. Of course we are not cognizant of everything done between the British Treasury agents here and our Treasury Department, but our relations with British Treasury agents here are entirely satisfactory so far and we believe extremely close and as satisfactory to them as they are to us. Am amazed at concealment indicated in your 38681 and also in 38708 and cannot understand Chalmers taking any such line. However, since he has done so we will be guided accordingly.

Just received your letter June 18th. So thankful for your escape. Remarks on page five embody the conclusion we had already come to. In the meantime our virtues are being loudly proclaimed which at any rate is pleasant as far as it goes.

Love to all.—J. P. MORGAN.

Exhibit No. 2817

Page 539-542

F. R. 1917 S. 2—Our cuts

File No. 841.51/67

(*The Secretary of the Treasury* (*McAdoo*) *to the Secretary of State*)

Washington, *July 9, 1917.*

My dear Mr. Secretary: The President has transmitted to me the letter dated July 1, addressed to you by Colville Barclay, Esq., for the British Ambassador, making, under instructions from Mr. Balfour, various representations as to British financial requirements, and a formal request for certain specified financial assistance. I beg to request that you communicate the following reply to the British Ambassador; [1]

It is true that the Secretary of the Treasury did not know that there was danger that the ability of His Majesty's Government to effect payments in America would be in jeopardy; nor could the Secretary of the Treasury, without far more complete and detailed information than has been furnished him by the financial representatives of the British Government, have been aware of this. The Secretary of the Treasury has received the information contained in the note of the British Ambassador with the gravest concern.

As to the probable effect which would be produced on the progress of the war by a collapse in British exchange, it is not clear from the note in question that the maintenance of British exchange at any given figure is in the mind of Mr. Balfour nor that the United States can intervene in the matter except in so far as it automatically intervenes through the making of the loans that have been or may be made to the British Government to cover purchases of supplies required to be made in America.

In respect to the burden borne by the British Government for nearly three years of financing "the whole of the Allied powers", it is in the general knowledge of the Secretary of the Treasury that large sums have thus been lent to other belligerents, but specific information asked concerning this point has not yet been laid before the Secretary of the Treasury; neither in respect to the amounts lent to each of the other belligerents, nor in respect to the rates of interest paid by those belligerents, nor in respect to any other conditions which may have been attached to the making of such loans. A figure of approximately $5,000,000,000 has been stated as covering the amount loaned by the British Government during nearly three years of the war, and it may be noted that the request of the British Government alone for assistance from the United States Government is at the rate of $3,000,000,000 per annum, and that the requests from other governments added to those of the British Government would, if acceded to, carry the loans of the United States Government to far more than $5,000,000,000 in one year.

The Secretary of the Treasury regrets that Mr. Balfour left with the understanding that the United States Government would relieve the British Government definitely of the expenditures in the United States of the other Allied powers, and that it should have been confidently expected that the needs of the British Government, as communicated on May 3,[3] and the specific assistance desired for June, as indicated in the Ambassador's note of May 29,[4] would be met. It is to be regretted that general expressions of good will and a general discussion of the needs of foreign Governments, and of the possibility of the United States Government's meeting these needs, should have been construed as positive undertakings on the part of the United States to meet requirements which had not been stated in definite terms. In the conversation between the Secretary of the Treasury and Mr. Balfour, as well as with other representatives of his Government, it was made clear that the action of the Secretary of the Treasury was limited wholly by the act of Congress approved April 24, 1917, in which the Secretary of the Treasury was authorized, with the approval of the President, to make loans to governments at war with the Imperial German Government. Had the Secretary of the Treasury undertaken to meet only the specified requirements for a period of six months of the belligerent governments which have presented a schedule of the advances desired by them, he would have at once passed beyond the statutory limit of $3,000,000,000, by which he was of course wholly bound.

Communicated to the British Ambassador July 13.

In an endeavor to meet with the greatest possible promptitude the indicated urgent demands of the British Government, the Secretary of the Treasury within twenty-four hours after the approval of the above statute by the President, loaned to the British Government the sum of $200,000,000, before receiving from that Government any statement indicating its needs either for six months or for any other period. Thereafter, under date of May 3 the statement of those needs for six months was received and on May 5, while Mr. Balfour was still in the United States and subsequent to his conference with the Secretary of the Treasury, a further loan of $200,000,000 was determined by the Secretary of the Treasury, and a reply to the Ambassador's communication of May 3 was written in the following language:

> I have the honor to acknowledge receipt of your communication of May 3 relative to the making of further loans to your Government. Without dwelling on the larger matters referred to by you, which I shall be happy to consider at the earliest moment, it gives me pleasure to say that, having secured the sanction of the President in the premises, I am prepared to make a loan to your Government of $25,000,000 to day, and a further loan of $25,000,000 on Monday the 7th instant. These loans will be arranged and evidenced in a manner similar to the loan of $200,000,000 to your Government, negotiated on April 25.

And on the same date, May 5, Mr. Balfour wrote the Secretary of State expressing, on behalf of the British Government and on his own behalf, appreciation of the promptitude with which the Secretary of the Treasury had met the "immediate financial obligations" of the British Government, but making no reference to any understanding or expectation with reference to the larger matters referred to in the Ambassador's letter of July 1.

Subsequent advances in various amounts have from time to time been made to the British Government, each independently of the other, the whole aggregating at this date the sum of $685,000,000, a sum so great that the Secretary of the Treasury cannot believe that the British Government, however dissatisfied it may be with the extent of the financial assistance rendered by the United States, would have been better satisfied with any possible further direct recourse by the British Government to the American market. In connection with none of these advances has any assurance been given of the ability of the United States to meet the requirement of the British Government, outlined in the letter of May 3, for advances in the sum of $1,500,000,000 in the six months' period.

The British Ambassador refers to the bringing down of gold from Canada, the sale of securities and the withdrawal by American banks of sterling balances in London. However, much the Secretary of the Treasury may regret, as he does regret, the necessities thus laid upon the British Government, the transactions have not entered into the dealings between the two Governments, except that when the great urgency of the matter was presented to the Secretary of the Treasury he did authorize, without such a consideration as would otherwise have been proper, immediate loans to the British Government on the representation of its agents that these loans would diminish the acuteness of the crisis which had thus been presented. If from what the Ambassador says with reference to these matters, it is to be inferred that the British Government desires to look to the United States, not only for the advances indicated in the communications referred to under date of May 3 and May 29, but in addition thereto for whatever sums may be necessary to pay off maturing indebtedness of the British Government in the United States though incurred before the entrance of the United States into the war, the Secretary of the Treasury regrets that he can give no assurances in this respect.

The British Ambassador, in concluding his letter of July 1, presents a formal request for the following financial assistance:

* * * * * * *

> (3) That assistance may be given to cover the amount of our overdraft with New York bankers amounting to about $400,000,000. It was explained to the Secretary of the Treasury in April and again in my communication of May 3rd that this overdraft had been incurred mainly in order to enable our other Allies to carry on and he agreed that this sum might be included in our application and regarded as a first call on the credits under the loan.

The Secretary of the Treasury is taking the whole subject of the $400,000,000 overdraft under consideration, but no immediate determination can be made. It is true that the Secretary of the Treasury stated to Mr. Balfour that this em might be included in a statement to be laid before the Secretary of the reasury of the amounts which the British Government desired to borrow from the United States Government. Not only was this item one which would receive consideration, but, indeed, the Secretary of the Treasury stated that any items whatever which the British Government desired to be laid before him would receive due consideration. But no commitment was made by the Secretary of the Treasury concerning any item, whatever its nature, which was suggested for inclusion in the statement then being prepared by the British Government for submission to him.

Cordially yours,

W. G. McAdoo.

Exhibit No. 2818

British War Mission

Office of the Chairman, Lord Northcliffe

Hotel Gotham,
New York City, 12th July 1917,
[Pencil notation: Ans'd July 13/17]

J. P. Morgan, Esq.

My Dear Mr. Morgan: I called yesterday upon Mr. McAdoo, accompanied by Mr. C. B. Gordon.

Mr. McAdoo politely but firmly declined to discuss the matter of the loan saying that he could not do so unless he received a list of the banks participating in it.

We were unable to alter his decision.

Perhaps you will let me know what answer I shall make to Mr. McAdoo in response to his request.

Yours sincerely,

Northcliffe.

Exhibit No. 2819

July 13, 1917.

The Rt. Hon. Lord Northcliffe,
Chairman, British War Commission,
Wyndcliffe, Manchester-by-the-Sea, Mass.

My Lord: We have your letter of yesterday addressed to our Mr. J. P. Morgan.

In order to enable the British Government to answer the questions which Mr. McAdoo asks, we are prepared to give you the information, leaving you to use it as you see fit. There is always a considerable element of danger in having such large sums subject to demand, and for that reason, and in order to safeguard the interests, as we see it, both of the British Treasury and of the American money markets, the matter of this demand loan has been handled in the strictest possible confidence. No participant has ever known either the names of the other participants, or the amounts advanced by them. We have, of course, no technical right to disclose the participants in the demand loans without first obtaining the permission of each participant; to do this would, however, cause delay, which we wish to avoid, and we cannot imagine that there would be, on the part of any of the participants, any objection to your having the information, provided of course that it be not made public.

The matter stands as follows: We have loaned to the British Treasury $398,545,531.46, of which amount we have participated at the present time an aggregate amount of $233,900,000, among the various firms and institutions indicated on the accompanying confidential list. Of course, as to subparticipations which the institutions may have given out, we have no information.

The loan is secured by collateral, of which we understand the Treasury Department has already a list, having a present estimated aggregate value of more than $700,000,000.

We trust that the information herein contained will enable you to bring this matter to a satisfactory conclusion.

Should the American Treasury not wish to advance you the money to take up the whole demand loan, we would suggest that the British Government be permitted by the American Government to reestablish the balance of the loan in such a way that it shall have a definite due date. This can only be done by the issue of some security in the New York market, which, if the market would take it, would enable you to pay off the balance of the demand loan.

With the assurance that our services and any information in regard to our transactions for the British Government are always at your disposal, we beg to remain,

Yours very truly,

——— ———.

47701. For E. C. Grenfell. Negotiations between Lord Northcliffe and U. S. Government proceeding. Secretary of Treasury has taken attitude he wishes to know who are the participants and to what amounts in loan. We do not ourselves see what difference this can make, but we see no reason for withholding the information and consequently are giving it to Lord Northcliffe for use as he pleases. It seems probable that when they get this information they will be bound to do something, after which we can take up question of adjustment of balance. Am going to Uncas again tonight for a fortnight, but if needed in regard to this or any other matter can always be back on short notice.—J. P. MORGAN.

MORGAN.

EXHIBIT No. 2821
[File copy]

JULY 19, 1917.

Rt. Honorable LORD NORTHCLIFFE,
New York.

YOUR LORDSHIP: In response to your request for a statement of our position with respect to the demand loans of the British Government, we submit the following:

The amounts, aggregating approximately $400,000,000, now due in the form of demand loans represent various amounts that we have paid from time to time to American manufacturers, merchants, etc., for the account of the British Government, less shipments of gold, proceeds arising from the sale of American securities and from the public sale of British Government notes, issued from time to time.

Since early in 1915, the British Government has called upon us repeatedly for temporary advances to care for its requirements, created here by the heavy and increasing trade balances running in favor of America. A summary of these temporary advances is as follows:

1. From February 1915 to October 1915 such advances aggregated $180,000,000; this amount being liquidated from the proceeds of the Anglo-French Loan issue of October 1915;
2. From May 1, 1916, to September 1916, $210,000,000; this amount being liquidated from the sale in September 1916, of $250,000,000 British Government notes;
3. From October 5, 1916, to November 1916, $188,000,000; this amount being liquidated from the sale in November 1916 of $300,000,000 British Government notes;
4. From November 1916 and thereafter $346,000,000; this amount being *partially* liquidated by the sale in February 1917 of $250,000,000 British Government notes.
5. The unliquidated balance, as mentioned, was steadily increased up to the maximum approximately $437,000,000 on April 25, 1917; this amount being reduced to the present approximate figure of $400,000,000 chiefly through gold imports.

We understand that since the entrance of the United States Government into the war, it has advanced the British Government an aggregate of $685,000,000, all of which advances, so far as our knowledge goes, have been used for the payment of current obligations of the British Government in this country for materials, supplies, and for the purchase of bills of exchange representing, in large part, foreign purchases of cotton and foodstuffs, no part having been used to reduce our demand loans. Moreover, these loans were secured by gold in transit, which gold upon its arrival might have been applied by us from time to time to the reduction of the loans, but which was also applied, with our full consent, to the payment of pressing current obligations.

The share of our firm in these demand loans at the present time is approximately $165,000,000. The balance of the loans we have obtained through our personal efforts and the co-operation of the larger institutions in New York and in a few of the other leading cities of the country. By consulting the cables you will note the great anxiety on the part of the officials of your Government that the matter should be handled most confidentially. This we have at all times met so far as it lay within our power.

We understood in May, last, from the members of the British Mission in this country that the entire demand loan would be liquidated on or about July 1st, last. Owing to the demands upon our own money market in connection with the Liberty Loan, there have been from time to time, requests from participating institutions for information as to when the loan might be expected to be paid. We have responded to such requests that we understood the loan would be liquidated on or about July 1st. The failure to carry out the plan of liquidating the loan on that date has, of course, interferred with the plans of those who were relying upon payment. There has never been the slightest question on the part of any of the participants as to the goodness of the loan. Their sole question has been as to whether it is one upon which they could rely as a quick asset, payable at any time to meet current demands.

We believe the foregoing states the situation as to the past. We respectfully make the following suggestions as to the future: We believe it highly undesirable, from the point of view of your Government as well as from the point of view of the American money market, that this loan should continue as a demand loan any longer than is absolutely necessary. We feel strongly that it should be liquidated in the very near future by one or a combination of the following measures:

1. By the issue and sale of British Government short time notes, secured by collateral. The extent to which this would be practicable, no doubt, would depend very largely upon our own Government's requirements from our money markets.

2. By the sales of the collateral to be made in as orderly a manner as circumstances permit, having in view always the desirability of obtaining the highest prices possible for your Government. You will recognize that with further issues of our own Government loans overhanging the market, it is not now practicable to sell American securities in large amounts at satisfactory prices.

3. The application to the payment of this loan of such advances as you may secure from the United States Government. This last is obviously a method which does not directly concern us and which is, perhaps, complicated by our entrance into the negotiations. It is distinctly a matter between the two Governments. As evidencing, however, our own desire to facilitate your negotiations, we have at all times expressed, and do now express, a willingness to accept for a substantial portion of our own participation in the present loan, short time obligations of the United States Treasury.

While not bearing upon the financial operation of your Government, we desire to take advantage of this opportunity to urge again that action be taken by which purchases of material for your Government may be made by or through the United States Government. You will recall that on April 3rd, we cabled the British Government, suggesting that it take up the question of obtaining supplies and making purchases through the United States Government; subsequently on May 25th, we proposed the cancellation of the contract under which we had been acting as purchasing agents of the British Government in the United States, and later, namely on July 14th, we urged the creation of a staff to take over as soon as possible, the work we have been doing in making purchases, etc. We hope that action in this direction will be taken promptly. We feel now, and have felt ever since the United States entered the war, that the business of the British Government should be transacted by its direct representatives, working in conjunction with the various departments of the United States Government in an effort to obtain the benefit of the more favorable prices and terms that that can be secured only through the exercise of governmental control; and we shall be glad to facilitate the transfer of the buying to any organization that may be formed for that purpose.

We are enclosing herewith memorandum of the securities that we are holding against the demand loans to which we have referred in detail in the earlier part of this letter.

Yours very truly,

—— ——.

Summary

American securities:	
Scheme A	$212, 110, 000
Scheme B	270, 280, 000
Treasury	26, 000, 000
Total	508, 390, 000
Securities of foreign governments and corporations:	
Scheme A	8, 575. 599
Scheme B	235, 000, 000
Total	243, 575, 599
Grand total	751, 965, 599

[NOTE.—The above valuations are based on figures and quotations which are approximate.]

American securities—Scheme A

Listed stocks	$179, 730, 000
Listed bonds	14, 040, 000
Unlisted stocks	8, 000, 000
Unlisted bonds	10, 340, 000
	$212, 110, 000

Upon the sale of securities deposited under this scheme, the Treasury is obligated to pay the owners thereof at once the sterling equivalent of the price at which such securities are sold plus 2½%.

[NOTE.—The above valuations are based on figures and quotations which are approximate.]

American securities—Scheme B

Listed stocks	$162, 100, 000
Listed bonds	50, 000, 000
Unlisted stocks	3, 180, 000
Unlisted bonds	55, 000, 000
	$270, 280, 000

Upon the sale of securities deposited under this scheme, the Treasury is obligated to account to the holders for the income during the five or three year period and at the end of such period, either return securities to the owners or to pay them the price of such security at the time of inception of scheme B, plus 5%, or the sale price, if such sale price is higher than the foregoing.

[NOTE.—The above valuations are based on figures and quotations which are approximate.]

American securities—Treasury

Listed stocks	$18, 000, 000
Listed bonds	5, 000, 000
Unlisted stocks	1, 000, 000
Unlisted bonds	2, 000, 000
	$26, 000, 000

These securities are owned by the Birtish Government.

[NOTE.—The above valuations are based on figures and quotations which are approximate.]

Securities of foreign governments and corporations

Argentine Government	$32, 729, 947
Argentine railroads	50, 155, 290
Brazilian Government	2, 366, 657
Chilian Government	32, 061, 758
Dominion of Canada	10, 193, 047
Canadian Railroads	17, 157, 757
Egyptian Government	17, 032, 900
Japanese Government	58, 525, 922

Securities of foreign governments and corporations—Continued

Chinese Government	$315, 208
Republic of Cuba	6, 158, 110
City of Tokyo	1, 741, 685
Miscellaneous Industrial Corps	15, 137, 318
Total	243, 575, 599

Of the above approximately $235,000,000 scheme B balance scheme A.

[NOTE.—The above valuations are based on figures and quotations which are approximate.]

47952. 40134. As to your suggestion, presume authorities have overlooked that participations in no. 1 loan were made in order to overcome legal limitation difficulties with certain institutions already participating in no. 2 loan. Believe it would be very unwise to attempt, for the moment, to distrub that situation. Five institutions hold participations in no. 1 loan aggregating $27,000,000 odd. We find that $12,500,000 of this could be transferred to no. 2 loan, leaving $14,750,000 odd that must be paid and for which we have no outlet if change suggested is made.

As to tender in your 38690, Bank of England could cancel these instructions and instead ask the Government advise us that they had instructed Ottawa to hold £17,500,000 gold for our account.

As for our participation in no. 1 of nearly $58,000,000 we would be willing to transfer to no. 2, but how the $14,750,000 balance could be taken care of we are at a loss to know. Under present stress of payments, we could not assume this amount.

49272. 47888. For E. C. Grenfell. Denkbar. In order to acquaint you fully and confidentially with situation, information furnished Lord Northcliffe as above was presumably for unofficial information of administration. We also supplied detailed information to Lord Northcliffe for transmission to our Treasury, giving participants and their amount in British demand loans. As no satisfactory solution of the matter had been made, T. W. Lamont, with the approval of Lord Northcliffe, conferred at length Monday, in Washington, with Secretary of the Treasury. He was cordial and co-operative in desires expressed, but explained that the demands of Allies upon Treasury were such that it had no funds available to turn over for prompt liquidation of present demand loan, either in whole or in part. Secretary of the Treasury stated that he had never made any commitment to take care of any particular item in British budget of requirements, and that he had told Rt. Hon. A. J. Balfour, when Mr. Balfour had presented a memorandum showing all obligations, including the $400,000,000, that Treasury would give consideration to all these items and do its very best to care for all of them, but without the slightest commitment, since he, the Secretary, had no definite idea of how much he might be able to accomplish. We think it unwise from this time on, to press this point further upon Federal Treasury. Inasmuch as it is now clear Federal Treasury is able to hold [out] to British Treasury no immediate help as to demand loan, we must consider other methods in order to place loan in a more regular position. Our first course naturally would be to reduce Treasury outstanding liability, through the careful sale of collateral, under instructions which we presume Sir Hardman Lever will hand to us. Such sales, however, must at best be slow in order to secure best prices and avoid depreciation both on account of British Government and our own Government which must soon appear again in security markets.

As a second measure, we are discussing among ourselves the possibility of making a comparatively early issue of $200,000,000 1-year British Treasury notes, secured by collateral now under demand loan and convertible like the last British issue, into 20-year bond—our idea being to try to get present banks and ourselves, who are carrying demand loan to underwrite substantial portion of this note issue, if not the whole of it, on the theory that if the notes do not sell to the public, these institutions will be little if any worse off than now, and if they do sell, they will be better off to the extent of such sales. We could hardly hope to put out such notes so that the interest cost to British Treasury would be less than 8% per annum. Even this however, we should consider preferable to present unsatisfactory and somewhat dangerous position of loan. Frankly, we have been much disappointed in the sale of $100,000,000 Dominion of Canada issue, see our no. 47895, and we may find it unfeasible to develop foregoing suggestion. In such contingency our own desire would be to handle short term Treasury bills at, say, 90 days' maturity to the extent of $150,000,000 or less, with idea that when we had once established these in market they would readily renew themselves. A 90-day maturity is in itself not satisfactory to Treasury, but at any rate to any material amount it is better to have the loan in this form than to have it all subject to demand. Further, we would hope to put these out in small amounts each day, so that there would be no one heavy maturity.

Secretary of the Treasury has given his tentative approval to our suggestion of a 1-year note issue, and today we discussed with him our suggestion of short term Treasury bills in event 1-year notes were not feasible. He has reserved his decision on this suggestion, but we shall keep in touch with him.

We are by no means certain just what we can accomplish along the various lines suggested, but it is clear we must make a move in some direction for the handling of the heavy demand loan.

Sir Hardman Lever will cable his views to Treasury, and we should be glad to receive promptly, if possible, your confirmation in general of this tentative programme.

MORGAN.

EXHIBIT NO. 2824

BRITISH DEMAND LOAN

BRIEF MEMORANDUM OF CONVERSATION AT THE FEDERAL TREASURY, WASHINGTON, D. C., MONDAY, JULY 30, 1917, AT 11 A. M.

T. W. L. explained that in conference on the previous Friday (Northcliffe, E. R. S. and T. W. L. being present), the suggestion emanated that T. W. L. should visit the Treasury to discuss the whole situation direct, to offer cooperation and to see whether some solution, satisfactory to all concerned, could not be arrived at. T. W. L. explained that he had no real standing in the matter, because we were supposed to look solely to our debtor, the British Treasury, but we felt there was no use dealing with such a matter at arms' length, and thought that in conference possibly we might be able to suggest co-operation that would assist the whole money market situation.

McAdoo said he was glad I had come and he immediately sent for Assistant Secretary Crosby. The conference lasted an hour. T. W. L. explained further, in introduction, that the loan was a great discomfort to the whole situation and was likely to cause continuing uneasiness with the approach of the second large government loan operation, the banks and ourselves being exceedingly anxious to cooperate strongly in that; therefore, wishing to clear up in advance any adverse factors.

The gist of McAdoo's and Crosby's attitude, summarizing the whole interview, was as follows:

(A) The Treasury had no funds available to clear up this demand loan, in whole or in part. The demands from the Allies were so heavy that the Treasury didn't really see how it was going to get through, even with the funds on hand, up to the time when fresh legislation might be possible.

(B) Even if the Treasury had spare cash on hand, which it didn't, it would prove very awkward to turn over money for this particular purpose, because McAdoo, in appearing before the Senate and House committees originally, in connection with the legislation for the $3,000,000,000 loan to the Allies, had assured them that any part of this sum to be advanced would be for fresh purposes and not to take up existing obligations. He may have made a mistake, but that was over the dam now. He wanted to have us appreciate his viewpoint and try not to force him to undertake a step which would be awkward for him.

(C) Incidentally, he wanted to make clear that he had never made any agreement to liquidate this particular sum. Balfour had asked him whether he should include it in the total budget of British requirements. He said, yes, of course, do so, but, he said, "all I told him was that we would do our utmost to take care of all their requirements but that I had no power to make a commitment on any specific item." McAdoo felt sore that this alleged agreement had been rubbed in so hard, because it was not in accordance with the fact. Crosby supported him in this very earnestly.

(D) Time would help resolve the whole situation, and the Treasury would do all it could to relieve it, appreciating our point of view and being bound anyway to help the British Treasury all it could.

(E) Now as to practical suggestions, "Why don't you go ahead and sell out the collateral", asked the Secretary. I said that we intended to act as promptly as possible on that, but feared that we could not market more than half a million dollars of the collateral per day, perhaps not even that, without having a materially adverse effect upon the security markets, which would be bad for the new Government loan. I pointed out that even if we sold $5,000,000 a week, at that rate it would take almost two years to liquidate the loan. "Well", said the Secretary, "do the best you can anyway, make a start on it, and reduce it steadily. You will find it all helps." I committed ourselves to that policy.

(F) The Secretary then asked whether we thought we could get up a note issue. I told him that that too we had been discussing, and would do our best to work out practical suggestions, keeping in touch with him. In this connection, let me add that on the subsequent day, July 31st, I talked with Crosby on the 'phone, explained that we were considering a one-year convertible note, and were doing all we could to carry out McAdoo's and his ideas both on a note issue and on selling collateral. Crosby said that that met their hearty approval. Further, in this connection, on Thursday, August second, I talked with McAdoo over the 'phone again and explained our fear that a one year note issue might not be practical, and suggested British Treasury bills (please refer to our letter to the Secretary of this date, also our cable to Mr. Grenfell, of London, of August 2nd).

(G) There is one possible source, said the Secretary, for reducing the loan, and that is $65,000,000, which the Treasury would like to pay Great Britain, being the sum advanced by Great Britain for the building of ships here. The Secretary believed that these ought to be and would be turned over to the United States. Great Britain had originally agreed to this, but there had been some hitch, which McAdoo thought would be adjusted in the near future, now that the Shipping Board had been reorganized.

(H) Mr. McAdoo mentioned the $185,000,000 which he was committed to advance this month to Great Britain, and made the inquiry as to whether we were convinced that this was being wisely expended by Great Britain. I told him that in general we were thoroughly convinced of the fact, but that I hoped that if any question of purchasing arose in his mind, he would not hesitate to utilize freely the experience of Mr. Stettinius, who is always at his command. He said he appreciated that. It was a satisfaction to have the assurance again.

(I) In general, the attitude of both the Secretary and Assistant Secretary was most cordial, and it seemed to me co-operative. Their later conversation over the telephone seemed to me to indicate a sincere interest in the subject of the demand loan and an earnest desire to do all they could to reduce it.

EXHIBIT No. 2825

[File copy]

AUGUST 3RD, 1917.

BRITISH DEMAND LOAN OF $400, 000, 000

Hon. WILLIAM G. McADOO,
Secretary of the Treasury, Washington, D. C.

DEAR MR. SECRETARY: When I asked you yesterday over the phone your feeling as to the possibility of the British Treasury taking up a part of its present demand obligations with notes of a fixed maturity, say for ninety days (these being in the category of so-called short term Treasury bills), you said that your mind was not clear on the subject, and you were good enough to suggest that we might wish to prepare some memorandum to submit to you, enabling you to consider the whole matter at your early convenience.

As I told Mr. Crosby over the telephone the other day, we are working on both the suggestions that you made to me in Washington, namely, first, the disposition as rapidly as the market will absorb the securities without depressing it unduly, of collateral to the demand loan; the rate of such sales being hardly likely to exceed $5,000,000 a week, if indeed that. Second, the question of a one-year collateral British note issue, convertible into a longer term bond, just as the last British note issue was. As yet, however, we have not received much encouragement upon this latter plan. We managed, after all, to dispose of the $100,000,000 Dominion of Canada note issue, but, confidentially, it was a very difficult job.

Owing, therefore, to this difficulty, our minds turned, as I said over the phone, to the question of trying to substitute some ninety day notes for some part of the present demand obligations. First, then, our idea would be to limit such ninety-day notes to not to exceed $150,000,000. To be sure this is only a little over one-third of the total demand loan, but with the possible payments that may come from various sources, such as you indicated confidentially to me, the whole loan would be cut down to comparatively moderate proportions if we were able to convert even $150,000,000 of it into notes of a fixed maturity, even though of short dating, like ninety days.

The second point as to such conversion is that we should not propose to make an issue of the whole $150,000,000 at one time. We think it would be much better for the market to peddle them out just as the market would take them, perhaps $5,000,000 today, $10,000,000 tomorrow, and so on. Each day's notes would mature ninety days from that particular day, so that there would be no large amount falling due on any one date.

As we look at it, the banks who are now carrying the demand loan ought, within moderation, to be willing to take ninety day paper in place of it. Paper like this, with a fixed maturity, would gradually find a somewhat broader market, and so relieve the British Treasury.

You asked us to consider this question from the Federal Treasury's point of view, which we are, of course, bound to do. Our conclusion is that if we limit the amount of these ninety day notes to the figure that I mentioned, $150,000,000, and put them out as quietly and slowly as the manner which I described, the effect on the general money market would be favorable, rather than otherwise. You see, no fresh money would be asked for at all; it would be simply a substitution of one kind of paper for another, and the elimination of that amount of demand paper ought to prove helpful.

I am sorry to have had to give you such a long letter in order to present these views, but of course, as you yourself said, the matter is of importance and requires the best thought of all of us. My suggestion, you understand, is merely tentative. We have purposely refrained from sounding the market on an obligation of this kind, desiring, of course, first of all to secure your opinion.

I am going away for a few weeks' vacation, but Mr. Morgan will be here and he or any of our partners will be glad to confer with you any time, if you should so desire.

Very truly yours,

——— ———.

[Copy of cable received 4:37 p. m. from Morgan, Grenfell & Co., London]

40420. Referring to my 40419, it appears that Sir Hardman Lever has sent long cable to Chancellor of the Exchequer giving his views on the financial situation with you, and hinting that there was possibility that certain repayments might be made to you out of the savings on the amounts allotted by McAdoo for British requirements during coming months. He also mentions that certain sums might be repaid by Russia out of the amounts coming to that country from Washington. I know nothing of these repayments being obtained in this manner, and probably Sir Hardman Lever has already discussed them with you. I merely mention them so that you may draw him upon the subject without mentioning the source of your information. The Chancellor of the Exchequer was going to discuss with his Treasury officials the idea of 90 days Treasury bills. These were previously much disliked by our Treasury at the time the Federal Reserve Board turned them down, but I do not think Rt. Hon. A. Bonar Law himself has any objection to them now.

Referring to early part of 49272, it is quite certain here that our Government understood McAdoo had agreed verbally to repay the $400,000,000, but it would be most unwise for our Government to press this point on the Federal Treasury. This evidently is also your view.—E. C. GRENFELL.

THE SECRETARY OF THE TREASURY,
Washington, August 13, 1917.

THOMAS W. LAMONT, Esq.,
c/o J. P. Morgan & Company,
New York City.

DEAR MR. LAMONT: I have given careful consideration to your letter of August 3d, in which you suggest that I advise you whether, so far as the Government is concerned, there would be objection to the conversion of a part of the so-called four hundred million dollar demand loan of the British Government, which is being carried by certain American banks and bankers, into ninety day British Treasury bills which will participate in the security of the collateral which is deposited for the four hundred million dollar loan. I see no objection to the proposed conversion.

I regret that I have been unable to answer your letter sooner.

Faithfully yours,

W. G. MCADOO.

EXHIBIT No. 2829

[Copy]

AUGUST 16, 1917.

Hon. W. G. McADOO,
Secretary of the Treasury, Washington, D. C.

DEAR MR. SECRETARY: In his absence, your letter of the 13th instant to Mr. Lamont came to me. I regret to find that, owing to some ambiguity in his letter, there has been evidently a misunderstanding in regard to the contemplated British Government Treasury bills participating in the security of the collateral which is deposited in the $400,000,000 loan. I understand, however, from Governor Strong, that this misunderstanding is cleared up and that you see no objection to issuing British Government Treasury bills up to an amount not exceeding $150,000,000 outstanding at any one time, the proceeds of these bills to be used to take up an equivalent amount of the demand loan, and that the Treasury bills will not bear on their face any reference to any special security. Their issue will not increase the amount of British Government borrowings in this country, but will place a considerable part of the present demand loan in such a position that it cannot be called and so embarrass the British Government. Furthermore, it would have the effect of releasing collateral now held in the demand loan to the extent that the Treasury bills were issued, and placing that collateral at the disposal of the British Government, thereby making their position in this market somewhat more flexible. We should expect to so arrange that the bills would not become due in any large amount at any one time, issuing them by degrees and without formal notice or public advertisement.

I should be obliged if, for regularity's sake, you would confirm to me that the suggested arrangement meets with no objection from you.

Yours very truly,

(In ink) J. P. M.

[Copy of cable despatched 9:30 p. m. to Morgan, Grenfell & Co., London]

J. P. MORGAN & Co.,
CABLE DEPARTMENT,
New York, August 16, 1917.

49662. For E. C. Grenfell. Secretary of Treasury is agreeing to the idea of $150,000,000 90 day British Treasury bills to be kept afloat in this market, proceeds to be used to reduce demand loan. In order to ensure that we do not meet with sudden stop in the renewal of these bills, we propose arranging a syndicate committed to take possibly two or three weeks maturities at any time they are called upon to do so. This will obviate any necessity of reserve being kept here against these bills and we are paying the syndicate out of our own commission of one-half of one percent per annum for handling the matter.

I hope very much that the Treasury will consent to the issue of these bills on the lines that Sir Hardman Lever has cabled them, as it is in my opinion a matter of very great importance to reduce the demand loan even by the expedient of such short dated bills as these.

We expect to be able to handle the matter at the rate of not exceeding $15,000,000 in any one week and as the bills will be received by the Federal Reserve banks as security for Government deposits of Liberty Loan money, it is our opinion that they will have a large and very satisfactory market and that we shall have no difficulty in keeping afloat the $150,000,000 which is all that is contemplated, especially as we shall have the syndicate to fall back upon for a considerable time.—J. P. MORGAN.

MORGAN.

EXHIBIT No. 2831

THE SECRETARY OF THE TREASURY,
Washington, August 20, 1917.

J. P. MORGAN, Esq.,
23 Wall Street, New York, N. Y.

MY DEAR MR. MORGAN: I have your letter of the 16th instant, in reply to my letter of the 13th of August to Mr. Lamont. I see no objection to the issue of "British Government Treasury bills up to an amount not exceeding $150,000,000 outstanding at any one time, the proceeds of these bills to be used to take up an equivalent amount" of the four hundred million dollar demand loan, to which you refer.

Very truly yours,

W. G. McAdoo.

Exhibit No. 2832

August 21, 1917.

Hon. W. G. McAdoo,
Secretary of the Treasury, Washington, D. C.

My Dear Mr. Secretary: I have to thank you for your letter of yesterday, informing me that you see no objection to the putting out of British Treasury bills. We are receiving instructions from the British Treasury to proceed with the matter forthwith.

As the issue of such bills will undoubtedly raise a question in the press, I am wondering whether, should you be asked any questions on the subject, you would be willing to make a statement somewhat on the lines of the one on the attached paper, which is sent you merely by way of a suggestion. A statement on these lines from you would put to rest any question which might exist in the minds of the public after last autumn's difficulties in regard to Treasury bills, and would be a very great assistance in carrying out the transaction successfully.

Thanking you for your kindness in so promptly replying to my letter of the 16th instant.

I am, my dear Mr. Secretary,
Yours very truly,

——— ———.

The financial representative of the British Treasury now in this country has conferred with me as to the advisability of the British Government selling in this market a limited amount, not exceeding $150,000,000, of English Treasury bills maturing in 90 days, for the purpose of providing in part for existing obligations of the British Government. I have advised him that I see no objection, as such a procedure would not in my opinion conflict with the operations of the United States Treasury.

Exhibit No. 2833

J. P. Morgan & Co.
New York, August 22nd, 1917.

Dear Sir: We are forming a group (of which we ourselves will be members) for the distribution of a series of British Government 90-day treasury bills, authorized by the British Government to be issued in this country, after consultation with the Secretary of the Treasury of the United States. The proceeds of these treasury bills are to be used exclusively in reduction of the demand loan of the British Government in which you have a participation. The authorization of the British Treasury limits the amount of bills to a total of $150,000,000 outstanding at any one time, and to a total of not over $15,000,000 maturing in any one week.

We plan to sell these bills with maturities of not over $15,000,000 a week, with the expectation of continuing the operation beyond the 90-day period through sales of sufficient bills from week to week to meet maturities, keeping within the above mentioned authorization of $150,000,000. The bills will run for a period of 90 days, and the discount rate will be fixed from time to time by us, the rates to be attractive as compared with rates for high grade paper for the period.

The group which we are forming will have two functions:

One: To purchase a portion of the issue if called upon by us.

Two: To distribute the bills on a fixed basis of compensation as they are available for sale.

The group will have at no time a commitment to take up bills to an amount exceeding $30,000,000. The liability of each member of the group for his pro rata share is to be met only upon call from us. For such commitment we shall pay the members of the group a compensation at the rate ½% per annum on the amount of the commitment for the period during which such commitment remains in force and in addition a compensation at the rate of ¼% per annum on the amount of bills distributed or taken by such member for his own account. This ¼% compensation, however, will not be paid on bills taken by members under their above mentioned commitment of $30,000,000, if such commitment be required to be met. We are to receive from the British Government compensation at the rate of ½% per annum on all bills sold, out of which we will pay the compensation as outlined above to the group.

The members of the group will have the sole right of distribution and all bills must be sold, including those taken by the group, at the discount rate established by us from time to time without any allowance of reparticipation, compensation allowance or otherwise. Members of the group will be advised of changes in the discount rate, such notification to reach them on the dates upon which any such change is to become effective. All compensation and profits will be paid on the termination of the account.

We plan to begin sales of the bills in the near future. In view of the limited amount of bills available for delivery in any one week, all sales must be made subject to confirmation from this office. It is planned to sell only such an amount of these bills as can be easily absorbed by the banking community throughout the country, and in no case in excess of the above weekly limitation of $15,000,000 of maturities. We do not anticipate that the group will be called upon to fulfill the commitment of $30,000,000 in connection with initial sales, the commitment being designed to serve as a general protection for the entire operation.

The account and commitment will be kept open for a period of a year subject to termination prior to that time in our discretion.

We have reserved for you in such account an interest of $------ and shall be glad to have you advise us at once if you wish to accept it.

Yours very truly,

------ ------.

P. S.—We take the liberty of calling your attention to the ruling of the Secretary of the Treasury made in May 1917 and referred to in the enclosed letter of the Federal Reserve Bank of New York, dated May 25, 1917, approving obligations of our Allies as security for Government deposits made under authority of the act approved April 24, 1917.

EXHIBIT NO. 2834

THE SECRETARY OF THE TREASURY,
Washington, August 23, 1917.

J. P. MORGAN, Esq.,
23 Wall Street, New York, N. Y.

MY DEAR MR. MORGAN. It was not possible for me to give attention to your letter of the 21st until today. I was under the impression all along that it was not expected that any public announcement about the conversion of a part of the British loan into Treasury bills would be necessary. In fact, in your letter of the 16th, you state that "it was the purpose to issue them by degrees and without formal notice or public advertisement." I confess that I was surprised and annoyed with the statements appearing in this morning's papers about the matter, because a wholly erroneous impression was given, particularly with reference to the Federal Reserve Board. I do not know who is responsible for these statements. They made it necessary, however, for me to issue a statement about the matter, which you will see in the press by the time this reaches you and which, I hope, will set the entire matter right in the public mind.

Very truly yours,

W. G. MCADOO.

EXHIBIT NO. 2835

AUGUST 23, 1917.

Secretary McAdoo said:

Certain American banks and bankers have held for some time obligations of the British Government. The Treasury Department was asked a short time ago whether or not there would be objection on the part of the Treasury to the conversion of $150,000,000 of these obligations into short-time British Treasury bills. I stated that I saw no objection to such conversion from the standpoint of our own Government's financing.

I regret that the impression is created in certain publications that this is a reversal of the position taken by the Federal Reserve Board in respect to British Treasury bills in November last. It is neither a reversal of that position, nor is it inconsistent therewith. It is merely a conversion of a part of existing obligations into another form. The conditions now existing are quite different from those which prevailed in November last. The present transaction creates no new obligations in our markets and is designed merely to facilitate the payment of those already existing.

I may also state that the views and attitude of the Federal Reserve Board are in complete harmony with the action of the Treasury Department and that it gave me pleasure, while the matter was under consideration, to discuss it with members of the Board.

Messrs. J. P. MORGAN & Co.,
23 Wall Street, New York, N. Y.

DEAR SIRS: Referring to the United Kingdom of Great Britain and Ireland Treasury bills being sold by you from time to time, the proceeds of which will be applied as payment on account of His Britannic Majesty's Government loan, I hereby direct you to charge the British Government Treasury account from time to time as sales are made with the amount of discount on bills sold, together with the commission at the rate of ½ of 1% per annum.

Yours very truly,

(Sgd.) Sir HARDMAN LEVER.

EXHIBIT NO. 2837

AUGUST 24, 1917.

Hon. W. G. MCADOO,
Secretary of the Treasury, Washington, D. C.

MY DEAR MR. SECRETARY: In reply to your letter of yesterday, I can only say that I fully shared your surprise and annoyance at the tone of the headlines and the statement in one or two of the newspapers in regard to this matter. Of course, when we found there was such a demand for the bills, it was wise to let that week's instalment go at once, and so many people were talking about it that it was necessary to give the bare facts to the newspapers, in answer to their question. We did not expect, however, to have any such publicity as came from it, and particularly we did not expect any such idea as was expressed by the papers in regard to the Federal Reserve Board. There was no statement made by anyone in this office, which justified such remarks. I think your statement is admirable, and must have cleared up any doubt that existed in the public mind. It certainly should do so.

I am, my dear Mr. Secretary,
Yours very truly,

(Signed) J. P. MORGAN.

EXHIBIT NO. 2838

AUGUST 20, 1917.

Hon. WM. G. MCADOO,
Secretary of he Treasury.

DEAR MR. SECRETARY: I return herewith Mr. Lamont's letter, which has been more fully covered by that of Mr. Morgan. It was concerning this letter that Mr. Strong asked me to speak to you, but, learning from him that Mr. Morgan was writing you to bring out the point of whether you would approve of issuing notes without collateral, I remitted the matter until that letter should arrive, knowing it would come up to you in the letter which reached you on Friday. Mr. Lamont's letter, as a matter of fact, does not mention the matter of collateral one way or another, and both he and Mr. Morgan desired to make it clear to you what was intended. In my judgment, it would be just as well for these British notes to go out without collateral. The chief departure from the program which is indicated now both in Mr. Lamont's letter and Mr. Morgan's, has to do with the maturity of the notes. My impression is that in your first conversation, you, very rightly I take it, suggested that no paper of less than twelve months maturity would help the situation much. There is doubtless something to be said on both sides. In the end, there is a certain danger in undertaking to dictate too narrowly about the terms, The corresponding responsibility may be inferred if the specific terms imposed by the Treasury are then found unworkable. My general feeling about it is that pretty large latitude should be allowed for the reason just named, and as nobody knows exactly what the market will take best. If unsecured notes can actually be scattered, even for a short priod, there is that much relief for the present situation, and it seems to me relatively unimportant, so far as the Treasury is concerned, whether the collateral is pledged or not. There would be one advantage, however, in having it free, namely, that the British Government by having free collateral would be able to meet some of the various emergencies which are constantly arising.

Looking at the matter from all sides, I am inclined to believe it is best to let them go ahead along the lines clearly indicated in Mr. Morgan's letter.

Respectfully,

(Signed) Oscar T. Crosby,
Assistant Secretary.

J. P. MORGAN & CO.,
CABLE DEPARTMENT,
New York, October 23, 1917.

44102. Denkstein for J. P. Morgan. We note that Lord Northcliffe proposes to return here shortly, and that he does not appear to be altogether satisfied with the present conduct of affairs. We should very much like to have either a full cable or letter prior to his arrival here, so that we may know what has been going on.

Firstly. As regards finances. Have you had any further communications with Lord Reading, Lord Northcliffe, or anyone, as regards repayment of your big loan. Are you comfortable about it?

Secondly. What is the position of J. P. Morgan & Co. as regards assisting in the work of the various British Government supply organizations in United States, such as payments, cabling, transmission of copy contracts, shipping documents, etc.

It appears that many of the Government departments at both ends continue to find it more convenient to send cables through J. P. Morgan & Co. and Morgan, Grenfell & Co., but as the messages so sent are confined to more or less routine matters and do not appear to be a complete record of the cable correspondence, Morgan, Grenfell & Co, cannot intelligently follow any of the proceedings.

We want to help the best way we can, and with that end in view will welcome as full particulars as possible on the above and kindred matters before the return of Lord Northcliffe or Lord Reading, so that we may understand the situation at both ends, and also have some idea of the organization which it is necessary for us to provide in order to efficiently carry on such work as we may have to do.—E. C. GRENFELL.

MORGAN.

EXHIBIT NO. 2844

NOVEMBER 2, 1917.

DEAR TEDDY: Referring to your cable no. 44102, inasmuch as both Lord Northcliffe and Lord Reading will be over as soon as this letter. I want to put you au courant as much as possible, as you ask.

Stettinius has written Charlie Whigham about the pending questions between ourselves and the British Government in regard to the continuation of our work for them. I think there is nothing to add to what he has said, except that it would be better to have that matter officially settled and determined as soon as conveniently possible. The French have already accepted a similar suggestion made to them, and consequently I have less hesitation in urging that the British Government make the same kind of arrangement.

As regards finances, we have been wholly unable to find any drastic and thorough-going way of reducing the call loan. Both Reading and Northcliffe have done their best with our Government people, but they have not been able to make much impression. We are, however, continuing to sell very quietly and without hurting the market, and have been quite successful even in the bad times now upon us, so that the loan is very gradually—much too gradually—being reduced. The British Government now keeps with us a very satisfactory balance which it has not allowed to run down for some little time, and everyone is working with the best feeling in the matter. There are two places where the British Government may receive quite large sums: (1) From the payment for ships taken from them, which should come very soon, and (2) from the possibility of either France or Russia getting a large advance and using it to pay off some of their indebtedness to the United Kingdom, in which case the United Kingdom would pay us the amount so received in reduction of the loan.

The centre of energy is now being transferred to your side, since Crosby (who is Assistant Secretary of the Treasury) Reading, Northcliffe et al. are all going to the conference.

In regard to your "Secondly", we are assisting everywhere that we are asked in every way that we are able to be of use. We are under the same difficulty as yourselves, however, in that we do not know what and how many cables are sent outside of us, so we are equally with yourselves unable to follow the proceedings. We have had an idea that perhaps it was just as well that we should not try to follow the proceedings with a view to making suggestions, although of course we are quite ready to make suggestions when consulted.

This letter will go over to you on the same steamer with Reading and Lamont, whom you will see as soon as, or before, you get it. I think you will find Lamont very useful in giving you information in regard to the whole situation here. I am very glad to have him go. You may find that his point of view requires to be educated, because he does feel very strongly that we are being used and perhaps our good nature taken advantage of rather more than is fair. On the other hand, he realizes, as I do, that the whole war now depends upon Gt. Britain backed up by America, and that when people are struggling under a load of that kind we must not be too particular as to the sort of way in which use is made of us.

Also, I am very glad to have someone go over from here to see you all. You see, it is a year since the last time when one of the American partners was over there, and I do not like to have so long a time go by without closer intercourse than can be had by letters and telegrams.

Much love to you all—and I wish to goodness I were going to bring this letter instead of sending it.

Yours ever,

——— ———.

E. C. Grenfell, Esq.,
Messrs. Morgan, Grenfell & Co.,
London.

Exhibit No. 2845

January 19th, 1918.
[Dated January 18, 1918.]

Memorandum for A. E. N.

For your private information we have been trying to arrange with the Federal Treasury at Washington to make a beginning in liquidating the British call loan, because of the bad effect which it has always had upon the money market. We have to recognize that while it has always been amply secured with gilt-edge securities, it has not been very liquid, because we have had to be so exceedingly cautious in our sale of securities so as not to injure the market for government loans.

We have now worked out with the Treasury a plan for liquidating at the present time 40% of the loan. This plan is set forth in the appended clauses. Please, however, do not file a copy of this with any of the banks. Simply use it for your own information in talking with them. Of course all the banks here are reluctant to take on large blocks of these certificates, but they recognize the necessity for doing so in connection with this operation.

I am writing this information instead of telegraphing it, and after you have digested it, I suggest that you call up on Monday either myself, Wm. Porter, or Anderson, to ask us any questions that occur to you.

Sincerely,

——— ———.

Memorandum re U. S. Treasury certificates.

1. We wish to sell to each bank participating in the present call loan an amount of U. S. Treasury notes approximately equivalent to 60% of its present participating in the loan, on the understanding that simultaneously 40% of the participation will be paid off in cash. These certificates may be resold by a bank at any time, but not on an interest basis higher than the Treasury Department is selling certificates at any given time. We are anxious that every participant should increase the amount of this purchase over the 60% proportion mentioned, if it is possible for him to do so.

2. These are the so-called tax certificates bearing 4% interest and due June 25th next.

3. A deposit in the usual form of a book credit will be made with each bank to approximately the amount of his purchase of these certificates. There is, of course, no commitment as to the length of this deposit.

4. There is no indication that the U. S. Treasury plans to put out any certificates at an interest return higher than 4%; money seems to be working easier rather than otherwise, but of course we who propose to take a substantial amount of these ourselves and the banks must take our chances on this.

EXHIBIT No. 2846

16A : 220.

J. P. MORGAN & Co.,
CABLE DEPARTMENT,
New York, Jan. 19th, 1918.

[Copy of cable despatched 6:00 p. m. to Morgan, Grenfell & Co., London]

61200. Denkstein. For E. C. Grenfell. Since T. W. Lamont's return from abroad, he and A. M. Anderson have spent much time in Washington in following up with U. S. Treasury the matter of British call loan and February 1st maturities, so fully discussed in London. Federal Treasury appreciates bad effect upon American money market of having this call loan continue indefinitely, and it has therefore been frankly desirous of arranging means to effect reduction and eventual cancellation of loan.

We have now agreed to suggestion made by the Treasury under which we purchase next week $150,000,000 U. S. Treasury 4% certificates due June 25th, next, proceeds of $86,000,000 of which will be turned over to British Treasury to be applied to that extent in reduction of its call loan. In order to carry out this plan we and our associates are obliged as you can see to purchase an amount of certificates greatly in excess of amount to be applied upon the call loan. This is the consideration which the Federal Treasury receives for lending its co-operation to the plan. This proposal is, in one way, rather a hardship upon participants in the loan, and in order to keep them from any actual money loss between now and June 25th, we are telling them that in the event that the Federal Reserve bank raises its present 15-day rate so that allowing for taxes a loss would result to the banks in case they wish to borrow upon these certificates, then, and in that event, we will lend to the banks upon these certificates, either for 15 days or some other period, at a rate that will show them no loss. In such event we should, of course, expect to be reimbursed by British Treasury for any loss which we might thus incur between our rate and rate at which we could in turn borrow for a similar period, but our judgment is this is almost an academic question, for it seems to us that Federal Reserve bank is more likely to lower than to raise its discount rate on this type of security, and further, even in latter alternative, it is very unlikely that banks would ask us to make loans in question. In order, however, to put the whole deal through, in which our firm is taking a heavy participation, it is necessary for us to offer to some of the larger institutions some proposition as described. We have no doubt British Treasury will realize that in any event we will handle matter as discreetly as possible, and further, will understand the vital necessity of taking this opportunity to begin to resolve the call loan in co-operation with Federal Treasury.

Federal Treasury has been in conference with British Treasury authorities here in regard to plans to utilizing to best possible [mutual] advantage such British owned securities now held in this country, and free from pledge subject, of course, to all conditions under which securities are borrowed from owners and to any engagements British Government has undertaken. Discussion of this matter has not been within our province, but we are convinced that all Federal Treasury desires is generous co-operation on part of British Treasury in working out method for handling increasingly heavy allied finance demands here, including those which result from purchases in neutral market. You will not misunderstand us we are sure when we say we are convinced that British Treasury can well afford to be very broad in its attitude on this point. Fortunately, relations between Sir Hardman Lever and Federal Treasury are on such a basis that all such questions can be handled—we are convinced—without difficulty as they may arise.

Sir Hardman Lever is, of course, cabling the whole situation fully to Chancellor for his approval, but it is important that you should be in touch, and we would suggest that you present the gist of this meassage to the Treasury as representing our views.—T. W. LAMONT.

MORGANCO.

MAY 2, 1935.

MEMORANDUM REFERRED TO IN MR. BROWN'S LETTER OF MAY 2, 1935

DEMAND LOAN #1 AND #2

On April 6, 1917, the loan stood at $345,524,483.93.

On May 16, 1917, the loan stood at $398,545,531.46, after which date no further advances were made.

As shown in the following pages:

Between April 16th and April 26th, 1917, inclusive, $104,611,029.19 was debited to the demand loans.

Between April 6th and April 26th, 1917, inclusive, $109,647,862.12 was credited to the demand loans by transfer from the British Government Treasury account, which account was credited with $200,000,000 received from the United States Government April 25, 1917.

The $398,545,531.46 outstanding on May 16th was repaid from sources identified as follows:

Gold	$33,750,359.57
Sterling exchange	26,562,114.99
Ship money	80,794,041.65
Sale of securities	134,630,528.88
Russian attaché	598,486.37
British Government Treasury bills	[1] 122,210,000.00
	398,545,531.46

[1] British Government Treasury bills were paid off from sources identified as follows:

Cash from C. J. Hambro & Sons and Bank of Northern Commerce	$19,900,000.00
Cash from Danish Government	5,100,000.00
Sale of securities	97,120,000.00
	122,210,000.00

April 6, 1917, balance $345,524,483.93.

LEE, HIGGINSON & Co.,
70 Federal St., Boston, U. S. A.

ITALIAN CONTRACT

Agreement between Count V. Macchi di Cellere, Royal Italian Ambassador to the United States of America, acting in the name and on behalf of the Royal Italian Ministry of the Treasury by special authorization, and Messrs. Lee, Higginson & Company, of Boston, Massachusetts; New York City, New York; and Chicago, Illinois.

1. Lee, Higginson & Company are to offer for sale twenty-five million (25,000,000) dollars par value of notes of the Royal Italian Ministry of the Treasury. These notes are to be substantially in the form hereto annexed and marked "Exhibit A", and the Royal Italian Ministry of the Treasury agrees to execute said notes and to comply with their provisions. The text of all the definitive notes and bonds shall be printed thereon in Italian and English, but the legal intent of said instruments shall be determined by the English text thereof.

It is understood that the ten-year bonds referred to in said notes may be registered in Italy and that the Royal Italian Ministry of the Treasury shall make provision therefor.

Provision may be made for temporary notes to be issued in anticipation of the definitive notes and to be exchanged therefor. The temporary notes shall be substantially in the form hereto annexed and marked "Exhibit B", but without provision for registering the same and without coupons, the interest to be payable upon presentation of the notes at either one of the principal offices of Lee, Higginson & Company mentioned therein.

Both the definitive notes and temporary notes shall be signed for the Royal Italian Ministry of the Treasury by said Royal Ambassador, or in the event of his absence, by the Charge d'Affaires or such other official as may be designated by the Royal Italian Ministry of the Treasury, they shall bear the seal of the Royal Italian Embassy at Washington, and shall be countersigned by Lee, Higginson & Company.

2. None of the twelve million five hundred thousand (12,500,000) dollars of said notes which are not underwritten shall be sold ao as to yield the Royal Italian Government a smaller amount than par and accrued interest, less the commission of one and one-half (1½) percent specified herein, nor shall they be sold to the public at less than par and accrued interest unless a lower price is approved by the Ministry of the Treasury.

All expenses in connection with the printing, engraving or lithographing and execution of any of the notes contemplated, including the certification and registration thereof, and all expenses incidental to their preparation, shall be paid by the Royal Italian Ministry of the Treasury which shall also pay the expenses incidental to the transfer of funds to any of the offices of Lee, Higginson & Company for the purpose of meeting the interest or principal of said notes and all cost and expense incidental to the preparation for or exercise of the conversion privileges.

It is estimated that these expenses to be paid by the Royal Italian Ministry of the Treasury will be approximately ten thousand (10,000) dollars. But the Royal Italian Government shall, if so requested by Lee, Higginson & Company, furnish and deliver to Lee, Higginson & Company, free of expense to them, the 1-year notes of the second series and the 10-year bonds referred to in Exhibit A, sufficient in number and denominations to meet the requirements of conversion and sale as provided in said notes. The text of said notes and bonds shall conform to the provisions referred to in Exhibit A, and the mechanical execution of said notes and bonds shall conform to the standard bonds issues of the Royal Italian Government. It is understood that these options, if exercised by Lee, Higginson & Company, shall be so exercised by written notice to the Royal Italian Embassy at Washington on or before April 15, 1916, as to the second series of one-year notes, and on or before April 15, 1917, as to the ten-year bonds. Lee, Higginson & Company shall bear all expenses in connection with the advertising and sale of said notes.

After the time limit for the exercise of any conversion privilege has expired, said Lee, Higginson & Company shall within seven days thereafter notify the Royal Italian Embassy at Washington of the number and denominations of the new notes, or bonds, as the case may be, to be issued in exchange for the old notes.

A preliminary certificate that the notes have been authorized and have been or will be executed in accordance with Italian law so as to constitute a valid obligation of the Royal Italian Ministry of the Treasury, will be furnished by said Royal Ambassador and a further certificate to the same effect from the proper official in Rome of the Royal Italian Government will be duly furnished as soon thereafter as it can be obtained.

3. The compensation of said Lee, Higginson & Company for their services in this connection shall be a commission of one and one-half (1½) percent upon the par value of all the first series of one-year notes sold; and an additional commission of one-half (½) of one (1) percent upon the par value of so many of the second series of one-year notes as may be taken in exchange by the holders of the first series one-year notes; and an additional commission of one and one-half (1½) percent upon the par value of so many of the ten-year bonds as may be taken in exchange by the holders of the second series one-year notes; with the same rates of commission as above stated, viz, one-half (½) percent and one and one-half (1½) percent, respectively, upon par value, for the sale of such of the second series of one-year notes and such of the ten-year bonds as may not be taken in exchange by the holders of prior notes; said Lee, Higginson & Company being hereby given the exclusive right at their option to offer for sale such of the second series of one-year notes and of the ten-year bonds as are not so taken. This exclusive right shall continue for the period of thirty (30) days after the date of maturity of the first series of one-year notes and for the same period after the date of maturity of the second series of one-year notes.

4. The Royal Italian Ministry of the Treasury agrees that it will use the proceeds of the first series of notes hereby contemplated in payment for purchases (heretofore made or hereafter to be made) of merchandise and commodities of every kind in markets of the United States, and, pending the application of the said funds, such proceeds, less commissions and expenses, shall be credited on the books of Lee, Higginson & Company to the credit of said Royal Ambassador for the account of the Royal Italian Government and the interest allowed thereon at the rate of two (2) per cent per annum. When and as needed by the Royal Italian Government for the purchase of or payment for merchandise and commodities as above, Lee, Higginson & Company shall, to the extent of the funds on deposit with them as aforesaid, make transfers therefrom to such bank, trust company, or other depository in the United States as may be designated by said Royal Ambassador. Such transfers shall be made by them when and as instructed in writing so to do by said Royal Ambassador or by such person as he may designate in writing.

5. The provisions of this agreement shall be applicable to said firm of Lee, Higginson & Company as the same may now or hereafter be constituted; and said firm agrees to use its best efforts to accomplish the sale of said notes upon the conditions stated, and daily to advise said Royal Ambassador, or such other person as may be designated by him in writing, of the amounts of the proceeds of said notes, less commissions and expenses as aforesaid, placed to his credit for the account of the Royal Italian Government as above. Information concerning the proceeds of the sale of the second series of one-year notes and of the sale of the ten-year bonds shall be given to said Royal Ambassador in the same manner.

6. It is understood that the sale of twelve million five hundred thousand (12,500,000) dollars of said notes is to be underwritten to net ninety-eight and one-half (98½) per cent thereof, i. e. par less the above mentioned commission of one and one-half (1½) per cent, to the Royal Italian Government by Lee, Higginson & Company, or by a syndicate to be formed by them, of which syndicate said firm may be members and managers.

The public offering of said notes shall be made on October 15th, 1915, with the proviso that Lee, Higginson & Company, acting solely in the interest of the success of the loan, may, if financial conditions in the American market make it wise or necessary, anticipate or postpone this date by a period not to exceed ten (10) days prior or subsequent thereto. But the twelve million five hundred thousand (12,500,000) dollars in notes underwritten as aforesaid will be taken up on said October 15th in any event and the proceeds thereof then placed to the credit of the Royal Italian Government as above.

The offering of said notes, unless they are sold earlier, shall continue for sixty (60) days from October 15, 1915, and thereafter until terminated by ten (10) days' written notice from said Royal Ambassador to Lee, Higginson & Company, or from Lee, Higginson & Company to said Royal Ambassador. All notices hereunder shall be given in writing and mailed either to Lee, Higginson & Company

43 Exchange Place, New York City, or to the Royal Italian Embassy at Washington, D. C.

It is understood that Lee, Higginson & Company if they so desire may associate with themselves in this undertaking other banking firms or banks or trust companies on such terms as they may approve.

It is further understood and agreed that this contract supersedes all that has heretofore transpired and constitutes the entire agreement between the parties.

In witness whereof said Count V. Macchi di Cellere, Royal Italian Ambassador at Washington, acting on behalf of the Royal Italian Ministry of the Treasury under special authorization as above, has hereunto signed his name and caused the seal of the Royal Italian Embassy at Washington to be affixed, and said Lee, Higginson & Company, by F. L. Higginson, Jr., a partner, has hereunto signed its firm name and affixed its seal this ninth day of October, 1915.

EXHIBIT "A"

No. ------ $------

KINGDOM OF ITALY—ROYAL MINISTRY OF THE TREASURY ONE-YEAR CONVERTIBLE SIX PER CENT SPECIAL TREASURY GOLD NOTE

For value received, The Royal Ministry of the Treasury promises to pay the bearer hereof, or, in case of registration, to the registered holder hereof ——— dollars (denominations to be $1,000, $500, and $100) in gold coin of the United States of America of the present standard of weight and fineness one (1) year from date, viz: on October 15th, 1916, and to pay interest thereon, from the date hereof in like gold coin until the principal of this note is paid, at the rate of six (6) per cent per annum, semiannually, on the fifteenth days of April and October. Such interest will be paid only upon the presentation and surrender of the annexed interest coupons as they severally become due and payable.

Both the principal and interest of this note are payable at the option of the holder at either of the offices of Lee, Higginson & Company (as the said firm may be now or hereafter constituted) in Boston, Massachusetts, or in the Borough of Manhattan in the City of New York, State of New York, or in Chicago, Illinois, all in the United States of America, and shall be paid and the promises herein contained kept, as well in time of war as in peace, without deduction for any taxes or impositions now or hereafter to be established or levied by or within the Kingdom of Italy in connection with or against the holder hereof, or in connection with or against this note or the principal or income or conversion privilege thereof, and irrespective of the nationality of the holder.

This note is one of an authorized issue of six per cent special treasury gold notes of the Royal Ministry of the Treasury, aggregating twenty-five million (25,000,000) dollars in principal amount, and all of like tenor and date, and all issued or to be issued pursuant to and in conformity with law.

The holder shall have the right to convert this note into another convertible note of the said Royal Ministry of the Treasury of the same principal amount, bearing interest at the rate of six (6) per cent per annum, payable semiannually, dated October 15th, 1916, and maturing one (1) year from its date, and otherwise of the same form and tenor except as herein specifically provided, by surrendering this note at one of the said offices of Lee, Higginson & Company on or after October 15th, 1916, and receiving in exchange therefor the new note.

The conversion privilege may be exercised only if this note be first presented at either of said offices of Lee, Higginson & Company not earlier than ninety (90) days and not later than sixty (60) days before its maturity, for the purpose of being stamped with the following notice:

"The holder of this note has irrevocably exercised the conversion privilege therein granted, and is entitled to receive in cash only the interest due or to become due thereon, and a new note for the same principal amount as therein provided."

The actual exchange of this note for the new note shall be made only at the office where it is so stamped.

The convertible provision of such one-year note of the second series given in exchange as above shall read substantially as follows:

"The holder shall have the right to convert this note into a bond of the said Royal Ministry of the Treasury of the same principal amount, bearing interest at the rate of five and one-half (5½) per cent per annum, payable semiannually, dated October 15th, 1917, and maturing ten (10) years from its date, and otherwise of the same form and tenor except as herein specifically provided, but containing no conversion privilege, by surrendering this note at one of said offices of Lee, Higginson & Company on or after October 15th, 1917, and receiving in exchange therefor the new bond. This conversion privilege may be exercised only if this note be first presented at either of said offices of Lee, Higginson & Company not earlier than ninety (90) days and not later than sixty (60) days before its maturity for the purpose of being stamped with the following notice: 'The holder of this note has irrevocably exercised the conversion privilege therein granted and is entitled to receive in cash only the interest due or to become due thereon and a new ten-year bond for the same principal amount as therein provided.'

"The actual exchange of this note for the new ten-year bond shall be made only at the office where it is so stamped. The said ten-year bond shall be payable, principal and interest, in gold coin of the United States of America of the present standard of weight and fineness at either of the said offices of Lee, Higginson & Company, or, at the option of any holder, at such branches of the Royal Treasury as the Royal Ministry of the Treasury may indicate, in gold coin of the Kingdom of Italy of the present standard of weight and fineness at the fixed rate of exchange of 5.18¼ lire of Italian money for each dollar."

At least ten (10) days before any instalment of interest on the notes of this issue shall become due, the Royal Ministry of the Treasury shall deposit with said Lee, Higginson & Company a sufficient sum to pay the same in full and, within ten (10) days before the maturity of the said notes, shall deposit a sum sufficient to pay at such maturity the principal and interest of all of said notes which have not been presented for conversion as above provided.

The Royal Ministry of the Treasury shall in due course deposit with Lee, Higginson & Company the new notes or bonds requisite for exchange as herein provided, and shall also, at the option of any holder of the second series of 1-year notes, make provision for the issue of the 10-year bonds in exchange therefor in denominations of ten thousand (10,000) dollars and fifty thousand (50,000) dollars, and registered as to principal and interest, or coupon in form registered as to principal, or coupon in form unregistered, but otherwise of the same tenor.

This note shall pass by delivery unless registered on the books of the Guaranty Trust Company of New York, registrar, such registration being noted hereon. After such registration no transfer hereof shall be valid unless made on said books by the registered owner in person or by his duly authorized attorney and similarly noted hereon; but the same may be discharged from registration by being in like manner transferred to bearer, and thereupon transferability by delivery shall be restored, but this note may again from time to time be registered or transferred to bearer as before. Such registration shall not, however, affect the negotiability of the coupons, which shall continue to be transferable by delivery merely. This note shall not be valid until the same shall have been duly authenticated by counter-signature of Lee, Higginson & Company, and the certification form hereon signed by the Guaranty Trust Company of New York, registrar.

The legal intent of this note shall be determined by the English text hereof.

The Royal Ministry of the Treasury certifies and declares that this note has been issued in due and strict compliance with the constitution and laws of the Kingdom of Italy.

In witness whereof the Royal Ministry of the Treasury has caused this note to be signed by its duly authorized representative, the Royal Italian Ambassador to the United States of America, the seal of the Royal Italian Embassy at Washington has been affixed hereto and this instrument countersigned by Lee, Higginson & Company, this fifteenth day of October, 1915.

(Signed) MACCHI DI CELLERE,
Royal Italian Ambassador to the United States of America.

ITALIAN LOAN

To the ITALIAN AMBASSADOR,
Beverly Farms, Mass.

YOUR EXCELLENCY: Referring to Mr. Higginson's conference with you last week, and our talk on Friday last and today with Mr. Ceccato, with whom you asked us to confer, we beg to say that it would give our firm much pleasure to bring out a loan in this country on behalf of your Government.

We have given this subject considerable thought, with special reference to the fact that our financial institutions and individuals have not been accustomed to investments in the securities of other countries, and also with a view to meeting in the best possible way the precise financial conditions which characterize the present moment in this country.

We suggest a one-year note carrying interest at 6%, to be sold probably at par, certainly not less than 99¾; to be free from all tax by your government; interest to be payable at six months and one year; principal and interest to be payable in this country.

Such a note by itself in these times, and in view of the lack of experience in this country in foreign investments, would not in our judgment be salable to a substantial amount; but it seems to us that it can be given a conversion privilege which would bring about a successful issue.

We suggest accordingly that the one-year note should give the purchasers the alternative of receiving payment or converting into a precisely similar second note, also running for one year, at the same rate of interest, this second note at its maturity to give the holder the option of payment or conversion into a ten-year security carrying interest at 5½%, interest and principal of this last security to be payable in this country and Italy.

In our opinion it would be wise, under present conditions, to make this first public issue $25,000,000. We hope that the issue would be so well received that if your government desired subsequent issues these could be placed also.

In the case of a recent Government loan, where we acted as fiscal agents for the Government, we performed our services for a commission based on the securities sold. We prefer this arrangement, because we think that it makes success more certain for various reasons, some of which we have outlined to Mr. Ceccato. If however, your Government would prefer to have a part of the loan underwritten—say half—we would be glad to arrange this.

If the loan is to be one-half underwritten, we should expect as compensation a commission of 1½% based upon the first year notes sold, a commission of ½% upon the second year notes taken by the holders of the first year notes, and a commission of 1½% upon the ten-year notes taken by the holders of the second year notes, with the same rate of commission for the sale of such of the two subsequent maturities as were not taken in exchange by the holders of the existing securities and might be sold by us.

The above commissions would cover the total cost except certain minor expenses such as printing, engraving, certification, counsel fees, etc., in regard to which we can give your excellency a close estimate.

We think it can probably be arranged that the noteholders should declare their option as to payment or conversion 30 days before the maturity of the notes.

We are ready to act promptly if your excellency should desire us to do so, and to settle immediately the minor details, in regard to which we think there is not likely to arise any basis for difference of opinion.

Very truly yours,

(Signed) LEE, HIGGINSON & Co.

BEVERLY FARMS, MASS., *Sept. 14, 1915.*

Messrs. LEE, HIGGINSON & Co.,
44 State Street, Boston, Mass.

GENTLEMEN: I have communicated to my Government the suggestions made by you regarding the placing of a loan in this country, and I have been advised by it that it approves the plan as outlined in your letter of September 3rd and in the conferences we had, and authorizes you to act as its fiscal agent to take such steps as are necessary to carry through the transaction along the lines as outlined in your letter and conferences above mentioned: And also to act as its fiscal agent in regard to the payment of the principal and interest on the notes and to hold on deposit, for the account of the Italian Government, the proceeds of such notes and disburse the same as may be arranged.

We can arrange the details of the formal agreement at our mutual convenience.

Believe me, gentlemen,

Yours very truly,

(Signed) V. MACCHI DI CELLERE,
Royal Italian Ambassador.

OCTOBER 15, 1915.

To the ROYAL ITALIAN AMBASSADOR,
Beverly Farms, Mass.

YOUR EXCELLENCY: We beg to advise you that we have today placed to your credit in our books $12,312,500.00 being the proceeds of $12,500,000.00 one-year 6% notes of the Italian Ministry of the Treasury at 98½%.

In accordance with our agreement, this deposit will carry interest at the rate of 2% per annum.

Very truly yours,

(Signed) LEE, HIGGINSON & Co.

ITALIAN TRADING ACCOUNT

NEW YORK, *December 16, 1915.*

Messrs. LEE, HIGGINSON & Co.,
Boston, Mass.

(Attention Mr. Sever.)

DEAR SIRS: We have to-day made a trading account with the Guaranty Trust Company in Italian Government 6's, 1916. The arrangement is as follows:

We are to buy a total of not over $300,000 without further consultation, the bid price at the present time to be 99½ and interest, and the offering price 100 less ¼ to dealers. In order to simplify the bookkeeping each purchase and sale is to be divided at once so that each party to the account is always carrying the proper proportion, and has the proper amount of profit and loss.

For instance, if the Guaranty Trust buys $20,000 at 99½, we put through our books here a purchase of $10,000 from the Guaranty at 99½ and similarly in the case of sales. We are inclined to think that this is the easiest way to run an account of this sort.

The Guaranty Trust Company has bought $20,000 of these notes today which we take over into the account and our trading desk has been instructed to enter the purchase of $10,000 at 99½ from the Guaranty Trust. You will receive a report of that in the regular course of business.

Yours very truly,

(Signed) Lee, Higginson & Co.,
D. Durant.

Exhibit No. 2856

Washington, *September 10th, 1917.*

My Dear Mr. Crosby: Further referring to our issue of Treasury notes due on the 15th of October prox., in order that you may have full information, I beg to mention that the period within which holders could exercise an option to convert the notes into 5½% bonds, expired on the 15th of last month, prior to which time circular notices were sent to the known holders, as per copy I am enclosing herewith.

The bankers who placed the loan have an option under our agreement with them, to sell during thirty days commencing October 15th next, our bonds in an amount equal to any notes not converted. But the bankers consider the possibility of selling the bonds so very slight that in answer to my enquiry as to their attitude in respect to the option, have just informed me that they are quite willing to surrender it.

For the consideration you are giving the general subject, I would inform you quite confidentially that our loan of 1918 did not find an immediate sale. And it was only after the bankers had made the most vigorous kind of a campaign that the entire issue was placed, some of the notes not being sold until a short time of the expiration of the period during which they had a right to sell. This, I was informed, was not on account of any questioning of Italian credit, but because American investors were not accustomed to investing in foreign securities.

The first series of notes, which matured in 1916, included an option to extend for one year, but very many difficulties were encountered, the most serious ones indicated to me by the bankers being the pronouncements of the Federal Reserve Board on investing in such securities and the fact that other governments were offering bonds secured by collateral of a nature my Government was unable to furnish.

Apart from the loan under discussion, under instructions of my Government, I made most diligent and exhaustive efforts to effect a substantial loan through the best qualified agencies to this country, but I was invariably informed that a loan without collateral was out of the question, and my Government did not possess bonds of neutral governments or of American railways or industries as were being offered by other borrowers.

If there is any other element about which you would care to have information in discussing the matter with the Secretary of the Treasury, which I trust you may be able to find it convenient to do at any early opportunity on account of its being necessary for my Government to deposit the money on the 4th of October, I shall take pleasure in furnishing it to you without delay.

I am, my dear Mr. Crosby,
Very sincerely yours,

[s.] MACCHI DI CELLERE.

Honorable OSCAR T. CROSBY,
Assistant Secretary of the Treasury, Washington, D. C.

DEAR MR. CROSBY: I have taken up with my partners the question of refunding or extending the $25,000,000 Italian Government 6% notes, due October of this year

We believe it would be impossible to extend these notes even under pressure. The investors market for securities has fallen absolutely flat, owing to the near approach of the next Liberty Loan, and the Italian Government has no collateral to pledge which would make these notes in any way attractive to the banks.

Under the circumstances, we very much regret to say that we will be unable to arrange an extension.

Very truly yours,

[s.] W. PENROSE HALLOWELL.

[Telegram]

A 45 BX 245 NL.

BOSTON, MASS.—3—*1917 Oct. 4—a. m. 1:35.*

Hon. OSCAR T. CROSBY,
Treasury Dept., Washington, D. C.

As both Mr. Hallowell and Mr. Allen explained to you we would be delighted to renew this loan if we could but it is absolutely impossible through no fault of our own. The fact that other governments have collateral and this Government has none and the market fields on foreign loans are as they are makes it out of the question to renew any portion of this loan. A compulsory renewal would be interpreted as a partial default and would be extremely unfortunate at this time in the midst of our own Liberty Loan campaign when it would receive either publicly or quietly wide attention among bankers and would tend inevitably to reduce funds available for the Liberty Loan on October fifteenth. Vast amounts of foreign loans are held in the banks and this would in their mind be a frightening precedent. The Government in question understand our position and agrees thoroughly with it. It seems to us some way should be figured out to establish a credit in the country in question in connection with our Government war purchases there and thereby furnish them with funds to take up their loan here. October fifth is the date under the contract when money should be in our hands. Many are asking us now about it as the date is quite widely known and if we are not able to say definitely after that date that the note will be paid great anxiety will be caused.

LEE, HIGGINSON & CO.

EXHIBIT No. 2859

SEPTEMBER 28, 1917.

Hon. THOMAS W. GREGORY,
Attorney General.

DEAR MR. ATTORNEY GENERAL: I have the honor to request that you be good enough to advise this Department as to whether, under the operations of section 2 of an act of Congress approved September 24, 1917, copy enclosed, the Secretary of the Treasury, with the approval of the President, would be authorized to lend money to a foreign government engaged in war against Germany, which money would with the knowledge of the Secretary of the Treasury be used for paying any obligations of such government issued before the date of the act and maturing after that date.

In order that the particular difficulty now presented may be better understood, permit me to state that the Italian Government some time last year borrowed $25,000,000 in this country on relatively short-term bonds, which were issued through the various Boston banking houses. These bonds mature early in October of this year. The Italian Ambassador is now urging, with very great concern, that funds should be lent to his Government in order that these bonds may be taken up, stating that his own Government is wholly without means to meet their indebtedness. If money were loaned under the operations of the act of Congress above mentioned, the Secretary of the Treasury would indeed purchase "a hereafter-issued obligation", being a proper bond of the Italian Government, the terms and conditions conforming to that statute. But there is reason to doubt the propriety or legality of an action which is indirectly a purchase of obligations which were issued by the Italian Government before the passage of the act.

The matter is one of very grave concern to the Italian Government and indirectly to this Government. I therefore venture to ask that if convenient you will be good enough to advise the proper course in this matter at an early date.

In the meantime, I am
Cordially yours,

[s.] OSCAR T. CROSBY,
Acting Secretary.

("EXHIBIT No. 2860" appears in text on p. 9043.)

("EXHIBIT No. 2861" appears in text on p. 9045.)

EXHIBIT No. 2862

OCTOBER 19, 1917.

MY DEAR MR. McCORMICK: The Italian Government has received the following credits from this Government:

May 3, 1917	$100,000,000
July 6, 1917	60,000,000
Aug. 15, 1917	40,000,000
Sept. 5, 1917	70,000,000
Total	270,000,000

Against these credits, they have drawn in cash, $255,000,000. The balance not yet drawn has been practically all covered by contracts placed by the Italian Government through the Inter-Ally Purchasing Commission here, or is allocated for the satisfaction of purchases of cereals which have been made for account of the Italian Government by the so-called Wheat Executive, which is a British organization that was established before we came into the war by agreement between Great Britain, France, and Italy. This Wheat Executive purchases for the three Governments named, and makes distributions according to proportions which when last notified to the Treasury Department were as follows: Great Britain, 44%; Italy, 34%; France, 22%. I understand that these proportions have perhaps been modified recently, or that negotiations are in hand looking to a modification. The Italian Government has paid over to the British Government on account of these purchases of cereals, sugar and a few other similar articles, approximately $68,500,000.

The question of transporting these cereals has been substantially in the hands of the British authorities. The Italian wheat supply, although nominally purchased for their account in the United States with funds loaned as above indicated, has come in large part from India. It seemed to all parties concerned good judgment that ships bound from India loaded with wheat should stop in Italy rather than go on to England. The British, considering themselves as supplying this much wheat to Italy, have compensated themselves by correspondingly larger purchases from the American and Canadian market, but the financing between the Governments has been on the basis above mentioned.

That the Wheat Executive of the British Government is active in trying to obtain supplies for the three Governments named, I am assured by the fact that in the last few days Lord Reading has with great insistence urged the necessity of advancing funds to his Government, acting for itself and as the intermediary for the others, with which to purchase all the Canadian wheat crop available for export. Assurance has now been given him that $200,000,000 will be available for this purpose from the United States Treasury. Lord Reading has repeatedly urged that the importance of obtaining this assurance lay in the necessity of obtaining wheat for France and Italy as much as for Great Britain. If it were necessary, the United States Government might intervene in the discussion as to the exact distribution of the total available cereal supplies as between the three European Governments in question, but thus far there has been no suggestion either by the Franch or the Italians that such intervention will be necessary. The only question that has from time to time been discussed is as to whether the cereal purchases should continue to be made through the one executive, or should be made by the independent action of each Government in purchasing from our Food Administration. This program might conveniently be established in the United States, but would perhaps be less easily applicable in Canada and other wheat supplying countries. In any case, it is not now a question which this Government can conveniently raise without inpunging the good faith of operations which seem to have been entirely satisfactory to the three copartners engaged in them.

The credits listed above substantially cover all of the specific requests of the Italian Government made to this Government. They do not correspond to a blanket request presented to the Secretary of the Treasury at the beginning of the loan operations and calling for a total of $3,000,000,000 for the period from approximately April 1, 1917, to July 1, 1918. This blanket requisition has not been in question since a few days after its presentation, because it was early indicated to the Italian Government, as to all other borrowing governments, that it was impossible to make allocations of such vast sums covering such long periods. Like other governments, the Italian Government has received from time to time the particular credits asked for, with the result as above stated. There is a request now before the Secretary of the Treasury for an additional credit of $100,000,000 for the Italian Government. Action upon this was delayed because an extremely difficult case was presented, which was solved a few days ago after much negotiation by advancing $25,000,000 to the Italian Government to meet its notes placed in this country long before our entrance into the war, and finally maturing on the 15th of October. This case presented difficulties, first, on account of certain doubts as to the legality of advancing funds for paying an old debt of this sort; and, second, because it seemed desirable in any case to exhaust all possible efforts to have such maturities renewed rather than have them paid by additional advances from the Treasury of the United States. Ambassador Cellere has been indisposed for some days, and I am now awaiting his recovering in order that we may have further discussion as to a further credit that may be established as against possible future needs of his Government as they were indicated in the request for the $100,000,000 credit now in suspense.

I have been informed by British authorities that previous to our entry into the war they had been making advances of $15,000,000 per month to the Italian Government. It will be observed that the average monthly credit extended to the Italian Government here since our entry into the war is approximately $46,500,000. They have been able with these credits not only to supply themselves with the cereals and foodstuffs above referred to, but also with vast quantities of munitions and with a relatively small amount of coal.

In respect to coal, there has been no restriction whatever placed by the Secretary of the Treasury upon the use of funds loaned to the Italian Government for coal purchases. That is to say, any portion of the credit allotted to the Italian Government which they have desired to spend for coal they have been free to expend. The real limitation in respect to this highly important article has been that of tonnage. The Italian officials have had frequent negotiations with our Shipping Board, and I cannot doubt but that that Board has done everything within its power to satisfy their demands. There has been very serious question as to the advisability of shipping coal from the United States to Italy as compared with supplying their demands from Great Britain. In the face of the inability of the British Government to supply the tonnage that they had hoped to supply when the British and Italian Governments considered the coal question in 1916 there was urgent appeal from Italy for additional tonnage from this country, but it has been impossible that the amount which was calculated as a reasonable allowance to Italy should be obtained by adding to the British supply enough of American supply to make up the deficit. Their present receipts from all sources have been reported to me by an Italian representative as approximately 500,000 tons per month. This amount is doubtless too little to secure the best efficiency for Italian military and civil operations insofar as they demand coal.

Except in the matter of tonnage for coal, I believe it may be fairly stated that no substantial requests of the Italian Government for assistance since we entered the war have failed to be satisfied. Doubtless it has been found impossible at times to obtain as promptly as might be desired the actual manufacture and delivery of some of the materials wanted by that Government. In the main, however, they have certainly fared as well in this respect as any other government with which the Treasury Department is dealing, and probably as well as our own Government. In order to expedite deliveries, Italian representatives paid exorbitant prices to many American producers, but this particular malady has been treated, as far as it can be successfully treated, by the conscientious and industrious efforts of the Inter-Ally Purchasing Commission, and by the fixation of prices through other United States governmental agencies.

If any further information as to the operation of the Treasury with the Italian Government can assist you in completing the inquiry which the President desires to have made concerning this matter, please command me.

In the meantime, I am

Cordially yours,

[s.] OSCAR T. CROSBY,
Acting Secretary.

Honorable VANCE MCCORMICK,
Chairman, War Trade Board.

EXHIBIT NO. 2863

APRIL 25, 1918.

His Excellency Count V. MACCHI DI CELLERE,
Ambassador Extraordinary and Plenipotentiary,
The Italian Embassy, 1759 R Street, Local.

MY DEAR MR. AMBASSADOR: I understand that the American Army has already made certain contracts and contemplates making additional contracts and expenditures in Italy. It is important for both Governments that arrangements be made for supplying the funds so required in such a way as to obtain the collateral benefits. I suggest, therefore, that an arrangement be made with the Italian Government, similar to that which we have made with the French and British Governments, whereby the Italian Government will, upon request of the Secretary of the Treasury, deposit with specified depositaries in Italy lire for credit of designated disbursing officers, and, upon the receipt of cable advice from the depositary of receipt of such deposit, the Treasurer of the United States will reimburse the Italian Government by paying to you the corresponding amount of dollars, to be used in payment of commodities purchase in the United States by the Italian Government, or for such other purposes as may be agreed upon from time to time.

Under this plan, it would be necessary for us to agree upon a fixed rate of exchange for each month in order to systematize the accounting of the Army Departments.

If this meets with your approval, I suggest that you ascertain by cable if such an arrangement would be agreeable to your Government.

I am, my dear Mr. Ambassador,

Very truly yours,

[s.] R. C. LEFFINGWELL.

EXHIBIT No. 2864

ROYAL ITALIAN EMBASSY,
Washington, D. C., May 6th, 1918.

Honorable Mr. R. F. LEFFINGWELL,
Assistant Secretary of the Treasury,
Washington, D. C.

MY DEAR MR. LEFFINGWELL: With my letter of the first instant, #9062, I had the pleasure to advise you that the estimates of cash advances to be requested of the United States Treasury during the months of May would have amounted to forty million dollars ($40,000,000).

You are perfectly aware that under the credits already granted by the U. S. Government to the Italian Government only thirty million dollars ($30,000,000) are still available besides the twenty-five million dollars ($25,000,000) advanced under special conditions, for the payment of the debt contracted with Messrs. Lee, Higginson and Company; the solution of which is not yet settled.

May, I therefore call to your attention the fact, that the establishment of new credits ought to be considered in order to put the Italian Government in a position to dispose of the necessary amount of money for the purchase of war material in this country and for the other purposes for which an agreement has been reached with you?

I am sure that you are going to give this important question your usual kind attention and I anticipate to you my best thanks and the expression of my consideration.

Faithfully yours,

[S.] MACCHI DI CELLERE,
Royal Italian Ambassador.

EXHIBIT No. 2865

[From the files of J. & W. Seligman & Co.]

DECEMBER 27, 1916.

DRAFT

We hereby offer and recommend to you for investment, participation certificates issued by the Central Trust Company of New York, as depositary, in a loan made by us to the French Government, secured by St. Louis & San Francisco 5% general lien bond certificates of deposit, with a margin of 20% which margin is to be kept good. The loan matures October 16, 1917, and bears interest at the rate of 6% per annum, payable April 16th, 1917, and October 16th, 1917.

The loan was made for the purpose of permitting the French Government, in connection with its efforts to control the exchange situation, to deal with the St. Louis & San Francisco 5% general lien bonds of the French series, and is for a maximum amount of $13,800,000. The actual amount will probably be less than this maximum amount and will depend on the amount of such French series bonds as the French Government may acquire. In any event, the value of the pledged collateral is at all times to be maintained at not less than 20% in excess of the face amount of the amount loaned.

The greater part of the participation certificates in above loan have been withdrawn for investment and the amount that we are in a position to offer you is, therefore, limited. Will you be good enough to let us know your wishes in the matter with as little delay as possible.

EXHIBIT No. 2866

[In pencil: "Notice of redemption French Govt."

J. & W. SELIGMAN & CO.,
No. 1 William Street, New York, January 2, 1917.

CENTRAL TRUST COMPANY OF NEW YORK,
54 Wall Street, New York City.

DEAR SIRS: As depositary under the indenture dated September 16, 1916, between the undersigned, yourselves as depositary and holders of loan certificates issued and to be issued thereunder, we hereby notify you on behalf of the French Government, pursuant to section 1 of article four of said indenture and article tenth of the loan agreement therein referred to, that the French Government will redeem on February 1, 1917 (being not less than four weeks from the date of delivery hereof to you) $2,307,829 in principal amount of the loan, and that the sum of $2,348,215.99 in cash received by you upon the exchange of Bankers Trust Company certificates of deposit under the reorganization plan of St. Louis & San Francisco Railroad Company, including the payments upon past due coupons upon the securities received upon said exchange, is to be applied to the redemption of said part of the principal of the loan and $40,386.99 accrued interest thereon to said date of redemption. You are at once to proceed, for a period not exceeding ten days after the receipt of this notice, to apply said sum to the purchase of loan certificates to a principal amount equal to the principal amount of the loan to be redeemed as above stated, which purchase is to be made under the direction of the undersigned at not to exceed the face value thereof and accrued interest.

If and to the extent that loan certificates cannot be purchased as aforesaid, then you are to apply the moneys remaining in your hands to the redemption of loan certificates to such principal amount as will, together with the principal amount of the loan certificates purchased, equal $3,307,829, the principal amount of the loan to be redeemed as first above mentioned.

Yours truly,

(Signed) J. & W. Seligman & Co.

Exhibit No. 2867

HAUT COMMISSARIAT DE LA REPUBLIQUE FRANCAISE AUX ETATS-UNIS,
Washington, le 4 Octobre, 1917.

(*Le Haut Commissaire de la Republique Francaise, a M. Oscar Crosby, Assistant Secretary of the Treasury, Washington, D. C.*)

Mon cher M. Crosby: J'ai l'honneur de vois accuser reception de votre lettre du 2 Octobre faisant suite a une conversation que vous avez eue lundi avec moi et mardi avec M. Simon, au sujet de l'emprunt Seligman.

Apres mure reflaxion, la situation m'apparait comme suit.

D'une part vous estimez que les leis americaines ne vous permettent pas d'autoriser le remboursement de nos emprunts sur les fonds avancea par le Gouvernement Americain et que, par suite, a leur echeance, ces emprunts doivent etre soit renouveles, soit remplaces par des operations de credit analogues, a moins que le Gouvernement Francais ne dispose pour les rembourser de ressources propres completement independates des fonds avances par les Etats Unis depuis leur entree dans la guerre.

D'autre part vous reconnaissez, comme nous, l'interet considerable qu'il y a a repredre possession des titres qui formant la garantie de l'emprunt Seligman de Septembre 1916 pour nous mettre a meme de degager du collateral de nos autres emprunts les valeurs espagnoles si necessaires en ce moment. Vous mesurez, d'autre part, autant que nous-memes, le grave prejudice que causerait au credit francais un renouvellement a 7% d' un emprunt de cette nature.

J'ai cherché entre ces deux ordres de considérations une conciliation loyale et je crois l'avoir trouvée.

Cette solution consiste, pour le Gouvernement Français, à procéder immediatement sur le marché américain à une émission de bons du Trésor semblables à ceux qu'émet actuellement le Gouvernement Britannique—et ce pour un montant correspondant à celui de l'emprunt à rembourser

Comme toutefois une émission de 10 millions de dollars pourait, par son peu d'importance, produire mauvaise impression, je vous proposerais de fixer le montant maximum de l'operation à 50 millions de dollars, à réaliser par tranches necessaires de 10 millions. Pour le moment, nous n'émettions que la premiére tranche, l'émission des tranches suivantes restant subordonnés à nos besoins, aux possibilités du marché et à des accords ultérieurs avac vous. Je me suis assuré que la Maison Morgan estime pouvoir placer immediatement la prèmiere tranche dans des conditions satisfaisantes.

Je n'ai pas manqué d'autre part de me préoccuper de l'influence éventuelle de l'opération sur le marché financier, en raison de l'émission du second Liberty loan. Je suis sûr que vous penserez avec moi qu'il n'y a pas, de ce fait, de difficulté réelle, puisque l'opération projétée équivaut, en fait, au renouvellement de l'emprunt Seligman; son montant est le même que celui de cet emprunt et les banques qui prendront les bons du Trésor seront pratiquement celles qui auraient pris les certificats de participation à l'emprunt renouvelee.

Cette objection possible étant écartés, les avantages sont évidents.

10. Nous nous mettons en mesure de réaliser le degagement des titres espagnols;

20. Nous evitons un taux d'interet prejudiciable à notre credit, vraiment inacceptable pour le Gouvernement Française et dont, en derniere analyse, la charge finirait toujours par retomber sur le Tresor Americain;

30. Nous repondons á votre desir de n'affecter au remboursement de l'emprunt Seligman aucune partie des avances consenties par les Etats Unis depuis leur entree dans la guerre;

40. Le reneuvellement tel que vous l'avez envisage dans nos conversations, ne pouvait etre fait que pour une durée de six mois, a l'expiration desquels la question se serait posée de nouveau et dans des conditions plus difficiles encore, car les banques constituant le syndicat avaient, vous le savez, mentre peu d'emprassement pour le premier renouvellement. Au contraire le renouvellement des bons au Tresor se fera sans difficulte et de façon presque automatique;

50. Enfin nous aurons cree un organismé dont le role ne sera pas necessairement limite a l'operation actuelle et qui pourrait eventuellement nous procurer les ressources necessaires pour faire face á d'autres echeances d'une nature analogue.

Je crois donc tres sincerement que cette solution est la moilleure possible et je vous demande instamment de l'accepter.

Si vous etes d'accord sur le principle, je vous serai reconnaissant de me le faire savoir le plus tot possible, car en raison de l'echeance rapprochée (15 Octobre) l'operation devrait etre executre sans delai.

Veuillez agreer, cher Monsieur Crosby, l'assurance de mes sentiments les meilleurs.

[s] ANDRE TARDIEU.

HAUT COMMISSARIAT DE LA REPUBLIQUE FRANCAISE AUX ETATS UNIS,
Washington, October 4, 1917.

(*The French High Commission to Mr. Oscar Crosby, Assistant Secretary of the Treasury, Washington, D. C.*)

[Translation from the French by Munitions Committee]

MY DEAR MR. CROSBY: I have the honor to inform you of the receipt of your letter of October 2, referring to a conversation you had with me on Monday and with M. Simon on Tuesday on the subject of the Seligman loan.

After ripe reflections the situation appears to me to be as follows:

On the one hand you believe that the American laws do not permit you to authorize the reimbursement of our loans with funds advanced by the American Government and that therefore, at their expiration, these loans should either be renewed or replaced by similar credit operations; at any rate that the French Government should plan to pay them off with resources completely independent of funds advanced by the U. S. since their entrance into the war.

On the other hand, you recognize as we do the considerable interest that there is in retaking possession of the shares from the collateral of the Seligman loan of 1916, in order to apply them to release the Spanish securities from the collateral of our other loans, so necessary at this time. On the other hand, you consider, as well as we do, the grave damage that a renewal of a loan of this nature at 7 percent will cause to French credit.

Between these two lines of consideration I have searched for a loyal conciliation and I believe I have found it. This solution consists, for the French Government, in proceeding immediately to the issue on the American market of Treasury bills similar to those which the British Government is now issuing—and for an amount corresponding to the loan to be repaid.

Since an issue of $10,000,000 might nevertheless produce a bad impression because of its lack of importance, I shall propose to you that the maximum amount of operations be fixed at $50,000,000, to be realized by necessary installments of $10,000,000. For the present we shall issue only the first installment, the issue of subsequent installments depending on our needs, the possibilities of the market and on further agreements with you. I have assured myself that the House of Morgan believes it possible immediately to place the first installment under satisfactory conditions.

I have not failed on the other hand to devote my attention to the ultimate influence of the operation on the financial market, because of the issue of the second Liberty Loan. I am sure you will agree with me that no real difficulty will result from this, since the proposed operation is equivalent in fact to a renewal of the Seligman loan, its amount is the same, and the banks which are taking the Treasury bills are practically the same as those which would have taken the participation certificates in the renewed loan.

This possible objection being removed, the advantages are evident:

1. We put ourselves in a position to effect the release of the Spanish securities.
2. We avoid an interest rate prejudicial to our credit and unacceptable to the French Government, and whose expense in the last analysis will always end by falling on the American Treasury.
3. We comply with your desire that the Seligman loan be paid by no part of the advances made by the United States since their entrance into the war.
4. A renewal such as you envisaged in our conversations could be made only for a duration of 6 months, at the end of which the question would be presented again and under still more difficult conditions, because the banks constituting the syndicate have, as you know, manifested little eagerness toward the first renewal. The renewal of the Treasury bills, on the other hand, will be made without difficulties and almost automatically.
5. Lastly we shall have created a machine whose operations will not necessarily be limited to its present role, but which will eventually be able to procure for us the resources necessary to face other similar maturities.

I believe very sincerely that this solution is the best one possible and I ask you to accept it promptly.

If you agree on the principle, I should be grateful if you would inform me as soon as possible, since because of the approaching due day (Oct. 15) the operation should be executed without delay.

Accept, dear Mr. Crosby, the assurance of my best wishes.

ANDRE TARDIEU.

EXHIBIT No. 2868

[From the files of J. & W. Seligman & Co.]

[Copy]

SEPTEMBER 25, 1917.

FS/J

J. FREDERIC BLOCH, Esq.,
Financial Agent of the French Government,
2 Rector Street, New York City.

DEAR MR. BLOCH: In accordance with our yesterday's conversation, I am writing you about the loan of the French Government maturing October 16 secured by St. Louis-San Francisco bonds.

It is needless to say that in times like the present, when the United States Government's requisitions on the money markets there are as great as they are now, holders of obligations about to mature, prefer to receive cash rather than to extend, but we as well as all of those associated with us, want, so far as it is possible, to meet the wishes of the French Government and we are accordingly inclined to extend for six months, the loan about to mature.

With the French Republic secured bonds having 18 months to run selling on a 7.7% basis of interest yield, and with the United Kingdom of Great Britain and Ireland secured obligations having a little less than a year to run selling on a 7.1% basis—not to mention longer maturities, selling in the case of the United Kingdom of Great Britain secured bonds falling due November 1, 1919, on an 8% basis—the rate of interest would naturally have to be comparatively high.

Under the circumstances, the rate of interest which we suggested to you, namely, 7% for a six months' extension, would seem to be not unduly high. Of course, if the French Government should prefer to pay off the loan rather than extend on these terms, we should understand its point of view, but I feel certain that the French Government will similarly appreciate our attitude in the matter of interest rate, which must necessarily have to be in conformity with money market conditions.

I repeat what I told you when we first discussed the matter, namely, that J. & W. Seligman & Co., although entitled to a reasonable commission of say ¼% for its services in the matter, would be entirely willing to work for no compensation at all, receiving merely reimbursement of their actual outlays in connection with the extension, should the French Government prefer to have us do so.

We should esteem it a favor to hear from you as soon as you can conveniently let us know whether the Government prefers to extend or to pay off the loan.

Very truly yours.

		32,220,000
Purchases April 25, 26, 27, and 29	8,000,000	
April 25 Bank of France	10,000,000	
April 29 British (no payment)		
		18,000,000
Balance Tuesday, April 30		14,220,000
United States advance		15,000,000
		29,220,000
Purchases April 30		2,000,000
Balance morning May 1		27,220,000
Proposed United States advances to France during April on the assumption that no reimbursements made for Army expenditures other than the $6,000,000 in process of arrangement:		
April 2	$15,000,000	
April 4	5,000,000	
April 9	15,000,000	
April 11	40,000,000	
April 16	20,000,000	
April 18	5,000,000	
April 23	5,000,000	
April 25	15,000,000	
April 30	15,000,000	
	135,000,000	
French started March 1 with a credit of		125,000,000
Loans to France during March:		
March 5	35,000,000	
March 14	20,000,000	
March 19	20,000,000	
March 26	15,000,000	
		90,000,000
Balance February credit available April 1		35,000,000

The above figures estimate expenditures for purchases at $52,000,000. Mr. Simons' estimate $67,800,000 not included in above British claim for reimbursement of over $9,000,000, nor regular payment on April 29 to Great Britain of $10,000,000. There will be some reimbursements for Army expenditures not possible to estimate now. Immediately after April 9 a new credit must be established for France and unless the situation is changed in the meantime a new credit of $125,000,000 is recommended which should carry well into May.

[s.] A. R. N. H. D.

EXHIBIT No. 2872

[Handwritten memo: To the Secretary. This letter has been carefully prepared to cover the situation which Tardieu presented to you personally some time ago. It will be accepted by Tardieu, if you approve. [s.] R. C. L.]

TREASURY DEPARTMENT,
OFFICE OF THE ASSISTANT SECRETARY,
March 11, 1918.

DEAR MR. TARDIEU: I wish to thank you for your ready acceptance of my views as expressed in the recent conferences which you have had with the Treasury Department. As a result of these conferences, I understand the arrangements to be as follows:

(1) All available funds of the French Government in the United States from whatever source arising, shall be used as may be required for the purpose of meeting the dollar expenditures of the French Government in the United States; and

(2) Advances are not to be made to the French Government by the United States Treasury as long as the cash balances of the French Government in the United States may be sufficient to meet its day to day cash requirements in the United States; for which an average daily bank balance of $30,000,000 will be considered sufficient.

You call my attention to the fact that the amounts which the French Government receives from the United States Government in reimbursement of the sums advanced in France by the French Government for United States Army expenditures, together with any sums received by the French Government from other sources than those advanced from the United States Treasury to France, should be available to meet the interest and principal of the obligations of the French Government created before the entry of the United States into the war, or for any other like needs of the French Government in the United States.

I appreciate the force of this proposition and although I have heretofore been unwilling to assent to the use by the French Government of funds advanced to it by the United States for such purposes, I now accede to the principle that future dollar advances that may be made to the French Government by that of the United States may be used to pay, when due, the interest upon and principal of the obligations made by or for the French Government, payable in the United States, or for other like cash requirements of your Government in the United States, up to the aggregate of the amounts received by the French Government in reimbursement of the advances made by that Government for the United States Army expenditures in France, together with the amounts which may be received by the French Government from sources other than United States credits, and on the understanding that all securities now held as collateral to obligations of the French Government, and which will be released by the payment of the said obligations, as well as all other securities held by your Government in the United States, shall be used by you in such manner as may be agreed between us as most advantageous in the common interest.

In accepting the distinction between the two classes of funds above referred to, I wish to express the hope that before making arrangements to pay maturing obligations you will confer with the Treasury Department in relation to the matter. In the common interest it may well be more desirable when obligations mature, either to extend them or to make some other arrangement in respect thereof, rather than to pay them off.

A full exchange of views between your Government and the Treasury Department in relation to all such matters, will, I am confident, be mutually advantageous.

I am. my dear Mr. Tardieu,
Very truly yours,

[s.] W. G. MCADOO.

Mr. ANDRE TARDIUE,
French High Commissioner,
2003–2005 Columbia Road, NW., Washington, D. C.

("EXHIBIT No. 2873" appears in text on p. 9072.)

("EXHIBIT No. 2874" appears in text on p. 9075.)

EXHIBIT No. 2875

MARCH 19, 1918.

FRANCE

The amount expended by France for exchange is of a less complex character than the disbursements shown under the same head for Great Britain. Since March 1917 importations into France have in general been prohibited but in some cases imports from the United States are authorized and in such cases the Bank of France undertakes to provide importers with New York funds sufficient to pay for these purchases. The dollar funds so provided constitute the major part of the exchange payments. There is included, however, under this heading an amount of $47,500,000 expended in New York in purchasing drafts on Paris or in making payments for cotton; of this amount cotton bills and cotton payments account for $58,452,267.58. As already noted some purchases for French accounts were paid for by drafts on London, this being true particularly in the earlier part of the period. The purchases of these drafts are included in the British item of exchange and the amount of the transactions as estimated from time to time by the French and British Governments forms part of the reimbursement by the French Government to the British.

It was necessary during the period to provide funds to enable the French Government to meet its maturing obligations in the United States, that Government having then no other funds available for such purposes. It is now, however, furnishing supplies to our Army in France and it has been agreed that settlement for these purchases shall be made by payments in dollars, and that the amounts so paid shall be available to meet maturing obligations of the French Government in this country. To the extent that they may not be required for that purpose they will go to reduce the loans which would otherwise be made by our Government.

The contributions for relief include part of the amount provided by the French Government toward the relief of Belgium and northern France. At present the Governments of the United States, France, and Great Britain undertake to provide $15,000,000 monthly for purchases in the United States and not less than £1,500,000 for purchases elsewhere. The former amount is provided as to $9,000,000 by our own Government and as to $6,000,000 by the French Government, while the sterling payment is provided by the French and British Governments in such proportions as they may agree upon.

OTHER COUNTRIES

By reason of extraordinary conditions existing during the summer of 1917 it was deemed expedient to grant credits to Russia applicable to expenditures outside the United States. The amounts so expended are far more than offset by expenditures on Russian account in the United States during the period out of funds provided by Great Britain from her own sources.

The greater part of the advances to Belgium represents advances for the purchase of American supplies for the relief of the population of that country. The whole of the advances to Serbia are for relief, but in that case a substantial part of the supplies have necessarily been purchased outside the United States.

EXHIBIT No. 2876

OCTOBER 29, 1917.

J. FREDERICK BLOCH, Esq.,
Financial Agency of the French Republic in the United States,
2 Rector Street, New York, N. Y.

DEAR SIR: Referring to our recent conversation concerning the St. Louis & San Francisco securities which you wished to substitute for certain Spanish external 4% bonds now held as security under the indenture dated August 1, 1916, of the American Foreign Securities Company, we would suggest that the following prices be used as a basis for such substitution:

St. Louis & San Francisco prior lien mortgage 4s, series A, at	56 and interest.
St. Louis & San Francisco cumulative adjustment mortgage 6s, series A, at	58 and interest.
St. Louis & San Francisco income mortgage 6s, series A, at	42 and interest.

As you will note from the official quotation sheet of the New York Stock Exchange of today, the prices above mentioned represent a margin of between 2½ and 3 points from the bid prices as officially quoted. We consider that this margin is necessary in accordance with the recognized custom of valuation of collateral in this country and especially so in view of the fact that the amount of the particular securities to be substituted is so large that unless a very conservative level of prices was observed, such substitution might be open to criticism.

We have conferred with Messrs. Brown Brothers & Company regarding this matter and they concur with us in this suggestion.

Yours very truly,

——— ———.

GW/AGW.

Exhibit No. 2877

[Telegram]

New York, *9th December 1917.*

(*From High Commissioner to Minister of Finance*)

[Translation]

Regarding expenses to be made in France by the American Army, the Treasury proposals, after interviews with the War Department and myself are the following:

The American paymasters in France, according to their needs will send requisition orders to the Treasury at Washington. This will then apply through my organization for the corresponding amount in francs to be put at the disposal of such and such a paymaster in France in a bank of deposit which will be appointed for the purpose.

As soon as the Treasury receives the cable advising it of the deposit, it will put to the credit of our account in New York the corresponding amount of dollars at the rate of exchange on that day as fixed by common agreement.

Will you kindly let me know if you agree on that point; I think, although agreeing with the principle of compensation which seems to me fair, that we ought not to be limited in the different means of employing dollars received against funds placed at the disposal of the American Army, as we are in regard to advances granted by the American Government. We ought particularly to be authorized to use them for repayment of credits.

S. deBilly.

Exhibit No. 2878

December 3, 1917.

Dear Mr. Simon: Referring to your conversation with Mr. Davis relative to funds required by our War and other departments in France for settlement of accounts in francs, I understand that the following arrangement would be acceptable to your Government:

For funds required by Army disbursing officers in France the War Department of the United States Government will, from time to time, make requisition upon the Treasury Department. The French Government will, upon request of the Treasury Department, deposit in a specified depository in Paris to the credit of the disbursing officer designated an amount in francs equivalent to the dollars requested by the War Department at a current rate of exchange to be agreed upon from time to time. Upon cable advice from the depository bank acknowledging receipt of such deposits from the French Government, the United States Treasury Department will immediately pay to or deposit in New York to the credit of the French Government the stipulated equivalent in dollars.

I should be pleased to know if the above plan is in accordance with your understanding and if it is acceptable to your Government.

In case such an arrangement is made, I assume that your Government will use the dollar funds thus received for meeting its dollar requirements for purchases here and would, therefore, reduce correspondingly its request for dollar advances from the United States Treasury. Please advise me if this also would be acceptaboe to your Government.

Very sincerely yours,

[s] R. C. Leffingwell,
Assistant Secretary of the Treasury.

Mr. Joseph Simon,
c/o French High Commission,
2505 Columbia Road, Washington.

[Telegram]

No. 101 DU 17 DECEMBER 1917.

From Finance (Mouvements des Fonds) to High Commissioner (M. de Billy)

[Translation]

I fully agree, under the restriction that we shall not be limited as regards the use of dollars to be received against francs placed at the disposal of the American Army as we are regarding advances granted by the American Government.

I talked with Mr. Tardieu over these two matters and it has been settled between us that the High Commissioner will take them in hand as soon as he returns.

I ask you, therefore, not to give any definite answer to the Treasury on the two points mentioned before M. Tardieu's arrival.

EXHIBIT NO. 2880

FEBRUARY 12, 1918.

Mr. ANDRE TARDIEU,
High Commissioner of the French Republic,
2003 Columbia Road NW., Washington.

DEAR MR. TARDIEU: I received yourletter of February 9th and appreciate your prompt and full reply to my letter of the 8th. I have since had a long talk with Mr. Simon and Mr. Casenave, and I am confident that as a result of this and other conferences which I am looking forward to the differences of view which our correspondence has developed will be readily adjusted.

I ought perhaps to mention that Mr. Simon was mistaken in thinking that there has been any change in the view of the Secretary as to the maturing obligations of your Government. I shall, however, be glad to bring the matter again to the attention of the Secretary in the light of the considerations presented in your letter and further considerations which Mr. Simon has suggested and has been good enough to say he will develop.

I desire particularly to express my appreciation of your ready assent to the principle that the demands of your Government shall be limited to the same strictly needed for indispensable payments.

With renewed appreciation of the very helpful spirit in which you and your associates have approached these and other negotiations, and with assurance of my profound respect, I am, my dear Mr. Tardieu,

Cordially yours,

/s/ R. C. LEFFINGWELL.

EXHIBIT NO. 2881

102.1/669. 102.1/630.

(*Telegram received from Paris, dated March 11, 1918. Rec'd. 12, 5:32 p. m.*)

SECRETARY OF STATE,
Washington,
3325. March 11th.

"For Secretary of the Treasury. Number 204. Your number 98. On account of delays in receiving information concerning questions raised in last meeting of Council, and subsequent scattering of members, my number 86 was sent before being submitted in its entirety to Council. British and Italian delegates were shown copies immediately with understanding if they disagreed with any portions of it, their disagreements would be reported to Washington. In doing this, I had in mind particularly the following:

"'On account of the several uncertainties affecting payments actually required, figures given here are therefore outside figures and net credits recommended are only those which will be found actually necessary to meet payments based upon program herein transmitted.'

"This was specifically important in case of France since Minister of France believed that he had received from Tardieu positive assurance of one hundred and sixty-five million dollars credit for February irrespective of any recommendations of council or deliveries of goods in America. Reduction of French figures to one hundred and fifty-five million dollars he considered as purely voluntary on his part. This misunderstanding together with that explained in my number 203, accounts largely for a situation which is now being cleared up. Klotz seems to fully accept theory that payments should be made to his Government only for actual disbursements required, within limits of outside figures connected with general program. His chief concern now is that such part as may be necessary of payments made account of our Army expenditures here, *available* (not available?) for meeting French obligations in the hands of our (*) or public. Of course an equivalent to this would be assurance, that if all moneys spent by us here are immediately applied to reduction of borrowings, that obligations above mentioned would be met, when necessary, by advances from Treasury. They naturally look to payment of British quarterly on February first as precedent. My own view is that it is better to make adjustment by having them invest some of the moneys advanced to us here in our certificates of indebtedness to be used when their quarterly mature rather than to enter into any positive engagements for meeting their quarterly a long time in advance. If they are thus given control for certain purposes, of funds resulting from advances made to us here, cases doubtful under the statute or as to policy *could covered with* such funds, while funds lent directly from Treasury may be subjected to more rigid control. Last sentence of your number 97 suffered somewhat in transmission, but I understand it to be in substantial accord with the recommendations quoted above from my number 86. Is this correct?—CROSBY."

SHARP.

HG.

EXHIBIT NO. 2882

MARCH 19, 1918.

Memorandum for Mr. Leffingwell: [1]

The French maturities for 1918 aggregate but $74,000,000. While it might be possible to pay one-half of the industrial credits of $50,000,000 and extend the balance for a short period, in view of the amounts of the past and expected future reimbursements to the French for our Army expenditures in France and the French maturities after 1918, about $200,000,000 in 1919 (exclusive of Cities of Lyons, Marseilles and Bordeaux loan of $36,000,000) and $250,000,000 in 1920 (one-half of Anglo-French bonds) it is recommended that the Treasury make no objection to the payment by the French Government of these maturities up to the equivalent of the amounts reimbursed the French for our Army expenditures. (To date the amount reimbursed the French for our Army expenditures is $50,961,025.32.) By the payment of the industrial credits there will be released $50,000,000 of French Treasury securities and $10,000,000 of neutral securities of which a list should be secured if not already furnished. The securities thus released will, of course, be held subject to the arrangement recently made by the Treasury Department with the French Government.

/s/ A. R.

EXHIBIT NO. 2883

MEMORANDUM OF PAYMENTS MADE BY THE FINANCIAL AGENCY OF THE FRENCH GOVERNMENT AT NEW YORK FROM MAY 1ST TO JUNE 15TH FROM THE 150 MILLION DOLLARS RECEIVED FROM THE AMERICAN GOVERNMENT

From May 1st to May 31st the financial agency paid out the following amounts:

(I) Payments made to New York direct for account of the Government:

Artillery	$32,000,000
Ammunition	10,600,000
Engineers	1,700,000
Cavalry	1,600,000
Aeronautics, clothing, physical	200,000
Various disbursements for transportation, storage, etc	1,500,000
Military administration	2,400,000
Marine	500,000
Agriculture, public works	500,000
	51,000,000

(*) Omission.

[1] Penciled note: N. H. D.: Have we ever received the list of securities which we asked for some time ago? R. C. L.

All these payments result from contracts formerly made with the United States at the prices and conditions indicated in the detailed sheets remitted to Mr. Crosby.

(II) Deposits made with Morgan for the credit of Banque de France for payments made by private individuals and manufactures for American products purchased in the United States, $14,000,000.

It must be noted that today, by virtue of the decree of March 18, 1917, all importations are at the outset prohibited; that the Government only permits the importation of products necessary to the manufacturers working for the "National Defense", and that the Banque de France will only sell dollars on the justification of importations of authorized American products.

These $14,000,000 constitute absolutely, then, a sum expended exclusively and entirely in the United States.

It is, besides, largely insufficient; the Government and the Banque de France have made it known on several occasions that the importations from the United States, effected by the merchants or manufacturers for the carrying out of their contracts with the Minister of War (petroleum, oil, gasolene, leather, shoes, metals, machines, etc.) represent more than $30,000,000 per month. The financial agency has only been able to deposit $14,000,000 instead of $30,000,000, on account of a lack of necessary funds. Numerous payments have had to be put off, and New York Exchange at Paris has fallen from 5.70 (end of April) to 5.75 (telegram from the Governor of the Bank of France June 14th).

(III) Payment to the English Government, which should be considered as a payment on account of the cost of cereals, sugars purchased in the United States, and not yet paid by France: $25,000,000.

Total for the month of May, $90,000,000.

(I) From June 1st to 15th, the expenses have been the following (expenses not yet entirely liquidated):

(a) From May 1st to June 10th the disbursements effected for account of the war by the financial agency by virtue of the contracts formerly existing reached the following figures:

Artillery	$12, 500, 000
Ammunition	3, 500, 000
Engineers	500, 000
Cavalry	700, 000
Clothing, physical, aeronautics, transportation, etc	300, 000
Provisions for the Army	800, 000
Fodder for army	100, 000
Marine	200, 000
Public works and agriculture	200, 000
	18, 600, 000

(b) The statement of those expenses between the 10th and 15th has not yet been made because they are only liquidated every ten days. They can be estimated at the rate of the fixed expenses—therefore half of the above—$9,300,000; in all, $27,900,000.

(II) Amounts deposited for the credit of the British Government with Morgan on account of cereals, sugars, purchased by the English for the common account, $10,000,000.

(III) Amounts deposited for the credit of the Banque de France, for payment of American merchandise purchased by private individuals, (see above), $10,000,000.

(IV) Purchase of American boats for the state and railroads in Algiers, $1,600,00.

Therefore for the first two weeks of June, $49,500,000, and for the period between May 1st and June 15th, $139,500,000.

But if our expenses have been adjusted in a manner which enables us to maintain ourselves within the limit of the credits opened by the Treasury ($150,000,000 for May and the first twenty days of June), it is because certain expenses, among the most important, have been adjourned; the months following will have to support, not only their normal share in these expenses, but that portion of the months of May and of June, adjourned until now:

1. It is thus that nothing was paid for orders of rails, cars, locomotives, whose normal amount represents $7,000,000 to $8,000,000 per month;

2. Nothing has been paid, either, for purchases of American products other than the cereals and sugars, purchased through the intermediary of the market of London: cottons, meats, wools, nitrates represent from $23,000,000 to $25,000,000 per month;

3. For the *cereals* and *sugars*, there has only been paid to the English on account, a very insufficient amount ($35,000,000 for the two months, when we are officially advised that our share in the purchases in question of cereals and sugars, represents a minimum of $30,000,000 per month).

4. Only one payment, relatively small, has been made for the purchase of boats, while our naval program in the United States (the realization of which is indispensable for the continuation of the war), represents an expense of three and perhaps four million dollars per month;

5. The Banque de France has only allotted to the French commerce, for its purchases exclusively in the United States, $24,000,000, in one month and a half, while the minimum needs amount to $30,000,000 per month. If this situation should continue the rate of exchange of the franc would fall, for the adjournment of payments cannot be prolonged indefinitely, nor can new private credits be obtained in the United States, as all their disposable funds must be preserved for subscriptions to future interior loans.

6. Not one cent has been paid to the Commission for Relief, a situation which, when considering humanity, dignity and politics, cannot be prolonged any more.

7. Finally, an account will have to be taken of the payments of interest on the former loans from the United States, which represent more than $28,000,000 yearly without mentioning amortization.

EXHIBIT NO. 2884

FRENCH GOVERNMENT—SCHEDULE OF ALL EXPENDITURES FROM UNITED STATES GOVERNMENT CREDITS DURING THE PERIOD MAY 1ST TO DECEMBER 31ST, 1917

II. PAYMENTS TO THE BRITISH TREASURY

The British Government has centralized the purchases abroad of various supplies for the Allies, wheat, oats, sugar, fat, meat, etc. It has been estimated that the share of France in these supplies represents an average amount of $40,000,000 or $45,000,000 monthly. As long as statements of expenditure are not presented by the English Treasury, the French financial agency, at the request of the British Government, is making weekly transfers varying from $8,000,000 to $10,000,000.

Up to the present, no statement has been obtained.

The only information given to us is contained in a letter from Lord Reading, dated October 6th, pointing out that the balance due by the French Government at the end of July amounted to $8,833,619.28, and that the claim for August reached a sum of $43,419,123.10.

Since that date our requests for accountings have remained unanswered.

Date of payments:		*Amount*
May	9	$25,000,000.00
June	13	10,000,000.00
	23	10,000,000.00
	26	10,000,000.00
July	2	8,000,000.00
	9	8,000,000.00
	16	8,000,000.00
	23	8,000,000.00
	26	20,000,000.00
	30	8,000,000.00
August	6	8,000,000.00
	13	8,000,000.00
	16	4,000,000.00
	20	10,000,000.00
	27	10,000,000.00
September	4	10,000,000.00
	10	10,000,000.00
	17	10,000,000.00
	24	10,000,000.00

Date of payments—Continued.	*Amount*
October 1	$8, 000, 000. 00
5	8, 000, 000. 00
15	10, 000, 000. 00
22	10, 000, 000. 00
29	10, 000, 000. 00
November 5	10, 000, 000. 00
12	10, 000, 000. 00
19	10, 000, 000. 00
26	10, 000, 000. 00
December 3	10, 000, 000. 00
10	10, 000, 000. 00
17	10, 000, 000. 00
24	10, 000, 000. 00
31	10, 000, 000. 00
Total	331, 000, 000. 00

IV. PAYMENTS TO THE BANK OF FRANCE FOR EXCHANGE REQUIREMENTS

(*a*) Since the month of March 1917, all imports from abroad have been in principle prohibited. Exceptionally, authorizations are granted for the importation of material or products indispensable for the national defense.

The manufacturers or dealers, duly authorized, can obtain from the Bank of France, at the fixed rate of 5.70, the dollars necessary for the payment of the importations from the United States, on presentation of the corresponding documents.

The dollars needed by the Bank of France for that purpose have been transferred to it by the financial agency in New York on the following dates:

Date:	*Amount*
May 5	$2, 000, 000
14	2, 000, 000
15	5, 000, 000
21	5, 000, 000
28	5, 000, 000
June 7	5, 000, 000
15	10, 000, 000
23	8, 000, 000
July 6	10, 000, 000
16	10, 000, 000
26	10, 000, 000
August 6	8, 000, 000
16	8, 000, 000
27	8, 500, 000
September 6	10, 000, 000
17	10, 000, 000
26	10, 000, 000
October 6	10, 000, 000
16	10, 000, 000
26	10, 000, 000
November 7	10, 000, 000
16	10, 000, 000
26	10, 000, 000
December 6	10, 000, 000
17	10, 000, 000
26	10, 000, 000
Total	217, 000, 000

(*b*) Besides these transfers, the French financial agency has supplied the Bank of France with the dollars necessary for the payment at their maturity of the 90 d/s drafts drawn in September-October 1916, by a group of French bankers (Rothschild, Credit Lyonnais, Comptoir National D'Escompte, Heine and Cie, etc.) against a group of American bankers (Brown Brothers and Company, J. P. Morgan & Co., National Bank of Commerce, Guaranty Trust Company, Farmers' Loan and Trust Company, etc.) and maturing after three (3) renewals in September and October 1917, without any possibility of further renewal. This credit designated as "French Commercial Export Acceptance Credit" has been granted in order to provide exchange facilities for French purchasers of American commodities, and managed by Messrs. Brown Brothers and Company. It amounted to twenty-five million ($25,000,000) dollars.

Date of transfer:	*Amount*
September 5	$2,500,000
12	2,500,000
19	5,000,000
26	2,500,000
October 2	2,500,000
17	2,500,000
24	2,500,000
31	2,500,000
November 7	2,500,000
Total	25,000,000

(*c*) It appeared that the above transfers were not sufficient to meet all the requirements and that the Bank of France, not being able to supply the commerce with the necessary amount of dollars, many dealers, instead of buying dollars in France, were selling francs in New York, and thereby threatened to bring down the rate of francs on the rather narrow markets of New York.

The French financial agency, through the representative of the Bank of France in New York, had to intervene, during the months of August and September, in the open market in New York and buy, for account of the Bank of France, drafts in francs for an amount of $8,847,732.42. It seems rather difficult to furnish detailed adjustifications of this expenditure, represented by a considerable number of drafts.

General total for exchange:	
(a)	$217,000,000.00
(b)	25,000,000.00
(c)	8,847,732.42
	250,847,732.42

VI. PAYMENTS OF INTEREST, COUPONS, AND MATURED CREDITS

Date		Nature of the operation	Amount
May	2	Interest due to du Pont de Nemours Co. on the one-year Treasury bills given to this company by the French Government in payment for powder	$94,675.22
June	15	Interest due to du Pont de Nemours Co. on the one-year Treasury bills given to this company by the French Government in payment for powder	67,919.25
August	1	American Foreign Securities Company semestrial interest on $100,000,000	3,625,000.00
	15	Interest due to du Pont de Nemours Co. on the one-year Treasury bills given to this company by the French Government in payment for powder	68,487.60
October	1	Semestrial coupons of the second loan with neutral collateral ($100,000,000 5½%)	2,753,437.50
	10	Semestrial coupons—Loan of the city of Paris	1,501,875.00
	15	Semestrial coupons—Anglo-French loan	6,257,812.50
	16	Interest due on the industrial credit of $50,000,000 (Bonbright, November 11, 1916)	2,062,500.00
	22	Semestrial coupons—on the loans of the cities of Bordeaux, Marseilles, Lyon	1,081,350.00
November	17	Interest due to the American Government	8,170,863.04
		Total	25,683,920.11

(*d*) Payment to du Pont de Nemours, at their maturity, of the 1-year Treasury bills given to this company by the French Government in payment for powder delivered:

Date:	*Amount*
November 2	$3,881,683.82
December 15	2,784,774.05
	6,666,457.87

(*e*) Payment at maturity after three (3) renewals of the 90 d/s drafts, drawn by the firm Creusot (our chief manufacturer of guns), against an American syndicate, managed by Messrs. Bonbright & Co., in order to pay for the steel needed for the manufacture of guns and artillery munitions (total credit $45,000,000, of which $20,000,000 were reimbursed before May 1917).

Date:	*Amount*
May 26	$5, 000, 000
June 26	5, 000, 000
October 8	5, 000, 000
November 5	5, 000, 000
December 6	5, 000, 000
Total	25, 000, 000

General total:	
(a)	25, 683, 920. 11
(b)	6, 666, 457. 87
(c)	25, 000, 000. 00
	57, 350, 377. 98

VII. COMMISSIONS—SUNDRIES

This item refers especially to the commissions paid to Messrs. J. P. Morgan & Co.

Date:	*Amount*
May	$176, 908. 69
June	48, 496. 59
July	320, 596. 25
August	270, 711. 08
September	204, 679. 06
October	230, 607. 20
November	25, 813. 73
December	53, 714. 44
Total	1, 331, 727. 04

Payments of cotton.—(a) In regard to the purchases of cotton, effected by the French manufacturers or merchants before the centralization of cotton transactions into the hands of the French Government, the French financial agency, ignorant of the contracts, limited its intervention to the purchase of the drafts in francs connected with cotton transactions. The amounts of such drafts is as follows:

September	$6, 420, 763. 61
October	1, 979, 134. 39
November	3, 357, 527. 72
December	4, 394, 841. 86
Total	16, 152, 267. 58

It does not seem essential and it would not be practical to furnish a detailed account of these very numerous transactions. But the agency possesses certifications from the New York banks through which such drafts have been negotiated, that all of these drafts refer to cotton purchases.

(b) Since the French Government has taken over the purchasing of cotton, the payments are made in New Orleans, for account of the French Cotton Commission, by the Hibernia Bank and Trust Company.

From time to time, according to orders received from the technical departments, the French financial agency transfers funds to our depositaries in New Orleans, to the credit of the French Cotton Commission. These depositaries are: Whitney Central National Bank, Canal Bank, Commercial National Bank, Hibernia Bank and Trust Company. Out of the funds deposited in the first three banks, our agent in New Orleans maintains a sufficient deposit in the Hibernia Bank and Trust Company, which bank, alone, has charge of the payments.

Date of transfers to the French Cotton Commission	Bank to which the transfers have been made	Amount
November 24	Hibernia Bank & Trust Company	$1,000,000.00
26	----do	500,000.00
December 1	----do	1,000,000.00
5	----do	1,000,000.00
10	----do	1,000,000.00
11	----do	500,000.00
13	Whitney Central National Bank	1,000,000.00
13	Canal Bank	1,000,000.00
13	Commercial National Bank	500,000.00
26	Hibernia Bank & Trust Company	1,000,000.00
27	----do	1,000,000.00
27	Canal Bank	1,000,000.00
27	Commercial National Bank	500,000.00
	Total	11,000,000.00

During the months of November and December the operations of the French Cotton Commission were as follows:

Received		
Transfers from financial agency	$11,000,000.00	
Interest and sundries	2,538.44	
		$11,002,538.44
Expended		
Freight	$46,240.89	
Office expenses	6,252.88	
Payments for cotton:		
Harrys, Irby and Vos	874,690.56	
Humphrey and Co	353,101.66	
M. Levy and Son	4,090,456.23	
Weil Bros	457,535.90	
George H. MacFadden	621,300.29	
Anderson, Clayton & Co	764,354.79	
Southern Products Co	349,827.40	
Weld, Neville Cotton Co	858,871.97	
Storage and sundries	7,442.11

EXHIBIT NO. 2893

HAUT COMMISSARIAT DE LA REPUBLIQUE FRANCAISE,
1954 Columbia Rd. NW., Washington, D. C., April 18, 1918.

(*The High Commissioner of the French Republic to the Hon. R. C. Leffingwell, Assistant Secretary of the Treasury, Washington, D. C.*)

[Translation]

DEAR MR. LEFFINGWELL: My Government has just called my attention to various points which it requests me to submit to your consideration, and the importance of which to the common cause of the Allies, you will readily see.

1. My Government informs me that the bonds of the French cities, Marseilles, Lyons, Bordeaux, issued in the United States in 1916 by the firm of Kuhn, Loeb & Co., are now being sold in large quantities in Holland for American account. These sales are competing with the efforts of the French Government to secure credits from banks in Holland; you know that my Government is in imperative need of these credits for the defense of its exchange and for the payment of the Dutch products indispensable to it. It is becoming more and more difficult for my Government to call on available Dutch capital, since the latter finds other investments as favorable as those of the loans of the French cities, payable in dollars and negotiated by American bankers or capitalists at about 87 percent of their face value. It is precisely for such reasons that I have, on various occasions, pointed out to your Department the importance, moral as well as material, for my Government to be able to employ, for the partial redemption of these securities, a part of its own funds, outside of any advances from the Treasury, funds which it receives from the United States, in payment of war material sold to the American Army, or as equivalent for francs put at your disposal. I am sure that you will grasp the considerable advantage and ultimate economy for both our Governments which would result from an agreement for the purpose of redeeming, at least partially, at advantageous rates, loans which have to be paid off at par in 1919, and the presence of which on the market, leads to regrettable combinations at the same time that it creates, by their low market prices, an unfortunate precedent.

On the other hand, I feel confident, that you will be disposed to study what steps should be taken to curtail the exportation of these securities to neutral countries, where they hamper the financial activities of my Government, and where they may give our enemies an opportunity of obtaining dollar credits very cheaply.

2. My Government requests me also to point out to you that every day it is getting more difficult to obtain in neutral countries, as for instance, Switzerland, Spain, Norway, the credits which are absolutely necessary for the carrying on of the war, because it lacks the neutral or American securities to be pledged. All the foreign securities which my Government could gather, at very high costs, have been remitted to American banks as collateral for the loans obtained in New York before the entry of the United States into the war. It would seem that there is an unquestionable common interest in being able, from time to time, as circumstances may require, to withdraw from this collateral the securities which would enable us to obtain credits at such and such a place, and I think that by granting us the authorization to release part of the securities in question (by means of the funds received from you, not as an advance, but as payment for value received) the Treasury will but permit the French Government to use its own money for the benefit of the common cause.

I dare to hope that you will recognize the advantages of the above suggestions, and I shall be obliged to you if you will be good enough to let me know your opinion on this subject.

[s] ANDRE TARDIEU.

NOTE REGARDING TRANSLATION OF MR. TARDIEU'S LETTER OF APRIL 1918

The translation furnished by the French Mission is a very poor one.

Sales of this kind come out unfortunate competition with the French Government which, for the protection of exchange and for payment for Dutch supplies indispensible to the French Government and the C. R. R. is actively seeking to open credits with Dutch bankers. It becomes difficult for my Government to interest in these credit operations available Dutch capital if such capital can find elsewhere opportunities of investment as favorable as those afforded by the offer of obligations of the French cities, payable in dollars, guaranteed by the same French Government and dealt in at the present time by American bankers and capitalists at about 87% of their nominal value.

(The whole sentence beginning "I am sure that" is not in the original.)

[Pencilled note: This should be attached to translation of letter of April 18 from Mr. Tardieu.]

APRIL 25, 1918.

Mr. ANDRE TARDIEU,
French High Commissioner,
1954 Columbia Road NW., Washington, D. C.

DEAR MR. TARDIEU: I have received your letter of the 18th instant in relation to the bonds of the three French cities and the Spanish securities deposited under the pledge agreement pursuant to which certain obligations of your Government have been issued.

I had understood that the question of anticipating maturity of these obligations had been, after careful consideration, settled by your correspondence with the Secretary of the Treasury on the subject. I shall, however, upon the return of the Secretary, place before him your letter.

I am, my dear Mr. Tardieu,
Very truly yours,

/s/ R. C. LEFFINGWELL.

JOSEPH SIMON, Esquire,
c/o The French High Commission,
2003–2005 Columbia Road NW., Washington, D. C.

DEAR MR. SIMON: I return herewith the list which you handed me some days ago of certain securities of the French Government pledged to secure its obligations under the first and second loan operations. I have retained copy of this list. I will be much obliged if you will furnish me with copies of the agreements under which these obligations were issued and providing for the control of the pledged securities.

Very truly yours,

/s/ R. C. LEFFINGWELL.

(Enclosure.)

EXHIBIT No. 2896

[Telegram]

PARIS, *June 9, 1918.—11 p. m.*

(G. Clemenceau, President of the French Cabinet, to the Hon. Wm. G. McAdoo, Secretary of the Treasury, Washington, D. C.)

[Translation]

I am calling upon you personally at the most critical times of the war, in order to ask a financial assistance, just as indispensable to victory as the military assistance which your country is giving us so generously.

France, on account of being the battlefield, is at present in a peculiar financial position.

Not only has its productive capacity diminished by more than one third, but furthermore, the French currency (practically reduced now to paper money) must suffice not only for the French needs but also for those of the Allies because the allied armies are fighting on her soil and are each day spending more and more money there.

Millions of allied consumers are in France and our monetary system has to bear the burden.

Because of this the amounts in francs which the French Treasury has placed at the disposal of the Allied Governments have reached the sum of 460 million for the month of April, of which 310 million were for the American Army, and 940 million for May, of which 750 million were also for the American Army. For the first six days of June the cessions of francs to the American Army amount to 220 millions.

It is in order to remedy this double situation, financial and monetary, that I appeal to you. I am sure that you will understand me.

I beg to make the two following requests:

First request: The High Commission is negotiating with you for the purpose of discriminating between on one side the sums which are advanced to us by the American Treasury and which must be repaid after a period of time, and on the other side, the sums proceeding from the cessions of francs corresponding to the expenses of the American Army in France.

I have no doubt that in your high spirit of equity, you would be disposed to grant this request, founded on the spirit of justice and loyalty which has always animated the American nation in her relations with France.

I request you, according to our previous suggestions and on the conditions which you would deem necessary to adopt, to put at the disposal of the French Treasury, in the form of a current account, the sums equivalent to our cessions to the American Government, it being understood that, for the duration of the war, the actual drawings would only take place under the conditions which have been indicated to you, and on which the French Government is ready to accede in the largest way possible, to your wishes.

The current account which would represent and be the recognition of the debt of the United States to France, would give in the future a new strength to our finances.

Second request: This first request is of a general order. I consider it as essential, but it would not permit us by itself to meet the difficulties of the situation.

Our monetary inflation has become a social and financial peril of the utmost gravity. We have only one means of reducing our circulation and that is to issue a new loan without delay.

It is indispensable that on the eve of this loan the proportion between our cash on hand and our money in circulation be notably increased.

Our gold reserve, which, at the beginning of the war, was 4,141,000,000 francs for a circulation of 6,683,000,000 has today fallen to 3,450,000,000 actually disposable for a circulation of more than 28,000,000,000, and yet, during this same period, the concentration in the coffers of the Bank of France of the gold savings of the country, supplied 2,300,000,000.

This situation results partly from the fact that, during the period of American neutrality, we sent to the United States by way of England, 2,820,000,000 francs in gold.

Appreciating at their full value the many difficulties which weigh upon you, we are not asking your for an actual return nor even a definitive retrocession of this gold. We only ask, under the pressure of necessity, that you help us to find an absolutely indispensable assistance.

It would be a question of—

(A) Depositing this amount in gold in a bank of the Federal Reserve System, to the credit of the Bank of France, against an equal previous deduction in our cession account.

(B) Our agreeing to employ this gold for our purchases in the United States after the war, or, if you prefer, our putting this gold purely and simply at the disposal of the Federal Government, when our monetary circulation will have come down after the war to a level upon which we have to agree.

What is indispensable to our public opinion at the time when we must float a loan in the conditions in which we find ourselves, is for America to open her arms to us, thus affirming her financial solidarity as she has already affirmed her military solidarity.

If you should judge that the operation bearing on the totality of our gold shipments to America would be too heavy at the present time, the consignment under the same conditions of a part of this sum (1,000,000,000) would answer our immediate needs and the rest of the operation could be made by installments.

Conclusion: I address myself to you in my capacity of head of the Government; for, it is a question of direction of the war. It is important for the security of your troops as well as for that of ours that the credit and the currency of France hold as well as does her Army.

You wanted, as well as we did, unity of command. We need unity of financial action. The second is as necessary as the first, for it is, I reiterate, because the fighting is taking place on our soil, that we are menaced with a crisis of the fiduciary circulation. I beg you to study, with the President, my appeal and give me an answer at the earliest possible moment. It is not a question of sending out of America a single ounce of gold, but only of sustaining—by an assertion of solidarity, corresponding at least partially, for the present, to the amount of

French gold sent to America—the French banknote, which is the common currency of all the Allied Armies.

We are facing a terrible situation and you will make a great effort to help us, because are cause is yours. Of course, I am conscious that I am not asking for anything which is not just and which is not of absolute necessity; I appeal to your sense of justice and to your will to vanquish.

/s/ CLEMENCEAU.

EXHIBIT No. 2897

TREASURY DEPARTMENT,
Washington, July 3, 1918.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: I have the honor to enclose herewith draft of a communication proposed to be made by the Secretary of the Treasury to Mr. Clemenceau in further answer to his cable dated June 9, 1918, and which has already been submitted to you by Secretary McAdoo. Discussions with the Deputy High Commissioner of France have resulted in conclusions on the part of Mr. Leffingwell and myself that are expressed in the proposed draft.

In section six of that draft are set forth the substanital features of the proposition which we think justifiable in the present circumstances.

Compilations recently made by General Pershing's purchasing department and received by cable yesterday indicate that our expeditionary forces have already spent something more than 4,000,000,000 francs, to be covered by corresponding advances from the French Government, and further that the probable expenditure of our Army up to January 1, 1919, in France, including the amount above mentioned, will be from 8,000,000,000 to 10,000,000,000 francs.

During the past four months the expenditures of the French Government covered by United States advances, and by the amounts received from the United States in reimbursement of our Army expenditures in France, averaged about $150,000,000 per month.

The matter is respectfully submitted for such action as you may desire to take.

I am,
Cordially yours,

/s/ OSCAR T. CROSBY,
Acting Secretary of the Treasury.

Enclosure.

EXHIBIT No. 2898

(The Secretary of the Treasury to the President of the French Cabinet)

I

The situation presented by the message of the President of the French Cabinet dated June 9, 1918, has been given careful study and consideration both as to the needs of the Republic of France and ability of the United States to meet its own war needs and the calls for financial aid which it has received from the Allied Governments. With the approval of the President of the United States the Secretary of the Treasury places before you his views as follows:

II

The method in effect of dealing with the amount in dollars receivable by the French Government in reimbursement of the expenses of the United States Army in France was adopted after a number of conferences with the representatives of the French Government, and is embodied in a letter dated March 11, 1918, from the Secretary of the Treasury to Mr. Andre Tardieu, the French High Commissioner, and confirmed by him by letter dated March 13, 1918. This arrangement was entered into after mature consideration by both sides, and embodies a concession by the Secretary of the Treasury that he was reluctant to make and was received by the representatives of the French Government with expressions of cordial appreciation. The arrangement made is quite similar to that in force between the French and British Governments respecting the expenditures of the British Army in France, between the British and United States Governments respecting the expenditures of the United States Army in Great Britain, and between the United States and the Italian Governments respecting the expenditures of the United States Army in Italy. Under this arrangement the amounts advanced by the United States to France (but not exceeding the amount of the reimbursements for the expenditures of the United States Army in France) may be used not only to pay, when due, the obligations of the French Government payable in the United States, but also for other like cash requirements of the French Government in the United States. After a reconsideration of the matter the Secretary of the Treasury is unable to change his views that the existing arrangement is eminently fair. The United States continues to loan to France for her purchases in this country all the dollars needed and for which no dollar funds are available in France; but the Secretary of the Treasury does not feel that he can sanction advances of dollars to an Allied Government while it has dollar funds available.

III

Even though gold from France reached the United States by way of England when the United States was at peace with the world to meet payments due in the United States, this would not constitute in the opinion of the Secretary of the Treasury any reason for the return to France of the gold thus used for its purposes.

Since the United States entered the war the commodities within its territory needed by France have been purchased out of funds which thereafter, but not before, could legally be supplied by the United States Government and these requirements of France as well as those of other Allied Governments have been in part supplied by the United States Government through the shipment or pledging of its gold to neutral countries in a very considerable amount. As an instance, the gold sent from the United States to Spain, approximating $100,000,000 in amount, was doubtless in considerable part required by French purchases in Spain.

IV

The financial demands upon the United States are now enormous. The raising, equipping, and maintaining on the battlefields the large bodies of troops which have already gone forward and are now in the course of preparation for active service alone means an expenditure of billions of dollars and the gathering of commodities from all parts of the world. The increase in size of our Navy and the active duty to which it has been assigned represents another large item. The construction of the tonnage so needed for the common cause is a further drain upon our resources. The Treasury has at all times stood ready to supply the funds needed by the Allied Governments to purchase food and other commodities in the United States. The Secretary of the Treasury feels assured that so far as the United States advances are expended for available services and commodities in the United States the United States Government can meet the financial problem which it confronts because the money thus spent flows back to the people of the country just as the francs placed at the disposal of the United States Army in France ultimately return to the people of France. The purchases in neutral countries for the United States Government and its people and for the Allied Governments and their nationals either directly, through exchange operations, or for materials purchased in neutral countries by the United States and later sold to Allied Governments in exchange for their obligations present a different problem and one, the solution of which is giving the Secretary of the Treasury grave concern. The heavy favorable balance of trade of the United States with the world, after eliminating the commodities purchased by the Allied Governments from the United States credits, becomes in effect a heavy balance of trade against the United States. In these circumstances, and in view of the need for the common good of conserving the credit and the resources of the United States, the Secretary of the Treasury is forced to the conclusion that the United States cannot prudently part with its gold resources for the purposes set forth in the message of the President of the French Cabinet.

V

The Secretary of the Treasury most sympathetically notes the apprehensions of the President of the French Cabinet of the gravity of the financial situation due to the increased issue of banknotes in France, and fully appreciates the serious consequences which might result from a depreciation in the French banknotes. He feels constrained, however, to call attention to the internal assistance already furnished the Government of France by the United States Government through advances made to finance the purchases outside of France of French nationals, and the purchase of foodstuffs by the French Government sold to its nationals. These transactions necessarily resulted in placing a corresponding amount of francs at the disposal of the French Government. The silver purchased by the French Government from the United States advances has furnished coin for circulation in France.

While the assistance which may be furnished by the United States to remedy the existing financial situation in France has not yet received the exhaustive study contemplated by the Secretary of the Treasury, yet, in order to aid the French Government in meeting the conditions presented as an emergency the Secretary of the Treasury is prepared immediately to establish in favor of the Government of France against its obligations in a corresponding amount, a special credit in dollars to an amount equivalent at the present rate of exchange to one billion francs, to be made available and dealt with in such manner as shall be agreed upon between the Secretary of the Treasury and the representatives of the Republic of France, and the Treasury Department awaits the convenience of the representatives of France to arrange these details.

In view of the importance of the matter presented, the Secretary of the Treasury has brought it to the attention of the British Government, but because of its urgency he is prepared to establish the special credit above mentioned without awaiting any advice from the British Government as to its willingness to participate therein. In case the British Government shall undertake to provide a portion of the said special credit, or, in case dollar funds shall become available to the French Government in excess of its current cash requirements in the United States, the amount of said special credit is to be diminished by a corresponding amount and any dollar funds so available shall pro tanto take the place of such credit under precisely the same arrangements as those to be fixed in respect thereof.

The WHITE HOUSE.
Approved 3 July, 1918.
[s] WOODROW WILSON. [s] W. G. MCADOO.

EXHIBIT NO. 2899

[Translation of a telegram from Mr. Tardieu to Mr. De Billy]

MEMORANDUM

PARIS, *July 20, 1918.*

(1) The following is meant to give you all the details pertaining to the answer which you have been requested to transmit from Mr. Klotz to Mr. McAdoo and to show you our state of mind;

(2) As you expected, the answer has caused a great deception. In fact, it appears that the United States Government does not conceive exactly neither the enormous and every increasing difficulties of our money circulation, nor the unique situation that, after four years of immense sacrifices, our being the battlefield has created for us.

(3) Under these conditions the offer of 200 million dollars made a painful impression at the Ministry of Finances: Firstly, because it did not even meet the increase in our money circulation for the last three months, due to our transfers to the United States (more than 2,000,000,000 francs); secondly, because it looked a little like an emergency help and not like a fair arrangement; and lastly, because without consulting us previously, the question had been submitted to the British representative. The first impulse was accordingly to refuse cordially and to say that we wanted to wait for the arrival of Mr. Crosby;

(4) I succeeded in having this point of view abandoned, not because I did not recognize the value of the above argument but for two reasons: First, because I am convinced that, in spite of their insufficient understanding of our situation and unfortunate errors of form, we have the good and sincere will of the Treasury and a refusal would have hurt them in the friendly sentiments which they bear us; second, because I see in the present operation, in spite of its imperfection, the first step in a way in which the fairness of the Federal Government will induce them to follow us. We cannot be asked to go to the doom of our money circulation through transfers of which the counterpart would not appear anywhere in the statement of the Bank of France. The ministry as well as Mr. Clemenceau have accepted my point of view and a cable was sent which, with moderation but sincerely, shows our state of mind.

(5) We shall keep you posted on all our interviews with Mr. Crosby.

On your side—

(a) Ask the Treasury not to communicate anything to the press until further notice;

(b) Make the Treasury understand, in a friendly way, but firmly, that these negotiations do not concern the other Allies and that they cannot reasonably be mixed with them without our agreeing to it.

(c) Use our precediug cable for your negotiations, so as to show sincerely the state of mind exposed above.

Exhibit No. 2900

[Translation of a cable from Mr. Klotz to Mr. de Billy]

July 20, 1918.

We note with pleasure the indications gathered by Mr. Simon from his conversation with Messrs. Crosby and Leffingwell regarding the willingness of the Treasury to open additional credits in our favor, for the purpose of paying off before maturing a part of our loans in the United States.

Evidently this is a slightly different proposition from the one set forth by Mr. Clemenceau to Mr. McAdoo. However, the addition of a special credit sufficient to pay off our two secured loans (American foreign securities and loan of April 1917) to the credit of two hundred million dollars which the Federal Government recently offered to us, would in fact make a total approximately equal to the counterpart of the francs transferred so far to the United States Army.

On the other hand, the withdrawal of our collaterals could help us considerably to obtain new credits in neutral countries. Such a result, although it would not be as far-reaching as the measures suggested by Mr. Clemenceau, would be very interesting and would to a certain extent work for the protection of the franc, the same way as an increase of the metal reserve behind our currency.

We could thus look upon the opening of those credits as a real satisfaction given to that part of our demand which covers the past. There would remain to study with the U. S. Government the means of averting during the next few months the danger of a tension of our fiduciary circulation, resulting from the very increase of the American forces in France.

You can, consequently, in your conversations with Mr. McAdoo and Mr. Leffingwell, state very clearly that the new dispositions evidenced by them regarding the paying off of our banking credits have been received here in the most favorable way and fully appreciated, inasmuch as we have always considered the measures contemplated today by the U. S. Treasury as being in accordance with our common interest.

Exhibit No. 2901

[Pencilled memo: If it is decided to send this letter a clause should be added tying up future receipts by French from Army reimbursements in excess of current requirements to repayment. A. R.]

Treasury Department,
Office of Assistant Secretary,
July 22, 1918.

My Dear Mr. de Billy: You will recollect the talk which Mr. Crosby and I had with Mr. Simon the early part of this month in relation to the situation in France presented to the attention of the Secretary of the Treasury by Mr. Clemenceau's message of ——. In the course of this conversation it was suggested that if the Secretary of the Treasury assented to the immediate use of some part of the United States advances to your Government for purchasing in the market or otherwise anticipating the maturity of some of the outstanding obligations of the French Government maturing during the year 1919 it might have a favorable effect upon the situation under discussion in relation to the outstanding notes of the Bank of France. While obviously retiring obligations of your Government payable in United States in advance of their due date would not affect the amount of the Bank of France notes outstanding nor the security held therefor, yet the psychological effect of such action upon the public ought to be favorable, and if the neutral securities held as collateral for such obligations were used in such a manner as to improve the position of the franc as against certain neutral currencies it should serve to maintin public confidence.

I now understand from Mr. Simon's talk with Mr. Rathbone on the 20th instant that it is the opinion of your Government that an operation of this character would be advantageous. It seems to me that for the present, at least, our attention should be directed to the obligations of your Government, issued under the first and second operations in neutral securities, both because these are the next maturing obligations of your Government in this country and because there are pledged to secure the same securities of neutral countries. I think it would be wise to commence these operations by purchases of these obligations in the open market, and if these securities are now selling on the basis of interest yield it ought to be possible to purchase considerable amounts thereof without advancing the quotations. You will, of course, appreciate that it is of some concern to the Treasury how rapidly funds are used for the purpose of retiring, by purchase or otherwise, the securities above mentioned, and I suggest that at the outset the operation be limited to the expenditure of not exceeding $50,000,000. When this money has been expended for the purpose I shall be pleased to confer with you as to the best method of continuing the proposed operation.

If it is the wish of your Government to undertake such operation at this time you may consider the arrangement embodied in Secretary McAdoo's letter to Mr. Tardieu of March 11th and Mr. Tardieu's reply of March 13th as modified to the following extent, namely: That United States advances to your Government up to $50,000,000 may be used in the purchase in advance of their maturity, at not exceeding par, of notes of your Government issued and outstanding under the first and second operations of your Government in neutral securities and maturing respectively April 1 and July 31, 1919. It is understood, of course, that the notes so purchased shall be forthwith cancelled. I should like to be kept informed of the progress made in purchasing these obligations, and should expect that the security held for these issues should not be withdrawn without previous consultation with this Department.

I am, my dear Mr. De Billy,

Very truly yours,

——— ———.

Mr. Edouard de Billy,
Acting French High Commissioner,
1954 Columbia Road NW., Washington, D. C.

Exhibit No. 2902

August 14, 1918.

Mr. Edouard de Billy,
French Deputy High Commissioner.

Dear Mr. de Billy: Referring to my message to the President of the French Cabinet transmitted to you on July 8, 1918, and to your letter of July 17, 1918, transmitting the translation of a telegram from Mr. Klotz, I take pleasure in advising you that in accordance with said message and for the purpose therein indicated, a special credit has been established in favor of your Government in the sum of $200,000,000 to be made available against the execution of obligations of your Government in a corresponding amount and to be dealt with as follows:

This credit will be opened on the books of the Treasurer of the United States and, unless earlier availed of with my consent, will be held by the Treasurer of the United States until the proclamation of the President of the United States declaring peace, and thereafter it may be used to purchase commodities, other than gold, in the United States.

Arrangements will be made for the remission of interest on the obligations of your Government above referred to so that interest thereon will be collected only upon such amounts thereof as are actually paid out and only from the dates of such payments.

In accordance with my message above referred to, in case the British Government shall undertake to provide a portion of the said special credit, or in case dollar funds shall become available to the French Government in excess of its current cash requirements in the United States, the amount of said special credit is to be diminished by a corresponding amount and any dollar funds so available shall pro tanto take the place of such credit under precisely the same arrangements as those fixed in respect thereof.

I am, my dear Mr. de Billy,

Cordially yours,

[S.] W. G. McAdoo.

EXHIBIT No. 2903

[Pencilled note in margin: July 26/18—Mr. Rathbone, I think we should telegraph Klotz message to Crosby & ask his advice. R. C. L.]

HAUT COMMISSARIAT DE LA REPUBLIQUE FRANCAISE,
1954 Columbia Road NW., Washington, D. C., July 24, 1918.

(*The High Commissioner of the French Republic, to the Hon. R. C. Leffingwell, Assistant Secretary of the Treasury, Washington, D. C.*)

MY DEAR MR. LEFFINGWELL: Referring to the conversation which Mr. Simon and Mr. Bloch had with Mr. Rathbone, this morning, I beg to enclose herewith a translation of a cable received from the French Minister of Finances.

As you will see the French Minister is considering paying off before maturity the collateral loans made by the French Government in the United States.

If the conditions under which the loans have been made do not actually permit of their being paid off, as contemplated by Paris, it seems to me, nevertheless, that there are other means of obtaining a similar result, that is to say the release of the collateral securing the loans.

One of these means would be to purchase in the market as many bonds as could be secured at reasonable prices and have these bonds cancelled according to the loan agreements against the release of a corresponding amount of collateral.

Another solution would be the substitution of United States Government securities for the collateral now securing the loans. In fact both these procedures could be used simultaneously to great advantage.

While remaining with my collaborators entirely at your disposal for any further consideration of this matter, I am, my dear Mr. Leffingwell,

Very truly yours,

[s.] BILLY.

EXHIBIT No. 2904

[Pencilled note in margin: Apr. 1, '19, Anglo Fr. Loan?]

SEPTEMBER 4, 1918.

In view of the arrangements hitherto made with your Government and embodied in Mr. Leffingwell's letter to Mr. Simon of December 3, 1917, and Mr. de Billy's reply of December 27, 1917, by which my Government is assured of the continued supply of francs by your Government to meet its army expenditures in France, I am willing to consent to the present use of the advances to your Government to the purchase and redemption in dollars at not exceeding par and accrued interest of the obligations of your Government which mature respectively ——— and ——— and designed as the two operations in neutral securities to the aggregate principal amount of $200,000,000. The possibility of my consenting to such a payment was contemplated by the agreement embodied in my letter to Mr. Tardieu of March 11, 1918, and the consent which I now give must not be deemed to modify that agreement but must be taken as a reaffirmation of the same. I shall be obliged if you will arrange the details of the matter with Mr. Leffingwell or Mr. Rathbone. As stated in my letter of March 11, the collateral held for these obligations shall be held in such manner as may be agreed between us as most advantageous in the common interest. You will appreciate that by permitting the payment of these obligations before maturity and when your expenditures in the United States exceed our expenditures in France that the result may be in carrying out the arrangement of December 1917. In the future you will have available in the United States more dollars than needed to meet your approved current expenditures here. I therefore must make it a condition of such advance that any such surplus dollars shall be used by your Government for such purposes as I shall approve. I am not unmindful of the fact that in view of the present course of the franc exchange it is likely that you would next April be called upon to make payment of your obligations then maturing in francs rather than in dollars and this is an additional reason why I must impose the condition mentioned.

Permit me to add that in view of the $200,000,000 special credit recently established in favor of your Government and the consent I have now given to the expenditure of an additional $200,000,000 that I should judge from the information I have received from conditions in France that all present need for further strengthening the position of the bank notes of the Bank of France has passed.

Very truly yours,

——— ———.

EXHIBIT No. 2905

LONDON, *Dated Sept. 10, 1918.*
[Recd. 8:44 p. m.]

SECRETARY OF STATE,
Washington:

1771. September 10, 2 p. m.

For Rathbone from Crosby, 510. Your number 383. Consider that furnishing of money for anticipation of French maturities should be accompanied, if at all, by the following conditions: First, that the transaction will be understood to have no bearing upon or constitute a precedent for any discussion of the modification of March agreement such as French Treasury has recently urged upon us. Second, that arrangements shall be made by virtue of which a certain proportion of the collateral in question shall be sold to realize neutral currencies, and that some proportion of the neutral currencies thus realized shall be available *of the* United States at cost to the French Government. Third, that purchase before maturity from American citizens by French Government of its obligations with funds advanced by the United States Treasury shall be made through public announcement at a figure satisfactory to the Secretary of the Treasury. Fourth, that any sums advanced for the purpose shall be specifically understood to be repayable out of any current monthly surplus of dollars made available to the French Government through advance of francs to us over the French current monthly expenditures in the United States and as fast as such surplusses may be accumulated consider that our interest in the matter lies chiefly in possible benefit from use of collateral. The dates at which anticipations may be effected with advances from the Treasury should be determined with reference to the ease with which Treasury could meet additional demands upon it, and with respect to consideration of the value of collateral above mentioned. The conditions above stated are not in contradiction with anything said by you, Leffingwell, or myself when this subject was discussed in my office at Washington. Have just received from Tardieu another memorandum proposing modification of existing arrangement which I have not yet fully digested, but at a glance see that it contains conditions which it is not likely we shall be willing to accept. Do not consider that we are under any obligation to hasten conclusion of French propositions for general modification unless the conclusion should be that we stand on our original ground without any modification, but as it always remains possible that some modification may be agreed upon, feel that the first condition above mentioned should be absolutely made clear or otherwise that subject of anticipation of maturities be dropped. Have just learned from Paris office that Bank of Paris during 30 days ending September 6 made net purchase in Paris of approximately $8,000,000 and net sales of francs in New York, of approximately $4,250,000. In approximately the same period British have sold sterling to value of $66,000,000. All these sales result simply from fact that we are lending money with which these Governments purchase our products for their own use and that *for* their nationals and *through* lack of control by our Government of the purchases made by our nationals in Great Britain and France, seriously doubt whether such funds should be available for operations in America free from appeals, the Secretary of the Treasury especially any use which would not reduce the current advances to Allied Governments and any purchase in the open market of obligations held by American citizens who are not apprized of general plans for the purchase of such obligations before maturity.

PAGE.

H. A. C.

EXHIBIT No. 2906

SEPTEMBER 13, 1918.

Mr. JOSEPH SIMON,
The French High Commission,
1954 Columbia Road, N. W., Washington, D. C.

DEAR MR. SIMON: Mr. Crosby has expressed the following views in relation to United States advances to your Government to enable it to anticipate certain of its maturities:

1. The transaction should be understood to have no bearing upon, and not to constitute a precedent for any discussion of a modification of the March agreement such as the French Treasury has recently urged upon the United States Treasury.

2. Arrangements shall be made, by virtue of which, a certain proportion of the collateral now held to secure the obligations to be retired prior to their maturity shall be sold to release neutral currencies, and some proportion of the neutral currencies thus released shall be made available through the United States Treasury at the cost thereof to the French Government.

3. Sums advanced by the United States Treasury for the purpose of retiring French obligations shall be specifically understood to be repayable out of any current monthly surplus of dollars made available to the French Government (through advance of francs to the United States) over the French current monthly expenditures in the United States, and as fast as such surplusses may be accumulated.

Very truly yours,

[s.] ALBERT RATHBONE.

AR: HB.

EXHIBIT NO. 2907

WHITE & CASE,
14 Wall Street, New York, November 16, 1918.

JDW-MC.
Re American Foreign Securities Company.

BANKERS TRUST COMPANY,
16 Wall Street, New York City.

DEAR SIRS: In our letter to you of November 6, 1918, with reference to the proposed request by American Foreign Securities Company for the release of securities pledged under its indenture of August 1, 1916, and substitution therefor of a United States certificate of indebtedness of $100,000,000, we called your attention to the provisions of section 3 of article Three of said indenture, under which the exchange might be made if approved by Messrs. J. P. Morgan & Co. and Brown Brothers & Co.

We understand that such approval will be given and we have agreed with counsel for Messrs. J. P. Morgan & Co. on the general form of the several documents which will be required in effecting the exchange. These documents will be:

(1) A request from the American Foreign Securities Company.

(2) Resolutions by the board of executive committee of the American Foreign Securities Company.

(3) An agreement between the Government of the French Republic, American Foreign Securities Company and Bankers Trust Company.

(4) A certificate by Messrs. J. P. Morgan & Co. and Brown Brothers & Co. as to the valuation of the securities released and of the certificate of indebtedness pledged in substitution.

(5) Approval of the transaction by Messrs. J. P. Morgan & Co. and Brown Brothers & Co.

If the above documents substantially as now agreed to by us are executed and delivered, you will in our opinion be authorized under the terms of said indenture to make the exchange, without liability on the part of your directors or on your part, as trustee, and there will be no obligation on your part as trustee to question the values of the securities to be released or the values of the securities to be substituted or the form or nature of the latter, and you as trustee will be obliged under the terms of the indenture to make the substitution as requested by the Security Company and approved by said banking firms.

Very truly yours,

(Sgd.) WHITE & CASE.

Doc. 26094, File 2162.
Amer. For. Sec. Co. Coll. Indt.
Aug. 1, 1916.

MEMORANDUM

The only reason that the requested release of the pledged securities under the indenture of August 1, 1916, of the American Foreign Securities Company, and substitution therefor of a United States certificate of indebtedness for $100,000,000 could not be made without breaching the provisions of the indenture, was that J. P. Morgan & Co. and Brown Brothers & Co. were unable to give their approval to the transaction, because at the time the indenture was delivered and the notes issued those firms filed with the Securities Company a letter stating that they would not at any time approve the substitution of collaterals of less value than the value of the collaterals released thereby. The face value of the United States certificate of indebtedness is less than the aggregate face value of the securities to be released.

The difficulty was not because of the nature of the security to be substituted or because of the relative face values or actual values of the securities released and the securities substituted, but because the indenture is specific as to what securities might be substituted for withdrawals and did not mention for that purpose United States securities. The indenture does, however, provide that a different transaction in the way of release and substitution may be had if J. P. Morgan & Co. and Brown Brothers & Co. approve.

Those firms having now determined that by reason of the change in conditions resulting and to result from the ending of the war, involving probably wide fluctuations in exchange rates and making difficult any liquidation of foreign securities, such as those to be released, they are justified in approving of the substitution, there will be no obligation on your part as trustee to question the values of the securities to be released or the values of the securities to be substituted or the form or nature of the latter, and you as trustee will be obliged under the terms of the indenture to make the substitution as requested by the Securities Company and approved by said banking firms.

Exhibit No. 2908

Piping Rock Club,
November 13, 1918.

My Dear Vermilye: I return the resolution with my signature but I would like you to raise one or two questions with Mr. Morgan. It is quite possible they were raised at the meeting and disposed of satisfactorily.

First let me say that the transaction has my entire approval and that it is desirable to put it through—also that it is far safer for the note holders than their present status.

What I question, however, is the right of the company and of its officers to depart from the terms of the indenture as I remember it. In it the French Republic was to maintain a certain margin in securities such as were deposited behind the note. Now, we propose that this margin shall be in French Treasury ctfs. This amounts to a borrower margining with his own paper and that would not be acceptable in any banking transaction. In this case with a U. S. certificate substituted for the collateral no note holder could object from the point of view of security but from a legal and contractual point of view the co. must consider what action the note holder or a viewer (?) could take if he did object.

Another thing: Do we continue to hold the obligation of the Fr. Gov. for $100,000,000—I assume so and that the only change is in the collateral.

I feel sure that our legal lights must have been satisfied themselves that the move can be made and I only wish to be assured of this.

Yours truly,

James J. Brown.

Exhibit No. 2909

MEMORANDUM OF TELEPHONE CONVERSATION BETWEEN MR. CLOSE AND MR. PROSSER AND MR. RATHBONE, ASS'T SEC'Y OF THE TREASURY DEPT., AT WASHINGTON, D. C., THURSDAY, SEPTEMBER 26, 1918

Mr. Rathbone. I think it was a most extraordinary attitude for the committee to take, in view of our talk yesterday and advice of your own counsel: I think they have gone out of their way to obstruct the work of the Treasury Department and the French Government.

* * * * * * *

Mr. Rathbone. In view of the advice of their own counsel, it strikes me as a most extraordinary attitude for your committee to take. Your counsel advised that you would have absolute protection. I wish very much that your committee would reconsider their action.

* * * * * * *

Mr. Rathbone (to Mr. Prosser). I am very much surprised to hear from Mr. Close, in view of our interview here and the advice of your own counsel, that the Trust Company could question the protection of a credit on the books of the Treasury of the United States and that they want a Treasury certificate of indebtedness ——— and in view of the fact that they were absolutely protected in taking a book credit with the Treasury I think it very extraordinary for them to take the position that they want a certificate of indebtedness; particularly too in view of the fact that it is against the policy of this Department to put up U. S. obligations as collateral, I do not think we could handle the business that way.

Mr. PROSSER. We would go to any limit to help out in this matter. We had the matter up with our committee; they are very anxious to cooperate in every way, but they feel that possibly we ought to have negotiable securities if we are going to commit a breach of trust—something better understood; in any event, we had a very serious meeting over it, and if it did not involve such a large sum of money we might feel different, but involving the sum it does——

Mr. RATHBONE. My whole feeling about the thing was that you were amply protected by the Treasury of the United States and my view was upheld by the opinion of your counsel.

Mr. PROSSER. It is very difficult to argue that sort of thing; that it is not ample protection I would not undertake to argue. There is such a very large sum of money connected with this trust that if we are asked to modify or violate such a trust it should be done in such a way that the matter is better understood, some way not so informal——

Mr. RATHBONE. I do not see that there is anything informal about the transaction; it seems to me that a credit on the books of the United States and advice from the Secretary of the Treasury, if such credit is a very formal matter, is good in every way, and is absolutely a compliance with the terms of a trust, and I do not see and your counsel does not see either why you are not amply protected.

I explained to your representative that the policy of the Treasury Department would not permit doing this in any other way than that proposed.

Mr. PROSSER. Why can't it be done in the way we want?

Mr. RATHBONE. Because we are not willing to issue certificates of indebtedness and have them held as security for other governments.

Mr. PROSSER. We had a very serious meeting over this matter and when I tell you that it is on account of the very large sum involved —— that the committee would like it done in such a way that the security is marketable. I do not believe that one could put into words a criticism of this thing——

Mr. RATHBONE. I do not see that there is any criticism—that's just the point I am getting at. You are absolutely protected. The Trust Company, for some unknown reason will not do what we want but will do it some other way——

Mr. PROSSER. I would like to be able to give you some assurance that our committee would feel differently if I brought it up again, but I really feel that they considered it very very thoroughly and were unwilling to permit us to part with our trust security here upon such a letter.

Mr. RATHBONE. Well, all I have to say is that it is very surprising to me to receive such an explanation, and I hope the Trust Company does not advertise it and that they will consider whether or not there will be any loss to them from it. We all know how much these trust matters are regarded so long as the bondholders are protected, and counsel can't say that the form you suggest is any more legal.

Mr. PROSSER. If you have any feeling that we have not got the idea of this thing I would very much like to have a letter from you with your further advice upon it.

Mr. RATHBONE. I don't know exactly what to do about it. I am quite surprised—— it is one of those things very hard to understand; there is no reason given at all—just that "they have a feeling." A feeling is very hard to define. I would like to know ——. If there are any reasons, I would be very glad to have them, but just "a feeling of the committee" is not very much and I am surprised at it.

Doc. 26634, file 2162.
American Foreign Securities Co.
3-yr. note agreement of Aug. 1, 1916.

EXHIBIT No. 2910

MY DEAR MR. DE BILLY: Referring to the letter addressed to you by the Secretary of the Treasury under date of October —, 1918, in regard to the establishment of a special credit in favor of your Government to assure the payment at maturity of the principal and interest of the obligations of your Government in the amount of $100,000,000 held by American Foreign Securities Company, and for the other purposes in said letter indicated, I understand that your Government will make the following arrangements in order to carry out the views of the Secretary of the Treasury as expressed in his letter above mentioned.

(1) Your Government will enter into and perform an agreement with American Foreign Securities Company and Bankers Trust Company, in substantially the form hereto attached as exhibit A, an original thereof to be furnished the Treasury Department.

(2) All notes issued and outstanding under the collateral indenture of American Foreign Securities Company of August 1, 1916, now or at any time hereafter purchased or controlled by your Government, shall at once be delivered to Bankers Trust Company under the said agreement exhibit A, and you will keep the Treasury Department informed of all such deposits and all notations made upon the certificates of indebtedness to be held by Bankers Trust Company under said agreement.

(3) Until the maturity of the said notes of American Foreign Securities Company your Government will purchase and pay for said notes if and when offered to it at private sale up to par and accrued interest, and will bid par and accrued interest for all said notes offered for sale on the New York Stock Exchange on the understanding that the United States Treasury will advance upon said certificates of indebtedness or against obligations of your Government or in such other manner as the United States Treasury shall determine the required funds if and to the extent that your Government has no other dollar funds available for the purpose. Will you be good enough to confirm the foregoing arrangement.

I am, my dear Mr. de Billy,

Very truly yours,

——— ———.

OCTOBER 14, 1918.

Indenture dated the — day of October 1918, made by and between the Government of the French Republic, hereinafter termed the French Government, party of the first part, American Foreign Securities Company, a Delaware corporation, hereinafter termed the Securities Company, party of the second part, and Bankers Trust Company, a New York corporation, hereinafter termed the Trust Company, party of the third part.

Heretofore and under date of July 18, 1916, the French Government and the Securities Company entered into an agreement in pursuance of which the Securities Company advanced to the French Government the sum of $100,000,000 taking its obligation therefor and pledged to secure the same certain neutral securities and certain American securities.

Thereafter and in accord with the provisions of said agreement of July 18, 1916, the Securities Company executed its collateral indenture to the Trust Company as trustee bearing date August 1, 1918 (hereinafter termed the collateral indenture) to secure an issue of its three-year 5% collateral gold notes (hereinafter termed the notes) in the aggregate principal sum of $94,500,000 all of which have been issued and are now outstanding and secured the same by the pledge and hypothecation thereunder of the neutral securities and American securities. All of the cash deposited with the Trust Company contemporaneously with the execution of the collateral indenture has been applied by the Trust Company in accordance with the terms of the collateral indenture.

The French Government desires to obtain the immediate delivery to it of the neutral securities now pledged under the collateral indenture free and clear from such pledge and hypothecation and any and all claim thereon of the Securities Company and of the Trust Company and to assure the payment of the principal and interest of the notes when due and payable.

The installments of interest on said obligation of the French Government and on the notes of the Securities Company have been paid in full as they became due. To the extent that holders of notes have not collected the past due interest on their notes and surrendered their coupons therefor the amounts required to pay said coupons in full upon their surrender have been deposited with Messrs. J. P. Morgan & Co. and are irrevocably dedicated to that purpose. The French Government now owns or controls $—— principal amount of the notes with all unmatured coupons attached.

In consideration of the premises and of other good and valuable considerations to each of the parties in hand paid by the other, the receipt whereof is hereby acknowledged, this indenture witnesseth:

FIRST

Contemporaneously with the execution of this indenture the French Government has surrendered to the Trust Company for cancellation $—— principal amount of the notes with all unmatured coupons attached and the Trust Company hereby acknowledges the receipt thereof and agrees forthwith to cancel the same as paid.

Contemporaneously with the execution of this indenture the French Government has delivered to the Trust Company and the Trust Company hereby acknowledges the receipt of United States Treasury certificates of indebtedness (hereinafter termed the Treasury certificates) to an aggregate principal amount of $—— and in substantially the form hereto attached as Exhibit A. The Treasury certificates have been procured by the French Government to assure the payment of its obligations held as aforesaid by the Securities Company and the Treasury certificates are delivered to the Trust Company under this indenture at the request of the Securities Company to be held by the Trust Company primarily to secure the payment of the outstanding notes upon their maturity and secondarily to secure the payment of the obligation of the French Government held by the Securities Company. To the extent that the Treasury certificates or the amounts paid thereon are not required for the purpose of paying at their maturity the notes or said obligation the French Government hereby irrevocably directs the return or payment thereof to the Secretary of the Treasury of the United States, the Securities Company irrevocably assents to such disposition thereof and the Trust Company agrees to make delivery or payment accordingly. A deposit of cash for the payment of the principal and interest to maturity of the outstanding notes and in an amount sufficient for the purpose with Messrs. J. P. Morgan & Company shall for all the purposes of this indenture be deemed and accepted by the Securities Company and the Trust Company as the payment of the principal and interest of the notes.

SECOND

The Securities Company and the Trust Company severally and respectively do hereby release and discharge the neutral securities from all and every claim and charge they have thereon or in respect thereof and the Trust Company agrees forthwith to deliver the same to or upon the order of the French Government freed from all and every lien, claim, and charge thereon of the collateral indenture.

THIRD

The Securities Company agrees to credit the French Government on account of its indebtedness to the Securities Company with an amount equal to (1) the principal of and unpaid interest upon all notes surrendered by the French Government to the Trust Company for cancellation contemporaneously with the execution of this indenture.

(2) The principal and unpaid interest upon all notes hereafter surrendered by the French Government to the Trust Company for cancellation pursuant to the terms of this indenture.

(3) All amounts paid to and received by the Trust Company upon Treasury certificates and by it applied or held for application to the payment of the principal and interest of the notes.

FOURTH

From time to time as the French Government shall surrender to the Trust Company for cancellation any of the outstanding notes the Trust Company shall forthwith cancel the same as paid and thereupon make appropriate notation upon the Treasury certificates to show that the amount thereof had been reduced by an amount equal to the principal amount of the notes so surrendered for cancellation and from time to time upon the request of the French Government the Trust Company will certify to it the amount of notes so surrendered and cancelled and the notations made by the Trust Company upon the Treasury certificates.

FIFTH

If pursuant to the election of the Securities Company the French Government shall be called upon to make payment of its said obligation given to the Securities Company or any part thereof by the issuance of its bonds in accordance with the provisions of article twelve of said agreement of July 18, 1916, between the French Government and the Securities Company, the French Government shall make delivery of all such bonds to the Trust Company, which delivery is hereby accepted by the Securities Company as good and sufficient delivery to it under the terms of said agreement of July 18, 1916, and thereupon the Trust Company will hold the bonds so delivered, subject to the order of the Securities Company, and shall forthwith make appropriate notation upon the Treasury certificates to show that the amount thereof has been reduced by an amount equal to the principal amount of the bonds of the French Government so delivered to the Trust Company.

In witness whereof the parties hereto have caused this indenture to be duly executed as of the day and year first above written.

CERTIFICATE OF INDEBTEDNESS

THE UNITED STATES OF AMERICA IS INDEBTED TO BANKERS TRUST COMPANY IN THE SUM OF ——— DOLLARS

This certificate is issued under the authority of the act of Congress approved September 24, 1917, as amended and supplemented by the act of Congress approved April 4, 1918, the act of Congress approved July 9, 1918, and the act of Congress approved September 24, 1918, and is payable without interest at the office of the Federal Reserve Bank of New York, on August 1, 1919, or on such earlier date as the principal of the notes of American Foreign Securities Company issued and outstanding under its collateral indenture dated August 1, 1916, to Bankers Trust Company as trustee shall become due by declaration or otherwise.

This certificate shall be exempt from all taxation now or hereafter imposed by the United States, any State, or any of the possessions of the United States, or by any local taxing authority, except (a) estate or inheritance taxes, and (b) graduated additional income taxes, commonly known as surtaxes, and excess profits and war-profits taxes, now or hereafter imposed by the United States, upon the income or profits of individuals, partnerships, associations, or corporations. The interest on an amount of bonds and certificates,issued under authority of said act approved September 24, 1917, or by said act as amended by said act approved April 4, 1918, the principal of which does not exceed in the aggregate $5,000, owned by any individual, partnership, association, or corporation, shall be exempt from the taxes provided for in clause (b) above. At the option of the Secretary of the Treasury all or any part of this certificate may be paid before its maturity. This certificate shall not bear the circulation privilege and will not be accepted in payment of taxes.

This certificate is not valid for any purpose unless countersigned by the Federal Reserve Bank of New York as fiscal agent of the United States.

Dated: Washington.

(Signed) W. G. MCADOO,
Secretary of the Treasury.
(Signed) HOUSTON B. TEEHEE,
Register of the Treasury.
FEDERAL RESERVE BANK OF NEW YORK,
Fiscal Agent of the United States.
By ——— ———, *Cashier.*

EXHIBIT NO. 2911

OCTOBER 19, 1918.

MY DEAR MR. DE BILLY: I have given careful consideration to the request of your Government that arrangements be now made to assure the payment at maturity of the principal and interest of the obligation of your Government in the amount of $100,000,000 held by American Foreign Securities Company and of the obligations of the American Foreign Securities Company issued and outstanding under its collateral indenture dated August 1, 1916, to Bankers Trust Company as trustee, and thus effect the immediate release of the neutral securities held as collateral under said collateral indenture to secure payment of the obligations of American Foreign Securities Company aforesaid.

I take pleasure in advising you that in accordance with your request, a special credit has been established in favor of your Government in the sum of $100,000,000 to be made available against the execution of obligations of your Government in a corresponding amount.

(1) This credit is to be used only for the purpose of purchasing at par United States Treasury certificates of indebtedness of a special series, to be issued for that purpose, which will bear no interest and which will mature on August 1, 1919, or at such earlier date as the principal of the obligations of American Foreign Securities Company issued and outstanding under said collateral indenture shall become due and payable. Your Government will make arrangements satis-

factory to the Treasury Department regarding the use and disposition of such certificates of indebtedness, the reduction in amount thereof from time to time to correspond with the principal amount of said obligations at not less than par and accrued interest, and the immediate release of the neutral securities hereinbefore referred to.

> (2) All the securities now held as collateral under the collateral indenture as and when released therefrom are to be used by the French Government in such manner as may be agreed upon between us as most advantageous in the common interest and on the understanding that the United States Treasury shall have an opportunity of sharing in the foreign securities provided by the use of the neutral securities so released upon making payment for such foreign currencies so obtained by the United States Treasury in dollars equivalent at then then current rate of exchange of the foreign currencies thus made available to the United States Treasury or, if such foreign currencies are obtained at a less cost by the French Government, then upon making payment in dollars equivalent at the then current rate of exchange to such cost.
>
> (3) In case there shall become available to your Government a surplus of dollar funds in excess of its current cash requirements for war purposes in the United States such excess shall be paid to the Treasurer of the United States up to the sum of $100,000,000, to be used in the payment of a like principal amount of obligations of the French Government held by the Government of the United States, or in such other manner as may be agreed upon between the French Government and the Secretary of the Treasury.

Arrangements will be made for the remission of interest on the obligations of the French Government to be given as hereinbefore set forth, so that interest thereon will be collected only upon such amounts thereof as shall correspond to the actual payments made upon said certificates of indebtedness, or otherwise advanced against such obligations, and only from the dates of such respective payments and advances.

One of the important reasons for the arrangement made hereby is to obtain the immediate release of the foreign securities held as collateral under said collateral indenture, so that the same may be used to rectify and stabilize foreign exchanges, and I understand that you will discuss with the Treasury Department at an early date the method of procedure to be adopted to avail of these securities to the best advantage.

I am, my dear Mr. de Billy,
Very truly yours,

/s/ WM. G. MCADOO.

MR. EDOUARD DE BILLY,
Deputy French High Commissioner,
Washington.

EXHIBIT NO. 2912

JDW-MC.

WHITE & CASE,
14 Wall Street, New York, November 6, 1918.

Re American Foreign Securities Company.

BANKERS TRUST COMPANY,
16 Wall Street, New York City.

DEAR SIRS: As trustee under the collateral indenture of August 1, 1916, between the American Foreign Securities Company and Bankers Trust Company, trustee, your company has authenticated $94,500,000 3-year 5% notes of American Foreign Securities Company, due August 1, 1919, upon which interest has been paid to and including August 1, 1918, and your company holds American and foreign securities as collateral to such notes of an estimated value of upward of $100,000,000.

Such securities belong to the Government of the French Republic and were pledged by it to the Securities Company with power of rehypothecation and to secure its obligation given to that company for $100,000,000, against a loan of a like amount made to it by that company. Your company's dealings with such securities should be governed by the provisions of said indenture.

We understand that the French Government desires to obtain the release and delivery to it of all such foreign securities, and the Securities Company desires also, in anticipation of a further request that may hereafter be made by the

French Government, to obtain the release to the Securities Company of all such American securities.

We also understand that the United States Government is willing to make and advance to the French Government sufficient primarily to secure the payment of the principal and interest of the outstanding notes to authenticated by you, and secondarily sufficient to pay the obligation of the French Government to the Securities Company, such advance not, however, to exceed $100,000,000 and to be given in the form of a nonnegotiable United States certificate of indebtedness for $100,000,000, payable to Bankers Trust Company or bankers Trust Company, trustee, without interest, at the Federal Reserve Bank of New York on July 31, 1919, and to be deposited with you in substitution for such American and foreign securities.

No written request from the French Government, nor written request or resolution of the Securities Company, has been shown to us and we do not understand that as yet any has been prepared.

There has been presented to us a form of a proposed agreement between the French Government, the Securities Company and Bankers Trust Company, trustee, under said identure, intended to provide for the carrying out of the release of securities, as above described. The original draft of this agreement was made by officials of the United States Treasury Department, and it has been the subject of conference with them and has passed through subsequent revises by counsel for all parties thereto, including ourselves as representing your company. It is not yet satisfactory to us as to form in some particulars.

There are two questions for you to consider in connection with this transaction: First, the liability of your company and of your assenting directors in the event the securities should be improperly released by you and for any reason the notes should not be paid and, second, your right to comply with the request and release the securities under the contemplated plan.

If the securities should be improperly released and the notes not paid, there is no doubt but that the amount due thereon would be a preferred claim against your company, having priority over your depositors, and that also your assenting directors would be personally liable, but this result could not obtain even if the securities would under the proposed plan be improperly released unless both the United States Government and the French Government defaulted on their said obligations when due. We say "when due" because a default when due, even with a subsequent payment, would create a disastrous hiatus not perhaps so much as to the financial side, because eventually, undoubtedly payment would be made, but as to the odium that would attach to your company in having breached this large and important trust.

We call your attention to the above points not with any thought of the possibility of failure or delay in the payment when due of such obligations of either the United States or the French Governments, but because the immense sum involved justifies the examination of the plan from that standpoint.

The vital question is as to your right to comply with the request and release the securities under the contemplated plan.

The indenture provides in substance, in article three, section 3, that from time to time on the duly authorized written request of the Securities Company accompanied by certificate as to whether or not such release and substitution is made for the purposes of a contract heretofore made between the French Government and the Securities Company in respect of the loan by the latter to the former, or whether or not request for such release and substitution has been made upon the company by the French Government, and also a certificate addressed to your company, as trustee, signed by J. P. Morgan & Co. and Brown Bros. & Co., specifying the values of the securities to be released and of the securities to be substituted therefor, the trustee shall release from the indenture and deliver to the order of the Securities Company any of the pledged securities "provided, however (except as in each instance otherwise may be approved by J. P. Morgan & Co. and Brown Bros. & Co.)" (1) that the French Government, pursuant to its said contract with the Securities Company, shall have requested that company to release such securities in anticipation of the maturity of the principal thereof; (2) that there shall be pledged under the indenture in substitution other securities of which each shall be the obligation of one of seven specified foreign countries and which substituted securities in the aggregate shall be of value equal to or greater than the value of the released securities; and (3) that the aggregate value of all such obligations of any one of such foreign governments or of any other issue of securities shall not be increased by such substitution to an amount which at any time shall exceed $22,680,000.

It would appear to be the reasonable construction of the above outlined provisions that Messrs. Morgan & Co. and Brown Bros. & Co. might approve of a substitution of securities that did not comply with the above three provisions, namely, (a) that was requested by the French Government for some other purpose than above indicated; (b) where the substituted securities were not of any of the designated foreign governments; and (c) where the aggregate value provision was entirely ignored and a single obligation of the United States Government was accepted.

If you proceed with the substitution upon the theory that you are following the above outlined provisions of the indenture as modified by such approval from those banking houses, you should have such written approval, which should specify the United States certificate of indebtedness that you are to receive.

The question then arises as to the nature of the United States certificate of indebtedness that is to be offered. In this connection it is to be noted that what has at this time been suggested is a certificate payable not to bearer or Bankers Trust Company or order, but directly and solely to Bankers Trust Company either as such or as trustee. The answer to any objection on that ground is, however, that such certificate is to be payable July 31, 1919, the day before the notes mature. If it should not then be paid, it could not be sold and so it makes little difference, it seems to us, whether it is negotiable or not, so long as it is a security and as the agreement does not mention the nature of the securities, it probably is as much of a security as though it were the ordinary bearer certificates of indebtedness. Also it is to be noted that this proposed certificate of indebtedness is really an advance by the United States Government to the French Government. The power to make such advance is found in the act of Congress approved September 24, 1917, as subsequently extended and amended, and it is

> "that for the purpose of more effectually providing for the national security and defense and prosecuting the war, the Secretary of the Treasury, with the approval of the President, is hereby authorized, on behalf of the United States, to establish credits with the United States for any foreign governments then engaged in war with the enemies of the United States."

There are certain limitations as to the aggregate amount of such credits that may be so extended.

The point to be considered is whether or not, without some representation to you by the Secretary of the Treasury in the nature of a declaration that the certificate in question is issued by him with the approval of the President for the purpose of more effectually providing for the national security and defense and prosecuting the war, and without some declaration that the aggregate credits permitted by law will not thereby be exceeded, you will accept the certificate of indebtedness on its face.

We do not know whether any request has been definitely made to the Treasury Department to make any such declaration or whether the Treasury Department is simply assuming that so far as that feature of the matter is concerned, the certificate of indebtedness will be accepted without further inquiry and on the assumption that the Government officials are observing in every respect the limitations of law. The general custom, of course, is that the issuance of United States obligations is not scrutinized, but is accepted on the assumption that Government officials rigidly observe the restrictions placed upon them. That same custom obtains in connection with the issuance of securities by some of the larger municipalities, as, for instance, the city of New York.

If this certificate of indebtedness in question were part of an ordinary issue of serially numbered certificates or other obligations payable to bearer, the usual custom should be observed, but where it is a single certificate, special in its nature, payable solely to a designated payee and for an unusual purpose, it rests with you to determine how far you desire to press for some such declaration as above suggested on the part of the Government officials before expressing your willingness to accept this certificate.

The above suggestions summarized are that you should have a proper agreement, similar to the one now in course of preparation, proper request, certificates and resolutions by the French Government and the Securities Company, a proper written approval by Messrs. J. P. Morgan & Co. and Brown Bros. & Co., and some declaration by the United States Government justifying the issuance of the credit on behalf of the French Government. The theory of this certificate of indebtedness is that the credit is erected under the authority of the statute for the benefit of the French Government. That it is immediately assigned to the

Securities Company and thereupon immediately assigned by the latter to Bankers' Trust Company, trustee, and that the United States Government, in acceptance and recognition of such immediate use by the French Government of the erected credit, payable July 31, 1919, and the several assignments thereof, issues its certificate of indebtedness as contemplated.

There is one other point to which your attention should be directed. The interest on the notes that will be due on February 1, 1919, and also such interest that will be due August 1, 1919, will, as we understand it, be sufficiently covered in amount by the difference between the face value of the United States certificate of indebtedness and the principal amount of the notes now outstanding. The payment of the February interest would, in event of default, be made from the proceeds of such certificate of indebtedness, which by its terms is made to mature prior to July 31, 1919, if the principal of the notes issued under said indenture became due earlier by declaration or otherwise.

Very truly yours,

(Sgd.) White & Case.

Exhibit No. 2913

Certificate of Indebtedness

THE UNITED STATES OF AMERICA IS INDEBTED TO BEARER IN THE SUM OF EIGHTY-ONE MILLION FIFTY THOUSAND EIGHT HUNDRED DOLLARS ($81,050,800)

This certificate is issued under the authority of the act of Congress approved September 24, 1917, as amended and supplemented by the act of Congress approved April 4, 1918, the act of Congress approved July 9, 1918, and the act of Congress approved September 24, 1918, and is payable with interest from January 28, 1919, at the rate of four and one-half per centum per annum at the office of the Federal Reserve Bank of New York on July 31, 1919, or on such earlier date as the principal of the notes of American Foreign Securities Company issued and outstanding under its collateral indenture dated August 1, 1916, to Bankers' Trust Company as trustee, shall become due by declaration or otherwise.

This certificate shall be exempt both as to principal and interest from all taxation now or hereafter imposed by the United States, any State or any of the possessions of the United States, or by any local taxing authority, except (a) estate or inheritance taxes, and (b) graduated additional income taxes, commonly known as surtaxes, and excess profits and war-profits taxes, now or hereafter imposed by the United States, upon the income or profits of individuals, partnerships, associations, or corporations. The interest on an amount of bonds and certificates issued under authority of said act approved September 24, 1917, and amendments thereto, the principal of which does not exceed in the aggregate $5,000, owned by any individual, partnership, association, or corporation, shall be exempt from the taxes provided for in clause (b) above. At the option of the Secretary of the Treasury all or any part of the principal of this certificate may be paid before its maturity, and interest upon all amounts so paid shall cease from the respective dates of payment. This certificate shall not bear the circulation privilege, and will not be accepted in payment of taxes.

Dated, Washington, January 28, 1919.

Exhibit No. 2914

Agence Financiere du Gouvernment Francais aux Etats-Unis,
2 Rector Street, New York, November 15th, 1918.

Seward Prosser, Esq.,
President, Bankers Trust Co., New York City.

Dear Mr. Prosser: After our conversation of yesterday I do not hesitate to give you very frankly, and in the most friendly manner, my views on the present situation as regards the question of the release of the collateral of our loan with the American Foreign Securities Co.

When, a few weeks ago, the plan was formed to use a credit of the United States Treasury to obtain this release, we received from Messrs. J. P. Morgan & Co. and from yourself on behalf of the Bankers Trust Co. a response which I am pleased to acknowledge. Representatives of the Morgan firm, and of the Bankers Trust went with me to consult with Mr. Rathbone at the Treasury Department in order to examine the means of carrying out the plan.

At that time, as well as during all the negotiations, the principle of the operation itself was never put in question. The only reference which was made to it was between ourselves when you told me that you and the executive committee of the Bankers Trust were unanimously of the opinion that, provided the credit to be opened by the Treasury should take the form of a certificate of indebtedness, the operation could be considered as constituting an anticipated payment, making it possible to disregard the provisions of the letter of pledge applying to the collateral and to release the securities forming this collateral.

As to the form of the instrument to be issued by the Treasury Department, you will recall that it had been first contemplated that the United States Treasury should open on its books a credit evidenced by a letter of the Secretary of the Treasury. After an exchange of views and as suggested by you, it was decided to have this credit take the form of a certificate of indebtedness.

This being agreed upon, we set forth to arrange all the details of the transaction. *At the last moment, when everything was ready, I was informed that, at a meeting of your board of directors, objections were made to the operation as contemplated, on the ground that according to the terms of the pledge, it is necessary, in order to release the securities constituting the collateral, to substitute securities of an equal value.*

This view, as you no doubt realize, involves the principle itself of the operation as it was conceived by all of us, and you will understand that, after all that has passed between us, and the reports I have made to my Government of the agreement between us and the Bankers Trust Co., I cannot again approach my Government and the American Government on this subject until the board of directors of the Bankers Trust Co. takes, on the question involved, a formal decision under their own responsility.

The question before them is whether or not they consider a certificate of indebtedness of the American Treasury as acceptable for its exact equivalent in cash. The question being thus presented, I have personally no doubt of the answer.

Believe me, dear Mr. Prosser,
Very sincerely yours,

(Sgd.) J. Frederic Bloch.

(*To Bankers Trust Company, as Trustee under Collateral Indenture with America Foreign Securities Company dated August 1, 1916*)

Dear Sirs: The undersigned hereby approve of the release and substitution of securities called for in the accompanying request of American Foreign Securities Company, made under the provisions of the collateral indenture dated August 1, 1916, between American Foreign Securities Company and Bankers Trust Company, trustee. This approval is given for the purpose of authorizing such release and substitution of securities pursuant to the provisions of section 3 of article three of said collateral indenture.

The change in conditions resulting and to result from the ending of the war, involving probably wide fluctuations in exchange rates and making difficult any liquidation of foreign securities such as those released as above referred to, confirm the undersigned in the opinion that the securities to be pledged in substitution for such released securities are fully as desirable for collateral as the released securities.

Dated January 29, 1919.

(Sgd.) J. P. Morgan & Co.
(Sgd.) Brown Brothers & Co.

Doc. 26634, file 2162.
American Foreign Securities Co.
3-year note agreement of Aug. 1, 1916.

EXHIBIT No. 2916

(Pencilled) 1/28/19.

STATEMENT PRESENTED BY MR. ANDERSON

For convenience in explanation, the securities pledged by the French Government with the company may be considered as divided into two lots:

1. The securities listed in exhibit "A", which are those held by the Bankers Trust Company as security for the payment of the company's three-year notes.

2. The securities listed in exhibit "D", which are the securities held by the company itself, and which are not subject to the collateral indenture with the Bankers Trust Company.

The French Government desires the release of all of these securities, both those in exhibit "A" and "D".

In substitution, the French Government has arranged for the deposit with the Bankers Trust Company of a United States certificate of indebtedness.

Simultaneously with this substitution, the French Government proposes to cancel approximately $18,949,200 of the three-year notes of the company which it has acquired and now holds.

The principal amount of the Treasury certificate to be deposited will be equal to the difference between $100,000,000 and the $18,949,200 of notes to be surrendered and cancelled by the French Government or $81,050,800.

The Treasury certificate matures July 31, 1919, or any earlier date upon which the notes become due in case of default.

The amounts collected on the Treasury certificate are to be applied——

1st, to the payment of the principal and interest of the notes, and

2nd, to the payment of the principal of the obligations of the French Government to the company under its contract of July 18, 1916.

The French Government contemplates purchasing, from time to time, additional notes of the company, and surrendering them for concellations, in which event the principal amount of such notes are to be credited as payments on account of the Treasury certificate, and to be noted thereon.

Thus, from time to time, the amount of the Treasury certificate will be reduced.

Inasmuch as by the surrender by the French Government for cancellation of notes of the Securities Company (bearing unmatured coupons) as above stated, the Securities Company will be relieved from, itself, paying the amount of such notes and coupons so cancelled, the new agreement provides that the amount of such notes and unmatured coupons shall be credited as prepayments in part of the $100,000,000 obligation of the French Government to the Securities Company under its contract of July 18, 1916; but nevertheless, as provided in said contract the French Government remains obligated to pay interest at the contract rate of 7¼% on the entire $100,000,000 up to July 31, 1919.

In the negotiations with the Treasury Department it became necessary to agree that the Treasury certificate should be secured only for the payment of the *principal* of the obligation of the French Government to the Securities Company; but as the Treasury certificate will never exceed the amount of such principal it does not seem that the distinction is of practical importance.

As part of the transaction in which the Treasury certificate is deposited with the Bankers Trust Company, as above stated, the French Government will also pledge with the Securities Company as security under the contract of July 18, 1916, the securities scheduled in exhibit "F" of an estimated valuation of about $9,000,000. Thus the Treasury certificate will secure the payment of the principal of the obligation of the French Government to the Securities Company, and the securities pledged in exhibit "F" will secure the payment of the interest.

American Foreign Securities Co.
3-Yr. Note Agmt. Aug. 1, 1916.

EXHIBIT NO. 2918

JULY 31, 1919.

Re American Foreign Securities Co.
Collateral indenture dated August 1, 1916.

Monsieur J. FREDERIC BLOCH,
Agencs Financiere Du Government Francais aux Etats-Unis,
2 Rector Street, New York City.

DEAR SIR: We beg to advise that we have this day collected the principal amount of the United States of America certificate of indebtedness dated January 28, 1919, due July 31, 1919, amounting to $79,405,800.

As provided by the agreement between the Government of the French Republic, American Foreign Securities Co. and Bankers Trust Company, individually and as trustee, dated January 29, 1919, we have reserved for the payment of all outstanding American Foreign Securities Company three-year 5% notes due August 1, 1919, $73,905,800 and for the payment of interest due August 1, 1919, on the above notes $1,847,645, and have handed our check for the balance, i. e., $3,652,355, to the American Foreign Securities Company.

We have requested the Federal Reserve Bank of New York to place to the credit of the Treasurer of the United States $1,810,441.49, representing the interest due on the United States Treasury certificate above mentioned as provided by article first of the agreement of January 29, 1919.

Very truly yours,

——— ———, *Vice President.*

EXHIBIT NO. 2919

AGENCE FINANCIERE DU GOUVERNEMENT FRANCAIS AUX ETATS UNIS,
2 Rector Street, New York, August 7th, 1919.

The Hon. ALBERT RATHBONE,
Assistant Secretary of the Treasury, Washington, D. C.

MY DEAR MR. RATHBONE: I beg to acknowledge receipt of your letter of August 1st and to confirm my agreement with the following:

1. On the 31st of July 1919, the United States certificate of indebtedness, held by the Bankers Trust Co., in the principal amount of $81,050,800, was collected by said trust company for the net amount of $79,405,800.
2. On the same day, the amount of $1,810,441.50, representing the interest due on the above mentioned certificate, was also collected by the Bankers Trust Co. who immediately repaid it to the Federal Reserve Bank, for account of the Treasurer of the United States, as interest due on the obligation dated January 28th, 1919, of my Government, held by the United States, for the principal amount of $81,050,800 which was reduced on March 14th, 1919 to $79,405,800.

For your information, enclosed please find copy of a letter from the Bankers Trust Co. in reference to this transaction.

I confirm my understanding that from July 31st, 1919, interest will run on the outstanding balance of the above mentioned obligation of my Government, $79,405,800, at the rate of five percent per annum.

I am, dear Mr. Rathbone,

Yours very truly,

/s/ EM. VERGE.

EXHIBIT NO. 2920

REPUBLIC OF FRANCE

DEPARTMENT OF FRANCO-AMERICAN WAR COOPERATION

FRENCH HIGH COMMISSION IN THE UNITED STATES,
1954 Columbia Road, Washington, D. C., November 2, 1918.

(*The Deputy High Commissioner to the Hon. Albert Rathbone, Assistant Secretary of the Treasury, Washington, D. C.*)

MY DEAR MR. RATHBONE: Answering your letter of the 25th ult., I beg to advise you that on November 1st the bank balances of the French Government in the United States amounted to $33,000,000.

I estimate that the ordinary expenditures of the French Government in the United States during the month of November will amount to $115,000,000, that is without taking into consideration the interest to be paid to the Treasury on November 15th, nor the purchase of French Government bonds.

Except for advances which I shall ask from you in order to meet the above mentioned expenditures, while waiting for a definite agreement on the question of the release of the collateral securing our loans, it appears to me that the dollars which we are to receive at the rate of $20,000,000 each Tuesday and $10,000,000 each Thursday during the month as the equivalent of the francs deposited with the Caisse Centrale du Tresor Public, will be sufficient to meet our current expenditures during November.

I take the liberty of suggesting, on account of the instructions I have given with the assent of the Treasury to the banks in regard to the purchase of French Government bonds, that a working bank balance of $35,000,000 would seem to be, under present circumstances, a minimum below which we could not very well remain.

/s/ BILLY.

W. GERARD VERMILYE, Esq.,
Secretary, American Foreign Securities Co.,
59 Wall Street, New York City.

DEAR MR. VERMILYE: Replying to your letter of even date it seems to me that it would be well to add to the draft of the proposed letter a clause to the effect that the French Government has indicated its desire that no public statement on this subject should be made.

Yours very truly,

A. M. ANDERSON, *Vice President.*

AMA/MEC.

EXHIBIT No. 2922

59 WALL STREET, NEW YORK,
February 11, 1919.

GEORGE W. ELY,
Secretary, New York Stock Exchange, New York City.

DEAR SIR: In accordance with this company's agreement embodied in its application of August 3rd, 1916, for the listing of its three-year five percent collateral trust notes, I beg to advise you that a change has been made in the collateral security lodged with the Bankers Trust Company, as trustee, to secure this issue of notes, in accordance with the terms of a tripartite agreement executed by the Government of the French Republic, the Bankers Trust Company, trustee, and the American Foreign Securities Company, under date of January 29th, 1919, copy of which is enclosed herewith.

From this it will appear that all the collateral heretofore deposited with the trustee as security for this issue of notes had been released in accordance with the terms of the indenture of this company to the Bankers Trust Company, as trustee, dated August 1st, 1916; that $18,949,200 par value of the notes have been cancelled, and that to secure the remainder of the notes, there has been deposited with the Bankers Trust Company, as trustee, a United States certificate of indebtedness, due July 31st, 1919, for $81,050,800, an amount in excess of the principal and interest of the uncancelled notes.

As the French Government has especially requested that no public announcement regarding this change of collateral be made, no stpes are being taken to publish it in the papers, or put it upon the news slips, and this company will appreciate it if your committee can see its way clear to cooperate with it in complying with the wishes of the French Government.

Requesting the favor of an acknowledgment, I remain,

Yours very truly,

(sgd.) W. G. V., *Secretary.*

c/o J. P. Morgan & Co., New York City.

MY DEAR MR. ANDERSON: Your letter of the 2nd instant has been received, enclosing a draft of the form of reference which in its annual report the American Foreign Securities Company proposes to make to the release of the securities pledged by the French Government. On this I have noted suggestions for certain small changes.

Very truly yours,

/s/ ALBERT RATHBONE.

EXHIBIT No. 2927

[Copy]

During the year negotiations were undertaken between the French Government and the company, ~~pursuant to an agreement with the United States Treasury Department,~~ for the release of the greater part of the collateral lodged with the company, in consideration of the deposit of ~~a~~ United States Government Treasury certificate[s] of indebtedness of an amount more than sufficient to provide for the principal of the company's notes still outstanding. These negotiations resulted in an agreement signed under date of January 29, 1919, by the terms of which there were surrendered to the trustee for cancellation by or for account of the French Government $18,949,200 of the company's three-year notes and there was deposited with the trustee ~~a~~ United States Government Treasury certificate[s] for $81,050,800, being the amount still due the company by the French Government after allowing credit for the decrease in the company's indebtedness through the surrender for cancellation of the above mentioned amount of notes. At the same time, the greater part of the securities held by the company and re-pledged by it to secure its notes, were released to the French Government, leaving, however, an amount of securities sufficient to secure the interest to become payable by the French Government to the company on February 1 and August 1, 1919.

The amount due ~~of~~ [on] the United States Government certificate was collected at maturity and, to the extent necessary, was used in paying off the company's three-year 5% notes which matured on August 1, 1919. Provision has been made by deposit with the trustee of sufficient funds to pay the principal of such notes as have not yet been presented by the holders for payment.

EXHIBIT No. 2929

[Written: Substitution]

AGENCE FINANCIERE DU GOUVERNEMENT FRANCAIS AUX ETATS-UNIS,
2 Rector Street, New York, October 7th, 1918.

Mr. J. N. WALLACE,
President, Central Union Trust Co.,
New York City.

DEAR MR. WALLACE: Referring to our previous conversations, and to the interview which took place at the Treasury in Washington last week, I beg to confirm that it would, in my opinion, be advisable to submit to the approval of your board of directors the general outline of the plan now being evolved, for the liberation of the securities forming the collateral of the 2 yr. 5½% French Government $100,000,000 loan, of which the Central Union Trust is trustee.

As you well know, this plan consists of the substitution for the present collateral of—

(a) The obligation of the United States Treasury for $100,000,000 the exact form of which is still to be determined by mutual agreement between the Treasury Department and yourselves.

(b) A sufficient amount of either the 5½% notes or American securities, to cover to your satisfaction the payment of the interest on the loan, as well as the exchange privilege.

It is, of course, understood that the operation will be made subject to the formal consent of J. P. Morgan & Co., whose approval is in principle already known to me.

I seize this opportunity to express to you my deep appreciation of your wholehearted cooperation for the success of this undertaking which as you have readily seen, is in the interest of our common cause.

Believe me, dear Mr. Wallace,
Very sincerely yours,

(Signed) J. FREDERIC BLOCH.

EXHIBIT No. 2930

OCTOBER 25, 1918.

(Charge to Treasury Department.)

AMEMBASSY,
Paris:

For Crosby from Rathbone. Treasury 513. Embassy's from London 2575, October 8, 10 A. M. Yours 599. Secretary has written French as follows: "I have given careful consideration to the request of your Government that arrangements be now made to assure the payment at maturity of the principal and interest of the obligations of your Government in the amount of $100,000,000 held by American Foreign Securities Company and of the obligations of the American Foreign Securities Company issued and outstanding under its collateral indenture dated August 1, 1916, to Bankers Trust Company, as trustee, and thus effect the immediate release of the neutral securities held as collateral under said collateral indenture to secure payment of the obligations of American Foreign Securities Company aforesaid.

"I take pleasure in advising you that in accordance with your request, a special credit has been established in favor of your Government in the sum of $100,000,000 to be made available against the execution of obligations of your Government in a corresponding amount.

> "(1) This credit is to be used only for the purpose of purchasing at par United States Treasury certificates of indebtedness of a special series, to be issued for that purpose, which will bear no interest and which will mature in August 1, 1919, or at such earlier date as the principal of the obligations of American Foreign Securities Company issued and outstanding under said collateral indenture shall become due and payable. Your Government will make arrangements satisfactory to the Treasury Department regarding the use and disposition of such certificates of indebtedness, the reduction in amount thereof from time to time to correspond with the principal amount of said obligations of American Foreign Securities Company purchased or otherwise paid, the maintenance of the market price of said obligations

at not less than par and accrued interest, and the immediate release of the neutral securities hereinbefore referred to.

"(2) All the securities now held as collateral under the collateral indenture as and when released therefrom are to be used by the French Government in such manner as may be agreed between us as most advantageous in the common interest and on the understanding that the United States Treasury shall have an opportunity of sharing in the foreign securities provided by the use of the neutral securities so released upon making payment for such foreign currencies so obtained by the United States Treasury in dollars equivalent at the then current rate of exchange of the foreign currencies thus made available to the United States Treasury or, if such foreign currencies are obtained at a less cost by the French Government, then upon making payment in dollars equivalent at the then current rate of exchange to such cost.

"(3) In case there shall become available to your Government a surplus of dollar funds in excess of its current cash requirements for war purposes in the United States such excess shall be paid to the Treasurer of the United States up to the sum of $100,000,000, to be used in the payment of a like principal amount of obligations of the French Government held by the Government of the United States, or in such other manner as may be agreed upon between the French Government and the Secretary of the Treasury.

"Arrangements will be made for the remission of interest on the obligations of the French Government to be given as hereinbefore set forth, so that interest thereon will be collected only upon such amounts thereof as shall correspond to the actual payments made upon said certificates of indebtedness, or otherwise advanced against such obligations, and only from the dates of such respective payments and advances.

"One of the important reasons for the arrangement made hereby is to obtain the immediate release of the foreign securities held as collateral under said collateral indenture, so that the same may be used to rectify and stabilize foreign exchanges, and I understand that you will discuss with the Treasury Department at an early date the method of procedure to be adopted to avail of these securities to the best advantage."

Secretary plans to write similar letter regarding French maturities of April first next of which about $20,000,000 already purchased on market. City of Paris and tri city bonds purchased on market about $7,500,000.

/s/ ALBERT RATHBONE,
Assistant Secretary of the Treasury.

Mr. EDOUARD DE BILLY,
Deputy High Commissioner of the French Republic,
Washington, D. C.

MY DEAR MR. DE BILLY: In accordance with arrangements made with Mr. Simon, the sum of $71,427,000 was today advanced to your Government for the purpose of enabling it to purchase a United States certificate of indebtedness for said amount, payable to bearer, dated to-day, bearing interest at 4½% and payable April 1, 1919, or at an earlier date in accordance with the terms of said certificate. This certificate is purchased by your Government for the purpose of being deposited with the Central Union Trust Company of New York, pursuant to the indenture about to be entered into between your Government and said trust company relating to the release and discharge of certain collateral now held under the instrument of pledge, dated April 1, 1917, securing the two year five and one-half percent secured loan convertible gold notes of your Government maturing April 1, 1919. The warrant representing the advance to your Government was endorsed by Mr. de Chambrun, in whose favor it was drawn, and has been delivered to the Treasurer of the United States in payment for said certificate, which I now have pleasure in delivering to you herewith.

I am, my dear Mr. de Billy,
Yours very truly,

[s.] ALBERT RATHBONE.

EXHIBIT No. 2935

CERTIFICATE OF INDEBTEDNESS

THE UNITED STATES OF AMERICA IS INDEBTED TO BEARER IN THE SUM OF SEVENTY-ONE MILLION FOUR HUNDRED TWENTY-SEVEN THOUSAND DOLLARS ($71,427,000)

This certificate is issued under the authority of the act of Congress approved September 24, 1917, as amended and supplemented by the act of Congress approved April 4, 1918, the act of Congress approved July 9, 1918, and the act of Congress approved September 24, 1918, and is payable with interest from December 10, 1918, at the rate of four and one-half per centum per annum at the office of the Federal Reserve Bank of New York on April 1, 1919, or such earlier date as the principal of the notes of the French Republic issued and outstanding under its instrument of pledge dated April 1, 1917, to Central Trust Company of New York (now Central Union Trust Company of New York) shall become due by declaration or otherwise.

This certificate shall be exempt both as to principal and interest from all taxation now or hereafter imposed by the United States, any State or any of the possessions of the United States, or by any local taxing authority, except (a) estate or inheritance taxes, and (b) graduated additional income taxes, commonly known as surtaxes, and excess profits and war-profits taxes, nor or hereafter imposed by the United States, upon the income or profits of individuals, partnerships, associations, or corporations. The interest on an amount of bonds and certificates issued under authority of said act approved September 24, 1917, or by said act as amended by said act approved April 4, 1918, the principal of which does not exceed in the aggregate $5,000, owned by any individual, partnership, association, or corporation, shall be exempt from the taxes provided for in clause (b) above. At the option of the Secretary of the Treasury all or any part of the principal of this certificate may be paid before its maturity, and interest upon all amounts so paid shall cease from the respective dates of payment. This certificate shall not bear the circulation privilege and will not be accepted in payment of taxes.

Dated, Washington, December 10, 1918.

[s]. R. C. LEFFINGWELL,
Secretary of the Treasury.
[s.] HOUSTON B. TEEHEE,
Register of the Treasury.

EXHIBIT No. 2936

DECEMBER 10, 1918.

MY DEAR MR. DE BILLY: Referring to the letter addressed to Mr. Tardieu by the Secretary of the Treasury under date of November 6, 1918, in regard to the establishment of the special credit in favor of your Government to assure the payment at maturity of the notes of your Government now outstanding and secured by the instrument of pledge or pledge agreement executed by your Government to the Central Trust Company of New York under date of April 1, 1917, I understand that your Government will make the following arrangements in order to carry out certain of the views of the Secretary of the Treasury in regard to the transaction:

(1) Your Government will enter into and perform and cause to be performed an agreement with Central Union Trust Company of New York, in substantially the form hereto attached as exhibit A, an original whereof is to be furnished the Treasury Department;

(2) All notes of your Government entitled to the security afforded by the pledge agreement aforesaid, which now or at any time hereafter, before or after maturity thereof, shall be held, purchased, acquired, or paid, either in dollars or in francs, by your Government, it will forthwith upon the purchase, acquisition, or payment thereof, deliver to Central Union Trust Company of New York for cancellation, and you will keep the Treasury Department informed of the amount

of all of said notes so held, purchased, acquired, or paid by your Government, either in dollars or in francs, and delivered to said trust company for cancellation;

(3) Until the maturity of the said notes entitled to the security of the said instrument of pledge your Government will purchase and pay for said notes if and when offered to it at private sale, up to par and accrued interest, and will bid par and accrued interest for all said notes offered for sale on the New York Stock Exchange, and if requested by the Secretary of the Treasury will purchase and pay for said notes and bid therefor up to a premium of ten per cent on the understanding that the United States Treasury will advance either against obligations of your Government or in such other manner as the United States Treasury shall determine the required funds if and to the extent that your Government has no other dollar funds available for the purpose;

(4) In order to carry out the intention expressed in the letter of the Secretary of the Treasury to Mr. Tardieu above referred to, that interest on the obligation of your Government to be given as therein set forth will be remitted so that interest thereon will be collected only upon such amounts thereof as shall correspond to the actual payments made upon said certificate of indebtedness or otherwise advanced against such obligation, and only from the dates of such respective payments and advances, the said certificate of indebtedness will carry interest at the rate of 4½% per annum. The interest collected thereon is to be applied by the French Government to the payment of the interest on its obligation above referred to, and such obligation will bear interest at 4½% until payment is made of such certificate of indebtedness, and thereafter, if not then paid, at the rate of 5% unless and until notice to the contrary is given by the Secretary of the Treasury;

(5) Whenever and as often as, in pursuance of the provisions of the attached agreement exhibit A (a) notation is made on the Treasury certificate therein referred to, showing a reduction in the amount thereof, or (b) cash (other than cash representing interest paid on account of said Treasury certificate) is paid to the Treasurer of the United States, endorsement will be made on the obligation of your Government, hereinbefore referred to, showing a corresponding reduction in the principal amount of the same. When pursuant to the provisions of said agreement the trust company shall deposit with the Federal Reserve Bank of New York to the credit of the Treasurer of the United States the interest by it collected on said Treasury certificate, the said amount will be credited, as of the date of such deposit, on account of the interest upon the aforesaid obligation of your Government.

Will you be good enough to confirm the foregoing arrangement.

I am, my dear Mr. de Billy,
Very truly yours,

[s.] ALBERT RATHBONE.

Memorandum for Mr. Rathbone.

Can you send me another photographic copy of the securities released by the French? I want to send it to Kent, together with the substance of your memorandum of December 12. I do not know just what Kent can do in the matter. Our regulations at present require no license for the shipment of securities abroad, they simply require a declaration to the effect that no enemy interest is involved, and such statements are filed with the Division of Foreign Exchange. These statements, however, need not be filed at any specified time before the shipments, so it is not at all certain that Kent would have a knowledge of the shipment sufficiently in advance to interfere with any transactions which it might be desirable to stop. We can discuss this matter with Kent when he is next here.

As to the best method of using the securities in question to rectify exchanges, I take it that the French are not willing that these securities should be sold for their account for that purpose. If we were at liberty to sell them for that purpose they might be of considerable use. I do not think that we require them as collateral for under present conditions we could, I think, borrow on our unsecured obligations in any market, or where the Treasury promotes the transactions through the banks, Treasury certificates would be accepted as security, as in the Spanish case. I will discuss this matter with you at your convenience and, in any event, I think we might discuss it with Kent next week.

[s.] A. S.

REPUBLIC OF FRANCE

DEPARTMENT OF FRANCO-AMERICAN-WAR CORPORATION

FRENCH HIGH COMMISSION IN THE UNITED STATES,
1954 Columbia Road, Washington, D. C., Jan. 7 1918[9].

(*The Deputy High Commissioner, to the Hon. Albert Rathbone, Assistant Secretary of the Treasury, Washington*)

MY DEAR MR. RATHBONE: Referring to your letter of December 12th, in regard to the use of the collateral released in accordance with the agreement my Government and the Central Union Trust Company, I take pleasure in transmitting to you the following indications which I have just received from Paris:

About two thirds of the neutral securities now released have become the property of the French Government through exchange for Treasury bonds or French rentes. The French Government is desirous of using these securities to obtain, as soon as possible, resources in certain neutral countries, either by selling them or pledging them in order to rectify neutral exchange.

Considering the state of arrangements already made and the urgent need of resources, the French Government is desirous of having the following securities forwarded to Paris, in the order given below:

(1) Spanish.
(2) Swiss.
(3) Dutch.
(4) Argentinian.
(5) Egyptian.
(6) Brazilian.
(7) Uruguayan.

I have been asked to arrange that these securities be delivered in Paris within the next five weeks, at the latest.

The remaining neutral securities, amounting to about one-third of the total collateral, still belong to their original holders, who loaned them to the French Government and have not agreed to dispose of them under the very good conditions offered. The French Government will have to return these securities to their owners in May, as agreed, but every effort will still be made to acquire as many as possible.

My Government feels confident that these explanations will be sufficient to justify the immediate expedition of the above mentioned securities to Paris. It is necessary for the French Government to have them in order to conclude the transactions which are now in the course of execution.

Furthermore, on receipt of these securities my Government will advise the Treasury Department by cable, of all transactions to take place in connection with these securities, so as to obtain the assent of your Government prior to their use.

I am, my dear Mr. Rathbone,
Pour le Delegue General et par ordre:
Very truly yours,

/s/ J. SIMON.

JANUARY 11, 1919.

MR. JOSEPH SIMON,
The French High Commission, Washington, D. C.

DEAR MR. SIMON: I take pleasure in acknowledging receipt of your letter of the 7th instant regarding the use of the collateral released in accordance with the agreement between the French Government and Central Union Trust Company.

This Department has no objection to the shipment to France of the neutral securities mentioned in your letter and in the order therein set forth, on the understanding that as rapidly as possible the same will be sold by your Government or used as collateral to secure loans to your Government in the respective countries, thus not only providing for the requirements of your Government in the countries in question, but also improving the general exchange position of the United States as well as of France with the countries in question.

I note that after these securities are received in France, your Government will advise this Department by cable in regard to transactions contemplated in respect to the same, so that the approval of this Department to the specific transaction may be obtained before its actual consummation. Such arrangement is entirely satisfactory to this Department.

Your letter calls to the attention of this Department that the remaining neutral securities released to your Government pursuant to its agreement with Central Union Trust Company above mentioned still belong to their original holders. This Department is of the opinion that every effort should be made by your Government to acquire these securities from their owners, and notes with pleasure that this is the course which your Government will take.

I am, my dear Mr. Simon,
Yours very truly,

/s/ ALBERT RATHBONE.

AGENCE FINANCIERE DU GOUVERNEMENT
FRANCAIS AUX ETATS-UNIS,
2 Rector Street, New York, January 21st, 1919.

CENTRAL UNION TRUST CO.,
New York City.

GENTLEMEN: Referring to our recent conversations, I beg to request you to prepare for shipment on S. S. "Niagara" sailing January 25th, next, the first lot of neutral securities held by you which are to be returned to France in accordance with the schedule of priority already furnished you.

Kindly have the boxes addressed to M. le Ministre des Finances a Paris, and arrange for their delivery to the French officials at the pier on Friday, January 24th. In order to insure the delivery of the cases to the proper official at the docks, Lieutenant Duranjon as representative of my office will join your representative in accompanying the shipment of securities from the bank to the steamer.

Yours very truly,

(Signed) F. DE SAINTE PHALLE.

President, Central Union Trust Co.,
New York City.

DEAR MR. WALLACE: On the completion of the shipment to France of the neutral securities formerly held by your company as part of the collateral securing the French Republic two-year 5½% notes of 1917, please convey to the board of directors of the Central Union Trust Co. on behalf of the French Government, our thanks for their cooperation in the handling of this operation.

I take advantage of this opportunity at the same time to express to you personally my sincere thanks for the part you have yourself taken in the negotiations to secure the release of this collateral, and my appreciation of your willingness always to assist us in every way possible.

With kind regards, I am

Yours very sincerely,

(Signed) F. DE SAINTE PHALLE.

NEW BUSINESS MEMORANDA

Name: American Foreign Securities Co.

Jany. 29, 1919: B. T. Co. is trustee under collateral indenture dated August 1, 1916, securing $94,500,000 of three-year 5% notes which mature August 1, 1919. We are executing today agreement with the American Foreign Securities Company and the French Government, under which $18,949,200 of these notes have been cancelled and United States Treasury certificate of indebtedness for $81,050,800 has been delivered to us as trustee against receipt of which we are delivering the other collateral held by us as trustee. That collateral consists of about 1,000,000 pieces, most of which are to be shipped back to France by our foreign securities department under the supervision of Mr. Dunham. We have not, however, at present adequate space to handle this business of listing and shipping the collateral thus released.

The proceeds of the Treasury certificate, which matures July 31, 1919, are to be used first to pay the principal and interest of the maturing notes, and any balance is to be paid over to the American Foreign Securities Company, all as provided in the supplemental agreement which we have executed today.

H. F. W.

[Pencilled note: Mr. Rathbone, I do not object to this. R. C. L. Dec. 3/19]

FRENCH HIGH COMMISSION IN THE UNITED STATES
1954 COLUMBIA ROAD
WASHINGTON, D. C.

65 BROADWAY, NEW YORK, *April 2d, 1919.*

The Hon. ARTHUR RATHBONE,
Assistant Secretary of the Treasury,
Washington, D. C.

MY DEAR MR. RATHBONE: Confirming your recent conversation with Mr. Bloch, I beg to transmit to you hereunder the information just received from the Minister of Finance concerning the proposed disposition of the neutral securities belonging to the French Treasury.

First. It is proposed to sell in the countries of their origin about 965,000,000 francs of said securities, the detail of which is as follows:

		Million francs
(a) Scandinavian securities	about	335
(b) Dutch securities	do	25
(c) Swiss securities	do	130
(d) Spanish securities	do	325
(e) Uruguay securities	do	40
(f) Part of Argentine securities		110

Second. It is planned to dispose in the British market of the following securities, the proceeds of which would be affected to the purpose of meeting our payments in the British Empire:

		Million francs
(a) Balance of Argentine securities	about	150
(b) Egyptian securities		300
(c) Brazilian securities		25
Total		475

As it is impossible to determine with any precision the proceeds in foreign moneys of the sale of these securities, the figures indicated in paragraphs first and second represent the approximate valuation in francs. It is to be noted, however, that the proposed negotiations for the sale of the securities, especially in the English market, will undoubtedly present great difficulties and entail long delays.

The above mentioned program covers all the neutral securities at present owned by the French Treasury, a part of which only were held in America in the collateral securing our loans.

As Mr. Bloch told you at your last meeting, we have been requested by the Minister of Finance to examine whether it would be advisable for the French Treasury to exercise its option to purchase the American securities loaned to it by French holders, or to return the securities to their owners at the expiration of the loan agreements beginning in May.

It appears that, on account of the general decline in the values of securities on the American market since 1916, the actual market value of practically all these securities is far below the minimum purchase price fixed in the loan agreements. Under those circumstances, the purchase of these securities at the price fixed three years ago is not, in my opinion, a desirable operation, inasmuch as the total value of the securities involved does not exceed 20 million dollars, and cannot consequently be used as a basis for an important transaction.

It seems to me that the best solution would be to return these securities to their owners at the end of the period, with possibly a very few exceptions. Before recommending this solution to the Minister of Finance, I would like to be sure that you have no objection to this course.

I remain, my dear Mr. Rathbone,
Very sincerely yours,

[S.] BILLY.
(*Acting for the Directeur General des Services Francais aux Etats Unis*).

ALBERT RATHBONE, Esq.,
Assistant Secretary of the Treasury,
Washington, D. C.

MY DEAR MR. RATHBONE: I enclose herewith for your confidential information a free translation of a telegram which I have just received from Paris.

I assume that the American Treasury has no objection to the transactions mentioned therein, and if I do not hear from you to the contrary, I shall cable to the Minister of Finance to that effect.

I am, my dear Mr. Rathbone,
Very truly yours,

[s] J. FREDERIC BLOCH.

[Translation of a telegram received from Paris]

(Confidential.)

With reference to my previous telegrams, the French Government is at present negotiating for the sale, on their market of origin, of the following securities coming from our American collaterals:

(1) Danish 3½% 1897 loan for a nominal amount of 7,000,000 kr.;
(2) Danish 3½% 1900 loan for a nominal amount of 1,483,000 kr.;
(3) Argentine cedules hypothecaires for an approximate nominal amount of 19,000,000 pesos M/N.

According to our understanding please bring these negotiations to the knowledge of the Federal Treasury. I assume that the latter will not object to the proceeds being applied to the payments which the French Treasury has to make in neutral countries.

The Hon. ALBERT RATHBONE,
Assistant Secretary of the Treasury,
Washington, D. C.

MY DEAR MR. RATHBONE: Following our conversation of this morning, I enclose herewith for your confidential information a free translation of a telegram just received from Paris.

I understand that the Treasury of the United States has no objection to the transactions mentioned therein, and upon receipt of your confirmation of this understanding, I shall cable to the Minister of Finance to that effect.

I remain, my dear Mr. Rathbone,
Very truly yours,

[s] J. FREDERIC BLOCH.

PARIS, *July 13, 1919.*

(*From Finances to M. Bloch*)

RELEASE OF NEUTRAL SECURITIES

The French Government is now negotiating, on their markets of origin, the following neutral securities coming from the collaterals of our loans in America:

(1o) *Spain: Exterieure.*—For a nominal amount of 10,000,000 pesetas.
(2o) *City of Fribourg loan.*—For a nominal amount of 4,000,000 Swiss francs.
(3o) *Danish Loan 3% 1894.*—For a nominal amount of 1,000,000 kronens.
(4o) *Credit Foncier Stockholm 4% 1904.*—2,800 obligations of 360 kronens, nominal value.
(5o) *Swedish loan 3½% 1899.*—For a nominal amount of 3,000,000 kronens.
(6o) *City of Stockholm 3½% 1909—4%.*—For a nominal amount of 1,500,000 kronens.
(7o) *Caisse hypothecaire des villes Suedoises 3½% 1909:*—For a nominal amount of 600,000 kronens.

According to the engagements we have taken, I would ask you to inform the Federal Treasury of these operations, trusting that it will see no objection to the application of the proceeds of these sales to the payments which the French Treasury has to make in the neutral countries.

JULY 16, 1919.

Mr. FREDERIC BLOCH,
French Financial Agency,
New York City.

DEAR MR. BLOCH: Your letter of the 15th instant has been received enclosing a free translation of a telegram which you have received from Paris stating that the French Government is now negotiating on their markets of origin certain neutral securities from among those pledged as collateral to loans made in this country.

Confirming our conversation, I have pleasure in advising you that the Treasury of the United States has no objection to the transactions referred to in the cable.

I am, dear Mr. Bloch,
Very truly yours,

[S] ALBERT RATHBONE.

EXHIBIT No. 2952

MEMORANDUM ABOUT THE $400,000,000 DEMAND LOAN, SUBROGATION AND BRITISH AND FRENCH PUBLIC MATURITIES

(By R. C. Leffingwell)

I was called to the Treasury May 8, 1917, and remained through June 1920. At first I was special counsel and assistant in connection with the Liberty Loans. From the end of October 1917 through June 1920, I was Assistant Secretary of the Treasury in charge of fiscal bureaus. After I left the Treasury I rejoined my law firm in New York, from which I had withdrawn when I came to the Treasury, and I resumed my law practice. Three years afterwards, in July 1923, I became a partner in J. P. Morgan & Co. So I can speak of these matters which occurred in 1917 and 1918 only from the Treasury viewpoint.

DEMAND LOAN NOT PAID FROM UNITED STATES LOANS

Objection was made by the United States Treasury to the use by the British Government of the proceeds of United States Government loans to pay the 400 million dollar demand loan, held by a group of American banks, or any part of it. It was paid out of the proceeds of the sale of British owned ships requisitioned by the American Government, out of the proceeds of the sale of securities pledged as collateral for the demand loan, out of gold shipments, etc. In other words the demand loan was wholly paid out of resources of the British Government itself and the proceeds of the sale of British-owned property.

UNITED STATES TREASURY STOPPED SALES OF COLLATERAL

Not only did the United States Treasury not permit the proceeds of United States Government loans to be used to pay the demand loan, but furthermore from February to August 1918 the United States Treasury exacted the stipulation that the British-owned securities held as collateral for the demand loan should not be liquidated and sold on the American market (though the United States Treasury had previously in the summer of 1917 suggested that very course for reducing the demand loan). The loan was an obligation of the British Government in the American market and during the war therefore a matter of concern to the United States Treasury. The United States Treasury found that the liquidation of American securities in the American market by the British Government for the retirement of the demand loan was having a depressing effect upon the bond market and was adding an obstacle to the United States Government's own Liberty Loan and Treasury certificate issues. Therefore it obtained the agreement above referred to, which in effect froze the demand loan for six months.

DISCUSSION BETWEEN GOVERNMENTS

The discussion about the demand loan between Secretary McAdoo and Assistant Secretary Crosby, on the one hand, and Sir Cecil Spring-Rice (the British Ambassador), Sir Richard Crawford (the British commercial attaché), Mr. Bonar Law (the British Chancellor of the Exchequer), Mr. Arthur Balfour (the British Foreign Minister), Lord Northcliffe, Lord Reading, and Sir Hartman Lever, began in the spring and summer of 1917, and continued on into February 1918. The controversy was at some times acute. At one time the Treasury suggested in a cable to Mr. Crosby, published by the State Department, that it was inclined to take up the demand loan and require subrogation with respect to the collateral, because liquidation of the securities was having an adverse effect upon the American market. However some time in January 1918 the Treasury finally decided not to do it.

This eighteen-year-old controversy between the two Governments has long been a matter of public knowledge. It is possible to follow a large part of it in the documents published by the State Department and in various reminiscences.[1]

PUBLIC LOAN MATURITY FEBRUARY 1, 1918

The controversy about the demand loan was accentuated by the problem of the maturity in the American market on February 1, 1918, of 92 million dollars of British Government-secured notes outstanding in the hands of the public. As these were held by the public generally it was not practicable to freeze them as was done with the demand loan. The Secretary of the Treasury made inquiry and became satisfied that this issue, because of our own Government's demands upon our market, could be refunded upon our markets in the existing situation only at a rate of interest so high, and secured by so great an amount of collateral, as would gravely impair the credit of Great Britain and the ability of the United States to carry through successfully its own financing. The Secretary, rather than tolerate a British issue in our market on terms which would reflect upon British credit and also would compete adversely with the Liberty Loans, then decided, with the approval of the President, to lend the money to Great Britain to take up this public maturity but he asked that the United States Treasury be subrogated to the collateral. The Chancellor of the Exchequer, Mr. Bonar Law, at first refused to grant subrogation. He said that Great Britain had not demanded collateral from her Allies for the loans which the British Government had made to their Allies, and said that it would have a very bad effect if it ever became known in Great Britain or to the enemy countries that the United States Government had demanded collateral for its loans to Great Britain. In cables sent to the Chancellor of the Exchequer the Secretary of the Treasury indicated his disappointment that Mr. Bonar Law would not concede subrogation, but the Secretary agreed to accept the more limited assurances tendered by the Chancellor and to lend Great Britain the money to meet the maturity on February 1.

SETTLEMENT OF FEBRUARY 1, 1918

The nine-months long controversy between the two Governments was settled for the time being on February 1, 1918, in the following manner: Great Britain used, to reduce the amount of the demand loan, $80,000,000 proceeds of British owned ships requisitioned by the United States. This was not money lent to Great Britain but money owing to Great Britain. To provide cash towards making payment of the ship money due Great Britain, and to lend to Great Britain to enable her to pay the publicly held notes maturing February 1, 1918, J. P. Morgan & Co. purchased about 150 million dollars of U. S. Treasury 4% certificates of indebtedness, maturing on tax day, June 25, 1918, and placed them among the banks which held the demand loan, thus relieving the Treasury of the necessity of providing cash at an inopportune time[2] and in excess of the 500 million dollar monthly limit which the Secretary had set for loans to the Allies. J. P. Morgan & Co. informally agreed to freeze the remainder of the demand loan and not to sell the collateral on the market without the Treasury's consent. Some days after February 1st and after the payment of the ship money and the loan, the Chancellor informed the Secretary that he was giving instructions that the United States Treasury be subrogated to the lien of former lenders upon the securities previously pledged to the holders of the one year notes, and that these securities as well as the securities pledged to secure the demand loan be dealt with according to the Treasury's instructions. The Secretary replied that this would greatly strengthen his hands in providing for British and American financial needs.

Page by Burton J. Hendrick, volume 3, 1925, pages 391–405. Intimate Papers of Colonel House by Charles Seymour, volume 3, 1928, chapter 4, pages 96–124.

[2] 400 million dollars 4% certificaes were issued on January 22nd maturing April 22nd, 500 million dollars 4% certificates were issued February 8th maturing May 9th, and 500 million dollars 4½% certificates were issued February 27th maturing May 28th, as appears from the Secretary's Annual Report for 1918, page 25.

BRITISH SHIPS REQUISITIONED BY UNITED STATES

The Secretary of the Treasury was obliged to consent to the above use of the purchase price of the requisitioned ships. The British Government did not desire to part with the ownership of the ships which were under construction in America for Great Britain. The Chairman of the Shipping Board required them. The British Government accepted without question the decision of the United States Government to requisition all vessels building in American shipbuilding yards, including those building to British orders.[1] This was not a Treasury matter, and the purchase price of these ships requisitioned by the Shipping Board from Great Britain, contrary to the wish of Great Britain, was money owing by the United States Government to Great Britain and payable absolutely and unconditionally by the Shipping Board.

CONTROL OF CAPITAL MARKET

For some months the Secretary of the Treasury had taken a strong stand against the offering in our market of any public loans of any of the Allies. This objection extended even to the introduction here of their domestic war loans. Early in January 1918 some weeks prior to the maturity of the British notes held by the public, the Secretary of the Treasury, pending action by Congress, had requested the Federal Reserve Board to pass upon proposals for new security issues, both public and private, and sought the cooperation of corporations, bankers, and municipal officers. In the War Finance Corporation Act, approved April 5, 1918, the Capital Issues Committee was created by Congress. The act also created a corporation to supply essential credits to the war industries. As the Secretary of the Treasury explained in his Annual Report for 1918, page 56, it was feared that the Government's enormous borrowings might absorb so large a portion of the available funds of the country as to leave even the Nation's essential industries without the necessary financial resources. The fact was that the Government of the United States was preempting all, and more than all, of the savings of the people for taxes and for its own war loans. The control of capital issues was an essential part of the Treasury's program. And similarly it was contrary to the policy of the Treasury of the United States and prejudicial to the success of its own vast borrowings to permit any of the Allies to make public issues in competition with the United States Treasury issues on terms which would have been necessarily much more attractive to the lender than those offered by the United States Treasury.

$500 MILLION MONTHLY LIMIT ON LOANS

It is to be observed that the controversy between the Governments arose among other things from the fact that the demands of the Allies upon the American Treasury were of such dimensions from April 1917 until midwinter of 1918 that the Secretary of the Treasury was sincerely doubtful of his ability to meet them all. He laid down a rule of thumb that he could not advance more than 500 million dollars a month to all the Allies. He insisted upon the creation of an Inter-Allied Commission on War Purchases and Finance, of which Assistant Secretary Crosby was chairman, to allocate this 500 million dollars among the Allies. It was for this purpose that Assistant Secretary Crosby went abroad in the autumn of 1917. Similarly the Secretary of the Treasury insisted upon the creation of the Purchasing Commission here, of which Mr. Baruch was chairman and Mr. Lovett and Mr. Brookings were members, to control Allied purchases in this country.

LIMIT OF SUPPLIES AND NEED OF FOREIGN CURRENCIES

However, some time in the forepart of 1918, the situation shifted. The increase purchases of the American Army and Navy became a dominating factor, and at times the limitation of supplies in the United States made it impossible for the Allies to get the consent of the Purchasing Commission to make purchases here in amounts aggregating as much as the 500 million dollars a month. Furthermore, the money we owed the Allies for the francs, and to a smaller extent the pounds, provided by France and Great Britain to meet our Army's expenditures abroad, provided funds available for expenditure here by the Allies which were not monies lent to them but due to them. Consequently some time in the forepart of 1918 the discussions between the United States Treasury and the British and other Allied Treasury representatives became less difficult. The United States Treasury could meet all the demands the Allies could make and justify.

---

[1] Letter of Mr. Arthur Balfour, dated August 21, 1917. Cablegram from the Secretary of State to the American Ambassador, dated September 7, 1917. Answer of Mr. Balfour cabled by the American Ambassador Octoer 26, 1917, to the Secretary of State. These papers are all published in the State Department volume referred to in note 1, page 3 above.

A CRISIS OF THE WAR

The Italian disaster at Caporetto and the collapse of Kerensky and defection of Russia, all in the autumn of 1917, and the German advance on the western front in the spring of 1918 and the advance on Paris in the summer of 1918 created a situation so critical that no American Secretary of the Treasury could conceivably hazard any course towards any of the Allies, least of all towards either of the principal Allies, Great Britain or France, which would seem to suggest a lack of confidence in them or a lack of willingness to support them to the full limit of America's ability.

PUBLIC LOAN MATURITY SEPTEMBER 1, 1918

Even so when the next considerable British maturity held by the general public occurred, on September 1, 1918, the Secretary of the Treasury did not consent to lend to the British Government the money to meet this maturity until first he had required the British Government to ascertain on what terms it could be provided for by private financing. On learning that the terms required would be no better than a net price of 94 and a fraction for 6% notes having a maturity of two or three years and with an ample margin of collateral, the Treasury considered that such terms would be injurious to British credit and to the general situation. The Secretary then decided, with the approval of the President, to lend Great Britain the money to pay the notes maturing on September 1, 1918, on the same conditions that had been accepted in connection with the February 1st maturity, viz., that the United States Treasury should be subrogated to the rights of the noteholders with respect to the collateral for these notes. The Secretary of the Treasury thought this collateral might be disposed of when opportunity offered to provide for approved British expenditure here, or in reimbursement of our advances or to obtain credits in Chile and the Argentine.

SELLING THE COLLATERAL

The Treasury was also able to obtain, in connection with this arrangement to provide for the September 1st maturity held by the public, an assurance that the demand loan (which, it will be recalled, had been frozen at the request of the Treasury) would give no further concern to the United States Treasury; and the Secretary consented that the British Government might gradually liquidate the British owned collateral behind that loan and pay it off by that means out of their own securities. Of course it did not suit Treasury or Federal Reserve policies to keep this loan indefinitely frozen. Whether from the point of view of the domestic economy, or from the point of view of the United States Government's relations with Great Britain, one of its principal associates in the war, or from the point of view, important for war purposes to the United States as well as to Great Britain, of maintaining British credit and exchange and buying power throughout the world, freezing the demand loan could only be regarded as a temporary expedient. Therefore, market conditions permitting, it was desirable from every standpoint that the demand loan be gradually liquidated from sales of British owned collateral pledged to secure it; and it did in fact give the Treasury no further concern.

FEBRUARY 1, 1919 MATURITY

The next great public maturity of British obligations did not occur until February 1, 1919, and the United States Treasury declined to provide for that. It was provided for through a conversion which was underwritten by the banks.

ANGLO-FRENCH LOAN

Another great public maturity was that of the Anglo-French loan October 15, 1920. The United States Treasury had nothing to do with providing for that maturity, which was fully paid by the British and French Governments from their own resources.

SUMMARY

It will be seen that, first, the United States Treasury objected to lending money to pay off the demand loan and it was paid by the British Government from its own resources; second, it exercised supervision over the use made of the collateral for the demand loan; third, it in effect froze a considerable part of the demand loan for a considerable period; fourth, it arranged to have the bankers purchase 150 million dollars of Treasury certificates towards providing for a loan to Great Britain to pay the publicly held secured notes maturing February 1, 1918, and to pay the ship money; fifth, it obtained the right to be subrogated with respect to the collateral for the secured notes maturing February 1, 1918, and September 1, 1918; and sixth, it obtained a secondary agreement by the British Government to consult the United States Treasury about the disposition of any other collateral which the British Government had at its disposal in this country. This latter arrangement was regarded as having been completely fulfilled in July 1919.

MATTER OF SUBROGATION

Naturally in view of the Chancellor of the Exchequer's urgent representation to the Secretary of the Treasury, in the course of the somewhat vigorous correspondence between them in 1917 and 1918, that if it became known that the American Government was exacting collateral for its loans to Great Britain it would have a very bad effect on public opinion in Great Britain and abroad, no public announcement was made during the war period of the agreement to subrogate, nor was possession of the collateral demanded nor notice of lien filed. There was no need to do so. The agreement was always honored by the British Government, of course. Subrogation was mentioned by the British Chancellor of the Exchequer in March 1921.[1] The Treasury contemplated the release of the subrogated securities as an inducement to and in connection with a funding arrangement which was under discussion in 1919 and 1920. These discussions were broken off by the British Government in May 1920 and the Treasury's rights with respect to the subrogated securities were retained. The terms of the abortive funding arrangements, including the provision for the release of the subrogated securities, were reported by the Treasury to the Senate Finance Committee in July 1921.[2] The release of the subrogated securities was finally made by Secretary Mellon in connection with the funding arrangement which he consummated in 1923 as duly reported by him in his Annual Report to Congress that year.[3] Whatever the justification of subrogation under the circumstances and at the time it was demanded, it was a war step. The best reason for requiring subrogation, and the secondary agreement with respect to the disposition of British owned securities in this country[4] was to put the American Treasury in a position to guard its own market and to be consulted about available securities for the acquisition of foreign exchange during the war period when so heavy a burden was imposed on the American Treasury and the Allied Treasuries for purchases in neutral countries. When the fighting stopped, and our Government loans ceased, and we stopped supporting the exchanges, these limited special arrangements had served their purpose so far as the protection of the market and the exchanges was concerned. And the retention of collateral for 285 million dollars loaned out of the 5 billion dollars loaned to Great Britain, and 10 billion dollars loaned to all the Allies, after the war was over and funding arrangements had been completed, would have been grotesque. One does not improve the value of obligations for 10 billion dollars by retaining collateral for 3% of them. On the contrary, one weakens the credit of the debtor and impairs the standing of the debt. It was far better to use the surrender of the right to be subrogated as an inducement to a favorable settlement as was proposed in 1919 and 1920 and doubtless done in 1923.

FRENCH LOAN MATURITIES

The situation of the United States Treasury towards the French Government maturities was broadly speaking as follows: France was the battlefield. Our Army was there. The United States Treasury soon came to be in the position of having to apply to the French Government for francs in large and ever increasing amounts to cover Army expenditures in France. In March 1918 before any considerable French maturities were brought to the attention of the United States Treasury, the Secretary of the Treasury made an agreement with Mr. André

---

[1] Reported in the Economist of March 19, 1921, page 599, and in the Financial Chronicle of April 9, 1921, page 1463. In a written parliamantary answer the Chancellor, Mr. Chamberlain, said: "There remain: pledged and subrogated sterling securities £93,215,034 and dollar securities £96,529,910; free sterling securities £17,919,863, and dollar securities £46,946,735."

[2] Hearings before Senate Committee on Finance on Refunding of Obligations of Foreign Governments, July 18, 19, and 21, 1921, part 4, pages 114, 119.

[3] Annual Report of the Secretary of Treasury for 1923, page 271, exhibit 47.

[4] A similar secondary agreement with respect to the disposition of French owned securities was obtained, but no right of subrogation.

Tardieu, the French High Commissioner, that the amounts which the French Government received from the United States Government in reimbursement of the sums advanced in France by the French Government for United States Army expenditures, together with any sums received by the French Government from other sources than those advanced from the United States Treasury to France, should be available to meet the interest and principal of the obligations of the French Government created before the entry of the United States into the war, or for any other like needs of the French Government in the United States. This agreement disposed in principle of the problem of French maturities in the United States. However, the problem of providing francs for the needs of the American Army in France was a very difficult one for both the French and American Governments and became increasingly acute as the anxious year 1918 wore on. The French Government was gravely concerned with the effect of the heavy note issue thus necessitated upon its currency and upon the position of the Bank of France. This appears in the correspondence between Secretary McAdoo and M. Clemenceau, then Prime Minister of France, and between Secretary McAdoo and President Wilson, correspondence which was published in the book by M. Synon on McAdoo twelve years ago. The problem in regard to the provision of francs for the American Army, and the protection of the French currency and of the Bank of France, against the heavy note issue thus necessitated, was dealt with by the establishment of deferred credits in favor of the Bank of France and for French maturities in the summer and early fall of 1918, supplementing the agreement of March 1918. The Treasury never asked or obtained subrogation with respect to any French owned securities, but it did ask and obtain the right to be consulted concerning the disposition thereof.

LEGISLATIVE HISTORY OF FOREIGN LOANS

Although there was no statutory limitation on his power to do so, Secretary McAdoo was most reluctant, for parliamentary reasons, to permit any of the Allied Governments to use the proceeds of United States Government loans to pay any of the loans which the Allies issued in the American market before the United States declared war, and he was always adamant in his refusal to lend money to take up the so-called Morgan demand loan. The legislative history is interesting. The debate on the First Liberty bond bill was very protracted, and the charge that Morgans and other bankers got us into the war and should not have their war loans paid by the Government was made again and again. It was not altogether clear whether the objection was to meeting the outstanding bonds of the Allies at maturity, or, as I incline to think, to buying them up in the market at a discount before maturity, or whether the objection arose from a fear that the bankers would receive a commission on loans made by the United States to the Allies, which of course they didn't and couldn't. The question was further confused with another suggestion that the proceeds of the loans made by the United States to the Allies should be strictly limited to purchases within the United States. However that may be, on the floor of the House Mr. Kitchin, the chairman of the Ways and Means Committee, in answer to a question on that very point, said in effect that he did not think that the old loans would be paid off by the Allies, but that we would buy the bonds of the Allied Governments and leave it to them (the Allies) to decide what they should do with the money; and his statement on that point was greeted with applause. The subject was discussed again and again in the course of the debate, and one after another of the leaders on both sides of the House said in effect the same thing that Mr. Kitchin said. The final conclusion seems to have been to leave the hands of the Treasury and the President and the Allies untied in this regard.

FIRST LIBERTY BOND BILL

After a protracted debate and amendments on other points, which as I have said left the power of the Secretary of the Treasury and the President and the Allied Governments with respect to maturities unrestricted, the House of Representatives passed the bill without a dissenting vote. There were 330 yeas, 1 present, 40 not voting, and no nays. And then the Speaker left the chair and voted "yea." Whether men had been for the war or against it, they were unanimous in wanting to win it, and in readiness to spend and lend the money of the United States to that end, and to the end of saving American lives. The various later Liberty Bond Acts contain no mention at all of any limitation about meeting maturities and no mention of any requirements with respect to collateral. Indeed, the First Liberty Bond Act required that the bonds of the Allies purchased by the United States contain in their essentials the same terms and conditions as those of the United States.

WAYS AND MEANS COMMITTEE

The Ways and Means Committee, which had charge of the Liberty Loan legislation, was a noteworthy one. Claude Kitchin, of North Carolina, who was chairman, had voted against the declaration of war, and explained his vote in a heart-stirring speech in which he said that he had reached that decision after mature thought and fervent prayer for rightful guidance had marked out clearly the path of his duty. He said, "I have made up my mind to walk it if I go barefooted and alone." But immediately after war had been declared Mr. Kitchin brought in the First Liberty bond bill with an unanimous report from the Ways and Means Committee. The ranking majority member of the committee was Henry T. Rainey, of Illinois, and among the other majority members were Cordell Hull, of Tennessee, and John N. Garner, of Texas. The ranking minority member was Joseph W. Fordney, of Michigan, and among the minority members were William R. Green, of Iowa, and Nicholas Longworth, of Ohio. The relations of the Treasury of the United States with that Ways and Means Committee were more or less continuous throughout the war period. They were relations of honor, trust, and confidence on both sides.

FIFTH OR VICTORY LIBERTY BOND BILL

In the hearing on the Fifth Liberty bond bill, February 13, 1919, Mr. Kitchin inquired what maturities had been paid. He was told that nearly 400 million dollars of maturities had been paid up to the preceding December 31, but that the Allies had other funds available to themselves in this country which were not the proceeds of United States Treasury loans, and that they had accounted to us for expenditures far greater than the amount of our loans. Mr. Kitchin and the members of the committee were satisfied and renewed and extended the authority to the Secretary of the Treasury to make loans under the Liberty Loan Acts. Except for the extraneous provisions with regard to the War Finance Corporation, they brought in an unanimous report on the fifth and last Liberty Bond Act as on the first. The House passed it with 348 ayes and 3 nays, 3 present and 74 not voting,[1] and, after protracted debate and disagreement in the Senate, the act became law on March 3, 1919, after President Wilson's first trip to Europe and after his party's defeat in the election of 1918.

1920 TREASURY REPORT AND RATHBONE ARTICLE

Summaries of credits established in favor of foreign governments, advances made to them and expenditures reported by them are contained in the Annual Report of the Secretary of the Treasury for 1920, exhibits 26 to 30, inclusive, pages 338–348, inclusive. They show payment of total maturities of about $353,500,000 by Great Britain, and $290,000,000 by France. On the other hand, they show dollar payments by the United States Government of about $450,000,000 to Great Britain and over a billion dollars to France for foreign currencies, *i. e.*, chiefly pounds and francs provided by them for the use of our armies abroad. This Annual Report for 1920, issued immediately after the conclusion of the period during which the war lending was wound up, gives a very full and accurate technical account of our Government's war loans to the Allied Governments. The best general account and exposition of the principles which governed our war lending is contained in an article published in Foreign Affairs in April 1925, by Mr. Albert Rathbone, who was in the Treasury in charge of foreign loans from January or February 1918 to some time in 1920, first as a member of the war loan staff and later as Assistant Secretary.

TREASURY PRECAUTIONS

The great nations that were associated with us in the war looked to the Government of the United States for loans for all their current requirements within the United States. On the other hand, the United States was obliged to look to them for francs and pounds and lire to meet our military expenditures abroad. The United States Treasury insisted that the dollar equivalent of foreign currencies provided to the United States by the Allies be used by the Allied Governments to meet their approved expenditures in this country to the extent it sufficed for the purpose. This greatly reduced the amount of the loans which the United States Government would otherwise have been obliged to make to the Allies. It also made it possible for the United States Government to emerge from the war, unlike the other belligerent governments, without any foreign indebtedness whatever. It amounted to a set-off of the amount of America's requirements for foreign currencies against the amount of the Allies' requirements for dollars.

---

[1] Congressional Record, February 26, 1919, page 4343.

Another precaution which the Treasury set up for controlling its loans to the Allies was that they should not allow their bank balances in the United States to exceed an amount sufficient for the transaction of their current business. Therefore the United States Treasury would not lend money to the Allies without a statement of the amount they had in the bank. This was a wise and necessary limitation as a matter of administration, in order to obtain a better check on Allied expenditures and secure economy in borrowing and in the use of balances.

Another precaution adopted by the Treasury was to require the Allies to report all their expenditures here for approved purposes whether from the proceeds of our loans or from their independent resources.

INDEPENDENT RESOURCES OF ALLIES

This wise procedure insisted upon by the United States Treasury, highly advantageous to the interest of the United States and thoroughly sound and reasonable as it was, could not however obscure the fact that the Allies were possessed of great resources outside of our loans, and that the provision by them of francs and pounds and other currencies for the needs of our Army and Navy abroad was an absolute and indispensable necessity of the American Government. The foreign currencies they provided were not in any sense whatever the proceeds of our loans. On the contrary they reduced the amount of our loans. The same was true of other assets of theirs which were sold and produced dollars. The dollar equivalent of the francs and pounds and of those other assets was literally and absolutely the property of the Allied governments. It would have been as irrational and indefensible to refuse the Allies permission to apply what was in fact their own money to meet their maturities in this country as it would have been irrational and indefensible for the Allies to refuse to supply the United States with francs and pounds to pay our army and its expenses abroad.

BRITISH AND FRENCH POSITION CONTRASTED

British and French resources from sources other than the proceeds of our loans exceeded the amount of the maturities, and their approved expenditures, excluding maturities, materially exceeded the amount of our loans. The principal French maturities did not occur until a much later date than the British. The problem did not therefore become important for the French until they were accumulating credits against our army expenditures greatly in excess of their anticipated maturities. The British, on the other hand, had been financing all the Allies to a very large extent before America entered the war, and the demand loan and the February 1918 maturity, which in part grew out of this, became serious problems before corresponding credits were accruing to them on account of foreign currencies, etc. British maturities were larger and occurred earlier, and our need of pounds was far less than our need of francs. That perhaps explains the fact that the British maturities presented more difficulty than the French. There is much to be said for the view that, taking a retrospective view of the war loans, British as well as French maturities should have been regarded as payable out of the independent resources of the Allies, and their other approved expenditure as payable from our loans.

EVERY LAW AND PLEDGE COMPLIED WITH

Neither the British nor the French government was without resources. They had their own money. We didn't pay their bills. We bought their obligations. They transacted their own business They had their own bank accounts. They paid their own debts. They reported their transactions in due course to the United States Treasury and endeavored to meet its views. But the United States Treasury could go so far and no farther in pressing its views on the governments with which it was associated in the war. They were bearing the main burden of the fighting until the last few months. They were great and friendly and associated powers. The fact that we were lending them money gave us the duty of informing ourselves as to its use, but no right to dictate rigidly as to the use of the dollar equivalent of the foreign currencies they provided us for our use abroad. Secretary McAdoo in my opinion complied not only with the laws under which he was acting, but with every parliamentary pledge to the last word and with a heaping measure. And that was the view of the Ways and Means Committee, which had legislative responsibility in these matters.

THE LOANS THE TREASURY MADE

The Treasury treated its loans to the Allies as good loans which must be repaid. It firmly resisted any suggestion of cancellation whether at home or abroad, and general default on these loans did not occur until 1932 or 1933, fifteen years after they had been made, and after the general breakdown in Germany and indeed in Europe in 1931 had led to a general moratorium on reparations and war debts proposed by the United States. In the meanwhile two and three-quarters billion dollars had been paid by foreign Governments to the United States Government on account of its war loans, of which about three-quarters of a billion dollars was principal and nearly two billion dollars was interest, including four hundred thirty millions interest which may have been paid by borrowing during the war period. Great Britain alone had paid over $2,000,000,000 of which $434,000,000 was principal and France had paid $486,000,000 of which $226,000,000 was principal.[1]

It was the task of the Treasury to finance the war. It performed that task wisely, cautiously, and to the satisfaction of the Congress and of the American people. It was not the Treasury's task, nor had the Treasury the power or the opportunity to arrange the terms of peace, of reparations, of world recovery, after the war was over. The loans the Treasury made were wisely and cautiously made, and, given a rational peace settlement and rational policies, political and economic, of the nations of the world (including our own) after the treaties of peace had been signed, the loans would for the most part have been collectible. As it was, after a post-war interval, payment of principal and interest was maintained and no default occurred until fifteen years after the loans were made. It was not within the power of the Treasury to foresee or to guarantee the treaties of peace and world settlements, the policies of the nations, or the structure of Europe.

(*The British Embassy to the Department of State*[2])

[Received August 3, 1917.]

Paraphrase of a telegram from Mr. Balfour dated August 2, 1917:

Please give following message to Mr. McAdoo from the Chancellor of the Exchequer.

There is no doubt about the fact that our exchange is really Allied exchange. The exchanges of the Allies are entirely dependent on the maintenance of sterling exchange in New York although the exact figures are naturally not available but all the Allies are well aware of this.

At the present time we are supporting exchange only by means of dollars supplied by the United States Government. Only so long as such assistance is forthcoming can exchange be supported. We have no resources of our own except a trifling amount which would possibly be obtained by the sale of securities. We ought, however, unless there is an exceptional run on the exchange, to get through August without a break if in addition to the $185,000,000 for August we could be repaid for the sums advanced by us for expenditure incurred by Russia in the United States since April 1. The exact amount would be furnished by Lever. We estimate that before the end of August the amount would be about $100,000,000. Pending further means of a less temporary character which we hope to see applied in a month or two, this seems the best way of avoiding raising an awkward question at the present moment in view of the difficulty of explaining to Congress the true nature of the present difficulty and of getting them to realise the vital importance of finding a solution and of avoiding a crisis.

(*The Acting Secretary of the Treasury* (*Crosby*) *to the Secretary of State*)

WASHINGTON, *August 6, 1917.*

SIR: I beg to advise you that a credit of $160,000,000 was a few days ago established in favor of the French Government for the month of August, under which advances of $8,000,000 and $32,000,000 were made on August 3 and August 6, 1917, respectively.

Country	Loans and credits agreed upon	Loans made	Balance under established credits
Great Britain	$955,000,000	$820,000,000	$135,000,000
France	530,000,000	410,000,000	120,000,000
Italy	160,000,000	140,000,000	20,000,000
Russia	100,000,000	37,500,000	62,500,000
Russia	75,000,000	10,000,000	65,000,000
Belgium	45,000,000	22,500,000	22,500,000
Belgium	2,500,000	1,000,000	1,500,000
Serbia	3,000,000	1,000,000	2,000,000
Totals	1,870,500,000	1,442,000,000	428,500,000

Respectfully,

OSCAR T. CROSBY.

CONSEIL INTERALLIE DES ACHATS DE GUERRE ET DES FINANCES

SECRETARIAT GENERAL—2 RUE SAINT-FLORENTIN

SUNDERLAND HOUSE,
Curson Street, London, February 20th, 1918 (*Pencil*).

(*The President of the Inter-Ally council on War Purchases and Finance to the Secretary of the Treasury*)

I am informed by our Ambassador here that the ordinary code in which most of my messages are necessarily sent is almost certainly known to the British Government, and that probably these messages are decoded and reported to the British Government. In many cases, this is a matter of no concern, but occasionally it is desireble that they should be confidential. In this case, the Ambassador would put them in a special code which he thinks to be entirely safe; but a rule of the State Department runs against this usage, restricting the code in question to communications going directly to the State Department and is not permitted for communications to any other Department. It will consequently be necessary at times to resort to correspondence by mail, even though it might be desirable to use the cable.

In this connection, I desire to record my high appreciation, which I am sure you will share, of the great courtesy shown both in this Embassy and the Paris Embassy in respect to the large amount of cable work thrown upon their offices. Should the amount of this work increase, it may be convenient to have sent from Washington one of the ordinary code books so that time may be saved, which must occasionally now be lost, due to the fact that the Embassy code staffs are called upon for so much extra work and cannot at all times execute it as promptly as might be desired, in spite of the helpful spirit of the Ambassadors.

With the above explanation, I will now state a few facts which I have not cared to send in code:

1. While the British officials connected with the Council are showing great courtesy, and have had placed at the disposal of the Council a large building, Sunderland House (belonging to the Duchess of Marlborough), there has been a great delay until this moment in the furnishing of a London secretary. It was agreed at the first meeting of the Council here that the London secretary should be proposed to the Council by the British Government, and that proposition was accepted as it was presumed to be desirable that the secretary here should be

British, and consequently presumably better able to quickly get about among the departments, if necessary, for the carrying out of the Council's work.

Mr. C. J. Phillips, of the foreign office, who has been in Washington and who is a very capable man, was designated at first, but his other duties have prevented him from going on with the work between the meetings. He still attends the meetings, and is helpful in many ways. When it was found that he could not serve satisfactorily, Mr. Booth, serving with the Munition Ministry, a man of unusual ability and intelligence, was proposed; but he, likewise, finds that he cannot devote the necessary time to the work. It was next proposed that Captain George Lloyd, who was in Egypt, should return to England and take up this work. He has attended one or two of the meetings, but it is found that he also is not free for continuous work. It was next proposed that Major Monfries, financial secretary of the Commission Internationale de Ravitaillement, should act as secretary. He would be an excellent man, and his duties with the C. I. R. give him, a certain familiarity worh the work of this Council. The C. I. R. is, in effect, an organization for the examination of applications to the British Government by the French and Italian Governments, and goes into far more detailed investigations than has ever been attempted by our Government in respect to the applications made to it by the British, French, and Italian Governments. There was some objection to this plan indicated by the French, who have not been entirely satisfied with the work of the C. I. R., and there was doubt as to whether Major Monfries could perform both functions satisfactorily. The matter as I write, is still in suspense.

In the meantime, Mr. Booth has suggested that probably the best solution of the matter would be that Mr. Cook, of the Equitable Trust Company of New York, whose services have been mentioned to you in previous telegrams, should become the London secretary with an English assistant. Mr. Cook has made an excellent impression, and has been in every way most helpful. I am inclined to think this solution of the matter the best, although desirous of holding to the position that we should be glad to have the British satisfied, if they can find a proper person, by having one of their own people as London secretary. It has been impossible to execute the work of the Council efficiently on account of this long delay in having a permanent secretary here.[1]

I attribute the delay not so much to any conscious opposition on the part of the British to the general activities of the Council as to a certain lethargy about it, which is gradually giving way as they realize the value of discussions with other allied representatives concerning the details of their applications.

It is difficult to convey by cable in forwarding recommendations any idea of the amount of discussion and subsequent modification of details which takes place in the Council meetings and in intermediate discussions with the departments. Some real headway is being made, and will be more apparent, I hope, in dealing with the figures for the months following the month of March. I am expecting to telegraph you today or tomorrow the combined recommendations for February and March, although the month of February is nearly gone. The understanding is clear, that, while the Council may continue to discuss applications for the placing of orders as far in advance as convenient, yet the actual credits will be established only for month to month, or, if you can see your clear, for two months ahead, or, as in this case, for two months when one month is nearly gone. It is rather slow work to get the departments of all the Governments to present intelligently their orders to be placed, although the members of the Council now are getting into the spirit of the thing.

Concerning exchange operations in New York, I am satisfied that the British Treasury will not be keen to diminish the amount of sterling thus handled. As a matter of fact, I have learned in conversation with Mr. Booth that, in his judgment, one of the advantages accruing to the British Government from the present system is this that they obtain pounds at a cost of 4.76, and, assuming the future stability of their finances, these pounds will really be then worth 4.85 to the Government. We must constantly bear in mind that cotton, cereals, a large part of the oil and other similar articles, are resold to their citizens, thus giving the British Government a large domestic revenue against their long-time obligations made to us. It amounts to a diminished need of interior borrowing in Great Britain. Undoubtedly, the British Treasury is under great pressure in every direction, and its needs will doubtless increase, both internally and externally, as the war goes on. I am not now, therefore, criticising their action, but am placing before you some of the facts which must tend, consciously and unconsciously, to dampen their activity in lines which may be desired by us.

---

[1] Pencilled note: NOTE—We wrote on Apr. 6 to Mr. Polk and Mr. Crosby in relation to Mr. Crosby being furnished a *code clerk* (filed in Inter-Ally).

In respect to some of the bills which our loans cover in part or in whole, it is pointed out that they represent purchases by British capitalists, whose properties in South America or other neutral countries must be kept going with American supplies. Railways, tramways and electric light operations in South America are thus, it is said, being provided with the necessary machinery, at least for upkeep, by placing orders in the United States, which orders would normally be filled by British manufacturers. The purchase in this case is one for British account, although the goods go to the neutral country. They are paid for in the beginning by drafts upon London, which constitute a part of the exchange operations which give us so much concern. It will be a certain alleviation of the situation if we can establish to what extent these bills actually cover American products, and I am hoping some progress may be made in that direction, now that the British are beginning to understand the importance of a study of the propositions even if it does not result in actual diminution of the sums involved.

Cable information has been sent covering the status of loans in neutral countries. The progress has not been very satisfactory. Hence, I was particularly concerned that the Spanish loan, which seemed to be nearly ripe in French hands, should not be frustrated by any action which could be charged against our Government unless that action was one of an imperative kind. I trust the explanation kindly sent by the War Trade Board in a recent cable, and which I have transmitted to the French Minister of Finance, will tend to relieve the situation if it is correspondingly understood by Ambassador Willard and by the Spanish authorities.

In general, the success of the efforts of Great Britain, France, and Italy to make these loans will depend upon the substance of the various agreements being negotiated, chiefly through the War Trade Board representatives so far as we are concerned, and through a considerable number of officials representing other Governments. There is a natural tendency on the part of the neutrals to hold back in respect to loans until these agreements shall have been concluded. It is my own belief that unless the negotiation of these agreements puts the neutral governments in an irritated state of mind, that the loans could be effected after the agreements were signed, on the basis of their interest in maintaining their commerce with countries which cannot pay in cash. It is the firm belief, however, of the British Government, and perhaps shared by those of our Government officials who are directly concerned in these transactions, that the loans and all relations between the belligerent governments and neutrals should be bound into one negotiation, as they could much more upon pressure than upon argument in dealing with these matters. There is now some reasonable fear that the approach of spring, which will alleviate the food conditions of countries, and the possible obtainment of food supplies by the northern neutrals through Russian-German sources, may tend to stiffen the position of the northern neutrals and perhaps render abortive much of the work heretofore done in endeavoring to establish loans for Great Britain and France.

Some of the British Treasury officials seem firmly convinced that a large part of the sterling exchange offered in New York represents free commerce still going on between Great Britain, France, and Italy on the one hand and the United States on the other. This, of course, would be very important if true, as it would show that the advances for exchange purposes, which might otherwise be subject to public criticism are, in fact, loans to facilitate American commerce. This view has only been recently advanced, and I shall now endeavor, with the figures obtainable from the boards of trade and chambers of commerce on this side, together with the reports available here of our exports, to make an effort to see how far this argument is well founded. I trust also that the examinations of exchange transactions now about to be made in New York will help also to clear the situation.

Respectfully yours,

[s] Oscar T. Crosby.

Exhibit No. 2955

MEMORANDUM ON RELATION OF THE UNITED STATES TO FOREIGN EXCHANGE

Honorable Oscar T. Crosby,
Assistant Secretary of the Treasury,
Washington, D. C.

Sir: Pursuant to your request, I submit herewith a memorandum relating to the question of the maintenance of a parity of exchange at a specified rate between the United States and certain foreign countries.

1. *Investigation made and material submitted.*—There are annexed hereto (a) statements showing regulations in force in the principal foreign countries with respect to gold movements and the control of the same; (b) statements showing balances of trade between certain of the principal foreign countries, compiled with a view to showing the relations between their trade balances and their foreign exchange condition.

2. The question at issue is: Whether the United States shall undertake to maintain sterling exchange, that is to say, the exchange on Great Britain, at a specified parity, approximating the rate of about 4.76 which has been established and maintained by British authorities for some time past. In this connection it should be noted that during the past twelve months the amount of exchange bought by J. P. Morgan & Company on behalf of the British Government was about $1,100,000,000, a large part thereof covering Allied purchases. It should be noted that at the present time the United States, by furnishing to the Allies funds with which to pay for their purchases in the United States, is changing the exchange problem to some extent, for the reason that it is thereby removing the necessity of providing the exchange with which to pay for these governmental purchases. In other words, the United States Government is practically purchasing in its own territory certain goods intended for the Allies, and is arranging the payments for such goods. Eliminating for the present any consideration of the payment of interest upon bonds representing such purchases or advances, it thus appears that the United States is eliminating from the exchange problem as heretofore presented, the goods bought on foreign account, although the effect of these purchases upon the exchange situation exerted through indirect channels is, of course, as strong as ever. The direct problem with which the United States would have to deal should it undertake to maintain the pound sterling at 4.76 would be that of providing exchange at the specified rate in amount sufficient to provide means for the settlement of balances of indebtedness growing out of the rest of the trade. It would also have to purchase all offerings at that or a lower rate. It should further be borne in mind that in undertaking this task the United States will also be undertaking to "stabilize" the exchange of those countries whose market is dependent on that of Great Britain, or which are in the habit of drawing sterling bills.

3. *Argument in favor of maintaining the rate.*—The argument in favor of maintaining a stable rate of exchange for the pound sterling, is that which has induced Great Britain to undertake this task heretofore. During the early days of the war, the pound sterling went down at one time to near 4.50, the result being that the purchasing power of the pound sterling in the United States was correspondingly lowered—that is to say, it would buy proportionately less of American goods as stated in dollars. It was considered desirable from the English standpoint to maintain the buying power of the pound sterling, and in addition it was believed that unless this were done the influence upon general commercial relations with the United States, produced by severe depreciation of this kind, would be exceedingly injurious. Furthermore, it was thought by many that the general effect on the financial market of such unfavorable quotations for the pound sterling would be bad, and that in consequence Great Britain's buying power and her credit in general would be seriously impaired. These considerations presumably hold good today, although the question is raised whether the United States has any such interest in maintaining the value of the pound sterling as Great Britain had. In support of the theory that it has, some assert that unless the equivalence is maintained, "loss of confidence" and market uncertainty will set in, and the result will be very decided injury to domestic financial conditions, as well as to those in Great Britain.

4. *Argument against maintaining the rate.*—The principal argument against maintaining the rate as specified is the cost involved in it and the general disarrangement of American foreign trade relations. Only very remote estimates can be given of the cost of conducting the operations, these depending essentially upon the extent to which interference with rates of exchange are actually carried into operation, not merely as regards trade with England, but with other countries as well. A more detailed estimate will be attempted a little later. At this point it should be noted that the probable effect of leaving the exchange to take care of itself would be that American shippers would demand that they should be paid in dollars because of the fact that only in that way would they secure a stable means of payment. They would not be willing to take the risk of a constantly descending quotation, so that unless Great Britain or the British banks were in condition to guarantee a stable rate, American exporters would want to be paid in dollars. They would be more likely to insist upon this be-

cause of the fact that American banks would not be willing to buy sterling bills freely. If the larger part of foreign dealings were stated in terms of dollars (dollar exchange), this would simply mean that the English banks would find it necessary to enter into negotiations with American banks, as was necessary, to persuade the latter to supply dollar credit. Then the question would arise whether American banks would do any such thing. If they would not, one of two courses would have to be followed by Great Britain—either gold would have to be shipped to pay for the unfavorable balances, or purchases on private account of the British Government would have to take over the duty of financing this private trade, as distinct from the Governmental trade. Assuming that the United States had practically committed itself to financing all of the war munitions, the question would then arise whether the British Government would undertake to supply the accommodation needed in order to enable its people to go on importing goods for private use, and, if not, whether the United States Government would be willing to increase its advances or loans in a corresponding degree. This would probably be the greatest advantage accruing from withdrawing the support now given to exchange—it would show clearly and unmistakably exactly where trade relations between the two countries now stand, and would make it possible to deal with them very much more intelligently than would otherwise be practicable. It would tend to cut off exports for unnecessary purposes which, in the present state of trade, would probably be a desirable thing to accomplish. It would also relieve the United States of a very large element of expense, as well as eliminate a troublesome financial operation whose management is almost certain to give rise in one way or another to criticism. It is not likely that the effect of "letting the exchange go" would be as injurious as is stated by some of those who desire to have the Government of the United States undertake to stabilize it for the reason that so large a proportion of the business now consists of supplies furnished for Government use, and because of the further fact that an increasing proportion of total outlay in international trade will undoubtedly be required for this purpose from now on.

5. *General considerations in connection with operation.*—It might very well be asked by other countries why the United States should undertake to maintain the stability of exchange with Great Britain and not with them, assuming that they had, or thought they had as strong a claim upon the aid and sympathy of the United States as that possessed by Great Britain. The maintenance of the pound sterling at a stable parity, while letting our exchange trade take care of itself, tends, of course, to protect the British international financial market at the expense of others, and to preserve in some measure the competitive power for the commercial contest which it is supposed will be inaugurated with the close of the war. On the other hand, should the United States undertake to maintain the British pound sterling at an agreed parity, the effort, as already noted, would necessarily imply the regulation of exchange and gold movements with respect to those countries which have heretofore made payments through London. It has already been suggested that this be done with respect to Japan in order to stop the recent shipments of gold to the Orient. If the United States were to adopt any prohibitive method of interfering with these shipments the effect upon our credit would be immediate, and our foreign trade would suffer accordingly. Indeed this is so obvious that most of those who have urged stoppage of gold exports to Japan have usually stated that they do not advocate any legislative or direct executive interference, but merely that obstacles of some kind should be put in the way of gold exports. It is not very clear what these obstacles would be. Apparently what the advocates of such a course have in mind is the stoppage of Treasury transfers to San Francisco and the establishment of banking conditions designed to restrict the disbursement of gold, etc. Such suggestions are apparently based upon English experience, but would be very difficult to carry out in the United States. The large quantity of gold certificates in circulation here renders it perfectly feasible for any responsible man with credit at the banks to obtain as many such certificates as he needs and then the question of obtaining gold is simply a matter of presenting them for redemption. Federal Reserve notes are in exactly the same position. The Federal Reserve banks have not been sufficiently developed to acquire any control over the real rate of discount in the various cities where they are located, and their branch systems are likewise undeveloped. Neither have they established themselves effectively abroad as yet; least of all in Japan or China. It would seem, therefore, that the only way in which the control spoken of could be exercised effectively would be through some action on the part of the Government designed to control and stabilize the exchange conditions with Japan and other countries just as it is suggested we should do as regards Great Britain. This would be a very large undertaking. The

attached figures for balances of trade have been compiled at the request of the Assistant Secretary, and indicate the scope which an attempt to control international exchange might possibly be compelled to assume.

Should the Government abstain from interfering with the course of exchange foreign countries which have balances in their favor will continue to be able to exact gold whenever they choose to do so. Most of them are not desirous of getting gold, as is seen by the experience of Spain and the Scandinavian countries, which have done everything they could to prevent American gold from entering in large quantities in recent months, their view being that such large importations tend to disturb prices and to affect general economic conditions somewhat unfavorably. The discontinuance of support for sterling exchange would tend to throw most of the transactions with Great Britain and this country or between this country and any others which habitually use the pound sterling as the money of account into terms of dollars, as the American exporter would, if exchange conditions were unstable, insist upon being paid in dollars. This would mean that the foreign importers' home banks would have to furnish credits with American banks. It is claimed that they would not be able to do this very long as American banks would not extend credit if exchange were unstable. (See pages 4 and 5 above.)

Assuming that such would be the case the transfer of the base of payment to the dollar instead of the pound sterling, and the limitation of the commercial bills current in the market to those which could be legitimately negotiated on a strict banking basis would be very desirable and would of itself tend to restore exchange to a normal condition.

The United States is now the only free money market in the world, and it ought to do nothing to place this desirable position in jeopardy, at least until definite circumstances of a kind unmistakably calling for some interference present themselves.

6. *Balances of trade and effect of exports.*—Reference has already been made in the foregoing discussion to the effect of the withdrawal of governmental support from exchange rates upon the movement of exports from the United States to Great Britain, and it has been suggested that such falling off as might occur would be wholesome, and the result of natural forces whose operation ought not to be wholly checked. Precisely how great a falling off would occur in this way can not be estimated with any approach to accuracy. The attached statistics afford some light upon existing balances of trade between the United States and other countries. They also afford at least conjectural information as to the amount of trade which might be checked or lost as the result of decline in exchange. It should be borne in mind that exports not taken by, say, Great Britain, will probably, as matters now stand with respect to demand and consumption, be taken by other countries. Precisely what rearrangement would be brought about in this way can be only conjectured.

A countervailing situation in connection with the checking of the export trade, may be seen in the item of freight paid for the transportation of goods in foreign vessels. How much this item is can not be known, and has always afforded a subject of controversy' the figures varying from $25,000,000 to $350,000,000. There is furnished herewith a table showing the total amount of exports for 1916, conveyed in various ways. If we assume that the foreigner pays the freight on goods sent to him (in the form of added prices), and if we further assume that the American buyer pays the freight on goods imported to the United States, while we allow a credit for freight paid on goods imported in American vessels, it will be seen that (reckoning the freight at 10% of the value of the goods) we would owe foreign vessel owners $162,494,000, while we would be able to claim a credit of about $66,469,000. On this basis, the offsetting item of freight paid to foreigners would be about $100,000,000 in round numbers.

7. *Military effect of reduction in exchange.*—Ever since the beginning of the present war unfavorable developments in British financing or banking have been noted in the German press, and have apparently afforded encouragement to the opponents of Great Britain. It may be suggested that a fall in British exchange, should it occur now, would greatly encourage or stimulate opposition to Great Britain. This might be true if it were not that the United States has definitely entered the war on the side of Great Britain, and inasmuch as American credit is now positively behind British credit, the effect of a fall in the rate of exchange could not be more than very superficial. So important a change in international financial conditions would, of course, cause comment at any time, but it is difficult to see how any real influence would be exerted by it, certainly in so far as thoughtful and careful observers were concerned.

Respectfully submitted.

EXHIBIT NO. 2957

SEPTEMBER 26, 1918.

DEAR MR. PRESIDENT: I desire to submit to you certain considerations in relation to the foreign exchange situation which has received my careful and constant attention. In times of peace the foreign exchange problem though simple in its elements is in practice one of the most elusive and baffling questions of finance. Now, however, it has largely ceased to be a banking question and becomes a question of governmental policy and particularly of interallied relations.

I

Considering first the situation of the United States alone it is evident that our trade position is calculated to produce a depreciation of the dollar. The great bulk of our exports is now moving to the Allied Governments in Europe for the purpose of enabling them to prosecute the war. These exports are in effect sold on credit, since payment therefor in made from loans granted by the United States. The remainder of our exports are insufficient to offset the necessary purchases from neutral countries and from Allied Countries such as Brazil and Japan, and we have therefor a large adverse trade balance with them. The United States has not been a lending country in the past so that this adverse cash balance is not met to any considerable extent by the remittance to the United States of interest and dividends on foreign securities held in the United States nor by the sale of foreign securities so held. Freights on American ships carrying on foreign trade have not in the past been an appreciable source of revenue to the United States. On the contrary the transport of United States commodities in foreign bottoms has in the past been one of the methods by which the trade balances due to the United States have been settled. Heretofore foreign countries have not kept in the United States large cash balances and while at the present time these balances have reached greater proportions it is probably true that to a considerable extent these bank balances do not represent a permanent change in the policy of foreign countries in this respect but an unwillingness to draw these dollars when not actually required for home use at exchange rates which would show a very heavy loss to the foreign countries. Those balances may therefore be regarded in large part as an accumulated debt of the United States arising because of our past cash adverse balances and awaiting an improvement in the exchange rate for remittance to foreign countries. The following figures taken from reports which have been furnished me may be of interest as showing the amount of certain of such balances as of August 14, 1918, after deducting therefrom United States balances in such countries.

BALANCE ADVERSE TO UNITED STATES	
Denmark	$80, 426, 072. 29
Holland	58, 929, 006. 92
Norway	66, 335, 966. 58
Spain	29, 913, 459. 46
Sweden	34, 689, 963. 46
Switzerland	17, 111, 352. 77
Argentine	69, 180, 916. 26
Bolivia	3, 319, 431. 68
Uruguay	117, 457. 63
BALANCE FAVORABLE TO UNITED STATES	
Brazil	15, 146, 130. 51
Chile	10, 354, 000. 17
Peru	2, 741, 397. 29

II

Turning now to the international phases of the situation, the broad position was taken by the Treasury that it was a most important purpose to preserve the credit of the Allied Governments and to maintain their purchasing power in foreign markets so essential for the successful conduct of the war. Accordingly Great Britain and France and later Italy were permitted to support their exchange on the New York market. British exchange has been kept at about 4.76 7/16, French exchange until the past month or two at about 5.70 and Italian exchange since the conditions which the Treasury prescribed as prerequisite to its assistance have been met has risen from about 9.10 to 6.36. Recently the franc rate has improved from 5.70 to about 5.50 probably to a large extent as a result of the remittances to Americans in France of funds from this country.

Our support of these exchanges has involved in effect the United States standing ready to advance the funds needed to settle adverse trade balances of the countries named at fixed rates as between the dollar and the pound, franc, and lire, and hence, even if the cash balance of trade of the United States were favorable, a larger cash unfavorable balance of trade of Great Britain, France and Italy with the rest of the world would tend to depreciate the dollar as well as the pound, franc, and lire, in foreign markets. A good illustration is Spain, where though the cash balance of trade between the United States and Spain has been favorable to the former the balance of trade of Spain with Great Britain, France, and Italy has been in favor of Spain and the dollar, as well as the pound and franc has been at a discount. Nor can these trade questions be confined even within these limits because the favorable balance of trade of a country with one country can be utilized to settle its unfavorable balance with another and therefore it ultimately comes to a question of the trade balance of the United States, France, Great Britain, and Italy, with the whole world as affected by the collection of the principal and income of foreign investments, ocean freight charges, etc.

In the early part of the war payment for cereals, cotton and other commodities bought in the United States by the Allies were effected through the exchange market and the amount of our advances to the Allies used for the purchase of exchange were therefore very large. More recently arrangements have been made for direct payment for many such commodities and as a result of this change and the restriction of imports into Great Britain and France the advances for exchange purposes have greatly decreased.

III

Ordinarily adverse trade balances insofar as they are not offset by freights, income from securities or sales of securities are met by shipment of gold, and if through failure to meet them the currency of a country depreciates in the international market the tendency is for its imports to be checked and its exports stimulated. In both these respects the case today is entirely different.

Embargoes now in effect prevent settlement by gold shipment and it would be most unwise for the United States to permit the use of gold for that purpose in the existing conditions except to a very limited extent. The proper course is for the United States to put its house in order so that as soon after the war as possible it will be able to resume free trading and remove the embargo on gold exports. To accomplish this result its gold should now be carefully conserved.

Further under war conditions the question of checking imports and stimulating exports becomes complicated with questions of military necessity for supplies and shipping as well as with the question of blockade and other considerations as to the relations between the belligerents on both sides and neutral countries.

IV

I fully appreciate the disadvantages, both real and sentimental, of having the dollar at a discount. I realize the disadvantage of violent fluctuations in exchange. I am sure it is in the interests of this country and of other countries as well that the exchange should be at or near the gold parity of the respective currencies.

I am, however, equally convinced as to the necessity of avoiding action which, while improving the position of the dollar might have far more important ill effects in other directions. It is, I am satisfied, most necessary that the United States should support the financial credit of France, Great Britain, and Italy by continued support of their exchange on the New York market, notwithstanding that by such support the difficulties of our exchange problem are greatly increased.

It follows that action to meet the problem must be taken in concert with the Allied Governments in the light of the best information available as to their requirements as well as those of the United States.

V

In its efforts to deal with this problem the Treasury has first of all sought to secure fuller information as to its dimensions than has been available in the past. In the United States the figures gathered by our various Governmental agencies have been most helpful. Through the president of the Inter-Ally Council on War Purchases and Finance the Treasury has urged on the Allied Governments the importance of securing and making available to an Inter-Allied body information as to the transactions abroad of their departments and their nationals. Statements furnished by Great Britain in response to those requests have proved most useful and have at the same time indicated the importance of the factors which are not reflected in trade returns. A statement furnished by Great Britain of its trade and financial relations with ten principal neutral countries, six in Europe and four in South America, shows that for the second half of 1917 its import and export balance was adverse to the extent of £51,127,000. This was reduced by income from securuties, freights, etc., to £27,236,000, and of this total there was settled by sales of securities, shipments of gold and loans effected £23,673,000, leaving as the balance carried over or settled by arbitrage £3,563,000. British trade with Brazil, Argentina, Uruguay, and Chile showed for the half year an excess of imports over exports of nearly £24,000,000, but freights, interest, and dividends reduced this balance to less than £5,000,000. At the same time an apparent balance in favor of Norway of under £6,000,000 was increased to over £7,000,000 by reason of the fact that charter hire and goods purchased to keep them out of German hands but not shipped more than offset the freights, interest, and dividends due from Norway to Great Britain.

Our Army and Navy purchases in the neutral countries in Europe constitute a serious factor in the exchange situation. Upon the urgent representation of the Treasury, the War and Navy Departments and the War Industries Board are at present engaged in a joint effort to estimate the amount of such purchases for the current half year.

VI

As to remedies, the restrictions of imports and the increase of exports are beyond doubt the ideal ways of improving the exchange situation. The Treasury has urged upon other governmental agencies the importance of such steps and it is believed that real progress is being made in this direction. The question of restriction of imports had been taken up by the War Trade Board and Shipping Board primarily from the standpoint of tonnage but the exchange feature has now been taken into consideration, particularly in dealing between alternative sources of supply of needed imports.

The War Department has been asked to limit its purchases abroad to such commodities as can not be purchased in the United States except where tonnage limitations, labor considerations, or times of delivery necessitate foreign purchases. The attention of this and other departments has been directed to the fact that tonnage conservation is not necessarily accomplished by foreign purchases, as often the purchases involve the ocean transport of the raw material from which the product is made and also additional transportation of commodities necessary to pay for the excess cost of the commodities we purchase in foreign countries over the value of the raw materials.

The War Trade Board has established a bureau which will be charged with promoting exports within the limits of available shipping of such of our commodities as we do not require for war purposes.

The War Industries Board proposes to assist in this policy by granting priority to goods for export approved by the War Trade Board as desirable for the liquidation of trade balances.

The export committee of the National Foreign Trade Council is now engaged in the study of what goods can be best utilized for export and an excellent opportunity is afforded of putting to a war purpose, in the payment of our foreign balances, some part of the production of commodities otherwise non-essential to the community but which cannot be abruptly discontinued without danger to our financial fabrics and without looking up the money invested in plant and disintegrating the labor employed in the manufacture. I am convinced of the entire willingness of our people to discontinue the use of any commodity so as to permit its use to help win the war and as the result of the efforts which I have initiated, I trust that the people may ere long be asked to forego or to curtail the use of specified non-essentials with two-fold results, each of prime importance, (1) releasing such commodities for export and (2) inducing further savings by the people through giving up the use of the non-essential and the investment of such savings in Liberty bonds, all without financial loss to the investor or loss of accustomed employment to the laborer.

In connection with the question of exports delicate questions of international relations arise. As long as the policy of supporting the exchange of the Allied Governments is being followed exports are, from a purely exchange standpoint, almost equally valuable whether made by the United States or by the European

Allies. Those countries are now importing vastly more than they can export so that there is ample tonnage for any exports they are able to make. On the other hand the need of tonnage for carrying war supplies from the United States is so great as to make it difficult to provide shipping space for exports from the United States to European neutrals that do now own shipping, like Switzerland. The exports to all European neutrals contiguous to the Central Empires, whether or not they own shipping, are controlled by considerations of blockade. The possibilities of export to other parts of the world are limited to the outward voyage of the tonnage required to bring back needed imports to this country. Consequently it may often be desirable in the interests of the common cause that exports of a given commodity from Great Britain, France, or Italy to a neutral country should be permitted while exports from the United States should be forbidden. Our exporters in such a case are likely to feel that they are being discriminated against and placed at a disadvantage in the matter of after-war trade. Such problems can be solved with due regard to war necessities and legitimate trading claims only by the exercise of the soundest judgment unclouded by prejudice.

While it is improbable that our rapidly growing merchant marine can be counted upon as a means during the war of settling to any large extent our adverse trade balance it will no doubt lighten our burden of foreign freight payments.

Foreign loans and credits constitute a means of temporarily relieving the exchange situation and by postponement afford an opportunity to obtain permanent relief by means of proper trade measures. Realizing that the price of the dollar in certain countries has been adversely affected by our support of British and French exchange, we have urged with great persistence upon the governments of these countries the necessity of their obtaining neutral currencies through loans or credits or the sale of the foreign securities which they hold. The results achieved have been materially of aid in maintaining the value of the dollar in foreign countries. The loans or credits which Great Britain has secured in Japan, Holland, Argentina, Denmark, and Spain and France in Argentina, Japan, and Spain, aggregating many hundreds of millions of dollars resulted in keeping equivalent sums off the exchanges and when after the war these loans and credits will have to be discharged by Great Britain and France the problem will be one for them to meet and will only indirectly affect the United States. This country has effected so-called stabilization arrangements with the Argentine and Bolivia and other arrangements are in negotiation with Chile, Peru, and Uruguay. The effect of the Argentine arrangement was to stabilize the United States dollar in the Argentine and although before the arrangement was entered into it had become demoralized and the prospect was that it might be difficult, if not impossible, for American merchants to finance the purchase of Argentine wool, hides, etc., on any reasonable basis.

In connection with the arrangements concerning silver with the Indian Government arrangements have been effected whereby the Treasury is enabled to supply rupees for all civil and military purposes of importance in connection with the prosecution of the war at a slight premium over parity, although prior to this arrangement Indian exchange was almost unobtainable.

In connection with the Indian exchange it must be borne in mind that while on a gold basis, the actual currency is silver and the cost of providing that silver currency fluctuates with the price of silver. At the present level for silver, the price fixed for rupees barely pays the cost of laying down the silver coin in India.

An arrangement has been recently negotiated with Iceland under which the United States though not a party, will obtain certain kroner provided thereby. A Danish arrangement is now under negotiation. An arrangement with Switzerland was effected under which 75,000,000 Swiss francs were to be obtained (60,000,000 of which have already been furnished) by our Government for its army purposes at the par of exchange and negotiations for a further supply of Swiss francs are under way. A banking credit in Spain has just been obtained aggregating 250,000,000 pesetas. Other foreign currencies are about to be received in direct payment of certain of our exports and plans are being perfected to obtain if needed additional foreign currencies in this manner, and I expect to be able to make further important progress in this intricate and important question at no distant date. The improved military situation ought to make it easier for Great Britain and France to obtain further credits to relieve the situation and I am now contemplating steps which will release for use in Chile and Spain certain Chilian securities owned by Great Britain and Spanish securities owned by France which had been pledged in the United States.

VII

As a result of the various measures indicated I believe real progress is being made on wise, broad, and conservative lines. From tables recently published, the following figures as to the highest premiums quoted for various foreign currencies since our entry into the war and the highest premiums for July have been extracted and quoted. Premiums of September 6, 1918, have been added for comparison. You will observe the very marked improvement since July particularly in the cases of Spain and Switzerland in which countries arrangements have as already stated been consummated recently.

Currency of—	Highest premium reached between April 1917 and July 31, 1918		Highest premium, July 1918	Premium, September 6
	Percent	*Month*	*Percent*	*Percent*
Sweden	69.78	November 1917	33.58	25.00
Denmark	44.59	do	16.79	13.81
Holland	29.35	July 1918	29.35	18.16
Switzerland	35.28	May 1918	31.50	15.91
Spain	54.15	April 1918	42.75	19.17
India	23.30	September 1917	10.14	10.14
Japan	7.82	July 1918	7.82	9.57
Argentine	12.25	December 1917	5.61	5.20
Chile	78.24	June 1918	75.48	71.27

In the case of Brazil whose currency has been at a discount the lowest discount was 16.35 in January 1918 the lowest discount in July was 23.13% and the discount September 6th was 26.8 so that the dollar has appreciated since July in Brazil also.

The whole subject of foreign exchange is constantly before me and my advisers and receiving the attention its great importance demands. As I have indicated it involves considerations of governmental policy and international relations above and beyond commercial or banking considerations. Its successful treatment requires concerted action of the Treasury, the spending departments, the Shipping Board and the War Trade Board and also calls frequently for cooperative action on the part of the United States and the Allied Governments.

I am in sympathy with the purposes and objects Senator Owen has in view in attempting to create a Federal foreign exchange bank, but I am fairly convinced that the creation of such a bank at this time would be a grave mistake. Any division of responsibility and any unneeded multiplication of agencies, in view of the existing situation, would be most unfortunate and hurtful. Every day as the war proceeds, the necessity of concentration of authority to meet war conditions becomes more and more evident. The injection of a new instrumentality to deal with foreign exchange problems would be a decided step backward. If its jurisdiction were co-extensive with that of the Treasury confusion would result and progress would be most difficult. It is not needed as an instrumentality of the Treasury for by reason of the character of the problem the Treasury can deal with it better directly than through any such instrumentality. The results recently achieved in Spain could not have been effected through a governmental institution because of the unwillingness of the Spanish Government to assume an attitude which it felt would not be strictly neutral. It was unwilling to countenance loaning money to a belligerent and a transaction had to be arranged providing for the utilization of the credits effected through the instrumentality of banking institutions. The same attitude may, I apprehend, be taken by other neutrals and the existence of the new instrument would not afford a medium for consummating such arrangements as have been made with Spain, but would make the employment of any other medium more difficult. I believe also that such a bank would require a steady supply of gold to transact its business and meet its commitments, and I regard any such contingency with the gravest concern when upon the continued financial support of the United States the fate of the war largely depends and this support is in turn dependent upon the confidence of the people of our country in our financial strength and our ability to solve our financial problems. I believe it would be impossible for such an institution to strike at underlying causes, and I believe that the Treasury is better able to deal with the problem (which as stated I conceive to be one of broad governmental and inter-Allied policies rather than merely a commercial or banking question) in its correct proportion and relation to other war problems than any agency newly created and dealing with only one phase of the commercial and financial situation could possibly be.

For these reasons I am convinced the creation of a Federal Foreign Exchange Bank under existing war conditions would be a grave error and I have felt it my duty to lay my views and the facts on which my views are founded somewhat fully before you.

Cordially yours,

[s.] W. G. McAdoo.

The President,
The White House.

Exhibit No. 2958

June 14, 1917.

Sir Hardman Lever,
Financial Secretary to the British Treasury,
New York, N. Y.

Sir: In connection with the additional advance of $25,000,000 which Secretary McAdoo made to your Government today and which has been witnessed by papers similar to those heretofore passing between your Government and this Government, I would like to state that the Secretary would be glad to have some further explanation of the item of $250,000,000 (round figures), exchange on London, and appearing in the memorandum handed to him by you today headed "Summary of Munitions, supplies, ships, and interest payments for the account of his Britannic Majesty, April–May, 1917."

The figures thus represented in answer to my verbal request made several days ago throws much light on the situation, but is not yet sufficient save with the explanation which you gave in conversation today. May, I, therefore, beg that you will now give in concise form those explanations so that the matter may be laid before Secretary McAdoo.

With much respect, I am, my dear Sir Hardman,

Very truly yours,

——— ———.

Exhibit No. 2959

Plaza Hotel,
New York, June 15th, 1917.

Hon. Oscar T. Crosby,
Asst. Secretary of the Treasury,
Washington, D. C.

Sir: In reply to your letter of the 14th June, in which you refer to a memorandum handed you by me, headed "Summary of Munitions Supplies, Ships, etc.", including an item of $251,000,000 (round figures) "Exchange on London", I beg to confirm my verbal statement made to you, namely, that this exchange item, being London exchange purchased in New York, includes and necessarily represents, to a large extent, drafts covering the purchase of wheat and other cereal products for the joint account of France, Italy and the British Government, cotton for use in Great Britain, meat and meat products, fuel oil and gasoline, and many other similar purchases made by or for our Admirality and War Office Departments in the American market.

I desire to add that as the whole of the shipping tonnage from this country is controlled and regulated by the British Government, only such supplies as are necessary and vital for the conduct of the war find space, and the goods paid for in the shape of exchange are therefore limited to these vital war necessaries and all the tonnage used for this purpose.

As explained to you, the cereal products are extremely large, and I am informed by the representatives of our Wheat Commission that in the month of June our total cereal and cereal purchases in North American markets will represent upwards of $130,000,000.

Trusting the foregoing supplies the information you desire, I am,

Yours very truly,

[s.] S. Hardman Lever,
Financial Secretary to the Treasury.

EXHIBIT No. 2960

JUNE 21, 1917.

Sir HARDMAN LEVER,
c/o British Embassy,
Washington, D. C.

DEAR SIR HARDMAN: Again referring to the memorandum left with me some days ago and headed as follows: "Summary of Munitions, Supplies, Ships and Interest Payments for Account of His Britannic Majesty's Government April–May 1917", may I ask that you be good enough to indicate to whether or not all of the Russian expenditures except those shown in the footnote were paid as against the Morgan list of Russian contracts, for which a British credit has been extended? May I further ask to what extent the purchases of cereals made for Italy and France were repaid to you?

Referring to your kind note of the fifteenth instant from the Plaza Hotel, I suppose it may be assumed therefrom that the $251,511,439.63 indicated in your memorandum under the heading "Exchange on London", represents substantially in its entirety recent purchases of materials for shipment either to Great Britain, Italy, or France, and is not of the character of exchange recently discussed by us as due to the purchase by you of bills upon London resulting from the withdrawals of banking funds by American leaders in the London market.

The memorandum as a whole, perhaps, would be more useful in preparing probable future monthly operations of your Government as a purchaser in our market if the month of May were separated from the month of April; or shall I assume that the total, $582,556.09, shall be divided by two as a close guide to the monthly expenditures.

Trusting that you will be able to cover these inquiries with but little inconvenience to yourself, I remain

Very sincerely yours,

[s.] OSCAR T. CROSBY,
Assistant Secretary.

[Pencilled note: $582,964,556.09?]

EXHIBIT No. 2961

PLAZA HOTEL,
New York, June 25th, 1917.

Hon. OSCAR T. CROSBY,
Assistant Secretary of the Treasury,
Washington, D. C.

DEAR MR. CROSBY: In reply to your letter of June 21st, received by me on the 23rd, I will have enquiries made and let you know as to whether or not all of the Russian expenditures, except those shown in footnote referred to by you, were paid as against the Morgan list of Russian contracts.

In regard to your second question as to the expenditures in connection with the purchases of cereals made for Italy and France, which are repaid to us, I have to advise you that we received in respect of cereals and sugar during the period from France $32,000,000 and from Italy $11,942,958.

In regard to your third question, you are correct in assuming that substantially the whole of the exchange item represents purchases of materials for Great Britain, Italy or France, and that the withdrawal of banking funds or sterling balances in London, to which I referred, occurred in the month of June.

In reply to your last question, I do not think that it would be a close indication of our monthly expenditures were you to divide the sum of $582,964,556 into two, as it is my belief that our payments for several of the months in the ensuing year will show considerable decreases, this particularly due to the fact that the cereal purchases do not occur in the same volume every month, and that we have periods of comparative freedom in this respect. Further, I do not anticipate that we will be purchasing anything like the quantity of finished munitions which we shipped during the months of April and May.

Very sincerely yours,

[s.] S. HARDMAN LEVER,
Financial Secretary to the Treasury.

EXHIBIT No. 2962

FEDERAL RESERVE BOARD,
Washington, December 13, 1917.

DEAR MR. LEFFINGWELL: With respect to the memoranda of Mr. Strauss and Mr. Davis, dealing with the exchange question, I should like to express my personal views, inasmuch as I do not know whether it will be possible to get an expression from the Board within the next few days, Governor Harding being away, and I know that you are anxious for a reply.

Generally speaking, I have held the view right along that we should lay down to our Allies the exact measure constituting the top amount of the credits that we can grant them, and then it will be their concern to use these credits in such a manner as to cover *all* their purchases in our country, including foreign exchange. In other words—that they must control the outsider, the purchaser who contracts in this country for goods independent of the purchases by the Government. It is he who creates half of our difficulties. Italy is a case in point. If we help Italy "to maintain her exchange", it simply means that we are helping the outside Italian purchasers in settling their purchases at not too great a loss. Unless foreign governments control these outside purchasers by conditions to be imposed by such foreign governments, the foreign exchange question will never be under control and our credits opened to our Allies will always be exceeded.

When this question of the outside foreign purchaser has been settled, there remains only the question of Government purchases by our Allies in foreign countries, for which American credit is used as a means of payment. Financing of these foreign purchases is dangerous because it is apt to drain our own foreign balances and interferes with the circle which money must describe in this country. Money raised by loans and spent by foreign governments in this country returns to the depositor and thus keeps intact the basis for our loan operations. If, on the other hand, we permit our own foreign balances to be consumed by our Allies, we shall be faced, sooner or later, with a very critical condition of being forced to pay in gold for certain things which we require for the prosecution of the war. The consequences of such conditions are obvious.

It is therefore necessary to permit our Allies to use our credits for purchases abroad only when we agree upon it in advance and when our Allies and we have reached a definite conclusion that there is an absolute necessity for our paying for these foreign goods. In that case, however, I wonder if it would not be the safest way for us to demand that we pay for these goods ourselves instead of buying exchange afterwards. Let England be the purchaser and distributor of goods for the whole allied European group; but when it is a question of buying Canadian wheat or Argentine wool or meat for the European allied group, and American credit is to be used for such purposes, let us buy those goods ourselves and sell them to England against England's bond, for distribution amongst the Allies in Europe.

What I am after is this—that we ought to have a direct connection with the purchase of goods and thereby better control the spending of the money. By adopting this method, we shall be consulted first, while now the money is being, spent first by outside purchasers, as above outlined, or by foreign governments and we are being faced with the fact afterwards when the harm has been done and when we have to buy bills of exchange indiscriminately without exactly knowing what has brought about the accumulation of sterling exchange in our market. The organization that we are about to create for the purpose of controlling exchange transactions will tell us a good deal in this respect, but I do not see how it can obviate the present condition—viz, that the transaction will go through first and that we shall then be dealing with the exchange transaction as a "fait accompli."

The two measures that I propose would cure the situation They are: first, request definite control by our Allies of all foreign purchases by their nationals in neutral countries and in our country; second, insist on direct purchases by the United States of such goods as are to be financed by means of American credit.

Needless to repeat that it is of the most vital importance to relieve us as far as possible of the necessity of paying for these foreign purchases and to push in every way possible negotiations for having neutral countries sell goods on credit arrangements just as much as we sell our goods on credit at this time, or have our Allies restrict their foreign purchases where credit cannot be arranged.

Very truly yours,

[s.] PAUL M. WARBURG.

Hon. R. C. LEFFINGWELL,
Assistant Secretary of the Treasury.

JUNE 26th, 1917.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: I have just had a telephone conversation with Secretary McAdoo at Buena Vista. He desires me to ask an appointment with you tomorrow morning in order that I may explain to you certain facts connected with the loans already made and now being negotiated to Great Britain and other belligerent powers. There is just now very urgent demand from Great Britain for additional funds which Secretary McAdoo is unwilling immediately to advance, and he thinks it desirable that the situation should be laid before you.

Awaiting your commands, I remain

Very respectfully,

(Signed) OSCAR T. CROSBY,
Assistant Secretary.

EXHIBIT NO. 2964

(Pencilled) JULY 5, 1917.

MEMORANDUM OF CONFERENCE HELD IN THE OFFICE OF ASSISTANT SECRETARY CROSBY ON JULY 4, 1917

There were present Lord Northcliffe and Sir Richard Crawford; Messrs. Tardieu, Simon, Casenave, and De Bille; Messrs. Crosby and Leffingwell.

Mr. Crosby stated at the outset that it was not expected that any conclusions on the part of any of the governments represented would be reached in the conference, and particularly emphasized the fact that he had no authority to make or even indicate any commitments of the Secretary of the Treasury whatever, nor to foreclose in any degree whatever further inquiries that might be directed by the Secretary of the Treasury to obtain infromation desired by him for his guidance in the exercise of his discretion under the said act. It was hoped, however, that the conference might produce certain results which, when reported to Secretary McAdoo, would facilitate his action on the important matters involved.

Mr. Crosby stated that not only the two foreign Governments represented in the conference, but also the Governments of Italy, Russia, and Belgium were pressing for immediate replies to requests for cash advances on the following day, July 5, and that it seemed well that a better understanding of the financial needs and abilities of the various parties should be had by the conference in question. He then stated that of the $3,000,000,000 that the Secretary of the Treasury was authorized, at his discretion and with the approval of the President to lend to belligerent Governments, $1,000,000,000, in round numbers, had already been allotted, and it remained for the Secretary of the Treasury to consider the wisest disposition of any such balance of $2,000,000,000 as he might determine to lend for the purposes indicated in the act. He then recalled the statement of Secretary McAdoo to Lord Northcliffe made in a conference held on the previous day that the Congress of the United States would probably adjourn in a relatively short period, and would not, unless called in special session, reassemble until December 1917, and that therefore there would probably be no further congressional authorization, even if requested by the Executive, for loans to foreign governments until approximately the first of January 1918. The requests of other governments, as presented to the Secretary of the Treasury, were discussed and opinions were asked of the foreign representatives present in the conference concerning the political and military situations of Russia and Italy and the corresponding attitude which any belligerent associated in the war and capable, by presumption, to lend money to its associates in the war should take in view of those conditions. Particularly the request of the Russian Government for 30,000 freight cars and 1,500 locomotives, in addition to 10,000 cars and 500 locomotives already negotiated, was discussed, and all the foreign representatives present were of the opinion that grave doubt existed as to the advisability of appropriating from limited funds the sums necessary to meet these requirements.

The discussion then turned upon the question as to whether the Governments of Great Britain and France would prefer any sums the Secretary of the Treasury might deem available for loans to those Governments to cover the remaining six months of the year 1917, or a shorter period, their attention being directed especially to the fact above noted, as having been stated by the Secretary of the Treasury that congressional action before January 1st was not probable. It was agreed between the representatives of the two Governments mentioned that they would confer upon the matter and indicate their own views on this point at a relatively early date.

In respect to the matter of British exchange, Mr. Crosby asked whether the British Government expected that the United States Government would be called upon for money to assist in the maintenance of the existing rate. Lord Northcliffe answered: "That is our business." Mr. Crosby then asked whether the British Government expected the Secretary of the Treasury to be requested to assist in payment of the $400,000,000 of bank overdrafts standing against the British Government among various New York bankers. Lord Northcliffe answered: "That also is our affair. It will not come up to you."

("EXHIBIT NO. 2965" appears in text on p. 9116.)

EXHIBIT NO. 2966

TREASURY DEPARTMENT,
THE SECRETARY OF THE TREASURY,
August 16, 1917.

DEAR CROSBY: Here is a most interesting letter dated August 14 from Governor Harding on the foreign exchange situation. I wish you would read this, guarding it with your own eyes for the time being. I have asked Governor Harding to submit any further views he may have on the subject so that we may all get together for further discussion of the matter at the earliest possible moment.

Cordially yours,

——— ———.

FEDERAL RESERVE BOARD,
OFFICE OF THE GOVERNOR,
Washington, August 14, 1917.

DEAR MR. SECRETARY: In accordance with your request, I have devoted during the past two months as much time as was available to a study of our foreign exchange situation.

The total gold stock of the United States is now about $3,086,000,000, but the rate of increase in the country's gold supply has been less marked during the present year than it was in either 1916 or 1915. From January 1st to June 30th our imports of gold have amounted to $478,165,000 and our exports to $202,534,000. Of our total imports $453,487,000 have been from Great Britain and Canada, and our exports have been principally to—

Spain	$53, 722, 000
Scandinavian countries	----------
Japan	84, 926, 000
India	3, 016, 000
Mexico	4, 777, 000
Cuba	14, 159, 000
Other Central American countries	685, 000
South American countries (chiefly Argentina)	32, 141, 000

American exchange, which will be referred to hereinafter as dollar exchange, is at a discount in Spain, Switzerland, Holland, Norway, and Sweden, and this discount of 14.8%, 13.5%, 4%, 12.1% and 18.8%, respectively, has no relation to the trade balances. Spain and the Scandinavian countries especially appear to have a surfeit of gold and have practically demonetized it by stopping its coinage and by placing it on a commodity basis. American exporters to these countries usually draw in sterling, while our importers are required to make payment in terms of the currency of these countries, the balance of trade running heavily against England in all three countries; hence exchange on London is at a discount, or conversely, pesetas and kromen are at a premium. Sterling exchange is pegged at a fixed price, $4.76–7/16, by the British Government in the New York market, which is the world's highest market for sterling. Consequently, holders of sterling bills all over the world send them to New York for sale. A shipment of gold from the United States to European neutral countries is an expensive and risky operation; and, while it would be possible, if dollar exchange alone were considered, to ship enough gold to restore the parity of the American dollar in neutral countries, it is not practicable nor desirable to ship gold in sufficient quantities to restore the parity of pounds sterling and francs, with which currencies the American dollar is associated in the minds of the neutrals, and which, under existing conditions would have to be fully protected before dollar exchange could reach its parity. It would seem therefore, that it would be desirable that the close interlocking relationship between the dollar, the pound sterling, and the franc undergo some modification.

Let us consider the Spanish situation first. We are approaching a time of year when there will be large shipments of cotton to Spain, principally to Barcelona. These shipments are usually financed through British banks, and a shipper in New Orleans or Savannah draws sixty or ninety days bills in sterling, with documents attached. This draft is accepted, we will say, by the Bank of Liverpool and sent to New York for sale, where it is purchased, let us assume, by the Guarantee Trust Company or the National City Bank. It is then forwarded to London and discounted by the Bank of England, the proceeds being placed to the credit of the New York bank. The ultimate payment of the draft is a matter entirely between British and Spanish nationals, but the proceeds being placed to the credit of the New York bank as soon as received by the Bank of England, the balance in London of the New York bank is correspondingly increased. The New York bank has two ways of withdrawing its funds from London: (1) By having the gold shipped to it; (2) by selling its own draft against its London balance.

Even in cases where the governmental consent is given to the shipment of gold, the operation is very expensive on account of the high cost of transportation and war risk insurance, so that as long as the British Government is prepared to buy sterling bills in New York at $4.76–7/16, shipments are not requested. The bank of Liverpool of course, would get its reimbursement in Spain, and its balance in that country would be available as an offset in the exchange transactions between Great Britain and Spain. But as far as our American business is concerned, the situation would be greatly simplified if we had a strong American bank doing business in Spain, which would finance the required credit for the Barcelona cotton merchant, and direct drawings on this side to be made in pesetas. Assuming the American bank so established to be a branch of either the Federal Reserve Bank or of some strong member bank, the proceeds of these peseta drafts in Spain would be available to be drawn against in pesetas in favor of American importers who might have peseta bills to Pay in Spain. And I may say here that I have been assured by Mr. Vanderlip that the National City Bank of New York will make application to the Federal Reserve Board in the near future for permission to establish a branch at Madrid and one at Barcelona. The situation in Holland and the Scandinavian countries, however, does not admit of so simple a solution and will be discussed later on in this memorandum.

You have, I understand, received information to the effect that during the present year purchases of sterling exchange in the New York market for British Government account in order to maintain the arbitrary rate of $4.76–7/16, have averaged about $40,000,000 per week. These purchases do not represent the entire volume of sterling bills that have been offered in the New York market, but represent rather the excess which it has been necessary to provide for in order to maintain the rate. It follows, therefore, that had the volume of sterling bills in New York been decreased to the extent of $40,000,000 per week, the ordinary commercial demand would have taken care of the market, and that purchases by the British Government would have been unnecessary. At the present rate, in order the stabilize the exchange market, purchases of sterling in New York by the British Government will, during the course of a year, amount to $2,400,000,000.

I shall assume that the credits which will be granted the British Government by the American Government during the twelve months beginning May 1st, last, will aggregate at least this amount, but you are in a better position to judge of this than I am. Two questions now naturally present themselves:

(1) Is it to our advantage, all things considered, that the rate on sterling bills be maintained or should the rate be permitted to find its own level:

(2) If it is desirable to maintain the rate on sterling, should the United States advance the necessary money and credits to the British Government to support the market with the present volume of bills offering, or is it preferable to reduce the volume of sterling bills to a point where the market could be more adequately supported by commercial demand by increasing the volume of dollar exchange or American bills?

We laymen should bear in mind that the conversion of the money of one country into that of another, even though it be done by drafts or bills of exchange, without involving the use of any actual money, is an expensive process and a profitable one to the bankers handling the transaction. Take the typical Spanish transaction above referred to, for example. There is an exchange between Barcelona and Liverpool, between New Orleans and New York, between New York and London, between London and Madrid, and finally between the Baltimore or Boston importer and New York, thence to Madrid. Direct dealings by American exporters and importers with their correspondents in foreign countries in American dollars would save most of this exchange charge, and for this reason it is natural that many of the most expert foreign exchange bankers are averse to building up dollar exchange by reducing to a corresponding degree the volume of sterling bills. For instance, Mr. Fred I. Kent, vice president of the Bankers Trust Company of New York, writes me that there is no question in his mind that the present method must be so controlled through restrictions, that it would be just as safe and much simpler of operation than the plan of increasing dollar exchange, and that, in his opinion, the present method should "by all means be continued." Mr. Benjamin Strong, Governor of the Federal Reserve Bank of New York, and former president of the Bankers Trust Co., writes me that "the simplest and most effective method would be for the Government of the United States to make sufficient advances to the British Government to enable it to continue its policy of purchasing exchange through the existing machinery, so that no disturbance whatever would arise, nor would any publicity develop which might be interpreted by enemy governments as evidence of growing weakness."

"The other alternative, *which seems less desirable*, would be for the British Government to take over control of the purchase of practically all commodities now being furnished by this country, making all contracts payable in dollars." Neither Mr. Kent nor Governor Strong takes the position that it is impracticable to reduce the volume of sterling bills by increasing that of dollar bills, but they agree that the maintenance of the existing method is preferable. Their letters to me on this subject are in my files and are available for your use.

One of the members of the Federal Reserve Board holds the view that it would be to the advantage of the United States if the rate on sterling in New York should go to pieces, on the theory that prices of goods in America would be reduced thereby to American consumers, because their prices to the foreigner would advance and demand for export would thereby be diminished, and there would be a greater supply of goods available for American consumption. Other foreign exchange experts, Mr. Kent in particular, are of the opinion that it is necessary for the best interests of this country that rates on sterling be maintained, even though it be necessary for our Government to make special loans to the British Government for this purpose. Mr. Kent holds, and in this view he is supported by Governor Strong, that this country has so much more to gain by supporting sterling exchange than the British Government has, that it might be considered as being almost immaterial to Great Britain. Mr. Kent points out that by raising prices the citizens of Great Britain would have to pay for goods purchased from us, due to the higher price of dollar exchange, they would be obliged to reduce their purchases in this country to a great extent and would ultimately have to discontinue them altogether. The United States would be injured because we would lose a market for many commodities which Great Britain naturally takes from us, such as wheat, and particularly cotton, and that the war expense of the United States would be increased by the extra amount of material which we would have to supply for war purposes at our own cost which Great Britain would otherwise pay for. I quote from Mr. Kent's letter the following:

"If part of this material is paid for by the British Government through giving its notes to the United States with sterling exchange maintained, Great Britain will be able to purchase such commodities and use them in such manner as to keep her army up to the highest state of efficiency. If we make it impossible for Great Britain to buy our cotton the injury to our southern planters, even though great, would be nothing compared to the probable additional loss in men and money that would fall upon the United States, because our Army would have to take the place of such part of the British Army as could not be properly equipped by Great Britain, and the war expense of such additional troops, both in men and money, would fall upon the United States. Again the stoppage of the buying power of the British people because of the fall in the sterling exchange that would certainly take place if it is not maintained by our Government would not be recognized in all its seriousness until after a certain lapse of time, possibly a month or two, or maybe more, when it began to be felt through British inefficiency at the front. Whatever time the war may last, therefore, provided Germany does not win, would be lengthened by such period.

"In 1916 we shipped raw cotton to the value of $543,529,808. Of this total $272,787,051 went to the United Kingdom. In the same year, 1916, we exported wheat to the value of $226,746,370, of which $87,876,853 went to the United Kingdom. The natural season for the exportation of these commodities and others which need not be mentioned is about to begin and it can readily be seen that if sterling exchange is allowed to drop now that serious results might ensue. The temporary unsettlement and derangement of business that might arise could easily assume tremendous importance and would unquestionably do so unless the condition were anticipated and met at once, and this could only be done through additional loans made by this Government that would actually be taking the place of those which it is now called upon to make in order to maintain the exchange. It must be borne in mind that due to the triangulations of exchange the maintenance of sterling exchange has a beneficial and steadying effect upon the exchanges of France and Italy and other countries, and if sterling is allowed to drop it may make dealing between these other countries and the United States, except through loans made by this Government, not only difficult but impossible. We might therefore be called upon to help the French Army, for instance, in a much larger way than will otherwise be necessary. It must be remembered that Great Britain is making loans to other Allies, all of which strengthen our position in the war. The total excess of merchandise exports for the calendar year 1916 was $3,089,769,254, and for the first five months of 1917 amounted to $1,472,246,108."

And I quote this from Governor Strong's memorandum:

"The consequence of a collapse of sterling exchange should be viewed from two standpoints; one political or military—and the other economic.

"The political or military effect is all comprehended in the statement that it would be regarded in Germany as equal in value to a great military victory.

"Germany's credit with neutral countries has been gradually drying up, the most recent evidence of this development being the enforced export of gold by the Reischbank. On the other hand, the credit of the Allies in neutral markets and particularly in this country, has been maintained largely because of the skill with which the international finances of Great Britian have been managed, but still more because of world-wide confidence in the wealth of Great Britain and the stability of its finance.

"A breakdown in sterling in the various markets of the world would be interpreted as a failure of British credit and as evidence that the allied powers had reached the end of their economic resources. The extent of the encouragement to the enemy can hardly be measured. It would reach all classes, would have a correspondingly depressing effect upon home population, and no doubt considerable effect upon the political attitude of neutrals. This last consideration is not to be ignored at the present time when further economic pressure must be exerted upon the Central Powers by a vigorous enforcement of the policy of controlling our exports to adjacent neutrals.

"The economic consequences of a collapse of sterling would be identical with the effect of a complete suspension of international specie payment by Great Britain. It would, for a time, reduce the trade of the world to a barter basis and disorganize commerce to such a degree as to seriously hamper the successful prosecution of the war.

"In detail, the following developments might be expected:

"1. Trade throughout the world, which is largely conducted at prices based upon the rate at which local currencies may be converted into sterling, would halt until other means of settlement were provided in place of the sterling bill.

"2. Interruption to commerce would result in goods piling up at seaports, causing congestion of transportation both by rail and water.

"3. The citizens of neutral countries would direct goods to the market where cash settlement could be effected, namely, this country, thereby hampering our Allies in purchasing supplies which they are now receiving from various parts of the world and forcing them to make all of their purchases in this country.

"4. It is quite possible that sufficient distrust of the stability of world finance would develop to lead timid people to hoard gold, with the inevitable consequence of a quoted gold premium.

"5. All exports by this country to Allied countries would increase in cost to the consumer abroad in proportion to the discount on sterling (or premium on dollars) and such restricted trade as continued could probably only be conducted by the use of our Government's credit.

"In general, it would mean a period of disorder in the world's commerce and finance which could only be gradually restored by the substitution of other means of settlement, doubtless American bills, which development would be slow because of the lack of adequate American banking machinery in foreign countries. The ramifications of the disorder resulting from any such calamity need not be enlarged upon as they are only too apparent.

"In view of the existing situation, two possible courses seem to be feasible. The simplest and most effective would be for the Government of the United States to make sufficient advances to the British Government to enable it to continue its policy of purchasing exchange through the existing machinery, so that no disturbance whatever would arise, nor would any publicity develop which might be interpreted by enemy governments as evidence of growing weakness."

I am familiar with the views which were expressed to you by Messrs. Morgan, Vanderlip, Kahn, and Alexander of strongly favoring the maintenance of the value of sterling exchange in this country, and my own opinion is in complete accord with this idea. I am strongly in favor, however, of a more normal support of sterling by a reduction in its volume and a corresponding increase in dollar bills, and am glad to know that this view is supported by the high banking authorities with whom you conferred in New York on the 6th instant.

The United States is now the world's chief source of supply for money and credit. If the present system is to be continued of having sterling exchange the standard currency in the world's transactions, it would seem that we should establish branches of the Federal Reserve banks at all of the principal money centers of the world which are accessible. There are of course, certain grave objections which may be urged against this policy. The Federal Reserve banks are the reserve depositaries of nearly 8,000 member banks and the distribution of the assets of the Federal Reserve banks throughout the world at this time might cause serious distrust and probably would, in addition, impair the ability of the Federal Reserve banks to relieve any sudden domestic crisis which might arise. In these circumstances, I am decidedly of the opinion that it would be far better to force the American dollar into the position of being a standard currency for the world, and to require those nations which deal with us not through preference but of necessity, to conduct their transactions in terms of American money and to make their ultimate payments for goods shipped from American in American money markets. The United States Government is going to be depended upon at any rate, to finance the anti-German belligerents during the continuance of the war, and it would seem that this Government is certainly in position, in extending credits to these belligerents, to force them to accept our own terms. You have announced the wise and liberal policy of seeking no profit on the moneys furnished, but it seems it is clearly in our own interest, as well as to that of the other countries, that the United States be recognized, for the time being at least, as the world's chief money market.

Let us assume that Congress will authorize you to extend credits of $2,000,000,000 additional, to Great Britain between now and the first of next June. This is an amount more than sufficient to take care of the present volume of sterling bills at the arbitrary rate which has been fixed. Let us assume further that you will cause a warrant on the Treasury to be drawn on the first and fifteenth of each month and that the amount of these warrants is placed in the New York depository banks of the British Government to its credit. The British Government could then instruct its nationals that it had made this arrangement for credit say to the Bank of Liverpool, London City and Midland Bank, and other accepting banks and acceptance houses, that under its arrangement with the United States Government bills of American purchases such as cotton, wheat, or steel, should be drawn at ninety days, payable in American dollars. These banks already have their New York correspondents and could send the acceptances to New York for collection. They would be met at maturity out of the funds in New York banks to the credit of the British Government account, and in addition American banks in New York and other large cities could engage in this acceptance business, forwarding their drafts for payment at maturity to New York in the same way. As a result, a very large proportion of these bank credits which will be liquidated by the popular subscriptions to Liberty bonds, will be carried by American banks. They will be paid promptly at maturity by the advances made by the United States to the British Government out of the proceeds of Liberty bond sales, and it is conceivable that there might always be an unliquidated amount of unmatured bills (representing the volume of ninety days) in the hands of American banks aggregating, of say, $1,000,000,000, thus affording a natural and easy means of increasing the credit. This arrangement might not at first appeal to British pride and would probably be opposed by Sir Edward Holden of the London City and Midland Bank, but if certain political conditions which I need not discuss here are pointed out, I think their opposition would fall to the ground. Because of the diplomatic aspects of the case, I am somewhat reluctant to make a suggestion regarding our transactions with Holland and the Scandinavian countries, but as this is merely a personal memorandum for your own consideration, I will take the liberty of doing so. From what I have read I am of the opinion that Holland, Norway, and Sweden have been heavy sellers of goods to Germany and the large increase in our exports to these countries during the past two years and a half would indicate that they have been buying much more than they needed for home consumption. The embargo on shipments to these countries appears already to have had a very strong sentimental effect on Germany. I assume that the embargo will not be absolute but that a certain volume of goods will be permitted to go forward. However, a decrease in our exports to Holland, Norway, and Sweden, unless accompanied by a corresponding reduction in our imports from those countries, will tend to further aggravate our present unfavorable exchange situation with them and will still further reduce the value of the American dollar in those countries. I have seen statements made in the press that Germany has forced these unfortunate countries to ship goods to her in exchange for coal. It would, I think, be to the advantage of this country if England were able to exert equally as strong in influence upon them as Germany. She could do this if an agreement could be made to have England act as an intermediary for America in the shipment of foodstuffs to Holland and the Scandinavian countries. England is practically on the ground and must have a clearer insight into the actual needs for domestic consumption of these countries than America has. She could prevent any retaliation on the part of these countries in the way of declining to ship goods needed by America, by making such shipments a condition to the forwarding of American foodstuffs to them. Some agreement should be made as to British profits in these transactions, which ought to be less than the discount now paid on the American dollar in the countries named, and I ask that you consider whether trading with these countries through England would not strengthen us from a military standpoint, besides relieving us of a very intricate exchange problem.

In this connection, I would suggest that you discuss with Lord Northcliffe the question of gold shipments to India. Not only have we been obliged to ship gold to India in payment of American purchases, but we have sent even large amounts for Japanese account. Owing to importations, principally of silk, we have been indebted for several months past to Japan on current account, which country in turn is indebted to India for purchases of cotton and jute. Japan has been settling her balance with India by directing the United States to ship gold to Calcutta for her account. I was informed sometime ago that the British Government had arranged with banks in India to retain incoming gold in their vaults and to issue notes against this gold for purposes of circulation. Would it not be possible, in view of England's steady debit to this country, to make some arrangement with Great Britain, Japan, and India, to have the gold which we have been shipping to India remain in this country for British account, letting the settlement be made direct between London and Calcutta? My inquiries into this subject of exchange have by no means been completed, but as this memorandum is already too long, I shall bring it to a close with the hope of being able to submit additional views and data later.

Respectfully yours,

[S.] HARDING.

Hon. W. G. McADOO,
Secretary of the Treasury.

EXHIBIT NO. 2967

BRITISH EMBASSY,
Washington, August 16, 1917.

Personal (Handwritten)

The Honourable OSCAR T. CROSBY,
Etc., etc., etc.

MY DEAR CROSBY: You will remember that in the message to Mr. McAdoo from the Chancellor of the Exchequer on the subject of exchange a statement was given, in paragraph three, of the purposes now served by supporting sterling exchange in New York. The balance unprovided for after allowing for America's ordinary trade obligations to the United Kingdom and to the Allies was indicated as follows:

(a) Exports on private account from America to this country for commodities not yet under Government control of which cotton is the chief.

(b) Similar purchases by the Allies who have not yet controlled so many commodities as we have.

(c) Purchases from America by British Dominions and by India only small part of whose trade is under Government control.

(d) Cost of neutral exchange arbitraged over New York, that is to say those Allied purchases in neutral markets which are being financed at present out of the resources of the United Kingdom.

With regard to (a), it was mentioned that cotton is the chief item. I find from the United States Trade Returns that the exports of this staple to the United Kingdom in the eleven months ended May last were valued at $253,000,000, or an average of $23,000,000 a month. This is, of course, the f. o. b. value.

It may also be assumed that cotton shipped to our Allies and to British Dominions, as well as that shipped to neutral countries, has been paid for mainly through the medium of sterling exchange, as this has been and is the usual practice in regard to this article. The shipments to other Allies in the eleven months amounted to $138,000,000; to Canada it amounted to $13,000,000 and to neutral Europe to $18,000,000, making a total of $169,000,000, or an average of nearly $15,500,000 a month. On the basis of the foregoing figures it would not be an exaggeration to hold that cotton represents about $40,000,000 out of the $100,000,000 a month referred to in the statement.

With regard to (d) cost of neutral exchange arbitraged over New York, I should like to point out that the amount involved under this head represents purchases of American commodities by neutral countries paid for out of dollar exchange against sterling credits created in London in respect of purchases made by the United Kingdom from the neutral countries concerned. For example a sterling credit in respect of iron ore purchased by the United Kingdom from Sweden is utilized by the latter country to pay in dollars for purchases of grain or other commodities in the United States. The point I wish to make here is that the amount involved under (d) does in fact represent exchange provided to cover payments for American goods. In the case of the purchases under (a), (b), and (c), these represent direct transactions between the United Kingdom, British Dominions, and the Allies, whereas under (d) the transactions are indirect in the sense that the goods, although purchased by neutrals, are paid for out of British exchange. But in all cases these operations, whether direct or indirect, represent payments for American commodities.

Yours sincerely,

[s.] RICHARD CRAWFORD.

EXHIBIT NO. 2968

FEDERAL RESERVE BOARD,
OFFICE OF THE GOVERNOR,
Washington, August 17, 1917.

DEAR MR. SECRETARY: Continuing the discussion of the foreign exchange situation as begun in my letter of the 14th instant, I ask your attention to some extracts from Hartley Withers' book, War and Lombard Street, which was written in December 1914 from which you will see that Mr. Withers who seems to be impressed with the idea that New York is America, and vice-versa, comments upon New York's inability to rise to the occasion and take advantage of the opportunity which was afforded the United States at the outbreak of the war. At the time Mr. Withers' book was written, the United States was still indebted to foreign countries on current account. There has been an entire change in the situation since December 1914 however, and the American position is therefore stronger now than it was when Mr. Withers wrote his book. I submit therefore, that unless America takes advantage of the opportunity now afforded, she is liable to incur the contempt of other nations. In my study of the international exchange conditions I am more and more impressed with the thought that exchange is now being regulated by governmental fiat more than it is by natural trade and economic conditions, and as other nations have taken an arbitrary stand in the matter, I ask you to consider whether the logic of the situation does not require that the United States should decide for itself its own attitude.

I had a talk yesterday afternoon with Mr. de Neuflize, the New York representative of the Bank of France. He admits that it would be entirely reasonable, if America undertakes to finance foreign purchases in the United States, for our Government to insist that bills against such purchases be drawn in dollars; but makes the point that in order to effect a change from the present custom some time will be necessary. It seems that in the matter of cotton purchases, the custom in France does not coincide with the English practice. French cotton merchants, who are located mainly in Havre, use their own credit and instruct American shippers to draw on them in francs at sight, shipping documents and insurance being the protection of the shipper in these transactions. English cotton merchants and spinners on the other hand, arrange bank credits, and drawings are made at sixty or ninety days, documents being delivered upon acceptance. While it may not be practicable as far as France is concerned, to have all bills drawn in dollars at once, I can see no reason why a start cannot be made and why some bills cannot be drawn immediately in dollars. The French Government has never undertaken to peg the price for bills draw in francs, so that after all the situation regarding these bills is not urgent as is the case with bills drawn in sterling.

I am leaving tonight for Boston and will have a conference tomorrow with Messrs. Aiken and Curtiss, with whom I will discuss more particularly the matter of bills originating in South America.

Respectfully yours,

[s.] HARDING.

Hon. W. G. McADOO,
Secretary of the Treasury.;

QUOTATIONS FROM A BOOK BY HARTLEY WITHERS ENTITLED "WAR AND LOMBARD STREET", WRITTEN IN DECEMBER 1914

In discussing the important effects of the outbreak of the war, August 1914, Mr. Withers says (pp. 102–108):

"It was the chance of a century for New York. American ambition has long ago informed the world that the United States, having been the world's granary, is now the world's most progressive manufacturer, and means soon to be the world's banker. This may happen some day, and might have happened already if American policy in currency, financial, and fiscal matters had been more enlightened, and if her people had been more thrifty. But they have tied their credit system in the bonds of narrow banking laws and their trade in those of a cramping tariff.

* * * * * * *

"It was the chance of a century, but New York could not take it. When London called in its credits from other countries, any centre that could have said to these countries, 'We will give you the credit that London has cut off, and lend you the money to pay London', would have stepped straight on to London's financial throne and set London a very difficult task to regain it after the war was over. * * * If the United States had had the courage to use this mountain of metal and let other countries draw on it * * * New York would have had a big slice of London's business. The United States were at peace, and with all the chief countries of this antiquated hemisphere engaged in the mediaeval business of killing one another's citizens and destroying one another's property, the United States might have been expected to leap into the position of economic leadership. But America feared to use its gold, and held on to it as tightly as it could, fearful of internal trouble and a run on its banks if too much of the metal went abroad. * * *

"At the same time there is no doubt that New York did some of the business for herself that London had formerly done for her. If she was not in a position to finance other countries, she did make a beginning in financing her own imports. Exporters of goods from South America to the United States who had formerly taken payment by drawing bills on London, and were no longer able to do so, drew on financial institutions in New York instead. Some of these bills were used to make three-cornered payments from South America to London, and a very costly means of payment they were to the debtor, owing to the high rate of discount in New York, and the depreciation of the American dollar as compared with the pound sterling. * * *

"It seems likely that this business of financing American trade New York will keep in her own hands to a greater extent that she did before. Probably she would have taken more of it to herself even if there had been no war. Her new banking legislation has included in its aim the establishment of branches of American banks abroad, and the development of acceptance business in New York. It could not be expected that New York would always be content to see the greater part of America's external trade financed with English credit. Her next step will be to endeavor to finance other people's trade, and she is already beginning to set about taking it, being assisted by Lombard Street's shyness in the matter of new acceptance business."

EXHIBIT No. 2969

FEDERAL RESERVE BOARD,
Washington, August 29, 1917.

DEAR MR. CROSBY: I would recommend that at some convenient place, possibly where I have marked it on page three, you express a thought somewhat as follows:

"It appears to the Secretary of the Treasury that the exchange situation in neutral countries could best be handled by a clear understanding amongst all countries at war with Germany that they will not buy in neutral countries goods to a larger extent than they can pay for by the export of their own goods (or their own shipments of gold?), or by loans to be granted by such neutral countries?"

I would suggest further that at the bottom of page three you revise somewhat the phrase "that some determination should be had, if possible, as to the permanence of these sterling balances." There are $150 millions of American bank balances and it is hard to see how we could suggest to the British Government that they tie up these balances permanently. It will be much rather a question for Great Britain to provide an adequate reserve to pay off these loans when called, or to offer a sufficiently high rate of interest to keep this money in England.

In this connection, may I quote from a letter of a Dutch friend of mine as follows:

"From an advertisement in a Dutch paper, I see that England does not renew 5% one-year treasury notes maturing in Holland in the course of July. This gives the impression that England uses your money, which cost her 3½%, to pay off her debts in neutral countries, to which she pays 5%. At the same time, she upsets your foreign exchange markets."

I think we have to keep clearly in our minds, in dealing with this question, two facts: (1) that money flows where it can draw the highest interest, provided credit conditions command reasonable confidence; and (2) that our entire problem can only be carried through safely, if at all, if we look upon the finance transactions at present under consideration merely as sales of goods on credit.

As long as goods are purchased in countries willing to sell them on long-time credits, the complicated problem that we have in hand can be carried on on a comparatively simple basis, though, of course, there are limitations to everything.

But when goods are bought in some countries that are not willing to sell on credit—bought in excess of what the purchasing country can ship in goods or gold in return—it is then that our difficulties begin, because it is then that some how or other this country is being used to pay for the goods that some one has bought in other countries, and it is then that the exchange difficulties for our European friends begin and it is then that it becomes impossible for us to protect our own exchanges in foreign countries.

By the way, as to gold embargoes, let me urge again that we do not put in this country an embargo on gold shipments, unless England and France are doing the same. We are doing it for their protection and if any onus attaches to that step, it ought to be borne by them with us.

Very truly yours,

[s.] PAUL M. WARBURG.

Hon. O. T. CROSBY,
Assistant Secretary the Treasury.
Inc.

EXHIBIT No. 2970

AUGUST 29, 1917.

SIR: Reference is made to your letter of August 15th in which you enclosed copy of a communication received by the State Department from the Swedish Chamber of Commerce in the United States of New York City, relative to the condition of exchange between the United States and Sweden, and requested the Federal Reserve Board to comment upon it.

The memorandum of the Swedish Chamber of Commerce of the United States calls attention "to the tremendous discount at which the dollar is now selling in Sweden, the consequences of the same being detrimental to America." "This state of affairs (the memorandum continues) seems to exist at present, not only in Sweden, but also in all other neutral countries, including Spain and Argentina. In other words, what has happened to the German mark, Russian rouble, and Italian lire during the war, is rapidly taking place with the American dollar and we feel some steps ought to be taken regarding same, as it certainly cannot be to our interest."

The memorandum overlooks one very important fact, and that is that we must consider in addition to the mark, the rouble and the lire—the pound sterling and the franc; because it is most significant that wherever the American dollar has gone to a discount in foreign countries, sterling and franc exchange have also declined. As a matter of fact the dollar has not led, but has followed this movement, and in most cases the decline of the dollar has not gone quite as far as that of the other exchanges.

The Federal Reserve Board published on August 1, 1917, in the Federal Reserve Bulletin, page 852, some facts regarding this situation, and additional information will be printed in the bulletin to be issued on September 1st. It will be seen from these statements that, while in Stockholm dollar exchange went down to a discount of 12.41%, sterling dropped to a discount of 14.37%; in Christiana the depreciation of the dollar was 9.14%, that of sterling 10.79%; in Copenhagen the depreciation of the dollar was 8.04%, that of sterling 9.96%.

The memorandum of the Swedish Chamber of Commerce states quite correctly:

"Undoubtedly we (the United States) are receiving from Sweden more goods than we are shipping to Sweden. When I mention "we", I include our Allies in the same because since we entered the war we are lending money to the Allies and undoubtedly they are transferring debts that they have to Sweden over to us."

Speaking generally of the problem of our exchanges with neutral countries, the facts are correctly stated in the memorandum of the Swedish Chamber of Commerce of the United States. Our European associates are heavy buyers in neutral countries. They cannot ship a sufficient amount of goods to those countries, nor can they ship enough gold, in some cases because they cannot afford to spare the gold, in others because some neutral countries refuse to accept gold. That is why, broadly speaking, belligerent exchanges have gone to a heavy discount in neutral countries. Had the United States been able to deal independently with those countries and not as a member of a group of belligerents, it is reasonable to assume that dollar exchange would not have gone to a discount in neutral countries. When, however, we make loans amounting to billions of dollars to the nations associated with us in the war, and more particularly to Great Britain, thereby enabling that country to maintain approximately a parity of sterling exchange in the United States, we bring about conditions which bind the dollar to the pound sterling, thus forcing dollar exchange in neutral countries to approximately the same level as sterling exchange.

From the foregoing we cannot escape the very clear conclusion, that, so long as sterling exchange is maintained in New York at existing rates, we cannot hope to restore the parity of American exchange in neutral countries, unless we are willing and able to settle not only our own balances by remittances of gold, but also those of our associates in the war. By such a course we would weaken our gold position to such an extent that we would jeopardize our ability to finance our own requirements as well as loans to the nations with which we are associated in the war. The statement of the Swedish Chamber of Commerce of the United States, that the consequences are "detrimental to America", is correct if we consider America alone. It is true that in assisting in the maintenance of sterling exchange in the present circumstances, we are decreasing the purchasing power of the dollar in neutral countries and we are thereby, to some extent, increasing the cost of living in the United States. We should not, however, consider this question from a local or selfish point of view. Should we permit sterling exchange in the United States to go to a discount of about ten percent, dollar exchange would perhaps go to par in neutral countries; but we should remember that Great Britain contends that any considerable discount on sterling would be a serious blow to her credit, and that it would be a source of comfort and encouragement to our common enemy. We in the United States should, therefore, consider this question from the standpoint of a partnership. We should be willing to undertake whatever disadvantage there may be in having dollar exchange at a discount in neutral countries if such a condition is best for the partnership or common interest, just as Great Britain would doubtless be willing to abandon her support of sterling exchange in the United States if it should be determined that thereby the general interest would be most benefited. It is certain that the United States is now the financial backbone of the powers at war with Germany, and that nothing should be done which will tend to weaken our financial staying powers.

The remedies suggested by the Swedish Chamber of Commerce of the United States must be regarded as palliatives only. The chamber recommends:

"First: Increase shipment from this country to Sweden of such goods of which the exportation is not detrimental to this country."

In view of the limited transportation facilities and of the restrictions that have been placed upon exports to neutral countries, we cannot export goods in sufficient quantity to offset the combined debit balance of our associates in the war.

"Second: Gold shipments to offset the debit balances of ourselves and our Allies."

Should we undertake to liquidate these debit balances by shipments of gold, we would impair our financial strength, the maintenance of which is so essential for the winning of the war.

"Third: Negotiating a loan in Sweden on the part of America.

"Fourth: Buying up in this country such Swedish securities as may be held by American citizens."

These are steps which the Federal Reserve Board has already suggested on several occasions, but the volume of Swedish securities in this country is not large, although there are some Spanish securities held as collateral against Anglo-French loans in this country. There is quite an appreciable amount of Japanese securities held in the United States, the sale of which might be undertaken following negotiations with the governments concerned.

It would, of course, be of material assistance if some of the neutral countries and Japan could be persuaded to make loans to our European associates in the war, or, if necessary, to the United States acting on their behalf. The difficulty of financial associations of this kind is that they probably cannot be carried through without the active cooperation of the neutral governments involved, and that these neutral governments would be unwilling to proceed far with such negotiations for fear of exposing themselves to the imputation and consequences of committing an unneutral act against the Central Powers.

After careful and extended consideration of this subject, the Board has reached the conclusion that as long as the parity of exchange between Great Britain and the United States is maintained, we cannot expect to reduce the discount upon the dollar in neutral countries without regulating, at the same time, sterling exchange in those countries. Whether it is to the advantage of the partnership-the common interest, to maintain sterling exchange in the United States around par, is not a question for the Federal Reserve Board to determine; and there can be no doubt that this problem of exchange must be approached from the standpoint of the best interest of the partnership as a whole. In the present circumstances, this question of stabilized sterling exchange can be dealt with only by joint action of the partners, that is, of the governments associated together in the war; either by loans in neutral countries or by a firm and consistent policy of reducing the purchases of our fellow belligerents, in neutral countries, to some amount not greatly in excess of the value of goods which these belligerents can sell to the neutrals. The Board is of the opinion that if the United States, in order to protect the European members of the partnership, and especially Great Britain, should be obliged to place an embargo upon the shipment of gold to neutral countries, Great Britain and France ought to be asked to join the United States in such a step; otherwise, the United States must bear the onus of having refused to pay her debts in gold, while Great Britain, although preventing gold shipments by restrictive measure of various kinds, has not declared an embargo and has been able to preserve the legal fiction of compliance with demands for gold.

The foregoing is respectfully submitted by direction and on behalf of the Federal Reserve Board.

I have the honor to be, sir,
Respectfully yours,

WARBURG, *Governor*.

The Honorable, The SECRETARY OF STATE.

EXHIBIT No. 2971

The SECRETARY OF THE TREASURY,
Washington, October 24, 1917.

DEAR MR. PRESIDENT: Under date of September 17th, you approved a loan to the British Government during this month of $185,000,000. This loan was notified to Lord Reading and has all been drawn. He had applied with much urgency for a loan of $235,000,000. We have been in constant communication about the matter during the month, and he has just now advised me that he does not see that it will be possible for his Government to meet its engagements without having an additional loan of $50,000,000 as previously calculated by him. This figures covers a portion of an advance of $200,000,000 to be taken from time to time as required during this winter and next spring for the purchase of available wheat surplus in Canada. This has been the subject of long negotiation between us, and Lord Reading has given the most positive assurances that it will be quite impossible to supply Great Britain, France, and Italy with the necessary food supplies unless this loan should be assured him. It has been necessary in connection with this to obtain from Canadian bankers an engagement to supply $100,000,000 out of the total that is estimated to cover the surplus wheat in question.

Looking beyond this month, Lord Reading feels that it will be quite impossible to diminish his Government's needs to an amount less than about $210,000,000 for November, and probably $225,000,000 or $235,000,000 for December. As I explained in conversation with you, considerable proportions of these sums go to the purchase of sterling exchange, and Lord Reading now repeats, with much urgency, the statements made in Bonar Law's despatches of several months ago to the effect that it is wholly impossible for the British Government to meet these bills in any other way at present than by borrowings made here. Just what proportion of these bills represent settlement of their balances in neutral countries, and what proportion represents settlement of certain purchases of American goods that are expressed still in sterling bills, we cannot now definitely determine. We must assume, however, that something like $60,000,000 per month will represent these outside purchases; the remainder of about $100,000,000 a month being spent in exchange operations covering purchases of cotton and other American supplies, in the same way in which cereal purchases have been made by the British Government in the past. His Government will now, I believe, after a better understanding of the situation, make renewed efforts to diminish the demands upon us for foreign settlement, but these efforts cannot immediately bear fruit. The situation is full of difficulty, and while we are required, in order to meet these great exigencies, to depart to a considerable extent from the theory of supplying moneys solely for purchases in this country, it does not seem that we should refuse to continue aiding the British Government in this way as long as we can do so with due regard to the commitments of our own Government in relation to the available funds in the Treasury.

I therefore have the honor to request that you will be good enough to approve loans to the British Government for $50,000,000 additional for this month, bringing the total to $235,000,000, and $200,000,000 for next month. The advances made already this month and future advances yet to be made will cover the total of $200,000,000 for Canadian wheat, of which Secretary McAdoo had promised $50,000,000 before his departure.

Cordially yours,

[s.] OSCAR T. CROSBY, *Acting Secretary.*

THE PRESIDENT,
The White House.

Approved, 25 October, 1917.

[s.] WOODROW WILSON.

EXHIBIT No. 2972

841.51/89

THE SECRETARY OF THE TREASURY,
Washington, October 25, 1917.

MY DEAR MR. SECRETARY: I believe it is already quite familiar to you that a considerable portion of the loans made by this Government to the British Government and also to the French Government, acting more or less indirectly through the British Government, have been used for the purpose of buying all French and English exchange offered on the New York market. In so far as the amount thus purchased represents final balances of trade between France and England on the one hand and neutral countries on the other, the purchase of these bills is in fact a payment of the debts of English and French nationals or their governments for the balances thus incurred. Until a recent date, it was possible for the sellers of these goods throughout the world to receive ultimate payment, if they so desired, by the shipment of gold from the United States. This movement, as has been indicated to you in the past, had attained very considerable proportions when the tentative embargo upon gold shipments was established by our Government. Since that date, the sales of these bills have resulted rather in the establishing of credits in New York banks in favor of the selling countries or the banks in various neutral countries representing these original sellers, these credits remaining as a part of the deposits of our great banks.

From this point of view perhaps there should be no complaint on our part, save that two questions of great import are presented in connection with the matter, namely, first, that the establishment of these credits through the means above indicated means at all times a heavy and almost unbearable pressure upon the Treasury of the United States to furnish to the French and British Governments the moneys to make the purchases of bills of exchange in New York; and, second, that after a certain period it may appear that the sellers of the goods, say from the Argentine Republic, or from Brazil, or Spain, will be unwilling or unable to receive their payment solely in New York bank credits. In this latter case, it is apparent that our associates in the war would be deprived, unless other means are taken, of obtaining goods which in the main we know are considered by them as essential for the prosecution of the war. It is true that some further economies in respect to their purchases in neutral markets may be established; but, without going too narrowly into the question, we are assuming now that they have already exercised an extreme prudence in limiting their importations to articles considered necessary.

In order to alleviate the situation without continuing the supply of funds for the purchase of bills of exchange in New York, with the attendant danger indicated above, the following means of relieving the situation have been discussed, namely:

1. That there should be an absolute forbidding of the dealing in bills traceable to neutral countries for British and French commerce in our market, thus at once diminishing the demand for moneys by those Governments intended for the purchase of these bills. This, of course, is an extreme and from many points of view an undesirable remedy, and is mentioned merely as one of the possible remedies. It would be attended with such great hardships upon our associates in the war that we scarcely like to contemplate it.

2. That there should be a renewed study by our associates in the war of the possibility of purchasing in this country the goods which they are now obtaining in neutral countries, which commerce creates the situation here described. It may be assumed that this particular remedy is now being more or less applied by the British and French Governments, but it seems difficult if not impossible that the whole situation should be thus met, since in the case of certain minerals from Spain, coffee from Brazil, and needed grain supplies from the Argentine, our markets cannot offer substitutes.

3. It has been considered that possibly the neutrals selling the goods in question might be content with increasing their London bank credits. This process, however, has been going on for so long a time in London and Paris, since the beginning of the war, that it is believed by the English and French advisers that it can scarcely be carried further.

4. Finally, it has seemed possible that by arrangement with these neutral countries their whole fiscal system may be modified to meet the world-wide emergency in this way, namely, that as against securities or other satisfactory guarantees owned by the English or French Governments or their nationals, the neutral countries in question should issue currency in their own countries permitting payment to their producers for the articles in question. This is by far the most obvious and sensible arrangement which could be made. Obviously, it is not easy to accomplish at once. Doubtless in some cases legislation of special character would be required in order that paper money should be issued against securities in ways not now familiar in the countries in question. It does not follow that an actual legislative change of monetary systems will be required in every country in question, but it is contemplated that in some countries such changes may be required, and hence, since we cannot assume that these changes could be immediately brought about, it is desirable that the question should receive large and general consideration at as early a date as possible.

The importance of the matter is such that I venture to suggest that you should communicate to the neutral governments which I shall name below a statement that it is believed to be of common interest to them and to this Government that their present representatives in Washington should be fully empowered to negotiate such financial arrangements as have been above indicated, or that other representatives thus empowered should immediately be sent to Washington.

For your information, I beg to state that I have talked this matter over with the representatives of Great Britain and France, who approve of the proposed procedure. They realize that what we are attempting to accomplish is specially for their benefit.

The countries in question are, notably, Brazil, the Argentine Republic, Chile, Spain, Norway, Sweden, Holland, Denmark, and Switzerland. You will of course determine whether in this list any countries appear with whose governments you would not desire to enter into negotiations looking to the amelioration of and continuance of our commercial relations.

It seems difficult to arrange with any prudence and wisdom the vexations questions connected with gold exports, dealings in bills of exchange, and even the general determination of exports and imports between our own country and the countries named, unless we have in view some general solution throughout the world of the extraordinarily difficult financial problems now being presented.

In the meantime, I am

Cordially yours,

[s] CROSBY, *Acting Secretary.*

Honorable ROBERT LANSING,
Secretary of State.

EXHIBIT NO. 2973

[Copy of cable received from Morgan, Grenfell & Co.]

J. P. MORGAN & CO.,
CABLE DEPARTMENT,
Nov. 19, 1917.

44839. Denkstein. For your confidential information, Crosby is, as before, apprehensive lest the whole burden of Allied financing may prove too heavy for his resources and feels that any break in America would be so serious that it must at all hazards be prevented. In this I concur. Crosby fears lest the present exchange situation may prove the last straw, but if some method can be devised to prevent sterling bills for Allied purchases in other markets from coming on the American market the situation will be greatly relieved. It is not illogical to feel that the Allies should finance their own purchases in neutral countries. To this end he and I have been discussing the idea of restricting purchases of exchange in New York City, et cetera, to bills that actually represent bona fide American transactions. This would be difficult, but if our Government insisted that every transaction should be traced through to its source, would it not be possible? Methods fully as difficult have been worked through here in other matters. Under such a plan British buying nitrates in Chili or wheat in Argentine and ordinarily paying for them by allowing sellers to draw bills on London, which, under present conditions, find their way promptly to our market, would hereafter have to establish credits in their neutral markets, one large source being selling back to these markets the bonds of their own Governments. Of course, these neutral markets will not at the start relish such a transaction, but in the two instances that I have just quoted, which is now actually under discussion here, the Allies constitute the only possible market for the countries in question and also control all the bottoms, so it would seem that eventually such countries must come around to some such arrangement if the Allies permit no alternative. Confidentially, the authorities here are also considering reducing interest rate paid on London deposits, also upon exchequer bills, upon latter for the purpose of diverting funds into long-term bonds, which are going rather slowly. If such deposit rate were reduced, is your judgment that much neutral money would be attracted to New York? I have suggested for Crosby's consideration the idea of releasing at some time in the future enough gold to bring about in certain other countries the same situation with respect to gold that obtain, for instance, in Spain and Norway. This may seem contradictory to idea number one and is for future consideration, the belief being that when the time is ripe a comparative small supply of gold will serve to drown some more of these neutral countries and make them desire to continue the credits forced upon them in the first instance.

Upon all the foregoing I have of course consulted fully with our friends here. Your views will be greatly appreciated. In possible absence of J. P. Morgan, I suggest you consult Breton, Guaranty Trust Company of New York. Crosby does not hesitate to express satisfaction at my daily calls upon him. I am told, unofficially, that from certain sources, hitherto unknown to us, we shall receive from here $50,000,000 for the demand loan prior to February 1st. One-half of same ought to be available before January 1st.—T. W. LAMONT.

MORGANCO.

EXHIBIT No. 2974

[Cable dispatched to Morgan, Grenfell & Co., London]

J. P. MORGAN & COMPANY,
CABLE DEPT.,
New York, Nov. 21, 1917.

55812. For T. W. Lamont. 44839. Matter has been under discussion and I understand still is so. My idea has been that the cessation of gold exports from this country to the neutral nations would automatically tend to diminish Allied purchases in those countries since those countries would prefer not to accumulate large balances in New York City. The sudden cessation, by Government direction, of arbitrage exchange transactions would, in my opinion, unsettle things considerably, but I understand that they are now working in Washington on a plan to assist this matter. This plan involves first obtaining of accurate information before any action is taken and it seems to me that it would be very desirable to arrange to get the information, which can be obtained by having all the banks report confidentially to the Treasury the source of their sterling remittances to London, against which remittances they eventually sell cable transfers to us. The establishment of Allied credits in the neutral countries would be very advantageous and it seems to me that your suggestion as to the inducement to those countries to make such arrangements are sound.

In regard to the interest on London deposits, in view of the prohibition of gold exports from here do not think it likely that banks of neutral countries would transfer their balances from New York City to London. It would be disadvantageous to situation if they did so, however, and hardly think saving of interest would be worth risk. Do not believe your idea of swamping countries with gold would work. The neutral countries do not want gold, evidenced by action of Spain which declined to receive gold except at considerable discount. They want something else, in most cases, I think, coal, and of course shipments of coal to them would be very advantageous were the shipping questions solved.

News about demand loan at end of your cable most satisfactory.—J. P. MORGAN.

MORGANCO.

EXHIBIT No. 2975

J. P. MORGAN & COMPANY,
CABLE DEPT.,
New York, Nov. 21, 1917.

55811. For T. W. Lamont. I judge from your 44839 Crosby considerably more frightened than anyone else in Treasury Department. Found them yesterday all full of courage and with great confidence that they could meet any calls that were necessary and they have no fear of coming so near the bottom as to make the last straw dangerous. From your cable I judge that Crosby is in the same condition as when I saw him in Washington and what he needs is a footwarmer. Of course, any steps taken to discourage exchange arbitrage must be taken with the consent and approval of the Allies. We certainly do not want to cramp them in purchases of necessities for the war, even if it costs us money to do so. After all, if we could shorten the war by ten days at an expense of even £100,000,000 or more, as a purely monetary transaction it would show a profit, and since we have Great Britain's obligation to repay that 100,000,000 later on, I do not think the United States should be too drastic in its requirements.

Delighted with your cables. Hope they will continue for full news is very valuable to us here and our views may be of assistance to you.—J. P. MORGAN.

MORGANCO.

Exhibit No. 2976

[Cable received from Morgan, Grenfell & Co., London]

J. P. Morgan & Company,
Cable Dept.,
New York, Nov. 23, 1917.
[Dated Nov. 22]

44975. Denkstein for J. P. Morgan. 55811. 55812. Thank you very much for both these illuminating and helpful cables. They are just what I wanted.

Matter of controlling arbitrage exchange transactions is still under discussion here, and nothing would of course be done without approval of all parties involved. Governor of Bank of England believes matter could be handled without unduly prejudicing British interests, and this morning Lord Reading expressed himself to me in somewhat like terms. But any actual step will be postponed until Crosby's return from Paris. Meanwhile a thorough-going investigation of sources such as you suggest should, in my judgement, be undertaken at once, and when completed will be most important in clarifying the minds of everybody here and enabling all parties to arrive at a satisfactory basis of operations in this matter.

Status of our demand loan. Had a very satisfactory interview this morning with Lord Reading who says this: "We have promised you by word of mouth, if not in writing, that when we receive those monies from shipping they shall be turned over to you to be applied to the demand loan. We regard that as a commitment which we will fulfill. We shall explain to your Treasury that those are monies which have already been hypothecated, so to speak, to the loan. If you yourselves deem it wise to try to meet some of Crosby's views and return to him a part of those shipping monies or hold it in reserve for other maturities of the British Treasury, that is entirely an affair between you and Crosby, and we wish to be understood as not urging you in the slightest degree to such an end."

The foregoing is the substance of his remarks to me, and he added that he well understood, as previously explained, that the indefinite continuance of the demand loan was prejudicial to the interests of the American money market, and to the financial position of the Allies generally. To me, this is most explicit and satisfactory.

For your confidential information, Crosby told me last night that he could of course, offer no objection to the British Treasury disposing of the shipping monies as it saw fit. Further, he did not want me to think that he had forgotten the suggestion which W. G. McAdoo and he made to me last July, that these shipping monies would all be available for the demand loan, but he wanted me to consider that the question of the February 1st maturities of Great Britain had since arisen, and he thought that some of the shipping monies should be allocated to cover a part of those maturities. I explained to him the unwisdom of our adopting any such suggestion, and again went into the importance of reducing at the earliest possible moment, the demand loan to its lowest limits, and the advantages which would thereby result to both American and British Treasuries. Crosby then brought up the question of du Pont maturities, and said he felt that in handling shipping monies those should also be considered. I explained to him impracticability of arranging anything with du Ponts so far ahead as March maturities, but I am confident that it would ease him up and help in adjusting whole demand loan situation if you were able to arrange something in the near future as to December maturities. See my 44774, your 55633.—T. W. Lamont.

Morganco.

Exhibit No. 2977

841.51/111 Plain

(*Telegram received from London, dated March 23, 1918. Recd. 11:59 p. m.*)

Secretary of State,
Washington.

9195. For McAdoo from Cravath. March 23, 7 p. m.

Cable number 130. Treasury have shown me today long cable to Reading which he will show to you. Crosby will not see this cable until I meet him in Paris on Tuesday.

Treasury cable presents situation so fully that very little remains to be added by way of comment. Plan presented has been subject of informal conference for some time but it was only this week that accumulation of questions raised by proposed transfers of dollar credits from France and Italy to Great Britain convinced Chancellor that the time had come to present plan to you.

There is one point which seems to require additional elucidation: the advances of British Government to France and Italy which for some months have averaged about 118,000,000 dollars a month exclusive of advances for interest have been used partly to pay British Government for commodities purchased in the British Empire of purchases elsewhere by the British Government and resold, and partly to pay for purchases of France and Italy in neutral countries. The advances of the latter category have usually taken the form of sterling bills which have helped swell the volume of sterling exchange which has come on the New York market. The advances for purchases in the British Empire have been to a substantial extent for commodities originally purchased by Great Britain in the United States or manufactured products absorbing raw materials purchased in the United States.

Under proposed plan Great Britain would be relieved of the necessity of furnishing sterling exchange to France, the purchases of France and Italy in neutral countries thereby reducing the burden of sustaining sterling exchange in the New York market, or if Great Britain for convenience furnished sterling exchange for these purchases she would receive dollar credits, in exchange Great Britain would also receive dollar credits in payment for commodities purchased by France and Italy in the British Empire. The dollar credits thus received would be used in reducing Great Britain's financial demands on the United States.

While Chancellor's cable not entirely specific in this regard it is essential part of plan that British Treasury shall agree to use all dollar credits received from France and Italy in reducing its dollar demands on the United States. I therefore agree that unless other causes should intervene, proposed plan would involve not an increase in the aggregate of our advances to the Allied Governments but simply our receiving an increased proportion of French and Italian obligations as compared with British obligation.

I have raised the question that proposed plan might remove present incentive on the part of British Government to carefully scrutinize and limit so far as practicable the purchases of France and Italy in Great Britain and in neutral countries and that it might even have the effect of making it to the interest of the British Government that Italian and French purchases in the British Empire should be as large as possible. The answer made to this criticism is that the conditions now existing and which must continue during the war automatically keep within the closest bounds the purchases of both the French and Italian Government outside their own countries. It is also proposed that the very effective machinery set up by the British Government to supervise the expenditure of advances to France and Italy be continued under our supervision. I am accordingly inclined to think that the dangers above mentioned are not serious.

Chancellor lays great emphasis on the desirability of not swelling British Government's debt by obligations issued for advances from the United States which are reloaned to France and Italy in return for their obligations.

My purpose in sending this cable is simply to aid in presenting the entire situation to you. Crosby will undoubtedly cable you on Tuesday after reading copy of Chancellor's cable.

EXHIBIT No. 2978

102.1/724 Blue

(*Telegram received from Paris, dated March 30, 1918. Rec'd. 31st., 7:45 a. m.*)

SECRETARY OF STATE,
Washington.

3475. March 30, 7 p. m.

"For Secretary of the Treasury Number 212. Referring Chancellor's long cable to Reading. While I believe in general that if dollars were made to France and Italy for payment of their purchases throughout world, that there would be diminution in dollars needs of Great Britain. I cannot adopt view that French and Italian purchases in Great Britain should be covered by United States. Besides powerful political reasons against this step, it is clear that diminution in dollars demands of Great Britain would correspond to increase of dollar credits to France and Italy, without effective check upon Allied purchasers in neutral and Allied countries, all of which, unless controlled, might be increased so that demand for dollars to cover sterling offerings in New York could not be guaranteed to diminish in proportion to furnishing of direct dollar credits to Italy and France. While British Government explain they will protect sterling exchange without our assistance beyond that assured by machinery of plan, fact remains that our assistance might prove essential to protect sterling exchange irresepctive of merits of proposition. The following observations are made:

First, I am surprised that it has been thought necessary in Chancellor's telegram to assume and combat at some length the proposition that it is your desire to increase British and decrease French and Italian loans by using Great Britain as intermediary for advances to cover French and Italian purchases. Presume this idea which is contrary to whole theory of action until I left Washington based upon criticisms in your number 104 (102.1/662A) of wheat executive's programme which has been interpreted as indicating desire to prevent Italy and France from issuing so large a quota of the obligations for cereal purchases in the United States as is proposed by that plan.

Second. Paragraph. In Chancellor's despatch reading as follows: "We should remain responsible for arranging the finances of such supplies to the Allies from the world at large —— as we are responsible for at present", *intensified* simply to mean that Great Britain would, if desired, serve as a broker, for both France and Italy in securing credits in neutral and Allied countries by means of dollar credits. This intervention in any case would seem quite unnecessary and probably undesignedly.

Third. This proposition has not yet been discussed between finance Ministers of Great Britain, France, and Italy. Until this is done do not think it should be concluded between Great Britain and United States. Am trying to arrange meeting of these Ministers. Present crisis renders this somewhat difficult but unless military situation should grow very much worse probably can be arranged in about ten days.

Fourth. Plan transfers to our shoulders entire burden of supervising and placing checks upon purchases by France and Italy outside of their own countries. This burden is now mainly on British Government so far as purchases in the United Kingdom and neutral countries is concerned.

Fifth. Am inclined to think it desirable that I should make a short visit to Washington to discuss this and other matters as the whole situation grows more serious and complicated. Have pressed at a meeting of Council just concluded proposition for much closer governmental control of all purchases by Allied countries than now exists. Without this we shall always be working in the dark.—CROSBY.

SHARP.

C. S. B.

EXHIBIT NO. 2979

MEMORANDUM CONCERNING FOREIGN LOANS

1. Great Britain is now asking that the United States Treasury should hereafter make loans to France and Italy for their expenditures in neutral countries and their expenditures (except for interest on British debt, coal, and maritime freights) in Great Britain and the British Empire, such loans to be in substitution for the British net monthly loans to France and Italy. The average net monthly advances of Great Britain to France and Italy during the period October 1917 to March 1918 were approximately: France £17,530,000; Italy £9,835,000. It is claimed by Great Britain that if we take over these advances her own loans in the United States will be diminished in like proportion and the effect of the new situation would be that we should have more French and Italian obligations and less British obligations with no net increase in our loans to all parties concerned. A settlement with Great Britain on the cereal question is also pressing, the Wheat Export Company having adopted the method of allocating to Great Britain all British Empire wheat, except Canadian wheat.

2. The Government of France is suggesting substantially that we should apply the dollars supplied to the French Government in the United States in reimbursement of the United States Army expenditures in France to guarantee such portion of the circulating medium of the Bank of France as is required to cover the expenditures of the United States Army in France. The basis for this request is expressed in conversation and is expected to be expressed in writing as due to the disturbance of the financial conditions in France reflecting the serious

military situation. This disturbance makes it difficult for the French Treasury to borrow money from its citizens and the French Government fears that if the Bank of France continues its circulation of paper francs without any more gold cover than it now possesses and with only additional long time French Government bonds as security, public confidence in these issues will be shaken and there will be a corresponding increase in paper prices of all products and generally the bad effects connected with a depreciation of paper money in any country.

3. Italy is asking that we furnish approximately $100,000,000 estimated by the Italian Government as sufficient to take up the present outstanding debts due by Italian banks to the United States and to various foreign countries, and to make monthly advances estimated by the Italian Government at $10,000,000 to protect future dealings in lira exchange. The outstanding debts are threatening the value of the lira in international exchange; approximately half of the amount is indicated as due in London and Paris, very largely in London. Inquiries are now being made by us to discover whether these debts in London reflect purchases in Great Britain by Italian citizens in excess of the monthly credit heretofore provided by Great Britain to Italy or whether they represent pruchases in neutral countries or perhaps even in America, which have been expressed in the sterling drafts and which, in part, would therefore have been already covered by loans to Great Britain for taking up such drafts when presented in the New York market. In any case, if money should thus be loaned to Italy to take up the London balances, the Treasury would be adopting a new policy of which the consequences would be difficult to foresee. It is hoped within the next two or three days assurances will be had from London that the balances there will either be taken over by the British Government or will be extended by British banks so as to relieve the exchange markets from this burden. In the meantime, assurances have been given Italy that cotton purchases approved by this country may be covered in dollars out of loans made to the Italian Government, and that certain pressing needs recently indicated for pesetas, for Swiss francs, and for Greek drachmai will be supplied by the United States. The total of these pressing needs is approximately $10,000,000, assuming gold parities. The Italian Government also indicates its desire that the United States Treasury provide it with neutral currencies to meet its purchases in foreign countries. The sum of $55,000,000 is indicated as the amount needed for the purchases in such countries (including Switzerland, Greece, Spain, Argentina, Brazil, China, Chile, and Norway) for the months of June and July against which, however, there might be available the value of the exports of Italy to these countries payable during the period mentioned. Of the said amount of $55,000,000, $8,000,000 represents the estimated requirements of Italy for French funds.

4. Great Britain has requested that the United States should share equally with Great Britain and France in financing the whole cost of the Serbian Army which heretofore has been met by them alone and which amount Great Britain estimates will be approximately $——— per month in the aggregate or $——— if divided into thirds. This is exclusive of about $1,000,000 per month which the United States has been advancing to the Serbian Government for relief purposes.

5. The general trend indicated by the above requests is substantially this, that Great Britain and France want to cease to be lending nations as far as possible, if not entirely, and we may therefore assume that request will be made to take over the whole of the Belgian relief if we should show disposition to assent to the proposition made by Great Britain concerning France and Italy, and possibly followed by a similar proposition in regard to financing Greece.

6. Thus far it is to be noted that the support of sterling exchange in New York and corresponding support of francs through the amounts made available through the Bank of France since we began lending to Great Britain and France, have permitted both those Governments to receive from their citizens large sums of money in repayment of the sterling and franc obligations, and from their citizens in this country and, so far as Great Britain is concerned, of many neutrals, while the British Government has obtained the money from the United States against its obligations deposited with the Treasury.

This relief to these Governments in respect to raising the money internally has also been increased by the resale to their citizens of foodstuffs which have been purchased by the Governments with funds advanced by the United States. Due to the fact that no close analysis has been made since April 1917 of the character of the sterling bills passing through the New York market, it is impossible to tell how much of funds thus covered have given the British Government the kind of relief here indicated, but unquestionably the amount is very large, but for the first three months of 1918, at the maximum, only about two-thirds of the British loans to the Allied governments.

The recent agreement by which Great Britain purchases from the United States silver, which will no doubt be in part paid for by United States advances to Great Britain, will result in turning over to Great Britain approximately 200,000,000 ounces of silver against which rupees will be issued by means of which Great Britain will be free to cover her own purchases in India and therefore, in this sense there is that additional amount of domestic finance supplied, if not to Great Britain, at least to the British Empire. In the same sense, the loans made to Great Britain for purchasing wheat in Canada constitute an aid to imperial finance as distinguished from strictly British finance.

7. There has been an indisposition until a very recent date, on the part of the British Government particularly, to respond to my urgent request that revisions be made of the means of all the Allied countries in all neutral countries as well as in the United States, with a view to determining approximately the balances which may be due by these countries to neutral countries. It is my belief that these figures should at an early date be obtained together with a fair approximation as to the amount of income which Great Britain and Frnace will receive from their investments in foreign countries, and also a fair approximation as to the amount of sales which they will make to neutral countries; consequently, a reasonably close approximation may be obtained as to the net balance above referred to, which would thus give dimensions of the problem that is set before the United States.

8. In addition to having such information as referred to above, it seems necessary now that the United States should have a more intimate knowledge than it heretofore possessed of the existing financial strength of the British, French, and Italian Governments particularly. In using the words "financial strength" I understand that we must take into account the military situation as it has developed since the 21st of March and that which may develop within the next few weeks. It is my belief that this will have a profound effect upon the ability of these governments to raise money either locally or for covering their needs in neutral countries.

9. As to the needs of these countries in the United States, I believe a close approximation for the remainder of this year can be made after study on the spot of the estimates made by the various departments and of the probable sales of these countries to the United States. The data developed during the past year together with the known limitations of transportation lead me to believe that all the requirements of these countries in the United States, including even the maturities of their issues to our public that may occur in the year 1918, will fall below $500,000,000 per month.

If we assume that the balances due to the United States by the Allied Governments and by their nationals engaged in approved commerce with the United States are to be met by dollar supply here, it would remain to determine to what extent the United States Treasury is willing to cover their needs in Allied countries and in neutral countries. It seems difficult to justify the United States financing the purchases of one Allied Government within the boundaries of another Allied Government and if the United States is to refuse to do so, its refusal should be made known to Great Britain at an early date; likewise the cereal situation should be speedily settled with Great Britain. If the United States is to undertake any further part in financing Allied Governments in neutral countries the amounts involved should be dimentionized before an unqualified commitment is given. If any portion of the burden is to be taken up, we then must approach the exchange problem in an increasing way. It should be borne in mind in this connection that in certain neutral countries it is far easier for Great Britain to provide neutral currencies than for the United States to do so, though in other neutral countries the contrary may be the case. In this connection the following figures of United States trade appeared in the official bulletin of May 23, 1918:

Exports for 10 months ending April 1918	$4, 894, 000, 000
Imports same period	2, 360, 000, 000
Balance	2, 534, 000, 000

During the same period the United States advances to the Allied Governments were in round figures $4,261,000,000.

My belief is that any amount we are at all willing to undertake in this respect can be obtained through the placing of United States bonds in foreign countries or the placing of War Finance Corporation bonds in such countries, and I am now inclined to believe that this could best be done by using American or Allied banks which would purchase these bonds directly from the United States or from the Allied Governments which might take them from the bonds in question, then to be sold "over the counter" in the countries in question and in the amounts required.

If this method should be used the moneys thus acquired and allocated to the needs of the Allies and to our own nationals, in so far as that case may arise, would not appear n gross as a distinct government loan and would, therefore, for a time at least, not be used by Germany as a bas s of a demand for some quid pro quo. Up to this time every loan made by a neutral couutry, either to an enemy country or to one of our associates in the war, has thus been taken as a basis for a corresponding demand by the others. The knowledge of this fact on the part of the neutrals makes for delay in their assent to such formal government propositions.

10. In this memorandum I shall not attempt to describe the particular characteristics as to maturity, interest rate, etc., of the bonds which would thus be used if the United States goes into this transaction, but my desire is to present in as complete manner as possible the principles that are now at stake. It is of course impossible to decide just what method should be accepted to obtain funds in neutral countries until it is ascertained what the various neutral countries want—what might appeal to one neutral country might be unattractive to another—the negotiators will have to feel their way.

11. Recent conversations with the French representatives here resulted in assent on their part to the request of Mr. Klotz, French Finance Minister, for aid in respect that increase in the circulating medium in France be delayed until my return to France in order that more intimate knowledge of the situation could be had, since this situation was presented only on the day of my departure from France.

It seems to me desirable that the termination of some part of the British Government demands for United States advances for purchases in neutral countries should likewise be deferred until more intimate knowledge of the British situation can be obtained. It is my belief that after all the conferences that have been had during my visit to America, cables on the subject will be more thoroughly understood than heretofore. No committal whatever, even of opinion, on my part has been made to the British or French Treasuries in respect to the matters above indicated.

12. It is not so easy to defer action on the Italian situation on account of the political effect of the exchange rate now running against Italy. What has been done, however, already will largely alleviate the position of the Italian exchange in United States, Spain, Switzerland, and Greece.

If the British Government and the French Government will take the position which they have been urged by cables within the last few days concerning the outstanding balances against the Italian Government and restrict the purchases in those countries to temporary loans which the British and French may make to those governments, the whole position of lire may largely be rectified and a better rate for it can from time to time be agreed upon between all parties.

EXHIBIT NO. 2980

TREASURY DEPARTMENT
WASHINGTON

HOTEL DE CRILLON,
Paris, December 21st, 1917.

MY DEAR LEFFINGWELL: In great haste I am dictating a few words which may go to you by Mr. Graves, connected with the Forestry Department, who is about to leave, I believe on tomorrow.

I have been resting up a little for a day or two, not being able of course to completely cut out business, but finding myself so very much fagged from the ceaseless work since last April that I wasn't quite up to normal activity. The various members of the council, including Mr. Cravath who has been spending the week in London, arrive tonight, and we shall be very busy lot for the next two days. It is very hard to get the machinery going, but I think we are making real headway, and I hope there will be some result worth while before it is necessary to act upon loans for February and March. I do not know how the English situation, running to such large amounts of money, can be met as I have not yet heard from you concerning the condition of the Treasury or the attitude generally in respect to increases. I suppose you may have been disappointed and perhaps a little surprised that I indicated in some of my recent telegrams the likelihood of presentation of demands for more money, and that I showed a disposition to suggest that we should meet those demands if at all possible. I wish I could tell you in this hasty dictation all that goes to make this conclusion, I think, a sound one. The next six months are going to be months of terrific strain. I believe all sorts of things may be asked for suddenly, and while I do not see that we can get out from America any more material than we are now getting out, or that we could transport it even if we could produce it, yet I believe there may be great pressure upon us in respect to two matters which we have much talked about but which we have not wanted distinctly to undertake.

The first of these is the repayment of loans that may be falling due from time to time in the United States, concerning one of which, namely, the British February maturity, I have already telegraphed much to you.

The next thing is constant payments in neutral countries. I do not think I can tell you in any letter just how constant the pressure has been in order to produce some effect upon Great Britain, France, and Italy in this respect. They do understand now that they must get about this business, but it has been a very hard job to keep them up to it. Moreover, the blockade departments of their Governments and of our Government have tended to render extremely difficult the successful issue of efforts to obtain loans. There has been a perfectly sincere belief on the part of these blockade people that any slight let-up of pressure from them would be condemned by their respective publics, and would perhaps indeed much strengthen the enemy. I am profoundly convinced from all that I can learn as to the actual situation in these countries, that there has been much exaggeration of any possible help that could go from the neutrals to Germany. Moreover, I believe unless they must be put into the war with Germany we must not ask them to cease their commerce entirely. Even if I felt that some material which might otherwise not get to the Germans would be permitted to them by virtue of arrangements made with us, I should want to take that into consideration very cold-bloodedly and weigh it against the value of shipping and of money both of which are desired to be had from the neutrals. If we do not keep our sense of proportion about all this, we will have an extremely serious time of it. The handling of all these affairs is so divided that only the slowest progress is possible. I have finally gotten Lord Robert Cecil in London, who conducts the blockade measures there, to be completely convinced that he must not drive on regardless of financial considerations.

The Swedish transaction now under way in London illustrates how important this move was. While very stringent measures were being urged against Sweden, demands for example being made that the ore output should be sold entirely or in part to the Allies, no provision had been made for paying for this ore. When I spoke to the principal Swedish delegate about the matter, as I did in the presence of Lord Robert Cecil and all other persons conducting the negotiations, he answered that the question of financing the balances of Swedish trade had never been raised. In private conversation with me, he showed an instant understanding of the necessity that there should be loans made by neutral countries selling to the Allies, but of course urged that they must wait to be told what was wanted of them in this respect.

I found a similar situation when, by chance, I met the Spanish Ambassador in London. It is true efforts have been made in Spain for loans, but they have been very unintelligently conducted, and in the meantime I understand the French frontier has at times been closed to Spanish goods. Rumors, whether true or false, as to our withholding cotton exports are put into circulation, and altogether the Spanish Government is left in complete doubt as to what our policies may be. In spite of all these difficulties, the effort started in our own office some months ago to get the French to try for a small loan has succeeded. In our meeting, the Spanish Ambassador did not wait for any opening from me, but instantly stated, on knowing who I was, that his people understood fully the necessity of making loans to Great Britain and France, but they wanted to have collateral presented and definite propositions made. Fortunately, I understand Bonar Law has now gotten Lord Cunliffe to go to Spain. I do not know that he is in all respects the best qualified man for the job, but he and his associates in the Bank of England are fully in accord with the views I have expressed on the whole subject, and insist, if the Treasury will only move forward actively, they can make these loans and relieve a situation which otherwise will give us all immense trouble.

A telegram has just come to me from Cravath indicating the probable success of efforts to obtain a loan in the Argentine. The dilatory and unintelligent conduct of these negotiations by cable is a heart-breaking story. I have had to take a stronger ground than I ever expected to take in discussing these matters, which are other people's business in a way, in order to keep them up to the mark. The tendency was, in the British Treasury particularly, to be discouraged at the outset and to instantly offer terms which meant substantially that we should bear the whole burden.

The various newspaper campaigns made against all neutrals in England, the United States and partly in France, are responsible for a great deal of the whole difficulty. I am glad to note in the most widely circulated French paper of this morning an article on the Spanish situation is in entire accord with the views which I have so constantly expressed. It encourages me to believe that sanity is returning on this subject, and that the Allies recognize that we cannot kick the neutrals all around just because they happen to be small; that they have very many things we need, and that the needs are mutual, and that we can go about satisfying these needs in spite of pro-German talk. Above all, I think we will find Spaniards pro-Spanish and Swedes pro-Swedish, and that all these people want to continue to do business with the rest of the world, and the intelligent ones among them will recognize the necessity of that business.

As further evidence on this point, I met Dr. Von Vollenhoven, the Dutch delegate, in London, who without waiting to have the matter raised by me said it was clear that the existing financial situation in Holland must be changed by loans to England and France. He and the Spanish Ambassador both agreed that apparently the discount under which the dollar suffered was to their advantage, but understood that in the end it would destroy business between our countries and was altogether an objectionable feature in the situation. Of course, there is just one way to change this situation concerning which our nationals have every right to complain (I mean those nationals who are engaged in business with neutrals), namely that loans should be made to France, Great Britain, and Italy to cover their balances with these neutrals. Then our dollar will automatically be put close to its proper position.

We are now about to purchase a good many million dollars' worth of goods in Spain, if possible, for the use of our Army. It is extremely important that such purchases should be made there as it saves transportation and time. We shall perhaps have to suffer as a government some of the loss due to existing exchange rates unless very rapidly we can get Great Britain and France into line with respect to their loans. I have used this matter of the burden upon our nationals and now upon us, as we begin to buy for our Army in Spain and Switzerland, as an additional reason why we must insist upon continuing to urge the necessity of obtaining these loans for the Allies. We are now voluntarily suffering because we believe in good war business to sustain the pound sterling and the franc at substantially fixed rates. It is a distinct addition to the cost of carrying on the war by us, and is at last being so recognized by the Allies.

However, all of this would have failed to interest them had I not been able to convince them that the neutrals would cease to sell goods if they could get only New York credits for their balances. I think they all see now that we must carry on a propaganda substantially along the lines indicated in my letter to the Secretary of State written a short time before I went away. I have not asked in answer to your cable about this that it should now be sent out, because I thought I should consult more with the governments here, and that they themselves will soon undertake actively the campaign indicated in that letter.

Indeed, I think it has been shown in the Argentine case that there is some danger in our mixing up too much in these matters. It was only because of the urgency of the British Treasury that I recommended that our Argentine Ambassador should be asked to join the negotiation there. We should not have to go beyond a mere friendly word in supporting the others in their negotiations. The more diplomats mixed in the matter, the less rapidly can the negotiation be carried forward. If Great Britain and France can see their own case as I am trying to have them see it, they would not need our interference, as the neutrals are just as much concerned to sell as the Allies are to buy. Or, if this rather strong, yet they are so much concerned to sell that no apologies are needed on the part of Great Britain and France in proposing now the only financial conditions which would make those sales possible. I believe, therefore, if they could once get intelligently to work, they would be able without our being mixed in it to succeed in establishing loans.

I am sending all this long screed, which is long because it is hasty, to you, hoping it will reach you quickly, and feeling Secretary McAdoo may with all his other duties be overwhelmed, and this letter will really reach him more promptly if it reaches him through you.

I also wanted to say a friendly word of personal greeting to you and to ask if you can get in touch with Mrs. Crosby. I have heard nothing whatever from her since I left Washington.[1] I presume she is all right, but it would be more of a comfort to know this definitely. I presume she may want to come over, but I have left that to her, not knowing what arrangements she and Juliet have made in the meantime. Moreover, it is not clear yet as to how much time I will spend in London and how much in Paris, and it is possible that until all these matters are cleared up it might be better for Mrs. Crosby to wait a little even if she intends to come. I do not even know where to address her now, and hence am writing a sort of letter to her by putting this in to you.

I have no doubt you must all be frightfully overburdened, and my heart goes out to you. I hope particularly the Secretary will not be broken down by the tremendous addition to his duties.

With best wishes to all around you, I am.

Cordially yours,

[s] OSCAR T. CROSBY.

EXHIBIT NO. 2981

Blue

PARIS, *Dated Jan. 14, 1918,*
[Recd. 15, 11: 12 a. m.]

SECRETARY OF STATE,
Washington, D. C.

3035, January 14, 6 p. m. For Secretary of the Treasury. Number 44.

"Argentine transaction includes establishment of reciprocal credit equal in amount to nominal loan made by Argentine to British and French. Consider all this arrangement extremely bad and have so indicated to interested parties here. Negotiation has been conducted in very irregular way, without due cooperation between London and Paris. This reciprocal credit idea was introduced with view to stabilizing exchange of Great Britain and France on one hand, and Argentine on the other, not recognizing that it opened the door to the sale of sterling and franc drafts in New York, thus substantially transferring burden of loan to us. Upon my urgency Argentine Government has been asked to go as far as it can to prevent this result by agreeing to draw directly upon Paris, and London, drafts being identified as relating to this transaction. This, however, will be insufficient protection unless further steps are taken here and London. French Government agrees to take special measures. Is probable nothing can be effective except through monopoly of exchange by British and French Governments, which now is only nominal. Have notified both treasuries that we may, in order to complete protection, be forced to take measures in Washington and New York which may in turn prove disadvantageous to other transactions, not in themselves objectionable. Have also strongly urged that reciprocal credits in future loans be avoided except to (*) extent. *Was this not* justified by payments required to be made in France and England by lending country. French Government has given corresponding instructions to their agents in Spain. I wired also in like manner to Willard.

French Government has substantially concluded loan of three hundred million francs with Brazilian Government involving reciprocal credits as above explained. This case probably not so objectionable since Brazil has large payments to make in France, but nevertheless, considerable balance is left open which may under present conditions, be transferred to New York in shape of sterling offerings.

In view of all these facts, I recommend that Treasury and Federal Reserve Board undertake at once study of system which would result in stopping all exchange transactions in New York, *those* satisfactory to Government. Understand that regulations devised by Nitti for application in Italy are well worked out, and will have copy of same sent to you.—CROSBY."

SHARP.

[1] Have had one letter and a cable since. Shall answer very soon (handwritten note).

(*) Omission.

EXHIBIT No. 2982

TREASURY DEPARTMENT

WASHINGTON

CLARIDGE'S HOTEL,
London, 16th January, 1918.

MY DEAR MCADOO: I am hoping to send this to you by Lord Reading, who expects to leave for America tomorrow.

Both Ambassador Page and myself have received the impression that he is expected by his Government to obtain a greater amount of help than we are now giving for the war in general, and particularly for the British end of it. I find both in London and Paris, but more particularly here, a certain unwillingness to accept the idea of a statutory limitation upon loans to the Allies. This is partly due to the fact that the Treasuries in London and Paris seem to be free to do as they please in these matters, getting from Parliament an approval ex post facto; but also because there is a feeling that we have accomplished as yet so little of direct military aid in the war that we should be unstinted in our help in other ways.

This feeling was expressed by Sir William Wiseman, a friend of Colonel House, whom probably you already know. He left for America just before Christmas, and before leaving said to me that he expected to say to our Government that if we could not find a way to do more the British Government might have to find a way out of the war. Probably something of this sentiment has already been expressed at least to Colonel House and the President, and I suppose has reached you.

My own feeling is that the statutory limitation is a good thing, if only we could take care separately of the outstanding obligations of Great Britain and France in the hands of our public. In this perhaps we should include the Morgan overdraft. If these things were out of the war, or could be considered in a separate category, I am under the impression that the amount now available is quite sufficient for all the purchases that could practically be made and transported from America, as well as for considerable aid in neutral countries.

Of course, under this letter heading, I have been perhaps more insistent than anyone else in urging that it should be limited by the making of loans, and some headway has been effected. I do not believe that anything whatever would have been done had I not come here. There is an almost incredible good-natured dull resistance to these efforts, especially here—not so much in Paris.

I am still convinced, prudently contemplating a long war, that we must put before the neutral countries the necessity of an issue on their part of domestic currency. Otherwise, there will be embarrassment. While the embarrassment may be shifted away from us, it will remain a difficult thing to finance continually on credit a larger surplus of exports over imports as between the neutrals and the Allies.

I have already wired you indicating that other measures must be taken to prevent these loans from being merely a camouflage, as, for example, when they take the form of reciprocal credits such as have been established in the Brazilian and Argentine cases. I have now the undertaking by both British and French Treasuries that they will not make any such forms of loans without referring the matter to me in the first place. Indeed, they seem quite willing to have all of their loan operations in neutral countries made thoroughly known so that we shall be protected, if we can be protected.

I am satisfied that while it may be necessary to take some rather stern measures, it yet can be accomplished. If we do not take radical measures, which I am not now attempting to discuss, I think everything may continue to fall upon us that chooses. Under this heading, I may point out that even the vast amount of Treasury bills, now $5,000,000,000 or more, which are outstanding may serve as the basis of exchange operations presenting themselves in New York. These exchange bills are of short life usually, but may go up to a year. They can be used as a form of borrowing in Holland and in other neutral countries. The owner of such a bill, particularly if it is say of twelve months' maturity, may, directly or indirectly, have it offered for sale in New York, not perhaps as a Treasury bill but as a draft made against a bank credit established through the ownership of the bill.

I am expecting to take this matter up now with the Treasury here. There will be strong resistance on the part of the Chancellor of the Exchequer to any barrage being erected in New York. I see many inconveniences resulting from it, and if we can get protection otherwise, I should of course not advise it. But, experiencing the difficulty of obtaining prompt action upon any of these matters, and not being entirely sure but that there is a perfectly conscious endeavor being made to keep New York open as a dumping ground, I wired you from Paris advising that a study should be made of measures which would make it impossible to sell exchange in New York save by consent of proper authority. I am fully aware of the fact that it will be said that no connection between bills and their sources can be established. I have, however, the highest banking authority in London and Paris as a backing in this connection, as they fully agree with me that it can be done. Lord Cunliffe distinctly holds that it is possible, and, indeed, I find him much more alive to the necessity of sound finance and to an understanding of the fact that we should not be overloaded than is the case among the Treasury officials surrounding the Chancellor.

Through a variety of delays, I only yesterday received the memorandum on exchange which was turned in to you by Lord Reading after my departure from Washington. I find a lot of discussion as to closing our market to certain neutral countries. It seems to me wholly wide of the mark. I do not know how it ever got into the discussion. The more important question as to challenging individual transactions is reverted to, and strong opposition shown which I have just mentioned above. As against the impracticability of justifying exchange operations indicated in the memorandum, I may state that both in Paris and London it is claimed that today exchange transactions are thus limited. There is a so-called free market outside. but it is felt that this also could be reduced within control if the amount of it seemed to be large and if there were not certain banking interests which were powerful enough to obtain exclusion as yet from Government control of operations in which they are interested and which in geneal seem to be innocent. The principle, however, of control is thoroughly adopted, in Paris particularly, and now, as I have already wired you, will be very rigorously applied in Italy. It will be more difficult here, as all such matters are.

I have now some good French financial assistants forming a part of the staff that will be established in Paris, where financial matters will be particularly studied, and I hope to have them get at this work immediately in order that something constructive may be sent to you. The dimensions of trade between the Allies and neutrals I am now trying to establish. I have called upon the three Governments for particulars. It is not easy to get the figures that are applicable to the present moment, as they wobble very rapidly under the operation of changing war conditions, and are also affected by special agreements such as those now being negotiated between all of us who are in the war on one side, and Holland, Sweden, Denmark, etc., on the other. These agreements practically fix new limitations in international trade. Until these are complete, the older figures are of comparatively little avail. However, everything bearing on the subject will be gotten together.

As I make this hasty dictation, I have not before me the table of maturities of Great Britain and France in the United States in the next three or four years. If, say, for twelve months ahead the maturities could be covered by some special arrangement, including the deposit of collateral, I believe we can work along under the $500,000,000 limitation quite comfortably, including something like $70,000,000 or $80,000,000 per month for a short time as advances to cover exchange operations, these operations in time to be very much reduced by the neutral loan operations. This would leave a possible expansion for American orders, and it would then remain only to have these purchases first reduced to the smallest possible amount with due reference to necessary efficiency and property distributed between the borrowing countries. On the munitions side of this work, which includes in a certain sense the general problem of military efficiency and coordination, there is in France quite a hearty assent to the plan of inquiry we always contemplated as growing out of the operations of the Inter-Ally Council. The Ministers there were quite willing that we should make inquiries of the military council at Versailles concerning reserve stocks, etc., which are now running quite at loose ends.

Mr. Bonar Law and Mr. Chamberlain urged me not to do it, however, and privately explained that there is so much feeling between the commander-in-chief in the field, Sir Douglas Haig, and their representative at Versailles, General Wilson, that unfortunate consequences might result if we actually use the Versailles council for the carrying out of one of the purposes for which it was particularly organized. This difficulty, however, we shall get over, particularly after General Bliss shall have returned and taken his place at Versailles.

While there is no public indication of the nervousness which now rather naturally hangs over the military situation, both in England and France, criticism of our military attitude is rather frequently heard. General Pershing has a hard time of it, in fact, as he is put under terrific pressure to get men into the fighting line. Both the English and French want every man that can possibly be had, and think our men should be put in in small units with the older troops, as in that way they would be used at an earlier date.

The almost complete lack of contact between Sir Douglas Haig and General Petain has made Pershing's role a difficult one. I believe as yet the three generals have never sat in the same room together, and I don't believe this is Pershing's fault. Petain is described to me by one of the French Ministers as a man of very difficult temper, unwilling to hear argument from any one differing with him. He speaks quite too openly his low opinion of General Haig's ability (however sound his opinion may be), and has made unpleasant references to Pershing in ways which it seems to me quite unwarranted. However, a last word came to me from my old friend Cambon just before leaving Paris to the effect that Pershing and Petain are now being brought into better relations with each other. The menace of a great German attack now hangs over the situation, and perhaps it will be sufficient to bring the military men to some sort of union.

Meanwhile, both in Great Britain and France, extreme efforts are being made to get more men to the front. This morning's London Times has a column or more of reports on the feeling existing among working men as the result of the recent declaration of the Government that there will be a combing out process in the various industries here in order to secure men of military age who have thus far escaped. The reports are not altogether encouraging, indicating that a vast number of people here are unconcerned about the result of the war, and have determined not to be disturbed in their present occupations; but the need is very great, and I imagine the Government will pull the thing through. They are not, however, at all confident of getting the number of men which they indicate in the press as the minimum. The Chancellor said to me the other day that their need was very great, and that no greater service could be rendered by America just now than that General Pershing should be convinced of the propriety of letting men from America come over without their equipment in order to be incorporated into the British Army, whose supplies can take care of them, and thus diminish to a large extent the transportation required.

Our own military situation in France is now quite closely related to the financing between our own Government and France, as revealed by the fact that Mr. Loucheur, Minister of Munitions, has felt it necessary to refuse deliveries of considerable amounts of ordnance and aviation material to our Army because he does not believe they are ready to use the materials. This will apparently cut off much of the supply of exchange which was counted upon for the cotton purchases of the French in the arrangements made before I left Washington. I wired you in the last few days of my efforts to obtain $17,000,000 due on deliveries which our ordnance people are now apparently ready to accept. I left Paris before the matter was absolutely clinched, after having given a good deal of time to it on discovering how hard it is to get anything through the various French and American officers that must combine "to have the baby born." I am hoping to obtain from our Army people an indication of the probable amounts that they will actually spend in France in the next two or three months. On account of the fact just above stated, we shall probably have to deal with a much smaller amount of money than we thought last fall. The French are, of course, anxious to turn ordnance into dollars, but on the other hand, are very much sobered by the situation which immediately confronts them, and are unwilling to take any risks by placing artillery in the hands of an American Army not yet ready to use it.

I think, indeed, their whole sentiment is a bit chastened since they have obtained the adhesion of our Government and that of Great Britain to the Alsace Loraine claim. That claim, of course, is not one which they particularly want in and for itself. Most of the Frenchmen who talk about it and who are under sixty years of age will state that they care really very little about Alsace Loraine except as it suggests victory over the Germans, and something which they like to think of as compensation for the losses which they have suffered. I believe they will be in a very embarrassing position if the other objectives stated by President Wilson and Mr. Lloyd George can be obtained in a moderately short time, if they then find themselves faced with a prolonged war due to the difficulty of wrenching from the Germans a territory which is now considered as an integral part of the soil of the Empire. I find also that the French are quite unwilling to leave the fate of Alsace Loraine to a plebiscite, which the Germans might in some event be willing to offer, as it appears they would run comparatively little risk. The careful wording adopted both by Mr. Lloyd George and President Wilson in respect to Alsace Loraine would apparently put it up to the French as to how far the war shall be prolonged if the British and American programs are satified in all points except that one. All this they are beginning now to see, and the strong currents running, among the Socialists particularly, in favor of some sort of transaction with Germany to be effected if possible through the Russian situation, are beginning to run against the existing Government. One hears rumors of the possibility of an early change in the Ministry.

In the meantime, in all three of the Allied countries, the existing Governments feel that they must turn toward us more and more, and if they cannot obtain larger numbers of troops, they will want to obtain whatever else we can give, which is, of course, chiefly money and material. However, I do not see that for some time they will be unable to meet their own expenses in their own territories, as there is no hardship being suffered anywhere as yet in Great Britain and France. Italy, on the other hand, is in very dangerous condition, not that the financial system is weak, but that they are actually lacking in the necessary coal and cereals for an efficient national existence.

As time goes on, I think the British and French Governments will ask us to take over some of the burdens they bear in maintaining the Belgian and Serbian Armies. The British may also ask us to relieve them of what they now do for Italy. British loans to France are on the basis of about 16,000,000 pounds per month, of which approximately half, however, really falls to us, as the sterling credit established for France is used to that extent in making purchases in neutral countries, and hence swells to a large extent the exchange transactions in New York. This particular burden, of course, ought to disappear with the success of the neutral loan operations; but if we do not find rapid diminution in that department, it may be well to have this amount separated and turned directly into the channels between the United States and France.

In order to understand the Italian demand for taking up some of their earlier war material purchases made through private concerns, Cravath has gone over the papers on the ground. He will be back in London tonight and will doubtless bring with him some more general information, whatever may have come in to him, in respect to the readiness of the Government and the people to go on with the struggle if they fail to receive in the next month or so the coal and cereal supplies of which they stand so much in need.

Colonel House, before leaving Paris, suggested it would be a good thing if I should go to Italy as soon as convenient in order to judge of the general situation; but I preferred not to do so until it should be more clearly understood that a general inquiry, as well as one strictly of the financial situation, was desired. I think, moreover, that Ambassador Page has probably kept the Government fully informed, as I believe he is in very intelligent and sympathetic touch with the Italian Government. The presence in the various European capitals of officials other than the Ambassadors, must be vexatious to the latter unless the newcomers show considerable thoughtfulness in carrying out their work. I am glad to say that both Mr. Sharpe and Mr. Page have assured me that instead of impeding in any way their proper functions they feel I have been of help. Certainly they continue to give me their most friendly aid in transmitting and receiving telegrams, and in conferences whenever I desire, as I frequently do, to talk things over with them.

The situation, however, is still a complicated one. Thus in the matter of the negotiations with neutral countries, it is not at all clear as to who is responsible for their conduct. I was asked by Ambassador Page here to give some direction to the Swedish negotiation when it began in London but have never received any further authority in that matter. Consequently, it is apparently in several different hands under several different heads. Each of these transactions being conducted with four powers on our side, and each of those four powers having five separate departments represented in the neogtiations with the neutral countries, it follows that twenty individual and independent springs of action may come to play upon each neutral negotiation. Of course, there has been much confusion as a result.

The Swiss situation is just now particularly difficult, and I am left quite in the dark as to how far I can go save in a personal and unofficial way to help in straightening it out. Mr. McCormick wires me that he considers an agreement was reached whereby tonnage was to be found for the Swiss, and he further considers that the English and French are parties to the engagement. The English shipping people, on the other hand, say they have nothing to do with it, that it is purely an American transaction. The French take the same attitude, and both, I believe, apparently state that they do not consider any engagement was made by anybody to furnish the transport for the cereals promised to Switzerland. In the meantime, acting upon the faith of their understanding, which seems to be the same as that of Mr. McCormick, they have made a loan to

France and are now hanging up the loan to England. I quite sympathize with their distress in the matter, as it looks to them as though some of us, who are the big fellows, are playing a bad trick on them. Meanwhile, our own Army people are deeply interested, as they are extremely anxious to get cross-ties and some other material in Switzerland.

On account of our deep interest in the loan question, I feel it my duty to give some attention to the situation, but would feel more comfortable if I am assured that such advice as I give to Mr. Sheldon, who has come to me in the matter as representing, I believe, the War Trade Board, will not be construed as intrenching upon their proper functions. I imagine the confusion must grow still worse before suggestions as to bettering the situation will be welcomed. I do not say this with the slightest meaning of reproach, because it is wholly natural that those who have been charged with the responsibility in Washington for the various interests of our Government in these matters should find it difficult to promptly arrange for proper representation in Europe. Even when each one of our various departments is represented, the confusion will still exist to a considerable extent on account of the interrelation of all these interests one with the other, and the interrelation between our national interests and those of the Allies, who have equal voice in the transactions. We shall undoubtedly have a crop of resentments due to misunderstandings, but that must be borne with.

The Spanish situation is in better shape, inasmuch as the negotiations are taking place in the neutral country with our own Ambassador to that country present to serve as a single director of our interests and to give friendly support to the French, English, and Italians who want to borrow money. The difficulty arises when the transaction takes place say as in London for the Swedes and Dutch, or in Paris for the Swiss, where our own Ambassador is not directly cognizant of and responsible for the relations of our Government to the country with which the negotiation is taking place.

Mr. Auchincloss, speaking I presume for Colonel House, asked if I would give some attention to the Polish societies in Paris and London, as he knew the President was extremely anxious to have complete information on the subject of Poland. I, of course, would be glad to do this, but for reasons stated in recent telegrams to you, and indicated I think clearly enough in this letter, I would prefer to have some further direction in the matter before undertaking it.

My mind turns away from all this European mess to wonder how you are bearing the great strains that have recently been laid upon you. While we must all give ourselves freely to the country's service and be willing to see our friends do the same, I cannot escape concern for those to whom as to you I have personal attachments as well as official. Both of us are so constituted that we can't help working to the limit; hence preaching is of very little good to either one of us. I can therefore only express a hope that you are managing somehow or other to take some care of your strength, which is now so sorely tried.

With that hope, and with expressions to those around you of my continued and unchanging regard, I am

Very hastily and sincerely yours,

/s/ Oscar T. Crosby.

P. S.—Glancing over this letter, I see it is rather incoherently sewed together. It is too late to rearrange it as we have to get it to Lord Reading in a very short time.

I will only add one more word about the exchange situation, with the request that it be passed on to Leffingwell, Strauss, and the members of the Federal Reserve Board, who are doubtless thinking about it. There are two ways of attacking this subject of control: One is by stopping every exchange transaction until it passes inspection. This is perhaps an unnecessarily harsh method. The other is to give the support of a fixed rate, such as now exists with respect to the dollar and the pound sterling, to justified transactions, letting other transactions find such rate of exchange as the market may afford; in other words, to limit the amount of our support at a fixed rate to those transactions which are approved by our Government, and presumably also approved by our associated governments. This would really mean two different rates of exchange, one set at 4.76, the other possibly as low as anything you please and covering such transactions which, though legitimate in the general sense of the word, might not be of special concern to the Governments, and perhaps also too numerous to warrant complete investigation and control. This second method is substantially that which is operating in Paris. I have not investigated it sufficiently to desire now to propose it, but make this hasty note concerning it in order that it may receive the attention of others.

EXHIBIT NO. 2983

2315 MASSACHUSETTS AVENUE,
Washington, D. C., October 29th, 1917.

Hon. W. G. McADOO,
Secretary of the Treasury,
Washington.

MY DEAR MR. SECRETARY, I enclose a statement on the subject of exchange. I have put it in the form of a memorandum, as I think this will be the shape in which you will find it most convenient.

The figures in regard to sterling balances held by neutrals in London were given by me to Mr. Crosby on October 28th.

I am, my dear Mr. Secretary,
Yours very sincerely,

[S.] READING.

Memorandum for the Secretary of the Treasury.

EXCHANGE

After my conversations with Mr. Crosby and Mr. Davis last week on the subject of the present system of supporting sterling exchange and of the use of advances made by the United States Treasury to the British Treasury for the support of exchange, I telegraphed home at length to the Chancellor of the Exchequer, and have now received replies.

SPECIFIC POINTS

I will begin with answers in regard to the specific information asked.

(1) The exchange transactions of the National Bank of South Africa have already from time to time been carefully considered in London, and it is clear that the business which this bank is doing is nothing more than an ordinary brokerage business. It is probable that the bank has succeeded in attracting a good deal of extra business to itself by cutting rates. The Chancellor of the Exchequer does not believe that any reduction in the total amount of sterling drafts offered can result from the elimination of this bank from the business, but he has now decided to ask the London exchange committee to take steps to secure that, pending further notice, the National Bank of South Africa shall confine its business in exchange to transactions on behalf of its own commercial customers.

(2) Mr. Crosby asked me to ascertain the amounts of neutral balances carried by British banks. The Chancellor of the Exchequer has supplied me with the following figures of neutral balances on October 13th: Total sterling balances, including Treasury bills, held by neutrals, £78,099,000, made up as follows:

	£
Norway	30, 484, 000
Denmark	14, 221, 000
Holland	8, 949, 000
Brazil	7, 533, 000
Spain	6, 842, 000
Others	10, 070, 000
Total	78, 099, 000

The Chancellor of the Exchequer recognizes that any sudden removal of these balances to New York would involve danger, but it appears to him that the danger is lessened rather than aggravated by the action of the United States in placing an embargo on gold exports. He adds that there is no sign at present of any tendency to remove these balances from London.

This covers the specific points on which information was asked. I turn now to the general question.

GENERAL QUESTION OF EXCHANGE

The Chancellor of the Exchequer understands that objection is not raised to the employment of the dollar credits in the hands of the British Treasury for the purpose of paying for purchases in the United States under the item "Exchange", whether such purchases are made by Great Britain or by constituent parts of the British Empire. He understands that the objection is mainly to the use of such credits for the purpose of paying for Allied purchases from neutral countries, more particularly if those neutral countries are likely to wish to draw gold from the United States. Mr. Bonar Law further understands that the United States Treasury raise objection to the credits being used to cover the withdrawal of sterling balances from London by the United States banks.

CONSIDERATION OF PRACTICAL SUGGESTIONS

I. In regard to the withdrawal of American balances from London, Mr. Bonar Law suggests that the action most likely to be effective would be some action taken in the United States, e. g. the issue of a circular by the United States Treasury or Federal Reserve Board to New York institutions on the subject of their balances in London. It is not apparent what action the British Treasury could take in this matter.

II. Careful consideration has been given to possible methods of limiting the amount of neutral arbitrage over Lndoon and New York. One suggestion considered has been that exchange should be furnished only for approved purchases. The Chancellor of the Exchequer is satisfied that this is absolutely impracticable and would lead to an immediate breakdown in the machinery of exchange. An alternative suggestion would be that arbitrage should be prohibited altogether on açcount of certain specified neutral countries. British experience in connection with the financial blockade makes it appear that joint action by the United States and British Treasuries might be successful in keeping arbitrage on behalf of specified neutral countries within very narrow limits, even if it could not entirley stop it.

The method of operation to be followed would be for the British and American Governments, acting presumably through the Treasuries, to prohibit banks in Great Britain and in America from taking part in any or all of the following transactions, whether directly or through an intermediary:

(a) The transfer of sterling from a neutral account in London to an American account in London, whether by the negotiation of sterling bills by neutrals in the United States, or by the negotiation of sterling bills in London.

(b) The transfer of dollars from a British account in the United States to a neutral account in the United States.

(c) Any other financial operations, the effect of which is to enable a neutral holder of sterling balances to transform his sterling into dollars.

Such regulations could, no doubt, be evaded on a small scale, but if all the leading banks in London and in New York were to agree to act on the spirit as well as on the letter of these regulations, and to refuse all business of the kind prohibited, British experience suggests that evasion would be impracticable on a large scale.

CONSIDERATION OF DESIRABILITY OF LIMITING EXCHANGE

Thus far, the practicablity of this control of neutral arbitrage is all that has been considered. When its desirablilty is taken into account, the Chancellor of the Exchequer points out in the first place that it would restrict within very narrow limits the amount of the assistance with Great Britain could continue to afford to the Allies. The Chancellor of the Exchequer would regard such limitation of neutral arbitrage as preferable to a general breakdown of exchange, but otherwise as in every way undesirable.

He points out that if arbitrage over New York were prohibited, it would be essential that the British Treasury should prohibit arbitrage operations in sterling in London in respect of the same neutral countries by the Allies of Great Britain. Ever since the beginning of the war, the British Treasury has furnished the Allies of Great Britain with large sums for expenditure abroad, and has never followed the policy of objecting to this kind of assistance. At the present moment, some portion of the Allied purchases in certain neutral countries, such as Spain and Argentina, can only be paid for by use of the machinery of finance out of resources of the United States. The British Treasury is at present furnishing financial facilities to Allies in a form which renders it unalbe to provide them from its own resources. The balance required has to be provided over New York, the sterling with which the Allies pay for their purchases in these neutral countries being converted by arbitrage into dollars and paid for by the British Treasury out of dollar credits furnished for exchange by the United States Treasury.

CONCLUSION

If, therefore, the arrangements suggested for controlling neutral arbitrage were put in force, Mr. Bonar Law would be compelled simultaneously to withdraw all financial facilities now granted by the British Treasury to the Allies in the neutral countries affected, to prohibit any arbitrage over New York on Allied account as well as on neutral account, and also to prohibit arbitrage by the Allies over London in respect of any of the neutral countries whose claims we should be precluded from satisfying over New York. It is only if all these steps were taken, and if in addition the purchases by British departments in the neutral countries affected were still further curtailed, that restrictive measures could be put into force without a general breakdown of our credit arrangements.

It is clear that the effect upon our Allies of such measures would be disastrous unless the United States Treasury were to step into the breach. The bulk of French and Italian expenditure in the Argentine for which we at present make exchange arrangements is for essential foodstuffs without which those countries could not continue the war. Mr. Bonar Law feels that he could not enter into arrangements for the control of neutral arbitrage which would have such a result upon the Allies and indeed might involve the economical lapse of the alliance unless the United States were willing to give some formal assurance that they would come to the rescure of the Allies as far as lies in their power.

If such assurance could be given there would be the advantage that America would be giving financial support direct to the Allies instead of indirectly through Great Britain, and the United States Treasury would be in a position to say that the money was for French and Italian food supplies instead of as now that it is for the support of British exchange. On the other hand, it must be borne in mind (a) that though there might be some very slight diminution of the net claims upon the United States Treasury, the greater part of the sum by which the advances to Great Britain would be reduced would have to be furnished by the United States Treasury in the form of increased advances to the other Allies; (b) that a novel procedure such as is proposed involves consequences which are not easy to foresee, and that the suggested change might therefore cause dangers which may perhaps not have been fathomed. Indeed, it is a matter for the most serious consideration whether it would be politic to make so great a change to obtain so small an advance.

In any event, the matter is of such far-reaching importance that the British Government would not take action so vitally affecting France and Italy except on the direct and formal request of the United States administration.

EXHIBIT NO. 2984

BRITISH EMBASSY,
Washington, 27th February 1918.

[Pencilled: Mr. Rathbone]

The Honourable W. G. McADOO,
Secretary of the Treasury, Washington.

DEAR MR. SECRETARY: The British Treasury is negotiating for a loan in Holland, and the Dutch are asking for collateral to be put up. This will involve the use of some of the securities controlled by the British Treasury which are now in the United States of America. It seems probable that some part of the collateral will have to take the form of American securities, but every effort will of course be made to use other securities. The amount required would not exceed $50,000,000 worth of securities.

I should be obliged if you would kindly let me know whether you would see any objection to this proposal.

Believe, me, dear Mr. Secretary,
Yours sincerely,

(Signed) READING.

EXHIBIT NO. 2985

[Pencil notation: Mr. Rathbone, I think we should not delay this transaction. R. C. L.]

MARCH 11, 1918.

The Honourable WILLIAM G. McADOO,
Secretary to the Treasury Department, Washington, D. C.

DEAR MR. SECRETARY: In reply to your letter of March 4th (which was not delivered at the British Embassy until March 8th), I understand that it is hoped to have ready for you early this week, the list of securities sold by the British Treasury in the United States since the date of preparation of the lists already handed to you of British controlled securities held as collateral for the call loan or over-draft and for the British Government secured notes paid off on February 1st.

My information as to the proposed loan in Holland is that an amount of 15,250,000 florins a month is being asked for over a period of ten months making 152,500,000 florins in all, the loan to be repayable on October 1st, 1921, and to be in the forms of British Exchequer bonds. The bonds would be repayable in sterling at any time at the rate of £1.0.0. sterling at 12.15 florins; the American securities required as collateral would be deposited with the Federal Reserve bank. As stated in my letter of the 27th February, the amount would not exceed 50,000,000 dollars worth.

Mr. Crosby has been strongly pressing the British Treasury to arrange the loan with a view to improving the exchange position and the British Treasury accordingly sent a mission to Holland. Progress in the negotiations is now arrested pending a reply from me on the matter. I should, therefore, be much obliged if I could receive an answer from you on the question of principle at your earliest convenience.

Believe me, my dear Mr. Secretary,
Yours very sincerely,

(Signed) READING.

MARCH 12, 1918.

His Excellency The EARL OF READING,
Ambassador on Special Mission in charge of His Britannic Majesty's Embassy, 7599 Connecticut Avenue, NW., Washington, D. C.

DEAR LORD READING: Answering you letter of the 11th instant, I do not wish to delay negotiations in regard to the Holland loan and am willing that about $50,000,000 worth of the securities held by or for the British Government in the United States be used to secure this loan. I should like to know just which securities it is desired to use for the purpose but if the matter is pressing I leave it to you to decide.

I am, my dear Lord Reading,
Very truly yours,

(Stamped) WM. G. McADOO.

High Commissioner, The Earl of Reading, G. C. B. Assistant Commissioner for Finance, Sir S. Hardman Lever, K. C. B. Financial Secretary to the Treasury

BRITISH WAR MISSION,
OFFICE OF THE BRITISH TREASURY REPRESENTATIVE,
85 Wall Street, New York City, September 20, 1918.

Hon. ALBERT RATHBONE,
Treasury Department,
Washington, D. C.

DEAR MR. RATHBONE: In reply to your inquiry on the telephone, I find that the only neutral securities which have been taken out of the list of securities owned and controlled by the British Government as of June 15, 1918, for the purpose of deposit in connection with a foreign loan are those taken out for deposit in connection with the British loan in Switzerland, viz:

Argentine

Argentine Government 4% loan of 1897	£250,000
" " 5% loan of 1886/7	250,000
" " 4% loan of 1899	250,000
" " Northern Central Railway extensions 5% 1887/9	200,000

Chile

Chilean Government 4½% loan of 1886	£300,000
" " 5% " " 1896	280,000

In addition, 21,880 shares of the Canadian Pacific Railway Company common stock have been deposited for the purpose of the same Swiss loan.

Yours sincerely,

[s] BASIL B. BLACKETT,
(For the Financial Secretary to the Treasury).

EXHIBIT No. 2988

SEPTEMBER 21, 1918.

BASIL B. BLACKETT, ESQ.,
British War Mission,
23 Wall Street, New York.

DEAR MR. BLACKETT: Many thanks for your letter of the 20th instant advising me of tne securities, for the purpose of the deposit thereof in connection with the British loan in Switzerland, taken out of the list of British Government owned and controlled securities as of June 15, 1918, heretofore furnished the Treasury Department.

Am I correct in assuming that these are the only foreign securities shown on said list the control of which has been since parted with by your Government?

Will you be good enough to let me know whether under the terms of the Swiss loan agreement additional Argentine and Chilean securities are to be deposited for the purpose of the same. From Lord Reading's letter of April 12th to the Secretary of the Treasury it would appear that it was expected that ultimately one-third of 5,000,000 pounds of Chilean securities and a similar amount of Argentine securities were to be deposited as security for the Swiss loan. It may be that certain of the Chilean and Argentine securities were deposited prior to June 15th and therefore do not appear on the list of securities owned or controlled by your Government as of that date.

I am, dear Mr. Blackett,
Very truly yours,

(Signed) ALBERT RATHBONE.

AR/MEH.

SEPTEMBER 21, 1918.

(Charge to Treasury Department.)

AMEMBASSY,
London:

For Crosby from Rathbone. Treasury 434. Supplementing our 410. Were informed April 12 by Lord Reading that to secure British loan negotiated in Switzerland, British owned and controlled securities in United States would have to be deposited to value of 5,000,000 sterling and divided in equal thirds between Argentine securities, Chilean securities, and Canadian Pacific Railway securities. Blackett now advises that since June 15 there have been deposited for purposes of said loan the following Chilean securities: 300,000 pounds Chilean Government 4½% per cent loan of 1886 and 290,000 pounds Chilean Government 5 per cent loan of 1896. Have asked whether other Chilean securities were deposited before June 16 and therefore not included in list furnished us as of that date or whether they are obligated to deposit further Chilean securities. Will cable you when information received.

——— ———,
Assistant Secretary of the Treasury.

EXHIBIT No. 2991

SEPTEMBER 27, 1918.

Memorandum for files.

Mr. Blackett advised that certain of the securities deposited under the Swiss loan to the British had been deposited before June 15, 1918, and, therefore, did not appear on the list of British owned and controlled securities in the United States of June 15. In addition to the securities appearing on said list which had since been deposited under this loan as set forth in Mr. Blackett's letter of a few days ago, the British might still be obligated to deposit about £700,000 of Argentine securities and about £1,000,000 of Chilian securities.

EXHIBIT No. 2992

(*Telegram received from Paris, dated March 13, 1918. Rec'd. 14, 5:22 a. m.*)

SECRETARY OF STATE,
Washington, D. C.

3350, March 13, 12 p. m.

"For Secretary of the Treasury, number 205. Present status of French and English negotiations for credits in neutral countries as now reported. Sweden. British loan accepted in principle. Chancellor prepared to furnish security for loan if necessary. Amount will depend on commercial and shipping agreement. Considerable increase of English trade is contemplated, which should improve exchange situation. French purchases in Sweden small and paid for out of remaining balance of forty million kroners credit obtained in 1916, which they hope to renew again this year, interest about eight per cent.

"Norway: French report sufficient balance remains of second credit of twenty-five million kroners to cover their purchase for next six months in that country. Are renewing original credit, interest about seven and one half per cent.

"Denmark: French not committed to any operation.

"Holland: English report progress toward obtaining secured loan though matter may be complicated because of Dutch ships controversy with us. French expect to pay for their purchases, which are not large, with proceeds Dutch subscriptions their four per cent loan. This is not likely.

"C. R. B.: Credit seems assured covered by joint guarantee French and Belgian Governments. English assent given on understanding operation to be considered distinct from their negotiations.

"Spain: English apparently making no headway toward loan there. Shall ask them to renew efforts. French have secured loan three hundred fifty million pesetos, interest eight per cent and commission, one third to be used by wine and food purchases.

"Brazilian Republic: French have arranged reciprocal credit but not sufficient to cover balances.

"Uruguay: England has twenty-five million pesos reciprocal credit secured by collateral. French are offered similar credit. They have no Uruguayan securities, but believe a reciprocal credit may be arranged. This will be of some benefit to us if surrounded with safeguards now being proposed by me as in case of Argentine loan.

"Japan: French are negotiating for a second series of Treasury bills fifty million yen. Agreement reached on principal, but issue to be subordinated to one for English account.

"Switzerland: French report agreement based on economic concessions which grants them credits against collateral composed of securities and drafts signed by French bankers and industrials, seven per cent interest and commission. Amount of monthly credits conditional upon tonnage for importation and transit from France to Switzerland, minimum of two million five hundred thousand Swiss francs a month. Agreement covers period ten months, beginning January. French expenditures are high, due to French prisoners interned in Switzerland to purchases lumber and war supplies, large part of which they report is transferred to the Allied armies in France. English report they are still meeting difficulties due to Swiss demands for tonnage, imports, et cetera, which Great Britain does not desire to meet. This credit is one of ten million Swiss francs a month, to be used for new purchases. Swiss officials tell me they are willing to make this loan but hesitate while good situation is left in dangerous state, and though loan will not be formally linked with wheat supply promised by us, still it will probably not be consummated until some tangible evidence can be given to people that grain is forthcoming. Sentiment now chiefly directed against Great Britain, Swiss considering that Government responsible for refusal allocate tonnage, and for refusal to permit Swiss purchase of neutral tonnage from it from danger of being requisitioned if found in British ports. Further loans to any borrower may be frustrated by political situation in Switzerland, which is growing serious due to the lack of food, unemployment and agitation by Russian revolutionary agents, all producing anti-Ally sentiment. Confidential. Figures given me seem to prove that Switzerland, while preserving her neutrality, has loaned or has been willing to loan more to the Allies than to Central Powers.

"Loans granted by Switzerland: To France, first loan fifty million, second loan thirty-seven million five hundred thousand, October, November, December 1917, third advance, which may reach twelve million five hundred thousand per month, up to the extent of one hundred twenty-five millions.

"To Italy: Negotiations are now being continued for granting of an advance of four million five hundred thousand per month, during ten months, forty-five millions.

"To England: In the course of negotiations for an advance of ten millions per month for ten months, one hundred millions.

"To Germany: First loan forty-five millions, second loan forty millions, third advance on coal twenty million during nine months from August 1917, up to April 30, 1918; that is, one hundred eighty millions but limited to about one hundred thirty millions in consequency of the insufficiency of coal deliveries.—CROSBY."

EXHIBIT NO. 2993

Loans raised abroad by His Majesty's Government since the beginning of the war to end of April 1918

Norway	June 1916	Kr.	40,000,000	A small part of these loans has been repaid, the balance is repayable about July 1918 but negotiations are now in progress to extend the maturity till after the war.
"	Sept. 1916	Kr.	140,000,000	
"	May 1917	Kr.	51,500,000	A substantial part of this loan is still unexpended.
Denmark	June 1916	Kr.	30,000,000	These loans are repayable on the declaration of peace. Substantial funds are still in hand.
"	1917	Kr.	30,000,000	
Sweden	Dec. 1916	Kr.	7,500,000	Repaid February 1917.
Holland	various dates	£	16,441,000	British Government Treasury bills taken by Dutch subjects in payment for purchases of agricultural produce. Of these £8,036,000 and Fl. 700,000 are now outstanding.
	Sept. 1917	Fl.	700,000	
" (Java)		£	1,950,000	British Government Exchequer Bonds taken by Dutch subjects in payment for sugar.
Switzerland	March 1918	Fr.	100,000,000	Up to Fr. 10,000,000 per month according to Swiss goods reaching European ports. Up to present Fr. 10,000,000 advanced.
Argentine	Jan. 1918	dollars	100,000,000	For purchase of wheat and Argentine produce.
Uruguay	Feb. 1918	pesos	15,000,000	For purchase of wheat and Uruguayan produce.
Japan	Dec. 1916	yen	30,000,000	Three year bonds.
"	Jan. 1917	yen	70,000,000	
"	Jan. 1918	yen	80,000,000	British Government Treasury bills; due January 1919 renewable.

EXCERPTS FROM FINANCE ACCOUNTS OF THE UNITED KINGDOM 1919–20

(London: H. M. Stationary Office 1920, pp 77–78)

Treasury bills:

Outstanding on 31st March 1920, £1,107,318,000.

Of this amount £48,622,000 was issued as collateral for sundry loans payable abroad.

Other debt payable in sterling:	
5% Exchequer bonds 1922 (Japanese ships)	£828, 000
6% Swedish notes 1920	191
Other debt payable abroad [outstanding Mar. 31, 1920]:	
Japan: Yen Treasury bills, 70,000,000 @ 2s 0.582d—1 yen	7, 169, 750
Argentine: 5% Government loan 1921, $96,000,000 @ 4s—$1	19, 200, 000
Uruaguay: 5% Government loan 1920, $23,817,505 @ 5s—$1	5, 954, 000
Holland: 5% Exchequer bonds 1920 (Dutch Sugar), Fl 8,913,600 @ Fl 12—£1	742, 800
Sweden: 6% 3 yr. kroner notes 1921, kr. 15,000,000 @ kr. 18.159—£1	826, 000

NOTE.—Pencil notation enclosed in brackets.

EXHIBIT NO. 2993–B

Outstanding Mar. 31, 1921:	
Sweden 6% 3 year kroner notes 1921—kr. 15,000,000	£826, 000
5% Exchequer bonds 1922 (Japanese ships)	—828, 000

Outstanding March 31, 1922: None.

LONDON, S.W. 1, *August 23, 1918.*

Mr. B. M. BARUCH,
War Industries Board, Washington, D. C.

MY DEAR CHIEF: We had a most interesting ten days in France. The big gun did not shell Paris while we were there though we had one air raid, which did not penetrate to the heart of the city. Our trip to the front was particularly interesting as the French had made an advance that day and we were in time to see the finish. We went up with the artillery and stood by some of the heavy guns as they got in their work. All told, it was extremely interesting. We went to Chauteau Thierry and followed the line of battle to the north. We had luncheon with General Mangin who was extremely proud of the Americans and whom I think is one of the great generals of France. You will see during the last week that he has been making good at a very lively rate. There is one thing you can remove from your mind and that is that there is any bleeding France. The behavior of the American troops has electrified all of France, and from a depressed, harassed nation they have suddenly become an exalted enthusiastic one. The rapid arrival of American troops and the magnificent performance of them and their heavy expenditures of money have revived France.

You will realize what it will mean if the Army is to be increased from 30 to 80 divisions. As our production of munitions has been so delayed, we have called more and more on France to equip the first troops, and the program as it is being outlined will call upon both France and England to equip a large part of the 80 divisions. This financial expenditure made in France will change the balance of trade to such an extent that within ten months America will be a debtor nation to France. Add to this the very heavy expenditures made by our soldiers in France, as they spend all the money they get, and you have a situation rapidly developing which is a very complex international financial problem. It seems to me inevitable that if we enter into this collossal expenditure in France and place ourselves in debt to France, before the war is over, we will find ourselves trying to finance the return of the American Army, unable to maintain the value of our money except by gold exports, and we may be drained of a large portion of our gold in the critical post-war period of reconstruction, with a tremendously extended credit situation in our own country. That is a picture your acute mind can size up, and to my mind it is so critical it should be brought to the attention of our strongest men. I wonder whether the President and Mr. McAdoo appreciate the possibilities of this. The Quartermaster Department here in London has been purchasing heavily from the English manufacturers of uniforms and shoes. I have not personally gone into these prices or made an effort to compare them with the purchases in America, but it would seem unwise to buy abroad if we have facilities in America that can produce these materials. You appreciate the failure of the Ordnance Department to either accept a European detonator and adapter which they are using continuously but attempt to develop a new type of their own has held back the shipment of artillery ammunition through all of these months and after seventeen months at war we have not shipped enough artillery ammunition abroad to fight a one day's battle. The necessity of using French guns and French ammunition will require very heavy financial settlements. The replacement accounts for our Army for materials which have been borrowed under the open-handed plan of replacing in kind is causing a perplexing situation, and we are further confronted with the necessity of large purchases from Switzerland and Spain in the form of lumber, horses, and similar materials. I dwell on these details as the proposed increase in the military program will accentuate them at a tremendous rate. Of course, Mr. Stettinius' ability will show itself in straightening out the situation that has developed and there are a number of capable American business men in Pershing's Army, such as C. G. Dawes and H. M. Billsy of Chicago, who would give great assistance.

One thing that surprises me as absurd is that the French charge the British a rental for trenches and they also charge the Americans this rental. In the little villages in France where the troops have been billeted, the residents have made claims for damages, for instance: They claim damages where windows in a house have been broken, and it looks as if these charges could be made against each lot of soldiers who arrive. This is only a step to charge the American troops with damages that may be inflicted. For instance, in this recent advance north of Chateau Thierry there have been several villages completely demolished. It was necessary to ruin the city before the advance could be continued. Are the French going to charge the Americans for these buildings? The French Government has a reconstruction department which enters these villages and where it is safe starts to restore them so they can be made habitable and you can appreciate what will happen if the Americans are forced to take a prominent part in the advance with 80 divisions in the field. The havoc wrought to many of these villages will be terrific and unless there is some understanding there will be a bill for damages that will be quite a tidy sum.

Crosby has been working under a tremendous strain and with an inability to get at the facts where requests are made for loans. He feels that where he has attempted to hold up a loan he has been the subject of grave criticism, and he was delighted to find when he got back to Paris that we had thrown down a number of requests on the ground that the information was insufficient. This particularly delighted him when he found that we had joined in the completion of program committee, and that we were capable of furnishing complete statistics and therefore were in a position to demand the same statistics of the others. He was afraid American statistics would not be complete or applicable, and that we might suffer by comparison. So far we have put forth statistics, particularly on raw materials, and we have been in better shape than anyone else, not excepting the English, whose steel reports are not comparable to ours. The above questions are all very grave and they may well require the attention of our ablest men. I am of the opinion that the President and Mr. McAdoo, as well as yourself, must be represented in Paris by a strong group of men. Our work is rapidly taking a form of not only advisory programs on shipping, but far more important advisory on the Allied loans, and as this mission is dealing entirely with the question of Allied supplies, I suggest to you that provision be made to meet the expense of the mission from the Treasury Department's appropriation towards Allied purchasing. I dislike to see the expenditures we are making charged to your personal account, and yet there is no possibility of running the mission on an inadequate basis. There are many questions of importance here in England that require the presence of someone to take charge of these program committees, and at the same time there is need in France of a man of general experience in raw materials and a technical knowledge of munitions. It is very difficult for any American officers to deal with the Allied military officials and do anything but agree on a military program. There has been a tendency for months past to put military urgency to the front and force everything through on that basis, and I have no doubt that in the period following the German advance of March 21st this was conspicuously true. This situation does not exist at the present time, and from what I have seen every effort will be made by the French and British to not relinquish the precedent they have established, and they are practically insisting that we become "rubber stamps" to anything they suggest. I may have to return at any time from inability to get along with these conditions but I am determined that this mission shall not be a "rubber stamp" and I have taken this position so absolutely that it is bound to produce results. There is a more marked tendency to cooperate and let the facts determine the recommendation. We have been of great assistance to Italy in forcing the British to make up their arrears and fulfill their agreements. Before we started in playing "Lady Bountiful." I told one of the military members the other day with whom I was meeting in Paris that we had a bottom to our pocket and we had a button on the top when he had suggested a program that to my mind was ridiculous.

If you have any suggestions or instructions to give, it is needless to say they will be thankfully received. I have no wish to increase the importance of the mission or to interfere in any way, but I cannot too forcibly bring to your attention the necessity of permanent representation in both London and Paris. The War Industries Board has more accurate information of our American industries and a broader view of the entire situation than any department of the Government can have, and we are so tied up with the Allied situation through our acting as the Allied purchasing agent, we should scrutinize requirements from this side and not attempt to paralyze American industries through blindly following some program that has not been adequately scrutinized or properly analyzed. The situation is developed in Europe and the analysis of the situation must be developed at closer range than hitherto. Please give this your earnest thought and work out the plan of action that will suit you, not forgetting to advise me as early as possible if you wish me to return in October. It is needless to say I am absolutely at your command and there is no personal preference in the matter.

Affectionately,

(In pencil) L. L. SUMMERS.

P. S.—Mr. Anderson will probably leave during the first five days of September, as he expects to complete the Tin Executive and the Tungsten Executive within the next few days. He will be able to give you at first hand his opinion of conditions.

EXHIBIT NO. 2995

SPECIAL UNITED STATES COMMISSIONER OF FINANCE IN EUROPE,
Sunderland House, Curzon Street, London, W. 1, 27th September, 1918.

[Pencilled: To Secretary McAdoo from R. C. L.]

The honorable the SECRETARY OF THE TREASURY,
Washington, D. C.

SIR: In cables of earlier date, I have expressed the opinion that arrangments should now be made with the French Government by virtue of which we should be assured that francs would be supplied to cover the necessary expenditures of our Government and nationals in France during the continuance of the war, and during the period that may elapse before our troops are repatriated. This opinion is shared by a number of Americans occupying responsible positions in England and France. It goes almost without saying that, if such assurance is asked of the French Government, we must be ready to make corresponding assurance that their needs in the United States will similarly be covered by advances of dollars.

The arrangement would, in fact, amount to nothing more than the continuance of the present month-to-month practice. But, if definitely agreed to now for the longer period, it would have the advantage of relieving the situation from embarrassment due to the recurring uncertainty that might otherwise arise during the war, and more particularly from the grave difficulty that will arise at the termination of hostilities out of our need for an immense sum of francs while our troops are being taken back to America.

Several of the most competent American observers here tell me they are impressed with the fact that the attitude of the Allied Governments toward our own military efforts and necessities will become more critical in proportion to the assurance of future victory over our common enemy. A certain fervor of sentiment toward us as saviours of the situation will pass as the situation becomes more surely saved, and we must look forward to a strengthening of a bargaining spirit, not only with respect to our needs of materials and currencies *during the war*, but particularly with respect to the after-the-war period.

The statement just made may sound somewhat unsympathetic, but, in my own conception, it is not at all so. It is a mere recognition of the usual play of human interest that must be counted upon in conditions now confronting us.

A full realization of the magnitude of our post-war expenses in France has been possible only since a comparatively recent date, when the approximate number of troops to be transported to France has been fixed.

I am still without any figures from the A. E. F. as to their probable expenditures in France for periods longer than one or two months in advance. The Red Cross report that their expenditures will approximate 20,000,000 francs per month. Corresponding information from other American organizations is being sought, and also some estimate of the expenditures of individual Americans in France.

Mr. Stettinius, whom I recently consulted on this subject, feels that, while the responsible officers in the Army will be urged to further effort in the matter of estimates of future expenditures, any figures obtained will be only rough approximations. He particularly emphasized the fact that, at the close of the war, large amounts will probably still be in suspense, based upon claims made by the French Government and not at that time accepted by the A. E. F.

I am informed by Colonel Cutcheon that, as a consequence of the efforts which we have been making to clarify the situation, the French Government is undertaking to present, on the 25th of October, a statement setting forth the nature of all claims which it expects to bring against us, with as much of precise valuation as conditions now permit.

I have recently consulted Lord Gainford, who has long represented the British Government in the matter of receiving and paying claims from French citizens. He informs me that the position of the British Government is substantially this: Through military commissions they make final determination as to the proper amount to be paid to a French citizen for the occupation of his land or buildings, or damage to his property. The French Government has a right to complete knowledge on the subject, and, if they are in any case dissatisfied, can make diplomatic representations in defense of their views of their citizens' interests. Thus far, however, there has been practically no dispute concerning final settlements made by the British Government.

Contrary to the widely prevalent rumor as to payment of rental for trenches, Lord Gainford tells me that no such charge has been made in the actual fighting zone. His Government has paid rental for trenches constructed several years ago approximately twenty miles in the rear of the fighting zone. These were likened in principle to training camps, and compensation has been made to the propriators of the land across which these trenches were dug.

The general line of demarcation in respect to damages to, or occupation of, private property may be thus stated: That all such damage or occupation which is effected in the rear, and which does not result from "faits de guerre", is to be paid by the Government whose troops make such damage or have such occupation. Obviously, there is a twilight zone of doubt between these two, and there have been difficult questions at times as to whether the occupation of, or damage to, property resulted from a "fait de guerre" or from an "operation in the rear."

An illustration of the rather conventional rules which have been adopted in this respect, is found in the statement that lands occupied for the construction of standard gauge railways, which are normally in rear of the fighting zone, are made the subject of a rental paid to the owners. On the other hand, lands over which the light railways have been built, closely in rear of the fighting forces, have not been made the subject of such rental.

There remains, however, hanging over the whole situation the fact that some time ago the French Parliament passed a statute under which its citizens are given the right to claim against the Government for damages due to all "faits de guerre." It has seemed to the French Government that it would be wholly unjust to leave certain provinces in the direct distress, without compensation, due to "faits de guerre", while all other portions of the country would be untouched by such calamity

Obviously, if an indemnity can be collected from the enemy sufficient to pay these damages, no serious question will arise between France and her associated belligerents. On the other hand, if such indemnity is not collected, I think we may expect that the French Government will present, as a matter of moral right, the claim that a portion of this great damage should be paid by their associates in the war.

Having this possibility in view, the British Government is endeavoring to keep a record of damages which have resulted from military operations within the zone of war. The situation is, of course, extremely complex, as, in many instances, a particular French town may have suffered in part from British, French, German, and American acts of war, in which case the separation of responsibilities as between the associated Governments would be a subject of extremest difficulty.

No claim has been made by the French Government against the British Government in respect to this very important matter. The British Government is taking no steps to bring the question to issue, whatever may be the inner thought of members of that Government as to the essential fairness of any claim that the French Government may eventually make.

The sum that may be involved is, of course, very great, but just now defies any effort to express it in figures, even with the roughest approximation.

I understand that our own Army authorities are cooperating with the British from day to day in fixing the payments due to French citizens for occupation or damage in the rear, and both are intent upon clearing up all these individual claims as rapidly as possible, so that, at the close of the war, there will be but a small heritage, if any, of disputes.

In making the estimates which appear upon the appended sheet, the following assumptions have been made:

(1) That the average number of troops in France for the period from September 1st, 1918, to June 1st, 1919, will be 2,500,000.

(2) That thereafter, until removal of troops begins, the number will be 4,000,000.

(3) That there may be a six months, period of cessation of hostilities, during which no troops can be removed.

(4) That, if the troop removal begins as early as June 1919 it will require a year and a half to complete the work, whereas, if it does not begin until a year later, the removal can be effected in one year. (This is due to state of our shipbuilding program at the dates of beginning removal.)

(5) That the average payroll in France (including officers and men) is $30 per month.

(6) That during any period of active military operation, other expenditures than payroll will be equal to the payroll.

(7) That during the period of cessation of hostilities, these "other expenditures" will be fifty percent of payroll.

(8) That during the period of troop removal, other expenditures will be twenty-five percent of the payroll.

As to the expenditures of France in the United States during the continuance of war, I believe we may safely be guided by the experience of the past. From $100,000,000 to $120,000,000 a month seems about all that they can obtain from us and make use of in France. This amount we should have available for the purchase of francs. Insofar as we need more francs than would be thus supplied, we may look to the following headings:

(a) Cancelation of the existing French debt of $2,000,000,000.

(b) Transfer to the French Government of British or Italian obligations now held by us.

(c) Dollars that might be supplied to the British Government covering French purchases in the British Empire, which are now covered by loans from Great Britain to France.

(d) Obligations of the United States given to France.

As to (a), the present contention of the French Government is that the portion of their indebtedness to us which was created before September 24, 1917, cannot be counted as subject to cancellation by future dealings between the two Governments. The basis for this claim is familiar to you. They also claim (without such justification) that later obligations were given with the general understanding that they were to be of some years maturity. On the other hand, they have stated a desire to cancel existing obligations as far as consistent with their banking situation and their need for after-the-war credits. This remark applies to any French obligations—whether those or ginating before September 24th or not.

It may seem an objectionable sort of camouflage—that, of two parties, each should hold obligations of the other equal in amount and maturity. Yet this sort of reciprocal credit arrangement is useful in certain banking transactions. It would have, in the opinion of the French, a marked advantage, in that their public would take great satisfaction in the appearance of American obligations among the securities held by the Bank of France.

I think, however, the matter may not be one of great seriousness, if we take the subject in hand at once, because we may very justly state that, if the war should end with an indebtedness running from the United States to France, it would have to be carried on as good terms as those which would apply to French indebtedness carried by us. Even, therefore, if the obligations remained outstanding each to the other, they would be practically an offset, and would not change the essential relations of the two parties as compared with the case in which bonds would be presumed to be canceled during the progress of the war.

As to (b) while discussing with Mr. Tardieu the question of strengthening the Bank of France situation, I suggested the possibility of our using such British obligations if, in any case, we were willing to meet the views that were then being urged by the British Government. Both Mr. Klotz and Mr. Tardieu have accepted this idea in principle. It has not been discussed with the British Government. To make it effective, that Government would, of course, have to be consulted particularly as determination of the specific maturities and other characteristics of their obligations would have to be made. It is not likely that there will be any opposition on the part of the British Government to such use by us of their obligations. They are now heavy creditors of the French Government, and are likely to remain so throughout the war, as their expenditures in France are not as heavy as ours—amounting to about 150,000,000 francs per month.

As to (c), probably this method of obtaining francs may be put into operation at any time that we so desire. It would presumably entirely satisfy the British Government, which has long been urging that we should take over the expenditures of France in the British Empire. It is not certain, though probable, that the French Government would be equally satisfied with such an arrangement. The amount of French net borrowing from Great Britain is now approximately $40,000,000 a month. If we take it over, and if, at the same time, we are taking more francs than can be paid for by our present dollar advances, plus this sum, the French cease to be borrowers, on account current, and become lenders. Thus far they have indicated strong preference for remaining in the former role—at least toward us. Hence, an objection on their part to the operation of (c) may possibly be presented.

With respect to (d), (obligations of the United States), whatever may be the amount of such obligations, whether represented by book credits or formal bonds, they may be viewed as falling into two categories:

(1) Those containing conditions requiring the proceeds of the credit to be used in a specified period after the war for purchase of materials in the United States. The obtainment of such credits is now the particular object of French negotiation. In a previous communication, I have indicated my belief that we should carefully study the amount of such credits which may thus control the outflow of our raw materials, and that a limit should be fixed in this respect, independently of the debit figures which may run against us as a result of our total transactions with France.

(2) Those containing only the usual provisions for gold payment. This would, of course, represent the residual amount, if any, due by us to France after all other forms of compensation for francs had been exhausted.

As to the relative proportions in which the various sources, (a), (b), (c), (d), for purchasing francs would be used, I shall not endeavor now to make specific suggestions, but shall do so in a later letter.

An inspection of the appended table shows figures so large that we must recognize as reasonable the concern of the French Treasury with respect to the methods to be employed in furnishing the francs in question.

The present total output of that Treasury, covering French expenditures and advances to Great Britain and ourselves, is approximately 4,000,000,000 francs per month. Our requirements will soon increase this amount by 500,000,000 francs or more.

Obviously, if our expenditures in France were followed very promptly by a return of these francs to the French Treasury, or to the Bank of France, there would be no serious question of currency expansion. It must, however, be recognized that, generally speaking, an increase in the turn-over of business in any country requires in and of itself a certain increase in circulation, this quite independently of the fact that, in the case under discussion, francs for our purposes are presumed to reach us through the French Treasury. As to how rapidly the French Treasury will effect loans from its public in order to obtain the francs required for its other expenditures and for our purposes, we are not in position to do anything more than perhaps now and then make a friendly suggestion. We must be prepared to consider with them such difficulties as may actually arise in respect to their operations as a Treasury, and in respect to the issue of additional bank notes, if required.

A first approximation as to what would be just with respect to the expansion in the Bank of France note issue may be had from the following considerations:

(1) That we should establish the actual net demand upon the French Treasury produced by our expenditures, as distinguished from the gross demand. I have already pointed out to the French officials that, through the resale of cotton, cereals, etc., and through the advances by us of moneys required for their neutral expenditures, we have in the past been the means indirectly of putting into the French Treasury the amount of 4,300,000 francs. This process is continuous. Admitting, however, that there is a net demand by us for francs, and that the French financing system will be such as to require all or a part of this to be represented by increased issues of bank notes, we may then propose to give them our own obligations, or British obligations, to an amount approximately equal to the cover which their notes had, say on the 1st of May of this year, when our demand for francs became marked. On the ratio of cover thus provided by American or British obligations might be taken as some safe ratio which, in the judgment of all concerned, would permanently secure the Bank of France issues against public alarm. Doubtless in our own case we should not be satisfied with less than twenty-five percent of gold cover, or cover equivalent to gold. Obviously, even taken into account the very large figures of net debt which might run in favor of France from us at the close of two years more of war, we should have in British obligations alone far more than would be necessary to meet merely this question of cover for any possible increase in the Bank of France note issues.

Since the French purchases in the United States of materials resold to their public will not increase, while, on the other hand, our gross demand for francs will very largely increase, it is apparent that our actual net demand upon the French Treasury for francs will be constantly augmented. It is probable that the success of the loan which the French Government is about to float will indicate, for the time being at least, how far the French Treasury will be able to supply francs for all purposes, without increasing the note issues of the Bank of France. In the present state of uncertainty, we could only deal with this subject on some such general principles, as are above stated, without knowing what the results, in precise figures, would be at any given time.

A résumé of the principles that may be adopted in dealing now with the French Treasury may be thus stated:

(1) A reciprocal engagement between that Treasury and ours that each shall furnish to the other the moneys required for war expenditures (including removal of American troops) in the territory of the other. The term "war-expenditures" to be understood as covering all governmental and certain private needs, subject to definition.

(2) The United States Treasury also to furnish against francs dollars for French expenditures in the British Empire and in neutral countries, if this procedure be agreed upon.

(3) As and when our current expenditures exceed in francs the French expenditures in dollars (determined by (1) and (2), surplus shall be applied (a) to the cancellation of existing French obligations; (b) possibly to the purchase of American obligations (or credits) for transfer to the Bank of France, according to agreed principles relating to the net increase in note issue traceable to our net demands; (c) to the acquirement of additional United States credits covering post-war purchases by France in the United States, over a period of say three years; (d) to the purchase of long term obligations of the United States, not specially conditioned as to expenditure in the United States. The ratios, absolute amounts, and priorities of these several applications of the supposed surplus must be the subject of negotiation.

(4) British or Italian obligations to be substituted for United States obligations in settlements requiring payment by United States, as may be agreed upon.

(5) Any net debt of the United States to France resulting from the war operations in question, and in excess of special three-year credits above mentioned, to be represented by our long-term obligations.

(6) Correspondingly any debt of France to the United States to be represented by French long-term obligations.

I await your instructions as to whether negotiations along the lines indicated herein—or others—shall be undertaken by me. If this is desired by you, it is my judgment that free discussion should be permitted, with the distinct understanding, stated in my no. — that no expression of opinion on my part is to be taken as in any way committing you. I believe in this way the real views of the French Finance Minister can be best obtained, and be made known to you, who would, from time to time, make such determinations as you see fit. If you completely reject any views expressed by me, I alone would seem to be embarrassed, but shall not so regard my situation.

Respectfully,

[s.] OSCAR T. CROSBY,
Special U. S. Commissioner of Finance in Europe.

NOTES ON ASSUMPTIONS MADE IN TABLE OF EXPENDITURES, A. E. F.

Other expenditures, as for transportation, rental of buildings and land, and purchase of all manner of supplies can be approximated now only through the figures which have been submitted by Lieut. Colonel Cutcheon, and which were reported some time ago to you, together with very recent information given to me by Mr. Summers as to the new programs for the supply of ordnance to our Army from French factories.

Whether the payroll must remain at the present figures it is difficult to state without further information from the A. E. F. authorities. It would seem, particularly after the close of hostilities, that the actual expenditures of our men might be reduced to a smaller figure than that which is thought desirable now while they are under the strain of military activity.

No allowance is made for any such reduction in the figures that are now made up in order to give us a rough idea of the probable expenditures of our Government in France until our troops are withdrawn.

The estimated periods for removal of troops under different conditions as to our shipping program result from conversations had with General Niles, who represents the War Department in the matter of ocean transport.

EXHIBIT NO. 2996

10 GROSVENOR GARDENS,
LONDON, ENGLAND, *August 23, 1918.*

Mr. B. M. BARUCH,
Chairman, War Industries Board,
Washington, D. C.

MY DEAR CHIEF: You realize in connection with my remarks in my other letter the possible financial developments. The one solution to this is to have America develop its facilities for the manufacture of artillery, guns, and ammunition. It is ridiculous for our Nation with its facilities to be in a position of not having shipped a day's supply of ammunition after we have been at war for seventeen months, and if the Ordnance Department cannot come through and produce results, the simple answer it "put someone in charge who can do it." It would be a calamity to put our country in the financial situation that confronts us simply through the military dogmas that have controlled the Ordnance Department since the start of the war. If our Ordnance Department cannot develop a detonator that is satisfactory, they must adopt either the French or British standard, which has been satisfactory for the past four years. They have constantly made improvements it is true, but they have started in with what they had and did not hold up the program while making them. This applies to shells and explosives. You know how bitterly I feel on this subject, because I was instrumental in developing the detonator for the British service, and I am not tolerant of delays in the Ordnance Department as regards gas shells and high explosives. If the American nation can equip its own forces, it will be a tremendous help financially. If the military authorities insist that speed is necessary and another division of the military Department cannot produce speed, something must be done.

I am convinced that the decision of General Pershing will be that 50% of all shells will be loaded with gas. There are two or three new gases that are coming out in the near future and it is to be hoped that the director of gas warfare will put more energetic efforts into their production than was the case in mustard gas.

You realize we now have on order in America about 30,000,000 75 m. m. shells. These are in all stages of process, from shells complete, with the exception of the detonator, to the steel bars. We also have some 12,000,000 155 m. m. The amount of shells we have on order in America practically equals the total reserve of the French Army, and up to the present time our program for guns does not amount to more than one half of the total guns of the French Army. Upon my return to Paris I will be able to get all of this information in detial and will try to submit you a brief analysis of it.

Very sincerely yours,

LILS:M. (In pencil) L. L. SUMMERS.

EXHIBIT No. 2997

PARIS, *September 13, 1918.*

Mr. B. M. BARUCH,
Chairman, War Industries Board,
Washington, D. C.

DEAR MR. BARUCH: After Anderson left I had a number of meetings with various British officials in connection with the wool, hide and leather, and jute situations. All of these are more or less involved, as you know, and the responsible British officials are trying to avoid an issue with the trade committees which have been dominant in these matters. There is a great deal of opposition to forming a hide and leather executive to meet in London, and there is also a great deal of opposition to giving the United States Government the same price the British Government pays Australian and New Zealand wool growers. These matters will come up actively when I return to London.

I left London for Paris on September 5th, and since our arrival here have been in consultation with Stettinius, and have had a number of committee meetings on various matters. There are several points at issue. When I arrived I found Stettinius had made up his mind that the Munitions Council was of more importance in connection with the Allied purchasing and the raw materials which the War Industries Board handles. He felt it was not of particular interest to the War Department. There had been developed in the steel meetings in London severe criticism on the part of both the British and the French regarding the amounts of steel America had assigned to its munition program. They called attention to the fact that the shells America was contemplating could not be transported and could not be utilized at the front. In repeating these criticism to Stettinius we showed the amount of steel the War Department was requesting and the number of shells it involved, and he realized there was considerable discrepancy. As we had your cablegram stating Stettinius had the figures on the amount of steel required by the Army we called on him with this information, and he seemed to take exception to it, as he felt the Washington authorities were reviewing all the programs, and they had never furnished him with any data in regard to tanks, aeroplanes, and similar matters. He therefore sent a cablegram to them, and I cabled you that I felt the War Department were disinclined to submit their programs for criticism. After two of three days of meeting together Stettinius stated the War Department would, of course, maintain their representation on the Munitions Council and co-operate in every way.

Secretary Baker arrived in town two or three days ago. I called and left my card, but he was out, and had not made an appointment.

The reason we are so actively pressing the War Department on their figures is, first: if you deprive American industries of steel to meet an exaggerated program, and later the War Department curtail on their program, or produce a large amount of unfinished material that cannot be used industrially, everybody concerned will be very gravely criticised, and you know there is a great tendency to criticise this at the present time, the automobile people being only one of the many industries which have been gravely affected. Second, if the program as outlined by the War Department is persisted in it will mean the construction of additional powder plants and additional explosive plants, and these must all be equipped with nitrogen fixation plants in view of the nitrate situation. This will involve a colossal sum of money, which will be an absolute waste, and will deprive essential industries, and other war industries of a large amount of material, and use large forces of men who should be available for other purposes. There is no intention on our part, of course, of assuming any right to influence the military program, but the data on which all of these results are calculated is so meager, and the assumptions are so extreme, that they are subject to very grave criticism, and I personally feel that the War Industries Board should be definitely on record as having called attention to the grave responsibility placed on the War Department if they proceed on a fictitious program that has been inadequately considered in view of all conditions.

From a military standpoint, the criticism comes entirely from the military experts of England, France, and Italy. The French and British technical men are particularly outspoken in this respect. It seems to me that the one great advantage of the Munitions Council will be that disinterested men of wide experience will have a chance to analyze the figures of each Government and call attention to any tendencies to over-estimate. The American estimates are most glaring in their inconsistency. I am putting this industrial situation up to the War Department very strongly, and, of course, if in the face of this they prefer to stand upon their estimates, we, at least, will have a very clear slate when the hurricane breaks. The arguments raised have been forcible enough to make Stettinius hesitate about going on with their program until it has been more adequately scanned.

In general the American program calls for an expenditure of money continuously throughout the year on a basis of about 50% greater than the maximum campaign of six or seven weeks of either the French or British Armies. This, together with their tendency to create a large reserve at their base depots and at their embarkation ports is making an unprecedented demand on our facilities.

A very important situation has developed in connection with the Allied purchasing, and I feel you should give this matter more of your personal attention. Several months ago England, in various negotiations with Italy, agreed among other things to furnish 100,000 tons of steel and 56,000 tons of pig iron. These negotiations were made between Italy and England, America not being a party to them or having knowledge of them. It is a little bit indefinite just what they involve except one of the factors was that England was to furnish this 100,000 tons of steel and 56,000 tons of pig iron. We have no knowledge, of course, whether this steel or pig iron is for military necessities. Only 28,000 tons of the steel was shell steel. When it came time to make delivery of the iron, the British Treasury would not allow it to leave the country unless Italy provided dollars credit in New York for the iron. Crosby, naturally, objected to dollars credit though there had been many cases where it had previously been allowed. When it came to a question of permitting Italy to repay England with pig iron purchased in the United States, then it became a replacement, but as it is after all a replacement in dollars of American credit, it is practically the same thing except that an open credit of dollars might permit England to use the money in any way she saw fit, that is, to purchase materials which would not be war necessities and, therefore, would not come properly under the Treasury appropriation. I have discovered in this connection, that there are some contracts and arrangements between France and England which contemplate this transfer of credit, and you appreciate it would only be a slight step to have each nation exchange these credits with the other and there would be practically no restriction in regard to their purchases. In other words, they could draw on the U. S. Treasury for classes of purchases which would not be essential for war purposes and the materials could be used industrially. There is much scattered evidence to show that materials we are sending over find their way into industrial uses, and we can only present a complete picture by examining the production of each country and analysing the uses to which this production has been allocated. This, of course, involves extensive program work, but it is quite possible.

In connection with some orders for Italy to be placed by the Aircraft Production Board, the question of the raw materials to be sent to Italy comes up, and McFadden's investigations in Italy had indicated that materials were being used industrially. For this reason I understand the Signal Corps are arranging in their contract with F. I. A. T. that American officers will have charge of the distribution of raw materials that are to be furnished for the manufacture of trucks and aeroplane motors.

We have followed up your cablegram regarding replacement orders and everybody over here agrees that the whole system of replacement promises was wrong and should never have been started. Col. Cutcheon has been named by General Pershing to work with Stettinius in getting this matter straightened up. Cutcheon is a very well-known New York lawyer and a very able man. I have had a number of conferences with him and Crosby, and Cutcheon is taking the position that both France and England are being supplied with materials by the U. S. far in excess of any materials they have furnished the Expeditionary Forces and that therefore they have been repaid in kind by these shipments. As the American Expeditionary Forces pay for their purchases in cash there is no financial question involved, and as the American Government has loaned money for the purchase of the materials, Cutcheon is taking the position they have replaced this. He is asking us to assist him in maintaining his position and it seems rational, and the only way in which we can terminate these ridiculous promises of returning certain things at certain times, which means the American Expeditionary Forces have usurped priority on all materials without regard to possible production. Maintaining this position taken by Cutcheon will result in cancelation of all replacement orders by the acknowledgment that materials of equal amount have been received in replacement.

There are so many of these questions arising continuously, it seems to me certain that you must maintain a permanent representation in London and Paris. As the demands on our raw materials increase they will become more and more important, and if you decide to take a stand supporting Crosby in the idea that the Allied purchases must be for specific purposes and for those purposes only you will have to assist the Treasury in an organization that will permit these requirements to be scanned. I think it is ridiculous for you to attempt to allocate American production on requests made by the various military missions to America, as you have no assurance that the materials so allocated are to be used for military purposes, which is the basis of the Treasury appropriation, and you are simply taking the statement of these military missions and they in turn receive their requests from various bodies on this side actuated by political motives as much as military motives. You can definitely make up your mind that our Allies have been so long in the war that they are quite willing to have America foot all bills regardless of the purpose to which the money is to be devoted. You know this has been so during the past year and I want to definitely warn you that this tendency is bound to incresae, and that owing to changed war conditions there is a spirit rampant of getting ready for trade after the war and no opportunity is neglected to improve industrial position.

There is a very great tendency on the part of both England and France to accumulate a large stock of raw materials and to have them on hand at the end of the war, which will give industry a huge and direct stimulus. The replacement orders of France are a conspicuous example. They will get 10,000 tons of something from us on an Allied purchasing order. They will loan this to General Pershing, receiving payment in dollars, with no restriction as to how those dollars are to be spent, as it is their money. In other words, they have converted American materials, bought with American dollars, into French money to be spent as they see fit. Secondly, after they have received cash for the material they tie a string to it that it is to be replaced in kind on their demand. They will then place an Allied purchasing order for a similar amount of material. There is no question involved as to the extent to which they might do this, as there has been no means of scanning these requests. If they choose to call for a replacement order in addition to their having purchased a similar amount, it gives them twice the material advanced to Pershing. The barbed-wire situation is a recent illustration. They asked you for 20,000 tons of barbed wire a month when they were already receiving 12,000 tons. They put in a very urgent plea and we started investigating what they were doing with barbed wire and where it was. After three weeks of continuous pressure they withdrew their additional demand for barbed wire, stating it had been made in error.

I have no intention of intimating that you should attempt to take the responsibility of determining the requirements of the Allied Governments, but I think in your position as Allied purchaser and representing Mr. McAdoo, he should understand, and you should understand, that there are numerous loopholes of large size which are enabling the Allies to convert into cash the materials supplied by us, and utilize the cash in a way not contemplated in the appropriation, and I think the whole matter will be put on a better business basis if it is recognized that by perfecting an organization of these committees all requirements will be scanned not only by us but by all the Allies, and we will be able to stop the intertrading on American money and will be able to more effectively meet the situation.

I think if you were to examine the work we have done in the past six weeks you would realize that we have been of very distinct benefit to our own industrial situation and to the Allied purchasing. I hope before you receive this letter that you will have talked with Anderson and will have decided what you want to do in regard to permanent organizations. We have rented a house in London for three months and will rent an apartment in Paris. The French Government have placed offices at our disposal in Paris.

Very sincerely yours,

LELAND L. SUMMERS.

EXHIBIT No. 2998

U. S. WAR INDUSTRIES BOARD MISSION,
136 Avenue des Champs-Elysees, Paris, September 21, 1916.

Mr. B. M. BARUCH,
Chairman, War Industries Board, Washington, D. C.

DEAR MR. BARUCH: I had a number of meetings in London with British officials on wool, hides, and leather and the jute situation All of these materials are more or less involved in trade committees and we will have quite a job to have them taken in hand. There is a great deal of opposition to forming a hide and leather executive as I have asked that this be formed in Washington. The members of the committee in London are opposed to this and it will have to be settled by the Cabinet.

Since my arrival in Paris we have had frequent consultations with Stettinius, and, as I cabled you when I first arrived, I felt Stettinius had lost interest in the Allied Munitions Council since he stated he felt it would be of more importance to the Allied Purchasing and the War Industries Board than to the War Department. After the arrival of Secretary Baker, Stettinius evidently got his affairs straightened out so that he has been given more authority and now has an opportunity to go into details of the military situation so that there is a possibility of reviewing their programs. As soon as this took place Mackall and I started pounding on the steel and shell situation. Mackall has been able, as chairman of the steel committee, to get a lot of detailed data together, and we practically challenged the War Department's figures. Last night I dined with Stettinius and he had there General Fox Connor, General Wheeler, General Rockenbach, Col. Logan, Col. Burney, and Major Kimball. We spent four hours on the general industrial situation, and I explained what it meant to embark upon an elaborate program of manufacture at the expense of our industries if there was any possibility of the figures being wrong, and suggested the data that was available indicated conclusively that the figures must be wrong and that this should receive very serious consideration. When I was over here a month ago I visited Chaumont and talked with General McAndrews, Pershing's chief of staff, about their programs, calling attention to their lack of information on their gas program, suggesting careful consideration should be given to all of their programs that were taxing American industry. This morning Mackall had an extended session with the chaser officers at Stettinius' office and it led to their practically admitting that there was an error in their figures and that a very heavy reduction in their requirements could be made. You will receive details of this through the War Department, and I have cabled you today that we had effected this result. I think this is one of the best pieces of work we have done, as it will be of great benefit to the steel situation and will be of tremendous benefit to explosives and propellants. And further explosives or powder plants would have required nitrogen fixation plants and this would all have been a tremendous waste of money.

Stettinius has been cooperating with us in every way and has furnished all information we have asked for, so that apparently things are moving along better. I have called your attention repeatedly to the Allied purchasing situation, and I am pleased to see the cables that Crosby exchanged with McAdoo in regard to the change in this purchasing. Of course, I feel flattered that Crosby wants me to serve on the Allied Council, and as this will not involve any more work than I am doing and will give a more official capacity to my work, I think it would be a good thing to put into effect. We have unearthed a large number of transactions which are open to very serious question and which I have vigorously protested. In connection with the Italian requirements for pig iron and steel a peculiar situation exists. Pershing purchased some motor trucks in Italy and after signing contracts could not get deliveries and was finally advised that they could not make deliveries on account of these trucks going to England and France. In other words, the British had taken these facilities for their own use, using as a wedge the supply of raw materials. Later they had made demands on us for 56,000 tons of pig iron and 100,000 tons of steel. We have accepted the 56,000 tons of pig iron to be deducted from the allocation of 180,000 tons. We have not approved the 100,000 tons of steel as the British have not produced any detailed statement of their output and its allocation. To sum these transactions up, you will appreciate that England has been able to operate the Italian factories and practically allocate their output through furnishing them raw materials and later has demanded that we replace these raw materials. In other words, she is distributing American raw materials to suit her own program of priority. Of course, it is needless to say I am taking a vigorous stand against this, and Mr. Churchill told me the other day that after seeing one of my cables to Crosby he felt I was peeved. I told him my cable did not show really how much I was peeved, and that I did not see how England and Italy could enter into a contract and expect the U. S. to hold the bag. This whole thing will be opened up in the future and we are striving to drive a wedge into the Italians so Pershing can get his share of motor trucks and aeroplanes from Italian factories. In view of our financial support to Italy it is ridiculous that her factories should be closed to us.

Another feature of the Allied purchasing which I do not like is the ease with which the various Allies have secured allocation of materials without presenting any evidence as to their essential character. Mackall and I visited Creusote Works this week and we came to the conclusion that about 85% of their steel output was being fabricated into commercial materials. Whether these materials were being used for military purposes or not we did not have an opportunity to investigate, though they claimed it was all for war purposes. You appreciate that by manufacturing this lower grade of steel and turning over to us the higher grades of steel they are not acting equitably.

They are endeavoring to form in Paris a new bureau to be called the "Bureau of Reciprocal Supply", which is supposed to do away with the questions of replacement. This bureau presented us with the attached form of organization which they contemplated, and we were not willing to prove anything but subject A which was a matter that concerned the War Department directly and entirely within their jurisdiction. We felt that to organize under subjects B and C was inviting trouble and in the form it is presented declined to approve it. There is a phase to this Bureau of Reciprocal Supply that should be carefully investigated. When Pershing buys material in France he has been paying cash for it. The French then place a purchasing order through the Allied Purchasing Commission. The result is that they have converted American material into money and have borrowed an equal amount in the form of raw material so they double up on all of the supplies they furnish to Pershing, converting one-half of it into cash. This is American money to be expended as they see fit and without any restrictions, unquestionably, in addition, deriving a liberal profit from fabrication. I imagine Mr. Crosby will succeed in the effort to insist on offsetting credits which will eliminate the cash transaction. It is of fundamental importance that this offsetting of credits be inaugurated as early as possible. I think some effort has been made toward this and as francs went down five points within the last two days where they had been constantly rising for the last five weeks.

The tendency of Great Britain and France to create reserve stocks of materials to be available at the close of the war is very marked.

A number of requests have been made by both Great Britain and France to have men at the front relieved for home industries, Great Britain asking for the return of coal and metal miners and France asking for the return of munition workers. I do not know to what extent this movement has taken place, but of course if they are allowed to do this to any extent it simply means we are draining American industries while France and England are rejuvenating theirs, and I presume General March's strong statement made before Congress at the time the new man-power bill was before that body is not idle talk but was backed up by some understanding with the French and British Governments that they would maintain their full man power and not attempt to diminish it in view of the great increase in our Army.

Up to this time we have had continual trouble getting from the British a definite statement of their steel production and its allocation. We have made repeated requests, and excuse after excuse has been offered. We will continue to put pressure on this until we get it, and if we don't get it it may be necessary to ask you to withhold British allocations until the details of their steel situation are furnished and we are assured that their steel supply is going into proper channels. Their furnishing of steel to the Italians and later asking our replacement made me suspicious of some of their transactions, and we should be sure that our steel sent to Great Britain is urgently needed for military purposes. If they furnish us a complete statement we will be able to check this, particularly as Mackall and I will visit some of the larger steel works in Great Britain.

Owing to the Munitions Council being advanced in its meeting date I was unable to leave for Italy, and I am returning to England tonight to have some meetings on hides and leather and the wool situation. I will return to Paris the latter part of next week in time for the Munitions Council meeting and I expect to go on to Italy immediately after the Council meeting.

Very sincerely yours,

(In pencil) LELAND SUMMERS.

JEM.

MR. RATHBONE (handwritten).

23 WALL STREET, NEW YORK, *2nd April, 1918.*

HON. R. C. LEFFINGWELL,
Treasury Department, Washington, D. C.

DEAR MR. LEFFINGWELL: I have pleasure in enclosing for the information of the United States Treasury a copy of a letter dated 26th March addressed by Sir Hardman Lever to Mr. Tardieu in regard to the British claim for dollar reimbursement from the French Government.

Yours sincerely,

[S] BASIL P. BLACKETT.

PLAZA HOTEL,
New York, 26th March, 1918.

The HIGH COMMISSIONER OF THE FRENCH REPUBLIC,
1654 Columbia Road NW., Washington, D. C.

MY DEAR MONSIEUR TARDIEU: Referring to your letter of 12th March and to my letter to M. Simon of 4th March, I have the honour to say that I have now received from London a further statement in regard to the British claim for dollar reimbursement from the French Government as follows:

Cereals: Jan. & Feb. 1918		$24, 010, 770. 00
Sugar:		
Jan. 1918	$729, 629. 52	
Feb. 1918	768, 572. 01	
		1, 498, 201. 53
Meat:		
Jan. 1918	4, 506, 117. 55	
Feb. 1918	2, 040, 230. 05	
		6, 546, 347. 60
Neutral freights:		
Jan. 1918	3, 168, 413. 32	
Feb. 1918	3, 157, 553. 79	
		6, 325, 967. 11
Norwegian insurance: Dec. 1917 (subsequent figures not yet available)		5, 006, 743. 65
War Office claims for meat supplied at Salonika and Port Said, and benzine supplied in Egypt (period unspecified)		2, 134, 144. 08
Ministry of Shipping claims in respect of disbursements in America (period unspecified)		257, 464. 63
Ministry of Munitions—nitrate of soda (period unspecified)		5, 184, 808. 51
Board of Agriculture—nitrate of soda (period unspecified)		277, 200. 00
Cotton (period unspecified)		4, 765, 000. 00
Dollar value of material in miscellaneous goods exported to France from United Kingdom (period unspecified)		2, 236, 308. 00
Expenditure in respect of Chinese ex enemy vessel (period unspecified, and no further details available)		126, 215. 32
Steel: Oct. 1917–Feb. 1918 (provisional figure)		26, 000, 000. 00
Add: Balance due from last statement		9, 744, 788. 87
Total		94, 113, 959. 30
As against this total there has been received from the French Government during the months of January and February 1918		80, 000, 000. 00
Leaving a balance of		14, 113, 959. 30

I understand that the above figures with the necessary explanations have been communicated to the French representative in London and to the Inter-Allied Council.

Unless I hear from you to the contrary I propose to furnish a copy of this letter to Mr. Leffingwell as usual.

I am, my dear Monsieur Tardieu,

Yours very truly,

(In pencil) HARDMAN LEVER,
Financial Secretary to the Treasury.

EXHIBIT NO. 3000

[Pencilled note: This exhibit is referred to by Mr. Rathbone again during Senator Vandenberg's questioning of Mr. Lamont]

PARIS, *April 12th, 1918.*

(*Ministere des Finances; Direction du Mouvement General des Fonds. No. 3447*)

[Translation]

DEAR MR. CHAIRMAN: Your letter of February 28th forwarded the request to be provided with various information in regard to the transactions of the French Treasury in England extending over the period from January 1st to December 31st, 1917, and during January 1918.

I now beg to enclose three statements showing the receipts and payments of the French Treasury.

With regard to the Banque de France and to its dealings with the Bank of England, the same refer exclusively to payments of supplies from the British Empire. This applies also to nearly all the payments made, at the request of the Bank of France, by the financial agency of the French Government for freights, coal, etc. Since this new rule has been set working, in July last, the following amounts have been paid: £27,128 for chartering Greek vessels and £615,131 for chartering Norwegian vessels.

[S.] L. L. KLOTZ.

MR. OSCAR T. CROSBY,
President of the Inter-Ally Council on War Purchases and Finance, Paris.

Total of balances placed at the disposal of the French Government by the British Treasury

Description	From July 1st to December 31st 1917	January 1918
Reimbursement of advances madein France to the Paymaster General	£19,978,460	£5,157,005
Reimbursement of advances made in France to the British Ministry of Munitions and to the Aviation Dept	2,692,398	844,850
Reimbursement for the railway conveyance of British troops in France	1,741,476	-------------
Countervalue of dollar amount placed at the disposal of the British Treasury[1]	25,020,253	2,098,636
Real loans granted by the British Government	86,548,000	16,387,500
Total	136,580,587	24,487,991

---

[1] These dollar payments represent the presumed amount of payments made in the U. S. through the intermediary of the London market. They are of a purely provisional character and any recognized surplus is applied to expenditure directly made in the U. S. by the English departments on behalf of French departments.

It should be observed in connection with the amounts placed at our disposal that:

£8,000,000 loans granted by the English Government, in November and December relate to the settlement of arrears.

£1,463,000 relate to an exceptional payment, in January, for Australian wheat.

£950,000 refer to an advance payment in January on funds at our disposal in February.

Amounts placed at the disposal of the Bank of France

	From July 1st to December 31st 1917	January 1918
	Francs	*Francs*
Payments for freights and coal	25,577,000	4,050,000
For exchange requirements	58.900.000	8,800,000
Totals	84,477,000	12,850,000

Expenditure made by the French Government directly in London through the intermediary of its financial agency

Country	From July 1st to December 31st 1917	January 1918
British Empire	£40,200,000	£10,569,000
U. S. & Canada	2,570,000	135,000
South America	4,000,000	362,000
Other countries	5,330,000	571,000
Totals	52,100,000	11,637,000

EXHIBIT No. 3001

FEDERAL RESERVE BOARD

WASHINGTON

NEW YORK, *February 28, 1919.*

Hon. ALBERT RATHBONE,
Assistant Secretary of the Treasury,
Washington, D. C.

MY DEAR RATHBONE: As requested in your letter of the 25th instant, enclose herewith statement just received from Lazard Freres, giving detail of transactions in sterling for account of the Bank of France.

In every case sterling exchange was purchased from Lazard Freres by the Bank of France for remittance to the London office of Lazard Freres, for account of the Bank of France. Payments were made to Lazard Freres in dollars for each transfer, the amount being 2,000,000 in each case. Lazard Freres, of course, have no means of telling how the Bank of France used these funds, but it unquestionably checked against them to meet requirements for sterling exchange.

Very truly yours,

[s] FRED I. KENT.

EXHIBIT No. 3002

MARCH 3, 1919.

FRED I. KENT, Esquire,
Director, Division of Foreign Exchange, Federal Reserve Board,
15 Wall Street, New York City.

DEAR KENT: I am much obliged for your letter of February 28 received this morning enclosing a list which you received from Lazard Freres giving the detail of their transactions in sterling for account of the Bank of France between December 6, 1918, and February 24, 1919, both dates inclusive. I will be obliged if you can make arrangements so that in case there are any other transactions of this kind you will be promptly advised of the same, and that you will arrange to inform me of any such advices.

Is there any way through your control of foreign exchange operations that you can prevent these transactions? If so, I will be obliged if you will let me know just what steps you would have to take, your judgment as to the advisability of taking the same, and what effect such measures would have on the foreign exchange situation in general.

Very truly yours,

[s.] ALBERT RATHBONE.

EXHIBIT NO. 3003

MARCH 3, 1919.

Mr. JOSEPH SIMON,
The French High Commission, Washington, D. C.

DEAR MR. SIMON: You will recall our recent talks in regard to the transactions of the Bank of France regarding its purchase of sterling in the New York market. I now find that the Bank of France has purchased sterling in this market for remittance to London for account of the Bank of France. Between December 6 and December 31, both dates inclusive, 5,175,000 pounds were so remitted to London, during January 1919, 5,395,000 pounds and during February, up to and including the 24th, 4,565,000 pounds.

In making advances to the French Government for use of the Bank of France, it has been the understanding of this Department that the dollars so obtained were used solely of dollar payments on account of commercial operations in the United States, as set forth in Mr. Tardieu's letter to Mr. Leffingwell of March 26, 1918.

I wish to confirm the statement I made during our talk of last Saturday regarding further advances from the Secretary of the Treasury to your Government to meet its requirements in the United States, viz, that the Treasury cannot continue to make advances to your Government, if as a result, your Government through the medium of the Bank of France or otherwise obtains through its available dollars sterling to meet its requirements in the British Empire. I understand that you are to confer with the representatives of the Bank of France in regard to this matter today or tomorrow and trust that you will make clear the attitude of the United States Treasury in this respect.

I am, dear Mr. Simon,
Very truly yours,

[s.] ALBERT RATHBONE.

(Charge to Treasury Department)

AMEMBASSY,
London:

For Crosby from Rathbone. Treasury 389. During August British sold exchange in New York to something over $46,000,000. They state Chancellor of Exchequer has advised it is necessary to raise rate for supply sterling for governmental purposes to $4.76\frac{9}{16}$ from October 1. Please immediately confer with Chancellor making strongest representations that the Treasury cannot assent to any change of sterling rate in view of the large amounts advanced in the past to maintain rate at $4.76\frac{7}{16}$ and the fact that present sales are the result of removing from exchange market British purchases now paid for direct from our loans. In accord with your 494 regarding French exchange we have every right to have this British matter dealt with as we think correct. We should be in a position to notify War Department and other governmental agencies of rate which will obtain for October not later than Monday next September sixteenth.

[Sgd.] LANSING.
[Sgd.] ALBERT RATHBONE,
Assistant Secretary of the Treasury.

Do not cable.

(*Telegram received from London, dated Sept. 5, 1918. Rec'd. 9:30 p. m.*

SECRETARY OF STATE,
Washington:

1644. September 5, 9 p. m. McAdoo from Crosby. 494. Think that rapidly declining free rate of dollar in Paris should now be made subject of agreement between Governments. Am inquiring as to volume of this budget as shown in French banks. Bank of France has felt unwilling to intervene continuously to support this rate but think we should have some agreement that it should not be left unsupported. A time scale could be agreed upon with understanding that movements should be checked except as in accord with such scale. Pressure upon market should be relieved by having Red Cross, Y. M. C. A., Knights of Columbus, and other similar organizations supplied with francs at agreed Government rates, practically as our Army is supplied. There would always, however, be considerable amounts expended in France by the multitudes of Americans now there. And as we are supplying French Government with goods so largely for private use we have lost the counterbalancing effect those exports to France. We have therefore every rignt to urge such system of intervention and check as we think correct. Please wire general views on the subject so that I may take up at once with French Treasury and possibly Bank of France the necessary steps to be taken in this regard.

DEPARTMENT OF STATE,
Washington, September 10, 1918.

(Charge to Treasury Department.)

AMEMBASSY,
London:

For Crosby from Rathbone. Treasury 388. Embassy's 1644, September 5, 9 p. m. Your 494. We entirely agree with views you express regarding French exchange. London and New York rates should be kept at a parity and New York rate should not be advanced to rate which will require United States advances for its maintenance. On balance French sold 34,100,000 francs New York market during August, out of which they paid cotton drafts amounting to 8,000,000 francs. French Government should supply funds not only for Red Cross, Y. M. C. A., Knights of Columbus, and other associations but also for all our governmental departments and agencies in substantially same manner as Army is supplied. Supplementing our 376, week of September 2 closing cable franc rate from 5.46 on Wednesday to 5.48½ Friday. In connection with advance in rate it should be borne in mind that French maturities next April of one hundred million dollars are payable at option of holders both principal and interest in francs at 5.70.

[S.] LANSING.

LONDON, *Dated September 8, 1918,*
[Recd. 8, 2.11 p.m.]

SECRETARY OF STATE,
Washington, D. C.:

1713. September 8, 11 a.m. McAdoo from Crosby. 503. Replying to your number 376. Am cabling to De Lachaume, Paris, today as follows: "Replying your telephonic conversation with Loree. Present open-market rate for francs, due to the fact that the American Government has for many months supplied dollars for purchase of materials not only for strictly government uses but also vast sums covering goods required for private use, no corresponding action has been taken by French Government, consequently American private purchases in France are not offset by French private purchases in the United States. Counting upon the figures given me by you before I left Paris as those which the bank of France would protect, we have taken no steps to supply dollars in this free market. In view of all these facts, and further fact that the official rate has been long maintained on the basis of credits established by the United States Government in favor of France for all purposes, it does not appear equitable that there should be so rapid a change in the official rate, praticularly if there be no understanding that the outside rate shall be protected. Please present this matter to Bank of France and if you think best to Minister of Finance, also as one which we view with concern and advise as early as possible modification; first, as to official rate which it is proposed by Minister of Finance to hold with respect to Governmental relations; and second, what steps Bank of France is prepared to take with regard to the open-market rate." Will advise you further on receiving his reply.

EXHIBIT No. 3007

(Via French Commission to de La Chaume, 2 rue St. Florentin, Paris; from Davis. September 12, 1918. No. 190.)

Referring our conversation relative to rate for francs, have been unable discuss matter fully with Crosby, but after further consideration think rate for francs supplied by French Government for American Government expenditures should not be based on present so-called open-market rate, which is one-sided and abnormal. When the dollars required to cover purchases for French-American nationals were included in advances made by American Government to French Government, the natural source of supply of francs for American private requirements was withdrawn. Present market therefore only reflects American private demand for francs without natural offset of private French demand for dollars. If francs required for American nationals were likewise included under present arrangements it would be impossible maintain present rate. American Treasury does not desire obtain francs at an unfair rate, but it seems illogical to base rate for francs supplies to American Government on present limited market rate, but for many reasons it is most important for us not to have such a quick radical change in the rate. Am writing more fully, but as it is necessary fix rate immediately for Army expenditures in October, suggest that rate be fixed at 5.60 and that market rate be maintained at present level at least until all parties concerned can discuss matter more fully. Please consult French Treasury and wire me.

EXHIBIT No. 3008

SEPTEMBER 13, 1918.

MY DEAR CAPTAIN: Although I have not had an opportunity to discuss fully with Mr. Crosby the question which has arisen in respect to the rate for francs, I wired you yesterday because, after thinking the matter over further, I have changed my opinion somewhat and at least to the extent that it would be most inadvisable for several reasons to make such a quick and radical change in the rate for francs to be supplied for American Army expenditures. As Washington should know by the 15th of the month what the rate is going to be for the subsequent month, and as it will be impossible for all parties concerned to have an opportunity to discuss the matter before that time, I therefore strongly urge and recommend that this rate be fixed at not lower than 5.60 for October and that the present so-called open market rate be maintined at its present level at approximately between 5.48 and 5.50. From the limited discussions I have had with Mr. Crosby, however, I am satisfied that he views with very much concern such a radical change in the rate without prior full consideration and discussion.

Upon our entrance into the war, the United States Treasury accepted the rate for francs and sterling which had been fixed and agreed upon by the French and British Governments, and we have advanced funds to the two respective Governments to maintain that rate at a time when it would have been most difficult to do so without such support, and, in addition to this, the American Treasury has included in its advances to the French Government dollars required to cover practically all of French private purchases. When the dollars required to cover purchases for French nationals were included in advances made by the American Government to the French Government, the national source of supply of francs to cover the requirements of American nationals was eliminated. As a result, the present market rate only reflects the American private demand for francs for which the natural market demand for dollars to offset same no longer exists. It would therefore be difficult for us to justify our support of francs and sterling and the inclusion of French private dollar purchases in advances to the French Government if this is going to result in fixing an abnormal rate for francs and a corresponding increase in the cost of our Army expenditures in France by basing the rate for francs supplied to our Government on the rate fixed by a one-sided market caused by American private demand for francs without the corresponding offset. I am sure you will agree with me that if the American private requirements for francs had been provided for in the same way as the French private requirements for dollars, the market rate for francs would still no doubt be around 5.70. It is, of course, a source of gratification to us to see any reasonable improvement in the rate of francs, but if we are to establish the principle that the rate for 500,000,000 francs which may be required by our Army monthly is to be based on the rate fixed by a one-sided demand for say 50,000,000 francs to cover our private requirements, it would be necessary for us to take measures to supply this private demand. Otherwise, the market rate for francs could be put on almost any basis. However, as the market rate has now been raised, it might have a bad effect to lower it, and I hope it will not be necessary; but, under the circumstances, it seems most advisable to me that we should try to find some fair solution, and I have therefore suggested that the rate for francs to be furnished by the French Government to the American Government for the month of October be fixed at 5.60 and that the market rate shall not be permitted by the French Government to go any lower. If the French Government or the Bank of France purchases the dollars offered in the market at, say, 5.48 or 5.50 and maintains such a rate, it would be equivalent to supplying us with francs required to cover American private demands.

I believe that you will agree with me that the above conclusions are fair and correct, and I hope very much this will be acceptable to the French Treasury. I am satisfied that the American Treasury does not wish to purchase francs at an unfair rate and that it would be quite willing to purchase francs at whatever rate may result in a natural free market, but that it will not look with favor upon the establishment of an abnormal rate without previously coming to a mutually satisfactory agreement as to what that rate should be.

With kindest regards and hoping to see you soon, I am,

Very sincerely yours,

(In pencil) N. H. Davis.

Captain Thion de La Chaume,
2, rue St. Florentin, Paris.

Exhibit No. 3009

Blue

London, *Dated September 14, 8 p. m., 1918,*
[Rec'd. 15, 10 a. m.]

Secretary of State,
Washington, D. C.

Urgent. 1897. September 14, 8 p. m. Leffingwell from Crosby 525. Telephonic communication with Paris very bad last two or three days. Officials with whom telegraphic communications has been taking place out of Paris yesterday and today. In interview with Davis on Tuesday last De Lachavme indicated that French Treasury expected to fix five forty seven as rate between Governments and to arrange with Bank of France that market rate should be maintained at between five forty five and five fifty. I have expressed objection to the fact that even tentative determination of rate should be made in Paris without prior consultation either in Washington or with me.

Referring to change in attitude toward maintenance of rate reported in my number 286 from Paris, explanation now given is that Finance Minister endeavored to stabilize market limiting himself to slowing up the movement and that at present stabilization between five forty five and five fifty seems probable and conforms to the intentions of the Ministry. This does not alter the fact that we had reason to rest upon the statements made in my 286 and that we were given no opportunity as the market went off sharply in a few days to insist upon any action to prevent variation from the program that had been (?) to us. There was some special demand for francs to reestablish Spanish balances in Paris that had been withdrawn from that capitol when it seemed in danger from the Germans and also notable transfers of French balances from London but am inclined to think market was permitted to go to its present level with a view to the effect it would have upon Governmental rate between French and American Treasuries. This, however, be entirely just, since there is a natural desire upon the part of the French to see their exchange improved by the failure to confer with us. On the other hand after making statement to me which was known to have been cabled to you in my 286 gives us moral right to insist upon five sixty at least for exchanges between governments this being minimum figure indicated to me. While he should have been consulted before the indicated programme was abandoned and while we must insist hereafter that market rate shall be subject to understandings as well as Government rates, yet it would now be injurious to French general situation to require that the market rate should be put back to five sixty. Compromise in a situation which has grown out of failure of the French Government to maintain its indicated position may be found in having for the month of October a five sixty rate between the Governments with agreement to maintain the market rate at from five forty seven to five fifty. Meanwhile the whole subject to be considered with respect to future stabilization. Doubtless Finance Minister will urge that he will be criticized for selling francs to us below their value as indicated by the market but since last year we purchased francs for a considerable period at higher than the market value he may reasonably bear such criticism for a time. The disparity of ten centimes between the two rates would doubtless cause some kicking from army officers in France. This is not a matter of first importance but in general we should aim as soon as possible at having market and Government rates established at substantially equal figures satisfactory to both treasuries. Hope to have five sixty rate for Government purposes and not less than five fifty for market accepted pleasantly by Klotz Monday or not later than Tuesday, but if not at least five fifty five, which has been suggested here by French Finance Agent in London. French Treasury would be prepared for notification on Moday at rate binding it and higher than five fifty. Will have representative in Paris Monday or Tuesday in order to make up for delay. Will notify Army informally here as soon as rate is fixed, you at the same time establishing official rate with War Department.

EXHIBIT No. 3010

INTER-ALLY COUNCIL ON WAR PURCHASES AND FINANCE,
Sunderland House, Curzon Street, London, W. 1., September 16, 1918.

MY DEAR MR. RATHBONE: I learned on my arrival here of your appointment as Assistant Secretary and take this first opportunity of congratulating you as well as the Government.

In obedience to your and Leffingwell's suggestion, I shall be glad to remain here at least until Cravath's arrival, especially as I am anxious, if possible, to assist in getting some of these pending questions settled. It seems that the cereal question with the British is about settled. Your reply to their memorandum was excellent.

As to the French situation, I am not so comfortable. The more I see and think of the French situation and proposals, the less sympathy I have. As a matter of fact, French prosperity, increased confidence and the improved military situation would automatically kill their proposals if the questions involved had not reached the argumentative stage whereby the French pride and desire for after-the-war advantages, or call on our raw materials, do not allow them to drop the question. I am concerned about getting francs after next year and after the war with which to meet our requirements until the Army can get out of France, and think now is the most propitious moment for us to press for and obtain a definite arrangement with the French Government to furnish us francs for that purpose and the price at which they will furnish them. For the last six weeks, the French Government has been able to sell war bonds to cover all its requirements and make a small reduction in its debt to the Bank of France. Crosby and Tardieu are conducting, unofficially, negotiations by letter with a hope or arriving at some solution of the French proposals for submission to the respective Governments.

In my opinion, we should not discuss the French proposals any more, except in connection with counter proposals from us, as above indicated, and also, possibly, in respect to the disposition after the war to be made of all the docks, railroads, etc., built and put there by us. France will really have need for most of those improvements, but of course won't admit it unless we start to take them away. After all you hear in the States, it is difficult to realize that France is undoubtedly more prosperous than in all her history. While the improvement in franc exchange is in one way advantageous, they didn't act just right about it as they now admit. They had told Crosby only a few days before that they wouldn't let the market go below 5.60, and without any advice or consultation, let it go to 5.47 when it would not have been difficult or have required more funds to maintain 5.60. The so-called market rate is no longer a real market quotation. By advancing dollars for French private requirements we eliminated the natural supply of francs to cover American private requirements and the present one-sided market represents nothing but the arbitrary price fixed by the French Government or Bank of France for the francs required by our nationals, and which could be put at 5 or 5.40 if measures are not taken to prevent it or unless the market is thrown open again, in which case there is no telling where the franc might go. Avenol, the French Financial Representative here, told us yesterday that during August, the French people—not the banks—who evidently had been carrying large balances here, sold £10,000,000 against francs. During the same period the Bank of France bought £4,000,000.

You should have received the Spanish agreements by this time, although the pouch is slow. I was sorry you weren't there to draw the agreements, but did my best and hope you will find them all right. Fortunately, we didn't have to agree to much. It was 105° in Madrid (rather warm for negotiating) and I was glad to get to San Sebastian. I will tell you all about my Spanish experience when I see you. It was a strain, but in many respects most interesting and amusing. Enclosed you will find copy of a letter received from Banco Urquijo, proposing reciprocal open credits between Spanish and American banks. This can be worked out, in my opinion, to considerable advantage and provide a permanent and satisfactory means for covering our peseta requirements.

I am glad Cravath is coming back.

With best regards to Leffingwell and yourself, also Strauss and May, I am

Sincerely yours,

(S.) NORMAN H. DAVIS.

Honorable ALBERT RATHBONE,
Assistant Secretary of the Treasury.

P. S.—Crosby seems to be in much better health than when I left him.

Enclosure.

EXHIBIT No. 3011

(Charge to Treasury Department.)

SEPTEMBER 17, 1918.

AMEMBASSY,
London.

For Crosby from Rathbone, Treasury 414. Embassy's 1897, September 14, 8 p. m. Your 525. Before receipt of same Leffingwell and I had long talk with Simon regarding exchange and understand he has cabled his Government. We told him that we were not adverse to improvement in the franc rate provided it were done in an orderly manner and with the knowledge and cooperation of both treasuries; that on the lines of your 494 French Government should furnish Red Cross, Y. M. C. A., Knights of Columbus, and other similar organizations and all governmental departments with francs they need at agreed rate; that commercial rate should be maintained at figure agreed upon by both treasuries French Treasury furnishing francs needed for that purpose and United States Treasury furnishing dollars required on understanding that there would be no relaxation of French import restrictions and that London rate would be kept at a parity; indicated that we thought French Treasury should work in close cooperation with Kent who would be able to materially aid and supply valuable data. We stated we saw no objection to the actual operations being conducted by the French Treasury much in the same way as the British Treasury looks after its exchange in New York. Commercial transactions could be handled in this manner while governmental requirement could probable best be handled in manner similar to that by which francs have heretofore been supplied for army purchases. We stated that it was our disposition to meet the wishes of the French Treasury in regard to gradual increase in franc rate after full opportunity of discussion but that the ultimate object in view should be to stabilize franc at not less than discount of 2% from its dollar parity. Agree with you it would now be injurious to require commercial rate put back to 5.60. We urged Simon for present to stabilize at not higher than 5.50 in view of present market and French maturities of April 1 next holders of which have right to require payment in francs at 5.70. Await advices from you regarding government rate for October. In this connection Comptroller has received cable from Ginn (Embassy's 5056 from Paris, September 12, 6 p. m.*) relative to paying treasury salaries in France at monthly rate fixed by agreement between French and United States Governments. Ginn asks that his employees may have benefit of governmental rate for September and trust that you can arrange accordingly. It seems obvious that government employees should receive salaries at governmental rate but to obtain this they must look to French Government as Ginn advises the banks will give only current rate for justice checks, which rate on date of Ginn's cable he states at 5.40.

(s) ALBERT RATHBONE,
Assistant Secretary of the Treasury.

AR/HEH.

(*To American Embassy, London, from American Embassy, Paris, signed "Sharp", dated September 16, 6 p. m. Rec'd. September 17, 8:45 a. m. No. 306 (from Hollis?)*)

Davis is right about our official rate of exchange with France. We must keep before us constantly elemental fact that open market rate results from supply and demand of bills in markets and tends to remain stationary if supply of dollars equal demand. If French demand for dollars is removed from market through supply furnished by United States in America, the supply becomes excessive by artificial methods and their price necessarily goes down. Inexcusable to permit artificial conditions continue to our disadvantage. Unless France will agree to stabilize dollar market in France at some agreed figure, we should refuse to permit private French purchases made through French Government. Loree is here and will see de la Chaume today about rate for October. De la Chaume absent when Davis telegram received Saturday and not yet returned. On your return to France whole situation should be discussed and new agreement made. Treasury operations and bank conditions of all Allied Governments should be mutually disclosed and discussed. Banks loaning money require statements why their our Government arranged to force this now but may be soon. Am surprised at questions raised. Our advances to French most desirable for we shall require all available French credits before our Army leaves Europe, but now is the time to require favorable terms on credit and exchange.

16TH SEPTEMBER, 1918.

HON. NEWTON D. BAKER,
Secretary of War,
Belgrave Mansions Hotel,
Grosvenor Gardens, London.

MY DEAR MR. SECRETARY: I enclose herewith a memorandum, which may be more detailed than you care to go over, but, on the other hand, it may be all interesting to you.

For the moment, I desire particularly to call attention to the fact that we have no arrangement with the French Government for the supply of French funds needed in France throughout the war, and we have no arrangement for the supply of such funds as may be needed while our troops are being moved back to the United States. While the making of these arrangements is probably a Treasury function, it is one of such importance, and perhaps difficulty, that I deem it my duty to place it before you, since it may be judged desirable that any undertakings which you may now make for the transfer to France of large numbers of American troops shall be conditioned upon the supply to us by the French Government of the francs required for our operations in France during the war, and for the removal of the troops just mentioned.

I shall be glad to go over the subject with you at your earliest convenience.

Cordially yours,

(S.) O. T. CROSBY.

P. S.—Definite action is solicited in paragraphs 17 to 21, inclusive.

[Pencilled note: Mr. Kieley, Secretary McAdoo should read this very important cable immediately upon his return. R. C. L. Oct. 28/18.]

[Recd. 26, 4.08 p. m.]
PARIS, *Dated October 25, 1918.*

[Pencilled: Mr. L., Mr. S., Mr. W.]

SECRETARY OF STATE,
Washington, D. C.

Urgent. 5574, October 25, 6 p. m. For McAdoo from Crosby, 625. Tardieu will probably show you letter from me concerning supply of francs for our purposes after the war. This letter resulted from numerous informal conversations begun when peace looked much further off than now and also before full appreciation of the importance of obtaining assurance of francs after the war. Though the controlling conditions which led to the suggestions may now be somewhat modified, they still, in my opinion, warrant my recommendations. Following explanations will aid in interpreting letter: One. The principal objective is to secure francs after the war. Two. Another objective is to aid in giving *needed support to the Bank of France during the war and during the trying period of three after the war* in the purchase of foodstuffs and raw materials, particularly, those required for rebuilding the devastated provinces. Four. Theoretically it might be held that all francs after the war should be purchased by cancellation of existing French obligation. Practically I do not believe you can rely on this to a great extent. The *Technical* on demand maturity of obligations held by us will not secure their payment. No court exists to enforce payment, and the French Finance Minister continually holds that even with respect to obligations signed after the twenty-fourth September, 1917, we cannot justly claim that they are actually payable on demand and that they could not make such payment save in small part, which in any case they will make from time to time, when judged possible. Should the French insist upon this point of view, the absolute necessity of our depositing francs during the period of the withdrawal of troops might result in a gold demand upon us and the arrangement contemplated is simply a substitution of other materials through a friendly understanding between the two governments instead of leaving the matter as a subject of possible unfriendly controversy at the time when our needs would be so imperious that we should be at a disadvantage. *The special credit suggested is in fact the purchase price of francs required by us after the war.* Fifth. In suggesting the proportion sixty forty and seventy-five twenty-five, I was moved by consideration of the fact that some proportion seemed desirable to be provisionally adopted in view of immediate excesses of our expenditures in France over the French expenditures in the United States and further because the particular ratio sixty-*the* had been strongly urged by Klotz and it was represented by Tardieu that if were adopted even temporarily as a recommendation by me it would result in the immediate undertaking of negotiations between the French and British Treasuries for after the war credits to France. The letter plainly shows, however, that this ratio is not considered important by me as a part of my recommendation and that it is presumed to be subject to change at any time on the motion of either Finance Minister concerned. While it is true that the French Treasury, according to my views, should have undertaken the British negotiations earlier and without waiting for my recommendations, yet, inasmuch as considerable feeling had been developed on this point, I deem it worth while to expose myself to the embarrassment of having my recommendations entirely renounced rather than to continue indefinitely a stalemate situation in the negotiations between Paris and London which are now under way. Incidentally it appears that for the next few months it is

---

NOTE.—Italics denote underscoring on original in pencil.

probable that forty percent of the dollar value of francs furnished to the American Government represent the excess over French expenditures in the United States.

Six. The undertaking of the French Government to supply us with francs may go far beyond the figure of a billion and a half dollars as the arrangement proposes that all United States expenditures in France growing out of the war are thus to be covered. While the rapid progress in military events may diminish our expenditures in France as compared with first estimates, it remains that in the opinion of Stettinius a *billion and a half dollars seems a conservative rather than unconservative estimate of our expenditures here after the war.*

Seven. In paragraph eleven of the letter it is provided that the French Government cannot use the materials purchased in the United States for manufacture and resale to third parties, it is clear that to express such a thing in precise terms would be difficult without putting in the hands of the American Government the power of *parcelling* French export trade. It will (not) serve, however, when properly drafted as a protection for our industries.

Eight. No specific mention is made in the letter of furnishing francs for American Nationals but their interests are protected by the provision that funds made available *to the French cannot be used if the dollar is at less than gold parity.* It does not seem that we can legitimately ask for anything more than (?) of exchange after the war since if we exclude the theory of obtaining a billion and a half dollars worth of francs by cancellation of existing obligations the franc might at normal times go to a premium over the dollar. The burden of maintaining the dollar at a gold parity is substantially thrown upon the French if they are to enjoy the funds in question.

Nine. While I had myself at first urged that some formula relating to the condition of the Bank of France should determine credits to be established in favor of the French Government, I am convinced that any such formula will include doubtful elements which however, lead to vexatious discussion between the Governments and perhaps eventually to a refusal on the part of the French Government after the war to accept our views.

Ten. Moreover, no consideration of the condition of the bank of France alone will include the satisfaction of our mutual requirements during the post war. This overestimating of need is the basis of the arrangement suggested. The limiting figure suggested is less by six *billion francs than the amount submitted by Tardieu* as that which his *Government would require for all purposes in the United States during three years.*

Eleven. If an indemnity should be obtained from Germany applicable to reconstruction in France, the proportion of francs paid for by goods would be automaticl*y* diminished and applied to cancellation of French debt. French Ministers assure me they expect to obtain indemnity from Germany for all damages suffered by them. Estimate of this damage is being prepared and will be furnished me in about ten days. *It will be much larger than the total credit mentioned in my letter.*

Twelve. The value of French exports to the United States during the first three years after the war will *probably be less than the sum of the interest charges on the debt of France* to the United States, plus the debt to our citizens maturing during the same period in so far as any deficiency in respect to these two items may be made up out of the limiting amount named in the letter, the amount for raw materials will be correspondingly diminished, and, therefore, probably not amount to more than *$400,000,000 a year.* This is less than one half the amount that France has been drawing annually from the United States since our entrance into the war.

Clemental advises me that pre-war exports from France to America may be largely increased, but only on condition that our policy through importation of wines and our imports duties on other luxuries MUST be radically modified.

Thirteen. Munitions contracts usually provide that in case of peace the materials involved may be changed in character so as to be useful for other purposes than those originally intended. As our loans for war purposes must cease with the conclusion of peace the values involved must be in some way provided for now unless the Government placing the orders can find means independently to pay for the material or make an absolute cancelation which would probably work a hardship upon our manufactures the arrangement proposed would cover this case and the amount involved at any one time on orders out standing would probably amount to more than $100,000,000.

Fourteen. Although through oversight no mention is made in the letter of the condition that if the limiting amount mentioned therein shall not be spent during the three years the balance shall be applied to the canceling of the French debt, yet this understanding was perfectly distinct by the last conversation with Mr. Tardieu and will not be questioned by him.

Fifteen. While it is uncertain that an arrangement of the kind indicated in the letter to Mr. (*Letcheur*?) [penciled: Loucheur ?] between the French and the British, yet it is not improbable that, having now some basis of discussion an arrangement may be effected by which France will be able to obtain coal and other British supplies of which she will stand in great need for a considerable period after the war. I am informed by Tardieu and it is a matter of public statement now in France, that the principal mining fields in French territory will not be available inside of two years and will not be completely eight or ten years.

Sixteen. It seems not improbable that French Governmental finances will be more embarrassed at the end of the war than during the war unless they continue to borrow from their public at extraordinary high rates. The disappearance war motive inspiring the purchase of national obligations will doubtless make it extremely difficult even if it were otherwise desirable to obtain necessary funds by borrowing. On the other hand their expenditures including interest on public debt will amount approximately to eighteen billion francs per annum. This is more by nearly ten billion francs than the present amount obtained by taxation. No plan has been evolved to meet the situation and the rapid movement of the war does not give time for the evolution of a satisfactory plan. Thoughtful men here believe that serious troubles are ahead of France in this respect. Our continued demand *for francs while benefiting individuals will increase difficulties of the Treasury*. Their situation will, of course, be eased by the resale of materials purchased as francs advanced to us, but even with this relief, their future is extremely grave. It is not improbable that, even *the most cold blooded consideration by us as a creditor of France would lead to a helpful attitude on our part, somewhat along the lines of the suggested arrangement*, which, however, must constantly be contemplated as directed toward the acquirement by us of francs for removing our army from France and the settlement of unknown claims against us. While our interest in obtaining francs is the dominant one involved in the suggestions made, it is also true that such American sentiment as may favor the aiding of France in the extremely difficult period which is likely to follow the war will be thus satisfied in the simplest and least expensive way.

Seventeen. Klotz is suspending judgment on my letter to Tardieu stating to me today that he will advise me in the course of a week of his views on same.

EXHIBIT NO. 3015

OCTOBER 26, 1918.

DEAR MR. PRESIDENT: I have heretofore discussed with you the French financial situation, but I think it of great importance that you should be fully informed concerning it, and I enclose a memorandum which has been prepared for me dealing with the subject. I also enclose a copy of M. Clemenceau's message of last June, and a copy of my reply which was sent with your approval.

You will recall that when M. Clemenceau's message was under discussion I felt that it was the desire of the French Government through the financial aid then requested of the United States Treasury to obtain credits in this country to provide for post-war expenditures in connection with the reconstruction of France. I have now been informed by M. de Billy that M. Tardieu is expected to reach here next week and during his short stay in this country desires to discuss with me the provision of credits to aid in the reconstruction of France and the dates to be fixed for the maturity of the French obligations held by the United States Government.

I feel it to be of great importance that we should be assured of a supply of francs for our Army in France during the war and after hostilities shall have ceased until the return of our troops, and it is clear that no discussion of this subject will be possible without entering on the questions which M. Tardieu desires to take up, even if we should otherwise prefer to postpone consideration of these questions. For reasons which I shall explain it seems essential that the British representatives should also participate in the discussions.

Unless the francs needed by our Army in France are obtained from the French Government resort would have to be had either to an offering of United States franc obligations or to the foreign exchange market. I should not want to be dependent upon floating a United States loan in France as such a step might seriously injure the credit of the United States. If we should be obliged to purchase on the market the exchange needed to produce the francs we require the dollar would speedily go to a discount as compared with the franc, and our whole foreign exchange situation would be badly disorganized. True, we might demand payment of the French obligations we hold to correct exchange, but such demand probably ought not to be made and might not be met if made, and our requirements for francs would nevertheless have to be supplied, be the consequences what they might. I am therefore most anxious to secure from the French Government an agreement to continue to supply the francs needed by our Army until their return home, against reimbursement in dollars, to be applied by the French Government only to the repayment of France's debt to the United States or other purposes specified or approved by the United States Treasury.

If the French Government does continue to so supply the francs for our Army it is to be anticipated that by the time peace is declared the French Government will become entitled to a large amount of dollars in this country in excess of its war expenditures during the same period, and the amount will have been largely augmented by the time our Army reaches home, unless applied to the repayment of the French obligations held by the United States. These dollars France will be most anxious to use to pay for the commodities which it must purchase without its territory to provide for the reconstruction of the invaded portions of France. France must have foreign credits to meet these expenditures, as for some time after the war it is not likely to have either gold or commodities to meet all its foreign balances, and consequently no doubt will object to applying its accumulated dollars toward the payment of the loans heretofore made to it by the United States Government unless assured of the foreign credits needed for reconstruction purposes. In view of the provisions of the First Liberty Bond Act the United States can hardly refuse to exchange the demand obligations of the French Government acquired under the authority of that Act (about $650,000,000 in amount) for long time obligations, and without the acquiescence of the French Government a demand for the payment immediately after the war of the indebtedness of France to us incurred before our Army participated in force in the battles upon the western front could not be made with very good grace nor would it appeal to our people as fair treatment.

It is obvious that, to relieve us of the burden of foreign expenditures to support our Army as well as for other and even more urgent reasons, we must make every effort to have our forces returned home as speedily as practicable. How quickly this can be done depends partly on the progress of our shipbuilding before peace is declared, but in part also on whether we can obtain the use of foreign ships. If British ships are used for commercial purposes while our ships are engaged in bringing home our Army, and if British Empire products are sold for cash while ours are to a large extent sold against dollar credits established in exchange for francs supplied to our Army, the inevitable result will be that Great Britain will secure an undue share of the cash markets of the world. It is most necessary that we arrange to secure such use of British or other foreign ships as may be requisite to bring our soldiers home expeditiously, and that Great Britain should share with us in supplying the credits required to defray the cost of the commodities needed for the reconstruction of France. I have no reason to believe that Great Britain will not be willing, in coöperation with the United States, to provide credits for the reconstruction of France, but in view of the loans made by Great Britain to the Allied Governments before we entered the war—its loans to France since the commencement of the war to the present time being upwards of £400,000,000 or, say, $2,000,000,000—a discussion with Great Britain may involve a general discussion as to the war indebtedness incurred by the various Allied Governments to the British Government, and the indebtedness (now amounting to $3,652,000,000) of the British Government to the United States.

The dimensions of the British problem of bringing home her army in France and of obtaining the francs needed for its support until its return are so much less formidable than our problem that I merely refer to it.

I am sending you this letter for your information so that you may be informed of the questions which are about to be brought up for discussion by M. Tardieu upon his arrival next week. No action upon your part is requird at this time unless, indeed, you have some directions to give me concerning the matter.

Cordially yours,

[s] Wm. G. McAdoo.

EXHIBIT No. 3016

(*Telegram received from Paris, dated Oct. 29, 1918. Recd. 29, 11:32 a. m.*)

SECRETARY OF STATE,
Washington:

Important. 5606. October 29, 1 a. m.

632.[1] Your 508.[1] Although transfers in London have thus far been relatively small, are advised that many bills are accumulated and have been presented and will soon be passed by American Expeditionary Force representatives. It remains still extraordinarily difficult to obtain any reliable information as to bills from either French or British Governments that will *presented* within a given time. Delano states he is under impression that French think there may be contentions about some of their railway claims and that this is not a good time to have them brought up. Hence reason for delay. My own impression is that they also are anticipating lower rate of exchange, and therefore in no hurry to present bills now. Having in view this last consideration, I shall endeavor, as far as possible, to get bills through, but as there is as yet no centralized Army bureau for handling these matters, whole subject remains extremely difficult.

SHARP.

EXHIBIT No. 3017

EXTRACT FROM THE HEARINGS BEFORE THE HOUSE COMMITTEE ON WAYS AND MEANS ON THE FIFTH LIBERTY BOND BILL, FEBRUARY 13, 1919

(Pp. 44–45) The CHAIRMAN. Some of the committee, and I am among the number, would like to know, if you can tell us, how much of the loans we have made to the Allies (and we have made about $8,000,000,000 in round numbers) was used by the Allies to pay their bonds, notes, or indebtedness to others than the United States.

Mr. RATHBONE. You mean to pay their bonds issued in the United States?

The CHAIRMAN. Yes; to pay individuals they owed in the United States, or bonds they owed to other countries.

Mr. RATHBONE. None of it, so far as I know (and I am very sure that is the fact) has been used to pay bonds owed to other countries. There has been a certain amount of it used to take up maturing obligations of those Governments issued in the United States and held by people in the United States, as they became due.

The CHAIRMAN. Do you know how much?

Mr. RATHBONE. I could tell you approximately.

Mr. MAY. On December 31 it was $394,000,000. That is the total they had paid off.

Mr. LEFFINGWELL. It is not safe to say that amount was used out of our loans, because they had other resources which they availed of. Those are the loans placed in our markets which have been repaid during the period mentioned. They had various funds available to themselves in this country.

The CHAIRMAN. It will not exceed $400,000,000 in any event?

Mr. LEFFINGWELL. It will be a great deal less than $400,000,000.

The CHAIRMAN. That carries out our promise when we presented the first bond bill to the House that practically all of it would be used in purchases in the United States other than paying off indebtedness in the United States. Some gentlemen wanted to put in a provision they should not use the money for paying off bonds held in the United States.

Mr. LEFFINGWELL. The reason I qualify the $400,000,000 is that Great Britain had something like $70,000,000 paid to her by the Shipping Board for the ships commandeered at the beginning of the war, and she had large amounts of securities here.

The CHAIRMAN. I take it that practically none, no substantial amount, of our loans have been used in that way. A gentleman asked me about that today.

Mr. LEFFINGWELL. It is still true.

---

[1] Rathbone and Crosby numbers. This telegram probably should be for *Rathbone from Crosby.*

Mr. **Rathbone**. It is more than true. As of December 31, our net loans were $7,685,000,000 odd. And they had accounted to us, for expenditures out of our loans and out of their other resoruces, for $9,200,000,000.

Mr. **May**. That is $1,600,000,000 more than the loans we have made.

* * * * * * * *

(Pp. 52-53) The **Chairman**. Have you a statement you wish to make before we ask you questions, Mr. Leffingwell?

Mr. **Leffingwell**. Yes; Mr. Chairman, as I have been listening to the talk this afternoon and have thought of the responsibility which this committee has shared with the Treasury during the 18 months that I have had the pleasure of doing business with you, it occurred to me that I might possibly help you in some of the things that are bothering you if I should say quite freely what I think you have accomplished and what you have helped the Treasury to accomplish during the war. These foreign loans that you have made it possible for the Treasury to make have been dealt with with the utmost caution in the Treasury. Mr. Rathbone has shown you, I think, how much detail is in our possession, how carefully these things have been analyzed, and how fully we are cognizant of all the ramifications of the problem, and you gentlemen here, as well as the House and the country, will be interested to know, I think, how important these foreign loans have been in the past.

Going back to the beginning of the war—there was very little that America could do except make foreign loans. We did not have an important Army, and, while our Navy supplemented very effectively the British Navy, that was not yet a critical situation. I verily believe that during the first six months of the war the loans we made to Russia and the knowledge of our willingness to make further loans kept Russia in the war and held that eastern front for six good months. It cost us $187,000,000 in loans. What would it have cost if you had not held that eastern front for that six months?

It was the loan that we made to Italy during the summer and fall of 1917, in that critical period when the great German offensive broke loose on Italy that gave the Italian people courage and gave her Government effective means to replace the supplies, the munitions, and food which had been lost as the result of the German offensive.

In the spring of 1918 it was the silver that the Congress authorized us to melt down and sell to India that held India against the Germans, if not in a physical battle line, yet in an equally real and tangible way.

During the summer of this very year—it seems scarcely possible now since so much water has gone over the dam—that in the summer of this very year——

Mr. **Crisp** (interposing). You mean 1918?

Mr. **Leffingwell**. In the summer of 1918, when the Germans were pushing the English and the French and the Americans, what were of them, on that line in France, it was the credits that the American Government was able to give the French Government that sustained the French in those bitter days, when their money was being withdrawn from the banks, because the Huns were overrunning their cities and their homes, and Paris itself was under gunfire.

We count the cost all the time in the Treasury; every penny that goes out we criticize and examine and scrutinize in the most minute and critical way, but I say to you that those loans which you made it possible to consummate constituted one of the most potent factors in the ending of the war, and I haven't any doubt that those loans made it possible to end the war in 1918 any more than I have doubt that the lavishness of men and material from America contributed to the quick result.

And when they criticize hasty expenditure, the accumulation of supplies, the guarantee on wheat, think what another year's war would have cost—if you had stopped to calculate exactly how much you could get by with; and it was just because you did not stop to calculate, but used every intelligence, and every skill and went ahead to finish the war, that you haven't another year's World War on your hands.

We criticize these things in the Treasury—we are criticizing the other departments of the Government—not in a public way, but we are criticizing them all the time for their expenditures; and when Mr. Rathbone makes a foreign loan I criticize him and tell him that I can not find the money for him. But let us not forget that we have saved the lives of good American boys by the way we have handled it.

Mr. **Moore**. If you made that statement on the floor you would be applauded.

The **Chairman**. I think you are right about it.

DEBATE ON THE DECLARATION OF WAR

[From the Congressional Record, April 5, 1917, p. 332]

Mr. Kitchin said in part:

"Profoundly impressed with the gravity of the situation, appreciating to the fullest the penalties which a war-mad moment will impose, my conscience and judgment, after mature thought and fervent prayer for rightful guidance, have marked out clearly the path of my duty, and I have made up my mind to walk it, if I go barefooted and alone. [Applause.] I have come to the undoubting conclusion that I should vote against this resolution. [Applause.] If I had a single doubt, I would with profoundest pleasure resolve it in favor of the view of the administration and of a large majority of my colleagues, who have so recently honored me with their confidence. I know that I shall never criticize any Member for advocating this resolution. I concede—I feel—that he casts his vote in accordance with sincere conviction. I know, too, that for my vote I shall be not only criticized, but denounced from one end of the country to the other. The whole yelping pack of defamers and revilers in the Nation will at once be set upon my heels.

"My friends, I cannot leave my children lands and riches—I cannot leave them fame—but I can leave them the name of an ancestor, who, mattering not the consequences to himself, never dared to hesitate to do his duty as God gave him to see it." [Applause.]

[From the Congressional Record, April 5, 1917 p. 376]

The CHAIRMAN. The gentleman from Illinois (Mr. Mann) is recognized for 10 minutes. [Applause.]

Mr. MANN. Mr. Chairman, I wish to pay a tribute to the courage of those Members of the House who in the exercise of the responsibility cast upon them have had the courage to express their opposition to the pending resolution, and I want particularly to pay my tribute to the rare courage of the gentleman from North Carolina (Mr. Kitchin). [Loud applause.] I do not agree with them [applause], but this is a time when the Members of this body, aye, all the citizens of the country, have the right to express their opposition to the war, for to-morrow, when the war is declared, it will become the duty of all citizens to hold up the honor and the power of the Republic. [Applause.]

DEBATE ON THE FIRST LIBERTY BOND BILL

[Congressional Record, April 13, 1917, at p. 626]

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 2762, which the Clerk will report.

The Clerk read the title of the bill, as follows

"A bill (H. R. 2762) to authorize an issue of bonds to meet expenditures for the national security and defense, and to extend credit to foreign governments, and for other purposes."

Mr. KITCHIN. Mr. Chairman, I ask unanimous consent to dispense with the first reading of the bill.

The CHAIRMAN. The gentleman from North Carolina asks unanimous consent to dispense with the first reading of the bill. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from North Carolina is recognized.

Mr. KITCHIN. Mr. Chairman, in presenting this bill we take the first step in financing the biggest, most momentous enterprise ever undertaken by the Government of the United States.

This bill contains the largest authorization of bond issues ever contained in any bill presented to any legislative body in the history of the world. I am happy to report that this bill has a unanimous approval and indorsement, and has the unanimous vote of the entire membership—Republican, Democratic, and Progressive—of the Ways and Means Committee. [Applause.]

The terms of the bill are simple. We provide for the issuance of $5,000,000,000 of bonds and an additional issue of $2,000,000,000 of one-year certificates of indebtedness. The terms and conditions of the bonds—that is, as to the maturity, the payment, the denomination, and all terms and conditions—are left to the discretion of the Secretary of the Treasury and the President, except that they must bear interest at not more than 3½ per cent per annum and do not possess the circulation privelege. The proceeds from the sale of $3,000,000,000 worth of these bonds are to be used by the President and the Secretary of the Treasury, in their discretion, to loan to foreign governments in war with the Imperial German Government. In other words, the bill provides that this Government, through the Secretary of the Treasury and the President, can purchase of foreign governments their bonds, not to exceed $3,000,000,000, but such bonds must have the same terms and conditions, the same rate of interest, the same maturity, and all other conditions as the bonds of the United States have. * * *

Mr. MADDEN. The bonds of the Allies are selling below par——

Mr. KITCHIN. I will answer the gentleman. We have to trust the governments to whom we loan the money, for the reason that we have no power to legislate for them nor have we any power to make them pay for the bonds, even at 2 per cent, or at 5 per cent, or at 8 per cent. We have to trust them, of course.

* * * * * * *

(P. 627) Mr. SHERLEY. Is it not true that it is not contemplated that bonds now issued by the governments of the Allies and now owned by individuals are to be taken by us, but that what is contemplated is that bonds from the Allied Governments, with terms similar to those of ours, shall be taken to such extent, not exceeding $3,000,000,000, as in the discretion of the President may seem proper?

Mr. KITCHIN. That is correct. The bonds will be purchased from the foreign governments, not from individuals. There is not to-day in existence a bond of any foreign government that meets the terms of the bonds provided for in this bill which we must buy.

Mr. MADDEN. The mere fact that new bonds are to be issued by the governments of Europe, to be exchanged for the bonds issued by the Government of the United States, will be no evidence that they will be worth any more on the market than the bonds already issued by those governments.

Mr. KITCHIN. No; to be candid, I do not think they will be worth par, but that is not the protection for us to consider.

Mr. MADDEN. Why not?

Mr. KITCHIN. I would oppose any purchase of bonds of the Allied Governments if it was not going to help us more effectively to prosecute this war. That is the very object of it, and we leave it to the Executive, to the war-fighting power of our Government, to use the $3,000,000,000 for the best interests of this country in order to quicken the termination of the war in which we are engaged, and if the Executive thinks that a loan to a foreign government is the best way to do it, I for one am willing to give him such authority. The Constitution provides that the President shall be Commander in Chief of the Army and Navy.

* * * * * * *

(P. 630) Mr. HAYES. Mr. Chairman, I wish to ask the gentleman if there is anything in this bill that prevents the Allies who receive this money—this $3,000,000,000—from the United States from taking up former issues of bonds now in the hands, for instance, of their agents in this country?

Mr. KITCHIN. Oh, yes.

Mr. HAYES. Should there not be express language in there limiting those bonds to be exchanged for absolutely new issues?

Mr. KITCHIN. The bill expressly provides that the bonds shall be purchased from the foreign governments on equal terms with the bonds we authorize to be issued, so that could not apply to the bonds of any foreign government in existence, because there is not in existence any such bond which would comply with the terms that would be put into the United States bonds under this act. They must be bonds hereafter issued, purchased by this Government.

Mr. HAYES. The thought I had was this: There is nothing to prevent these foreign governments from taking up these higher-rate bonds bearing, some of them, 6 per cent interest and issuing in lieu these bonds or taking the money and retiring those bonds.

Mr. KITCHIN. There is nothing specifically to prevent that, but I can hardly conceive that that would be done. If we are going to lend this money to the governments that we are cooperating with to more effectively prosecute this war, why not leave it to them to expend the proceeds in any way which their judgment tells them is the best way to achieve success in the prosecution of this war and not limit or qualify the use of that money? [Applause.]

Mr. SABATH. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. SABATH. I presume it might be the best policy, but sometime ago I read an article in which it was stated that Great Britain, in making loans to its Allies, the smaller and poorer nations, made provision before she agreed to lend this money that all of these moneys that Great Britain is to advance to its Allies shall be expended in Great Britain. Now, I do not know, but the chances are that the same arrangement could be made in this case, so that the moneys that will be loaned by this Government to the Allies can be, and should be, expended in the first instance in the United States if it can be done. I wish to say that if Great Britain can do it and has successfully done it and has made such arrangements, I do not see why our Government cannot make the same arrangements and agreements.

Mr. KITCHIN. I will say to the gentleman that if we are going in wholeheartedly to cooperate with the Allies in war against Germany, I would not be in favor of qualifying or of limiting their right to expend that money in any way they see fit. [Applause.]

Mr. BUTLER. They are fighting our battles.

Mr. KITCHIN. Yes. You will understand that they will be fighting with our money their battles, and we will be fighting with our money our battles, too. I will say to the House that the committee has considered what the gentleman has suggested, and we are of the opinion that most of this money that we will loan to the Allies for the purchase of their bonds will of necessity have to be expended in the United States. * * *

(Pp. 631–632) Mr. DEWALT. Referring to section 2, lines 24 and 25, I find that authority is given to the Secretary of the Treasury, with the approval of the President, to buy the obligations of foreign governments, which shall bear the same rate of interest and contain in their essentials the same terms and conditions as those of the United States. The question I desire information upon is this: In the judgment of the chairman of the Ways and Means Committee, does that clause preclude the possibility of buying the present outstanding bonds of these foreign governments?

Mr. KITCHIN. It does.

Mr. DEWALT. How does it thus preclude them?

Mr. KITCHIN. Because in the first place you must have bonds of a foreign government in terms equal to our bonds, the same terms in all essentials with the bonds provided for by this act, and, as no bond of any foreign government complies in any way with these terms, therefore they are not bonds that can be purchased. The only bonds that can possibly be purchased under the authority of this act are bonds to be hereafter issued by foreign governments. There is no doubt about it.

Mr. DEWALT. Now, if there be such bonds, the question which arises in my mind, Mr. Chairman, is this: In looking over the stock reports last evening I found that the French bonds now are quoted in the New York market at 94. I do not know at what figure they were sold to the French customers nor what the syndicate paid that purchased them and distributed them, but in my mind there arises this possibility, that the French people who bought the bonds might, at the instigation of the French Government, or the English Government if they were English bonds, return them for a small premium to their respective governments, and this clause provides that the United States shall buy these obligations at par. Therefore, if there be any outstanding bonds of these respective governments which are similar in their terms to these bonds proposed to be issued by the United States, the purchasers of the bonds who heretofore obtained them might again sell them to their respective governments and they would make their small profit, and their governments would make a profit by selling them at par to the United States. Therefore it strikes me, Mr. Chairman, that the suggestion made by the chairman of the Ways and Means Committee ought to be incorporated in the bill that these bonds, if purchased by the United States Government, should be exclusively such bonds as are to be hereafter issued.

Mr. KITCHIN. They are excluded by the very terms of this bill. They are to be bonds hereafter to be issued. But suppose they were not. Take France, for instance, how would it help France to get a billion-dollar loan from us if it had to take it and pay bonds for an indebtedness already incurred? What she needs is a billion dollars to prosecute the war; she wants the money to buy new provisions, new supplies, for new purposes. There would be no sense in her doing otherwise.

Mr. DEWALT. That is rather foreign to my question.

Mr. KITCHIN. I say that it is impossible under the terms of this bill for this Government to purchase from a foreign government any bonds that have now been issued; they must be bonds issued herafter, for the reason that there are now no bonds which will comply in the necessary essentials with the bonds authorized in this act.

Mr. DEWALT. Does not the gentleman think it would be the part of wisdom to make it definite in that regard and incorporate the language in the bill?

Mr. KITCHIN. Let us see how much more definite it would be:

"SEC. 2. That for the purpose of establishing credits in the United States for foreign Governments, the Secretary of the Treasury, with the approval of the President, is hereby auhtorized, on behalf of the United States, to purchase from such foreign Governments — — — not for Tom, Dick, or Harry, who now hold those bonds — — — at par, their obligations, bearing the same rate of interest and containing in their essentials the same terms and conditions as those of the United States issued under authority of this act. * * *"

Mr. MANN. There is nothing in the bill which would prevent a foreign Government issuing bonds for the purpose of paying off the indebtedness which it now holds in this country and obtaining bonds from the United States?

Mr. KITCHIN. That is true, if it issued new bonds.

Mr. MANN. Under this bill we would have to buy the foreign bonds from foreign Governments. Take the case of Russia, which desires to establish credit in the United States. There is probably no way it could more firmly establish credit than by paying off the indebtedness which it has already incurred in the United States. Is the gentleman able to say whether, in any of the plans which have been suggested, money that is practically and really loaned to the foreign Governments is to be used in the United States in the main for the purpose of purchasing supplies of various sorts or for the purpose of paying off some of the bonds which are now below par?

Mr. KITCHIN. It is my understanding that it will be used for purchasing supplies, and not for paying past indebtedness.

Mr. MANN. I am not sure which would help the Russian Government the most.

Mr. KITCHIN. But suppose it did; suppose the Russain Government owed a billion dollars. If she paid that billion dollars off to-day, it would establish credit for another billion dollars, and she could buy another billion dollars' worth of supplies on credit.

Mr. MANN. Very well. I agree with the gentleman about that.

Mr. KITCHIN. As I said, I think this money will not be used that way, but will be used to get new supplies and new munitions of war.

Mr. MANN. I do not know which way would do the Russian Government the most good, but I think it would be the sentiment of everybody here that the stockbrokers, or our good friends, the financiers of Wall Street or elsewhere, ought not to be able to thimblerig the matter in such a way that they would be able to collect in full for Russian rubles that are now worth only 50 per cent of par.

* * * * * * *

(P. 633) Mr. HELVERING. Mr. Chairman, by the question asked by the gentleman from California (Mr. Hayes) and the gentleman from Pennsylvania (Mr. Dewalt) and the suggestions of several gentlemen on the floor, it is apparent that the idea carried in this bill is not understood relative to the foreign bonds, many gentlemen having the understanding that this money could be used to buy our bonds outstanding in this country now. Therefore would it not be wise—I offer this as a suggestion to the chairman of the committee—that an amendment be made in line 24, page 2, after the word "obligations", by inserting the words "hereafter issued?"

Mr. KITCHIN. I really do not see any harm in such an amendment, and I would not object to that, but I do not think it would add anything to it.

Mr. HELVERING. I understand that——

Mr. KITCHIN. But it will do no harm and if it would satisfy gentlemen I do not think I would object to it.

Mr. DEWALT. Will the gentleman yield?

Mr. KITCHIN. I yield to the gentleman from Pennsylvania.

Mr. DEWALT. I would suggest with reference to the proposed amendment of which the gentleman has just spoken that the amendment be on page 3, line 2, after the word "act", in this form: "Amend section 2 by inserting in line 2, page 3, after the word 'act', the words 'but such purchases of obligations shall be confined to obligations authorized and issued after the passage of this act and shall not apply to any obligations authorized or issued prior thereto.' "

Mr. KITCHIN. I would suggest that the amendment proposed by the gentleman from Kansas covers that exactly.

* * * * * * *

Mr. **Mondell**. In reference to the suggestions that have been made by gentlemen that the loan we make may be used by foreign governments to cover obligations already issued, is not this the fact: If you make this great loan, the greatest in all history, it will be for the purpose of sustaining and extending the credit of foreign governments at war with our enemy?

Mr. **Kitchin**. That is true.

Mr. **Mondell**. We shall accomplish our purpose best if we use these funds in the way by which the cause of these foreign governments will best be sustained and their credit extended, and what if they should refund some of the bonds now outstanding in order to bring them under the provisions and conditions of this bill?

If in the opinion of these governments such action would best sustain, extend, and strengthen their credit, will we not have accomplished just what we have set out to accomplish through that method? And therefore why should we be disturbed if by reissuing or refunding, some obligations already resting on foreign governments, they may be relieved through the loans we made? [Applause.]

Mr. **Kitchin**. The gentleman is correct.

* * * * * * *

(P. 635) Mr. **Burnett**. My idea is that much of the propaganda for this war was financed at least by those who had these very financial interests in view, and had we not better put a check on that now, while we can, instead of letting them do it, and then locking the stable after the horse is gone?

Mr. **Kitchin**. You know, before April 5 I had a little fear that they had something to do with this propaganda, too, but I do not think about that now.

Mr. **Burnett**. I want to ask the gentleman if he does not still have that fear? I do not want to committ him on that.

Mr. **Kitchin**. The committee considered this phase of the matter, and I think they will be amply protected by leaving this as it is.

* * * * * * *

(P. 637) Mr. **Cannon**. Mr. Chairman, does the gentleman think there is any way by which the people who are not American citizens, and people who are, who have negotiated loans in this country before we were engaged in this war—and possibly lost money or possibly made money—is there any way that we can pass an ex post facto law to put them in the penitentiary?

* * * * * * *

(641) Mr. **Fordney**. Mr. Chairman, let me say to the gentleman that the Governments of England, France, Germany, Russia, and all of the governments in Europe at war are in a life-and-death struggle, fighting for their existence, and it will be my purpose in loaning this money to the nations we propose to join, and with whom we propose to cooperate to end this frightful war, to let them have the money and use it to the very best advantage for themselves, whether that be to buy food supplies in this country or arms and ammunition or to save their credit at home. So long as the people engaged in that great war get that money into their possession I have every confidence and belief that they will expend it to their very best advantage in bringing this war to a successful close. [Applause.] I know of no set of sane men who would do otherwise.

Mr. **Curry**. Possibly not. I am willing to vote $3,000,000,000 or $5,000,000,000, or $7,000,000,000 for future credit or for the use of the foreign nations to pay their armies in the future, but I am not willing to vote a profit of $150,000,000 to $250,000,000 into the banks of the United States and Great Britain and Germany simply by the foreign government issuing a 3½ per cent bond, getting the money from the United States, and retiring the depreciated bonds already in circulation, already used, and already in the hands of the banks. [Applause.]

Mr. **Fordney**. I agree with the gentleman, and I have no idea that such a proposition is in the mind of any man in Europe.

Mr. **Curry**. Why does not the committee present that in the bill?

Mr. **Fordney**. My idea is that those people are much in need of money to prosecute this war. There is no other object on the face of the earth in the minds of the American people in loaning European nations this money. Their only purpose is to aid them in the best way possible to fight our battle across the sea without calling upon our men to go there. I do not believe that one single dollar of the money to be loaned to them as provided for by this bill will ever be used for the purpose suggested by the gentleman; if so, I would like to see some provision of law that would prevent it, because if they were to borrow this money from us and then retire outstanding bonds, what they would have to do when in need of money would be to come again and sell their own bonds at a higher rate of interest than they are getting this money from us for, a thing not at all likely to be done by them.

* * * * * * *

[Congressional Record, April 14, 1917, at pp. 667–669]

The Chairman. Does the gentleman from Illinois (Mr. Rainey) desire to be recognized in opposition to the amendment?

Mr. Rainey. Yes, sir. Mr. Chairman, I understand the position of the gentleman who offers this amendment is this: We are preparing to loan an enormous amount of money to the friends of this Government engaged in war with the enemies of this Government. The proposition contained in the pending amendment is that before loans are made to any nation the matter must be submitted to the determination of the 435 Members of the United States House of Representatives and of the Senators from each of the States, that a discussion must occur here as to the time the loan is to run, as to the amount of the loan, as to the terms of the loan in general, and as to whether or not that particular loan is advisable.

This bill drags its weary way through the Congress of the United States. Already in the making of the bill and in presenting it to this House we have occupied nearly 10 days of time. It is hoped that to-day this bill will pass the lower House of the Congress. How long it will take to pass the upper House no man can say. It will take to discuss each loan along the lines suggested by this amendment as much time as we are consuming now in determining upon this important war measure. To-day on the western front the greatest battle of the war is being waged. The entire force of the Allied armies available for that purpose is being hurled against the Hindenburg line in northern France. To-day thousands of our friends and Allies are dying in the trenches of northern France, and, according to the theory of this amendment, before we can loan to France a dollar we must discuss the matter at great length here in the Congress of the United States. While this awful war is raging and the very life of the States who are our friends are in danger we must permit all the Members of both Houses of this Congress to determine how much money we are going to let them have in this the hour of their national peril, in this hour when they are fighting our battle along the battle fronts of Europe. France did not treat us that way 140 years ago, when our credit was gone; when it cost $150 of American currency to buy a bushel of corn; when it cost $2,000 of American currency to buy a suit of clothes. She loaned to the impoverished young Republic of the western world millions from her treasury at the request of the great Franklin without any discussion and without debate. And she sent her fleet and her armies, which finally led to the surrender over here at Yorktown and later to the end of that long war.

The Chairman. The time of the gentleman from Illinois has expired.

Mr. Rainey. Mr. Chairman, I ask unanimous consent for five minutes more.

The Chairman. The gentleman from Illinois asks unanimous consent to continue for five minutes more. Is there objection? [After a pause.] The Chair hears none.

Mr. Rainey. And afterwards she remitted the interest. The millions she expended when she sent her armies and her fleet here in the defense of this young Republic in its natal hour we have never repaid. And yet the proposition is that while her young men are suffering and dying by the thousands our Secretary of the Treasury with his advisers, the Council of National Defense, shall not be permitted to determine, and to determine quickly, where these first bombs in this fight that we propose to wage shall be placed, because this proposed bond issue is the first battle in the great world conflict in which we are entering. This is the way the great Republic of the western world enters this awful war for freedom throughout the world. We enter it by here and now putting into the conflict $5,000,000,000 in money, by saying to those executives of this Government who are qualified and who are in possession of the desired information that they shall say how much we shall give to this nation, and when, and how much we will give to this other nation, in order to produce the best results.

An amendment of the sort proposed here and pending now destroys absolutely and kills this bill. If we are to wage a campaign here in the House and let the representatives of these various nations who go to make up this great melting pot of ours suggest here that France shall have so much, that England shall have so much, that Italy shall have nothing at all in this loan and proceed to wage this sort of a campaign here in this body, we might as well abandon this method of starting this fight. [Applause.]

The thing to do is to pass this bill and pass it quickly, and to say to the nations of the world engaged in the war with us, "We propose to help our friends, and we propose to do it quickly, and we propose to do it in the most effective way." [Applause.]

* * * * * * *

Mr. FITZGERALD. Mr. Chairman, I am opposed to this amendment, but for reasons different from those assigned by the gentleman from Illinois (Mr. Rainey).

I do not believe that time is wasted in considering these very important measures, and although four days have elapsed since the bill was introduced into this House, a single day's discussion has disclosed the fact that amendments of a vital and important character should be made to it, and will be made to it, before it is enacted into law. [Applause.]

I am not in favor of making this enormous loan upon the theory that we have initiated a program of helping some other nation in this great conflict. There is only one justification for the enormous burden that is now proposed to be put upon the people of the United States, and that is that this country is engaged in a war to maintain and to sustain its own rights as a nation, and the fact that financial and other help is to be extended to some of the belligerents that are engaged upon the same side of the contest as the United States is merely incidental to the purpose in view. Whatever may have been the conduct of France in the past, however much we may have been indebted to her, or now sympathize with her, those facts alone would not be sufficient to justify the United States in engaging in this contest. We have been brought into this contest because one of the belligerents has committed repeated acts of war against the Government and people of the United States which compel us as a self-respecting and decent nation to acknowledge that situation and to accept the challenge with which the Imperial German Government has confronted us. We are now initiating the measures that are necessary to conduct that war successfully, not to conduct some one else's war successfully, not merely to aid some belligerent in the accomplishment of its purpose except as that may be incidental and necessary in the accomplishment of our own purpose.

I would not hamper the administration in the negotiation of these loans. We happened to be arrayed on the same side with other nations. I should gladly vote to give $6,000,000,000 to the nations arrayed on the same side with us if we could win this war without sacrificing American blood and American lives. [Applause.] I have little sympathy with the suggestion that possibly we will not get our money back. I care not so much if we do if American blood and American lives be preserved by the grant of the money. [Applause.]

Mr. Chairman, in this discussion suggestions have been made that in some way the Congress should attempt to limit the use to which the governments to which this money is to be furnished may put it.

If we propose to help those governments by extending credit and enabling them to get supplies, we can not quibble about what is to be done by them with portions of the money. [Applause.] It is a matter for them to determine. The only question for us to decide is whether it is advisable from our standpoint, for the successful conduct of the war in which we are engaged, to aid in the conduct of the war by the advancing of supplies of either money or men to those arrayed with us. When we decide to act we have done all that we should do. The details are administrative and must be intrusted to the executive department of the Government. * * *

Mr. MANN. Mr. Chairman, I did not know that I should speak upon the bill in any of its phases, because I doubted the necessity or desirability of speaking. But Mr. Chairman, the amendment now proposed goes to the very basis of the proposition in the bill, as to our policy in regard to the war. The administration has proposed that it shall have the authority to loan $3,000,000,000 to those nations now engaged in war with the country upon which we have declared war. When we take the responsibility of engaging in war we ought not to expect that it will be a mere paper war or a mere academic discussion.

We are not prepared to place men in the field. We are not prepared to fight with our Army. We are not prepared to do very much with our Navy; not because we do not have some Navy, but because there is little opportunity for the Navy to engage in actual war at this time. But there is one way in which we are prepared to engage in the war. There is only one way in which to-day we can do more than make our war an academic discussion, and the only way left to us is to help finance those nations who are fighting our enemy. [Applause.] This bill will authorize the loan to them of $3,000,000,000. I doubt not that before a year has passed that sum will be more than doubled; but let us hope that by advancing our credit and loaning our money we may be able thus to end the war. I think it is our highest duty, in the making of war, to give aid to those who are fighting the enemy against whom we have declared war, and I only hope and pray that the aid thus given may be effectual enough to end the war before we send our boys to the trenches. [Applause.]

Mr. GARDNER. Mr. Chairman, I agree with the gentleman from New York (Mr. Fitzgerald) in his opposition to the Towner amendment. I do not agree with him as to the causes for which we are fighting. Neither does his President agree with him. I do not agree that the United States has gone to war merely to enforce its rights. I admit, of course, that Germany's submarine warfare has been the match which has lighted the conflagration in this country; but fundamentally the American people are actuated by a purpose even higher than the defense of our rights upon the high seas. The historians of the next generation will see with clearer eyes than ours. I venture the prediction that the future's broad survey of present-day American thought will show that the public opinion in this country which supports armed intervention in the affairs of Europe is based on a conviction that the Entente Allies are fighting for the rights of man and against a system of government which has become intolerable. Autocracy and democracy are engaged in a death struggle. We have taken up the sword on the side of democracy. It is high time for us to do so. Americans can not any longer permit other nations to bear the exclusive burden of a war for liberty.

* * * * * * *

(P. 670) Mr. MADDEN. Mr. Chairman, I am sorry to disagree with my friend from Pennsylvania (Mr. Moore). When he states that we are loaning this money to European nations to defend their interests in the war in which they are engaged, I think he stretches the case beyond the facts. We have already declared war, and we are not prepared to begin to fight the war we have declared. If we can find somebody else to fight the war for us with our money, we ought not to hesitate to grant them the credit which they want and must have. [Applause.]

There is no way to win this war except by men and money. We are not prepared to furnish the men to-day, and somebody else is prepared to furnish the men, if we furnish the money. I do not agree with the statement that we are furnishing this money for somebody else to wage war on their own account, but we are doing our part to wage the war in which we are engaged is the contention I make.

Mr. MILLER of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. MILLER of Minnesota. Do I understand the gentleman to mean that these loans we are going to make are not to be repaid?

Mr. MADDEN. I would not care whether they were repaid or not. We are starting out to win a victory, as I understand it, to maintain American rights; and if we can maintain American rights by furnishing money to somebody willing to fight our battles until we are prepared to fight those battles for ourselves, we ought to do it. We ought to begin the war upon which we have entered now, to-day, not to-morrow. We ought not to wait until we have enlisted an army that we can send over there. It will be a year before we can do that; but if we send our money to operate the armies that are already in the field, then we shall have done the thing that the American people are looking forward to us to do as their representatives.

* * * * * * *

Mr. RAINEY. Mr. Chairman, we are engaged in war with Germany, and we are strengthening, or arranging to strengthen, the credit of those nations engaged in war with Germany. We are not making this loan for the purpose of making an investment of our funds. We are making this loan in order to further our interests primarily in this World War, and from that moment when the Congress of the United States declared that a state of war existed between this country and Germany every blow struck at Germany, by any of her enemies, was struck also in our interest, because we have entered this war for the declared purpose of bringing it to a speedy conclusion, not for the purpose of territorial aggrandizement, not for the purpose of claiming for ourselves at the close of the war extravagant war indemnities. * * *

(P. 676) Mr. MANN. Mr. Chairman, I doubt whether I ought to again obtrude myself upon the House. We are about to authorize the borrowing of $8,000,000,000—very close to $8,000,000,000 I think it totals—of which close to $6,000,000,000 will be in the form of bonds. There may be gentlemen in the House who know a good deal about the issuance of bonds to be subscribed by the public, but it is very certain there is no one in the House who knows very much about the issuance of five or six billion dollars of bonds to be subscribed by the public. The total amount of the indebtedness we authorized is, I believe, about equal to or more than half the amount of deposits in all of the national banks of the country combined. Those who imagine that it will be an easy matter to float five or six billion dollars of bonds may have another guess coming. Even if they be subscribed for, the payment of them will be a matter of great and grave difficulty without unsettling the rest of the credits in the country. If I were in control of the issuance of these bonds, the first thing that I would want to do would be to call in and obtain the advice of men who have been engaged in that business, and, although I have not any particular love for some of the great financiers of the country, I think one of the men whose advice I would ask would be Mr. J. Pierpont Morgan, and also the National City Bank group and other men engaged in the floating of bonds by municipal corporations, railroad corporations, public-utility corporations, and people who are engaged in the selling of bonds throughout the country, in order to obtain advice as to the terms upon which these bonds are most likely to be subscribed for. * * *

Mr. CANNON. Mr. Chairman, I agree substantially with what the gentleman from New York (Mr. Fitzgerald) stated earlier in the day, when he addressed the committee, and also with what my colleague (Mr. Mann) stated who followed him. I do not know that I can make any suggestions that will inform this committee. I think you have got to give the President, who is primarily responsible in this matter, some latitude. I do not know that I would curtail it; I am inclined to think that I would not. There are certain amendments that have been agreed to back and forth which I think are wise. I have not been in the House all of the time while consideration of this bill has been going on in committee. Other duties in connection with the business of the House have required my presence elsewhere.

I think this is a loan, not a gift. We are not in a giving business by the billions or the three billions of dollars. Does anyone suppose that we would have declared war against Germany if she had not blown up our ships without notice? The war was commenced by Germany upon the high seas against us. We properly declared war against Germany. That is as far as it has gone. Austria is an ally of Germany, Turkey is an ally of Germany, and also Bulgaria. We have not delcared war against those countries, and whether we will or not remains to be seen later on; but the President so far, as I recollect, and I believe I am correct, has not even given passports to the diplomatic representatives of those countries. * * *

(Pp. 677–678) Mr. GRAHAM of Pennsylvania. Now, Mr. Chairman, we ought to be ready to vote upon this question. It has been thoroughly and fully discussed, and I am sure that every man in this Chamber has made up his mind as to what form his vote will take. But before concluding what I have to say I would like to call attention to what the gentleman from Virginia (Mr. Montague) advocated in such eloquent terms—our relations to France. I cordially agree with the thought, and wish it were practicable to put an amendment in this bill so that we might at this time, when the situation is so exactly analogous to what it was in the Revolutionary period, say to France, "We will make you a loan, the interest upon that loan shall be remitted, and that loan itself shall be payable at your pleasure."

True, France was fighting England in those days; but we are fighting Germany. True, she loaned us money without interest. She gave us men, she gave us the immortal La Fayette to help Washington in the dark hours of the American Revolution, and it would be but a small thing for us now to say, and show that the old remark is without truth, that "republics are ungrateful"; to show to the world that America with her higher ideals is prepared to set a new standard of action among the nations of the earth.

I am going to vote also with much regret against the amendment offered by my colleague from my own State. I do not believe that this is the place to put terms upon this loan or say in what fashion it shall be issued. I cordially concur in the remarks of the Republican leader (Mr. Mann) in all that he said upon that question, and in the unwisdom of attempting in the legislative halls to govern and regulate a purely financial matter that requires conference, advice, the best light that can be had which must finally be shaped up according to the facts and circumstances as they will then appear for the making of this great loan, this great demand upon the American people. I believe in my heart of hearts this loan will be taken and fully subscribed by our people. * * *

Mr. HUDDLESTON. Mr. Chairman, what will be the economic effect in this country of the adoption of this bill? I want to try to give some sort of an answer to that very important question.

First, there are vast amounts of British, French, and Russian securities held here now. They range in value from 50 cents to about 90 cents on the dollar at this time. With this immense loan made to the Entente the value of those securities will be greatly enhanced, so that some of the worthy gentlemen and patriots who have been so loudly clamoring for war will have some hundreds of millions of dollars of unearned profits transferred into their pockets. * * *

I shall vote for this bond issue as a war measure and as a matter of stern necessity only, but I believe that we owe our first duty to our own people. * * *

Mr. SWITZER. Mr. Chairman, I cannot agree entirely with the gentleman from Alabama (Mr. Huddleston). We have declared that a state of war exists between our country and Germany. Shall we fail, shall be make no effort to bring this war to a speedy close, to crush our enemy, because, perchance, bonds in the hands of Morgan & Co. or other holders in this country may appreciate in value?

Is it not our intention to crush Germany, to bring her to terms, if we raise and equip a large army? If we can bring about the same thing by the extension of credits and the use of money, why hesitate and allow the bugbear that somebody will profit out of the transaction to deter you? There is no way, there has been no way yet devised by man, to keep the infamous from grafting in time of such great crisis. * * *

(P. 679) Mr. HOWARD. Mr. Chairman and gentlemen of the committee, I agree with what has practically been said by Members on both sides of the Chamber who have spoken on the question of leaving the entire disposition of this issue of bonds to the executive branch of the Government. * * *

We have got to win this war. It does not make any difference what sacrifices we have to make. It is serious business; it is the most serious situation this Nation ever confronted, and I pray to God that it will never confront a more serious one; and if it takes 10,000,000 men or $50,000,000,000, weighing the consequences to posterity and our free institutions, this war will be won. The United States has got to manfully perform its part of the duty. Now, as has been said, it will be at least a year, or ought to be a year, before we can put a single volunteer or a selective conscriptive soldier into the trenches in Europe, because it would be nothing but governmental murder to put untrained and green men behind our guns in the trenches against seasoned trained soldiers. Therefore the only thing that we can do, whether we get a dollar of this money back or not, is not to be weighed at this time; the consequences of this conflict on this Nation is what we should weigh now and the most expeditious and practical way that we can help in Europe. * * *

EXHIBIT No. 3019

2315 MASSACHUSETTS AVENUE,
Washington, D. C., November 1st, 1917.

Hon. W. G. McADOO,
Secretary to the Treasury,
Washington.

MY DEAR MR. SECRETARY: I beg to acknowledge and thank you for your letter of the 31st October informing me that my Government may rely upon advances being made to it by the U. S. Treasury, under conditions required by the statute of 24th September 1917, to the amount of $435,000,000 up to the 1st January 1918.

In regard to the reimbursement to the British Government of sums expended on ships which the U. S. Government is to acquire, I fully agree that the question of the application of these funds should be discussed with you. It is certainly not the desire of my Government to borrow more than is absolutely necessary to meet its essential requirements in this country. I should, however, point out that from the first it has been assumed by my Government that any moneys reimbursed in respect of its expenditure on ships would be applicable to a special purpose, viz: the reduction of the call loan or overdraft which originally stood at close on $400,000,000, and I have always understood that the matter was discussed with you on this basis.

I am, my dear Mr. Secretary,
Yours very sincerely,

[s.] READING.

(*Telegram received from London, dated Nov. 18, 1917. Recd. 11:50 p. m.*)

SECRETARY OF STATE,
Washington, D. C.:

November 18, 7 p. m.

Number six. For Secretary of the Treasury. Andrews, former charge d'affaires at Jassy, is now in London having left Jassy. While he believes Roumania loyal to the Allies does not think either her army or Russian Army in Roumania of any military importance. Believes amount of food called for in telegrams from Vopicka and Anderson higher than necessary and that wheat supply probably sufficient until next March. Immediate needs are clothing and shoes. Advises to send with these trustworthy men having funds to insure movement of trains. Clothing and shoes costing about seven million dollars obtainable here. If we purchase these, British plan is to ship these and other Roumanian and Russian supplies which will remain under British control until unloaded at Russian port so that they could be brought back, if at the time of delivery Russian conditions so unsettled as to render shipment across Russia too hazardous. Goods to be of service this winter must be shipped promptly. As a humanitarian, rather than strictly military measure, but with some chance of benefit to the prosecution of the war, we may wisely join, but sending these goods forward, limiting present commitment to seven millions to be expended here as above stated and to five millions arranged through Russia before my departure subsequently if the situation renders it possible and desirable. French and British indicate their willingness to join us in helping to a monthly amount of four millions each for purchase of foodstuffs in Russia and also to continue amounts of material from their own countries. Representations made here indicate Roumanian Minister at Paris could sign obligations. If you approve I think legal situation can be kept in line by having seven million Roumanian obligation received by me for you with authorization from Roumanian Minister cabled you to place proceeds of loan as a dollar credit to Great Britain whose Government will then forward the goods above described.

Political conditions in France caused delay in departure of mission; now fixed for Thursday. I have communicated with Tardieu who is attending to appointment of French delegates.

In an interview today with Bonar Law and Reading, former states that there will be no difficulty in agreeing to higher rates of interest than now paid. States they are charging France and Italy five per cent, but with indication that rate will be made permanently as high as that which they pay to their public on long term bonds, this rate now being, net, about five and a half per cent. I urged importance of prompt action by British Government in obtaining loans in neutral countries with the result that special men are to be sent on this business at an early date. Learn from the British Government and from Lamont that renewal of loan of about ninety-five millions maturing February first impracticable because it is represented by widely scattered obligations in small amounts, nor could a new loan be placed at that time unless market conditions are very much changed for the better. Considering these statements have urged Chancellor of the Exchequer to revise and, if possible, reduce other needs for that period. British delegates to Council will take all this in consideration at an early date. If, on later presentation of urgent need, you should decide to advance money for meeting the above maturities, I think there will be no difficulty in obtaining special obligation from the British Government secured by collateral now protecting it, thus laying foundations for direct British loan to our public when market conditions permit.

French and British authorities desire to know whether State Department took action on letter to Secretary of State dated October 18.

(*The Delegate to the Inter-Allied Council* (*Crosby*) *to the Secretary of State*)

[Telegram]

LONDON, *November 21, 1917—10 a. m.*
[Received 1:34 p. m.]

No. 8, for Secretary of the Treasury. Referring yours November 15.

(1) Referring Canadian purchases. Recommend that small and urgent purchases may be made without reference to council here but their general program should be submitted if only to determine place in priority scale and further because of highly probable relation between Canadian and British finance. If, however, Canadians willing to accept foot of priority list see no great objection to letting them enter purchasing agreement without reference to council.

(2) Referring to moneys reimbursed on account of shipping construction. Treasury here would like assurance that it may be all applied in one way or another to payment of their outstanding cash obligations including bills held by du Ponts and other manufacturers. Have proposed that best disposition would be to apply to $94,000,000 notes maturing February which are scattered as previously indicated. Lamont naturally expresses preference that all available cash should be applied to reduction of overdraft but I consider we must deal with British Government solely on this subject. There will be no difficulty in having subrogation to collateral held against obligations thus met. Please advise amount of money and probable time of payment to British Government by Shipping Board considering possible changes in situation if Italy and France whose requirements for next year still unknown, possibly very large. Recommend that if application of these funds to Morgan overdraft insisted upon they must be put on notice that February maturity cannot be met unless large reductions in other programs be accomplished.

(3) Referring to Greek situation. Do not consider necessary to send special financial American agent to Greece. Information here that English and French experts are very capable master the situation; so urgent that probably no delay admissible such as would be invalued (incurred?) in getting American special agent there. It would be well, however, to ask our Minister to be associated with the French and English experts in financial investigations. During an interview with Venizelos yesterday he urged immediate help particularly in the way of food. Consider French and British absolutely bound to aid Greece whose situation very bad but do not believe we should make commitment for money until after conference in Paris with French authorities. Venizelos will be there. It seems probable that 200,000 tons Indian wheat may be allocated to Greek consumption. This could be financed by Great Britain. Future military movements not yet decided. Venizelos likely to be terribly disappointed, perhaps to the extent of complete discomfiture, if British and French troops are more or less withdrawn as is now anticipated but not known to him. This point entirely confidential.

(4) Concerning Japanese financial assistance. Treasury here considers not available nor particularly desirable. No war purchases being made by Allies in Japan save for Russia. Financial relations between Russia and Japan may present serious situations. No present action indicated.

(5) Concerning Belgium. Think proposed increase justifiable but recommend that it be made now for not more than two months in order to require further Belgian demands to be coordinated with other demands upon the Treasury.

(6) Referring to Serbia. Recommend application of Minister be granted.

(7) Concerning Roumanian Minister. Understand he is awaiting my arrival in Paris.

[Telegram]

LONDON, *November 21, 1917*
[Received November 22, 2:40 a. m.]

No. 9 for Secretary of Treasury.

Food Administration here has been asked by our Food Administration to guarantee purchase of hog products up to May 1919 on certain basis of amount and sliding scale of price varying with price of corn. General scheme seems good but Treasury Department here estimates British proportion may rise high as $430,000,000 and declines to make commitment until assured of funds from us to meet their guarantee if made. Have advised them you probably could not guarantee beyond end of war for any purpose whatever and that large amounts like this should not be passed upon until all other large purchases for ensuing six or twleve months shall have been indicated by each of borrowing governments. While fully recognizing great importance of this matter as part of food supply of Allies, I hope it will be possible to delay action insofar as it rests upon obtaining guarantees from governments here which means only corresponding hasty action on part of Treasury in assuring long time credits for large amounts. Before having totals for consideration would like to know how soon it is desired to give guarantee to American farmers so as to present whole matter of anticipated expenditures with this included.

Referring to ship construction funds returnable to British Government, understand from Treasury here that they prefer application of all of it to overdraft. Have called attention to fact that this leaves their obligations with du Pont and others and their February maturities entirely unprotected. They, however, seem to urge whole amount be applied to Morgan account. Have notified them I would cable you facts. Am uncertain how far you may feel committed to Morgan account by virtue of conversation in your office with Lamont some months ago. Think at least du Pont notes $13,000,000 maturing December 15, should be cared for out of these funds unless assurance can be had of renewal of this obligation and of $17,800,000 due March 15. Respecting Italian application for loan. After conference with Chancellor here recommend that $7,500,000 per month for November and December be established as free credit available to Italian Government for any purposes, including support of lire exchange in New York, this to be in addition to $230,000,000 credit already established. Any other program for increase to await further study in France and by Inter-Ally Council. Great Britain is lending Italy £8,000,000 per month for general purposes and £1,500,000 per month for free credit similar to that above recommended. Please wire me your decision on this recommendation to Paris.

CROSBY.

EXHIBIT No. 3026

TREASURY DEPARTMENT,
Washington, November 23, 1917.

Memorandum re British Maturities on February 1st on $95,000,000.

Mr. Crosby first suggests that in case it should be decided to furnish the funds for meeting these maturities, the corresponding collateral should be subrogated and that the British Government reduce its needs for that period. Later, he suggests that the reimbursements to the British Government by the Shipping

Board should be applied for this purpose and for taking up $13,000,000 in notes to du Pont maturing December 15th and $17,800,000 maturing March 15th. Later, he advises that the British Treasury desires to apply such funds for the Morgan overdraft. I notice from one of Lord Reading's letters last month to the Department that he understood that the negotiations for taking over the shipping contracts were carried on with the understanding that the British Government would apply the reimbursements to the Morgan overdraft.

Belgium.—Mr. Crosby recommends that the additional $1,500,000 for Belgian Relief be granted, but for not more than 2 months in order to require further Belgian demands to be coordinated with other demands upon the Treasury.

Serbia.—Mr. Crosby recommends that the application of the Serbian Minister be granted.

Italy.—Mr. Crosby recommends that an additional credit and advance be granted to Italy for $7,500,000 for this month and an equal amount for next month, with a free credit to be used by Italy for pressing needs which may arise, including the support of the lire exchange. He recommends that any further increase in credits to Italy await consideration of the Inter-Allied Council.

(*Telegram received from Paris, dated January 10, 1918. Rec'd 11th, 1:58 p. m.*)

SECRETARY OF STATE,
Washington.

January 10. For Secretary of Treasury, number 39. Tabulation of elaborate figures of demands for January and for first quarter of year indicate about same average for three months as proposed for January. Monthly average of totals for three months as follows: For purchases in United States including cotton for Great Britain four hundred eighty-two millions; France four hundred fifty-three millions; Italy three hundred sixty-two millions; average per month for all four hundred thirty-two millions. Specifically for purchases in other countries: Italy, eighteen millions, average per month six millions free credits or for purchasing exchange excluding cotton bills for British; Great Britain three hundred forty-three millions; France thirty-nine millions; Italy one-twenty millions; total five hundred two millions; Average per month one hundred sixty-seven millions; grand total: Great Britain, eight hundred twenty-five millions; France four hundred ninety-two millions; Italy five hundred millions; total one billion eight hundred seventeen millions; average six hundred five millions.

Of requirements of Italy for January sixty-five millions; for orders placed and forty-three millions for orders to be placed. Requirements of France for January entirely for orders placed. Of requirements of Great Britain for January one hundred twenty millions for orders placed and eight millions for orders to be placed. You will thus see that substantial part of January allotments will probably go over to subsequent months.

Balance of which is not credits to Italy as reported by you will be substantially required for Italian wheat purchases including January. British have not yet fully reported all outstanding orders but will be urged to get a list of some in order to place all Governments as soon as possible on the same basis namely that orders shall not be placed except within limits of credits assured. Sixty millions asked for by Italy for free credits for January are intended to be used chiefly for payment of accumulated indebtedness by various Italian private concerns acting for Italian Government in placing orders many months ago. Exact situation of these contracts whether expressed for payment in lire or dollars not yet known. Am arranging for investigation by Cravath or Byrne now both in Rome to clear this matter satisfactorily. Nitti extremely anxious to get whole foreign account of his government paid up in order to insure success of rigorous policy concerning exchange operations in future which will be absolutely controlled by a commission which he has established in Rome and which will prevent hereafter any foreign commerce whatever except that approved by this commission.

Italy's January figure sixty-five million for orders already placed includes thirty millions for cereals returnable to wheat executive authorities and for which money already available. Consequently this sum if recommendation made below be adopted might be held for covering such portions of accounts just above referred to as investigation may justify but would not otherwise be needed.

I have consistently adhered to the position that our aggregate advances to all European Allies cannot exceed five hunded millions per month. Bearing this in mind advise that pending further study I be authorized to suggest provisional allotments for January as follows: Great Britain, two hundred twenty-five millions; France, one hundred fifty-two millions; and Italy, tentative amount of one hundred millions. This leaves twenty-three millions for smaller powers. Within these limits application of funds to particular purposes can for the present best be settled in Washington with such recommendation as may go to you after my return to London next day or two. Question of priorities in foodstuffs scarcely arises since agreements have been reached that insure through wheat executive and meat executive distributions satisfactory to allies. Priorities in respect munition requirements present extremely delicate and difficult questions concerning which Versailles Military Council is not yet prepared to act, but in course of time I hope this can be accomplished in manner proposed by us from beginning, that is that priorities should be indicated here as between European Allies subject to final determination in Washington as between their requirements and ours. I have urged establishment here of organization which will see that stocks belonging to the independent armies and which in their nature are capable of general usage shall be reported so as to prevent one army from calling in great haste at great expense for reserve stocks which perhaps may be in hands of adjacent army. Thus far it appears that each keeps its own independent reserves. Often the total of these reserves larger than would be required if they were watched by one organization. Principle of this fully accepted by council and will be presented to respective governments by the delegates. French Munition Minister also expresses himself strongly in favor of an effort to diminish number of different types of war material believing that much economy will result from this effort. Obviously question very grave and will require action of Versailles Military Council, the efficiency of which is not yet established.

In response repeated inquiries from British Treasury, have said am not authorized offer any encouragement except ship money that money will be provided for overdrafts including Treasury bills and February first maturity. In response to requests for suggestions as to how these obligations to be met, have said it seems to me to be a problem which must be worked out by British Government and their bankers with such cooperation as the United States Treasury can give. Have suggested that British Government should, if necessary, urge bankers to release them from promise to apply ship money to overdrafts so that it can be used for February first maturity. Bonar Law suggests that small amount of gold roughly estimated by him now at five million dollars can be brought down from Canada to aid in February first settlement. Am also informed that Danish loan to British of twenty-five million dollars now available in New York in part and balance by installments. Chancellor has expressed hope that inasmuch as pledged collateral even at present market values exceeds overdraft Treasury bills and February maturity combined, some way can be worked out whereby with aid of ship money, Danish loan, and Canadian gold, a new secured loan may be established. Have said that this can only be done by negotiations at New York and Washington and if additional cash advances required from Treasury it would probably involve diminution on January and February loans for other purposes.

Condition of accounts between French Government and our Army here deplorable. Have just succeeded in having Army people establish single office which will receive all French claims and have today had interview with the Minister of Finance urging that their claim be now promptly submitted. Our people charge French with delay; French charge our people with delay. Hope to get some large amounts put through very promptly in order to cover cotton purchases. Extraordinarily difficult to have importance of these matters understood, but progress is being made.—CROSBY.

SHARP.

[Handwritten]

TREASURY CHAMBERS,
Whitehall, S. W. 1.

Sir H. Lever telegraphed, 19 Jan., 1918.

In all our discussions the understanding has been that this 94 million dollars (to meet Feb. maturities) will be a first instalment of a larger amount and that ultimately whole of overdraft including ripe bills might possibly be paid off. Secretary of the Treasury is not willing to make a prior commitment as to further advances and question as to whether any will be made depends to a considerable extent (a) on general banking situation, and (b) on political reception of the advance now under consideration.

[In pencil: Above is Treasury's latest information on the scope of the new loan. P. D. C.]

EXHIBIT NO. 3031

[Handwritten letter]

22 JANUARY 1918.

DEAR CRAVATH: Lever's telegrams are down at the House of Commons with the Chancellor of the Exchequer; but I have revived my memory of them by telephone. In putting the figure at $150,000,000 I was making a confusion. I understand that according to the latest proposals we are to receive on Feb. 1: (1) ship money—circa $86,000,000; (2) a special advance variously stated at $100,000,000 and $94,000,000.

I suspect that the correct figure for (2) may be the exact amount required to meet the Feby. maturities, i. e. $92,000,000; the intention being that the special advance should cover the maturity of the one year notes, leaving the ship money free for reduction of the overdraft. In any event you may take it that the special advance contemplated is round about $m90—$m100.

The exchange we have purchased in New York has been:

December	$132, 044, 000
January 1–21	65, 234, 000

Sincerely yours,

[s.] J. M. KEYNES.

[In pencil: Feby. 1st maturity].

EXHIBIT NO. 3032

16A2 220A

J. P. MORGAN & Co.,
CABLE DEPARTMENT,
New York, Jan. 19, 1918.

[Copy of cable despatched 6:00 p. m. to Morgan, Grenfell & Co. London]

61200. Denkstein. For E. C. Grenfell. Since T. W. Lamont's return from abroad, he and A. M. Anderson have spent much time in Washington in following up with U. S. Treasury the matter of British call loan and February 1st maturities, so fully discussed in London. Federal Treasury appreciates bad effect upon American money market of having this call loan continue indefinitely, and it has therefore been frankly desirous of arranging means to effect reduction and eventual cancellation of loan.

We have now agreed to suggestion made by the Treasury under which we purchase next week $150,000,000 U. S. Treasury 4% certificates due June 25th next, proceeds of $86,000,000 of which will be turned over to British Treasury to be applied to that extent in reduction of its call loan. In order to carry out this plan we and our associates are obliged as you can see to purchase an amount of certificates greatly in excess of amount to be applied upon the call loan. This is the consideration which the Federal Treasury receives for lending its cooperation to the plan. This proposal is, in one way, rather a hardship upon participants in the loan, and in order to keep them from any actual money loss between now and June 25th, we are telling them that in the event that the Federal Reserve bank raises its present 15-day rate so that allowing for taxes a loss would result to the banks in case they wish to borrow upon these certificates, then, and in that event, we will lend to the banks upon these certificates, either for 15 days or some other period, at a rate that will show them no loss. In such event we should of course expect to be reimbursed by British Treasury for any loss which we might thus incur between our rate and rate at which we could in turn borrow for a similar period, but our judgment is this is almost an academic question, for it seems to us that Federal Reserve bank is more likely to lower than to raise its discount rate on this type of security, and further, even in latter alternative, it is very unlikely that banks would ask us to make loans in question. In order, however, to put the whole deal through, in which our firm is taking a heavy participation, it is necessary for us to offer to some of the larger institutions some proposition as described. We have no doubt British Treasury will realize that in any event we will handle matter as discretely as possible, and further, will understand the vital necessity of taking this opportunity to begin to resolve the call loan in cooperation with Federal Treasury.

Federal Treasury has been in conference with British Treasury authorities here in regard to plans to utilizing to best possible mutual advantage such British-owned securities now held in this country, and free from pledge subject of course to all conditions under which securities are borrowed from owners and to any engagements British Government has undertaken. Discussion of this matter has not been within our province, but we are convinced that all Federal Treasury desires is generous cooperation on part of British Treasury in working out method for handling increasingly heavy Allied finance demands here, including those which result from purchases in neutral markets. You will not misunderstand us we are sure when we say that we are convinced that British Treasury can well afford to be very broad in its attitude on this point. Fortunately, relations between Sir Hardman Lever and Federal Treasury are on such basis that all such questions can be handled—we are convinced—without difficulty as they may arise.

Sir Hardman Lever is of course cabling the whole situation fully to Chancellor for his approval, but it is important that you should be in touch, and we would suggest that you present the gist of this message to the Treasury as representing our views.—T. W. LAMONT.

MORGANCO.

EXHIBIT NO. 3033

THE SECRETARY OF THE TREASURY,
Washington, January 22, 1918.

The Honorable the SECRETARY OF STATE.

DEAR MR. SECRETARY: May I ask that you have the following urgent telegram sent to Assistant Secretary Crosby in London:

"Treasury number 59. I have indicated my readiness to assent to the use, out of our advances to the British Government, of a sum of about ninety three million dollars required for the purpose of paying off the five and one half per cent secured notes maturing February first as well as my assent to the use of the ship money in retirement of the overdraft. In that connection, however, I have felt obliged to ask not only certain general assurances in respect to the use of the securities owned by the British Government but also specifically that the United States Treasury should be subrogated to the rights of the pledgees with respect to the collateral released in connection with the payment of the February first maturity and on account of the overdraft. As to the latter, I have understood from your cables that no objection would be raised. I have made it my personal request that my views as to the requirements of expediency in respect to this transaction be assented to. You are fully informed as to the reasons which make me most reluctant to assent to the retirement of this indebtedness and of the reasons of expediency which lead me to feel that some special sanction should be thrown around the transaction. I should be glad to have you indicate to the Chancellor of the Exchequer and to any others with whom you may have occasion to discuss the matter that the suggestions which I have made are based upon my judgment as to the best course to be pursued in the interests of the governments concerned."

Cordially yours,

[s.] W. G. McAdoo, *Secretary.*

Exhibit No. 3034

The Secretary of the Treasury,
Washington, January 23, 1918.

Dear Mr. President: You will recall that, in asking your approval of the establishment of a credit of $185,000,000 for Great Britain for the month of January, I indicated to you that the demands which had been made by Great Britain were for more than twice that amount; and that I delayed making any recommendation of a larger amount until I should be better able to inform you of what the actual requirements would be. For a variety of reasons, the principal of which, however, are the deficiency of tonnage and the order of the Fuel Administrator, the actual cash outgoings of the Government of Great Britain have been less than was anticipated, and I am glad to be able to say that a further credit of $65,000,000 for the month of January will, it appears, suffice.

At the same time I believe it wise to ask your approval of the establishment of a credit for Great Britain for the month of February in the sum of $210,000,000. Again I am obliged to say that I fear that this credit will be insufficient to carry the British Government through the month; by how much, however, I am not now in position to say.

In order that the actual cash requirements of the situation may be provided for for a reasonable period in advance, I recommend the establishment of an additional credit of $65,000,000 for Great Britain for the month of January, and the establishment of a credit for Great Britain for the month of February of $210,000,000.

In connection with these credits, I should call your attention to the fact that Great Britain has maturing on the 1st of February the unpaid balance, amounting to about $93,000,000, of an issue of one-year 5½% secured notes. I have been very reluctant to permit the repayment of this loan out of advances made by the United States, but I am satisfied that it could be refunded upon our markets in the existing situation only at a rate of interest so high and secured by so great an amount of collateral as would gravely impair the credit of Great Britain and the ability of the United States to carry through successfully its own financing. In connection with the refunding of this indebtedness, I am asking assurances with respect to the collateral securities held by the pledges and I am asking other collateral advantages for the United States which, in my judgment, make the transaction in every way a wise one.

Cordially yours,

[s.] W. G. McAdoo, *Secretary.*

The President,
The White House.

The White House,
24 January, 1918.

Approved.

[s.] Woodrow Wilson.

("Exhibit No. 3036" appears in text on p. 9166.)

EXHIBIT No. 3037

[Typewritten note: Correct date probably Jan. 25, 1918. Senate Munitions Committee]

PLAZA HOTEL,
New York, January —, 1918.
[(In ink.) Received Jan 29]

DEAR MR. SECRETARY: Following upon the conversations which have recently taken place in regard to the capital liabilities of the British Government in the U. S. A. and the application by the British Treasury of the securities in its control in the U. S. A., I desire to put in writing certain facts and proposals with a view to a settlement of some of the financial problems which have arisen.

First, as regards the capital liabilities, the two matters which are immediately pressing are (a) the maturing on the 1st February 1918 of one-year secured notes of the British Government to a total of approximately $94,000,000, and (b) the need for effecting a substantial reduction in, and if possible for completely repaying, the British Government's overdraft or call loan which originally stood at close on $400,000,000. The amount now outstanding is approximately $310,000,000, included in this figure being three months British Treasury bills to an amount of about $90,000,000.

Second, as regards the securities controlled by the British Treasury in the United States, these consist of American and other securities which are either the absolute property of the British Treasury or have been deposited with the British Treasury, subject to certain conditions as to payment of compensation and eventual return to the depositors. Nearly the whole of these securities are at present pledged in this country as collateral, either for secured loans or for the overdraft above referred to. The British Treasury is, of course, at all times ready and anxious to co-operate with the U. S. Treasury in using all its resources in furtherance of the common cause. But its powers to deal with the securities under its control are at present very much restricted by the existing commitments above referred to.

Third, it appears to me to be germane to the subjects now under discussion to draw attention to the fact that since the date of the entry of the United States into the War, the dollar expenditure of the British Treasury on current outgoings in the United States up to the 30th November 1917 exceeded by approximately $400,000,000 the amounts received directly or indirectly by way of advances from the United States Treasury during that period. This excess of expenditure included an amount of approximately $160,000,000 spent on Russian account. In order to meet these outgoings, the British Treasury had to draw on all its available resources, and as you are aware the amount of gold imported into the United States by the British Treasury since April 1917 is about $290,000,000, of which some $226,000,000 was applied for ordinary current expenditure. The British Treasury had counted on being able to apply these resources to reducing its capital liabilities in the U. S. A., and it is only the excess expenditure on current outgoings which has prevented it from so doing.

In these circumstances, I desire now, on behalf of my Government, formally to request that the United States Treasury should consent to the application of $94,000,000 of its advances to the British Government, which my Government will use for extinguishing the liabilities maturing on February 1st, 1918.

I am authorized by my Government to say that in the event of such advance being made by the U. S. Treasury and applied in reduction of capital liabilities the British Government is willing to undertake that, subject to all previously existing liabilities, and insofar as not inconsistent with its existing pledges and undertakings,

(1) It will refrain, during the continuance of the war, from selling, pledging, or otherwise dealing in the U. S. A. with any securities owned by or deposited with the British Treasury, except with the approval of the Secretary of the Treasury of the U. S. A.; and

(2) The British Treasury agrees to co-operate with the Secretary of the Treasury of the United States in facilitating during the course of the war the issue of loans by or on behalf of the United States Government, by the use of such British-owned securities as may be owned or controlled by the British Treasury, subject to the limits of such control and to the requirements of the British Treasury in connection with its own prospective financial operations.

I am, dear Mr. Secretary,
Very truly yours,

/s./ S. HARDMAN LEVER.

(There was no exhibit marked "No. 3038")

EXHIBIT No. 3039

JANUARY 26, 1918.

DEAR MR. SECRETARY: May I ask that you have the following cable message sent as expeditiously as possible to Mr. Crosby in London:

Treasury number 63, supplementing Treasury number 59. Informed today that British Government declines to subrogate United States to rights of pledges with respect to collateral released in connection with payment of February first maturity and on account of overdraft. British Government assents to request that during continuance of war it refrain from selling, pledging or otherwise dealing in United States with any securities owned by or deposited with British Treasury except with approval of Secretary of the Treasury. It is, of course, already in my power to compel this. In lieu of assurance desired that British Government will cooperate with me in lending, selling, or hypothecating such securities, whether in the United States or elsewhere, in aid of the financial requirements of the Government of the United States or of the Allies, the British Government proposes an assurance "to cooperate with the Secretary of the Treasury of the United States in facilitating during the course of the war the issue of loans with United States Government guaranty by the use of such British owned securities as may be owned or controlled by the British Treasury subject to limitation of such control and to requirements of British Treasury in connection with their own prospective financial operations."

As you know, I have been extremely reluctant to permit our advances to be used to pay off this old indebtedness. You are very familiar with my views in this connection. Nothing but the feeling that this loan could only be renewed, if at all, in our market upon terms so onerous as to reflect upon credit of British Government and to suggest a lack of willingness or ability on the part of the United States to support the British Government induced me to assent in principle to such use of our advances and then only if the British Treasury were willing to place the United States in respect to the collateral in a position approximately as advantageous as it would gladly have placed American bankers in if any could have been found willing to undertake this loan upon any terms. I do not want to make this loan; I cannot make it unless the British Treasury can see its way to meet my views in the matter. I had made arrangements with the British bankers here which would have enabled me to make the advance necessary to meet the February 1st maturity as well as to pay the ship money without infringing upon $500,000,000 a month for Allies for current purposes. These arrangements fail if British Government finds itself unable to meet my views. The situation is very acute because of the near approach of February 1st and, while I shall, of course, do what may be necessary to prevent an actual default on that date, failing their assent to my suggestion, I shall be obliged to insist that any sums advanced for the purpose of meeting the February 1st maturity be deducted from amounts otherwise available for current purposes which means, of course, that the British Treasury will have to issue a secured loan on our market within a week or two provided I should be willing to permit such an offering. British representatives here offer no encouragement as to bringing in gold from Canada and state that the Danish loan will not be available until April or thereabouts, the part of it already rendered available having been heretofore applied in reductions of the overdraft or of British Treasury bills here. Though the most serious difficulty in this transaction is utter refusal of British Treasury to subrogate in respect to the collateral whether in connection with February 1st maturity or payment on account of overdraft, I am also much disconcerted by the very restricted assurance of cooperation above quoted with respect to the use of securities here and in neutral markets. I have no reason to suppose that there will be for some time to come a need of collateral security for loans issued with the United States Government's guaranty. You have shared my disappointment at the apparent failure of the British and French Governments to realize the importance of settling their balances in neutral countries by placing securities in such countries. While our loans to Great Britain so greatly exceed the amount of her purchases here I feel justified in expecting hearty cooperation in lending, selling and hypothecating securities in the United States or elsewhere in aid of the financial requirements of the Government of the United States or of the Allies. I hope that you will take this matter up with the Chancellor of the Exchequer in your own graceful way and explain to him the limitations of our statutes, both express and implied, and the reasons, with which you are fully familiar, which made me desirous, if in any way possible, to avoid retirement out of our advances of indebtedness now in question. Bear in mind that although the ship money is the result of the purchase of ships belonging to Great Britain this money should properly be applied to cover adverse balances in neutral markets rather than to retirement of pre-existing indebtedness. On that account as well as on account of our own political and economic situation feel obliged to request subrogation in respect to the collateral released from proceeds of the ship money as well as in respect to the collateral released in connection with the February 1st maturity. It is of the utmost importance that this matter receive full, patient, and comprehending consideration from the highest authorities in Great Britain since it seems inevitable that without a satisfactory understanding on this subject the British Treasury will be obliged to offer upon the American market a new secured loan under conditions most unfavorable to the Government and with possibilities of failure.

Cordially yours,

(Signed) WM. G. MCADOO, *Secretary.*

The HONORABLE THE SECRETARY OF STATE.

JANY. 29TH, 1918.

DDDSSS Paris 36944 325 30 1h 25.
Extreme urgence.

BONAR LAW,
Chancellor of Exchequer,
12 Downing Street, London.

January twentyninth. Have just learned by wire from Gravath of cable addressed to me by Secretary McAdoo expressing surprise and regret that British collateral now in New York is not made available to protect a loan arranged in form, the particulars of which are not known to me, but which represents balance due by your Government on February, first maturity and Morgan overdraft after applying approximately ninety millions ship money. If the conditions of pledge of collateral are objectionable and if that is the reason for refusal of collateral I suggest that transaction might be put through to save the situation on February first, with proposal on your part that these conditions might be revised after that date even though this would not bind those to whom the pledge is made. It is not improbable that if the conditions are judged by Secretary McAdoo as being harsh that modification might be obtained later. It would be most unfortunate if the transaction which has presumably been negotiated between your representatives, those of the Treasury of the United States, and New York bankers should fail, in which case at the last moment you might think it necessary to appeal to our Treasury to meet the one hundred million dollars due on February first. Being unaware of the details I am telegraphing somewhat in the dark. Inspired by a sense of the seriousness of the situation that would develop through any failure to carry out understandings tentatively reached in New York and Washington as it was impossible for me to reach London in time to discuss matter with you before action must be taken. Gravath consulted Lord Reading who has doubtless consulted you. I should very much appreciate a telegram concerning this subject addressed to me tomorrow, Wednesday, at the office of the Council, number two Rue Saint Florentin, and in duplicate to the Hotel Meurice.

CROSBY.

[In pencil: Crosby to Chancellor.]

EXHIBIT No. 3044

29TH JAN. 1918.

The VISCOUNT READING, G. C. B., K. D. V. O.,
32 Curzon Street, W.

DEAR LORD READING: The doctor insists upon my going into a nursing home to prevent my acute laryngitis, which is rendering me speechless, from developing into something worse. I fear I shall not be out before your departure. I hope Crosby will be here tomorrow. I have wired him about the long cable which came last evening, and of which I sent you a copy.

What I hope the Chancellor of the Exchequer will do is this: Promptly cable Secretary McAdoo that he acquiesces in such arrangements as Secretary McAdoo regards proper, for providing for the February first maturity, and the so-called over-draft (which includes Treasury bills) but, expressing an earnest hope that some suitable arrangements will be made, by which, hereafter, the loan can be refinanced and the surplus collateral made available for other purposes of the British Government. In case it should develop, at any time, that changed financial conditions would render such a transaction possible.

Any letters sent to me at Claridge's Hotel will be received by my secretary, and promptly taken to me at 19 Manchester Street, Manchester Square, where I shall be for the next few days.

Very sincerely yours,

[s] PAUL D. CRAVATH.

("EXHIBIT No. 3045" appears in text on p. 9172.)

EXHIBIT No. 3046

JANUARY 30, 1918.

MY DEAR SIR HARDMAN: I beg to acknowledge receipt of your letter of January 29th, addressed to the Secretary of the Treasury, communicating a personal message from the Chancellor of the Exchequer to the Secretary. I have also received your letter, handed me on the same date, offering certain assurances on behalf of your Government with respect to the securities owned or controlled by it. For your records I hand you herewith a copy of the letter (which I showed you yesterday) which the secretary has written to the Secretary of State, incorporating a message in reply to the Chancellor of the Exchequer.

In view of these letters and of the urgent representations presented on behalf of your Government, the Secretary of the Treasury has felt constrained to consent to the application of the necessary $93,000,000 or $94,000,000 of the advances of the United States to the British Government in payment of the secured notes of your Government maturing on February 1st, and to the use of the purchase price, $80,794,041.65, of the requisitioned ships in reduction of your Government's call loan or overdraft.

I have pleasure in advising you of the establishment of a further credit of $65,000,000 for your Government for the month of January and of the establishment of a credit of $210,000,000 for your Government for the month of February, which amounts will be made available against the duly executed obligations of your Government.

I understand that against these credits your Government will desire advances in the amount of $65,000,000 on January 31st, $30,000,000 on February 1st, $60,000,000 on February 8th, $60,000,000 on February 15th, and $60,000,000 on a date to be determined.

I understand that your Government may be obliged to ask the establishment of an additional credit for the month of February, the amount of which is now estimated by you at $40,000,000, and such request will, of course, receive the careful consideration of the Secretary if your Government finds it necessary to make it.

In this connection and referring to our various talks concerning the loan of $40,000,000 in the United States which your Government is negotiating with the Japanese Government, and the balance of the Danish loan of $25,000,000 which I understand will be made available to your Government in New York from time to time in the next few months, the Secretary of the Treasury is of the opinion that in view of the very heavy demands which are foreshadowed for current purposes these sums, when made available to your Government, should be applied in reduction of those demands rather than of the capital liabilities of your Government in this country.

I understand from you that the Chancellor of the Exchequer has no recollection of having suggested to Mr. Crosby that some gold might be brought in from Canada. The Secretary would be very glad if you would inquire further into this matter and let me know whether it would not be feasible to do this.

I am, my dear Sir Hardman,

Very truly yours,

(Stamped) (Signed) R. C. LEFFINGWELL.

Sir S. HARDMAN LEVER,
Financial Secretary to the British Treasury,
Plaza Hotel, New York.

Enclosure.

EXHIBIT No. 3049

102.1/575

THE SECRETARY OF THE TREASURY,
Washington, February 2, 1918.

DEAR MR. SECRETARY: May I ask that you have the following message cabled to London to be communicated to the British Chancellor of the Exchequer:

"As indicated in my message of January 29th, I have felt constrained to meet your views as presented to me by your representatives here. Mr. Crosby was mistaken in supposing that the proposed arrangements make provision for the overdraft beyond what the ship money would suffice to pay. On the contrary, I am obliged to ask that such moneys as may be made available to your Government in the United States by the Japanese Government or the Danish Government or by shipments of gold shall be applied in reduction of your demands for current purposes rather than to retirement of capital liabilities."

May I ask you to have a copy of the foregoing message delivered to Mr. Crosby together with the following:

"Treasury number 70. Your cable of January 30th and your no. 58 received. Simultaneous therewith personnel message from Chancellor of the Exchequer whose understanding apparently quite different from yours. British Embassy will hand you copy my reply to the Chancellor. Ask Chancellor to give you copy of his cable to me which apparently shows that he still is unwilling to subrogate me to rights of pledgees with respect to collateral. In addition to credit of $185,000,000 previously established for British Government, $65,000,000 was advanced January 31, making total of $250,000,000 for January. For February, $210,000,000 credit has been established, of which $30,000,000 was advanced February 1. With these sums British Government is taking care of February first maturities. British Government also received February 1 from Shipping Board $80,794,000 for ships, which was applied on overdraft. Expect that moneys received by British from Japanese and Danish Governments shall be applied to current expenditures and not to retirement of capital indebtedness. British representatives here indicate possibility of having to ask for $40,000,000 this month in addition to $210,000,000 credit established but this question is being held in abeyance and my judgment is that nothing further will be needed for February."

Cordially yours,

[s] W. G. MCADOO, *Secretary.*

The HONORABLE, The SECRETARY OF STATE.

EXHIBIT No. 3050

PLAZA HOTEL,
New York, 5th February, 1918.

Hon. R. C. LEFFINGWELL,
Assistant Secretary of the Treasury,
Washington, D. C.

DEAR MR. LEFFINGWELL: I have to thank you for your letter of January 30th. I shall be glad if you will kindly thank the Secretary of the Treasury on behalf of my Government as well as of myself personally for his decision in this matter.

In accordance with your letter the sum of $80,794,041.65 representing payment for the ships requisitioned from the British Government has been applied in reduction of the call loan or overdraft, while a sum of approximately $92,000,000 is being applied to meeting the secured notes of the British Government which matured on February 1st.

The further credit of $65,000,000 for January and the credit of $210,000,000 established for February make an aggregate credit for the two months of $460,000,000, out of which $92,000,000 is applicable to outstanding obligations, leaving $368,000,000 for current outgoings. You will remember that the estimate of the amount of advances needed for January, based on actual commitments, was put at $235,000,000 with a possibility that an increase to $275,000,000 might be necessary, and that the Chancellor of the Exchequer in his message relative to food purchases placed the requirements for February at $260,000,000, while intimating that if this amount proved insufficient, a sum of about $40,000,000 to be obtained from a Japanese loan transaction might as a temporary measure be used to supplement it. It will thus be seen that the total credits required for current outgoings for the two months, if commitments were to be taken as the basis, would be at least $495,000,000. In these circumstances I desire to request that the supplementary credit of $40,000,000 for February, of which you speak in your letter, may in any case be established in favour of my Government. With this supplement the total credits for January and February available for current outgoings will still, at $408,000,000, be $87,000,000 below the figure indicated on the basis of commitments.

In accordance with our conversations of last week, I am prepared to agree to make my actual drawing on the credits established dependent on the progress of expenditure, on the understanding that any balance not drawn during the month for which the credit is established will be allowed to be drawn after the close of the month.

I note that the Secretary of the Treasury is of opinion that the proceeds of the Japanese loan of approximately $40,000,000, and the balance (which will not be available till April) of the Danish loan of $25,000,000, should be applied for current outgoings rather than in reduction of capital liabilities. I have at once conveyed this opinion to the Chancellor of the Exchequer, and at the same time I am making further enquiries in regard to the possibility of bringing a small amount of gold from Canada.

I am, dear Mr. Leffingwell,
Yours very truly,

[s] S. HARDMAN LEVER,
Financial Secretary to the Treasury.

(In pencil) 1/30/18.

LORD READING,
32 Curson Street, London.

Learned from Cravath of serious situation existing in regard February first maturities. Impossible reach London in time to influence Chancellor's decision but wired him at midnight last night after vain effort to get into telephonic communication. Extremely important that I remain here at least until tomorrow to obtain results from conferences with Bliss and others concerning economies in orders for munitions, etc. Suggested to Chancellor that if he has refused to place collateral now in America as pledge for remainder of overdraft and February first maturity after application of ship money because of objectionable conditions of pledge, that he should consent now to those conditions with suggestion that Secretary of Treasury might undertake, if he considers them harsh, to obtain some modification after February first. It will be most unfortunate that appeal should be made to Treasury at last moment to save situation. I presume however it can be saved in another way namely that all the ship money should be applied to February first maturities leaving the overdraft as it is. I am extremely sorry that I cannot confer with you again but my whole visit here would be without effect unless I stay two or three days longer. I am counting upon your intervention to prevent any difficulty on first of February and also that you will fully explain existing situation here to Washington.

CROSBY.

(*Telegram received from Paris, dated January 31, 1918. Rec'd. 8:41 p. m.*)

SECRETARY OF STATE,
Washington, D. C.

Thirty-first.

"For Secretary of Treasury. Number 58. Telegraphic communication with London extremely difficult, hence wired Chancellor immediately after receiving news from Cravath concerning difficulty of February first settlement suggesting that you were interested in getting whole situation cleared up. Although I was ignorant of details presumed matter included February first maturities and Morgan overdraft and suggested that he should consent to any arrangement which had thus far been negotiated by his agents and approved by you, and if his objection now referred to harsh conditions of pledge of collateral that he should leave this also to you for possible future modification. He wires me this morning that he has acted in accordance with this suggestion and indicated that there is no question of harsh conditions of pledge requiring modification, but that whole matter is left to you. Delay in permitting collateral to be applied in accordance with conditions of negotiations in Washington and New York, he says, was due to misunderstanding. It was impossible for me to reach London in time for personal discussion before February first and particularly without losing effect of conference here with Bliss and Pershing in line with your correspondence with Secretary Baker. Will wire later today concerning this matter.—CROSBY."

FEBRUARY 1, 1918.

The Honourable W. G. MCADOO,
Secretary of the Treasury, Washington, D. C.

MY DEAR MR. SECRETARY: I beg to inform you that I have received a telegram from the Chancellor of the Exchequer asking that the following personal message may be conveyed to you from him:

"Since sending my message of January 28th through Sir Hardman Lever I have been in further communication with your representatives here and judging from the impressions they have formed from cable to Mr. Crosby there must be some misunderstanding.

"Position as I understood it was explained in my previous message which I did not intend to be a refusal of any arrangement you might press for. I would only add for the sake of clearness that the political difficulty I foresaw here was not an attack on me or on the British Government but speeches in House of Commons contrasting our action towards Allies with that of the United States towards us.

"Mr. Crosby however believes proposed arrangements cover a much wider field than I had understood and that you had it in mind to provide not only for the February 1st maturity but for the entire balance Morgans overdraft after application to ship money. This of course would be a step very greatly relieving us for which we should owe your Government very real gratitude.

"Please realize we greatly appreciate what you are doing to meet our old obligations and that I am ready to agree to any arrangement respecting our American securities which you may think necessary either for the protection of your market or to assist you in future financial operations."

Believe me , my dear Mr. Secretary,

Very sincerely yours,

[s] Richard Crawford.

Exhibit No. 3058

February 1st, 1918.

British Government Treasury Account.

Messrs. Morgan, Grenfell & Co.,
London, England.

Dear Sirs: Referring to our daily cable of today in which we advised the following credits and charges, which we herewith beg to confirm:

Received from the Federal Reserve Bank	$30,000,000.00
Received from the United States Government on account of amount due from United States Shipping Board and the United States Shipping Board Emergency Fleet Corporation, in accordance with the agreement between the above named, the Cunard Steamship Co., the British Controller of Shipping, and the Financial Secretary to the British Treasury (dated January 30, 1918)	80,794,041.65
Interest to Feb. 1st on participation in His Britannic Majesty's Government loan no. 2 held for account of British Treasury	3,850.00

We have today charged the British Government Treasury account as follows:

To cover the redemption of a like amount par value of United Kingdom of Great Britain and Ireland 1 year 5½% notes outstanding, due today		$91,931,000.00
This amount is arrived at as follows:		
Original issue	$100,000,000.00	
Redeemed from proceeds of sales of collaterals	7,388,000.00	
Converted to 20-year 5½% bonds ex. Feb. 1, 1918 coupons	392,000.00	
Converted into 20-year bonds with the Feb. 1, 1918 coupons attached to the bonds, retired	289,000.00	
Our commission for redeeming above bonds		57,456.87
Interest due Feb. 1st 1 year 5½% notes, coupons outstanding		2,538,882.50
Our ⅛% commission		3,173.60
Interest due Feb. 1st on $142,998,000.00 par value 2 year 5½% notes outstanding		3,932,445.00
The above amount is arrived at as follows:		
Original issue	$150,000,000.00	
Less amount redeemed from proceeds of sale of collaterals	6,854,000.00	
Less converted into 20-year 5½% bonds	148,000.00	
Our commission on interest due		4,915.56
Interest due Feb. 1st on 20-year 5½% bonds outstanding (with Feb. 1st, 1918 coupons attached)		12,017.50
Our ⅛% commission		15.03
Interest due Feb. 1st Central Argentine Ry. Co. conv. 6% notes		450,000.00
Our ¼% commission		1,125.00
Six months interest due Feb. 1st on British Government Treasury 2-year 5% notes issued to contractors		897,500.00
Our ⅛% commission		1,121.87
Interest to Feb. 1st on His Brittanic Majesty's Government loan "Morgan, Grenfell & Co. on account of clients no. 2"		1,166,675.42
We have also charged the British Government Treasury account		80,794,041.65
Which amount we have applied as a payment on account of the principal of loan no. 2, thereby reducing the unpaid balance of said loan to		135,745,958.35

Trusting you will find these figures agree with our cable, we beg to remain,

Yours very truly,

[Typewritten note: Mr. RATHBONE: Let us see what Reading will propose. R. C. L.]

FEBY. 14, '18.

Memorandum for Mr. Leffingwell in regard to February first maturities of British Government and over-draft or call loans.

Information should be obtained:

(1) List of securities which were held Feb. 1, '18, to secure the one year secured gold notes of the British Government.

(2) The amount of the over-draft remaining unpaid with amount of Treasury bills outstanding given in partial payment thereof.

(3) List of securities held Feb. 1, '18, to secure the over-draft with a memorandum showing to what extent these various securities may now be released.

It may suit the purposes of the United States Government to select the different collaterals to be released from the over-draft.

[Form of letter to Secretary of Treasury by British representative]

To ensure the subrogation of the United States Government to the rights of the creditor in respect of the securities pledged to secure the one year secured gold notes of the British Government, which were paid on or about February 1, 1918, and the securities, which were released on or about said date, from the charge of the call loan or over-draft, or at the option of the Secretary of the Treasury the use of such securities in such manner as he shall approve, I hand you herewith letters from various financial institutions setting forth that they hold the securities specified in such respective letters subject to the order and direction of the Secretary of the Treasury; the income accruing on such securities to be collected by the British Government for its own account while the securities are held as aforesaid by such financial institutions. By the delivery of the letters mentioned, it is not intended to transfer title to the securities therein mentioned.

[Form of letters to Secretary of Treasury from financial institutions]

This is to certify that the securities mentioned below are held by the undersigned, in bearer form or accompanied by appropriate transfers in blank, subject to the order and direction of the Secretary of the Treasury of the United States. While the said securities are held by the undersigned dividends received, interest collected thereon and matured coupons, from time to time, are to be delivered by the undersigned to or upon the order of

(List of securities, dated February —, 1918.)

[Form letter to Secretary of Treasury by British representative]

Having made the necessary arrangements with the holder of the over-draft or demand loan, I assure you that without your previous consent during the next few months the securities held to secure such over-draft or demand loan will not be disposed of or otherwise dealt with.

[S] A. R.

EXHIBIT No. 3062

(In pencil) ENGLAND.

MEMORANDUM OF CONVERSATION WITH MR. BLACKETT, FEBRUARY 23 (1918)

1. Mr. Blackett's attention was directed to the car loads of export freight at North Atlantic ports held for British Government on February 15th as per Mr. Smith's letter of February 16th. Mr. Blackett said he would like to know the number of car loads so held as of January 1st; that he did not know whether the amount of car loads for the British Government on February 15th, 3,333, was excessive and would make inquiries on the subject as he appreciated the necessity of freeing cars as speedily as possible.

2. Mr. Blackett explained the Treasury bill operations which he said had been used exclusively for the purpose of reducing the over-draft. He distinguished the Treasury bills from the Treasury notes issued to du Pont, as shown on the

December statement, and promised to furnish an itemized list of interest payments reported on the summaries for October and November. He stated the amounts now due on the over-draft at substantially $130,000,000 and in addition $100,000,000 of Treasury bills. The discount on Treasury bills was in effect payment of interest thereon in advance and accordingly all such discounts were, in effect, payments of interest on the over-draft.

3. The du Pont notes, the payment of which is included on the October summary, Mr. Blackett stated were one-year obligations, as were the du Pont notes, which matured in December and would mature in March. Of notes which matured in December one-half were paid and one-half extended for three months and would mature in March. Mr. Blackett said that the du Pont notes paid in October were not allocated against the United States advances and that, in accordance with an understanding reached with Mr. Crosby, they were to be paid from the amount payable by the United States Government for rifle plants in the United States which it had taken over from Great Britain, that the total amount so payable by the United States War Department was $15,000,000, of which $3,900,000 had been paid.

4. The Canadian payments and the difference in the treatment thereof on the December and January statements Mr. Blackett explained as follows: The munitions and food, etc., purchased in Canada were financed through the United States advances and certain Canadian advances, while the advances from the United States for the purpose, estimated to be about $15,000,000, a month, were about equal in amount to the amounts expended by Canadian munition makes for raw materials purchased in the United States, Canadian authorities thought that Canadian advances should be allocated to the cost of munitions purchased in Canada rather than to cost of food purchased there on the theory that Canadians felt that their food would be salable whether or not purchased by the British through advances made by Canada and that their munitions would not be salable unless purchased by the British through advances so furnished. Mr. Blackett further stated that it was merely a bookkeeping entry as to the purpose of the use of the funds advanced by the United States. Mr. Blackett's attention was directed to the situation from the United States point of view and the distinction between United States advances for the purpose of enabling Great Britain to supply Canada with the amount required to purchase raw materials in the United States in the manufacture of British munitions and advances to Great Britain to enable it to purchase Canadian food supplies. Mr. Blackett was told that we should have, whatever the determination of the Treasury might be in this respect, information showing in detail the application of the Canadian advances for the months of December to January (the amount of the advances to Great Britain for Canadian payments in previous summaries having been allocated to the cost of munitions to the British Government). Mr. Blackett said he would furnish this data.

5. The question of reimbursements was then discussed. In regard to wheat purchases, Mr. Blackett thought that Lord Reading's letter of September 17th contained a clear statement of the arrangement that had theretofore been in effect between the British, French, and Italian Governments in relation of purchases of wheat, but that the principle to be adopted in the future while not so clearly stated in Lord Reading's letter indicated that in the future a different course of dealing in respect to the allocation between the three governments of wheat purchased by Great Britain on joint account. Mr. Blackett called attention to the possibility of Great Britain buying all of its wheat outside of the United States leaving United States wheat to be purchased by France and Italy, he admitted that shipments had not been made in that way not even during the pre-war period, although he stated that the Indian wheat surplus had been largely increased since the war. Mr. Blackett's attention was called to the fact that the United States might consistently take the position that it would make advances for the cost of cereals purchased in the United States to the government to whom the cereals were shipped, and that the United States had gone as far as it should in the theoretical allocation of purchases when it was willing to accept the theory outlined in Lord Reading's letter as to the method which had been theretofore used in the division of the cost of wheat purchases in the United States between Great Britain, France, and Italy. Mr. Blackett said that he thought that Mr. Dickinson's report of the wheat situation would be at hand in advance of their making up in March their requirements for April and that information in regard to other matters of reimbursement with Italy could be readily furnished in advance of applications for United States advances to the other countries to reimburse Great Britain. Mr. Blackett's attention was called to the amounts of contemplated Italian reimbursements mentioned by Mr. Alliata, namely;

$51,000,000 now and $67,000,000 later. Mr. Blackett said he thought there was some mistake in regard to these figures, that all he knew of was an item of about $60,000,000 which included $50,000,000 to the Italian Government on account of cereals and some $10,000,000 for other purposes; that he thought the $10,000,000 figure was too high and that on more careful examination would be reduced. He stated that the effect of the United States failing to advance to Italy the amount needed immediately to reimburse Great Britain would be to increase Great Britain's requirements for advances from the United States for the month of March by a like amount. The matter of French reimbursements was also discussed. The distinction between the Italian case and the French case was pointed out, the former being reimbursements for specific expenditures and the latter being an estimated payment on account to be adjusted later. Mr. Blackett stated that the French-English accounts had not been adjusted since July 1st last but that he expected an early adjustment of these accounts up to December 31 (?) and some figures had been exchanged between the two Governments for that purpose. Mr. Blackett also stated that the money adjustments between Great Britain and France as to exchange was made in the United States in dollars and that Frecnh contributions by the support of British exchange reduced by a like amount the advances asked of the United States for that purpose. Mr. Blackett said that he though that any failure on our part to advance to the French the amount necessary to enable France to make reimbursements to Great Britain in dollars might be difficult to adjust, but that so far as he could see the only effect requiring information as to transactions between Great Britain and Italy, before making advances to Italy for a reimbursement to Great Britain, other than as already stated, would be a loss of interest to Great Britain which he could, no doubt, adjust with Italy.

6. The matter of making the United States advances to Great Britain depend on the actual cash requirements of Great Britain over and above her other resources was discussed. Mr. Blackett said it was necessary that Great Britain know monthly in advance the amount it could count upon receiving and that in estimates of the amount required commitments were not included, but merely their cash requirements for the coming month. It was pointed out to Mr. Blackett that in making these applications the entire situation should be disclosed not only as to the payments to be made out of United States credits and reimbursements from the Allied Governments, but also the payments of every character and as well the British resources available from every source to meet such disbursements and that the United States advances should be limited to the amounts which could not be otherwise met. Mr. Blackett while not objecting to this method of procedure thought that the result would be about the same, as the British resources were now pretty well limited to the advances from the United States and the reimbursements from the Allied Governments, that collateral held under the over-draft when sold was applied to the reduction of the over-draft, that he did not anticipate any more transactions such as the Danish loan or the Japanese loan. He thought that the other British resources might be estimated at about $10,000,000, he stated, however, that the income from securities held by Great Britain amounted to about $5,000,000 a month and of the Danish loan $12,000,000 or $15,000,000 had already been received, he did not recall which amount, but he thought $15,000,000, and had been applied towards the reduction of the over-draft. The Japanese loan of $40,000,000 was available and that Lord Reading intended to discuss the disposition of this fund, particularly whether it should not be used to meet maturing du Pont notes which would have to be paid when due.

7. Mr. Blackett promised to furnish a statement of the collateral now held under the over-draft, the list formerly submitted is not accurate owing to sales of securities since made. He stated that while there was no right to release collateral held under the over-draft as payments were made on account of the same, Morgan and Company had agreed, however, to deliver a fair proportion of this collateral. He also stated that under the arrangements made, the collateral held under the over-draft was not to be sold for the present. The United States was to be subrogated to the rights of the creditor in respect of this collateral and the collateral held under the obligations paid February 6th (a list of which Mr. Blackett agreed to furnish), in accordance with the arrangement made. He said he had not worked out any plan in respect to such subrogation, as Lord Reading intended to discuss that matter.

8. Mr. Blackett stated that the British Government was without dollar funds at the close of September 1917 and that their cash resources in the United States were exhausted at the close of November; that their December estimates were about correct and that their disbursements were made at about the rate estimated

until after Christmas and after that time they fell behindhand, largely through delay in shipments and receipts of materials, and the same was substantially the case in January, but that by spring he did not anticipate any such delays.

(Initialed) A. R.

(*The Ambassador in Great Britain* (*Page*) *to the Secretary of State*)

[Telegram]

London, *August 21, 1917—4 p. m.*
[Received August 22, 8:50 a. m.]

6993. I have received the following personal and private letter which I quote in full:

My Dear Ambassador: When I was in the United States the question was raised as to whether the shipping under construction in American yards on British account should be taken over by the American Government or should remain in the ownership of the country for which it was being built. Mr. Denman, at that time head of the Shipping Board, raised this point in the course of a conference at which both he and General Goethals were present which the British Government had adopted; his line of argument being that British orders occupied all the yards in the United States that American labor and American capital were absorbed in the construction of British shipping and that with their assistance Britain would find herself at the end of the war possessed of a great mercantile marine which the United States had built but did not own.

I took the liberty of pointing out to Mr. Denman in reply that in ordering these ships before America entered the war Great Britain took the only course open to her and one which, however the question of ownership was ultimately decided, must be to the advantage of all the powers fighting against Germany. It was of the first necessity that the whole of the world's resources in shipbuilding open to the Allies should be used in the construction of mercantile ships and as America was not then among the belligerents it was only by the British Government that the necessary arrangements could at that time be made with private owners of shipyards in the United States. I added that under no circumstances would the British Government enter into controversy with the State Department on the question of ownership and that we placed complete reliance upon the justice and goodwill of the authorities in Washington. To this policy we still adhere. If the United States Government after surveying all the circumstances of the case think the ships that we have ordered in their yards should belong to them we shall not think of making any protest nor are we of opinion that if the ships on completion are used in the war work of the Allies the question of ownership has any material bearing upon the conduct of the war. It may however be worth observing that if our own policy towards our Allies were taken as a precedent there would be no change of ownership in the case of the British ships now under construction in American yards. We always drew a sharp distinction between ships building for Allies in our yards and ships building for neutrals.

The latter were brought under the British flag and retained in Allied services for the period of the war, work on the former was dealt with exactly as if the ships were being built for British owners and when finished they were handed over without reserve to the country on whose account they had been ordered. There was as far as I can ascertain only one exception to this general practice and in this particular case satisfactory arrangements were made. From very nature of the case the largest losses in mercantile shipping have been borne by Great Britain. It is on Great Britain in the main that the Allies have relied for the maintenance of the seaborne traffic on which not merely their capacity for fighting but their very existence depends. It is on Great Britain that the full brunt of the submarine campaign has fallen. Our losses have been heavy and unless we obtain the ships now under construction for us in America we cannot easily tide over the critical period which must elapse before our own extended shipbuilding program bears its full fruit.

We should therefore feel much gratified if the United States Government thought it consistent with the claims of their own national interests to allow the ships now building for us in America to remain in their present ownership, though for the reasons given above we shall not press the point. We rely (as I said at Washington) on their justice and goodwill.

Yours sincerely,

Arthur James Balfour.

EXHIBIT No. 3064

(*The Secretary of State to the Ambassador in Great Britain* (*Page*))

[Telegram]

WASHINGTON, *September 7, 1917—3 p. m.*

5388. Your 6993, August 21, 4 p. m. After giving very careful thought and consideration to Mr. Balfour's views the chairman of the Shipping Board has made following reply to Secretary of State, which represents the views of this Government:

It has not been with any view to national advantage, but with the single-minded purpose of waging the war successfully, that my own personal thought has been given to this matter. On account of the uncertainty of the amount of tonnage we may require for our troops in France, my views are that we must move slowly. Our line of communication to our troops in France extends over the Atlantic Ocean. It is our first duty, not only to ourselves but to the nations associated with the United States in the war against the German Government, to see to it that every precaution is taken to preserve these lines of communication.

The American Government will be held responsible for the maintenance of its own fighting forces in France. It must not only have adequate transport facilities for troops, but must always have at hand a sufficient number of ships for the movement of supplies for the maintenance of these troops, as well as for the needs of the nations associated with us. The responsibility for this vital war service falls upon us. We cannot shirk the responsibility, or share it.

If we could calculate the measure of destruction of merchant shipping by submarines in the future, we would have greater freedom of action in this matter, but as the futue must be guessed, rather than gauged, it seems to me that we would assume grave risks in adopting any policy which would reduce our control of our own military and naval situation, without reducing our responsibility.

For your information, I will say that the steamship War Sword owned by the Cunard Line and now in San Francisco, which came under our commandeering order, has been turned over to the Cunard Company. This ship was ordered and paid for by the Cunard Company and I understand no money was due when the commandeering order went into effect and the ship was about ready to sail.

You will appreciate the uncertainty of our requirements on the other side at the present time, as well as in the future. We are figuring on sending thousands of tons of freight cars, locomotives, hospital trains, rails, ties, thousands of feet of lumber, and many other materials for construction of which it is impossible at the moment to gather complete data. In addition, the Army must be provided with transports, supplies for the Army, animals, munitions and food. For the sending of troops and supplies for our own men we can arrive at an approximation, but even this approximation is again made tentative by the degree of destructiveness in future submarine operations.

No one can predict with certainty or accuracy what demands will be made upon us in the future. The uncertainty of the entire situation is such that we should move cautiously with the thought always in mind of living up to our promises to our own people and to the nations associated with us. Our first thought, of course, must be for our own troops, and we must take every precaution to see that we are able to meet their requirements abundantly even at a time when we may have a million or two million men in France.

If we were to act hurriedly and turn over the tonnage to all foreign countries now in our yards, and later the submarine menace should increase, and thus decrease our present tonnage and proposed tonnage to a point where we could not supply our own soldiers or even delay the sending of such supplies, we would be placed in the position of having failed to use the good judgment which the American people expect us to use. The very labor used in the construction of these ships would have right to complain that its work had not saved its brothers in the trencees from the disaster that would come from a failure of supplies.

In view of all the facts, it is my hope that the British Government will appreciate the seriousness of our position and realize that the transportation of troops 3,000 miles is a serious task; that our ships must sail 6,000 miles in order to carry a cargo; that this is the longest line of communication which any nation in war has ever been compelled to maintain; that while they have suffered severely by the submarine and we recognize the point of view set forth in all friendliness, our own necessities require us to move with caution and care. They may rest assured that the tonnage in our yards that we may from time to time take over, if conditions demand it, will be in the service of our Army in France, as well as in the services of the nations associated with us in the war.

The American people have been most generous in giving every branch of our Government unlimited powers not only in supplying our Government sufficient funds but in being ready and willing to continue financing our associates in the war. The American people, in turn, expect us to pay special attention to our soldiers who are to fight our battles thousands of miles from home, and any steps taken whereby these men are not first considered, to my mind, would meet with the general disapproval of the American people.

LANSING.

EXHIBIT No. 3065

(The Ambassador in Great Britain (Page) to the Secretary of State)

[Telegrams]

LONDON, *October 26, 1917—4 p. m.*
[Received October 27, 2:20 p. m.]

7538. Mr. Balfour has just handed me the following aide memoire:

His Majesty's Government accept without question the decision of the United States Government to requisition all vessels building in American shipbuilding yards, including those building to British orders.

It may be convenient to repeat the British position in regard to these vessels. The orders were placed early in this year as soon as the commencement of the intensive submarine campaign made it obvious that the shortage of tonnage available for war services would be one of the most important factors in the war. This action was taken before America entered the war and was discontinued as soon as there was any indication that continued purchases might embarrass the future action of the Government of the United States. His Majesty's Government have been only anxious to maintain as far as possible the number of vessels available for war services and they have throughout made it clear that they would acquiesce without protest in whatever decision the United States Government took in the matter. His Majesty's Government recognize that the early advent of an American army is an advantage for which many risks must be accepted. The fact that the requirement of the United States for military transport will exceed previous expectations raises, however, certain very serious considerations to which His Majesty's Government venture to call the attention of the United States Government. The British ships available already fall short of the essential needs of the Allies for food and supply and His Majesty's Government had hoped to make good part of the deficiency with vessels building in America. The transfer of these vessels from the British to the American Government does not materially affect the position except that it transfers from His Majesty's Government to the Government of the United States the power to help France and Italy. On the other hand the diversion of tonnage from supply to transport will greatly increase the demands which the Allies will necessarily make upon the United States Government. There is every indication that through comparatively poor harvests, etc., the Allies' needs will be greater rather than less and His Majesty's Government fear, therefore, that these demands can not be postponed or ignored without grave military risk. As regards oil tankers building to British Government order it is earnestly hoped that these will not be requisitioned in view of the very great difficulty which the British Admiralty is experiencing in supplying oil for British needs and for the other Allies. These vessels are intended for the supply of oil fuel for the use of the British Fleet and their possession has been reckoned on in all the calculations which have been made of the quantities which can be imported in future months in British tank steamers. Their withdrawal would, therefore, correspondingly increase British deficiencies and create a most serious situation.

In conversation Mr. Balfour pointed out that the American requisition of ships building for British in the United States necessarily transferred the obligation from Great Britain to the United States to supply Italy and France with certain material and food. He said, "I do not mean any technical obligations, of course, but we shall no longer have the shipping power to give them the help that we should otherwise have given."

Mr. Balfour then gave me the following memorandum from the Controller of Shipping:

As an illustration of the extreme gravity of the food situation in Italy the Shipping Controller stated today that the Italians had ordered direct from Europe to America 20 vessels which it had been arranged should load iron ore from Spain to the United Kingdom. The failure of these vessels to transport 100,000 tons of iron ore will deprive us of 100,000 tons of steel which with lower-grade ore and scrap iron could be made thereof and which in turn will make 200,000 tons gross of shipping. On this subject of steel, which is the neck of the bottle in the production of merchant tonnage in the United Kingdom, it has been reported recently to us that it might be possible for the United States to let us have considerable quantities of steel slabs or steel plates without interference with their shipbuilding program. It was suggested however that the Americans hesitated to send this steel to us because they doubted the energy we were putting into our merchant shipping construction and thought that we were wasting our resources of steel in other directions. An increase in the steel supply from America is of the utmost importance and if any such misconception as I have indicated above exists it should not be difficult for us to show Mr. Page or anyone he appoints what is the true position.

The rumor that our Government doubts whether the British are doing their utmost in merchant shipbuilding has for some time been current here. The Ministry of Shipping have informed me that they are held back only by lack of material. I shall now on my own account ask the Controller of Shipping to make good his promise in the last sentence of his memorandum

FEBRUARY 14, 1918.

Sir HARDMAN LEVER,
c/o British Embassy, Washington, D. C.

MY DEAR SIR HARDMAN: I am enclosing a letter which I had intended to send to the Assistant Secretary of the Treasury, outlining the origin of the demand loan, and the variations in its size from time to time.

It has seemed to us that it would be well for us to put this information in his hands, particularly to point out the amounts which this market has actually advanced to the British Government through the medium of this call loan since the United States dismissed the German Ambassador, so that if the Treasury at some future time has funds available for a further reduction of the demand loan, it will have ample basis for so doing on the ground of reimbursing advances made since the United States became in effect a belligerent.

Won't you please let me know if there is any part of this that you would particularly like to have altered in any way.

Yours very truly,

——— ———.

P. S.—You might wire or telephone me tomorrow, if you will, so that I can get the letter off tomorrow.

T. W. L.

AMA/EGK.

EXHIBIT NO. 3067

[Private file copy]

FEBRUARY 19, 1918.

Hon. R. C. LEFFINGWELL,
Assistant Secretary of the Treasury, Washington, D. C.

DEAR MR. LEFFINGWELL: I am taking advantage of a brief breathing spell to express my personal appreciation of your patience and courtesy in the working out of the transaction which was closed on the first of the month. Everything went through smoothly.

There was a little reluctance on the part of a few of the banks to substitute a 4% obligation of the United States Government for a 6% obligation of the British Government, amply secured. On the whole, however, all of the banks recognized their patriotic obligation to increase their liquid position (the desirability of which they had in fact urged upon us) in order to be of as much assistance as possible to the Secretary of the Treasury in the next few months.

There are some facts with reference to the English demand loan with which you are undoubtedly familiar, but as to which I should like (with the permission of the British Treasury representative here) to write you informally and personally. Our English friends as well as our own Treasury authorities have often alluded to it as an overdraft. As a matter of fact, it cannot properly be considered as such. Prior to the entrance of the United States into the war the British Government was taking care of its purchases of supplies in this market by (1) gold shipments, (2) sales of American securities, and (3) issues of secured loans from time to time.

Pending the arrival of gold, or the public issue of notes, it was our custom to make advances, repayable on demand, which advances (except as to the joint Anglo-French loan) were always secured by prime collateral, American or neutral.

I have consulted the records and find that on February 6th, which was just after Ambassador von Bernstorff received his passports, the amount of the call loan (reduced through the proceeds of the British note issue dated February 1st) was about $72,000,000.

Just at that time, you remember, we had laid plans for the issue of $198,000,000 of Canadian Pacific Railway securities, the proceeds of which would have cleaned up the British Treasury situation very well. But finally conditions became such that the British Treasury authorities agreed with the Federal authorities at Washington that the British Treasury would better not proceed with the Canadian Pacific operations. Therefore, by April 3rd (the date on which Congress declared war) the Canadian Pacific loan not having materialized and no effeorts having been made during the previous two months to issue loans on behalf of Great Britain, the demand loan had risen to, $355,000,000.

After the declaration of war, but before Congress authorized loans to the Allies, the British demand loan had increased by April 20th to $401,000,000.

As against the net increase in the loan of $46,000,000 between April 3rd and April 20th, the gross amount actually advanced to the Government (offset partly by credits arising from gold imports and sales of securities) was $58,000,000.

The amount similarly advanced *after* April 20th aggregated about $95,000,000; and the total amount advanced after February 6th (including the above items) aggregated about $526,000,000.

I am giving you the above figures to indicate the amount which the British Government actually borrowed in this country through the medium of the demand loan after Ambassador von Bernstorff was dismissed; which amount, had we actually declared war and had the Treasury had authority, might conceivably have been advanced out of United States funds.

Although advances were made of $526,000,000 over and above the $72,000,000 of February 6th, the loan did not increase to this full extent because, during this period, gold imports and sales of securities from time to time offset the increase. During the latter part of the year, when the markets were in a semi-disorganized condition, we made comparatively few sales, although we still held a most varied and comprehensive list of saleable collateral.

Because of the high character of the collateral which secured the loan (I doubt if the banks have ever had a demand loan of better character) we should have been entirely willing to permit it to stand until gradually liquidated by the sale of the securities, had it not been, first, for the heavy demands which we all felt we must meet for our own Government financing; and, second, for the sentimental effect of having the collateral overhang the market. For both of these reasons, neither of which is likely to disappear, I think it important that—now that a start has been made—the balance of the demand loan should be cleaned up—even if it can't be done all in one operation. Certainly that is imperative if we are ever to have a chance of issuing a new formal obligation of Great Britain here, as you once suggested in connection with the February maturities.

If the attitude of the banks in New York is a proper indication of the attitude of the banks in the country, I think the Secretary can rely upon their wholehearted support in the carrying out of the programme that he outlined a few days ago. Especially will this be true if it is known that the Federal Reserve banks will cooperate. As you know, I have always felt it would be a mistake to go to the country with a great Liberty Loan before the spring. Weather conditions not only make it more difficult to get around the country districts, but unconsciously affect the spirits of us all.

Very sincerely yours,

(In pencil) T. W. LAMONT.

TWL/CAD.

EXHIBIT No. 3071

23 WALL STREET, NEW YORK, *July 3rd, 1918.*

R. C. LEFFINGWELL, Esq.,
Treasury Department, Washington, D. C.

MY DEAR LEFFINGWELL: I asked Anderson, when he returned from Washington a week or so ago, to tell me of his chat with you, for I had suggested to him that he bring up informally the matter of the British call loan. You will recall that last winter in our several discussions on the whole matter you expressed the hope that, after the first step had been taken in reduction of the loan, gradually further steps would be taken, until the obligation was entirely liquidated.

In fact, with this in mind, we were glad to accede to the condition that you laid down, that, until further notice, we should refrain from marketing any of the collateral. You, of course, realize that we had no real right to accede to this without consulting each one of the many banks that had an interest in the loan, inasmuch as each one of those institutions had a right to call his share of the loan, and, in the event of its not being paid, to demand the sale of collateral sufficient to liquidate it. Of course we did not consult all these institutions, knowing that you did not desire such publicity in the matter. But I simply recite all this to recall the circumstances to you.

Later on in the spring, when I had a little chat with you in Washington about other matters, you expressed a good deal of doubt about being able to take another step in the near future in assisting the British Treasury to liquidate the loan, but I did not attempt to argue the matter with you. I think, however, that you must now agree with me that in common justice to those who have so long carried this burden, some arrangement should be made either to liquidate the loan or to permit the borrower to take steps to liquidate it through the sale of the collateral.

I know that you have no intention whatsoever of taking any step that is not fair; but I submit to you that it is not fair to tell a man who is holding a loan that is long overdue, that he shall neither get his money by direct payment, nor shall he exercise his right to call upon the borrower to make payment through the sale of the collateral to the loan.

Furthermore, all the institutions who have now carried the burden of this so-called demand loan for almost a year and a half, have been, as you know, most loyally co-operative with the American Treasury. They will continue to be so, and that statement of course includes each and every one of us. But I must say that on the whole I don't think those institutions are fairly treated when they are compelled to carry this burden indefinitely and yet not allowed to collect the loan by the only means manifestly possible, and so lighten the burden. Further, if the amount were so considerable that it really made a vital difference to the situation of the American Treasury, it would be different. While, of course, it is large, remaining at approximately the $220,000,000 figure (including the ninety day Treasury bills), yet it almost seems to me that it could be cleaned off without an undue strain upon our own Treasury.

Looking at the other side of the picture, you have no idea how helpful it would be, as a constructive measure, to bury this dead horse completely, and once and for all. When a man takes on a loan as purely a demand obligation, and then finds it remaining as a permanent burden, it becomes after a while rather a sore point, and it isn't a good thing, as it strikes us, for either the British or the American Treasury to have this situation continue indefinitely. Furthermore, if the loan were cleared off, that would, as it seems to me, give us a good fighting chance to do something with the British maturity of $200,000,000 on September first, or, at any rate, with a substantial part of it.

Of course, unless the demand loan is taken care of, there will be no chance at all to do anything with the September maturities, the reason being that, in order to try to handle a new issue, we must look for underwriters largely to the very same institutions that are now carrying the demand loan. The British issue due on September first is in the form of bearer bonds, scattered all over the country, and it is quite out of the question to look to them with any confidence to take a fresh obligation. They have been trained too well to buy Liberty bonds and nothing else. But if we could get the loan underwritten, then there would be a fair chance of gradually peddling it out to the investor and getting it well planted: A condition precedent, however, as I have explained, to the underwriting of any new British issue, is the liquidation of the present call loan.

I am going away for ten days salmon fishing up at New Brunswick and a little rest, and I thought I would give you these lines to show you exactly the way the matter looks to me after canvassing the situation over here pretty carefully.

When I get back I hope that I shall have some word from you in some form or other. With great respect and cordial personal regards, I am,

Sincerely yours,

TWL/HN (Signed) Thomas W. Lamont.

Exhibit No. 3072

[Copy]

New York, *July 16, 1918.*

Dear Lord Reading: In Washington last week you asked me for a definite answer to the following questions:

(1) If the demand loan which the British Government now has with bankers should be paid off would it be possible to form a syndicate to guarantee the sale of about $200,000,000 of British Government notes to supply the Government with the necessary funds to meet the maturity of the $194,000,000 of secured notes due Sept. 1st?

(2) If such a syndicate could be made what would have to be the terms and conditions of the new notes and what would be the price to the public and the cost of the money to the British Government?

In view of the need for care lest the public should fancy that there is any question as to the payment of the maturing notes it has not been possible to make any very extensive inquiries, but after discussion with those best able to judge I can answer your questions as follows.

I believe such a syndicate could be formed; the new note could however only be of a short term—say 2½ years, and would have to be of a high coupon rate, say 6%. The price at which the syndicate would expect to sell it would be about 97½ to 97¾ and there would have to be a syndicate commission of about 3% making the net return to the British Government of about 94½ or 94¾. The collateral would have to be satisfactory and the note would have to have the privilege of conversion into a British Government unsecured long term (say 20 years) 6% bond.

The reasons for these extremely onerous terms are not any doubt either of the sufficiency of the borrower or of the security to be pledged but simply that there is at the present time a very intense competition for the comparatively small amount of money available for investment in other directions than Liberty Bonds, and the sum required is large in proportion to the total amount of funds for investment. The shortness of the term of the notes which I am advised is necessary also increases the difficulty as the syndicate being paid a percentage on the notes underwritten the amortization of that expense must be made in a short time.

It is hardly necessary for me to say that I sincerely hope some other way may be found by the British Government in which the needed money may be obtained at a less cost. I deeply regret being forced to give such a discouraging answer to your question.

Yours faithfully,

(signed) J. P. Morgan.

EXHIBIT No. 3073

18TH JULY 1918.

The Hon. R. C. LEFFINGWELL,
United States Treasury Department,
Washington.

MY DEAR MR. LEFFINGWELL: In accordance with my arrangement with you at our discussion on July 16th, I have pleasure in enclosing a copy of the letter addressed to me by Mr. J. P. Morgan in regard to the terms on which a public issue could be made on the market of a British Government Loan.

I am, my dear Mr. Leffingwell,
Very sincerely yours,

[s] READING.

R. C. LEFFINGWELL, ESQ.
Treasury Department, Washington, D. C.

DEAR LEFFINGWELL: Thanks very much for your letter of July 27th. When Mr. Morgan returned and told me of his conference with you and Lord Reading, it seemed to me that the solution that you had tentatively arrived at, was, all things considered, as feasible as any other plan that could be suggested. I think that if this plan is carried out if will help the general money market situation somewhat, will enhance Great Britain's credit, and such effect as it will have on the impending Liberty Loan will certainly be favorable. If it comes to the question of marketing securities, of course you may rely upon the fact that we shall use the utmost circumspection in that regard.

I am going to be in Washington tomorrow for a little while at the request of the War Finance Corporation. I must catch the one o'clock train back to New York, but hope to drop in and simply pay my respects to you as I always desire to do.

Sincerely yours,

[s] T. W. LAMONT.

[Note: "Sir Hardman Lever says that Lord Reading said to J. P. M. yesterday at Boston McAdoo had approved this plan."]

The Honourable W. G. McADOO.

MY DEAR MR. SECRETARY: The Chancellor of the Exchequer desires me to express his warm thanks to you for the assistance you have decided to give the British Treasury in the matter of the maturity of September 1st. It is a great satisfaction to him to know that you share his views that the terms proposed by Messrs Morgan were impossible of acceptance by the British Government. Indeed he never had any doubt but that you would come to this conclusion. Nevertheless it is a relief to him to know your decision so promptly, and he trusts that you will understand how much he appreciates your action.

May I, my dear Mr. Secretary, add my own expression of appreciation of the assistance you are giving to the British Treasury at this moment. May I also say how much I regret that I shall not be at Washington when you return and that our meeting must be deferred for a while.

I am, my dear Mr. Secretary,
Cordially and sincerely yours,

[s] READING.

EXHIBIT No. 3084

AUGUST 26, 1918.

The PRESIDENT,
The White House.

DEAR MR. PRESIDENT: Of the credit of $175,000,000 established in favor of the British Government, for which your approval was given on July 11 last, there remains at the close of business August 24 an available balance of $70,000,000. On September 3 there will become due obligations of the British Government amounting approximately to $193,000,000 and later in the month about $6,000,000 additional obligations, the payment of which is guaranteed by the British Government. I am satisfied that the obligations of the British Government mentioned can not be replaced by its new obligations except upon terms which would seriously reflect upon British credit and would be detrimental to the general situation. The collateral pledged to secure these obligations consists principally of United States railway, public service, and industrial bonds and stock, Canadian railway securities, and government obligations of Canada, the Argentine, and Chile. It would, in my judgment, be unwise to force the British Government to sell this collateral now in order to raise the amount necessary to pay these obligations. Such a sale upon our markets would have a most unfortunate effect upon our financial situation, which it is most important to protect.

I have arranged, therefore, with the British Government to advance the amounts needed to take up these obligations at their maturity on their assurance that I shall be subrogated to the rights of the present holders of such securities in respect to the pledged collateral. When opportunity offers this collateral may be disposed of to provide for approved British expenditures here, thus reducing the amount of our future advances or in reimbursement of our advances already made and to obtain credits in Chile and the Argentine.

I now ask your approval of a further credit in favor of the British Government in the amount of $400,000,000, which with the available balance from the previously established credit should be sufficient to provide the funds to meet the maturities above mentioned and to defray the estimated cash requirements of the British Government in the United States until some time during the month of October.

Cordially yours,

(Sgd.) W. G. McAdoo.

The White House,
Approved August 1918.

A. R. RCL

Exhibit No. 3085

The Secretary of the Treasury,
August 26, 1918.

Memorandum for Mr. Leffingwell.

I think it would be well to give the President an idea of the character of the collateral security for the British loan. The insertion could be made at the end of the first paragraph.

I think it would be well also to say that it is necessary, in my opinion, to take up the British loan for the protection of our financial situation and also that if the British loan should not be provided for, and the collateral should be thrown upon the American market, it would have a very unfortunate effect, and that by taking up the loan, the Treasury can, when a suitable opportunity presents itself, dispose of the collateral and be reimbursed for the advances made.

W. G. McAdoo.

EXHIBIT No. 3095

DECEMBER 31, 1918.

DEAR SIR HARDMAN: The memorandum of December 26, 1918, which you handed me last Friday has received the careful consideration of this Department.

I regret that the United States Treasury is not in a position, even if the existing legislation permitted it. to advance to your Government $500,000,000 in addition to the balance of the $250,000,000 special credit which still remains available to your Government.

Now that the war is virtually ended and the attention of our people is being more and more concentrated on private endeavor, the meeting of our own large war expenditures and the advances in the nature of relief which this Government is being called upon to make to countries that are utterly unable to care for their necessary expenditures for this purpose, imposes a burden upon the United States Treasury which cannot be extended to meet the suggested additional advance to your Government.

Even were such not the case, the existing legislation authorizing the loans to be made by the Secretary of the Treasury to foreign governments does not contemplate advances for some of the purposes indicated by the memoranda. You will recall that the only loans which the Secretary of the Treasury may make to foreign governments are for the purpose of our national security and defense and the prosecution of the war.

In the judgment of this Department a large part of the outstanding obligations of your Government maturing February 1, 1919, will be converted in accordance with the option given the holders thereof. It should be possible for your Government to float a loan on our market at this time on terms it could accept and sufficient in amount to provide for the payment of such of the obligations of your Government as mature on February 1, 1919, and are not converted and to leave a substantial balance to meet other requirements of your Government in the United States. It is probably possible to increase the amount of your Treasury bills outstanding. You have already been informed of the view of the Treasury that it does not see its way in any event to make advances to your Government to meet these maturities, or to make advances to your Government for other purposes, which could be met by your Government if its maturities are refunded and not paid.

You will recall that your estimate as of December 1, 1918, showed that apart from maturities and commitments for food and cereals, the outstanding commitments of your Government less estimated cancellations aggregated $154,000,000. During the month of December your Government has received:

Loans from this Government	$186, 000, 000
In reimbursement for sterling furnished this Government	45, 029, 000
Reimbursement in dollars from the Italian Government (exclusive of the $6,500,000 per week on account of cereal purchases)	20, 000, 000
Total	251, 029, 000

Of the special $250,000,000 credit recently established in favor of your Government, there still remains available $193,961,000.

In addition, your Government has received dollar reimbursement from France, and has claims against other foreign governments for dollar reimbursement aggregating many millions of dollars. It will also be in control of dollar funds arising from sales of wool, ocean transportation of troops, sales of securities, sales of materials and other proceeds of liquidation of war activities.

It is the view of this Department that many of the requirements of your Government in this country can be met through the private credits ordinarily extended by private interests in normal times and conditions. Since many of the purchases of your Government are, I understand, now made on the basis of immediate payment the change to a commercial basis allowing a reasonable interval between purchase here and payment should afford marked relief in a situation which is essentially of a temporary character.

I also wish to refer again to the American and neutral securities which are available for sale by your Government, or which it may make available for sale. Foreign currencies realized upon such sales could in many instances be advantageously exchanged into dollars at the present exchange rate or they might be utilized in defraying the cost of raw material entering into commodities that your Government may desire to purchase in the United States.

I sincerely hope and I have no reason to doubt that by effective use of the method suggested and others, the financial requirements of your Government can be met without undue strain.

The treasury would have been glad if it could have seen its way by advances to make the task easier, but I am sure you will appreciate the heaviness of the burdens which the Treasury has to bear and will realize both the legal and the practical difficulties which prevent its acceding to your request.

I will write you later regarding the sale of silver to your Government under the authority of the Pittman Act and also regarding the dollar payments which have for some time been made weekly by the French Government to the British Treasury.

Very truly yours,

[s] ALBERT RATHBONE.

Sir S. HARDMAN LEVER,

[Stamped: Answered Jan. 22, 1919. E. B. S., vice president]

[Confidential]

J. P. MORGAN & Co.,
New York, January 21, 1919.

FIRST NATIONAL BANK,
2 Wall Street, New York, N. Y.

DEAR SIRS: Referring to our various conversations in regard to an account to be formed to underwrite the conversion of the remaining outstanding United Kingdom 5½% Notes due February 1, we now beg to advise that we have just reached an agreement with the British Government whereby we shall in effect underwrite the conversion on the basis of the amount outstanding at the time the British Government was able to act on our proposal; viz, approximately $95,000,000. It has been necessary to reduce somewhat the amount of the participations which have been tentatively discussed and we now confirm your interest in the business to be $5,000,000 based on approximately $95,000,000 to be underwritten.

The actual form of the commitment is that we agree to purchase at 99 and accrued interest, payable on February 1, an amount of the new 20-year 5½% bonds equivalent to the amount of notes outstanding on January 15, we are on our part to agree to supply at par all bonds that may be required for conversion. For your information we advise that conversions subsequent to the 15th amount to date to $14,000,000.

The method of dealing with such bonds as may be retained by the group in connection with this proposal will be decided when the amount is definitely ascertained.

Please advise if the foregoing is in accordance with your understanding.

Yours very truly,

J. P. MORGAN Co.

AMA/MEC

EXHIBIT NO. 3097

[Stamped: Answered Feb. 7, 1919. E. B. S. Vice President.]

[Confidential]

J. P. MORGAN & Co.,
New York, February 6, 1919.

FIRST NATIONAL BANK,
2 Wall Street, New York, N. Y.

DEAR SIRS: With reference to your interest of $5,000,000 in the account formed to underwrite the conversion of the United Kingdom two-year 5½%

notes in accordance with our letter of January 21, we beg to advise that there remained, unconverted, notes to the amount of approximately $44,500,000.

Members of the account have indicated to us their wish to withdraw bonds for investment to the amount of about $15,000,000, such bonds so withdrawn not to be resold in the market for a period of three months, unless sooner released by us.

As to the remaining amount of about $29,000,000 bonds, we are forming a syndicate to purchase such bonds from us at par and interest, for distribution at 101 and interest, in accordance with the terms of the enclosed syndicate letter. We are planning to syndicate among dealers and distributing institutions, other than those in the group, approximately 50% of the above $29,000,000 bonds remaining. Your interest in the remaining 50% bonds, based upon your percentage of interest in the underwriting as set forth in our letter of January 21 will be approximately $750,000, the exact amount to be determined when answers from the other members of the syndicate have been received.

Yours very truly,

J. P. Morgan Co.

AMA/MEC.
Enclosure.

Exhibit No. 3098

High Commissioner
The Earl of Reading, C. C. B.
Assistant Commissioner for Finance
Sir S. Hardman Lever, K. C. B.
Financial Secretary to the Treasury

British War Mission,
Office of the British Treasury Representative,
23 Wall Street, New York City, 18 January 1919.

The Honorable Albert Rathbone,
Treasury Deparrtment, Washington, D. C.

Dear Mr. Rathbone: In reply to your letter of January 16th, my Government is prepared to substitute 33,500 shares Pennsylvania Railroad Company stock and 15,000 shares Great Northern Railroad preferred stock for the securities set forth in the list handed you at the end of December. The purpose of this substitution is to set free from subrogation to the Secretary of the Treasury securities which are the absolute property of the British Treasury, having been purchased by the British Treasury from British owners, and to sell the securities so set free on the market here as and when opportunity arises. The securities which will be substituted are held by the British Treasury under one or other of the deposit schemes, the essence of which is that the securities deposited are not the absolute property of the British Treasury but are returnable to the owners unless circumstances make it inevitable that the British Treasury should dispose of them. The British Government is under a moral obligation not to dispose of them if it can possibly avoid doing so. No change has taken place in the position in regard to deposited securities subrogated to the Secretary of the Treasury since February last when subrogation first began. As regards all deposited securities which are subrogated, therefore, it cannot be said that the rights of the Secretary of the Treasury are precisely the same as they are in regard to securities which are the absolute property of the British Treasury.

I have set out this situation at length in order that there may be no risk of misunderstanding. I would point out that the question of substitution was raised solely because in respect of securities which it proposed to substitute, the British Treasury was not in a position to effect sales on the market because the securities were deposited.

I am, dear Mr. Rathbone,
Yours sincerely,

[s] S. Hardman Lever,
Financial Secretary to the Treasury.

Exhibit No. 3099

January 22, 1919.

Sir S. Hardman Lever,
The Plaza Hotel, New York City.

Dear Sir Hardman: I have received you letter of the 18th instant in regard to the substitution of securities referred to in my letter of the 16th instant. I also note that the British Government is under a moral obligation not to dispose of the substituted shares if it can possibly avoid doing so. It is the understanding of this Department, however, that the rights of the Secretary of the Treasury are to be precisely the same in respect to these securities as in respect to those which are to be released; that the rights of the persons to whom the British Government are under moral obligations in respect thereof are wholly subordinate to the rights of the Secretary of the Treasury in respect thereto, and that the British Government is solely responsible regarding the moral obligations referred to with which the Secretary of the Treasury is not concerned.

You will appreciate that the Treasury could not with propriety consent to a substitution unless it had full rights in respect of the substituted securities not affected by any moral obligation of the Britiish Government.

I am, my dear Sir Hardman,

Very truly yours,

(Signed) Albert Rathbone

AR:FJ

Exhibit No. 3100

High Commissioner:
The Earl of Reading, B. C. G.
Assistant Commissioner for Finance
Sir S. Hardman Lever, K. C. B.
Financial Secretary to the Treasury

British War Mission,
Office of the British Treasury Representative,
23 Wall Street, New York City, 8th July 1919.

The Hon. Albert Rathbone,
Treasury Department,
Washington, D. C.

Dear Mr. Rathbone: Referring to my Government's request for the substitution of certain securities for those now held by my Government under its agreement with the Secretary of the Treasury to subrogate him to the rights of the pledgees in respect of certain securities held by my Government, I have pleasure in stating that the understanding of the Chancellor of the Exchequer in regard to the situation and the existing arrangement, made by cables, letters, and verbal conversations prior to the respective times when the advances hereinafter mentioned were made by the Secretary of the Treasury to my Government, is as follows:

Certain obligations, either payable to bearer or accompanied by proper transfers in blank, and certain shares of stock accompanied by transfers in blank, were pledged and deposited by my Government with the Bankers Trust Company as trustee under a trust agreement dated February 1st, 1917, to secure certain obligations of my Government, viz, one-year-5½% notes aggregating $100,000,000 which matured February 1st, 1918, and two-year-5½% notes aggregating $150,000,000 which matured February 1st, 1919. From time to time during the continuance of such pledge certain of the securities so pledged and deposited were withdrawn from such pledge upon the substitution and pledge and deposit in lieu thereof of certain other securities of substantially similar class and equal value, all in accordance with the terms of said trust agreement.

Under the terms of the one-year-5½% notes and of the two-year-5½% notes the holders thereof at their option had the right to convert the same into unsecured bonds of my Government. The trust agreement of February 1st, 1917, among other things provided that—

1. My Government might proportionately withdraw the collateral security so deposited as the one-year-5½% notes and the two-year-5½% notes were paid or surrendered for conversion, and

2. In the case of the failure of my Government to pay when due the principal of the one-year-5½% notes and of the two-year-5½% notes or in the case of the failure of my Government to pay the interest thereon when due, or within the period of thirty days thereafter, the collateral security deposited under the trust agreement of February 1st, 1917, might be sold and the proceeds of such sale or sales applied to the payment of the principal and interest of the one-year-5½% notes or the two-year-5½% notes.

On February 1st, 1918, the one-year-5½% notes that had not been theretofore retired by sales of securities or converted into unsecured obligations of my Government amounted to $91,931,000, and were paid by my Government through advances made to it by the United States Treasury in a corresponding amount.

On the date last mentioned there were outstanding $143,146,000 of the two-year-5½% notes, $6,854,000 having been theretofore retired by sales of said securities.

On February 1st, 1919, the two year 5½% notes of my Government outstanding aggregated $142,906,000, there having been theretofore retired $7,094,000 of said issue by sales of pledged securities. Those notes then maturing were not paid but through arrangements made by my Government through a group of bankers the two year 5½% notes then outstanding were converted of effective arrangements made for their conversion into unsecured bonds of my Government, so that no part of the collateral security theretofore deposited under the trust agreement is now held for the benefit of the two year 5½% notes.

It is the understanding of my Government that it is obligated at the request of the Secretary of the Treasury to deposit with the Treasury of the United States, or in case the Secretary of the Treasury shall so request, with such depository as my Government shall approve, in bearer from or accompanied by proper transfers in blank, 91,931/234,837ths, or say 46/117ths of the securities deposited or pledged on February 1st, 1918, under the trust agreement of February 1st, 1917, that being the proportion borne by the amount of one year 5½% notes paid at February 1st, 1918, to wit, $91,931,000, to the sum of said last mentioned amount and the amount of $142,906,000 two year 5½% notes which were unpaid at the opening of business on February 1st, 1918, in all $234,837,000, the deposit of said proportion of collateral to be regarded as a pledge of the same, free from any and all prior claims or charges thereon to secure the payment of advances to my Government by the Secretary of the Treasury in the amount of $91,931,000, it being understand that such collateral is not to be sold or otherwise resorted to unless the principal or interest of such obligations of my Government in the amount of $91,931,000 shall not be paid when due and then only after a notice to the representatives of my Government in Washington of not less than thirty days.

In addition to the securities hereinbefore referred to, certain other obligations either payable to bearer or accompanied by proper transfers in blank and certain shares of stock accompanied by transfers in blank were deposited by my Government with the Farmers Loan & Trust Company as trustee under a trust agreement dated September 1st, 1916, to secure certain obligations of my Government, viz, two year 5% secured loan gold notes aggregating $250,000,000, which matured September 1st, 1918. The trust agreement of September 1st, 1916, among other things provided that in case of the failure of my Government to pay when due the principal of the two year 5% secured loan gold notes or in case of the failure of my Government to pay the interest thereon when due or within the period of thirty days thereafter the collateral security deposited under the trust agreement of September 1st, 1916, might be sold and the proceeds of such sale or sale applied to the payment of the principal and interest of the two year 5% secured loan gold notes.

On September 1st, 1918, through advances made to my Government by the United States Treasury in a corresponding amount my Government paid or provided for the payment of all said outstanding two year 5% secured loan gold notes to the aggregate amount of $192,842,000.

It is the understanding of the Chancellor of the Exchequer that my Government is obligated at the request of the Secretary of the Treasury to deposit with the Treasurer of the United States or in case the Secretary of the Treasury shall so request with such depository as my Government shall approve in bearer form or accompanied by proper transfers in blank all of the securities deposited or pledged on September 1st, 1918, under the trust agreement of September 1st, 1916, the deposit of such securities to be regarded as a pledge of the same, free from any and all prior claims and charges thereon, to secure the payment of advances to my Government by the Secretary of the Treasury in the amount of $192,842,000, it being understood that such collateral security is not to be sold or otherwise resorted to unless the principal or interest of said obligations of my Government in the amount of $192,842,000 shall not be paid when due, and then only after a notice to representatives of my Government in Washington of not less than thirty days.

The arrangement under which said securities formerly deposited under the respective trust agreements of February 1st, 1917, and September 1st, 1916, are held by my Government and under which they are to be held when deposited as aforesaid, will permit my Government, but only with the consent of the Secretary of the Treasury, to substitute for any of the securities so held other securities of similar class and equal value. This is in accord with the rights of my Government as provided in said respective trust agreements.

During the progress of the war certain of the collateral previously deposited under the one or the other of the trust agreements mentioned was, with the consent of the Secretary of the Treasury, used as collateral for certain loans which my Government negotiated in neutral countries for the purpose of providing credits therein and rectifying the neutral exchanges. It is understood that any such collateral is not now included in the arrangements herein set forth, and is not to be considered in determining the proportion of the collateral previously deposited under the trust agreement of February 1st, 1917, which my Government is obligate to deposit as aforesaid.

The arrangement herein before entered into which it is now sought to define comprised also an undertaking by my Government to hold available for use in such manner as should be agreed upon between my Government and the Secretary of the Treasury, having in view the rights of the depositors of said securities with my Government, until the termination of the war, such securities which my Government owned and controlled and which were on February 1st, 1918, physically within the United States, other than and in addition to the securities pledged under the trust agreement before mentioned.

I shall be glad if you will be good enough to confirm on behalf of the Secretary of the Treasury the foregoing understanding and arrangements.

I am, dear Mr. Rathbone,
Yours sincerely,

[s] S. Hardman Lever,
Financial Secretary to the Treasury.

Exhibit No. 3101

July 8, 1919.

Sir S. Hardman Lever,
23 Wall Street, New York City.

Dear Sir Hardman: I take pleasure in confirming the arrangement as set forth in your letter of the 8th instant. I wish also to repeat my previous statement to you in regard to the securities mentioned in the next to the last paragraph of your said letter, viz, that as from certain aspects the war may be regarded as terminated, at least so far as active fighting is concerned, the Secretary of the Treasury therefore regards as completely fulfilled the undertakings of your Government set forth in and confirmed by your letter above mentioned in respect of the securities therein mentioned other than those in respect of which your Government is obligated, at the request of the Secretary of the Treasury, to deposit with the Treasurer of the United States, as set forth in your said letter.

I am, dear Sir Hardman,
Very truly yours,

(Signed) Albert Rathbone.

AR:MEH.

Exhibit No. 3102

19th November 1919.

Dear Mr. Rathbone: I have been thinking further about the suggestions which we discussed together on November 1st and 2nd for releasing the subrogated securities in whole or in part, and have spoken to the Chancellor of the Exchequer on the subject.

First, I think that the repayment of \$40,000,000 out of rupee credits if and when finally arranged ought to release a proportionate amount of the securities now subrogated, i. e., $\frac{40,000,000}{284,773,000}$ of \$344,000,000, where \$284,773,000 is the total United States advances covered by subrogated securities and \$344,000,000 the approximate nominal value of the latter. You will, I think, agree that it is really impossible to earmark advances as having been expended in a particular way. There would be no difficulty improving that the whole \$284,773,000 covered by subrogated securities was in fact provided out of British Government resources other than United States Government advances, the latter having been used for other purposes. If it be assumed that the \$284,773,000 were actually used out of United States advances to repay maturing market debt it is equally fair to assume that the \$40,000,000 now to be repaid are a repayment of part of these \$284,773,000.

Secondly I find that the British Treasury-owned securities in the subrogated list consist of—

Security:	Nominal value
Canadian Government 4½% bonds	$32,000,000
United States of America securities	437,000
Others	255,000
Total	32,692,000

As I explained to you we are anxious to secure the early release of the Canadian Government 4½% bonds, and I propose that these should be set free as part of the securities to be released in respect of the $40,000,000 repayment.

Thirdly, the "deposited" securities in the subrogated list are of a total nominal value of a proximately $312,000,000. These are not the absolute property of the British Treasury. It costs the British Treasury ½% per annum on the nominal value—i. e. $1,560,000 per annum—to retain them. And we are under a very definite obligation to return them to the owners in 1921.

I have explored the possibilities suggested by the line of thought started by you, that we should substitute for the securities now subrogated Belgian (Post-Armistice) bonds and similar securities of Allied Governments, and find that I cannot immediately put before you more than approximate figures. We have not yet come to any final settlement with the Belgian Government either as to the form, etc., of the bonds or as to the catagories of advances to be covered thereby, and in these circumstances you will appreciate that I must ask you to regard the necessarily approximate figures I quote as confidential.

Subject to this proviso I set out for your consideration a proposal, in accordance with the discussion between us, that the securities now subrogated should be released in accordance with the following schedule:

Total nominal value of subrogated securities	$344,804,082
On repayment of $40,000,000 you will release an amount (including the $32,000,000 Canadian Government 4½% bonds) equivalent to $\frac{40}{284.778}$ of $344,804,082 (say)	48,432,096
Leaving a balance still subrogated of	296,371,986
We leave subrogated "owned securities" to the amount of	692,000
And for the balance the British Treasury proposes to substitute—	
(1) Post Armistice Belgian securities to an approximate total of	49,400,000
(2) Bonds of other European Allies to the amount of the balance (say)	246,279,986
Total	296,371,986

The effect of this substitution will be that all the subrogated securities will be British Treasury owned.

I have the honor to be, dear Mr. Rathbone,

Yours faithfully,

[s] Basil P. Blackett.

Exhibit No. 3103

Hotel de Crillon,
Paris, 25th Nov. 1919.

Dear Blackett: Your letter of the 19th I have duly received.

I do not see how it is possible for the United States Treasury to take any position other than that definite amounts were advanced to your Government (1) for Pittman silver purchases; (2) to provide for the secured obligations of your Government maturing on the American market; and (3) for Austrian relief. Indeed the correspondence between the Treasuries in regard to these matters makes it quite plain, I think, that such was the case. It must follow that any repayment of advances for the purchase of Pittman silver, or any part thereof, could not be regarded as a payment which would justify a release of any of the subrogated securities.

Your figures regarding the British Treasury owned securities on the subrogated list are disappointing. Is it requisite that all of the Canadian Government bonds should be released at this time? Are not their British Treasury owned securities in the United States which are or could be made available for exchange for subrogated securities?

I hesitate to submit to the Secretary of the Treasury any plan for exchange of the subrogated securities having the result indicated by the figures in your letter. Moreover, I am confident the Secretary would desire to be informed at the same time when it was proposed that this particular advance should mature and the dates fixed for the payment of interest thereon.

I shall, of course, regard as confidential the approximate figures set forth in your letter. May I express the hope that negotiations with Belgium, as well as with other countries indebted both to Great Britain and the United States, in regard to the form of obligations to be given, will be carried on simultaneously by the British and United States Treasuries with the closest co-operation between the two Treasuries.

I am, my dear Mr. Blackett,
Very truly yours,

(Signed) ALBERT RATHBONE.

B. P. BLACKETT, Esq.,
Treasury, Whitehall, S. W. 1, London.

(“EXHIBIT No. 3104” appears in text on p. 9196.)

EXHIBIT No. 3105

TREASURY DEPARTMENT,
Washington, November 24, 1919.

Memorandum for the Secretary.

I have read the attached memorandum to you from Mr. Davis, dated November 21st, and the accompanying draft of a proposed cable from you to Mr. Rathbone concerning the relinquishment of the right of subrogation which the Treasury now has in respect to certain securities formerly pledged to secure British loans placed in this country before the United States entered the war and which were paid in whole or in part from advances made by the United States Treasury. I am strongly of the opinion that if the Treasury has the legal right to forego this right of subrogation it should do so. I ought to explain to you, however, that my opinion in this respect may be prejudiced by the fact that I never wholly sympathized with Secretary McAdoo's insistence upon this right of subrogation. I think his view in substance was that he was under some sort of a parliamentary pledge growing out of statements made by him before committees of Congress at the time when the First Liberty bond bill was under discussion. I believe that the hearings on the first bond bill were not reported and, as I did not reach the Treasury until May 7th, two weeks after the first bond bill had been signed by the President, I have no first-hand knowledge of this. There had been some talk in the newspapers about the war being forced upon the United States by big bankers in this country in order to make good the loans they had made to the Allies before the United States was in the war, and my recollection is that Secretary McAdoo thought he had said something to the committees to the effect that he did not expect to use the proceeds of the loans of the United States Government to pay off any of these private loans made before the United States was in the war. It is perfectly clear, however, that the act imposed no such limitation. I do not think that any statement of intention or explanation in a hearing before the committees which was not incorporated in the bill could in any way be controlling upon the discretion of the Secretary of the Treasury and the President in the emergency which was presented nine months later when the maturing obligations of the British Government in our market were taken up.

However that may be, the loans were made, and, in my judgment, there was nothing else in the world to do because they could not have been financed by the sale of securities to American investors at that stage of the war except, if at all, upon terms which would have been so harsh as to reflect gravely upon British credit and upon inter-Allied morale, not to mention the reflex upon Liberty bonds of an issue of British bonds upon extravagant terms.

There is nothing in the bond acts to require or, indeed, to authorize the Treasury to exact or to accept collateral securities for loans made to the Allied. No security was asked or obtained in any other case (unless the pledge of some of

Cuba's own bonds to secure its own notes would be regarded as security). I believe that some arrangement is being made now for a customs receivership in the case of a very small loan made to Liberia, but this also may be regarded as an eccentric matter.

The limit of the amount which the Treasury is entitled to collect out of the collateral security obtained is about $280,000,000. The collateral pledged is of a very much larger value, but the understanding is that it is pledged for loans to this limited amount. It seems to me to be bad business and bad policy to hold collateral for so small a fragment of our $4,500,000,000 of loans to Great Britain. The public here and in Great Britain do not know of the existence of this agreement in relation to subrogation, and I believe that, particularly in view of the present international situation and international affairs, politically and economically, it would be a great misfortune to have the claim of subrogation insisted upon. As a purely business matter, it seems to me that it is very bad business to hold collateral for so small a fragment of our great claim, for it to some extent reflects upon the credit of our debtor, embarrasses our debtor's operations in meeting his obligations and other necessities, and depresses the foreign exchange.

Along with the right of subrogation went some general understandings as to the use of these and all other securities of the British in this country in foreign exchange. These understandings were obtained at a time when dollar exchange was at a discount all over the neutral world. So far as this matter is concerned, therefore, there is no possible reason for keeping the agreements alive.

I am unequivocally of the opinion that the right of subrogation should be abandoned in toto as having outlived its usefulness if the Treasury has the legal power to abandon it. I am of the opinion that it has such power, but I should not wish to have you act upon that opinion without learning the view of Mr. Rathbone.

[s] R. C. L.

EXHIBIT No. 3106

DECEMBER 15, 1919.

[Not by wireless]

(Charge to Treasury Department.)

AMEMBASSY,
Paris:

For Rathbone from Glass. Treasury R–114. Mission's 4982, November 4, 2 p. m. Your R–35. Am strongly of opinion that continuance under present circumstances of our right of subrogation in respect of British securities in this country is undesirable. Existence of any such claim of ours against British securities here must greatly embarrass British financing in this country, thus adding important factor to depression of sterling exchange. This tends to weaken further all other exchanges, reduces Europe's power to purchase American products and adds to pressure on our Government here to induce it to incur commitments to help exchange sitution. Amount of security obtained by exercise of any such claim is insignificant compared with total amount of British indebtedness to Treasury and as reasons for which right of subrogation was accepted no longer exists, I am inclined to favor renouncing any claim upon securities as to which right of subrogation may exist. Inclined to believe that in view of form of claim to subrogation it can properly be terminated when so desired by so advising British. Amount of British obligations held by Treasury in respect of which right of subrogation exists is ninety-one million nine hundred thirty-one thousand dollars being amount of one year five and one-half per cent notes which matured February 1, 1918, paid out of our advances and one hundred ninety-two million eight hundred forty-two thousand dollars being amount of two year five per cent secured gold notes which matured September 1, 1918, so paid, total two hundred eighty-four million seven hundred seventy-three thousand dollars. Our understanding is that such right of subrogation is not connected with any particular British obligations held by us and that the obligations, the proceeds of which were used to meet the British maturities, are not identified and also that the British securities against which such right of subrogation may exist may be changed from time to time. Am inclined to believe that in these circumstances, right of subrogation is not in itself a security, but is rather a right to obtain security and that Treasury does not require authority from Congress in order to refrain from exercising that right any more than it needed such authority for not requiring security in first place in case of other loans. If it should be considered inadvisable to forego our right to obtain this security, think we should inform British that first amounts received in payment of British obligations held by us will be considered as applying toward amounts in respect of which we have right of subrogation and that right of subrogation will be released in proportionate amount of collateral as payments are made. Think that fifty-seven million one hundred sixty-four thousand dollars heretofore repaid may be treated as part of such payment. This would leave balance of two hundred twenty-seven million six hundred ten thousand dollars. Am strongly inclined to believe that simply advising British that we shall not make further claim upon their securities here is preferable to alternative plan which, in existing circumstances, appears to be only partial solution, but in view of your study of whole matter I shall appreciate full expression of your views.

(Sgd.) CARTER GLASS,
Secretary of the Treasury.

(Charge to Treasury Department.)

AMEMBASSY,
Paris:

For Rathbone from Davis. Treasury R–118.

First. Our R–114 was prepared for the Secretary's signature a month ago and before the receipt of the rough draft of your letter of November 18 to Blackett. It was approved by the Secretary and dispatched because we thought it advisable to let you have our views and also obtain your opinion. If you share the same view regarding the advisability and the possibility of such procedure, you could no doubt use this concession to considerable advantage in settling all other pending matters with the British because, while this is a very unimportant concession from our standpoint, it will seem of considerable importance to the British.

Second. In view of importance of winding up all pending questions including reimbursements, about which I hope to cable you tomorrow, think it advisable to adopt liberal policy. Am inclined to agree to let French use for purchases here dollars received against francs for balance of army setoff, as indicated your R–115, rather than to apply such dollars toward cancellation of French obligations provided satisfactory agreement is made as to rate of exchange and other details. French insist they have depended on this and although the agreement you made with them gives us the right to apply such dollars against French obligations, I am under impression you had contemplated exercising such right only in case of necessity. French Government apparently worried because Parker left. Verge and Casenave came to see me to make representations similar to those made to you by Bloch. I told them Treasury could not recommend further concessions to War Department. They then indicated they might accept provided they could use the $19,000,000 balance for purchases. I gave them no encouragement because I desired to communicate with you and consider matter further.

/s/ NORMAN H. DAVIS,
Assistant Secretary of the Treasury.

EXHIBIT No. 3108

Green

PARIS, *Dated December 22, 1919,*
[Recd. 12:05 p. m.]

SECRETARY OF STATE,
Washington, D. C.

1865. December 22, 11 a. m. R–161. Secretary of the Treasury. Department's 9356, December 16th, your R–114. Departments 9365, December 18, 4 p. m., your R–118.

First. Lever's letter of last summer defines British obligation in respect to subrogated securities. Right of subrogation under this letter is for benefit only of United States advances to British for purpose of repayment of British secured debt. Clearly I think there has been no pledge with United States Treasury of subrogated securities but merely an agreement to pledge if called upon to do so.

My view is that Treasury has authority to waive right to avail of such agreement by British.

Second. I appreciate embarrassment to British and its consequent effect on general situation to the disadvantage of all if this right of Treasury is not waived. Accordingly I concur in your view that it should be waived.

Third. If right to subrogation is waived, I am inclined to view that in making arrangements for exchange of demand obligations for obligations with fixed dates of maturity, no distinction should be made between (A) British obligations given to Treasury for purpose of paying British secured debts and (B) obligations given by British for ordinary war purposes. Do you agree?

Fourth. If you agree with paragraph three above I will be prepared to make these concessions to British as well as concession regarding cereal year. See R–108, December 1 in endeavor to reach agreement on various points at issue between two Treasuries.

Fifth. Find great difficulty in determining when I should go to London to confer with Chancellor on these important questions between Treasuries as to which no agreement has been reached and as to which I believe no agreement will be reached until such discussion. In view of uncertainties here, limited personnel, and multitude of questions constantly arising for immediate action, I hesitate to leave Paris at this time. It may be that if treaty comes into force at an early date, as now seems probable, instructions I am awaiting as to attitude then to be reported by reparations section may make it possible for me to go to London at once.

Sixth. In view past arrangements think French should be permitted use of dollars received in balancing Army set off if settlement of that question is reached except and to extent, if any, you may determine in Washington to change same against last credit you gave France which we were under no obligation to provide.—RATHBONE.

WALLACE.

HG.

EXHIBIT No. 3109

12TH JANUARY, 1920.

DEAR MR. RATHBONE: I write again with reference to the suggestions for the release of the securities subrogated to the United States Treasury which were dealt with in my letter of the 8th November last. As I then stated, we have every reason to desire to obtain the release of securities not owned by the Treasury, and I would like to set before you certain of the considerations which are present to my mind.

(1) As you know the securities are not owned by the British Government but are merely loaned to the Government by their owners. Unless we are in a position to return the securities originally depoisted with us by the owners, or securities of the same description and to the same nominal amount, we are committed to payment of the value at the time of deposit plus 5% plus accrued interest. This involved a liability to provide £300,000,000[1] on or about 31st March 1922 and we should doubtless have to repay in addition any sums required to bring the deposit value up to the quotation then current, if that should in any case be the higher. Apart from the magnitude of the sum assurances have been given which in practice make it impossible for us to buy.

(2) The payment of the additional ½% granted to depositors by the Treasury which by itself involves a charge of nearly £1,600,000 per annum is made in the case of dollar securities at the current rate of exchange, so that the fall in the dollar exchange involves a substantial increase in the charge. This should in any case be avoided.

(3) The release of these securities would quite probably lead to their sale by their owners in view of the present rate of exchange, a proceeding which would not only materially assist us in restoring sterling to a level which would remove one of the worst of our difficulties, but also be useful to American export trade.

I should therefore be glad if you could make recommendations to the United States Treasury on the lines of my letter of the 8th November.

The figures in that letter can be improved to a considerable extent by the effect of the release of collateral consequent upon the payment off of our November maturity. The Chancellor of the Exchequer can now offer you the following Treasury owned securities: £6,000,000 Commonwealth of Australian Government; £3,964,242. 8. 4 Dominion of New Zealand; £4,500,000 Union of South

---

[1] This includes, of course, all the deposited securities, but there are difficulties in dealing with a part only.

Africa 4½% 1925/45 in substitution for an equivalent amount of subrogated non-Treasury owned securities, and I further find that in addition to the $437,000 Treasury owned American bonds already intimated to you, we have now free a further $2,848,000 American shares and $1,600,000 American bonds. This gives us some $60,000,000 to offer in substitution, my original suggestion of $246,000,000 bonds of other European Allies being correspondingly reduced.

As regards Belgian Post Armistice securities I have had definite figures prepared and forwarded to Brussels. These show that we can call upon the Belgians at once for obligations to a value of £10,000,000, while obligations for a further £9,000,000 will come into our hands at an early date. I am however still awaiting agreement by the Belgians to the form of the obligation and the amounts involved.

Assuming however that no difficulty arises in connection therewith, I can rewrite the calculations in my letter of the 8th November as follows:

Total nominal value of subrogated securities	$344, 804, 082
On repayment of $40,000,000 there could be released as shown already	48, 432, 096
Leaving a balance still subrogated of	296, 371, 986
We leave subrogated *owned securities:*	
(1) as before	692, 000
and we add further owned securities:	
(2) Further American shares	2, 848, 000
(3) Further American bonds	1, 600, 000
(4) Dominion bonds face value as above £14,464,242. 8. 4 (say)	56, 000, 000
and for the balance the British Treasury proposes to substitute:	
(5) Post Armistice Belgian gold bonds face value £19,000,000 say at 4.866	92, 454, 000
(6) and bonds of other European Allies for the remainder (say)	142, 777, 986
Total	296, 371, 986

I feel that I may confidently look for your assistance in this matter, and that the figure now before you will enable you to give me a reply which will materially assist me in settling this particular problem.

I have the honour to be dear Mr. Rathbone,

Yours faithfully,

[s] Basil P. Blackett.

Exhibit No. 3110

Room 45, 7 Rue Tilsitt, Paris, *January 15, 1920.*

B. P. Blackett, Esq.,
c/o Sir John Bradbury,
26 Rue Bassano, Paris.

Dear Mr. Blackett: I have before me your letters of January 10 and January 12, the former relating to the advance to your Government for the purchase of Pitmann silver, and the second in regard to subrogated securities.

Regarding the Pittman silver I can only repeat that the proposal heretofore made by the British Treasury does not now appear to meet the situation and it is unacceptable. If you feel that you can not agree with the suggestions heretofore made by the United States Treasury to deal with this matter, then some other method must be devised, which will result in the repayment, in the near future, of the total amount advanced to your Government for Pittman silver purchases, both principal and interest. The United States Treasury does not object to receiving gold paid to it under the terms of the original arrangement and, indeed, would expect such payment unless a different method of dealing with the matter was arranged by mutual agreement. You will appreciate, however, that the gold payment provided by Lord Reading's letter would not dispose of the entire question which we are now discussing regarding this advance.

I note what you say in regard to the subrogated securities, and shall be glad to discuss that matter with you the end of this week, when, I understand, you are to be in Paris. An agreement on this matter should, I think, be a part of an agreement on the various matters which we have been discussing for the last few months.

I am sending this letter under cover to Sir John Bradbury, as I assume it would reach you quicker in that way than by forwarding to London.

I am, my dear Mr. Blackett,

Very truly yours,

[s] ALBERT RATHBONE.

EXHIBIT No. 3111

McADOO, COTTON & FRANKLIN
ATTORNEYS AT LAW
120 BROADWAY, NEW YORK

AT ST. LOUIS, *February 25, 1920.*

Hon. DAVID F. HOUSTON,
Secretary of the Treasury,
Washington, D. C.

MY DEAR MR. HOUSTON: While I was Secretary of the Treasury I advanced to the British Government three or four hundred million dollars with which it took up certain of its demand loans in this country which were secured by collateral. I required the British to turn over to the Treasury all of the collateral against these loans and to subrogate the United States to all of its rights in such collateral. Will you not kindly write me how much collateral we hold against British loans and what, as nearly as may be, is the market value or the estimated market value of such collateral. Will you also be good enough to give me a general outline of the character of the securities and in what countries they were issued?.

What do you estimate is the amount of the sinking fund or amortization requirement for our national debt for the fiscal year 1920?

With kindest regards, I am,

Cordially yours,

[s] W. G. McADOO.

EXHIBIT No. 3112

MARCH 3, 1920.

[Confidential]

MY DEAR McADOO: Your letter of the 25th ultimo, dated at St. Louis, has been received, in which you inquire concerning the collateral which the British Government had pledged for certain loans in this country and in respect to which the British Government agreed that the United States should have the right to be subrogated to the rights of the pledgees in consideration of assent by the United States to the use by the British Government of United States Treasury advances in paying off the loans.

On looking over the records, I find that the Treasury assented to the use by the British Government of Treasury advances in paying off $91,931,000 of the one-year 5½% secured loan convertible gold notes of the British Government which became due February 1, 1918, and that the Treasury became entitled to be subrogated to the rights of the pledgee in 91931/234837ths, or, say, 46/117ths of the securities pledged under the instrument of pledge dated February 1, 1917, of the Government of the United Kingdom of Great Britain and Ireland to the Bankers Trust Company securing $250,000,000 one-year and two-year 5½% secured loan convertible gold notes of the British Government. The fraction above mentioned was the proportion borne by the amount of the one-year 5½% notes paid by February 1, 1918, to wit, $91,931,000, to the sum of said last-mentioned amount, and the amount of $142,906,000 two-year 5½% notes which were unpaid at the opening of business on February 1, 1918—in all $234,837,000—the balance of said $250,000,000 one-year and two-year 5½% notes having previously been retired. I find that the Treasury assented to the use by the British Government of Treasury advances in paying off $192,842,000 of the two-year 5% secured loan gold notes of the British Government which became due September 1, 1918, and that the Treasury became entitled to be subrogated to the rights of the pledgee in the securities pledged under the instrument of pledge dated September 1, 1916, of the Government of the United Kingdom of Great Britain and Ireland to the Farmers Loan & Trust Company, securing $250,000,000 two-year 5% secured loan gold notes of the British Government. I do not find that the stocks and obligations in respect of which the Treasury received rights of subrogation as above mentioned were turned over to the Treasury. It appears that the rights of the Treasury in respect of the pledged collateral were defined in the correspondence with the British Government by an arrangement which contained an undertaking of the British Government to hold the collateral and deposit it when requested to do so by the Treasury and which permitted the British Government, but only with the consent of the Secretary of the Treasury, to substitute for any of the securities subject to the right of subrogation other securities of similar class and equal value. This was in accord with the rights of the British Government as provided in the instruments of pledge above mentioned. The original instruments of pledge contained lists of the pledged securities and of the unit value, but did not indicate the amount pledged of each security. It is not possible, therefore, to determine from the original instruments of pledge the total value of the pledged securities as estimated at the dates of the original instruments.

I judge from the records that the purpose of your transaction was to entitle the Treasury to be put in the same position respecting the collateral, whatever it might be, that the private lenders had been in. I do not find that the Treasury has obtained appraisals except in connection with substitutions for certain securities, which were a small part of the whole. In view of the large number of securities concerned, the obtaining of an appraisal would be a matter of considerable time. A considerable part of the collateral appears to consist of foreign securities. As the fluctuations of market values is further complicated by the great fluctuations in rates of exchange, the value of an appraisal would be only temporary; and, as the Treasury has not thus far required the deposit of the collateral, there does not appear to have been any reason for obtaining an appraisal.

I do not find in your report for the fiscal year 1918, which deals with foreign loan matters up to November 15, 1918, and therefore covers the period in which the transactions took place, any reference to the rights of the Treasury in respect of the collateral. It is my understanding that the matter was not at the time, or subsequently, disclosed either to Congress or to the public, and that it has not been disclosed in Great Britain. I concur in the view which I find from the records was that of Secretary Glass that, inasmuch as the reasons which led to our requiring the right of subrogation no longer exist and the amount of British obligations, in respect of which we hold the right, is a trifling fraction of our total British obligations, it is probably desirable not to exercise the right, but, on the contrary, to encourage the British to make the best immediate use they can of the securities. Negotiations are not pending between the Treasury and the British Treasury concerning this matter in connection with the negotiations for the exchange of the demand obligations of foreign governments held by the Treasury for long-time obligations and other matters looking toward a general settlement of matters outstanding between the two Treasuries.

As is stated in the annual report for 1919, the provisions for the sinking fund for the retirement of bonds and notes issued under the First, Second, Third, and Fourth Liberty Bond Acts and the Victory Liberty Loan Act come into operation on July 1, 1920. It is calculated that the operation of the provision will retire the funded war debt of the United States in the neighborhood of twenty-five years, except with respect of an amount equal to the loans to foreign governments outstanding on July 1, 1920.

With kindest regards, I am

Cordially yours,

[s] D. F. HOUSTON.

Honorable W. G. McADOO,
120 Broadway, New York City.

EXHIBIT No. 3113

TREASURY DEPARTMENT,
Washington, March 4, 1920.

Memorandum for the Secretary.

Attached is a proposed form of reply to an inquiry from Mr. McAdoo concerning the collateral in respect of which the Treasury became entitled to certain rights of subrogation as a result of assenting to the use by the British Government of United States Treasury advances for meeting at maturity certain loans contracted by the British Government in the United States before we entered the war.

For your information I attach copies of memoranda prepared by Mr. Leffingwell and me under dates of November 24 and November 21, respectively. There are also attached copies of Secretary Glass' cable no. 114 of December 15 to Mr. Rathbone, of my cable R–118 of December 17, and of Mr. Rathbone's cable 161 of December 22. Mr. Rathbone was subsequently authorized to make the concessions referred to by him in paragraph 4 of his cable. He has probably already incurred commitments to the British.

[*s*] N. H. D.

EXHIBIT No. 3114

MARCH 13, 1920.
(Cipher.)

(Charge to Treasury Department.)

AMMISSION,
Paris.

For Rathbone from Houston. Treasury R–275.

First. It was impossible arrange meeting last week with Ways and Means Committee, but hope to settle this week pending questions relative to the postponement of interest. We are satisfied that the British cannot, at least without serious financial inconvenience which might react on us, meet their interest obligations for two or three years and have accordingly based our representations to the Ways and Means Committee on such conviction. While we do not consider it necessary or expedient to get a written admission on the part of the British Treasury that it cannot possibly meet such interest, we should have a direct written request for such postponement based upon such statements of necessity as they may deem compatible with their dignity. It was not originally our intention, nor as I understand your own, to ask for a written request. The extension of interest was first broached by them in conference in Paris last May or June, and a written request was not in our contemplation. However, in order to guard against misunderstanding here of Treasury position, it is considered that the Secretary should have a request for extension along the lines indicated. I cannot tell you definitely until after this meeting what assurances on the part of the British as to their inability to meet the interest would answer that purpose. Whatever letter they sent should, however, be prepared by them. The British have deliberately put on record in the same letter in which they ask for extension of interest their views regarding the advisability of a general cancellation of intergovernmental war debts. While we have replied declining to accept their invitation to consider that question, we should not be willing to base the postponement of interest on a letter from the British in which they also put on record their advocacy of a cancellation of war loans, a proposition which our reply has already dealt with.

Second. In this connection and referring to our R–114 from Glass and our R–163, paragraph 15, and your R–354, it is my understanding that no concession will be made concerning rights of subrogation in respect of British securities except as part of comprehensive settlement of all pending questions.

(Signed) D. F. HOUSTON,
Secretary of the Treasury.

NK:MFB

EXHIBIT No. 3115

[Not by wireless]

MAY 12, 1920.

(Treasury Department.)

AMEMBASSY,
London.

For Rathbone from Davis. Treasury no. R–365.

First. Our R–364 confirms our views, but was intended to assist your negotiations and not increase your difficulties or upset your plans. We are strongly of opinion that British are overplaying their position by reason of their belief that we will make large concession in order to conclude negotations. They may also feel that all bridges will be burned once a general settlement is concluded. We believe, therefore, that the delivery of a practical ultimatum, with strong presentation of our views, is most likely to bring them around. They must realize also that a failure to arrive at a settlement may prove equally, if not more, disadvantageous to them.

Second. The Secretary would not be justified or willing to release the right to subrogated securities until the general settlements are concluded; namely, the reimbursements, Pittman silver advances and the tentative agreement for the exchange of obligations and extension of interest. We are convinced that in view of British arrangements regarding Anglo-French loan, the release of these securities will be the strongest inducement to them to agree upon general settlements. If British are willing to reach an agreement they will do so in my judgment without any further concessions from us, and if they reach the conclusion that it is desirable not to reach an agreement, concessions will not induce them to do so. In either event I think they will be more apt now to reach an agreement if they come to the conclusion that our patience is exhausted.

Third. Department of State is considerably concerned at what they fear is deliberate policy adopted by British Government to exclude American nationals from exploitation on equal terms with others of oil and other properties in Mesopotamia, Palistine, and other territories over which jurisdiction was granted under treaty. My personal judgment is that if and when in connection with putting into effect agreement for exchange of obligations we stipulate as a condition equality of opportunity for our nationals, such stipulation should be confined to newly constituted states, mandatories, and territories which changed hands as a result of the war and treaty.

Fourth. Am cabling you separately about right to demand sterling bonds of small denominations and provisions for protection of gold supply.

(Signed) Norman H. Davis,
Assistant Secretary of the Treasury.

(Cable message from the American Ambassador at Paris, May 21, 1920, 9 p. m., No. 1185

[Paraphrase]

Communicates a message from Rathbone to Leffingwell and Davis and the Secretary of the Treasury, R–529. References made to Department's 488, May 12, 5 p. m., your R–362, Department's 489, May 12, 6 p. m.—your R–364, Department's 490, May 12, 10 p. m.—your R–365, Department's 495, May 13, 5 p. m.—your R–368, Department's 494, May 13, 10 p. m.—your R–369, Department's 496, May 13, 6 p. m.— your R–370, Department's 503, May 15, 6 p. m.—your R–373.

* * * * * * *

Eleventh. See your R–370. Bonds for present delivery, you say, should not exceed the one million denomination. Great Britain may possible consent. There was a tentative agreement made under your approval (consult your April 7, 1920, R–321, my February 23, 1920, 354, paragraph 3). That the privilege granted us to call for bonds of lower figures should not begin until five years had elapsed, which would fix it at five years from the spring of 1919. For some time Blackett held out for ten years, but it was fixed at five, and he is now willing to fix January 1, 1924, as the date. He declines to set an earlier date, and, in my opinion, the past agreement being taken into consideration, I should not insist on an earlier date. The ground for the delay was that Great Britain, during a few years which constitute a critical period for her, should be enabled to arrange in the American markets for what she needed from the United States. I have been told in confidence that while arrangements have been made by Great Britain to pay her portion of the French-English loan, she is uneasy about France's share and apprehends that she might be called upon to pay another two hundred fifty million dollars, which would seriously affect her finances. Blackett understands perfectly that while, if we think best, we may not demand the bonds of smaller values, until after the date mentioned, yet our Treasury is absolutely entitled, as is any owner of bonds, to sell them at any time, or to dispose of certificates based on such bonds and representing interests in them. Blackett, however, was told by me that at present we were not disposed to sell, either by direct or indirect methods, in the near future, bonds given by Great Britain, and that, while I was not authorized to speak for any future Secretary of the Treasury nor even for the present Secretary, yet I thought that neither the bonds nor any interest therein would be sold, unless our own financial situation either compelled us so to act or made it advisable. If I can tell Blackett positively that our desire to have bonds of one million dollar value is not based on a desire to make it easier to deal with them before January 1, 1924, I feel assured that he will agree to furnish them as desired. As far as I am concerned, I fail to perceive much advantage in insisting on this point, as it would be just as easy to sell or dispose of certificates of interest in bonds of *large* [larger (?)] values as in bonds bearing the figure one million dollars. I shall, therefore, not insist on this point unless you instruct me to do so, as Great Britain decidedly protests against giving in the beginning bonds whose figures do *not* [do (?)] exceed each one million dollars.

Twelfth. From what I have reported above you will perceive that we have made no stipulation that certificates of interest in bonds in our possession will not be put out and sold in New York or at other places when we so desire.

Thirteenth. We are now discussing the form of the bond which differs in many points from the bond concerning which I reported on February 28 in my memorandum. The stipulations of the bond now being discussed I will briefly describe. The bond promises to pay principal and interest in gold, or, if the holder desires, in sterling, interest at five per cent, and it is in the main as previously described except that there is a postponement provided for the payment of interest accruing up to the spring of 1922, but this is to be paid up on dates for payments of interest in the spring of *1920* [1922 or some later date (?)], and the repayment of this is not be to strung out through the period of years mentioned in my message of January 19, 1920, R–227, paragraph 4.

[In the case of interest accruing prior to the spring of 1922 (?), the exchange rate is fixed for 30 days by the Federal Reserve Bank at an average of $4.84, the interest, which may then be postponed, to be paid on the next following date for payment of interest, three months having elapsed since the period of thirty days above mentioned (?).] But for the doubt which Great Britain feels (referred to above in paragraph 11) as to France's repayment of her half of the French and English loan, Great Britain would, in my opinion, be disposed to pay up back interest in the spring of 1921. Should you so desire, I believe I can induce Great Britain, if she finds herself able, to arrange to pay the accrued interest at a date still earlier than the one fixed if the United States will also agree to accept it on notice previously given that Great Britain intends to anticipate the payment. I doubt whether such an agreement is to be desired. The stipulation in the bond as to freedom from taxes is agreed to as provided in Mr. Leffingwell's message of November 1, 1919, R–29.

NOTE.—Questioned corrections enclosed in brackets.

LETTER FROM THE SECRETARY OF THE TREASURY, DATED JUNE 19, 1923, TO THE BRITISH AMBASSADOR REGARDING THE DEPOSIT BY GREAT BRITAIN OF THE SO-CALLED SUBROGATED SECURITIES DESCRIBED IN LETTER BY SIR S. HARDMAN LEVER

JUNE 19, 1923.

The Right Honorable Sir AUCKLAND GEDDES,
Ambassador Extraordinary and Plenipotentiary,
The British Embassy, Washington, D. C.

MY DEAR MR. AMBASSADOR: In connection with the proposal dated the 18th of June, 1923, by His Britannic Majesty's Government to the Government of the United States of America regarding the funding of the debt of Great Britain to the United States, the acceptance of which I am handing you simultaneously herewith, I am writing to say that in accordance with the understanding reached at the time of the agreement for the settlement of the debt the United States Treasury will not require the deposit by Great Britain of any of the so-called subrogated securities described in the letter dated July 8, 1919, from Sir S. Hardman Lever to Mr. Albert Rathbone, then Assistant Secretary of the Treasury, or any securities which from time to time may have been substituted therefor.

I am, my dear Mr. Ambassador,
Very truly yours,

(Sgd.) A. W. MELLON,
Secretary of the Treasury, and Chairman
of the World War Foreign Debt Commission.

Approved.
(Signed) WARREN G. HARDING,
President.

JUNE 19, 1923.

The following memorandum is included in the record at the request of Mr. Leffingwell, see text, p. 9075:

MEMORANDUM ABOUT SUBROGATED SECURITIES AND OTHER SECURITIES

By R. C. LEFFINGWELL

Secretary McAdoo always refused to lend money to Great Britain to pay the 400 million dollar demand loan held by Morgans and a group of American banks. It was finally paid by the British Government out of its own resources without the use of any loans made by the United States Government or their proceeds. Therefore the United States had of course no right of subrogation with respect to the securities pledged for that loan.

Secretary McAdoo obtained the right to be subrogated to the position of the noteholders with respect to the collateral for two loans only, viz, about 285 millions dollars in the aggregate of British notes which matured February 1, 1918, and September 1, 1918. Of the five billions loaned to England and the ten billions loaned to all the Allies only two hundred and eighty-five millions ever had any right of subrogation.

Having regard to the international amenities and the British view that the right of subrogation if it became known would create an unfavorable impression in England and in the enemy countries, the Treasury never asked for the physical delivery of this collateral or served notice of lien; but that collateral, or approved substituted collateral, was in fact held subject to the United States Treasury's order and disposition until released by Secretary Mellon in connection with the British debt settlement negotiated by the World War Foreign Debt Commission.

The Treasury had contemplated the release of the subrogated securities in connection with the debt settlement which Mr. Rathbone was sent to Europe to effect in 1919–1920. The British broke off the negotiations at that time and there was no debt settlement then and no release of the subrogated securities by Secretary Glass or by Secretary Houston.

For the same reasons of policy already indicated, the Treasury did not make public the right of subrogation during the war period. Afterwards it was published as a matter of course although no great significance was attached to it. It was mentioned in the House of Commons by the Chancellor of the Exchequer in 1921, and Mr. Rathbone's abortive funding agreement with Great Britain (containing the provision for the release of the subrogated securities if that debt settlement had been accepted) was reported to the Senate Finance Committee in July 1921 by Assistant Secretary Wadsworth, in charge of foreign loans under Secretary Mellon, and was printed in full then.

The final release of the subrogated securities by Secretary Mellon was dated June 19, 1923. It was signed by him expressly both as Secretary of the Treasury and as Chairman of the World War Foreign Debt Commission. It was approved in writing on its face by the President of the United States. It was addressed to the British Ambassador. It was published in the Report of the Secretary of the Treasury for 1923, page 271, exhibit 47. It was stated to be written in connection with the proposal dated June 18, 1923, for the funding of the debt of Great Britain to the United States, and in accordance with the understanding reached at the time of the agreement for the settlement of the debt. It states that the United States will not require the deposit by Great Britain of any of the so-called subrogated securities described in the letter, dated July 8, 1919, from Sir Hardman Lever to Mr. Albert Rathbone, or any securities which from time to time may have been substituted therefor.

The Treasury never had any right of subrogation with respect to any other British securities than the foregoing, which was limited to $285,000,000.

The Treasury never demanded or obtained any right of subrogation with respect to the collateral securities for the two secured French loans which were paid by the French Government out of proceeds of loans of the United States Government, or any other French owned securities whatever.

So much for subrogation. The Treasury did however have the secondary right (which may have confused the uninformed) with respect to all other British owned and French owned securities in this country, to be consulted as to the disposition thereof. This secondary right to be consulted in regard to securities not the subject of subrogation was obtained by the United States Treasury for the protection of the American market against depreciation from inopportune liquidation of foreign owned American securities, and for the purpose of enabling the United States Treasury to indicate its views as to the most effective use which could be made of the American and neutral securities owned by Great Britain and France for the protection of the foreign exchanges and for the provision of funds in neutral countries, such as Argentine, Spain, Chile and Switzerland, where money was needed for the war requirements of the United States and the Allies. The burden of financing requirements in these countries to a greater or less extent must otherwise have fallen upon the United States Treasury, directly, or through loans to the Allies. It was highly advantageous to the United States Government to have these securities made available, in consultation with the United States, and used by the Allied Governments, who owned them, in ways which would facilitate the acquisition of foreign exchange for its own purposes by the United States and for the needs of the Allies. This secondary agreement never included the right of subrogation and never gave the United States Government any monetary interest or right with respect to the securities affected other than to be consulted as to the use which the Allied Governments, the owners thereof, should make of them in the general interest.

Soon after the fighting stopped, the United States Government discontinued loans to the Allies and stopped supporting the exchanges. By this time, the secondary right to be consulted in regard to securities had served its purpose, and it was agreed that it had been fulfilled.

The following memorandum is included in the record at the request of Mr. Leffingwell. See text, p. 9075.

Postscript about Subrogated Securities and Other British Securities

By R. C. Leffingwell

We have seen that the Secretary of the Treasury refused to lend Great Britain money to pay the $400,000,000 secured demand loan to Great Britain from J. P. Morgan & Co. and a group of sixty American banks; that he was obliged to permit Great Britain to apply to that loan $80,000,000 due from the United States Shipping Board to Great Britain for British owned ships requisitioned by the Shipping Board (which ships Great Britain wished to retain), because this was money due to Great Britain, not money lent to her; that he asked and was unable to obtain subrogation on account of the ship money; that he did obtain (A) the right to be subrogated to the rights of the pledgees of the collateral for the publicly owned British notes which matured February 1, and September 1, 1918, to the aggregate amount of $285,000,000, which were paid by Great Britain from the proceeds of United States loans to her; and (B) the secondary right to be consulted about the disposition of the securities for both the foregoing loans and the demand loan as well.

In the recent hearings hitherto unpublished Treasury documents have been read into the record on behalf of the Munitions Committee, and it is proper to quote them and to supplement previous discussion.

PRELIMINARY DISCUSSIONS

The general character of the discussion between the Secretary of the Treasury and the Chancellor of the Exchequer, and other British high officials, which began in April 1917 and continued into February 1918, about these matters has already been indicated. Enough has already been said about the preliminary discussions between the two Finance Ministers and their assistants in Washington, London and Paris. The important thing is not what the two Finance Ministers wanted and argued for, nor what their assistants thought and said about it. The important thing is, what did the Finance Ministers themselves, when all was said and done, agree to? What was the contract between the British Chancellor of the Exchequer and the American Secretary of the Treasury?

FINAL AGREEMENT

The essential features of that contract are contained in four short cables exchanged between the two principals, two messages just before and two messages just after the critical date, February 1, 1918, when the British maturity of $92,000,000 and the $80,000,000 ship money were paid, and $150,000,000 U. S. Treasury certificates were purchased by J. P. Morgan & Co. and a group of banks to finance these payments in part.

The critical moment had come. The nine months' debate must end. The British maturity must be met. Default and its consequences, in the very midst of the war, were unthinkable. All other arrangements had been made, but the question of subrogation was still unsettled.

First, the final messages exchanged between the Secretary and the Chancellor just before February 1st are important. On the basis of these two messages the February 1 maturity was met by the British Government out of loans made to it by the United States Government, and the Shipping Board's debt was paid by the United States Government to the British Government.

THE CONTRACT CABLES

The Chancellor's last meassage before February 1st was as follows:

"From Lever,
Jan. 28, 1918.

"I desire you will communicate following as a personal message from me to the Secretary of the Treasury.

"Lever has kept me fully informed as to progress of negotiations. I understand proposals to be as follows:

"1. Dollars reimbursed to us for requisitioned ships will be used for reduction of call loan.

"2. U. S. Treasury will make special advance up to amount required to enable us to meet February 1st maturity.

"3. I am not quite clear as to meaning of what I understand to be condition of two namely that Secretary of U. S. Treasury 'To be subrogated to rights of holders of February 1st maturity.' But I presume this means that securities now held in trust for holders of one year notes should be held for future as security for advance by U. S. Treasury.

"I so much appreciate assistance you are offering us in dealing with great anxiety of February 1st maturity that I feel difficulty in objecting to above condition if you think it will help you in meeting your political difficulties of which you alone can be judge. But I am afraid pledging of British owned securities to U. S. Treasury is bound to cause unfavorable comment in this country and that I shall have to face British Parliamentary crisis for consenting to a precedent for which it will be pointed out there is no parallel in our own dealings with Allies. I trust therefore that this aspect of matter will be borne in mind before a final decision is reached. Would it not be possible for you to nominate some Bank or group of banks who would nominally take over both loan and collateral making your own arrangements with banks so that transaction would be in effect on account of U. S. Treasury. This would obviate direct pledging of securities to U. S. Treasury and might thereby meet both your and my political difficulties.

/s/ A. BONAR LAW."

In the above message the Chancellor of the Exchequer made it plain that his understanding was that subrogation was only to be required for (2) the February 1st maturity and not for (1) the ship money. He also made it plain that his preoccupation was to "obviate direct pledging of securities to U. S. Treasury."

THE SECRETARY'S REPLY

The Secretary of the Treasury replied the following day as follows:

"Telegram Sent
Department of State, Washington,
January 29, 1918.

"TREASURY DEPARTMENT,
Amembassy, London.

"Urgent. Please deliver the following telegram from Secretary McAdoo to the British Chancellor the Exchequer and furnish a copy thereof to Crosby:

"Quote: I have received your personal message with respect to the February first maturity and the ship money. In view of what you say as to the situation which would be created in Great Britain if you should assent to my desire to be subrogated to the position of pledgees in respect to the collateral of these loans and in view of your statement that there is no parallel for such an arrangement in your own dealings with the Allies, I am constrained, though with great reluctance, to defer to your wishes in this matter, although I cannot alter my judgment that the course proposed by me is wise and right in aid of the general situation and would have been welcomed in this country as indicating a readiness on the part of Great Britain to deal not less liberally with the Government than with the banks, especially when the sole purpose fo the United States in suggesting that it have the use of such collateral is to promote and serve the common cause and for no other. The suggestion you make as to handling the transaction indirectly through a bank or group of banks is not feasible under our own laws. I have received from the British representatives here certain assurances in respect to the securities owned or controlled by the British Government. These assurances are more restricted in form than I had expected. I am confident that your Government will cooperate with me to the full extent in your power, whether in respect to securities owned or controlled by the British Treasury or otherwise, both here and elsewhere, in meeting the financial burdens in aid of the common cause, however and whenever these burdens may have their inception, and thereby facilitating the financing of the requirements of Great Britain and assisting in lightening the almost intolerable burden which the war is placing upon the Treasury of the United States. Unquote.

/s/ LANSING."

In the above message the Secretary of the Treasury assured the Chancellor of the Exchequer that (1) the sole purpose of the United States in suggesting subrogation was "to promote and serve the common cause," and that (2) in asking other assurances in regard to all British owned securities the Secretary had in mind "facilitating the financing of the requirements of Great Britain" and thus relieving the United States.

Thereupon the February 1st maturity and the ship money were paid, both without subrogation.

THE CHANCELLOR AGAIN

However, a few days later, on February 6, 1918, the Chancellor of the Exchequer sent the following message to the Secretary of the Treasury:

"I am directed to communicate to you the following personal message from Mr. Bonar Law, the Chancellor of the Exchequer:

"Further telegram received and conversation with Cravath shows that my telegram of January 30th[1] may have been misunderstood. I intended last paragraph to mean that I left myself entirely in your hands. The last thing I should have thought of would have been that I should make conditions as to financial assistance accorded us by the United States Government. You have to bear great burden of allied finance in the United States and you rightly relay on our cooperation in every way and to leave you a free hand as to proper solution of current problems.

"I am giving instructions that you are to be subrogated to lien of former lenders upon securities previously pledged to holders of one year notes and that these securities as well as other securities pledged to secure overdraft be dealt with according to your instructions.

Believe me,
My dear Mr. Secretary,
Yours very sincerely,
/s/ RICHARD CRAWFORD"

Thus, ex post facto, the Chancellor (1) conceded subrogation with regard to the securities for the one year notes; (2) withheld it with regard to the securities for the overdraft; and (3) granted the general assurances, which the Secretary desired (instead of the more limited and unsatisfactory assurances which Sir Hardman Lever had conceded) that all the securities located in America, whether for the one year notes or for the overdraft, should be dealt with in accordance with the Secretary's instructions.

THE SECRETARY ACCEPTS

On February 11th the Secretary of the Treasury replied as follows:

"I have received your further cable message through Sir Richard Crawford concerning the February 1st maturity. Permit me to express to you the assurance of my profound appreciation of your acceptance of my views and of the instructions which you have given that the United States Treasury be subrogated to the lien of former lenders upon securities previously pledged to holders of one year notes and that these securities as well as other securities pledged to secure overdraft be dealt with according to my instructions. I am sure that this action on your part will greatly strengthen my hands in the heavy task of making provisions for your and our financial needs."

---

[1] *Sic.* 28th.

Thus the Secretary of the Treasury accepted the limited rights offered by the Chancellor of the Exchequer and renewed his assurance that the rights conceded to him would be used for the common cause.

MORE ORAL DISCUSSIONS

It is possible that the Chancellor's courteous general assurance that "I left myself entirely in your (the Secretary's) hands," may at first glance have revived the hope in the minds of some Treasury officials that the Chancellor would yet extend the right of subrogation to securities other than those pledged to secure the February 1st maturity to the extent of the ship money. If so the hope was promptly extinguished by Lord Reading upon his return to Washington. Lord Reading's talks with our Treasury and the talks of other British Treasury representatives with our Treasury resulted in a thorough understanding between the Secretary of the Treasury and his assistants on the one hand and the British Treasury and its representatives on the other hand. The essential features of the arrangement were fixed by the above quoted January-February, 1918, cables and the details worked out through the talks mentioned. The Lever-Rathbone letters of July 8, 1919, are in accordance therewith.

ONLY ONE AGREEMENT

There was only one agreement of subrogation, the essential features of which were defined in the above quoted cables. The July 8, 1919, agreement with Lever was the same agreement the details of which were arranged in accordance with oral talks of representatives of the two Treasuries. The essential features of the agreement of subrogation, and of the agreement with respect to the disposition of both subrogated and non-subrogated securities, were contained in the four messages above quoted. As to all essential features this agreement was clear, precise and unambiguous. It never was changed or varied. Six months later it was extended to the securities pledged to secure the notes maturing September 1, 1918. A year later out of abundant caution, it was spelled out in greater detail by Sir Hardman Lever's letter of July 8, 1919, and Mr. Rathbone's reply announcing that the secondary agreement in regard to non-subrogated securities had been fulfilled.

THE CONTRACT PROVIDED NO SUBROGATION FOR SHIP MONEY

This agreement contained in the above quoted messages between the Chancellor of the Exchequer and the Secretary of the Treasury makes it abundantly clear that there was to be (A) subrogation with respect to the securities for the one year notes but no subrogation with respect to the securities for the demand loan or overdraft; and that (B) both classes of securities, that is the securities pledged for the one year notes as well as the securities pledged for the demand loan or overdraft, were to be dealt with in accordance with the Secretary's instructions.

Both of the Chancellor's cables made it clear that the right of subrogation was limited to the February 1st maturity to the exclusion of the demand loan and the ship money. To suggest now that these cables gave the Treasury a lien to the extent of 80 million dollars upon the securities pledged to secure the demand loan is to write a contract for the parties eighteen years afterwards. To suggest that the British Government reported among other approved expenditures 40 million dollars for ships, and that the United States was entitled to subrogation on account of this 40 million dollars, is again to write a new contract for the parties eighteen years after the fact. There is not a suggestion of anything of the sort in the documents.

The effort of the Treasury to obtain subrogation in consequence of the payment of the ship money failed because the British refused it. The ship money had been promised to the demand loan. The ship money was money due from the United States. The debtor with respect to the ship money was the United States, the creditor was Great Britain. Subrogation means the right of one like a surety who pays the debt of another to step into that other's shoes in respect to the debtor's property. The United States was not paying the debt of another, but was paying its own debt.

The final agreement embodied in these four messages gave the Secretary of the Treasury subrogation with regard to the securities for the one year notes which he was lending Great Britain the money to pay, and it gave him command of the use of substantially all of the British collateral in this country, including that for the one year notes, for the protection of his own market and for the provision of neutral exchanges for the common cause.

THE AGPEEMENT OF SUBROGATION WAS EXECUTORY

The right of subrogation did not involve a present deposit of the collateral. It did not contemplate immediate physical possession or the filing of a lien or notice of claim. It was an executory agreement to make a deposit if and when required.

In the Chancellor's message of January 28th he indicated strongly his apprehension of the concequences of an actual pledge of the securities with the United States Treasury and suggested a method of avoiding that. In his reply of the 29th the Secretary rejected that method but said that his sole purpose was to aid the common cause. In his message of February 6th the Chancellor placed himself in the Secretary's hands and he said that he was giving instructions that the subrogated securities and the non-subrogated securities were to be dealt with in accordance with the Secretary's instructions. This ex post facto concession of the Chancellor, and the Secretary's own assurance that his sole purpose was to aid the common cause, put the Secretary under the strongest possible obligation not to embarrass the Chancellor or the British Government by availing of his right to give instructions in such a way as to provoke a parliamentary crisis in Great Britain, as the Secretary had been warned might happen if there was a physical pledge of the securities and the matter became public.

The agreement of subrogation makes it abundantly clear that what was in contemplation was an executory agreement and that the securities, subrogated and non-subrogated, were to be dealt with according to the Secretary's instructions for the common good of both countries. This was wholly inconsistent with any suggestion of a requirement of an immediate physical pledge and delivery of the securities or the filing of a notice of lien. The securities were to be used in the common case, not locked up in Treasury vaults.

CONTEMPORANEOUS CONSTRUCTION

This was the contemporaneous construction placed upon the agreement almost immediately by Lord Reading and Secretary McAdoo. Lord Reading had been in London during the critical discussion, and returned at once to Washington. Within the month, on February 27, 1918, Lord Reading wrote the Secretary of the Treasury that the British Treasury was negotiating for a loan in Holland and asked whether the Secretary saw any objection to the proposed use as security for the loan of some of the securities controlled by the British Treasury and then in the United States. Secretary McAdoo on March 4th replied asking for a list of the securities. Mr. Rathbone on March 5th wrote Sir Hardman Lever acknowledging receipt of a summary of the securities released by the repayment on February 1st of the one year notes, and asked for some supplemental information with regard to the securities for the call loan or overdraft. On March 12th Secretary McAdoo wrote Lord Reading saying that he did not wish to delay the negotiations with regard to the Holland loan and that he was willing that about 50 million dollars worth of securities held by or for the British Government in the United States be used to secure this loan. The Secretary said he would like to know just which securities it was desired to use for the purpose, but if the matter was pressing he would leave it to Lord Reading to decide. On March 14th Mr. Rathbone acknowledged to Sir Hardman Lever receipt of lists of securities, the one headed British Government Treasury Account Securities sold December 7, 1917, to March 11, 1918, inclusive, the other headed British Government Loaned Securities Account Scheme B, securities delivered November 1, 1917, to March 11, 1919, and made some inquiries about them.

There was here no question of delivery of securities by or to the United States Treasury but only a request for a list of them. There was prompt approval of their use for British needs.

Again, in asking the President in August for approval of a credit in favor of Great Britain to pay the British maturity of September 1, 1918, the Secretary of the Treasury gave a general description of the collateral for these maturing notes and said he had arranged to be subrogated to the collateral and that when opportunity offered this collateral might be disposed of to provide for additional British expenditure here, thus reducing the amount of our future advances, or in reimbursement of our advances already made, and to obtain credits in Chile and the Argentine.

All this makes it evident that Secretary McAdoo then had in mind nothing remotely approaching an immediate pledge or deposit or notice of lien, but merely that the securities, subrogated and non-subrogated, were to be disposed of for the common cause, perhaps to provide for approved British expenditure, or perhaps to provide foreign exchange.

THE SECRETARY'S RIGHT TO GIVE INSTRUCTIONS

It should go without saying that the right to have both subrogated and non-subrogated securities dealt with in accordance with the Secretary's instructions did not confer upon the Secretary the right to appropriate these securities of Great Britain to the use of the Treasury of the United States.

Of course when the Secretary cabled the Chancellor on January 29th that his sole purpose in suggesting that he have the use of the collateral was to promote and serve the common cause and no other, the Secretary meant exactly what he said. Of course when the Chancellor replied that he put himself in Secretary McAdoo's hands and that he had given instructions that the subrogated and the non-subrogated securities both should be dealt with in accordance with Secretary McAdoo's instructions, he did so in reliance on that promise of the Secretary that his sole purpose was to aid the common cause. And of course when the Secretary replied on February 11th that the Chancellor's concession would greatly strengthen his, the Secretary's, hands in making provision for British and American financial needs, the Secretary meant exactly what he said.

In view of all this and the Chancellor's warning that an actual pledge of the securities with the United States Treasury might provoke a parliamentary crisis the Secretary of the Treasury could not at any time during the duration of the war demand the physical pledge of the securities with the United States Treasury. The Chancellor had put himself in Secretary McAdoo's hands with the full explanation of the consequences of such action. Furthermore the very fact of taking such action would have put it beyond the power of Secretary McAdoo to use the securities, subrogated and non-subrogated, for the common cause. That was the sole purpose for which the Secretary had asked subrogation and had asked the secondary agreement with regard to the use of the securities. The physical pledge of the securities with the Treasury would have frustrated the very object and sole purpose of the Secretary.

TREASURY'S ARRANGEMENTS WERE EFFECTIVE

The arrangements which the Secretary of the Treasury made with the Chancellor of the Exchequer were in fact sufficient and effective. British owned securities were used by the British Government in consultation with the United States Treasury for approved purposes, to provide neutral exchange, to obtain loans in Holland and Switzerland, etc., and so to reduce the demands of the British Government on the American Government for loans. Liquidation of the American securities owned by the British Government, which had been found detrimental to our bond market and to the flotation of our Liberty Loan, was stopped altogether for six months, from February to August 1918, and then only continued as permitted by the United States Treasury.

No payments on account of the principal of the loans in regard to which the United States Treasury had the right of subrogation were made before the 1923 debt settlement. The subrogated securities or approved substitutes in fact remained subject to the agreement of subrogation through June 1920 when Mr. Rathbone's and my connection with the Treasury terminated. No doubt they so remained also until they were released about three years later by the World War Foreign Debt Commission in connection with the debt settlement of 1923. Indeed it was stated at the Hearing on behalf of the Munitions Committee that 314 million dollars was the amount of subrogated securities released at the time of the debt settlement. This left an ample margin of collateral over and above the amount of the debt on account of which the United States Treasury was entitled to be subrogated, which was about 285 million dollars. So the right of subrogation remained unimpaired to the date of settlement.
